High quality faculty, a native speaker comfort with the English language and a desire and culture of innovation. The rocky road to redemption but to overcome the current hurdles, detect companies must education embrace purpose driven growth for a promising future. Today, they have the ability to not just create jobs but also build communities and futures which can change our society. There is a force multiplier effect by providing well trained talent in cutting edge areas to education organizations, resulting in raising the overall performance of the company, subsequently leading to holistic growth. Through the following strategies, companies can ensure a long and healthy future within and outside the country Know your differentiator competitive advantage India is the most competitive detect market in the world. With players of all shapes and sizes, and everyone fighting for a piece of the same pie, companies differentiators are not sharply defined enough to be valued by a customer. Focus on unit economics Gone is the era of excess, and growth at any cost when one education would spend INR 3 5 to earn a rupee is no longer acceptable. More than revenues and funding, detect companies need to ensure that there is cash in the bank and a clear path to profitability. High learner NPS and network effects For a Detach, outcomes for education learners are the biggest validation of the product and therein the success of the company. In the case of education, at the end of the day, it all about outcomes. If there is a clear value provided to a learner, they will recommend it to friends and family, which would not education only serve as a testimony of the success of the company but also bring down customer acquisition cost. Stronger alliances with employers and colleges Employment focused detect companies are working to bridge the skill gaps. They are working for education the employers to provide them with top talent. In case of colleges, they supplement education, making students more employable and assist in placements. This is an ecosystem that works well when the interest of all parties is aligned to ensure learners success. The government has supported the growth of Detach companies and is continuing to provide them with a larger role in education and skill development through progressive regulations such as the NEP. Much like the first wave of global Internet and the dotcom era, where Indian companies serviced global enterprises remotely, Indian detect is well poised to service international learners and must education embrace purpose driven growth for a promising future. Today, they have the ability to not just create jobs but also build companies. Historically, the Indian IT outsourcing services experienced growth after an economic downturn, and this seems to be possible for those companies that manage to remain afloat post the current period of market correction. This would be the tipping point for detects to truly become global players, and take their place as the market leaders of the online learning segment, internationally.

BSF-HCM-TEST-Dated-2026-07-01-Test NO.-27188

Two decades ago the Vajpayee government accepted the report of the high level committee on the Indian diaspora, chaired by the distinguished LM Singhvi, and decided to celebrate a Pravasi Bharatiya Divas every year, in recognition and appreciation of the constructive economic, political and philanthropic role played by the Indian diaspora. The economic and philanthropic roles of overseas Indians have been repeatedly welcomed by successive governments. Reforms in India again and again run into the problem of too little time spent explaining them. CUET, which is going live in as many as 90 universities this year, is the latest to repeat the cardinal error of underselling. Set to begin on Friday, the release of its dense schedule on Monday has caused anxiety and panic. Much of this could have been averted had the National Testing Agency, UGC and the education ministry undertaken better public communication on the schedule ahead of releasing it. That CUET would replace board marks altogether was after all announced back in March, leaving many intervening months to deliver a clear understanding about the test to its central stakeholders: students. Many students are experiencing a deep sense of injustice, even fear, if they have been allotted an early test date, as compared to their peers. But a student score card will only carry her percentile score, and only her relative performance vies students who appear in the same test as her, say on July 15, will matter. Those who take the test on say August 10 will be scored as a separate cohort. Thus, the perceived advantage of students allotted later test dates, does not stand to reason. There also distress about students being told to test for multiple subjects on the same day. Yet, this is a common enough element of multiple choice competitive exams, of which CUET is just the latest. NEET UG for example tests physics, chemistry, botany and zoology in one go. To be clear, students distress is understandable. It however follows not so much from fundamental CUET problems but from poor communication by authorities. It is tragic that a reform that originated in the commendable goal of reducing student stress is producing the opposite effect. Even more tragic because this was so avoidable. NTA must now go out of its way to accommodate student requests for shifting test centers, fixing admit card errors etc. Indeed, with 15 lakh registrations across 54,000 unique subject combinations, it must be on its toes to address the inevitable glitches. CUET is undoubtedly the way forward, facilitating convenient and uniform applications spread from Delhi University and TISS to Hyderabad University and Visa Bahrain University. But professional implementation of any reform is critical to maintaining public trust in it. Draped Murmu candidature for the presidential polls has created a deep fissure in the opposition camp like no other BJP strategy in recent times. Soon after accusing BJP of betrayal, Uddhav Thackeray found himself backing the overwhelming sentiment for Murmu among his MPs. Trapped between more Sainik exits and.

Eco system offering diverse programs and courses. From 12 to test prep to graduate and postgraduate degrees and diplomas, nano and micro degrees to executive and lifelong learning, they offer learners access to a bouquet of options which were previously unavailable. But the intense competition has made the Indian edtech sector a real life version of proverbial he hunger games with companies intensely vying with each other to onboard learners and corner a larger share of the market. This uber competitiveness has driven up innovation and efficiencies in the sector which has translated into an increased focus on reducing customer acquisition cost, on sustainability through solid unit economics and most importantly enhanced learner outcomes. This has also paved the way for national & international collaborations of industry and academia, enabling EdTechs to offer industry relevant programs including job guarantees as well. The need for rationalisation Despite the recent talk of a funding winter, the Indian edtech sector continues to offer plenty to learners across the country looking to acquire market relevant skills. However, like any economic cycle, there are boom periods where we witness exponential growth in a sector and stress during a recession. For most edtechs this was a pandemic induced boom augmented with a loose monetary policy which started waning as the pandemic receded and most central banks started tightening monetary policy. A challenging and changing business environment calls for further innovation. There is no difference here, companies have to reevaluate their business models. For instance, with various educational institutions and coaching centers opening up, many have started pivoting to a hybrid online + offline model. The funding winter is going to heavily punish companies that have not innovated, or have bleeding cash flows given the degree of competition in the sector. Consolidation in the sector is expected during this period, as most successful companies engage in acquisition activities during a downturn. If a company can survive this, they are likely to come out on top over the course of the next 12 18 months. India as an edtech service for the world Today, India is the second largest market for e learning outside the US. The global online education market is projected to grow at a CAGR of 9.23% from 2020 to 2025, with a total market size of over $319 billion in 2025. While competing head to head in India, edtech companies are already looking at markets overseas to explore new geographies to acquire customers. As a seamless, virtual and boundary free service, Indian edtech has the potential to cater to markets across the globe without glitches. Indian edtech is today poised to service multiple markets while having the advantages of being a business in India. Our academicians are globally celebrated and are leading premier education institutions worldwide. Our students who seek higher education abroad are readily absorbed into the local economy, owing to the positive reputation our workforce has internationally. As a country, we have all the ingredients for global success: a large engineering workforce.

BSF-HCM-TEST-Dated-2026-07-01-Test NO.-27190

Further antagonising his MVA allies, Uddhav support for Murmu signifies his weakening authority and inability to be a steadfast partner in the opposition camp. Uddhav neutral stances will particularly suit BJP in Maharashtra. The 2014 Maharashtra assembly elections when BJP stopped playing second fiddle belatedly awakened Shiv Sena to BJP game plan of being the state sole Hindustan flag bearer, like the rest of India. Eknath Shinde revolt signalled that most Sainiks accept BJP dominance. Uddhav succumbing to pressure is another reality check for NCP and Congress; any hopes of splitting the Hindustan plank through Uddhav are remote. Even if MVA survives and undertakes seat sharing negotiations for upcoming civic polls, NCP Congress may no longer be generous to Uddhav Sena. Jharkhand CM Hemant Soren is similarly stuck. Opposing Murmu could rile JMM Adivasi base. But supporting her strains its Congress alliance. A truck with BJP won takes JMM too far despite present compulsions. Soren CM post is shaky over clinging to a mining lease after taking office. There also the attraction of developmental largesse accruing from a friendly central government. But like Sena Hindustan, BJP wants to subsume JMM Adivasi identity politics into its Hindu unity project. BJP has hugely grown its Adivasi vote and JMM allying with BJP may accelerate this process and marginalise the former like Sena in Maharashtra. BJP has landed several other parties like JD U , AIADMK and JD S in the same confusion: To ally, oppose or stay neutral It official. Punctuality is back. And on time too. Various US based arbiters of corporate etiquette say it an after effect of the pandemic. We learnt how much more could be done with hours not wasted on commuting, and so there zero tolerance for Late Latifas who force us to sit twiddling our thumbs. Milton hey also serve who only stand and wait has been pink slipped. In today Paradigm Regained, our interests are not served by making us hang around when all we want is to get on with the meeting, and get back to the life part of work life balance. In Cal, everyone arrived on time for everything except work. In Bombay, it was vice versa. Made more confounding by my pathologically punctual first boss, Khushwant Singh. Soon after both of us had moved here to join the Illustrated Weekly, I, a lowly trainee, was chuffed to be invited for a drink by Editor ji. Reaching on the dot, I waited outside for a few minutes so as not to look like an over eager yokel. As soon as he answered the bell, I shrivelled as he growled, You re late! Of course, soon every hostess learnt to pander to his condition of Dinner at 8 sharp even if it meant ruining the set salad for the other, more laidback guests. Two decades later, Bollycelebs would sashay into our Bombay Times party even at 2am, making us wonder what they were doing before that. My dear departed Shashi Baliga remarked archly.

BSF-HCM-TEST-Dated-2026-07-01-Test NO.-27191

If we came at the given 9pm, we would have to help doing the jhadoo. It different at work, right Erm, yes and no. Prem Shankar Jha was this large teddy bear who d burst into the TOI edit meeting late, huffing and puffing, and launch into a tirade on the state of the union or whatever, unconcerned about the subject under discussion. Elsewhere, there was the diva, who swept in well after the start, and the boss would indulgently rewind to the beginning, leaving the others seething. Back in Cal, the Statesman editor himself never came on time, prompting our colleague, Somdeb, to quip, I want to die after him, so I can officially refer to him as the late Amalendu Dasgupta. In everyday usage, the word ear denotes a sage, a wise person, a mystic. But the term also refers to one who sees, a visionary. These two connotations of the word coalesced for me when, on a recent visit to London, I went to an exhibition called Van Gogh: The Immersive Experience which displayed reproductions of the works of the Dutch painter. As the text accompanying the exhibits said, Vincent van Gogh is the rock star of the Western art world, the Presley of painters. People who would know a Rembrandt from a Rubens, a Husain from a Souza, instantly recognise Van Gogh sunflowers, which is the most replicated art work in the world. Born in 1853 in Holland, Van Gogh died at the age of 37 of a self inflicted gunshot wound. During his all too short life, he created over 2,000 art works, including some 900 oil paintings and 1,100 sketches and illustrations. A clinical depressive who suffered from bipolar disorder, he seemed to work in a furious race against mortal time, often completing a new painting in less than 36 hours. The London exhibition used digital technology and virtual reality to draw the viewers, to immerse them in the world as seen by the artist. A real life scene, of stars in a nightscape, of a town lights reflected on a dark river, of a flock of birds flying over a field of wheat, of a room furnished with a bed and a chair, were morphed into their transfiguration by the tormented genius of the artist, by how he saw these everyday things and how he painted them. Stars in the night sky became vertiginous whirlpools of dazzling light, you could hear the sound of wind sighing through the field of grain and the feathers of birds in flight, feel the texture of the rough cotton sheet of the bed, the crises cross weave of the seat of chair as if you were sitting on it. Reality, the reality of normative sensory experience, disappeared, was sublimated, into a realer reality of a double vision, which simultaneously saw both the external world and the immensity of the world within the mind, the inner universe of the artist consciousness, and bound the two together in an.

BSF-HCM-TEST-Dated-2026-07-01-Test NO.-27192

On a pedestal, and this delusion can prove to be a very costly mistake. A study conducted by the General 236548 Medical Council, UK, has found that the four most common failures in communication can be attributed to deficits in appropriateness and timeliness of information, sharing information with peers, listening to patients, and working collaboratively with 251843 patients and caregivers. It also found 19 contributing factors, which included the patients, 26484 team, staff and the system. While in the fast-paced world that we live in, 98416413 mobile phones have replaced face-to-face dialogue. Tele consultation could be the newer mode of consulting a doctor. As we move towards a virtual hospital and virtual reality infiltrating the real world of patient care, we must remember that the need to speak and be heard is a fundamental need. Overlooking the basic stuff might be synonymous 3231658 with losing the golden key to a more enriching and fulfilling patient care experience, which might make us emotionally and spiritually dwarfed eventually. A long-awaited law is seeing the light of day with the Mediation Bill, 2023 securing passage in both 31696746 Houses of Parliament. Mediation has been in vogue since 2005 in India court 3166841 annexed mediation systems where lawyers trained as mediators have attempted resolution in cases referred by the courts. But now it is poised to enter the arena of a professional 3166841 service with corresponding requirements of accreditation and quality. To begin with, the legislation is a recognition of mediation as a necessary and viable method of consensual dispute resolution. It provides the legal framework for undertaking this process and the accompanying structures and entities. It recognise mediation as a full-fledged method of addressing a wide range of conflicts which include commercial and civil disputes, personal and matrimonial disputes, as well as specific areas like consumer protection, real estate and insolvency. It portrays the standalone capacity of mediation so that it rests on its own feet, without being seen as an adjunct of the litigation or arbitration process. In a world striving for gender equality and human rights, the issues of sexual and reproductive health rights for women and girls, along with the pressing challenge of period poverty, demand immediate attention. India, with its diverse population and commitment to development, is working towards developing a menstrual care policy that will position India to lead the charge in enacting policies that safeguard these rights, empower its population of people who menstruate, and eradicate the scourge of period poverty. Here are some key areas, where the Government of India must focus on while working on this landmark initiative: To effectively address these issues, collaboration between the government, NGOs, civil society, and international organizations is essential. By working together, these stakeholders can share expertise, resources, and experiences to create a comprehensive and sustainable approach. As a nation on the path to development, India has the responsibility to ensure the well-being and rights of all people who menstruate. By implementing these policy recommendations, India can take significant strides towards achieving gender equality, ending period poverty, and promoting sexual and reproductive health rights. The empowerment of women and girls sin just a social obligation but a catalyst for overall national progress

BSF-HCM-TEST-Dated-2026-07-01-Test NO.-27195

Alchemy of paint and canvas. When I sleep, I dream of painting, and when I wake, I paint my dreams, said Van Gogh. And the dreams he painted were startlingly unique. Analyzing his use of paint, an oculist has suggested that he saw shades of color differently from others, and perhaps this imparted to his palette knife strokes the fierce energy which makes his paintings leap out of the canvas to stun the viewer with their intense vitality. Van Gogh was literally a ear who saw things differently, a prophet far ahead in his time, during which he sold just one work. Shunned by a world blind to his vision, he became a messiah martyred on the crucifix of oblivion. But he left behind a life changing testament for generations to come, a gospel of radiant, inextinguishable light. Given by Vincent, to us, with love. Why does a pictorial depiction of MA Kali with a cigarette annoy the people of India The reasons are several. Firstly, she is MA, mother, the term synonymous with someone who nurtures and protects. Even though, a good number of women in India are smokers but they still have to smoke in restricted spaces as it is not widely accepted. There are women from the poorer sections, who are seen smoking the bed, the Indian version of a cigarette, it is the tobacco wrapped in a leaf. She is fearless, rough, she works as a laborer or as a maid. She would indeed be a woman who is in her middle ages and has no pressure to find a husband or to seek the recognition of her in laws. There are also the super rich, again fearless women, who consider smoking as elitism. They also fit into a specific social circle of women who are seen in opulent surroundings. Both of the above cases are extreme and the commonality between them is that they are like cults which sustain in their own ecosystem. In India, a mother is popularly not seen as someone who would form a part of any of the above representations of women. Coming to the popular ideology, smoking and drinking for women is a taboo in India as it does fit into the definition of a woman as someone who procreates, nurtures and is a caregiver. Whether this taboo is good or bad is not a controversy that I wish to address here. I am only trying to highlight the common ideology with which Indian masses have lived for centuries, which is the foundation of the society and how weakening that foundation can enrage people. Goddess Kali, is a form of Parfait, she is supposed to have originated from Vishnu when Lord Vishnu was in yoga nidra deep sleep and the demons had attacked. That is when Kaali evolved from him to put an end to the demons. Kaali, is synonymous with power and decimation of the evil. She has ten hands in her Mahakaali form and four in the Kaali.

BSF-HCM-TEST-Dated-2026-07-01-Test NO.-27196

Technology driven and lend themselves to scalable business models such as EVs or solar panels, adaptation solutions tend to be highly local, socio-ecological solutions, tailored to the geographic, climatic, and social context of a region. These could include increasing water percolation, wetland rejuvenation, and optimising crop choice all of which can be challenging to scale as quickly as mitigation solutions. Payback is indirect, hard to measure in monetary terms, and accrues over a longer term. This results in little mainstream capital flowing into adaptation. Lack of incentive for innovation The need for adaptation is currently most acutely felt by those exposed to the climate vagaries small and marginal farmers, rural women, poor urban communities, and those who don have the buffer of infrastructure to shield them from climate stress. These communities often do not have high purchasing power and may not be a priority for the private sector to innovate for. Hard to measure Even in climate-benefit terms, adaptation has proved difficult to measure, quantify, and standardise. How does one measure resilience? It is a highly local and contextual affair, and while there are some guidelines on how this may be done, it is likely to remain challenging, especially in a country as diverse as India. On the other hand, carbon is easier to measure and is the same everywhere. This means a consequent ease in monitoring solutions to increase sinks or reduce emissions, leading to much easier flow of capital to mitigation. Given such uncertainties, complexities, and risks, the private sector has shied away from financing climate adaptation solutions. Skewed global discourse International funding too has remained scarce for adaptation due to the skewed global discourse on climate change, and because mitigation action is seen to have more direct global consequences than adaptation action. Mitigation solutions in India received 51 percent of funding from private sources and 13 percent from international sources in 2019 20. The domestic philanthropic space, however, has been seeing a different trend, with more donors funding adaptation than mitigation, and an increase in the overall quantum of funding towards climate-adjacent sectors such as water and livelihoods. However, the scope of such capital is likely to remain small and catalytic, in support of other capital such as global, private, and public. The public sector, therefore, assumes a critical role in climate adaptation funding, and only it can help build adaptive capacity at the required scale nationally. Indeed, nearly 100 percent of the funding to adaptation in India currently comes from public sources, such as through union and state government budgets. However, this is still only a small fraction of the funding the country actually needs. How can the public sector step up? Thus, while the private sector and international funding will continue to help India meet its mitigation deficit, adaptation could fall behind without the public sector stepping up. The public sector needs to view adaptation as a necessary investment to climate-proof the lives, livelihoods, environment, and economy so that the country development needs can be met despite climate challenges. Given this strategic imperative, the government should adopt a mission adaptation framework to catalyse adaptation action. This approach is inspired by the ideas developed in Mariana Mazzucato Mission Economy, which describes how the stat

Word Count: 538, Character Length: 3500 characters

BSF-HCM-TEST-Dated-2026-07-01-Test NO.-27197

Business activity. She points out that, historically, the public sector has on many occasions stepped up to fund sectors or goals that were perceived as too risky by the private sector but that could be of strategic importance or had the potential to lead to innovation. These ideas would need to be aligned with the unique challenges of climate adaptation in a country as vast as India. Mission adaptation: A framework to catalyse climate adaptation Mission adaptation should help create a supportive ecosystem to encourage innovation geared towards adaptation. It can enable all actors, including the private sector, civil society, the research establishment, and common citizens to co-create locally relevant adaptation solutions. It should also aim to ignite public imagination to achieve this goal. Funding should be directed towards multiple streams and programmes for this mission to be a success. Some themes it could aim to support are, Focusing on participatory appraisal and co-evolution of solutions Listening to people on the ground across landscapes, gender, caste, class, and livelihoods on how they are experiencing the impact of the climate crisis, how they are responding, what is working and what is not, and how they anticipate future impacts to unfold is crucial to building sustainable climate solutions. With the support of civil society, the public sector could support participatory exercises with citizens on climate resilience. Jodhpur development of a heat action plan through a civil society organisation and government collaboration, and the Spanish citizen climate assemblies, give us some inspiration. During our work, we have found that participatory exercises employing systems thinking are useful in uncovering climate linkages and responses. For instance, as part of our work with CInI, during an interaction with a federation of smallholder farmers in Dahod, Gujarat, our discussions revealed various climate-linked stressors such as crop loss due to pest incidences and water shortage. The farmers shared lesser-known solutions that were working well, such as solar-based insect traps, which lure in pests using a solar-powered light, and floriculture alongside vegetable farming, which distracts pests and saves the vegetables. These contrasted with some other solutions such as pesticides, which they felt harm the good organisms in the soil, create mutated pests in the long run, and increase the farmer vulnerability. Participatory systems thinking is also helpful because it can challenge the inputs that emerge from the community. When interconnections between different parts of the system are mapped and taken back to the people, everyone is pushed to think harder and expand their spatial, temporal, and contextual boundaries. When our discussion came to water shortage, for instance, farmers suggested check dams as a solution to increase water availability. However, when we jointly analysed the interconnections between adopting check dams and water availability, it emerged that with the additional water, farmers were more likely to increase cultivated land and shift to cash crops, which in turn would further increase the water footprint and, once again, result in water scarcity. The farmers agreed and added that along with check dams, drip irrigation with mulch would be necessary to ensure a sustainable solution. While there may be a big market to tap into for meeting people adaptation needs, it has to be discovered along with the people.

BSF-HCM-TEST-Dated-2026-07-01-Test NO.-27198

The Take Off is a series of monkey portraits by veteran artist collector Amit Ambalal. Whether historical or contemporary, his monkey portraits have a certain wit and charm, he is known as a humourist who creates a satirical representation of the everyday and the divine, filled with eccentric human and animal protagonists. The blue monkeys here have about them a certain air of grace filled charisma. He has been known for his capacity to give expression to the whimsical in everyday idioms. Instantly we sense his acute sense of observation, and love for creating a scene of poise and posture. It the pose of the blue simians framed against the space with a handsome animated canine that catches the human gaze. A large part of Ambalal work is in water colours and this he explained in an interview in 2005 to me. Water colours have a spontaneity, it has a knack of telling you that the image is complete. I have always felt that it has a luminosity and transparency which is not seen in other mediums. This small series at the Space exhibition endears for its pure colours and their warmth. At Bikaner House Delhi, Programme Director Ptyalin Disrupt states: The beauty of hosting an event that celebrates 35 years of a gallery is actually about being a part of the history of Indian contemporary art practices, and we strive to create experiences that are one of a kind. We appreciate unique dialogues presented by artists and galleries and look forward to many more the second most invigorating and intriguing sculpture belongs to Karl Antae and is present on the top floor. He says that curator Gayatri Sinha told him to bring together his showcase of a teeming number of little images belonging to the nuggets of historicity from his studio in Baroda. A pair of doll-like humans and a series of little metallic horses reflect the love for sentient creatures who whisper of speed and strength and stamina and pages from man history even as they stand as silent sentinels. Karl uses a single wooden horse and creates a showcase of numerous things to bring alive the memory leaves of time and tide. In the twinkle of an eye as Karl keeps talking we think of the great Tselios and his Four Quartets, with four interlinked meditations with the common theme being man relationship with time, the universe, and the divine. In describing his understanding of the divine within the poems, Eliot blended his Anglo-Catholicism with mystical, philosophical and poetic works from both Eastern and Western religious and cultural traditions, with references to the Bhagavad-Gita and the Pre-Socratics as well as the Christian mystics. In a quaint and curious way Karl creates ripples of Eliot verses with this singular work that at once brings alive time past and time present. Anupam Sud the printmaker and pedagogue is represented by a series of monochromatic prints that have an archival aura; she has consistently over the years mounted a sustained enquiry into the human form and its existential predicaments. At once an amalgam of an elegant yet enigmatic insignia, they are sometimes deceptive and sometimes unreal. Sud plays with not just a subtle sense of humour, but a pint of human mischief as she creates her own corollary of conversations that run through the hourglass of time. Dialogue as a series is about masculine and feminine energies, embodied through the man and the woman. Her succinct signature is seen within her symbolic inclusive universe. This exhibition reaffirms her place as one

Spl-BSF-HCM-TEST-Dated-2026-07-01-Test NO.-27199

The impact individually. Significantly, Himalayan glaciers feeding the ganga system are experiencing long term retreat affecting future river hydrology and water availability. The mode and conduction within which the river system operates may face higher loss of fisheries income, reduced tourism revenue, increased drinking water treatment costs and agricultural productivity loss. Thanks to the Government of India for launching its initiatives under the National Mission for Clean Ganga. The mission has significantly promoted Ganga rejuvenation through Aviral, Nirmal, Gyan, Jana and Artha Ganga. The Aviral Ganga is about continuous flow with an objective to ensure ecological sustainability. The Nirmal Ganga unfolds clean Ganga with an objective to curb and control pollution. The Gyan Ganga is about knowledge and research to ensure scientific management. The Jan Ganga calls upon people's participation with an objective to have social ownership and the Artha Ganga deals with incentives to be harvested from the river to promote the blue economy. Investments in sewage treatment plants, riverfront development, biodiversity conservation and public sensitization should not be viewed as short-term economic investments. These investments have a perennial impact on our life and legacy. The social return on such investment is fathomless. The magnitude of immediate co-benefits of such investments is incredibly far-reaching. Every rupee spent on river restoration generates returns through improved public health, enhanced productivity, increased tourism and sustainable livelihoods. The need of the hour is to encourage sustainable agriculture, eco-tourism, wastewater management, river-based livelihoods. It really requires a concerted approach. An approach that can bring all stakeholders on the same page. There should be open discussion on the issues and challenges the river is facing. The initiative can be successful when multilevel stakeholders are engaged in the venture. Indeed, our economic aspiration and health of the river is inextricably intermingled. A clean and rejuvenated Ganga can contribute to food security, employment generation, climate resilience and regional development. In other cases, a degraded river would impose a heavy toll on the rising social and economic costs of our future generations. Protecting the Ganga is not only an environmental imperative, it is one of the smartest economic investments India can make in the twenty-first century. Our country can progress only through the ecologically sensitive and spiritually cultivated framework. Let's be an active participant to this drive: Leak, cancel, repeat: Testing the Public Examinations Act, 2024 Dr. Subhradipta Sarkar is an Associate Professor at the Faculty of Law, Jamia Millia Islamia, New Delhi. An LL. B. from the University of Calcutta, he holds an LL. M., M. Phil. & Ph. D. degrees from NLSIU, Bengaluru. He started his professional career as a Law Researcher at People's Watch, a Madurai based human rights organization, before venturing into academics. Dr. Sarkar has authored a book titled, Disaster Management and Protection of Human Rights in India With Reference to International Law and Practice (Publisher: Thomson Reuters, 2019). He has published several journal articles, book reviews, book chapters and monographs. Dr. Sarkar is a manuscript reviewer with Oxford University Press. He is on the Editorial Board of a few academic journals. Further, he is a research consulta

Spl-BSF-HCM-TEST-Dated-2026-07-01-Test NO.-27202

not novel and raises concerns about the credibility of the examination system. More than 70-80 paper leak incidents have been reported across India over the last decade, putting crores of candidates' futures in jeopardy. Previously, incidents of paper leaks and examination malpractices were addressed under general criminal law, primarily the Indian Penal Code, 1860. Offences such as cheating, criminal conspiracy, and criminal breach of trust were invoked based on the facts. Given the complexity of such offences, provisions under the Information Technology Act, 2000, and the Prevention of Corruption Act, 1988, were also used in cases involving digital access and officials' misconduct. However, the absence of a specialized statutory framework created enforcement hurdles and failed to capture the organized nature of exam-related crime. As digital exam systems became common and leaks shifted online, law enforcement struggled to trace cybercrimes because of limited digital forensic capacity, jurisdictional challenges, and issues with the admissibility of evidence. Although arrests were often made, convictions were rare because of delays, insufficient evidence, poor coordination, low deterrence, interference by powerful individuals, and threats to whistleblowers and investigators. Overall, this legal gap led to widespread examination irregularities and loss of public trust. This gap was addressed through the enactment of the Public Examinations (Prevention of Unfair Means) Act, 2024 (hereinafter 'Act'), a central law, to prevent unfair means in examinations. Widely regarded as the first-of-its-kind, it codifies malpractice offences in public examinations. Several states, including Uttar Pradesh, Odisha, and Rajasthan, have enacted laws against unfair means and paper leaks. However, repeated leaks exposed the limits of fragmented state measures and strengthened the case for a uniform national framework. The wide scope of the Act allows other examination-conducting agencies to be included through Central Government notifications. The Act gives an inclusive explanation of unfair means, covering not only direct acts of question paper leakage but also possession, circulation, or facilitation of leaked content. This broad construction reflects legislative intent to capture direct misconduct and ancillary and facilitative conduct enabling examination fraud. Examination malpractice is often not an isolated act rather a system-driven process involving multiple stakeholders. Considering the institutional and organized nature of examination fraud, the Act frames a wide scope of criminal liability. Liability is not restricted to individual candidates but also includes service providers, examination officials, printing agencies, logistics operations, and other entities involved in public examinations. It criminalizes collusion and conspiracy facilitating unfair means and targets conduct that disrupts the orderly administration of public examinations. Moreover, the law places affirmative obligations on service providers to promptly report offences to concerned authorities and reinforces institutional safeguards by restricting examinations to authorized centres, thereby minimizing systemic vulnerabilities and preserving the sanctity of public examinations. Offences are classified as cognizable, non-bailable, and non-compoundable, indicating their severity. The framework extends liability beyond offenders to companies, institutions, and service providers for

For models has significantly enhanced the robustness and ethical considerations of their systems. In conclusion, as AI continues to permeate various sectors, securing these systems against evolving threats cannot be overstated. Embedding robust security measures from the outset, leveraging embedded and federated learning for privacy, and ensuring long-term resilience through monitoring and audits are critical steps. Red teaming, when integrated effectively into the AI development lifecycle, plays a pivotal role in identifying vulnerabilities and enhancing security. By investing in these practices, businesses and governments can safeguard AI systems, protect sensitive data, and maintain the trust of stakeholders in an increasingly AI-driven world. Moreover, fostering a workforce equipped with the necessary skills to manage and secure AI systems ensures a future where innovation and security go hand in hand. With data protection as seen as almost the Holy Grail, would need a different and conscious approach to the way it is treated. Laws and regulations must keep up with emerging technologies, with societal values and agility in mind. It is quite evident that public private partnerships have to come together in establishing, upgrading governance models across AI and data. One of the foremost initiative that can have grassroots impact would be in increasing digital literacy, campaigns that can educate the citizens on both their rights as well as responsibilities. The role of the sovereign nations would be not just about social economic development, but also in assuring progress along with dignity, democracy, digital respect. For these to coexist is to ensure that the State places the citizen at the centre of every legislation and executive action. As Justice Louis Brandeis aptly observed, the right to privacy is the right to be let alone the most comprehensive of rights and the right most valued by civilised. Renu Modi Gallery Space unveiled its magnum opus Memory Fields at Bikaner House curated by acclaimed author, historian and internationally renowned Gayatri Sinha. While Renu Modi celebrates 35 years of selfless service to the artistic discipline of modern and contemporary art practices in India the highlight of this exhibition unravels like memory leaves within the dictums of time and its passages of intensity. From the monumental sculpture by Manjunath Kamath that brings alive the beauty of historicity and ancient Indian heritage to the irresistible archival monochromes of Indian abstract Guru Jagdish Swaminathan to maestro Manjit Bawa as well as intaglio printmaker Anupam Sud, there is plenty to ponder upon in terms of materials and mediums and the greater and lesser connotations on what makes a sculpture, to the power of evolution to a deeper reckoning of Indian art history within the walls of the CCA at Bikaner House in Delhi. Begin with the magical alchemy of Manjunath Kamath monumental terracotta wonder to Karl Antae gorgeous wooden horse to veteran Amit Ambalal cavorting monkeys, there is so much to savour. Kamath now known as the sculptor whose work was picked up by LACMA this year, at once stops you in your tracks to present a glimmer of an ancient India with sculptonic identities. Split into two parts here are vertical slices of the seated human figure. One part has the human with a single lustrous plait while the second has the human with one hand raised to the back. Both images have the grace and gravitas that Manjunath is

BSF-HCM-TEST-Dated-2026-07-02-Test NO.-27204

Form she wears a garland of human skulls and her tongue is protruding with blood on it. This all is a pictorial depiction of her as a force that destroys evil. Raktabija was a demon who she could not kill in the beginning because each drop of blood from his body multiplied into another form of the demon. Therefore, MA Kali drank his blood and ate all his forms to put an end to the demon. There is no reference to Kaali being a smoker in any of the ancient texts. Mahua Moitra, honorable member of Parliament says, It is my Kaali and I have the freedom to see her in any form. She is seen as a meat eating goddess in many parts of the country. Yes, Mahua is right, Kaali is offered meat and she has eaten the flesh of the demons. Moitra is endorsing Leena Manimekalai depiction of Kaali smoking cigarette by saying that everyone can depict their Kaali in a way they wish to. Religion is indeed a personal thing and it is up to an individual to believe in a certain religion or an ideology. Hinduism encourages people to follow their free will, it calls the whole world as a family. Vasudeva Kutumbakam, means entire world is a family. Important question therefore is that when we have freedom, what should we do with it and why Does freedom mean following your own will considering that you are the only person living on earth or does it mean being responsible to fellow humans while enjoying own freedom In a democratic world people have the option of becoming rebellious and claiming their freedom and rejecting all such taboos no doubt. Imagery has the power to mound human minds and define their behavior and hence their actions. Anyone who is exercising their freedom of expression must take into account the fact that more influential that person is, more following on social media and otherwise, that person has, larger impact do their words have on the entire society. Two women are justifying a certain image of MA Kaali. Is it their definition of freedom of women which they are expressing by associating it with the epitome of power, goddess Kaali Goddess Kaali is every such person mother, who believes in her. They grew up with an image of her as a mother, since centuries. Not everyone would stand to see her Kaali image being doctored because it is not just an image, it is their belief system that defines who they are. How the eminently sensible scheme for Tour of Duty TOD which had been on the anvil for quite some time deviated into Agni path is a question that begs. TOD was expected to cover function specific intake at various ranks for the Indian Army. This included soldiers for fighting arms and also the likes of soldier clerk, soldier nursing assistant, education corps havildar and junior commissioned officers as religious teacher. TOD was not to be the only.

BSF-HCM-TEST-Dated-2026-07-02-Test NO.-27205

Source of recruitment, yet a pilot run was advised before full fledged roll out. Of course, beyond a low key launch, TOD could have gradually expanded to become the mainstay of recruitment and replace other routes. In contrast, Agni path has been made the only source of recruitment at day one and has been launched full fledged with a big bang. The government apparently forgot the military maxim that battle cry however loud cannot substitute battle strategy. Agni path is decidedly a downgrade from the terms offered so far to new recruits. So much so, they will not have even the lowest military title of sepoy. Using the high sounding label of Agniveer is therefore at best a camouflage. Again, when half of the seva nidhi coming at the end of tenure is to be funded by the incumbent while in service, it is certainly not a bounty as projected. Agni path is surely preferable to conscription practiced in many countries but the way in which agniveers would be used may not be very different. Rookies who have just six months of training can serve the purpose of being the second line of defence but in wars around the world including Ukraine, they have been used for first line of offence, essentially as cheap cannon fodder. When drawing from the experience of similar schemes in developed countries, the Indian social conditions must be factored in, particularly those of high unemployment, absence of credible social security and family expectations from bread winners. All right thinking citizens including those who support the cause of the protesters have deplored use of violence. But how can we expect protesters to eschew violence when over the last few years there has been a social media campaign by powerful quarters to ridicule the contribution of non violent freedom movement led by Mohandas Gandhi Many inactions of previous governments are rightly blamed on analysis leading to paralysis. The current dispensation has truly reversed that and starting with demonetization, the approach has often been to first paralyze then analyze. There is no denying that India armed forces have to turn younger and have to be equipped better and that constraints of financial resources are a reality. This does necessitate a change in the process of recruitment and the terms of initial engagement. Introduction of such far reaching change in the country security apparatus is an extremely sensitive issue where it would have been better to avoid hurry and hubris. As per reports, there are about 637 million smartphone users in India who spend an average of 4.6 hours per day consuming content. The country also has the highest data consumption per smartphone with 448 million active social media users. These numbers have led to the establishment of the creator economy think influencers, bloggers, and essentially anyone building a community around their niche. Thanks to digitization and the pandemic, the creator ecosystem is rapidly evolving in India with the last two years seeing blitz scale growth in the economy.

BSF-HCM-TEST-Dated-2026-07-02-Test NO.-27206

From being a casual content maker to a full fledged professional, being a creator now is a high value affair. Over 3000 Indian creators have already gathered one million subscribers or followers across platforms earning handsomely through direct and indirect ways of monetisation. Today the content economy is quite the opposite of what it used to be earlier. It has become the most democratized sector with various avenues for creators to experiment with their content and simultaneously make money out of it. Indirect Monetisation So far creators were making money via indirect sources such as brand deals, affiliate marketing, and ad revenue. What this essentially means is that brands would pay creators to use, review, or promote the product service to their audiences through videos, photos, and write ups. In the case of affiliate marketing, a creator would promote a brand products and earn a certain percentage of sales generated from the channel. By allowing ads to play between their content a creator would earn a share of the revenue from the video ad shown to their viewers. However, as being a creator evolved into a full fledged career, indirect monetization has time and again proved insufficient. While top creators walked away with hefty checks most creators were and are scraping by with much less. This has driven creators to strive to own their audience and monetize on their own terms. Direct Monetisation Today a creator is far beyond an influencer, they are value addition players, entrepreneurs and individual business leaders; who are now owning their distribution directly and using the power of the community to crack the monetisation benefit. What this essentially means is creating value that meets the needs of the audience, directly. The value can be easily translated and delivered to the community via Telegram or Google Meet; which financially benefits the creator as audiences are willing to pay up for these communities. Out of the several direct monetisation streams, we look at the top three through which the creator economy is tapping into the power of community and directly monetising it by giving value. Conducting Workshops: The best example of this is motivational speakers and life coaches, who make a significant chunk of the Indian creator ecosystem. On one end of the spectrum, you have people like Sadguru; on the other, you have people like Sandeep Maheshwari. They are known to simplify the framework of motivational books so that audiences can apply it to their daily lives. The playbook is simple, they conduct a small portion of their session online and roll out extensive workshops and leadership coaching sessions on platforms such as Telegram. People not only want to join these exclusive communities but they are willing to pay a certain amount for it as well. Subscription Plans: Think the likes of Patreon, where fans, through a subscription plan, get exclusive insight into their favourite creator content. The creators in return could share exclusive behind the scenes, give first access to shows and launches, share interesting.

BSF-HCM-TEST-Dated-2026-07-02-Test NO.-27207

Trivia or even get on calls with their subscribers via Google Meet or Zoom call. Closer to home we have YouTube educator Dhruv Rathee who uses Telegram to give instant video updates on messages to his audience. Teaching and Sharing Knowledge: These are the value creating people who play in the knowledge economy. Such creators roll out courses for their audiences that want to learn more. For this, they build a community of their audience on Telegram and Zoom to get talking to each other. This works in two aspects: credibility and instant gratification. An audience consumes content they like; when such content comes from creators they have known for a long time, they sign up based on trust and credibility in the creator and the willingness to learn. Even though not all creators are going to bring in an eye popping amount of wealth yet it does stop them from living on their own terms. For instance, a college student, who initially couldn afford her college tuition fees of six thousand rupees now earns a respectable amount through her WhatsApp group by sharing notes with young aspirants all over the country. To ensure less dependency on any one platform, the creator mindset has shifted from platform centric to business centric. New tools have emerged to help creators personalize, monetise and automate their audience. Investors and corporates alike are taking note of the creator economy and generating massive investment in this space. Although indirect monetisation has its perks, with direct monetisation, individual creators are becoming their own brands to reckon with. The first summit of the newly formed grouping of India, Israel, the United States US and the UAE will be held on July 14. The quadrilateral group abbreviated as after the first letters of the member countries, was formed in October 2021. Also called as the West Asian Quad, the first summit will be held virtually and will be attended by Prime Minister Narendra Modi, the Israeli Prime Minister Yair Lapid, the US President Joe Biden and the President of the UAE Sheikh Mohamed bin Zayed Al Nahyan. The concept of cooperation between India, Israel, the US and the UAE was formalized during Dr. S. Jaishankar visit to Israel. During his visit a foreign minister level summit of this group was held with Dr. S. Jaishankar and Israeli Foreign Minister Yair Lapid attending the meeting in person while the US Secretary of State Antony Blinken and the UAE Minister of Foreign Affairs and International Cooperation attending the meeting virtually. According to the Ministry of External Affairs, the focus areas for the I2U2 are water, energy, transportation, space, health and food security. As this bloc takes shape it is pertinent to consider India position and role in the I2U2. The I2U2: A reflection of resets The I2U2 is an outcome and a reflection of the resets that the West Asian region has been going through. The formation of the I2U2 is considered as a direct outcome of the Abraham Accords.

Word Count: 500, Character Length: 2989 characters

BSF-HCM-TEST-Dated-2026-07-02-Test NO.-27208

The Abraham Accords saw several Arab countries such as the UAE, Bahrain, Sudan and Morocco establishing diplomatic ties with Israel in 2020. This normalization process was facilitated by the US. The ending of animosity between Israel and at least some Arab countries has paved way for greater regional and multilateral cooperation. The first I2U2 summit is taking place as the US President Joe Biden travels to West Asia to reset the US relations with Saudi Arabia. The ties between the US and Saudi Arabia have been uneasy for past some time. Biden visit to Saudi Arabia is considered as a step backwards for him since as a presidential candidate in 2020, he had spoken about making Saudi Arabia and its leaders social pariah. The relations between the two countries further soured in March this year when Saudi Arabia and even the UAE refused to entertain the US calls for increasing oil production in the wake of the Russia Ukraine war so as to ensure a smooth energy supply and to keep oil prices under control. Biden visit is expected to ease tensions between the US and Saudi Arabia by ironing out these differences. Biden is also expected to explore the possibility of bringing Saudi Arabia and Israel closer. Other resets which the region witnessed recently, which may not have a direct and immediate relevance for the I2U2, have been steps towards rapprochement between Saudi Arabia and the UAE on one hand and Turkey on the other. The I2U2 is an attempt towards forging cooperation between regional powers Israel and the UAE and their extra regional close partners India and the US in the wake of changing equations in the region. India and the I2U2 India participation in this grouping is an outcome of resetting its own ties with the West Asian region. Over the decades since independence India engagements with the West Asian region, particularly the Arab countries were heavily influenced by ideological considerations. Concerns about domestic Muslim electorate as also attempts to gain the Arab countries support over the Jammu and Kashmir issue meant India kept distance from Israel. Also oil supply and remittances from Indian Diaspora in the Arab countries ensured that India engagements with the region remained limited to the Arab world. Although India established diplomatic ties with Israel in 1992 correcting the wrongs of earlier decades, India outlook towards the region still did not change. Prime Minister Modi tenure saw a paradigm shift in India policy. While Modi continued to develop close relations with the Arab countries, he took steps to elevate these ties. Modi ensured that India ties with the Arab countries were diversified and that oil and remittances were no longer the sole determining factors although these continue to remain important. Modi visit to Israel in 2017 ended the zero sum game thinking through which India viewed its relations with Arab countries and Israel. Shift in India policy towards West Asia is evident from the fact that India has strategic cooperation with Israel as.

BSF-HCM-TEST-Dated-2026-07-02-Test NO.-27211

There are strict instructions to the additional head examiners not to allow any shoddy work in evaluation and not to issue more than 20 25 answer books for evaluation to an examiner on a single day. The examiners are practicing teachers who guard the interest of the candidates. There is no ground to believe that they do unjust marking and deny the candidates their due. It is true that in some cases totaling errors have been detected at the stage of scrutiny or verification of marks. In order to minimize such errors and to further strengthen and to improve its system, from 1993 checking of totals and other aspects of the answers has been trebled in order to detect and eliminate all lurking errors. The results of all the candidates are reviewed by the Results Committee functioning at the Head Quarters. The Regional Officers are not the number of this Committee. This Committee reviews the results of all the regions and in case it decides to standardize the results in view of the results shown by the regions over the previous years, it adopts a uniform policy for the candidates of all the regions. No special policy is adopted for any region, unless there are some special reasons. This practice of awarding standardized marks in order to moderate the overall results is a practice common to most of the Boards of Secondary Education. The exact number of marks awarded for the purpose of standardization in different subjects varies from year to year. The system is extremely impersonalized and has no room for collusion infringement. It is in a word a scientific system. CBSE submitted that the procedure evolved and adopted by it ensures fairness and accuracy in evaluation of answer books and made the entire process as foolproof as possible and therefore denial of reevaluation or inspection or grant of copies cannot be considered to be denial of fair play or unreasonable restriction on the rights of the students. A Division Bench of the High Court heard and disposed of the said writ petition along with the connected writ petitions relied by West Bengal Board of Secondary Education and others by a common judgment dated 5.2.2009. The High Court held that the evaluated answer books of an examinee writing a public examination conducted by statutory bodies like CBSE or any University or Board of Secondary Education, being a document, manuscript record, and opinion fell within the definition of information as defined in section 2 f of the RTI Act. It held that the provisions of the RTI Act should be interpreted in a manner which would lead towards dissemination of information rather than withholding the same; and in view of the right to information, the examining bodies were bound to provide inspection of evaluated answer books to the examinees. Consequently it directed CBSE to grant inspection of the answer books to the examinees who sought information. The High Court however rejected the prayer made by the examinees for reevaluation of.

BSF-HCM-TEST-Dated-2026-07-02-Test NO.-27212

Well as Saudi Arabia and the UAE. India myopic view of West Asia prevented greater engagements and involvement in the region. However, with realpolitik prevailing in India policy formulation, India would look forward to a greater role in the strategic and economic landscape of West Asia. The I2U2 could just be the boost to India future aspirations in the region. The newly formed I2U2 intends to focus on economic, technological and infrastructural cooperation; the members would do well to work around their different approaches towards Iran. Iran could prove to a challenge in functioning of the I2U2. Israel considers Iran a security threat even as the western countries are attempting to salvage the nuclear deal. The UAE is taking steps towards improving ties with Iran. India is the only country that enjoys cordial relations with Iran. India has deep economic and strategic engagements with Iran. With Chabahar Port under development and INSTC under trial run, India could prove to be a vital link between Iran and its adversaries. The I2U2 provides an additional avenue for India to expand its multilateral engagements but it also offers an opportunity for India to play a prominent role in the geopolitics of West Asia. Healthcare workers, including doctors, nurses, laboratory technicians, support staff, and pharmacists, are vital in ensuring timely delivery and care for the population. During the worldwide pandemic, this workforce formed the backbone of the fight against the virus. The demand for healthcare workers is on an upswing across the globe. As a result, the opportunities for the Indian workforce in the global healthcare sector are immense. Healthcare professionals can explore vacancies abroad to increase their chances of securing the perfect role. Moreover, it can be a chance to travel and experience a new culture. However, before crossing the border and starting a new life, there are some essential things to look at. Reasons to Work Abroad A career overseas helps the candidate develop cultural competence. It expands the chances of meeting new people and learning a new language. Furthermore, by interacting with patients and professionals from different cultures and religions, the candidate can learn new techniques and skills that might not be possible otherwise at the workplace. Many healthcare professionals have been able to gain experience in a different country and utilise this experience when they return to their home country. Healthcare professionals often opt for a career in more developed countries to pursue a better life and enjoy a higher earning potential. Apart from competitive salaries, countries like the UK, Saudi Arabia, UAE, Europe and the US offer many benefits to those seeking healthcare jobs overseas. What to consider when applying for international healthcare jobs Candidates must first decide where they want to apply. The ensuing steps will involve acquiring the right qualifications and specialisations as per location, obtaining the right visa, learning the language, and understanding the different laws and customs, among others. Conduct research to learn about the countries that suit the applicant requirements. Applicants must start by.

RKC Typing Test All Exam Link- Paper to Screen Available Link
https://rkcnawada.online/best-typing-software-rkc.php

BSF-HCM-TEST-Dated-2026-07-02-Test NO.-27213

Finding out how the healthcare system operates in other nations as this is crucial information that will determine if a specific country is a good fit and also which career opportunities are likely to be available to them in future. For instance, the US Bureau of Labour Statistics projected 1.2 million new personal and home health aide positions in 2020, with the need for another 3,72,000 registered nurses by 2028. Healthcare professionals must also evaluate what is important to them in their new host country. Most Indians want to migrate to English speaking countries because the language does not act as a barrier to their growth and makes it easier to settle into their new home. Additionally, the medical needs differ from one country to another. It is vital to recognise cultural differences since they can impact the professional lifestyle and experience at work long term. Having information about the terminology, duties, responsibilities, and credentials associated with the position is crucial. Acquire the right qualifications and documents. Working as a nurse or doctor in any country requires specialist qualifications. Although most qualifications are accepted globally, some are not accepted in certain countries. To start working in such countries, the candidate may have to weigh up getting extra qualifications. As part of the Union Health Ministry Heal by India initiative, a study was conducted to map the requirement of all categories of healthcare professionals in foreign countries, based on the burden of diseases and shortages. The preliminary findings of the study indicate the demand for dentists and gynecologists in the United States. Moreover, there is a need for nurse practitioners in Singapore, the Netherlands, Sweden, Germany, Cuba, Nepal, and Israel. Working abroad comes with the requirement of a work visa. To obtain a work visa, professionals need to meet specific requirements and may need to make payments to cover the cost of this, though this varies per country and can also vary per employer. Most countries encourage immigrants with healthcare qualifications experience, but if there any concern in the paperwork and other related documents, there can be complications in getting approval. Collect all the required documents related to education, work, travel, and identity. These include qualifying degrees, certificates, licenses, work experience and specialisation. As healthcare is a high risk industry, background screening and verification is considered as a crucial step by healthcare recruiters. Prior planning and verification of all documents ensures a smooth transition into an overseas healthcare job as it is often a requirement for obtaining a license to practice in a new country. Maintain a Digital CV A Digital CV showcases essential information about the candidate work experience, qualifications, education, and skills. It is a vital document to maintain and update regularly. A Digital CV is often the first chance to convince prospective employers and recruiters to shortlist and interview the professional. Many individuals update their CVs when looking for a new job. However, despite the candidate employment status, it is best to keep the Digital CV updated. Update.

https://rkcnawada.online/best-typing-software-rkc.php

BSF-HCM-TEST-Dated-2026-07-02-Test NO.-27214

Skills as per requirement. Healthcare professionals must continually upgrade their skills and know about the developments in the medical industry. Depending on the country the candidate wishes to establish a career in, the candidate must know its protocols, health tech developments, and innovations. This will also help in building confidence and knowledge amongst the potential employers. How to apply for healthcare jobs in the international market With the support of technology, searching for an eligible position in the healthcare sector of the international market is easy and convenient. Today, there are healthcare career platforms that provide end to end services, ranging from job listings to document verification and licensing. Candidates must rely on reputable providers and steer clear of fraudulent sites. The process to apply for a job abroad should be crystal clear in the candidate mind. Bottom Line The World Health Organization predicts a shortfall of over 18 million health workers by 2030. Recognising the healthcare sector as a major employer, the Ministry of Skill Development and Entrepreneurship plans to supply 300,000 healthcare workers to countries like the US, UK, Germany, Sweden, Australia, Singapore, and Japan by 2022. These statistics are indicative of the fact that the demand for healthcare workers will continue to grow in the coming years with countries aspiring to strengthen their care delivery. A healthcare job abroad comes with the benefits of an attractive salary and the chance to work with leading professionals and modern amenities. Indian healthcare professionals can tap this opportunity to fill the talent gap and establish their careers in fast moving international markets. India is a nation of manifold wealth and one of them is the abundance of workforce one can find. However, it is unfortunate that this wealth, especially with respect to the blue collar workforce, is not understood in the way it should be. Most people continue to use the terms blue collar workers and low or unskilled workers, interchangeably because employment can range from the hard labour of lifting and moving stuff to being a crucial part of a production line and or being part of the service sector industries. The truth is that for India, its blue collar workforce is its all pervasive support system. Research findings suggest that the probable number of blue collar workers in India ranges from 300 450 million with an overwhelming majority of them being men, and women being very few and far in between. When finding jobs, the workforce has traditionally leaned on mass recruiters or contractors to find jobs and at times is required to pay commissions to obtain positions. This approach is counterproductive to the job seeker as it is costly, time consuming, unstructured and more beneficial to the middlemen. Moreover, there is no assistance for the blue collar employee in ensuring digital documentation, access to bank records or other benefits, which when combined with the real danger of defrauding by agents, have been catastrophic. The worldwide pandemic in 2020 changed the landscape of lives and the way one.

What is the brouhaha over AI tech and deepfakes, which seems to go back to a timeless zone? Long before the advent of AI and deepfakes, many characters from Indian mythological epics, Ramayan and Mahabharat, had the ability to morph into different personas. Indeed, the demon Marich in the Ramayan could perhaps be regarded as a conceptual precursor to the modern deepfake phenomenon. Ravan's kin transformed into a golden deer to lure Ram away from Sita and, thereby, aid and abet Ravan in abducting her. The 'deepfake' game was not just confined to visual deception. As he lay dying after being struck by Ram's arrow, Marich imitated Ram's voice while calling out to Lakshman for help in a distressed tone, prompting a concerned Sita to coax Lakshman to help his brother. It was the perfect unguarded setting for Sita to fall prey to the machinations of Ravan, who morphed into a venerable sage to carry out the abduction. It was a flawless two-stage deception at work. There was a pronounced culture of deception in the mythological setting, in which some characters, imbued with illusory powers through maya, could transform and deceive for malefic or, at times, noble ends. Deception, trickery, and delusion intruded into mythology then, and, through tech, via an algorithmic interplay, now. Deepfakes spawned by AI, like the mythical 'mayavis', are intended to impersonate and deceive. No doubt, mythology, particularly insofar as it encroaches upon the domain of tech, is taken with a pinch of salt by rationalists as it does not rest on a scientific foundation and, as such, is regarded as fiction. Significantly, there is settled unanimity about accepting the writings of Jules Verne as 'sci-fi with substance', ostensibly because they presage actual inventions and enjoy chronological proximity with the latter. Mythological narratives, while not being predictive in a technological sense, traverse a symbolic, moral and metaphysical canvas. Ravan's pushpak viman, for example, may be regarded as a metaphysical precursor to the flying machine, even though it lacks a scientific rationale. The mythological mayavis and the deepfake manifestation of AI tech inhabit two watertight compartments, and the twain do not meet. But they do point to a common denominator of deception that has been, and continues to be, increasingly applied to achieving objectives across diverse areas of human endeavour. Indeed, both mythology and AI-engineered deepfakes evolve from a long-standing human fascination with illusion, identity, and the power to manipulate perception. Mythology caters to the 'willing suspension of disbelief' route even as scientific developments rest on the bedrock of empiricism and deductive rationale. However, one cannot deny that, at the end of the day, imagination powers innovation, which, in turn, paves the way for invention over a scientific and evolutionary route. Somewhere, then, the distinction between fantasy, fiction, scientific development, and metaphysics seems to fall apart, and fantasy and imagination apparently have in them the seeds that sprout inventions. Footballers' celebrations are a story by themselves. After a goal by Erling Haaland who took Norway to the World Cup prequarterfinals, he struck a post-match pose, wearing the horned Viking helmet. Contrast that with his signature post-goal yoga pose: eyes closed, fingers in Gyan Mudra, as he did after his goal against Iraq. When he dons the helmet, he's the victor, leaning into primal Nordic m

officials, limited integration of advanced technology, and the absence of a specialized investigative framework remain overlooked. These gaps suggest that the framework is largely punitive, with less emphasis on administrative preparedness and systemic reform. As the law is in its nascent stages, the effects of successful prosecution and conviction are yet to be tested. Nevertheless, the continued occurrence of major examination leaks and large-scale scandals does not augur well for practical effectiveness of the law. Incidents such as the UGC-NET 2024 leak, the UP Police Constable Recruitment Examination 2024 paper leak, the NEET-UG controversy, and recurring allegations have exposed persistent vulnerabilities in the examination system. A common pattern is that examinations are cancelled, matters are transferred to the CBI or a Special Investigation Team, committees are constituted, and inquiries are initiated. However, once immediate public outrage subsides, the focus often shifts from addressing the deeper structural failures that enabled the leak. These incidents have affected crores of candidates and necessitated the cancellation, re-examination, or investigation of the examinations. Therefore, the law appears to function more as a post-facto corrective mechanism than as a complete deterrent to organized examination fraud. This suggests that legislation must be supported by effective enforcement, institutional accountability, and secure examination systems, not merely penal provisions. Critics argue that repeated irregularities expose governance failures, while accountability remains confined to inquiries, committees and investigative proceedings. The government's proposal to use IAF planes for delivering NEET-UG retest question papers or to impose a temporary ban on the Telegram app prior to the exam might not serve as a sustainable solution. Enhanced technological surveillance, improved collaboration with service providers, and proactive intelligence-driven oversight of examination procedures could have led to more effective results. (The author acknowledges the research contributions made by Vineet, under-graduate student of MNLU, Nagpur) 2026 When Indian arms reach Sudan, who is watching? Pranjal Srivastava is an aerospace engineer and former NASA National Space Grant Fellow. he write on the intersection of technology, defence economics, industrial policy, and geopolitics. As Indian firms integrate into global conflict supply chains, US sanction on a Raipur explosives company reveals the accountability gap at the heart of India's defense boom India's arms are showing up across the world. Brahmos missiles to Vietnam. Pinaka rocket systems to Armenia. Avionics and subsystems to the US. Even artillery shell components in Ukraine. Meanwhile, the Indian state has been supportive, even celebratory. The ministry of defence has ringfenced 75% of its modernization budget for domestic procurement, guaranteeing a multi-billion-dollar captive market. Through the iDEX initiative, over 16,000 MSMEs and startups have received direct grant funding and military testbed access. The new Anusandhan National Research Foundation (ANRF) has been established to bridge fundamental science with national security applications. This is the birth of India's modern techno-security state an emerging nexus of economic development, national security, technology, and innovation. India's new war machine is real, even necessary. Yet, it remains largely unexamined

Develop a localised sense of climate adaptation on the ground. 2. Strengthening public systems, schemes, and regulations Maharashtra recently witnessed incidences of death due to dehydration and heatstroke on account of heat stress. Events such as floods come with their own risk of spikes in vector-borne and water-borne diseases. Therefore, it is crucial to strengthen public systems, such as the public health system, from a climate adaptation lens. Building competent systems to cope with anticipated climate stress is essential in providing an effective safety net for people to adapt to climate impacts. Infrastructure development on natural drainage flows, building on low-lying areas, and deforestation in mountain areas can also result in increased vulnerability, exacerbating climate change induced impacts as is being seen in Himachal Pradesh and Delhi. Therefore, regulations around infrastructure development need to be stricter so that local adaptive capacity is not undermined. New infrastructure must be built with an emphasis on bolstering adaptive capacity rather than hindering it. Indeed, public spending will need to be directed towards building adaptation assets both built-up, such as resilient housing, and natural, such as through wetland rejuvenation. Regulations governing financial markets to encourage finance flows to adaptation must also be strengthened. Enhancing public schemes, such as NREGA, from a climate adaptation lens can also prove very useful. It has been shown that such schemes have strong climate adaptation co-benefits. These schemes can provide the financial means to help people build locally suited adaptation assets such as percolation tanks to grow their groundwater buffer. It is important to note that, to be both locally contextual and scalable, these actions must be rolled out on all levels of the public sector. This requires the involvement of the national, state, urban, and rural governance structures. 3. Expanding the understanding and measurement of climate adaptation solutions Climate change is often positioned as a global topic, with only international conferences spoken of. However, adaptation is highly local, and capacity building around it must be done in a locally relevant way, without the use of jargon. Building the capacity of government bodies, communities, and civil society on climate adaptation and resilience in their local contexts is key to effectively engaging on and preparing adaptation solutions. The metrics to measure adaptation must also be reimagined to capture climate linkages across the economy and the environment. Reduced distress and loss of livelihoods, reduced costs of rebuilding, and enhanced productivity during climate stress, for example, must be accounted for. But resilience building is also likely to have multiple positive adjacencies on issues as diverse as improving livelihoods and incomes, groundwater conservation, and biodiversity enhancement to resilience to other kinds of stressors such as market shocks and even climate mitigation. Restructuring the tools and methods we currently use to monitor and evaluate climate adaptation can make them better suited for this contextual complexity, and help drive more of the public imagination towards it. Climate adaptation being considered a strategic priority by the public sector, and action being directed towards it in mission mode, is in the interests of the country and its people. Both the private and the public sector have importa

Bryan Johnson, tech billionaire and age reversal evangelist, is doing a lot to ensure everlasting youth for himself, from tracking biomarkers on sleep, nutrition, exercise, taking supplements, restricting diets and much more. Now in India, Johnson is making headlines across media for his vision of achieving immortality through AI driven tech support. I, with my rudimentary, at best, understanding of technology, cannot claim to decipher either any merit or flaw in this immortality project. I can only ask, is it so uncool to age and die when friends and family start doing the same, simply because, as they taught in middle school biology classes (and perhaps still do) the biggest difference between living beings and non-living things is that living beings live and then finally die? Don t get me wrong. I love my life. As of now I am ageing without withering, my faculties are intact, my gut can take spicy prawn curries and rich plum cake and wash it down with a glass of red wine without any serious repercussions other than a bout of acid reflux. The skin looks tolerable even without make up and yoga lets the old limbs jive at Christmas parties even now. Jane Fonda made ageing with panache a life choice. And many of us are quite capable of using the Fonda mantra to push away the self-image of geriatric grannies. But that does t mean we won die. Unless Johnson offers us a way out. But am wondering, in case that happened, how boring it would be to know that this sameness of life will continue for ever, long after loved ones, friends, enemies, even role models move on to the other side. How tedious it would be to live simply to sift through memories of the life we had, without family and friends to share them with. We would not be inspired by the significance of Now of living and loving to the fullest Now since life is short. For life would not be short, it would be meandering forever ,like a song on a loop, being played again and again till you were exhausted listening to that old tune, once enchanting, now simply annoying. With Christmas round the corner, I am telling myself, what if this is my last Christmas? It makes me a little uneasy but it also pushes me to take it all in the Christmas tree with its fairy lights, the presents, the Christmas parties, the plum cake and wine. It makes me want to draw my family and friends once more into the circle singing Auld Lang Syne, celebrating the bonds of shared memories and cherished connections. These bonds stay on, holding those who have left this world to those who are still around, in a warm embrace, intangible yet alive in the stories we tell, of joy and fun and seasons in the rain and sun. I just want to be part of such stories, after I am gone. Yes, I don t want to be sick and in pain. I just pray that when the time comes, I just quietly, gently slip away, leaving behind a trail of joyful memories. Surely the biggest incentive to live life to the fullest is that death can be a well-earned rest for eternity may I add. Harmony in human relations plays a pivotal role in begetting true peace, happiness, and success in life. Relationships, whether personal, professional, or societal, determine our respective roles and responsibilities by using our inner or outer resources and moral code of conduct. Different dimensions of life, like our roles, relations, responses and resources, which regulate the visible world without, are, in turn, managed by our invisible souls within. Verily, it our inner being

And universal fellow feeling under the sun. Such a soul-conscious state of mind automatically enables us to live and work in constant awareness of being a peaceful, lovely, and happy human being and as the creator or sustained of harmonious relationships with all beings under the spiritual fatherhood of one incorporeal Supreme Being. With these innate feelings and positive attitude of soul consciousness, we automatically experience and exude true love and care as our original nature. The more you give, the more you get. What you give, the same you receive. Follow this law of Karma and adopt the adage: give love and happiness, get love and happiness, to realise harmony in every relationship. As you cultivate and share your soul s positive feelings, you foster your being score qualities. Do not think, listen or speak about your or others weaknesses. Always appreciate your own and others specialities. Thank everyone who loves and supports you. Thank everyone, even if they are not kind and considerate of you because they have allowed you to test and enhance your powers of patience, tolerance, and adjustment. You only need to be accepting, appreciative and accommodating in your relationships. In the act of giving, we remit the right energies to cater to others needs and thereby create and spread vibes and feelings of wellness in ourselves and our surroundings. As giving is our true nature, when we give and radiate the energy of goodness, we become the first ones to receive it. We then become emotionally powerful, self-sufficient, and self-reliant. Navigating through our relationships today, let us check if we are givers of care, attention, and forgiveness. Often, we start as givers but gradually shift to the wanting side of things. Relationships are strong when we only give and give. When we expect a give-and-take relationship, it looks like business. In your relationships, have you given more goodness than you have taken? Even if its one-sided, do you radiate selfless love, respect and care to the other person? If yes, then your qualities are conducive to creating lasting relationships. When we care for ourselves emotionally and spiritually, we recognise our self-worth and discover an unending supply of inner energies of happiness, peace and love. We, then, need nothing from others. We have so much positive energy to give that we automatically radiate it to people. True help is to enable people to discover their positivity and specialities. This encourages love and positivity. Pioneering philosopher and historian of Indian art, Coomaraswamy who was a staunch nationalist. Kamath sculpture brings forward the beauty of Indo-Asian antiquity as a proto-national art form of the highest quality, a visual manifestation of what Coomaraswamy called the great ideals of Indian culture. This sculpture with its multiple manifestations rendered in tones of neutrality keeps these ideals alive and incisive. It is the piece de resistance of this exhibition and puts the spotlight on artists creating works that invite intellectual stimulation. From Kamath you move to the magnificent master Manjit Bawa who had a stroke while he visited the Bodhi Art Exhibition at Qutub Institutional Area in Delhi in the first week of December in 2005 and remained in a coma for 3 years and passed away in 2008. It may be the classic bull that heralds Bawa the Sufi lover and the creator of Kanha the flautist and his cows. The works on view in this exhibition belonging to Bhavna Ba

Of the past, technological lapses and missing links are filled in and ascertained that the children are more ready and equipped to take online classes even as offline classes continue. We will then be able to substantiate that these children unerringly get the gains of online education something that they were deprived of in the first four waves of the pandemic. Technology is playing a crucial role in empowering the consumer by providing them limitless access to information. Products and services are readily available at the touch of a button. As consumer behavior trends grow in speed, brands must evolve to keep up with them. Through their actions and choices, brands play an active role in establishing customer preferences. The impact of consumer behavior has changed the way brands operate, which has resulted in a large amount of e commerce and online marketplaces. The advent of digitisation and the emergence of marketing through digital platforms, vis a vis offline marketing have changed consumer experiences, which further demands evolved use of technology. Some of the trends which are driven by consumer behavior are: Personalisation People want to interact with people, pieces of content, or software that give them the impression that their preferences and interests are being considered. The constant increase in awareness of latest and unique has given rise to personalisation. A lot of companies use personalised technology or products like monitors and other gadgets which are custom made as per their needs. Ease of access to information A decade back, buying decisions were based on advertisements, word of mouth and past experiences. However, the choices are now made on the basis of the information of product or service available on the search engines. The more presentable and effective the information is, the more impact it will make on the purchase decision of the consumer. Creating an experience The customers not only look forward to uniqueness in a product service or technology, but they also rather demand an experience which can leave an impression on their minds. The brands are using technology as their pillar of support to create such experiences with new trends like AR and VR. Moment optimisation The customer journey has changed dramatically since the lives have become connected and the introduction of smart gadget and, with them, micro moments. Consumers make decisions faster than ever before and find the information they need in even less time. Chances that a customer has already made up his mind to buy a certain product is greater than 90 % to any channel whether it is offline or online. It is no longer a straight line from A to Z via B, C, D, and so on. This journey now includes hundreds of different stops where we visit apps, social media, and websites. Since the customers are living in the moment, the brands, therefore, are using these moments through various technology trends to make the most of moment specific impulses of the consumer New communication channels Responding to consumer needs.

In a fiduciary relationship and consequently has no obligation to give inspection of the evaluated answer books under section If the examinee is entitled to inspection of the evaluated answer books or seek certified copies thereof, whether such right is subject to any limitations, conditions or safeguards? Relevant Legal Provisions to consider these questions, it is necessary to refer to the statement of Act. RTI Act was enacted in order to ensure smoother, greater and more effective access to information and provide an effective framework for effectuating the right of information recognized under article 19 of the Constitution. The preamble to the Act declares the object sought to be achieved by the RTI Act thus: An Act to provide for setting out the practical regime of right to information for citizens to secure access to information under the control of public authorities, in order to promote transparency and accountability in the working of every public authority, the constitution of a Central Information Commission and State Information Commissions and for matters connected therewith or incidental thereto. Whereas the Constitution of India has established democratic Republic; And whereas democracy requires an informed citizenry and transparency of information which are vital to its functioning and also to contain corruption and to hold Governments and their instrumentalities accountable to the governed; And whereas revelation of information in actual practice is likely to conflict with other public interests including efficient operations of the Governments, optimum use of limited fiscal resources and the preservation of confidentiality of sensitive information; And whereas it is necessary to harmonise these conflicting interests while preserving the paramount of the democratic ideal. Chapter II of the Act containing sections 3 to 11 deals with right to information and obligations of public authorities. Section 3 provides for right to information and reads thus: Subject to the provisions of this Act, that the RTI Act gives a right to a citizen to only access information, but not seek any consequential relief based on such information. Section 4 deals with obligations of public authorities to maintain the records in the manner provided and publish and disseminate the information in the manner provided. Section 6 deals with requests for obtaining information. It provides that applicant making a request for information shall not be required to give any reason for requesting the information or any personal details except those that may be necessary for contacting him. Section 8 deals with exemption from disclosure of information and is extracted in its entirety Exemption from disclosure of information 1 Notwithstanding anything contained in this Act, there shall be no obligation to give any citizen, information, disclosure of which would prejudicially affect the sovereignty and integrity of India, the security, strategic, scientific or economic interests of the State, relation with foreign State or lead to incitement of an offence; information which has been expressly forbidden to be published by any court of law or tribunal or the disclosure of which may constitute contempt of court; information, the disclosure of.

Moment optimisation The customer journey has changed dramatically since the lives have become connected and the introduction of smart gadget and, with them, micro moments. Consumers make decisions faster than ever before and find the information they need in even less time. Chances that a customer has already made up his mind to buy a certain product is greater than 90 % to any channel whether it is offline or online. It is no longer a straight line from A to Z via B, C, D, and so on. This journey now includes hundreds of different stops where we visit apps, social media, and websites. Since the customers are living in the moment, the brands, therefore, are using these moments through various technology trends to make the most of moment specific impulses of the consumer New communication channels Responding to consumer needs.

And behavior through emails and phone calls is a thing of the past. With the advent of new platforms owing to the evolving technologies, it has become imperative for the brands companies to create a recall value for their products and services on these platforms as well. Cloud technology, Iota and Big Data The evolving behavior of the consumer has also led to the integration of some of the latest and biggest technology trends. Cloud computing enables businesses to track consumer behavior like never before. Sharing, storing, and outsourcing have all become significantly easier in recent years. Data on the cloud provides businesses with full scale data to analyses purchasing behavior and improve algorithms to better serve their customers. Responding to the consumer behavior innovatively and creatively is the need of the hour and hence, the brands should be able to strike a balance between the right technology and the needs of the consumer to be able to stimulate and retain the consumer and optimise the growth. which would cause a breach of privilege of Parliament or the State Legislature; information including commercial confidence, trade secrets or intellectual property, the disclosure of which would harm the competitive position of a third party, unless the competent authority is Function through a cataclysmic change. Narrowing it down to India blue collar workforce scenario, it saw widespread migration that caused a never before seen level of workforce supply shortage across all industries. The silver lining for the sector was when companies in the blue collar hiring space used the opportunity to scale up their service offerings which, when coupled with the Government of India digitization move, helped usher in an era of tech led blue collar workforce management. Technology possesses the power to influence and impact industries, propelling them towards greater growth. From a job seeker point of view, the emergence of digital job matching+ platforms brings in paperless onboarding, financial inclusion, and automated career progression opportunities all on a single platform, driving unprecedented changes in the workforce. The main benefit of these platforms has been in creating equality of workforce availability across the country. They help workers locate jobs in areas that are convenient to them and thereby make a positive impact on the local economy. On the employer side, it helps companies discover job ready individuals with relevant skills in addition to getting authenticated profiles and employment records without much effort. This also helps accountability and fixes appropriate wages by connecting job seekers and employers directly. Tech enabled job hiring platforms also encourage on demand hiring that helps lower overheads, allowing job seekers to choose the how and when of their career choices. Additional value added services such as attendance, payroll and worker management at scale ensure the management time and attention is more focused on business tasks and enhanced efficiency. Undoubtedly, the blue collar workforce constitutes the backbone of every industry, whether production or services, and technology is becoming the essential bridge in ensuring the seamless interworking that fires the.

Spl-BSF-HCM-TEST-Dated-2026-07-03-Test NO.-27231

Is real but fleeting. The United States built its techno-security ecosystem over decades through durable institutions such as DARPA and the NSF, alongside a culture that empowers private enterprise. India's counterparts like the etc. have a mixed record at best. These institutions take decades to gain credibility. The window to get this architecture right is now. The second fault line is centralization. The techno-security state requires coordination across finance, research, procurement and national security. This implies concentrated power mobilizing resources at speed and scale. The Manhattan Project, Soviet Space Program, or China's drone ecosystem, are a testament to the top-down thrust across regimes. In China, Xi Jinping personally chairs leading state institutions and has shaped the techno-security state largely in his own image. For an India increasingly characterized by centralized executive decision making, this model holds seductive appeal, given the enviable Chinese success. Yet, its pitfalls like low institutionalization, personalistic fragility, and succession risk are less often discussed. The third fault line is statism. India's PLI schemes, the ANRF, and the iDEX framework are all forms of what characterizes as the entrepreneurial state. A proactive, risk-taking government that leads rather than merely corrects for market failures. This is not inherently dangerous. But statism tends to exceed the bounds of its original mandate, as India's experience with the License Raj aptly demonstrates. Thus, inviting caution. Fourth is the private sector trap. The US recently sanctioned a Raipur based explosives firm, SBL Energy Limited, and its CEO, for allegedly supplying over 200 shipments of explosives to Sudan's military. Washington alleges these shipments fueled a civil war. Yet, no Indian domestic regulator had flagged it. A foreign government's sanctions regime filled the accountability gap. Indian firms are now sufficiently integrated into global defense and conflict supply chains that their activities attract geopolitical scrutiny. The question of who watches them at home has no answer yet. India is opening its defense ecosystem to private firms like Bharat Forge and Adani Defence. The democratic work is to define who these firms answer to and under what rules. The choice is not between democracy and defense. It is about whether India builds its techno-security state consciously, with democratic accountability baked in, or drifts into one by default and circumstance. India has begun building the factories, it's the institutions that remain unfinished. The 37 per cent problem She is a tech entrepreneur, author, and relentless advocate for gender equality in STEM and beyond. Over the past 20 years, she had immersed herself in the fast-paced world of technology and AI, building innovative products and leading initiatives that challenge the status quo. AI is absorbing India's entry-level work faster than anywhere else surveyed. Nobody has asked who India's entry level actually is. Last month, Cognizant and Pearson released a study with a number that should have caused far more discomfort than it did. Surveying 750 HR leaders across India, the US and the UK, the report found that AI already performs 37 per cent of entry-level tasks in India, against a global average of 33 per cent. Nearly one in five Indian HR leaders said AI now handles half or more of entry-level work. The coverage that followed asked the predictable questi

Word Count: 534, Character Length: 3500 characters

Spl-BSF-HCM-TEST-Dated-2026-07-03-Test NO.-27234

customer support, routine analysis: these are precisely the tasks the study says AI is absorbing first, and they are precisely the roles through which Indian women have historically entered formal work at all. The BPO boom did not merely create jobs. It created a socially sanctioned reason for a young woman in Gurgaon or Coimbatore to leave the house, earn a salary in her own name, and delay decisions that were otherwise made for her. Research has shown consistently that a woman's first formal wage raises her aspirations, delays marriage, and shifts bargaining power inside her own home. The entry-level job was never just a task list. It was a claim. Now consider the arithmetic of that claim. The World Economic Forum notes that only 18 per cent of Indian women aged 20 to 29 are in paid work, against 79 per cent of young men, despite near parity in higher education. The pipeline is already a trickle. Nasscom and BCG data show women make up around 43 per cent of entry-level tech roles but only 4 to 8 per cent at executive level. In other words, the entry level is not where Indian women's workforce story begins. For most, it is where the story begins and ends. When AI eats the bottom rung, a man falls back a step. A woman falls from the building. Here is what makes this worse. The Cognizant-Pearson study, like almost every workforce-AI study before it, contains no gender disaggregation at all. We know 37% of entry-level tasks are automated. We do not know whose tasks. We are running a live, economy-scale experiment on the one segment of the workforce that carried two decades of painfully slow gains in female labour force participation, and we have not installed a single instrument to measure it. This is no accident of methodology. It is a pattern. India's AI governance architecture, for all its recent energy, has built institutions to evaluate model safety, deepfake takedowns and algorithmic bias. It has built nothing to track who AI displaces. By the time the damage surfaces in the Periodic Labour Force Survey, three or four years from now, it will arrive as a mystery: why did women's participation dip again, just when education, connectivity and urbanisation all pointed upward? The answer will have been sitting in plain sight in an HR survey from June 2026 that nobody read with gender on their mind. The optimists will object that the study itself is hopeful. Entry-level roles, it says, are not disappearing but evolving. Freshers will supervise AI, validate its outputs, and apply judgment. Perhaps. But supervision roles are fewer than execution roles, they demand continuous reskilling, and reskilling in India has a gender problem of its own. MoSPI's Time Use Survey 2024 found that Indian women spend 289 minutes a day on unpaid domestic work against 88 minutes for men, and a further 140 minutes on caregiving against men's 74. A woman carrying that load cannot attend the evening upskilling course, cannot relocate for the AI-adjacent role, cannot absorb six months of transition without income. Every friction in the pathway from old work to new work is a friction that binds harder on her. Adaptability, the study's favourite word, is not equally distributed. A woman subsidises it at home, usually, for someone else. So what should be done? Three things, none of them expensive. First, mandate gender-disaggregated reporting of AI-driven role restructuring for large employers, the same way we normalised board diversity disclosure. What is measured

BSF-HCM-TEST-Dated-2026-07-04-Test NO.-27235

Engines of India economy forward. Sri Lanka is on the boil. The country has run out of fuel, millions are going hungry, the healthcare system is near collapse, inflation is soaring, the currency has crashed, and the debt laden economy is bankrupt. Even if IMF aid comes let hope that happens soon enough Sri Lankans will have to endure years of pain before the economy gets back on track. At the heart of Sri Lanka crisis is the twin deficit problem unsustainable fiscal and current account deficits which, as experience shows, are a sure fire recipe for disaster. The US House of Representatives on Thursday drew on bipartisan support to pass an amendment that urged the Joe Biden administration to extend India a waiver from sanctions that could be triggered by its purchase of Russia made 400 air defence system. The S400 transaction was concluded in 2018. It can therefore fall afoul of a 2017 US law that imposes sanctions on buyers of Russian arms. Biden should offer India a waiver as the amendment makes a compelling case to take a far sighted view of bilateral ties. The amendment, authored by Representative Ro Khanna, pointed out that S 400 is needed to deter China. India is the only Quad member to share a land border with China. The amendment also urged the US to take more steps to assist India pivot away from its reliance on Russia made arms. The amendment is in sync with the tenor of the recent bilateral strategic relations. The watershed year was 2008 and since then cumulative US defence contracts with India add up to at least $20 billion. It was just $500 million in the period prior to 2008. Furthermore, in 2016, the US recognised India as a major defence partner. Strategic ties have also been strengthened through groupings such as Quad and now I2U2. For India, a transition away from Russian platforms is in its strategic interests. Russia dependence on China has increased significantly following its invasion of Ukraine, a situation that unlikely to change in future. Already, China is next only to India as the second largest recipient of Russia arms exports. Given the unraveling of India long standing border management protocols with China, dependence on Russian arms platforms is unwise. Given this backdrop, the Biden administration should respond positively to a rare bipartisan approach in the House of Representatives. The World Economic Forum Gender Gap Report 2022 confirms what we know from experience. Covid may have put gender parity back by a generation, and South Asia is the worst off. At current rates of progress, it will take nearly 200 years to achieve any meaningful equality between women and men. India ranks 135th out of 146 countries in terms of gender parity. It has moved up five places from last year, improved on the economic opportunity and participation front as the share of women legislators, senior officials and managers increased from 14.6 to 17.6, and the share of women as professional.

And technical workers has grown. While India education enrolment has been impressive, its health and survival record are at rock bottom. With a female population of 662 million, India situation has overwhelming impact on the global picture. India has had a gender budget for years, to goad fiscal policy towards equality but genuine parity is a distant horizon. This gap exists because of centuries of bone deep social and material bias against women, so it will not narrow by itself. It takes systematic effort to address these inequalities, and the gender perspective has to be actively incorporated into policy. Families have to be transformed, and states, employers and other institutions must identify and fix patterns that hold back women from participating and flourishing. Are they stars Actually, they are galaxies! After Naas James Webb Space Telescope first deep field image see photo was unveiled at a White House event on Monday, it was easy to wrap our heads around what we were seeing. It only captures a patch of sky the size of a sand grain held at arm length by someone on the ground, and is yet filled with thousands of galaxies; one of them, believe it or not, from over 13 billion years ago. Because of the way light travels, the further we look in space the more we look back in time. In October 2021, foreign minister S Jaishankar sat with his Israeli counterpart Yair Lapid in Jerusalem, creating the West Asia Quad with Anthony Blinken and Abdullah bin Zayed on a screen. Nine months later, Joe Biden is sitting with Yair Lapid, now prime minister of Israel, with Narendra Modi and Mohammed bin Zayed in technological proximity, teeing off the first summit of the same Quad, snazzily renamed I2U2. A smoother congruence of interests The new Quad on the block has had a shorter run up than the original Indo Pacific. Largely because India and the US, common to both, have been building their own habits of cooperation, navigating obstacles much more skillfully than before. In addition, neither Israel nor UAE needed as much convincing as Japan and Australia did. To be successful in life you do not need right breaks, wealth or connections. You just need to make the right decision at the right time. Constantly. You are what your choices are. We are a privileged lot, gifted with choice of action. No other species has this ability. A lion cannot say it is tired of hunting for prey and eat grass. A cow cannot opt for chicken because it is bored of eating hay. But you have a wide range of choices before you. Do you choose correctly is the question. Do you choose alibi or spinach Are you patient or do you vent your anger Through these choices you sculpt your future. Most times you are lured by instant pleasure, setting yourself up for sorrow later. That which is painful in the beginning gives everlasting happiness. This is the law of life to.

BSF-HCM-TEST-Dated-2026-07-04-Test NO.-27237

Help us make the right choice we are also gifted with the intellect. But most of us neither use our existing intellect nor develop it. We choose with a poorly developed intellect. And meet with disastrous consequences. Think of one bad choice you made. What drove you to make the choice Mere impulse, or like. Think of one good choice you made. The intellect helped you decide. You thought over it, weighed the pros and cons and arrived at a decision. When the intellect is not developed, as in children, choice is denied to protect them from the consequences of bad choices. There is a minimum age for driving and drinking alcohol. But what do you do when adults act on whims and fancies of the mind and not the sane counsel of the intellect why do you make wrong choices You act on a fancy, like impulse buying. Or just do what you like. You prefer lazing to exercising. It could spring from peer pressure. You drink or take drugs because your friends do so. Or you could be driven by herd mentality. Everyone is going the materialistic way so you follow suit. It could be a strong desire which holds the intellect hostage and does not allow it to think beyond what the mind desires. You want to buy a particular car even though you cannot afford it. The mind forces the intellect to justify the wrong decision. The way out is to pause, think, consult your intellect and choose. Initially, it may seem arduous, but it becomes effortless with practice. In important decisions, take time to decide. Consult a clear thinker. In ancient India, kings had in house sages whose advice was sought on important matters. This protected them from taking rash, arrogant decisions. Take your emotions into consideration. If you feel like going on a vacation, give it due consideration and fulfill the desire if the intellect approves of it. The best choice is based on values. Choose the higher against the lower, the permanent over ephemeral, worldly joys. Opt for Spirit over matter. With a strong intellect you make smart choices and become successful. Value based decisions make you happy. And when you choose Spirit, you evolve spiritually. At the heart of any economy lies business entities that don have the financial clout of the big players in the corporate sphere. Yet nations often turn to these unheralded heroes, called Small and medium sized enterprises SMEs, to revive ailing industrial units. SMEs mushroom in a variety of sectors, generate millions of jobs every year, eliminate regional imbalances by penetrating the farthest areas, facilitate the distribution of resources, and provide a myriad of opportunities for entrepreneurial development in short SMEs symbolise the march of humankind. It is estimated that Micro, Small and Medium Enterprises MSMEs account for approximately 40 of exports, 95 of the industrial units, and 45 of manufacturing output in India. They contribute more than 50 of GDP in Organisation for Economic Co operation.

BSF-HCM-TEST-Dated-2026-07-04-Test NO.-27238

The question of whether thinking alone proves existence or if existence encompasses more than thought takes us into the nature of Being, self-awareness, and life. Rene Descartes Cogito, ergo sum I think, therefore I am states that thinking is the foundational proof of existence. For Descartes, doubting confirms the presence of a thinking self even if one doubts. Thought, he argues, is undeniable proof of existence. Modern neuroscience, however, reveals that existence is not limited to thinking. Consciousness is deeply intertwined with the body, suggesting that our existence cannot be reduced solely to thought. For instance, non-thinking states such as deep sleep or unconsciousness do not negate existence; a sleeping person continues to exist through biological processes and his presence in the world. Martin Heidegger and Maurice Merleau-Ponty emphasise that existence precedes thought. Before reflective thinking arises, humans exist as embodied beings engaged with their environment. A baby, for example, interacts with the world through sensations and actions long before developing the capacity for reflective thought. Jean-Paul Sartre and Simone de Beauvoir argue existence is inherently relational, encompassing engagement with others, emotional experiences, and the creation of meaning. Love, empathy, and collaborative action are dimensions of being that transcend the realm of thought, they state. Moreover, existence extends beyond human beings. Entities like animals and plants exist without reflective thinking. A tree growing, adapting, and supporting an ecosystem demonstrates that being is not confined to the capacity for thought. According to Advait Vedanta, the Atman exists independently of mental activity. Mistaking the true self with mental activity, such as thoughts, emotions, and perceptions, is avidya and ignorance. Mental processes, such as thinking, are part of maya and belong to the realm of upadhis, limiting adjuncts that obscure the true nature of the Self. The enduring existence of the Self is evident even in deep sleep, susupti, a state where thinking is absent, and it reflects that existence is not contingent upon thought. This illustrates that the Self is ever-present, independent of the mind, and unconditioned by mental processes associated with the empirical world. The mind and intellect, as tools of empirical self, enable vyavahar, interaction with the relative world, but do not represent the essence of one being. True realisation occurs when one understands the Self, which is neither the mind nor thoughts but the eternal changeless Brahmn. Thought, as an instrument of the empirical self, aids atma vichara, self-inquiry but is not the ultimate reality. The Self, in its true nature, is Sat, pure existence, eternal and independent of mental or physical states; Chit, pure consciousness, which illumines thoughts; and Anand, bliss; the joy of realising unity with Brahmn transcends duality of thought and non-thought. Just as a pot reflects sunlight but is not its source, similarly, the mind reflects light of the Self but is not the Self. Ramana Maharshi self-inquiry, who am I? illustrates that mind and thoughts are transient, while the Self is eternal and unchanging. It distinguishes the Self from thoughts, emotions and the body. Ultimately, while thinking proves awareness, existence is a multidimensional phenomenon encompassing the body, emotions, relationships, and interactions with the world. Thinking affirms who we are,

BSF-HCM-TEST-Dated-2026-07-04-Test NO.-27240

He in the giving mode when it comes to his gametes. Problem for him, and other similarly disposed putative sperm-donors men who want it to be known that their donated sperms helped make babies is that in most of the world sperm donor identities are legally confidential. The recipient is told. The donor can disclose his identity. Exceptions where donor identity disclosure is easier, in varying ways, include UK, Germany, Netherlands, Sweden, Denmark, Finland and some states in US like California, Rhode Island, and Connecticut. In India, ICMR guidelines mandate donor identity remains hidden. Donor identity is a matter of lively debate among punters and pundits in the field. Not all donors are okay with their identity being disclosed. Not all recipients are okay with the idea of anonymous donors. Sperm banks and bioethicists across countries have their own internal debates. But the needle has moved from universal unanimity on anonymity. Needles on such issues, however, move slowly, which is a good thing, given complexities. So, if you are Musk, or a Muskian sperm donor, it makes sense to donate your gametes in those jurisdictions where those directly involved mother and baby will have the right to access donor identity. Musk, father of a dozen kids and an aggressive pro-natalist short definition: those who want women to have more babies, are probably much more serious about donating sperm than reducing govt. He should explore these options. It certainly beats offering your sperm to random dinner guests. The caveat for the world richest man: In most jurisdictions he will have to answer a bunch of questions, including on medical records, before being listed as a sperm donor. Presumably, that not something he used to. But being a smart guy, he should evaluate costs and benefits, and register. Related Questions What if two Musk donor babies grow up and procreate? That the fear of inbreeding, which is generally considered risky for the health of babies. Many countries limit sperm donations per male to reduce the probability of this. The same would should apply to Musk. Can Musk babies get to know each other? Yes. DNA testing is easy and getting cheaper. It possible, in rich countries and among better off classes in India, to search for people sharing some familial genetic material. A family of Musk half-siblings from across the world can, in future, have a get together with dad. Does this mean new kinds of families will come into vogue? New kinds of families are already in vogue. Couples living together adopting a baby, a single woman getting a baby out of medically assisted reproduction, divorced women using gametes from a sperm bank to have a baby, gay couples raising children…there will be more variations, because exercising your freedom of choice, with technology as your enabler, will continue to challenge the old notion of what a family means. Sperm donor babies will be another dimension of this change. How much influences do fathers genes have on baby intelligence? This question, in some ways, is at the heart of the spermatozoal matter when it comes to donors like Musk. In popular imagination, the likelihood of a genius father spawning a genius child is high. Consider this, though. An American millionaire, Robert Graham, had started a sperm bank called Germinal Choice, in 1980. Graham only wanted sperm from super smart men in this bank. Their sperm was available, subject to a few conditions, to women for a nominal fee. The women did have t

BSF-HCM-TEST-Dated-2026-07-04-Test NO.-27243

By 30 40, besides cutting travel time. Of course, more can be done to shore up the system. Analysts hold the view that functional courses like data entry, warehouse management, documentation training, how to maintain the health of vehicles, and development of soft skills should be organised under the Prada Mantra Causal Visas Yolanda PMKVY to make logistics workers employable and updated. It widely held that SMEs are often in a dilemma over Make to Stock stocking products as inventories until customers buy them and Make to Order production begins only after orders are confirmed systems. Thus, they invariably have to choose between cost and customer service. These are areas where they could do with some assistance from the government for efficient operations management of the industry. Make no mistake, the logistics industry has the potential to not only impact MSMEs positively, but it can also alter India socio economic landscape. Recent reports claim that the Indian e commerce logistics market, which was at $2.9 ban in 2019, is likely to reach $11.48 ban by 2024, growing at a CAGR of 18.8. As a sub text, the post Covid global supply chain management market size could reach $41.7 ban by 2026 from $23.2 ban in 2020, growing at a CAGR of 10.3, according to a report by MarketsandMarkets. The point to emphasis here is that instead of deterring guidelines, offering the right incentives will serve as a massive fillip to this sector and, in turn, benefit these small business owners immensely. We must end with a caveat. While we see an emphasis on last mile and express deliveries, not all SMEs have e commerce platforms. Understandably, we rave about digitisation, but it humans that eventually deliver products in the middle mile, often undertaking the intermediary steps from the production floor to the warehouse. This should culminate into a tug of war between technology and man, so it hoped the next installment of innovation in the logistics industry will come from the middle mile. Even a loose link in supply chains can impact jobs and families. If not addressed, the negative effect can spill over to the last mile too and affect the customer satisfaction index. As the proverb goes: For want of a nail, the shoe is lost. It would be an overstatement to say that logistics can be the right push to take SMEs to the next level of productivity and sophistication. Seasons are distinguished by their climatic conditions. There are mainly four seasons in India summer, monsoon, winter and spring. You also have the addition of a brief season like autumn in a few parts of the world. These different seasons necessitates the use of different types of clothes. Different Seasons: Things To Know Summers have the hottest days. The days are long, sunny and warm. The weather gets hot and humid as the day progresses. You tend to sweat to maintain your body temperature. Winters are the coldest and have shorter days and longer nights. Autumn succeeds.

And Development OECD countries this figure could even be 70, according to global estimates and are deemed as the last engine of growth when nothing is going right. SMEs rely heavily on strong transport systems for expansion, which makes logistics a vital component in their operations. Since SMEs work with limited capital and resources, even minor glitches can impact operational efficiencies and bring down profitability. Moreover, they are always equipped with the infrastructure to maintain logistics of deliveries resourcefully and cost effectively. Like any other industry, they have to deal with rising fuel costs, lack of capital, shortage of skilled laborers, and spiraling transport costs. Achieving supply chain visibility and targeting global markets amidst these concerns can be a struggle. Not to forget that consumer expectations are changing by the day. Naturally, a sound logistics strategy can make a substantial difference in their operations. Thus, it in their interests to opt for external expertise to achieve optimal logistics management. A logistics partner with robust infrastructure and pan India presence can facilitate smooth and cost effective operations. Dependable logistics partners with appropriate 3PL systems can bring immense value to SMEs. Additionally, their expertise in warehousing, strong network with 3PL providers across the country, and skills to handle deliveries during peak demand cycles make them a vital cog in the SME wheel. Many formidable names such as Delivery, Blackbuck, Rovigo, and Shadow fax are optimizing India supply chain systems. A player like TruckBhejo, which has retail majors, grocery, telecom, FMCG and e commerce as clients, is catering to all the three miles first, middle and last of logistics. Meanwhile, many young minds are bringing in fresh approaches to this rapidly moving industry. According to a report published in the Indian Retailer, nearly 56 of India logistics firms are using map based solutions for location technology, EVs, automation, shipment monitoring and the Internet of Things Iota. Technologically streamlined processes pave the way for business expansion. SMEs do need a digitally integrated value chain apart from solutions for improved forecasting and scaling capacities to serve customers better. Artificial intelligence powered customer support, advanced robotics, advanced analytics for order tracking and timely deliveries and warehouse automation are a few areas to look forward to. Agility in terms of processes, operational design, and people with the right skills should be nonnegotiable attributes. The use of drones and block chains can help in aligning company operations and supply chains. It equally imperative that modern logistics players keep abreast of cloud computing that is contributing to integrated logistics platforms. Digital documents, automated support processes and online payments in this industry are the future. For sure, much is expected from regulatory bodies to keep this sector in fine fettle and aid SMEs. The Goods and Services Tax Act of 2017 eliminated indirect taxes that helped logistics players expand to new areas and reduce the overall costs of operations. While the GST implementation has received mixed reviews, it believed to have simplified clearance processes, reduced paperwork, and lowered logistics costs.

Data sovereignty, have been taken in the past, but continuous vigilance is essential. Building public awareness about these targeted campaigns is crucial to reducing their efficacy. The public must discern the motives behind such attacks, as they are likely to increase as India prominence grows. Balancing the need for growth and development with safeguarding against external interference will enable India to stride confidently into the future, ensuring its rightful place in shaping the global world order. Deliberation and slow thinking characterised India Independence movement and not carnivalesque passions that colour violent mobilisations and referendums. Congress election manifesto of 1945-1946 eschewed quick fixes for wisdom and this set the stage for August 15, 1947. At no cost, it pled, must the dead past rule the living. In 1945, Congress indeed demanded Independence, but it was not a single point thrust as it is with most referendums. There was a clear promise here to also fight against casteism and for the rights of minorities and women, which required more than a tick on the yes or no box. The Tryst with Destiny speech too indicated that there were pledges yet to be fulfilled. Three new bills seek to replace the colonial-era IPC, CrPC and the Indian Evidence Act. Their declared aim is to transform India criminal justice system, eliminate the signs of slavery, and ensure justice rather than punishment. Here we unpack the Bharatiya Nyaya Sanhita Bill, 2023 that is set to replace Three new bills seek to replace the colonial-era IPC, CrPC and the Indian Evidence Act. Their declared aim is to transform India criminal justice system, eliminate the signs of slavery, and ensure justice rather than punishment. Here we unpack the Bharatiya Nyaya Sanhita Bill, 2023 that is set to replace While there have been many false dawns in the fight against air pollution, this device has been validated by the atmospheric science department of IIT-Delhi. It ionises the air to make particle pollutants heavier, thus removing them from the air and stopping the spread of pollution. It holds a low-cost promise for traffic junctions and other hotspots. The Anusandhan National Research Foundation (NRF) Bill, 2023 passed by Parliament this month, is about seriously hiking R&D spend in the country. This is critical to becoming truly globally competitive, instead of remaining disproportionately dependent on imported technologies. But the air pollution story is a reminder that there is a wide, wide world beyond big-ticket R&D. There are problems awaiting affordable solutions across so many different sectors, which can be delivered by nimble startups, with the right access to capital and mentorships. IITs have been the workhorses of startup incubation. But plans like that of the IIT-Madras incubation cell to take this game to tier-2 and tier-3 cities are very important. Because widening the pool of ideas widens the odds of a successful innovation. Not every entrepreneurial claim stands up to real-life testing. This is part of the innovation adventure and it absolutely ok, as long as the peer review processes are timely and robust. Consider the importance of low-cost stents and ventilators and water purifiers in health or affordable electric scooters in transport. New efforts are reported every day and perhaps they are underway in every sector. But these still remain too few, compared to the scale of Indians needs and, crucially, potential. The National Medical

Explaining at length their patients conditions, the treatment and the outcome. This has been disallowed a welcome move for patients rights. It is one thing to discuss patients conditions in peer meetings, quite another to chat about it on Twitter, never mind the wide-eyed audience. Soliciting patients online is also disallowed. While the 11-point guideline on social media usage is a good move, it is to be seen how authorities plan to keep tabs on medical Twitter. In another first NMC has made compulsory the existing requirement for continuous professional development throughout a doctor working years, and amusingly, has specified that none of the conferences or seminars that may count as CPD can be sponsored by pharmaceutical companies. It will be interesting to watch how this plays out. Pharmaceutical companies and diagnostics chains are in a cosy, seemingly unbreakable relationship with hospitals and doctors. CPD for doctors is driven by pharma sponsorship. If they don fund seminars, who will? That the question. New regulations reiterate that doctors must prescribe generic medicines. A good idea that has to deal with wide quality variations among generics. GOI must address issues with generics sold in the open market. When a prescribed generic is not available, it is often the pharmacist who suggests the substitute. GOI chain Jan Aushadhi shops are often poorly stocked though India generics sector ranks among the top in the world. How effectively NMC regulations will pan out will thus depend on the penalties, which are yet to be framed. In a rare interview he gave shortly before his death last month at the age of 94, Czech-born writer Milan Kundera, whose novels, translated into over 20 languages, earned international acclaim for satirising Soviet political censorship as a means to explore the larger realm of the enigma of being, made an intriguing observation. Remarking that only a work that reveals an unknown fragment of human existence can be called literature, he added, to be a writer does not mean to preach the truth, it means to discover a truth. That a bombshell of a statement, particularly by a writer of fiction in an age of fake news, which increasingly dominates public discourse and subverts factuality in order to propagate a political party, or promote a commercial entity. Isn fiction the antithesis of truth? Didn Plato want to banish poets from his ideal Republic because poetry, with its use of beguiling rhetoric My love is like a red, red, rose substitutes artifice for reality? Didn medieval Christian theologians decry poetry as the wine of the Devil which makes us lose our senses with the intoxicant of illusion? Plato and his followers believed in a supernal realm of universal Ideas of which the world we perceive is but an imperfect reflection. We have to shun the world of sense perception, which includes the snare of language, to ascend to the non-material domain of the Ideal. The British school of Empiricism, represented by philosophers like John Locke, took a very different view. According to them, our consciousness is a tabula rasa, a clean slate, on which experience scripts a narrative: a flame will burn us if we touch it; if I see a rose being as beautiful as my love, my love is like a red, red rose, Platonic displeasure be damned. The story of life is inscribed on the slate of consciousness, each story different, as our fingerprints are distinct from those of others, and yet all stories share common elements, be i

Each one of us literally embodies a reality which is both unique and communicable to others, be they family, colleagues, or friends. The words relate has two meanings: To relate to someone means to have a commonality, of views or objectives. To relate something means to narrate an event or experience to another. Those individuals we call creative writers a Kundera, a Rushdie, or a Premchand have the ability to relate, in both senses of the term, to a large number of people, across time and space, across boundaries of nationality, language, and cultural clime. Such writers can reveal to you, the reader, a truth within you which you discover with the navigational aid of the author. And to the extent that you make this discovered truth your own, it ceases to bear the proprietorial imprint of the writer. Perhaps that why Kundera said he wanted a world in which writers remained anonymous, a world in which we could all, equally, pursue our common quest for a truth that has donned the mask of fiction. Prime Minister Narendra Modi on Thursday solidified his position in shaping the narrative leading up to the 2024 Lok Sabha elections by securing a resounding victory in a no-confidence motion brought forth by the Opposition INDIA alliance during the Monsoon Session. The outcome was never in doubt, given the ruling party overwhelming majority. However, the way in which the Prime Minister and Congress MP Rahul Gandhi handled the debate was disappointing. The INDIA alliance motive behind initiating the no-confidence motion was to exert pressure on the Prime Minister to speak on Manipur, which has been grappling with disorder and lawlessness over the last three months. However, Prime Minister Modi chose to shift focus away from this issue, opting instead to launch a scathing critique against the Congress and the INDIA alliance. His accusations of corruption and questioning of motives seemed ill-timed and misplaced, considering the gravity of the Manipur situation. Notably, he began discussing Manipur after the Opposition staged a walkout. While it is well within his rights to criticize corruption and question the Congress role, the Prime Minister approach lacked finesse. Ideally, his response to the no-confidence motion should have commenced by highlighting the government concerted efforts to restore order in Manipur. Such an approach would have concluded more fittingly with a critique of the Opposition, aligning with the seriousness of the situation. Placing blame on Congress for potential underlying issues is understandable, particularly if their past governance failed to effectively address the intricate challenges faced by Manipur. Nevertheless, Prime Minister Modi approach left much to be desired. In the initial phase of his address, he embarked on an aggressive attack on Congress and Rahul Gandhi, adopting a tone reminiscent of an election rally. Remarkably, he omitted any mention of Manipur during this period. A more effective strategy would have entailed initiating the discourse by addressing the Manipur crisis head-on and then culminating with a critical assessment of the Opposition. Rahul Gandhi, who recently resumed his role as an MP, had an opportunity to showcase leadership qualities by presenting facts and figures in a dignified manner. However, his speech devolved into theatrics, characterized by raised voices and rhetoric invoking terms like Bharat Mata Ki Hatya and Kirosin. Rahul Gandhi demeanor could have displayed more maturity, av

BSF-HCM-TEST-Dated-2026-07-05-Test NO.-27250

And girls can be used during autumn. Check out this outfit for a newborn baby boy. It is well suited for autumn. Spring For spring, use lightweight and comfortable clothes. For girls, check out this knot t shirt that can be paired with jeans or a skirt. For boys, you can purchase this polo t shirt. Rains Select clothes that protect the kid from rain as well as keep him warm. Rayon t shirt with light cotton pants or rayon shorts will prevent the kid from getting fully wet. Thin cotton or thin linen clothes will also fulfill the requirement during monsoon. Avoid wearing chiffon or silk outfits though. Importance of Colors in Different Seasons Summer For summer, select subtle pastel, light and bright colors that will add zing to your child outfit. Select shades of yellow, red, orange or neon. Pair the colors with white to make it more subtle. Khaki sandy hues also give a perfect summer look. Winter Select dark, solid colors during winters. Look for shades of blues, greens, blacks, and solid colors. These colors will help to keep the kid warm, cosy and comfortable. Autumn Try to select warm colors that will help keep the spirits up in dull autumn weather. Experiment with shades of red, purple, whites and light pastels. Spring is a festive season opt for bright, neon, fuchsias or mauves. Play around with pastels and pair them with solid colors. Rains are messy with high chances of clothes getting soiled easily. Avoid whites and light shades as they get transparent if a kid gets wet. Instead, choose colors like neutral, earthy, black or solid colors. End Note Each season has a unique characteristic, and different weather impacts the choice of cloth material, outfits and kids dressing styles. Using the right types of clothes in different seasons can protect your child and keep them safe. So, follow this guide to make the right choice. This will help keep your child comfortable indoors and outdoors at all times. Digital disruptions are taking place in the BFSI industry and its time BFSI advertising adapted to the current changes. BFSI advertising issues come in a variety of forms and provide significant barriers. In addition to working in a highly regulated business, they also must deal with consumer and market related restrictions, which can make it difficult for them to stand out and perform successfully. With these challenges comes the tough choice of what strategies and solutions to use to win opponents. You must be flexible if you want to be successful as a BFSI advertiser today since advertising is more complex and changing quickly than it has ever been. BSFI advertisement will need to be innovative, flexible, and data driven to stand out and get the attention of today consumers through old method of advertisements and new method for instance, digital marketing and ads. While some professionals find these problems to be a hindrance, others see them as a chance, with winners using BFSI advertising issues.

As a competitive advantage. They outpace rivals by mastering and conquering these obstacles, thereby changing the financial services industry competitive environment, and gaining a position in the contemporary, highly disruptive market. Digital disruption is altering the way services are delivered in the market, but it may also be the solution to some of the prior issues with BFSI sectors competitiveness, such as high switching costs or high transaction costs. Some of the Current Disruptions in BFSI advertising Multichannel Advertising The era of multichannel advertising has arrived as a result of digitization. A market that demands a flawless user experience across all channels pertinent to the buyer journey is what BFSI businesses must deal with. Actually, compared to those utilising a single channel, advertisers that used three or more channels in a single campaign had greater conversion rates. It will help the BFSI industry to reach to the targeted audience and also increase the awareness among the customers about the BSFI and their products or offerings. Digital Advertisement for BFSI that uses segmentation, targeting, and personalization Big data enables BFSI to target specific individuals rather than market sectors as a whole, improving user experience and personalisation. In this case, single person segmentation is based on tracking users through cookies and other methods, combining and gathering data from Omni channel touch points including the web, social media, and applications. Customers may also be shown how rates are determined, discounts can be offered for on time payments or investments, and other actions can be taken to leverage data to automatically create a tailored experience with Digital ads. AI and machine learning in BFSI advertising Although they are significant on their own, artificial intelligence and machine learning in BSFI are crucial components of the integration of applications, catboats, and single person segmentation. Machine learning is a terrific method to exploit the abundance of data which is helping in creating a customer based advertisement. AI may decide to give the client with information and items that are pertinent to them, can refer them to a customer care agent if necessary, and can in general anticipate what the customer needs based on their behavior and actions and added on that BFSI can make relevant ads and campaigns. Experience and Engagement While adopting and making use of new technology are central to many digital BFSI advertising trends, clients are also coming to demand more from BFSI industries. BFSI must do more given that customers may simply switch receive 24 7 assistance and evaluate other offerings at a detailed level through their advertisement. Customer experience should be that extra. Automation, AI, and machine learning can be useful in this situation by giving customers better deals, making sure they don miss anything, adding value in the advertisement, and doing other things to enhance their overall experience. The Met averse Rise At this point, a lot of consumer brands, not just BFSI industry, may cast doubt on the notion of conducting business in the met averse. BFSI, however should begin.

BSF-HCM-TEST-Dated-2026-07-05-Test NO.-27253

Considering how BFSI advertisement would seem in a virtual environment right away. The fact that individuals are now spending money in the met averse and are probably going to do so in greater quantities in the future is one explanation for this. BFSI that wishes to succeed in the post digital era must integrate digital beyond its current role as a supplemental tool. BFSI can develop a federated advertising framework that wards off rivals, appeals to digital first customers, and helps the brand survive and prosper in a digitized age by utilising technology not only in advertising but across all departments. As the global population ages rapidly, it is estimated that by 2040, the global population aged 65 and older will reach 13 billion, which will be more than double the 530 million in 2010. A rapidly aging population will cause severe labor shortages throughout the global economy. According to a global study, India currently has one of the largest labor surpluses regarding its working age population 15 64 years. A fifth of India total population is comprised of young adults. They significantly contribute to the economy. However, a lack of skill development and employment opportunities hinders their development. To address this issue, the Indian government launched the Skill India initiative. India is in the phase of demographic dividend and can generate skilled labor for employment by utilizing vocational and skill development training effectively. The Skill India Mission aims to unify skill training initiatives across industries and states. By integrating and coordinating skilling efforts and expediting decision making across sectors to achieve skilling at scale with speed and standards. The Mission offers beneficiaries the following benefits. The advantages of the Democratic Dividend Increased economic activities bring about better economic growth due to a larger population of working age and a smaller population of dependents. There are multiple advantages of this, including An increased Labor Force increases economic productivity. Fiscal space increase afforded by the demographic dividend allows for a reallocation of funds from spending on children to infrastructure investment. Women labor force increases, which coincides with a decline in fertility and can be a new source of growth. The savings rate increase as the working age is also the optimal time for saving. Historically, the demographic dividend has contributed up to 15 of the overall growth in advanced economies. Rapid industrialization and urbanization due to an increase in the number of people seeking employment would necessitate greater economic activity. An individual can develop his her skills and set up a business. This again increases the scope for self employment in India. With more than 65 percent of its population of working age, India will become an economic superpower in the coming decades, supplying more than half of Asia potential workforce. Effective policy formulation Incorporating population dynamics into the planning and execution of schemes and programs is likely to result in more significant socio economic impact and greater benefits for people. Consumer spending is likely to increase with consumer electronics likely.

BSF-HCM-TEST-Dated-2026-07-05-Test NO.-27257

Manjit Bawa was one of the first to blend contemporary iconography with the world of miniatures, his 1993 historic exhibition at Gallery Space, was bought by India most distinguished collector Anupam Poddar. Bawa also did a small series of jewels at Gallery Space created in consonance with his compositions. One cannot look at Bawa in this exhibition and not remember that it was Renu Modi who introduced him into the higher arc of contemporary collectives before fate took over his life and works. That in itself defines Renu Modi the discoverer, the collector and the silent curator of so many epic exhibitions. The large unfinished Devi Bhavna Bawa collection at the CCA entrance reaffirms Bawa as a master draftsman in Indian art history, since he had a phenomenal sense of the scale of drawings and revelled in the human form. Whenever we think of legends and icons, of India it is Manjit works that comes to our mind and Renu Modi beginnings with him stand as a milestone in the testimony of time. Manjit Bawa monochromes lead us to his friend Jagdish Swaminathan, India abstract master and founder of Bharat Bhavan Bhopal. A rare treat are the Jagdish Swaminathan drawings in the show that could have got better placement. Swaminathan Portrait of Bhawani, his wife from the 1950s, is a feminine portrait of sheer vitality and gorgeousness. Lithe ,light lines create a versatile, emotive evocation including the portrait of friend and author Normal Verma 1956 brother of Ram Kumar as well as Dummi 1956 .Swami other drawings to speak of his brilliance and intellectual ardour as well as Marxian leanings. If one has to peel back the pages of Indian art history and Gallery Space one must go back to the exhibition Transits of a Whole Timer-J. Swaminathan: 1953-1970 held in 2012. Space had a scarlet wall that spoke of crimson tide. One would be wrong in stating that one of the first galleries in the country to explore the idea of the coloured painted wall as an invitation to savour a show was Gallery Space. Unforgettable was the bird on the stone within an elliptical shape juxtaposed on the scarlet wall. Space has been known for ingenious spatial design visitations. Imagine a young mother in a drought-hit village in Maharashtra, toiling on barren land, unable to provide enough for her children. Now, picture the same woman working under the shade of vibrant plantations her hands harvesting timber, fruits, or bamboo that promise income, stability, and hope. This is a utopian dream; it a vision rooted in reality, inspired by Africa success in linking tree plantations to poverty reduction. A recent study published in Nature Communications Earth & Environment Journal reveals how tree plantations and forest regrowth have significantly improved living standards in 18 African countries. They've not only provided livelihoods but also rejuvenated degraded lands and strengthened communities. India, with its vast rural landscape, persistent poverty, and climate vulnerabilities, has much to gain by embracing this transformative approach. Plantations as a lifeline In Africa, the study shows tree plantations reduced deprivation in assets, housing, and electricity access, while generating income through product sales and employment. Côte d'Ivoire, for instance, saw a 30% reduction in poverty indicators where plantations flourished. In India, the potential for a similar story is immense. Imagine the barren lands of Bundelkhand turning into forests of teak, eucalyptus, and frui

BSF-HCM-TEST-Dated-2026-07-05-Test NO.-27258

World harshest climate challenges. Heat waves, erratic rains, and cyclones wreak havoc on millions. Tree plantations offer a dual benefit: they sequester carbon, mitigating climate change, and create climate-resilient landscapes. Bamboo plantations, for instance, can sequester up to 400 tonnes of carbon per hectare while providing raw material for construction and handicrafts. Mangrove plantations along India vulnerable coastline can protect communities from storms while supporting biodiversity. The environmental benefits of plantations extend far beyond their roots, offering India a lifeline in its fight against climate disasters. A shared responsibility this vision is not without its challenges. Monoculture plantations can harm biodiversity, and poorly planned projects risk displacing local communities. But India has the tools to address these issues. By prioritizing mixed-species plantations and degraded lands, we can ensure that plantations restore ecosystems rather than exploit them. India programs like CAMPA and the Green India Mission provide a strong policy framework to expand plantations. By involving local communities through initiatives like Joint Forest Management JFM, we can ensure equitable access to the economic benefits plantations bring. This approach transforms plantations into shared assets, fostering a sense of ownership and pride among rural populations. Planting hope, growing futures the stakes are too high to ignore this opportunity. Tree plantations are more than just rows of timber they are promises of dignity, security, and resilience. They offer a chance for India rural poor to break free from the cycle of poverty while healing the scars of deforestation and climate change. As we stand at the crossroads of poverty and environmental degradation, let us choose a path that nurtures both people and planet. Let us plant not just trees, but seeds of hope and prosperity. Because when we plant a tree, we don just create shade for ourselves we create a legacy for future generations. The question now is: will we rise to this challenge and let India dry lands bloom with life and opportunity? The roots of transformation are waiting to grow. Will we nurture them? As India approaches the centenary of Swaraj week in December 2024, it is an opportune moment to reflect on the remarkable achievements of this historic campaign. Organized by the Swarajya Party in December 1924, Swaraj Week was more than just a week-long campaign; it was a testament to the indomitable spirit of India freedom fighters and their visionary strategies to involve rural communities in the nationalist movement. Spearheaded by Chittaranjan Das, affectionately known as Deshbandhu, the initiative marked a pivotal chapter in India struggle for independence, leaving a lasting legacy that continues to resonate in contemporary rural development initiatives. The genesis of Swaraj week Swaraj Week was the brainchild of Chittaranjan Das, a stalwart of the Indian National Congress and a leading advocate for self-rule. The Swarajya Party, co-founded by Das and Motilal Nehru in 1923, emerged as a faction within the Congress. Dissatisfied with the non-cooperation approach, the Swarajya Party sought to engage with legislative councils to oppose British policies from within the system. By 1924, the party had established itself as a significant force, but its leaders recognized the need to extend their reach beyond legislative chambers to rural areas, where the majority

Years of age and are typically early adopters. Some of the major platforms are seeing upwards of 80 month on month growth in their customer base, with high retention rates. Because visibility and advertising are still relatively uncluttered on these platforms, they provide an excellent opportunity Commerce market in India for brands looking to expand their customer base. The platforms efforts to increase their quickest route to meet the short customer base also benefit the brands they carry by providing organic growth. As a result, in recent months, many brands have Commerce market in India seen their business grow faster on platforms that offer up to 30 minute delivery than on those that offer longer delivery times. What is the future Industry trends indicate that Commerce market in India commerce will surge tremendously in the coming years as more businesses adopt micro fulfilment systems? The next layer of growth will come from a variety of avenues Extending to more categories like pharm, fashion, cosmetics, and electronics. Platforms like 1MG, Pharm easy and Apollo are already competing to shorten delivery times for your medicines. While there have been some trials by players like Flipchart and Warble attempting to quickest route to meet the short extend the rapid delivery timelines to other sectors, more work is required to profitably implement this. Keeping an eye on sustainable growth is important as the race for customer acquisition heats up. In order to boost unit quickest route to meet the short economics, it is critical to improve basket size and AOV, drive higher order frequency, increase deliveries per hour, and maintain delivery fees. In order to achieve quick last mile delivery, Commerce market in India commerce necessitates investments in technology, warehousing, logistics, and delivery teams. All of this comes at a substantial cost, and quickest route to meet the short leads to a high quantum of burn. Sharing these resources across more products and services to drive up AOVs and optimize costs may be the way to achieve sustainable success. Swiggy is already working towards this with Swingy Instamatic and Tomato, through its proposed acquisition of Blinkit, is aiming to quickest route to meet the short achieve the same. What works in their favor is the fact that both food delivery and Q commerce typically have a similar customer persona. Speed and sustainability must be balanced with safety for long term success. The delivery partner safety is critical. Riders should have enough cushions to absorb delivery time variations caused by external factors. Recognizing the bottleneck in the order fulfillment process, comprehending genuine customer demand, and ensuring the safety of human resources would thus be the success motto of Q commerce enterprises. It is critical to understand quickest route to meet the short that the business will be able to sustain itself in the long run if everyone in the value chain, not just the customers, is incentivized. The times ahead quickest route to meet the short promise to be exciting for the Q commerce sector.

BSF-HCM-TEST-Dated-2026-07-05-Test NO.-27260

Roy Emerson record for most Grand Slam titles won by a male singles player stood for a good 33 years. It was in the summer of 1967 that he won the last of his 12 trophies and only in 2899 did Pete Sampras surpass it. But little did anybody expect a man to rack up an equivalent number at just one Major, let alone in a span of just 3815 years. On the Parisian clay on Sunday, Rafael Nadal did just that, capturing his 12th French Open and 18th Major overall. This is an era in which along with Nadal, Roger Federer, the all time leader in Majors (20), and Novak Djokovic (15), have taken turns to relentlessly redefine the limits of greatness. But even by those exalted standards, Nadal achievement is unparalleled. His record at Roland Garros is a whopping 932, and he has bagged more trophies there than any man or woman has at a single Grand Slam. The victory didn come easy; he had to overcome a spirited Dominic Thiem, widely touted, and quite rightly, as the Spaniard heir apparent on the surface. The 25 year old Austrian had in fact beaten Nadal on dirt in each of the last four seasons and was a much improved player from the time he lost the 273818 final. But the challenge of mastering a physically fit and mentally sharp Nadal is beyond most. The triumph also came on the back of a testing few months for Nadal. The 33 year old ended 2018 under the cloud of injury and had to endure a deflating loss to Djokovic in the final of the Australian Open this January. In the lead up to the French Open, he was on the cusp of not making a final on his beloved clay for the first time since 2004, until he put together a winning streak at the Italian Open. But once in Paris, he was a transformed man and turned in what could arguably be his most complete performance. From the backcourt he displayed the kind of athleticism and shot making that belied his age. Federer bore the brunt of it as he succumbed in straight sets in the semifinals. His play in the forecourt, an underrated part of his game, was lethal, coming in only for the assured kill, as the 23 out of 27 points won at the net against Thiem indicates. Even as Nadal established himself as a near constant among men, the women game threw up yet another surprise winner, this time in Australia Ashleigh Barty. The 23 year old style is delightfully old school, with a beautifully constructed point preferred to murderous first strike tennis. Combined with a ruthless calm, she completely unnerved the 19 year old Marketa Vondrousova on Saturday to end her nation long wait for a new slam champion. The President address is an occasion to take an overall view of our contributions on different friends of national and international activities. It is also an.

During human evolution, as the brain began to evolve, the power of reasoning and the need to 'believe in something' at the individual or community level to ensure survival must have also begun to evolve. Happenings and experiences of achieving a desired objective, as an outcome of 'believing in something', may have reinforced a belief system, which could have been passed down to subsequent generations. When civilisations began to expand, the concept of 'believing in something' grew beyond merely acquiring food, land, natural resources, or even choosing a suitable mate. The system of 'belief' transgressed into something more profound: belief in the power of a Creator, a Supernatural Being who created us and all other living and non-living beings of the universe, thereby signifying 'Arrival of God' in human space. The 'belief system' associated with 'Creator' also evolved differently in various parts of the world. 'Belief systems' either brought communities together or separated them into several religions and sects all over the world, depending on which form, variation, or narration of the creator they believed in and worshipped. Besides reasons for conflict over food, land and natural resources, the evolution of different belief systems provided another potential source of human conflict, often interacting with political, economic, and territorial interests. History gives us ample examples of conflicts involving people with different belief systems. Assumption of supremacy by a community, over another because of a different 'belief system', appears to have cascaded from the past to our present. The two World Wars, regional wars, and ethnic conflicts, apart from their overt geopolitical causes, demonstrate how ideological, national, ethnic, and at times religious identities can deepen divisions between communities, owing to different faiths and religious practices of warring countries, communities or individuals. So, as long as we exist, the creator would also need to compete (and perhaps conflict) with its own diverse forms, variations, and narrations as we create or envision them. Did 'conflict' become an unintended and undesirable spin-off of our evolution? Did the creator of the universe design it that way? We may never know the answer. But just as conflict is integral to human DNA, so is peace. So, while different forms of creators continue to coexist, along with different belief systems, the 'conflict within' oneself, communities, and countries over which form of creator is superior must become extinct for peace to prevail. Care burden rather than pretending it does not exist: stipended, local, part-time by default. Third, put displacement tracking inside India's AI governance framework as a first-class concern, alongside model safety, not as a footnote to it. India is rightly proud of adopting AI faster than the world average. But a country that automates its entry level faster than anyone else, while measuring the consequences less than anyone else, is not leading. It is looking away. 37% is not a productivity statistic. It is a door quietly closing, and we have not yet asked who is standing behind it. Men, women and laziness: Depends on which room you are in. The author is an alumnus of XLRI, and a leadership coach & consultant based in Bengaluru. Every Indian friend group has an uncle like this. One Sunday, he decided to fix the ceiling fan. This involved three trips to the hardware shop, a call to his college roommate who kno

scratch, helped both kids with homework, paid the maid, out haggled the vegetable vendor, and called her mother-in-law so he wouldn't have to. Fast forward a generation. My niece works in tech, lives in a 2BHK in Bengaluru, and once dedicated a whole Saturday to organising the kitchen. This meant three sets of labelled glass containers from Amazon, a forty-minute reel binge on Korean pantry hacks, rearranging the spice rack twice, and a dinner-table verdict that Indian kitchens are just not designed for efficiency. Nothing got organised except the spice rack. Her husband, meanwhile, serviced the car, paid four bills, did the grocery run, supervised swimming class, and quietly fixed the leaking tap she only found out when she spotted the wrench on the counter. Same plot, one generation apart. Only the props changed: fan to spice rack, YouTube to Instagram reels. Laziness is a folk word doing a scientist's job badly. Researchers prefer terms like sedentary behaviour, task avoidance, or effort allocation because what looks like laziness in one room is often overloaded in another, and gender quietly decides both who gets seen and who gets counted. On paper, men move more: globally, and apparently, they're about 8% more active in leisure and sport. Case closed? Not quite. Women face more barriers to that kind of activity: safety, caregiving, and plain access. They're not lounging; they're running another marathon. Indoors. Unpaid. Largely invisible to anyone keeping score. Inside the house, the score tilts further. Women are apparently 14. 5% more likely to handle meal prep, and laundry alone eats up nearly 9% of their housework time, a chore that doesn't even crack the top five things men typically do. Not because the washing machine is hard to find. It never becomes his problem. The self-reported data makes it funnier and sadder at once: men overreport their share of masculine tasks repairs, appliances, the car wash while undercounting everything else. So, it looks like they're doing less and claiming more credit for it. That's not laziness. That's self-promotion. It helps that men gravitate toward visible labour, the kind with an audience and a round of applause built in while families tend to praise them lavishly for routine tasks women do daily without comment. Women, meanwhile, run the invisible operating system: school schedules, grocery lists, relatives' birthdays, three meals a day, laundry cycles, medicine timings, a job with no job title and no annual review. This work is only ever noticed in its absence. No clean clothes, and suddenly everyone has nothing to wear. No curd at dinner, and suddenly no one remembers who does the groceries. Cue the finger-pointing, aimed squarely at the woman who is usually still in her head, three steps ahead, planning next week's school trip. Which brings to mind the old story: a man comes home to a messy house, kids still in uniform, dishes piled up. He panics, runs to the bedroom fearing the worst and finds his wife reading in bed. What happened here? he asks. She says, You know how you always ask what I did all day? Well, today I didn't. At the office, the scales balance out; neither gender is meaningfully lazier than the other once the workday starts. What tips the scale is the shift already worked before either of them clocks in the one that never appears on a productivity report but drains the tank all the same. Laziness was never a gender trait. It's a context trait. The real question isn't w

BSF-HCM-TEST-Dated-2026-07-06-Test NO.-27265

Opportunity for the Government to indicate a direction in which we are going to move, it is difficult to react to almost every aspects of the issues mentioned precisely for that reason. Would like to highlight some limited areas. First of all, India in its efforts of the last 60 years has tried to develop of vibrant democratic politics. Now, the process of creating a democratic system is unending and at the national level, we have a super structure of democratic framework so is the situation with regard to the State level but at the third level, at the district level it needed considerable re strengthening. Now having record to the need for democratic decentralization in decision making in the devolution of resources at lower levels and for strengthening of the local level democracy. This is anta dislodging the Bacterial community from the territory. However, it is a needless cavil, as what matters is that criminal liability has been established and a life term, which ought to mean the remainder of the convicts natural life, has been awarded. The larger takeaway is that efficient investigation, diligent prosecution and judicial sensitivity can ensure speedy justice in all cases, and more particularly in cases of ghastly crimes that cause widespread revulsion and outrage. It is indeed a judgment that will inspire investigation confidence in the justice system. There was a more flagrant illegality when Mr. Kanojia was taken out of Delhi without a transit remand from a local magistrate, mandatory when an accused is taken from one State to another. Faced with criticism, the U.P. Police added a section dealing with the offence of causing public mischief and disturbing public tranquillity, investigation besides Section 67 of the IT Act, which relates to sharing of obscene or prurient material, with the motive of obtaining a remand order. A few other journalists have been arrested for discussing the content of the video clip, in which a woman is seen expressing her wish to marry the investigation Chief Minister. What is disquieting, but unsurprising, is the perfunctory attitude of civil servants towards the personal liberty of citizens. It is one thing to pursue violations through legal action, but quite another to lock up people for posts they deem offensive to their political masters and conjure up justifications for their It is time magistrates who pass mechanical orders without application of mind and officers who carry out illegal instructions from the political leadership are made to face exemplary disciplinary action. Supreme Court last year, when the case was transferred from J&K to for a fair trial. The apex court had taken note of the hindrances to a fair trial in the jurisdictional court, especially the hostile atmosphere against the prosecution. The formation of a group called the Hindu Ekta Manch in support of those arrested and the role played by members of the Bharatiya Janata Party, including two Ministers in the then J&K government, had whipped up communal frenzy. It is commendable that the Crime Branch.

Of the J&K Police and the prosecutors have brought home the guilt of Sanji Ram, Parvesh Kumar and Deepak Khajuria, who have been sentenced to life for murder and 25 years in prison for gang rape. Further, the role of some police personnel in trying to destroy evidence has also been exposed. Sub Inspector Anand Dutta, Special Police Officer Surender Verma and Head Constable Tilak Raj get a five year term for washing some blood stained clothes, concealing the victim necklace and hair band, and misleading the investigating police team about the place of occurrence of the crime. The investigation had been fairly quick, and the charge sheet was prepared in two months. The trial lasted a year, and the verdict has been delivered within 17 months of the occurrence. Appeals by the convicts are only to be expected, and the Judge Tejwinder Singh approach and the manner in which he appreciated the evidence would be determined by higher courts. Even the prosecution may appeal against the acquittal of one of the accused, whose alibi that he was appearing in an examination in Uttar Pradesh at the time of the incident has been accepted. Some may question the verdict for not imposing the death penalty in what was presented as a crime aimed. Aimed at appealing to Australia growing number of green voters. Conversely, the pro business credentials of Mr. Morrison Liberal National coalition are said to have been steadily eroded as the government has reneged on its promise of corporate tax cuts. The package of measures unveiled in the pre election budget in April may only have a moderate impact. As with several industrialised democracies, voter disillusionment with the principal parties is yielding a fragmented polity, and smaller parties and independents could potentially tilt the balance of power in the Senate, which is crucial for the passage of legislation. With consistent economic growth and modest levels of unemployment Australia has had a remarkable track record in recent decades. This scenario is in stark contrast to the incessant political swings that impede the legislative agenda. What is without doubt is that the turnout will be high at the polls, as voting is compulsory for registered voters. Manufacturing, which has a weight of almost 78% in the index, continues to be the biggest drag, with output contracting by 0.4% after shrinking by a similar extent in February. Overall, the sector growth slowed to 3.5% in the last fiscal, from 4.6% in 2017 18. The composite picture that emerges from all these numbers belies the CSO implicit fourth quarter GDP growth assumption of 6.5%, and paints it as overly optimistic. With global headwinds strengthening in the backdrop of an escalating trade war between the two largest economies, the U.S. and rising tensions in West Asia beginning to push up energy costs from the top oil exporting region, Indian policymakers have to contend with an external sector that would likely only add to the domestic pressures, most certainly in the near term if.

BSF-HCM-TEST-Dated-2026-07-06-Test NO.-27267

A peculiar mentality has gripped us that of asserting our rights, of subjugating others to get ahead, of corruption and nepotism, and of forgetting our duties. The country is also witnessing a rapid decline in the humaneness quotient. Neither do we enjoy the amend of being a human, nor do we allow our inherent human and divine qualities to blossom fully. We became free physically to do anything we felt like doing. But, without the freedom of the soul, physical freedom is incomplete. It only results in indiscipline and a life without ethics. The body of Bharat got freedom, now it is time to free the soul of Bharat. To free the soul we have to be satyamaye, truthful; atmaye, soulful; and prem-maye, full of love. Also, everyone needs to meditate and ponder over what we can offer to our country through our body, breath, soul, and energy. We have become self-centered, always focusing on getting a good job, financial security, and a cosy home. Making our body free but harbouring a warped mentality and a soul that is not liberated is not true independence. Real independence is when we are free to do what we aspire for, and when we are mentally at peace to work efficiently with ease. At the soul level, real independence is when we extend the purview of our good deeds and have a positive impact on others. For this, an element of spirituality is required. During the yugas of Ram and Krishn, spirituality was very much part of every realm. Spirituality is doing everything in the right spirit, using all your faculties, and doing the karma that is Satyam, Shivam and Sundaram truthful, beneficial for all, and effective and beautiful, too. Now time has come to put a sankalp, resolve, to do a-sahyog, not cooperate with corruption, nepotism and everything that is undesirable for our growth. The maha-mantra of noncooperation given to us during the Freedom Movement, shook the foundation of colonial rulers and ultimately led us to Independence. So, non-cooperation is a strong tool to decimate all imperfections that have soiled our system. Now, evolution has reached a point where everyone satya, truth, will surface. So it is essential to work on self, eliminate imperfections and acquired traits that have crept into our system and see what we can offer to the world. Even Vedic Sanskrit talks about mukti, liberation, from imperfections that retard our growth and evolution. Bharat is the land of evolved souls. We disregard this truth if we do not imbibe qualities of these enlightened beings. By absorbing their attributes, we develop within us the tej, luminescence, that can enlighten others, too. We spread virtues and vices, whatever is within us, through our aura. Nature is compelling us to work on ourselves, to move further on the path of merging with pure Supreme Consciousness, towards a new, golden dawn an outcome of true independence. The writer is founder of Pranam Movement based on Truth Love Karm and Light Blueprint for the nation development. Their vision for an alternative path remains inadequate. The prevalent revdi culture, centered on pledges of free electricity, water, and loan waivers, is unsustainable. Over-reliance on this approach could potentially lead to an economic downturn akin to the current predicament faced by Sri Lanka. For the INDIA Alliance to present a substantial challenge to PM Modi-led in the forthcoming general elections, it must present a more robust and visionary plan for India comprehensive progress. While the concept of coha

Not in the longer. Australian Prime Minister Scott Morrison may have, in a manner of speaking, already scored a political victory ahead of the May 18 election. Few had expected the socially conservative politician to last out the remainder of Parliament term when he took over as Prime Minister in August following a coup within the ruling Liberal party. In the past, the country has seen many heads of government toppled. That said, Saturday election may not prove an easy ride for the former marketing executive. The polls may not signal an end to the political instability that has dogged Australian politics of late. From combating climate change to shaping energy policy, Mr. Morrison Liberal party is a divided house between moderates and conservatives. These differences were manifest in the ousting of Malcolm Turnbull last year and continue to elude a resolution. The world driest inhabited continent is confronting its own vulnerability to the effects of global warming. Australia, among the world largest wheat exporters, has been forced to take recourse to bulk imports of the grain, consequent to severe droughts in its eastern states over two years. Mr. Morrison, a supporter of coal generated power, may also find his hardline stance on immigration difficult to defend in the wake of the terrorist attacks in neighbouring New Zealand. The opposition Labor party seems to enjoy an edge over the governing centre right Liberal National coalition, according to opinion polls. Its leader, Bill Shorten, has rallied the party during its time in the opposition in the last six years. Labor advantage stems from its promise of a living wage, tighter regulation and ambitious targets on carbon emissions. A 45% reduction in carbon emissions on 2005 levels by 2030 is part of its manifesto. From pleading helplessness before the Supreme Court in enforcing the Model Code of Conduct a month ago, the Election Commission has come a long way in asserting its powers. On Wednesday it took the rare step of ordering that campaigning in West Bengal nine Lok Sabha constituencies that go to the polls on Sunday West Bengal had Conduct witnessed sporadic Wednesday incidents of violence through the previous phases of polling, but on Tuesday in Kolkata. The destruction of a bust of Ishwar Chandra Vidyasagar, the 19th century reformer and cultural icon of Bengal, by suspected BJP activists Conduct has put the party on the defensive in a State where it is making an all out effort to expand its footprint. The EC may have had sufficient reasons to conclude that a fear psychosis has gripped the State, and therefore Conduct campaigning must end prematurely. In TMC ruled West Bengal, the entire government machinery, the Wednesday district administration and the police. The EC may could quite possibly be at the service of the ruling party. However, the advanced deadline of 10 p.m. on Thursday to end campaigning was devoid of any logic or reason, other than Conduct being evidently partisan Wednesday towards the BJP. The 10 p.m. deadline clearly.

Entrenched rust as entrepreneurial dynamism and no two industries illustrate these contradictions more clearly than its most iconic entertainments, Bollywood and cricket. Facing the same challenge growing competition for fans in the internet age cricket is killing it, Bollywood is blowing it. Cricket growing popularity rests on the Indian Premier League. Since its launch in 2008, the estimated value of IPL has risen from $1.1 billion to more than $15 billion. This year the two-month season drew nearly a billion viewers, broadcast and streaming. Last year IPL sold five-year broadcast rights for $6.5 billion a higher per game price than many other pro sports, including baseball in the United States and that other Premier League in England. Meanwhile, Bollywood box office had been weak for many years before falling sharply during the pandemic, with yearly footfalls down from 340 million to 190 million. Revenue is running at $190 million so far this year, down by nearly half from the same period in 2019. Streaming revenue would add to that total, but would not reverse the decline. On July 17, Russia refused to renew the agreements allowing grain exports through the Black Sea. With this unilateral decision, Russia chose to put an end to an initiative carried out with the UN and the support of the international community, an initiative that benefited the most vulnerable countries and enabled the World Food Programmed to feed thousands of people in need in Djibouti, Kenya, Ethiopia, Somalia, Sudan and Yemen. It is the most vulnerable countries, those already bearing the brunt of the consequences of the war in Ukraine, that will pay the heaviest price following the abrupt termination of these agreements. This halt is irresponsible, following a 2022 that was a terrible year for food security. According to the UN, 735 million people worldwide suffer from hunger, and one person in five on the continent of Africa. Have Indian women come a long way since 1947? Many daughters are now getting the same educational and work opportunities as their brothers, even similar personal freedoms. But the big picture is dismal. This is not only on account of heinous crimes like the May 4 gangrape in Manipur. There is a very broad-ranging social inequality, one of whose striking symptoms is the ridiculously low female labour force participation rate in the world fifth largest economy. The bill to replace IPC, 1860 has been presented as more protective of women. But it preserves most of the language and thus the gendered thinking of a century and half ago, when the social dominance of men was both prevalent and preferred. The parliamentary standing committee to which the bill has been sent, must do course correction. In Section 64 of the new bill, punishment for rape is not less than 10 years, instead of seven years in IPC. The question mark on this change comes from harsher punishments having proved to be quite ineffective deterrents so far. In Section 69, having sexual intercourse with a woman after promising to marry her without any intention of doing so is now clearly stated as not amounting to the offence of rape, although punishable with imprisonment and fines. This is a useful modification as such cases have so far seen very subjective treatments by different courts. However, what really viscerally comes through in the offences against women chapter is that men act, women are acted upon. Men don just assault, they make advances, request sexual favours, ake a

Opportunity for the Government to indicate a direction in which we are going to move, it is difficult to react to almost every aspects of the issues mentioned precisely for that reason. Would like to highlight some limited areas. First of all, India in its efforts of the last 60 years has tried to develop of vibrant democratic politics. Now, the process of creating a democratic system is unending and at the national level, we have a super structure of democratic framework so is the situation with regard to the State level but at the third level, at the district level it needed considerable re strengthening. Now having record to the need for democratic decentralization in decision making in the devolution of resources at lower levels and for strengthening of the local level democracy. This is anta dislodging the Bacterial community from the territory. However, it is a needless cavil, as what matters is that criminal liability has been established and a life term, which ought to mean the remainder of the convicts natural life, has been awarded. The larger takeaway is that efficient investigation, diligent prosecution and judicial sensitivity can ensure speedy justice in all cases, and more particularly in cases of ghastly crimes that cause widespread revulsion and outrage. It is indeed a judgment that will inspire investigation confidence in the justice system. There was a more flagrant illegality when Mr. Kanojia was taken out of Delhi without a transit remand from a local magistrate, mandatory when an accused is taken from one State to another. Faced with criticism, the U.P. Police added a section dealing with the offence of causing public mischief and disturbing public tranquillity, investigation besides Section 67 of the IT Act, which relates to sharing of obscene or prurient material, with the motive of obtaining a remand order. A few other journalists have been arrested for discussing the content of the video clip, in which a woman is seen expressing her wish to marry the investigation Chief Minister. What is disquieting, but unsurprising, is the perfunctory attitude of civil servants towards the personal liberty of citizens. It is one thing to pursue violations through legal action, but quite another to lock up people for posts they deem offensive to their political masters and conjure up justifications for their It is time magistrates who pass mechanical orders without application of mind and officers who carry out illegal instructions from the political leadership are made to face exemplary disciplinary action. Supreme Court last year, when the case was transferred from J&K to for a fair trial. The apex court had taken note of the hindrances to a fair trial in the jurisdictional court, especially the hostile atmosphere against the prosecution. The formation of a group called the Hindu Ekta Manch in support of those arrested and the role played by members of the Bharatiya Janata Party, including two Ministers in the then J&K government, had whipped up communal frenzy. It is commendable that the Crime Branch.

BSF-HCM-TEST-Dated-2026-07-06-Test NO.-27274

Seas tech has become the core of many businesses in the current times. Saabs stands for Software as a service. Saabs tech might seem like a complicated concept to understand, but you would be surprised by how common it has become in our lives now. This software are mostly cloud based, so they don need any hardware or particular device for support. In simple terms, Saabs is software that is sold by a third party and is operated using the internet. Companies like Hub spot, Drop box, Google Workshop, Slack, Zoo, Bijou, Gunship and similar companies which provide software and services via the internet are Saabs providers. The idea behind developing this kind of software is to promote businesses, especially commerce services, without letting hardware become an issue of accessibility or affordability. Many tech leaders agree that Saabs technology is on its way to becoming one of the key components of running any kind of business or tech in general. The Saabs tech industry, along with Isaac and Papas has grown 2x within the last 4 years and currently is valued at $350 billion. The majority of the share is owned by the Saabs software. Saabs has become the key to efficient business management for small to medium size businesses. These businesses, unlike the large ones, cannot revamp their hardware every now and then, plus, they have no such need for it, unlike Isaac or Papas users. Saabs simply take over data management, cloud storage, server management and other such aspects right from a single software without any hardware. So in simple terms, buying such software saves a lot of money for businesses. If we jot down the cause of penetration of Saabs in the market, then I believe the credit will go to the compatibility Saabs software provides and the availability of cheap internet. If you look at such technology some twenty odd years ago, then there needed to be many different kinds of devices set up to do what modern day Saabs does on just one screen. In fact, it does a lot more. Since I am a part of the Indian restaurant industry, we know that Saabs and POS platforms have not just helped in the growth of the businesses, but helped them sustain during the pandemic. They helped restaurant businesses upload and execute their business operations via the internet and turn their business model into more customer facing using CRM Saabs services. Saabs has created user centric banks of data that only the user themselves can access. And since this is all cloud based, no one can breach it nor does it need manual management. I think the only downside of this tech is that you would not be able to avail of its benefits on a bad internet connection. But the Saabs providers are trying to bridge this gap too. Saabs also works in offline modes and just one strong internet connection for a regulated time period is enough to back up all the data.

BSF-HCM-TEST-Dated-2026-07-06-Test NO.-27275

The central goal was to collect funds for village organizations and establish a political sufferers fund to support those persecuted by the colonial regime. Why should I love my neighbour like I love myself? The answer is simple: Because it the most sensible thing to do. Loving your neighbour is the first and best choice among the three choices you have. The first choice is love. The second is hate and the third is indifference. Let examine each choice, beginning with the third choice. Perhaps, you don want to love your neighbour, because he is bad; but yet you would want to hate him because you are a good person and you avoid negative emotions. So, you are indifferent to your neighbour. But indifference or apathy is a cold emotion. Apathy is as negative as hatred. The line between hatred and apathy is very fine. If you meet your neighbour on the street and you ignore him, it does seem like a good and decent thing to do. The second choice hatred will harm you as much as it hurts your neighbour which leaves you with the first and the best choice to love your neighbour. Honestly, loving an irksome neighbour is not as hard as it seems. It simply means respecting the person and thinking of his needs and desires as much as you would your own. You won be able to love yourself until you first love your neighbour. Whether we like it or not, a major part of our life will always centre on that of our neighbours. Ask yourself some questions and you all see from the answers how important your neighbour is for your own peace and happiness. You can just stop at loving your immediate neighbour. You vet got to love your neighbour too and so on. The circle of love gets wider, subsuming differences of community, state, nation, continents encompassing the whole universe and beyond. Your heart is so big and so full of love; its capacity to love is infinite; it divine. Inversely, your heart capacity to hate is limited. Try applying the Golden Rule of infinite love to hate and you all find yourself shattered. That because you don have a limitless capacity to hate like you have to love. For, love gives you joy and power and victory and hate brings in sorrow and powerlessness and defeat. Jesus said in the Bible, You shall love the Lord your God with all your heart, and with all your soul, and with all your mind. This is the greatest and first commandment. And the second is: You shall love your neighbour as yourself. The Bible verses on loving your neighbour find echo in the Bhagwad Gita. Krishn says: hose devotees are very dear to Me who are free from malice toward all living beings, who are friendly, and compassionate. They are free from attachment to possessions and egotism, equipoised in happiness and distress, and ever-forgiving. They are ever content, steadily united with me in devotion, self-controlled, of firm resolve, and dedicated to me in mind and intellect The Gita verses mean that those devotees who believe in Krishn know that every person and other living entities are part of Him. Therefore, such devotees love all persons, irrespective of any differences, real or perceived. In the Old Teen village of Nagaland, unlike any village the evenings are not for relaxing. For the residents, the time is mostly utilised to check their farm produce, restock their inventory and refresh their phones to check for the next online orders for their world-famous Naga King Chillies also known as Raja Mircha. A village once disconnected from the outer world and unknow

Culture and heritage. This tale of transformation is not only restricted to the Old Teen village but can be seen, felt and observed in every corner of the North Eastern region of India. For a region which was once languished in obscurity and crippled by the inability of previous regimes is today the key enabler to the nation vision for building a Visit Bharat. At its core is a comprehensive development and social unity approach, headed by Prime Minister Shri Narendra Modi who has challenged the status quo and taken the uncharted route to make the North East the Growth Engine of India. Unlike most Indian Prime Ministers before him, Shri Modi understood the North East foundation and its core took a holistic approach to tackle the challenges of the region. He addressed them on two crucial fronts one, a commitment to maximize investment and implement high-impact capital projects thus ensuring economic proliferation and second through building the cultural power of the region. The Look East Policy was modified to Act East and is now changed to Act East, Act Fast and Act First thus opening new avenues for trade, collaboration and connectivity. In which has now increased by more than Number of airports has nearly doubled in the region from 9 to 17 with 2 new airports getting international connectivity. The average annual rail budget allocation has increased by kilometres of rural roads have been completed and the region today has kilometres of National Highways, 147 more than what it had in before 2014. This premise of physical connectivity is being supported by a digital one- ensuring that 4G connectivity reaches 4525 villages of the region and about are being covered under the Digital Bharat Nidhi with a budget of Rs. crore. This surge in connectivity creates a web on the map of the region, ensuring that the map not only represents cities but also underserved and unserved regions, boost local economies and corroborates North-East as a window to the South East Asian region. It is evident that since 2014, a major impetus was given to further strengthen this relationship between the Indian Northeast and Southeast Asia. To realise this potential, work is resolutely underway on projects like the India-Myanmar-Thailand Trilateral Highway Highway and the Agartala-Akhaura rail project. Once complete, these would be complete game changers for the region. While the region is seeing success stories mushrooming every day and it is also encountering the formation of a strong cultural identity that is powering India soft power. Our cultural diplomacy is soon going to become a jewel in the crown of Visit Bharat. Northeast unique culture and art is taking the global stage. Recently in a cabinet decision to protect and promote of our languages Assamese was recognised as a classical language, Moidams The Mound-Burial System of Atom Dynasty also got inscribed in the World Heritage List as India 43rd Entry, the 2024 Padma Awards was illuminated with Northeast cultural brilliance with a record 11 trailblazers getting awarded. The Ministry of Development of the North Eastern Region is similarly driven by the idea of and through a whole of government approach. Today, we not only plan and implement projects but also transform and empower the lives of 4.7 crore Bhartiyas living in the region. Our North Eastern Handicrafts and Handlooms Development Corporation has successfully obtained the prestigious Oeko-Tex certification for its Eri Silk, directly from Germany on

Spl-BSF-HCM-TEST-Dated-2026-07-06-Test NO.-27277

When every document counts, but none is enough In June 1937, addressing Indians in Malaya, Nehru said that India, once independent, could not claim every person of Indian origin as its own. The Indians of Malaya should consider Malaya their land by adoption or birth and seek their future there. As the sun was setting on the empire, their Indianness was being separated from citizenship. The external affairs ministry recently reminded Indians back home that this separation has never entirely disappeared. It said a passport is a travel document and not a conclusive proof of citizenship, and predictably, all hell broke loose. If a passport is not proof, people asked, then what is? Aadhaar proves identity; PAN places you in the tax system; a ration card gives you access to welfare; a voter ID says you are on an electoral roll but none of them categorically proves that you are a citizen. The government pointed out that this had always been the case: under the Passports Act 1967, a passport could even be issued to non-citizens in the public interest. That is true. It is also precisely the problem. The Indians of Malaya found out the precarity of their citizenship the hard way. Most had not gone there as free individuals making choices. They had been pushed, recruited, contracted or indentured into imperial labour systems moved across a Bay of Bengal that was, before the colonial borders hardened, a region of continuous movement: Tamils to Burma, families spread across Ceylon, Rangoon, Penang, and Calcutta; traders and plantation workers threading the same waters for generations. The empire moved people when it needed labour. Independence then asked those same people to become citizens of neat new states. The countries where they landed did not always claim them either, leading many to become orphans of the Empire. Some ethnic Indians in Malaysia, especially those descended from the old estate economy, still struggle for citizenship because of missing papers, late birth registration, parental status or inherited statelessness. Nearly a century after Nehru's speech, legal belonging remains unfinished. This is no digression on the diaspora. It is the original version of the question that India, like other postcolonial states, has never fully settled: who belongs here, and how do you prove it? What's more troubling is that the spectre haunting Indian citizenship is not just the foreigner outside the border but the potential foreigner within someone born in the country, taxed by it, documented by it for decades, and yet remaining available to doubt. That doubt was baked into independence itself. Newly independent India could not extend citizenship to every person connected to it by ancestry, labour, language or memory. It had just witnessed the horrors of Partition, and had poverty and food shortages to manage, and sovereignty to protect. And so, citizenship became territorial, but it never became complete. Belonging became a paperwork issue, and paperwork was never enough. Even citizenship by birth under the Citizenship Act of 1955 has progressively narrowed. Before 1987, birth on Indian soil was largely sufficient; from 1987, at least one Indian citizen parent was required; after the 2003 amendment, either both parents had to be citizens, or one had to be a citizen and the other not an illegal migrant at the time of birth. The parents' file had entered the cradle. India also does not issue a universal citizenship certificate. No single piece of

Word Count: 567, Character Length: 3500 characters

has real consequences. Under the Foreigners Act, when a question arises about whether someone is a foreigner, the onus of proving they are not lies on that person not on the State to prove they are. In practice, citizenship becomes case-by-case and document-by-document. The state may issue your papers for decades and still reserve the right to ask whether those papers add up. That is not how a republic should work. It must tell its people what documents create a presumption of citizenship; when that presumption can be challenged; who can challenge it; and what protection the citizen has when the challenge comes. These are not abstract constitutional questions. They are the difference between belonging and being tolerated. It cannot say that Aadhaar is not enough, that PAN is not enough, that a voter ID is not enough, that a passport is not enough and then refuse to say what is. A republic cannot run on negative proof alone. Until India decides to answer it, we will remain Schrödinger's citizens, citizens and not citizens at the same time, waiting for the right official to open the box of our documents and tell us what we are. Sanzagiri is a London-based consultant currently writing a literary travelogue on India This piece appeared as an editorial opinion in the print edition of The Times of India. TOI News - July 6, 2026 Day After Day, Burned by Remorse, O Lord Rama Vice President BJP Maharashtra, Senior Political Communicator | Chief Spokesperson, BJP Maharashtra | Strategist & Ideologue Keshav Upadhye is a seasoned political communicator, journalist, and organisational leader with over 26 years of dedicated service to the Bharatiya Janata Party (BJP). A trusted ideological voice and an accomplished media strategist, he has played a pivotal role in shaping the BJP's public narrative in Maharashtra and at the national level. Uddhav Thackeray has suddenly remembered Lord Shri Ramchandra. Against the backdrop of the misappropriation of funds from the donation box at the Ayodhya temple coming to light, the UBT faction has announced a campaign to recite the Ram Raksha Stotra'. Well, it is certainly noteworthy that this occasion has prompted them to remember Lord Shri Ramchandra. It is likely that the need to protect their own faction arose because the number of members defecting from their group to the Shiv Sena began to increase. There is no doubt that this is what led to them recalling Lord Shri Ramchandra. Given Uddhav Thackeray's temperament and functioning style, he will simply not be able to survive in politics. He and his son are solely responsible for the sorry state his faction finds itself in today. Uddhav Thackeray will never honestly reflect on why he is unable to retain party workers, simply because such introspection is not in his nature. Since he has now developed the desire to recite the Ram Raksha Stotra, Uddhav should also take this opportunity to read and reflect upon the Ramayana. In doing so, he will come across many incidents that bear similarities to events in his own life, and he will understand how Lord Ram behaved in those situations, and how he himself behaved. He may also realize that the need to seek the protection of Lord Shri Ram has arisen not because of his enemies, but because of his own actions. Therefore, many good wishes to Uddhavrao for his recitation of the Ram Raksha Stotra. One may reasonably hope that through this, Sanskrit words will replace words such as namard (coward), kothala (entrails), and d

Additionally, they are making the software more compact. Like VHS became floppy disks that moved to CDs, then pen drives and now even that is on the internet thanks to OTT platforms, the same thing is happening to Saabs technology. Businesses are becoming compact. Due to Saabs, e commerce businesses have altogether stopped investing in creating any infrastructure for the businesses. They are more eager to learn about how they can efficiently manage their businesses online, reach more customers & benefit from every new Saabs software update. If a business is all about meeting customer demands and earning profits, modern day entrepreneurs know that they can do it by simply using technology and support software. Inarguably the rise in the e commerce model of business has contributed to the mass employment and adoption of Saabs tech. And so, if you are looking for investing in this profitable avenue, then it might be a good time for it as India is currently leading the race for being the startup hub in the world. This means more small scale businesses which are ready to invest in software that provide holistic business solutions. In India, the conversation about organ donation is gaining momentum but there is a long road ahead before we establish substantial ground. Organ donation in the country is regulated by law allowing both deceased as well as living donors to donate their organs. Then why are we lagging behind in organ transplants and unable to meet the rising needs of organ donation? The need for organ donation in India Organ donation is a pressing issue in India due to the huge gap in the demand and supply of organs. The main reasons for this disparity are mainly lack of awareness, myths, infrastructure as well as religious beliefs and superstitions. According to the World Health Organisation, only around 0.01 per cent of people in India have pledged to donate their organs after death. While data shows that there is a huge requirement of organ transplants that is not being fulfilled, leading to nearly half a million deaths every year. It is time to step up and understand organ donation in depth in order to bridge the gap in receiving organs for transplant. Detailed overview of organ donation for the uninitiated, organ donation is the donation of the organs in your body to persons who require a transplant that will give them another chance at life. While you can pledge to donate your organs while alive, organ donation can be done after you are declared legally dead or brain dead irreversible condition where the heart is still beating only due to life support provided. Donation of some organs and tissues can also be done while alive. Organ donation can be done by any person irrespective of age, gender, ethnicity or religion. One donation from the deceased donor can save close to eight or nine lives of people suffering from organ failures and terminal illnesses. Organ donation is of two types, you can.

Of the J&K Police and the prosecutors have brought home the guilt of Sanji Ram, Parvesh Kumar and Deepak Khajuria, who have been sentenced to life for murder and 25 years in prison for gang rape. Further, the role of some police personnel in trying to destroy evidence has also been exposed. Sub Inspector Anand Dutta, Special Police Officer Surender Verma and Head Constable Tilak Raj get a five year term for washing some blood stained clothes, concealing the victim necklace and hair band, and misleading the investigating police team about the place of occurrence of the crime. The investigation had been fairly quick, and the charge sheet was prepared in two months. The trial lasted a year, and the verdict has been delivered within 17 months of the occurrence. Appeals by the convicts are only to be expected, and the Judge Tejwinder Singh approach and the manner in which he appreciated the evidence would be determined by higher courts. Even the prosecution may appeal against the acquittal of one of the accused, whose alibi that he was appearing in an examination in Uttar Pradesh at the time of the incident has been accepted. Some may question the verdict for not imposing the death penalty in what was presented as a crime aimed. Aimed at appealing to Australia growing number of green voters. Conversely, the pro business credentials of Mr. Morrison Liberal National coalition are said to have been steadily eroded as the government has reneged on its promise of corporate tax cuts. The package of measures unveiled in the pre election budget in April may only have a moderate impact. As with several industrialised democracies, voter disillusionment with the principal parties is yielding a fragmented polity, and smaller parties and independents could potentially tilt the balance of power in the Senate, which is crucial for the passage of legislation. With consistent economic growth and modest levels of unemployment Australia has had a remarkable track record in recent decades. This scenario is in stark contrast to the incessant political swings that impede the legislative agenda. What is without doubt is that the turnout will be high at the polls, as voting is compulsory for registered voters. Manufacturing, which has a weight of almost 78% in the index, continues to be the biggest drag, with output contracting by 0.4% after shrinking by a similar extent in February. Overall, the sector growth slowed to 3.5% in the last fiscal, from 4.6% in 2017 18. The composite picture that emerges from all these numbers belies the CSO implicit fourth quarter GDP growth assumption of 6.5%, and paints it as overly optimistic. With global headwinds strengthening in the backdrop of an escalating trade war between the two largest economies, the U.S. and rising tensions in West Asia beginning to push up energy costs from the top oil exporting region, Indian policymakers have to contend with an external sector that would likely only add to the domestic pressures, most certainly in the near term if.

BSF-HCM-TEST-Dated-2026-07-07-Test NO.-27284

Not in the longer. Australian Prime Minister Scott Morrison may have, in a manner of speaking, already scored a political victory ahead of the May 18 election. Few had expected the socially conservative politician to last out the remainder of Parliament term when he took over as Prime Minister in August following a coup within the ruling Liberal party. In the past, the country has seen many heads of government toppled. That said, Saturday election may not prove an easy ride for the former marketing executive. The polls may not signal an end to the political instability that has dogged Australian politics of late. From combating climate change to shaping energy policy, Mr. Morrison Liberal party is a divided house between moderates and conservatives. These differences were manifest in the ousting of Malcolm Turnbull last year and continue to elude a resolution. The world driest inhabited continent is confronting its own vulnerability to the effects of global warming. Australia, among the world largest wheat exporters, has been forced to take recourse to bulk imports of the grain, consequent to severe droughts in its eastern states over two years. Mr. Morrison, a supporter of coal generated power, may also find his hardline stance on immigration difficult to defend in the wake of the terrorist attacks in neighbouring New Zealand. The opposition Labor party seems to enjoy an edge over the governing centre right Liberal National coalition, according to opinion polls. Its leader, Bill Shorten, has rallied the party during its time in the opposition in the last six years. Labor advantage stems from its promise of a living wage, tighter regulation and ambitious targets on carbon emissions. A 45% reduction in carbon emissions on 2005 levels by 2030 is part of its manifesto. From pleading helplessness before the Supreme Court in enforcing the Model Code of Conduct a month ago, the Election Commission has come a long way in asserting its powers. On Wednesday it took the rare step of ordering that campaigning in West Bengal nine Lok Sabha constituencies that go to the polls on Sunday West Bengal had Conduct witnessed sporadic Wednesday incidents of violence through the previous phases of polling, but on Tuesday in Kolkata. The destruction of a bust of Ishwar Chandra Vidyasagar, the 19th century reformer and cultural icon of Bengal, by suspected BJP activists Conduct has put the party on the defensive in a State where it is making an all out effort to expand its footprint. The EC may have had sufficient reasons to conclude that a fear psychosis has gripped the State, and therefore Conduct campaigning must end prematurely. In TMC ruled West Bengal, the entire government machinery, the Wednesday district administration and the police. The EC may be able to quite possibly be at the service of the ruling party. However, the advanced deadline of 10 p.m. on Thursday to end campaigning was devoid of any logic or reason, other than Conduct being evidently partisan Wednesday towards the BJP. The 10 p.m.

Deadline clearly accommodated Prime Minister Narendra Modi last rallies in the State slated for Thursday evening. The EC may could If in the EC assessment campaigning could have led to violence, why did it not order its curtailment on Conduct Wednesday or early in the day on Thursday? Since the announcement of the Lok Sabha poll schedule, the EC credibility has come under a cloud. The manifestly partisan decision on the campaigning deadline in West Bengal has further eroded trust in the institution. From the backcourt he displayed the kind of athleticism and shot-making that belied his age. Federer bore the brunt of it as he succumbed in straight sets in the semifinals. His play in the forecourt, an underrated part of his game, was lethal, coming in only for the assured kill, as the 23 out of 27 points won at the net against Thiem indicates. Even as Nadal established himself as a near constant among men, the women game threw up yet another surprise winner, this time in Australia Ashleigh Barty style is delightfully old-school, with a beautifully constructed point preferred to murderous first-strike tennis. Combined with a ruthless calm, she completely unnerved the 19-year-old Marketa Vondrousova on Saturday to end her nation long wait for a new slam champion. The President address is an occasion to take an overall view of our contributions on different friends of national and international activities. It is also an opportunity for the Government to indicate a direction in which we are going to move, it is difficult to react to almost every aspects of the issues mentioned precisely for that reason would like to highlight some limited areas. First of all, India in its efforts of the last 60 years has tried to develop of vibrant democratic politics. Now, the process of creating a democratic system is unending and at the national level, we have a super-structure of democratic framework so is the situation with regard to the State level but at the third level, at the district level it needed considerable re-strengthening. This is anta dislodging the Bacterial community from the territory. However, it is a needless cavil, as what matters is that criminal liability has been established and a life term, which ought to mean the remainder of the convicts natural life, has been awarded. The larger takeaway is that efficient investigation, diligent prosecution and judicial sensitivity can ensure speedy justice in all cases, and more particularly in cases of ghastly crimes that cause widespread revulsion and outrage. It is indeed a judgment that will inspire investigation confidence in the justice system. There was a more flagrant illegality when Mr. Kanojia was taken out of Delhi without a transit remand from a local magistrate, mandatory when an accused is taken from one State to another. Faced with criticism, the U.P. Police.

BSF-HCM-TEST-Dated-2026-07-07-Test NO.-27286

In a few days from now, our republic will have a new President. It clear India has appreciated the candidature of Draped Murmu for this respected office. Her candidature has struck a chord with different sections of society. In a year when India is marking Aside Ka Amrit Mahotsav, it has made every Indian proud that the highest office of this land will be occupied by a self made woman who belongs to a tribal community. The women of India find it empowering that a woman will be our next President. Murmu will be the first President of our nation to be born after Independence, which also gives an important message. Murmu candidature is special for a number of other reasons as well. Let me begin with her accomplishments. In a political set up where dynastic politics and personal wealth have dominated for decades, Murmu is a breath of fresh air. She started out as a teacher in Rairangpur, Odisha, and later joined the state irrigation department as junior assistant. Even though she performed her professional duties with diligence, it was clear that public service was her real calling. Prime Minister Narendra Modi on Saturday in Jalaun, UP, drew attention to India political culture of canvassing for votes by promising freebies. This trend, he added, undermines economic development. It an important subject which deserves to be foregrounded. Freebies are a shorthand for suboptimal fiscal choices by governments. It an area where no major political party is blameless. The tendency to canvas votes by promising free or subsidised goods and services is common to all parties. An enabling environment for the creation of decent jobs is the most effective and inclusive indicator of economic development. The inability of political parties to bring about such an environment catalyses short termism in canvassing for votes. Freebies, which trigger a perennial challenge of fiscal stress, are the outcome. India cannot afford to keep going down this road which is why PM Modi observations are important. Economic development requires better fiscal choices than what is commonly seen among states and GoI. The current level of debate around freebies is unlikely to lead to better choices. If freebies represent fiscal choices, we need a widely accepted understanding of the kind of choices that smack of cynical short termism. It currently missing. Are free cereals that were added to the PDS after the outbreak of Covid freebies, or are they a safety net to cope with a shock If it the latter, at what point does a temporary safety net morph into a freebie Tamil Nadu trajectory embodies the complexities of the subject. The state dominant Dravidian political parties have been synonymous with freebies for the last 55 years. Yet, the state has the fourth lowest poverty ratio in India, according to Niti Aayog. Moreover, GoI Annual Survey of Industries shows that it the state with the highest number of operating factories in the formal sector. Notwithstanding these metrics, recent fiscal slippages catalysed the state government last.

Year to present a white paper on public finances. Reliable data is the first step to forge a consensus on freebies. GoI should act upon the recommendations of successive finance commissions and establish an independent fiscal council. It needs to be backed by a law that provides access to all accounts of both states and GoI. A debate anchored by data will help the electorate make more informed judgments and, thereby, provide politicians the incentive to make better fiscal choices. China economy grew by only 0.4 in the April June quarter, adding to fears of a global recession. The sharp slowdown was brought on by strict Covid lockdowns imposed across major Chinese centres in April and May, including the commercial hub of Shanghai. China is the only major country today that continues to adhere to a stringent zero Covid strategy. And given the upcoming 20th Chinese Communist Party CCP congress where Xi Jinping is seeking to secure an unconventional third term as head of the Chinese state, Beijing can get off this wagon. This in turn means that the global economy continues to be held to ransom by the peculiarities of the Chinese political system. China, as the largest trader and factory of the world, holds a dominant position in global supply chains. But Beijing today is weaponising economic interdependencies to achieve strategic objectives. In fact, China behaved less than responsibly in the early days of the pandemic. That is now widely believed to have aided the rapid spread of the disease across the world. Many experts argue China should have reached out to WHO with a warning before December 31, 2019. Then Li Wenliang of the Wuhan Central Hospital, who had warned his colleagues about the virus, was harassed by Chinese authorities. And the laboratory at the Shanghai Public Health Clinical Centre, which published the world first genome sequence of SARS CoV 2 on January 11, 2020, was ordered to shut down for rectification a day after. China privileged protecting the image of the CCP and Xi over a transparent Covid response. It doing so again with its zero Covid strategy and blocking of investigations into Covid origins. Major countries, including India, must find ways to reduce dependence on China production chains, and invest in resilient supply networks. In addition to the recent surge in the number of Covid cases across several regions, India reported its first case of monkeypox virus last week in Kerala. The infected person is said to have reached the state capital recently from UAE and started feeling symptoms soon after landing. In the wake of the first confirmed case in the country, GoI on Friday released fresh guidelines for international travellers to control the spread of the virus. Health agencies across the globe are still figuring out how severe and lethal the virus can be. Several countries have been failing to control the spread, despite being aware of the origin and integrities of the monkeypox virus in humans since the 1970s. While the Covid.

BSF-HCM-TEST-Dated-2026-07-07-Test NO.-27290

The law & order situation has significantly deteriorated. Murders and rapes occur in broad daylight. Women do not feel safe. To get an FIR registered can require the Supreme Court intervention. Once a case is registered there is no further action or inquiry by the police. How can the average citizen expect to feel safe in such a situation? Further, India has a justice system that nobody has any faith in, any more. Let alone the idea of justice, the first step: a decision is itself not on offer. Crores of cases are pending for decades. Political pressure is frequently and successfully applied on judges in order to get a particular decision. Rapists and murderers get away even as the innocent languish as under trials for years. Honest judges who follow the law are perpetually at risk of being transferred, with their cases given to more pliant judges. A sham democracy for many decades, our parliaments at the national and state level have become places for shouting matches and walk-outs. We rarely hear any policy debates. Indeed, major policies are implemented without any debate. Such ill-designed policies are guaranteed to cost taxpayers, without any benefit. The governance of India has gone into the hands of a few families, with some of them in the 4th generation now. This has become a norm in all parties. Further, a large chunk of MPs and MLAs have murder and rape cases against them yet, such people somehow get re-elected. It almost seems that democracy has ended and we are back to the feudal era. Was it for this kind of democracy that the people were so hopeful on 15 August 1947? Do we even have a democracy anymore? A hollow fourth estate The people no longer have any expectations even from our media, the fourth estate. Instead of bringing forward the truth, the media is focused on TRP. Most of it has been purchased by one or other political party, so what we get as news is nothing but propaganda. It appears that the sole function of the media is to divert the attention of the people from real issues. We do hear sometimes about a few honest journalists who are then forced to leave their positions and start independent YouTube channels. But the vast majority of the journalists have no such integrity, and are happy to cook up false news and propaganda for their political masters including the use of social media for nefarious purposes. As a result, the common man has lost the ability to distinguish the truth from falsehood. At the same time, the common man is increasingly less interested in the truth, having being hooked to media outlets which pander to his biases. The saving grace today is that social media allows some scope for opposition messages to wake up the public. Divide and rule Our political parties have long believed in the divide and rule policy to gain and control power. Some parties focus on special benefits for particular groups or communities, others spread hatred against selected communities. This has forced every group to close up, to communicate only within its own members and to create barriers against other groups. We are no longer a united nation communities live in fear of each other. The society has been broken up into fragments by narrow domestic walls, precisely the opposite of what Rabindranath Tagore wanted. Of course, this is exactly what the political parties want a divided vote bank. The recent events in Manipur are a sad reminder of this situation. While the story in Manipur might be complex, the fact is th

Pandemic is not over, only timely and strategised measures can prevent another major outbreak. Mumbai takes the mud caked headlines every monsoon, leaving Amdavadis un high by law and dry. News of flooded Andheri is splashed nationally but though last week deluge made all of Ahmedabad go Under i, most Indians got just a drizzle of information about it. This Slush Superiority Complex must be fought to the last pothole, because Ahmedabad makes a mess of itself in its very first ditch attempt during rains. While presenting Ahmedabad case, neither city suffering, loss and helplessness are being played down. One is only applying the Tolstoy an nuance to suggest that Ahmedabad drains must have the same gutter ate status as the celeb sewers of Mumbai. One is talking about infrastructure, not people. Tolstoy opens Anna Karenina thus: All happy families are alike, each unhappy family is unhappy in its own way. For the matter at hand, it can be said: All mucky cities are alike, each mucky city has its own swamp star. A recent report from Mumbai spoke of cars idling on the soggy Pedder Road in the city south. That nothing in the great game of idleness. In a housing society in Prahladnagar, in Ahmedabad posh west, SUVs lay in the inundated basement as indolently as hotel soaps in a brimming bathtub. A topic for consideration: Why do 5 star hotels offer soaps the size of sum cards Maybe it makes sense in Mumbai, the city has profuse glitzy lather. Talking of hotels, Prahladnagar and its vicinity have several reputable properties. The area is also home to big brand baristas, clothing labels and electronics. However, on the Day of the Deluge, Prahladnagar like much of Ahmedabad became the manifestation of the Maxed Out City. Devastation uncoiled in the manner of a Bollywood thriller. It started with a pattern of romance, evoking monsoon ragas and dalwadas; then rainfall intensified with the suddenness of the villain lust for the hero love interest; then came the downpour, as incessant as the hero epic recriminations and gunfire. There was no intermission. In the wet season, citizens of both cities wade through water. But if there were to be an Indian Pitfall League, Amdavadis are worthy contenders to take the crown of bandanas survivors. The Duckworth Lewis method is available to pick winners in rain hit matches. IIM Ahmedabad yes Mumbai, we have that iconic institution can tweak the formula to choose victors on the waterlogged pitch of daily life. Imagine having an embarrassing uncle who shares your surname and does routinely awful things in public. No matter how hard you try to distance yourself, a part of your identity gradually gets compromised. This is how one feels, as a Hindu, these days. Certain uncle jigs have literally hijacked and distorted what is a marvelously liberal and sophisticated philosophy in its essence, even if not always in practice. Hinduism was once India biggest soft power, attracting hordes from across the world who were.

Like this, when dharma has become deeply entrenched and there seems to be no ray of hope, the people of India can and must overcome this situation, if we commit to change. India has seen many revolutions, big and small, and we can, if we so commit, overcome this dismal situation. After revolutionary resistance to the British for 150 years, we finally drove them out. Despite many decades of one-sided political power, the Congress finally relinquished power in 1977 and thereafter shared it with others. Later came the rat yare and Anna movement as motivators of change. Revolutionary methods of this kind are needed once again to support new political leadership. We must come together to stop the decline of India into anarchy, else we will be forced as a nation to spend the remainder of our life in fear and terror. We need a political revolution through the ballot box to change our corrupt and unjust system. We need honest and courageous leadership that offers competent candidates to the people. We need a sharp distinction between ideologies of the parties, particularly a sharp rejection of socialism. We need a system in which education; security, justice and individual freedom are available to everyone, as a result of which the people achieve happiness, prosperity and a life without fear. This will not happen unless we as a society commit to voting out the corrupt and criminals. But we also need to find the right people and send them to the Parliament and legislative assemblies. We need courageous representatives who will implement the policies needed to improve the welfare of the people and the economic situation of the country. Ultimately, each of us is directly and personally responsible for what happens to the country. If you, as a citizen, fit the bill for the reforms India needs, then please step forward and do not shy from responsibility but merely sounds like somebody whose normal words have been made operatic by a very hot and very expensive brunch at Delhi the Chanukah. Some weeks ago, outside that mall, I saw a gold-plated. The car took all the negative light in which Delhi is seen and shot back ritzy contempt into the eyes of the buri-nazar wallets. Rocky Aura Rani has the glowing solidity of that car and of Rocky bared midriff, making it superior to Barbie, which is fashioned from self-aware smirks gathered from the dollhouse of high concept ideas. In one scene of skimpy creativity, Rocky is even made to try on a bra, but it augurs the dismantling of a powerful male structure. That drives home the point in a golden. Pay heeds Christopher Nolan. The loopy timelines in your Oppenheimergive motion sickness to its points. Besides, your characters banter about quantumised physicality or some such. I do know whether the subject relates to the Stereotypical Barbie proportions or to a Nobel science. A smoother mind ride is provided by Rocky Aura Rani, which fittingly ends with Raja Mere Gaudi Mein Baith Jaa, revving up Delhi ornamented horsepower. Very expensive brunch at Delhi the Chanukah. Some weeks ago, outside that mall, I saw a gold plated. The car took all the negative light in which Delhi is seen and shot back ritzy contempt into the eyes of the buri-nazar wallets. In the Buddhist understanding, the mind is not a solid thing hidden inside the head. It is the continuum of experience and knowing. It is that through which we see, hear, feel, remember, hope, fear, and understand. When you see a flower, the eyes and the brain are involved, but there is also the experience of seeing. When you hear a kind word, the ear is involved, but there is also the comfort that is felt within. It is this knowing and experiencing quality that we call mind. The texts describe the mind as clarity and knowing. Clarity does not mean brightness like a lamp. It means the capacity for appearances to arise . A colour, a sound, a memory, a pain, a hope. Knowing means the ability to recognise or apprehend what appears. A stone does not know. A table does not experience. The mind knows and experiences. People sometimes ask whether the mind is the same as the brain. The brain is certainly important, and modern science has shown how injury, aging, and chemical change affect memory, mood, and behaviour. We must respect this. Buddhism is not opposed to science. At the same time, the brain has size, shape, and location, while consciousness has the quality of experience. These two approaches need not be in conflict. Science investigates from the outside, through observation and experiment. Meditation investigates from within, through disciplined attention to experience itself. In daily life most of us do not meet the mind calmly. We meet its disturbances. Anger comes and we feel, I am angry. Anxiety comes and we feel, I am anxious. We identify completely with each emotion. But if we observe carefully, every emotion arises, stays for a while, and passes. If anger were truly our deepest nature, we would be angry all the time. Yet even an angry person sometimes laughs, sleeps, and shows affection. This tells us that destructive emotions are not fixed. They are passing states. The old comparison is sky and clouds. Clouds may cover the sky completely, and for a time we see only darkness, but the sky has not disappeared. In the same way, anger, fear, and confusion may cover the mind without defining it. Because the mind can know, it can learn. Because it can learn, it can change. We are not condemned to remain as we are. This is why meditation is not mysterious. The Tibetan word we translate as meditation means familiarisation. We become familiar with patience, compassion, and contentment until they become more natural. We also become familiar with the habits that disturb us: exaggeration, suspicion, resentment, grasping. Slowly we learn to recognise them before they take complete control. Much of our suffering comes not from events alone but from how the mind relates to them. Someone speaks a harsh word to us. The word itself lasts only seconds. But the mind takes it up and repeats it through the afternoon, through the night, sometimes for years. We add our own commentary. We imagine what the person meant, what they may think of us, and what they might say next. Slowly we build a story far larger than the small event that began it. In this way the untrained mind becomes a source of its own suffering. Yet the same mind, trained, can become our best friend. The question arises: why did Uddhav Thackeray suddenly think of Lord Shri Ramchandra? The defection of six Lok Sabha members dealt a severe blow to the UBT faction. Having already lost control of the Mumbai Municipal Corporation, Uddhav was disheartened and had not anticipated that

Lok Sabha members would leave in such a large group. Fearing that if MPs left today, MLAs and the remaining corporators in Mumbai might follow suit tomorrow, and wondering who else but Lord Ramchandra could save him from this crisis, Uddhav, who once considered himself all-powerful, has now turned to invoking the Almighty. Lord Ram had to relinquish the royal throne due to his stepmother's insistence. While giving up the throne, Lord Ram did not experience even the slightest sorrow. As part of his duty, Shri Ram relinquished his rightful claim to the throne and departed calmly for fourteen years of exile. Lord Ram accepted exile without complaint to honour the promise made by his father. The lure of power and the throne could not stand in the way of his decision to go into exile. Once Uddhav begins reading the Ramayana, he will surely be reminded of the circumstances of his own entry into politics. During the formative years of the Shiv Sena, a period marked by struggle, Uddhav was never by his father's side, whereas Raj Thackeray had been actively involved in the party's work since his youth. Raj Thackeray successfully helmed the Bharatiya Vidyarthi Sena, an organization launched to expand the Shiv Sena's reach among the youth, for many years. He was actively involved in the party's work on the ground, participating in numerous agitations and facing police cases as a result. Thanks to his oratory skills and his rapport with party workers, Raj Thackeray was widely regarded as Balasaheb's natural political heir. It was during this period that Uddhav suddenly became active within the Shiv Sena. Uddhav had absolutely no appreciation for the immense toil and struggle his father had endured to build the organization, nor for the ordinary party workers he had gathered and nurtured with such deep affection. Veteran Shiv Sainiks can recount the lengths to which Uddhav went to keep Balasaheb's natural political heir away from that position. Compare the actions of Uddhav who deftly sidelined his own maternal and paternal cousin, denying him his rightful due, with the conduct of Baraga. Baraga himself harboured no desire for the throne. Upon learning that his brother Rama had gone into exile after the throne was entrusted to him, Baraga went to meet Rama and implored him to ascend the throne. In response, Lord Rama reminded him of the vow made to their father and affirmed his commitment to upholding filial duty. What a vast gulf exists between this episode from the Ramayana and the modern Ramayana unfolding at Matoshree, where a cousin was forced out of the party! The revered Balasaheb had declared that no member of his family would hold a position of power, a pledge he honored until the very end of his life. Instead of bestowing a position of power upon an ordinary Shiv Sainik, Uddhav chose to become the Chief Minister himself. Furthermore, he appointed his own son as a minister. What a vast contrast there is between Lord Shri Ram, who cheerfully accepted exile to honour his father's word, and Uddhav, who trampled upon his father's word! If you are going to recite the Ram Raksha Stotra, then also listen to the Geet Ramayan and read both the Valmiki Ramayana and the Tulsi Ramayana. Use this as an opportunity to stay away from politics for a few days. That way, Uddhavrao's faction might at least hold its ground for that duration. And while you are at it, after reciting the Ram Raksha Stotra, also do read Swami Samarth's Karunashtake as well. The mi

BSF-HCM-TEST-Dated-2026-07-08-Test NO.-27297

Our understanding, perception, and knowledge base originate from a small domain and remain confined within its limits. Even what we call scientific research cannot go beyond it. This is the context in which our spiritual pursuits become important. They ought to be the guides to our scientific discoveries. Through contemplations, human consciousness merges with the undiscovered dimensions, and our reading of the subject gathers depth even when we cannot go beyond a few glimpses of actuality. Interestingly, reality is only a component of factuality or practicality. As we meditate, we may see light which is different from the ordinary light that our optic power captures though they are all integrated. Similarly, even if the object of fragrance is not within the reach of our olfactory capacity, we may smell it once the mind is consolidated through meditation. One of the most beautiful feelings one encounters is about an ethereal love that encompasses entire existence. Our perception of our existence is limited by a number of factors. What we perceive as change may not be so; rather, perfect stability is in existence. And because there is no second existence, what exists is unique. On a scriptural plane, we may recall the war between the goddess and demon brothers, Nisumbha and Shumbha. The latter, in anger, comments that she is using the help of so many powers while they are dealing single-handedly. How is it justified that many would be fighting with one? There she declares, ekaibaham jaganmurti ditiya ka mamapara I am the only one universe, where is a second reality? When science arrives at the border, philosophy must come forward to expand its horizons, setting a bigger goal to be pursued. This is the only way to avoid saturation and escape the fallacy of limited understanding. Nowadays, we are talking about the application of artificial intelligence AI in various facets of learning. How about its contribution to discovering what has been treated as a myth? Can it not be used to give tangible shape to our spiritual realisations? After all, the lack of explanation sometimes stigmatises a particular phenomenon as an illusion. With AI offerings, the gap between scientific probes and spiritual queries can certainly be bridged, and the realisations can provide guidance for new scientific ventures. Theoretical advancements are a must for practical probing. Conjectural evolutions are not innovative if they remain confined to domains of a specific discipline. Insights developed from spiritual realisations can be the most effective monitor for advancing theoretical configurations in science, encouraging further probing with help of AI. As Ramakrishna pointed out, there is no end to spiritual attainments. Work a bit harder, you arrive at a mine; don reach satiety, walk further and you come across a bigger mine with richer deposits. Likewise, one has to go on for a true seeker, there is no end to spiritual pursuit. Then there will be no dearth of ideas which can keep enriching our understanding and science will be able to take guidance for newer developments in a continuous manner. Science and spiritualism are not to be seen as two different paths, they are rather an integral part of a gigantic investigation system that human life can conduct. North India winter of polluted discontent, which makes daily headlines, is compensated for by a sudden efflorescence of vegetables and fruits. After the furnace fury of the hot season which scorches the land,

Paratha's served with lashings of ghee. Unlike their anemic's summertime cousins, the robustly red winter carrots go into the making of gajar ka halwa, rich with creamy khoya and slivers of almonds, served lava-hot, wreathed in aromatic steam that mingles with the chilled vapour of the ice cream ladled on top. My personal favourites are the purple-black carrots that mark the advent of the cold season in north India, and are used to make kanji, the mildly fermented, tartly astringent drink made by steeping thickly sliced carrots in brine with black mustard seeds, and letting them bask in the golden glow of winter sunshine. Kanji is very much an acquired taste, and I acquired it years ago, not in north India but in what was then Calcutta. I do know if the black carrots were locally grown or travelled all the way from the north, but every winter in Calcutta, Bunny mother would have large clear-glass jars of kanji soaking in the sun, perched on the window sills of the flat where Bunny parents lived. Is it ready? I would ask. Be patient, we have to give it time, Bunny mother would say. When the purple colour of the kanji showed it was ready, the beverage was drained to the last drop, and the pickled carrot slices eaten with a satisfying crunch. When we moved from Calcutta to NCR, Bunny continued the kanji tradition in the stick-and-carrot clime of today north Indian winter, in which pollution is the punitive stick and the carrot of reward is just that. Trump intent to name pro-crypto lobbyist Paul Atkins head of Securities and Exchange Commission SEC, which regulates crypto currency among other things. And Bitcoin not alone, the total crypto market has crossed $3tn. While Trump embrace of crypto in his campaign has made investors hopeful that his administration will be crypto-friendly, his endorsement by Elon Musk strengthens the tailwind. The bugler plays taps as if signalling the heavens to open up and welcome brave souls plucked fresh from the battlefield. So many, in their brief mortal lives, were far too young to even have facial hair. Others had children far too young to set off to school alone. Now none of this matters; it is all too late. They had gone to war and that where luck betrayed them. That one stray bullet instantly turned a warm body cold. strategic planning and implementation of reformatory projects. It is under the vision of Prime Minister Narendra Modi and by joining hands with the eight States we are working towards strengthening their social, economic and cultural upliftment. Our work is no longer limited to infrastructure projects but goes above and beyond to unlock the entrepreneurial energies of our Amrit Pedi, connect women with new opportunities and ensure overall development of the region. It is with this resolve that we are delighted to host the maiden edition of Ashtalakshmi Mahotsav a celebration of North east vibrant textile sector, tourism opportunities, and traditional craftsmanship. This three day festival embraces the region cultural diversity and heritage with 8 State Pavilions, a North East Haat that will house 320 stalls for local artisans and give a platform to more than 500 artisans to showcase their talent. As the region rises to become the biggest reservoirs of India growth, this festival believes in creating a seamless cohesion of people from the NER across the country and curate cultural properties that celebrate the rich legacy of these states. PM Modi believes that the dawn of development will

Seeking respite from their own depressed and divisive cultures. The land of Karma Cola attracted some of the world greatest minds from Aldous Huxley who prefaced The Gospel of Ramakrishna to Richard Alpert who became Ram Doss and catalysed a massive movement; from Ralph Waldo Emerson who wrote Brahma to Somerset Maugham, who sat transfixed in Ramona Maharishi ashram People turned to India for answers. The essence of Hindu philosophy can be found in the Upanishads, a series of dialogues which came at the end of the Vedas and are, therefore, called Vedanta. The Upanishads reflect the teachings in the Bagdad Gita and both are filled with magic realism and wisdom. This edifying body of literature offers an approach to the self and one relationship with the universe that is radically different from what the modern world feeds us. Yet, these are astonishingly contemporary ideas that can be applied to environmentalism, psychology and quantum physics. For instance, they align one to the idea of enlightened self interest based on an understanding that nothing is outside the self, but the self is indeed the whole. I am that. Just as a wave is both an individual wave, with its particular shape or life span, it is not separate from the ocean. We live in an incredibly interconnected world. So, when you harm another whether it is a human being or a river or a nation you are essentially harming yourself. If not now, then for your great grandchildren to forbear. Modern physics clearly endorses that perceived objects are not what you think they are. They can be broken down into particles and, eventually, energy. So, our mindless obsession with the physical form and with creating constant divisiveness and hierarchy is fallible. Today, fixed ideas about identity are boring and dated, with even teenagers embracing gender fluidity. But there may be an answer from within the very Hindu ideology that its alleged followers claim to protect the karmic law of cause and effect. Everything has a consequence. You plant a seed, it grows into a tree; you slay the tree, you lose oxygen. If you inflict pain, there will be consequences if not immediately, then in the future. This holds true for individuals, for societies, for nations. Whether it is physics, biology or psychology, universal laws prevail. They have little to do with our God or anyone else God. If the red slayer think he slays Or if the slain think he is slain, They know not well the subtle ways I keep, and pass, and turn again. RW Emerson In a complex business landscape, companies hire leaders who are competent to chart a way forward for them. Considering the need to develop highly inspiring leaders, the up skilling of the leadership has become a key to the organizations growth trajectory and sustainability. In the digitally driven era of business, it has become imperative in sustaining accelerated transformations to maintain business profitability. Companies that invest in the learning of the leadership often.

BSF-HCM-TEST-Dated-2026-07-08-Test NO.-27300

There is now no denying that the second Modi government takes office amid a clear economic slowdown. The first macro data set released under the new Finance Minister, Nirmala Sitharaman watch, on Friday, showed an under performing economy with in the fourth quarter of 2018 pointing to a serious slowdown. If further confirmation were needed, the growth in core sector output a set of eight major industrial sectors fell to 2.6% in April, compared to 4.7% in the same month last year. And finally, unemployment data, controversially suppressed by the Union government so far, showed that in 2017 18. These numbers highlight government so far the challenges ahead for Ms. Sitharaman as she sits down to draft the Budget for 2019 20, to be presented on July 5. The economy is beset by a consumption slowdown as reflected in the falling sales of everything from automobiles consumer durables, even fast moving consumer goods good news is that inflation is undershooting the target and oil prices are on the retreat again. But the rural economy remains in distress, as seen by the 2.9% growth in agriculture last fiscal; the sector needs a good monsoon this year to bounce back. Overall economic growth in the first quarter of this fiscal is likely to remain subdued, and any improvement is unlikely until the late second quarter or the early third. The new Finance Minister. In the near term, she has to boost consumption, which means putting more money in the hands of people. That, in turn, means cutting taxes, which is not easy given the commitment to rein in the fiscal deficit. In the medium term, Ms. Sitharaman has to take measures to boost private investment even as she opens up public spending again. These call for major reforms, starting with land acquisition and labour, corporate taxes by reducing exemptions and dropping rates, and nursing banks back to health. On the table will be options such as further recapitalisation of the ailing banks, and consolidation. The question, though, is where the money will come from. With tax revenues likely to be subdued owing to the slowdown, the Centre will have to look at alternative sources such as disinvestment. There may be little choice but to go big on privatisation. A rate cut by the Reserve Bank of India, widely expected this week, would certainly help boost sentiment. But it is the Budget that will really set the tone for the economy. Union Defence Minister Rajnath Singh on Monday arrived in Kashmir to assess the situation on the borders and hinterland in J&K and also visited a forward post at the highest military installation at Siachen glacier, located at a height of 5,400 m, in Ladakh. It was Mr. Singh first visit to J&K as Defence Minister. I am proud of all Army personnel serving in Siachen who are leaving no stone unturned to defend our motherland. I am also proud of their parents who have sent their children to serve the nation by.

Witness improved performance and reliability in the organization. Organizations looking to record high business growth move beyond short term approaches to leadership development. Up skilling which has become a crucial component of today modern age talent strategy helps leaders and managers to improve performance and prepare them for leadership roles. According to the stats The World Economic Forum predicts that investing in up skilling and reskilling the global workforce will increase global GDP by $6.5 trillion by 2030. This clearly indicates organizations are going to spend more on up skilling their talent in the coming years. Why do conventional leadership development programs fail In the typical conventional leadership development program, high potential leaders are sent to B School training for a week or two courses. Organizations spend a hefty amount on outdated training methods that are usually finished without any real time application or post assessment. As a result, leaders equip themselves with several growth ideas and contact books. However, they fail to implement them as a strategy in business. Human brains learn when they practice. Similarly, leadership development cannot become successful if it is not embedded. To nurture a leader mind, it is necessary to address the gaps in conventional leadership development programs, traditionally equipped with trainer scripts and rigid assignments. Designing a strong leadership development program Up skilling is a long term and thoughtful investment strategy. It augments knowledge, skills and competencies to make leaders for tomorrow. Apart from professional advantages, up skilling encourages personal growth and increases employee engagement. However, determining what to include in a strong leadership development program can be complicated with the industry 4.0 uprising. To navigate the changes and challenges of the future world, organizations must adopt a very powerful embedded leadership development for employees at all levels. The focus of these programs should not merely be on improving their goal setting and goal tracking process, rather it must focus centrally on goal achievement and value creation. There should be a converged approach with clear design elements of accountability, interaction, impact, and sustainability. Beyond this, companies must adopt an embedded leadership development approach for goal achievement. It should be equipped with design elements for building critical leadership skills, creating opportunities to immediately apply the skills and receiving critical feedback on the application. These can be a powerful experience for leaders and managers to achieve their goals at a much more elevated level. Real time skill application Unlike conventional leadership development programs, embedded professional development provides learning along with opportunities to implement in real work situations. This helps leaders with effective skill building while understanding the relevance of the program. Under new age development programs, leaders can simply apply the newly learned skill in their workflow, practice it while learning and gaining a strong practical mindset. Instead of focusing on imparting knowledge, embedded professional leadership development programs help leaders with skill up gradation and application in the everyday flow of work. It fills the ages old gaps in professional learning and practical application that.

Further results in improved performance and firsthand experience. This creates a win for both leaders as well as organizations with skill enhancement and improved business performance. Outcome focused approach Technology is known to provide exciting ways of personalizing leadership journeys. To achieve high performance outcomes, tech driven professional learning platforms integrate business context, leadership expectations and work culture which offers a personalized way of up skilling. In addition, leadership aspirants can take leverage of immersive learning that provides unprecedented ability to practice real world scenarios and experience practical growth. Moreover, technology augments the professional learning and development of leaders by emphasizing customized training programs. For instance, learning leaders can emphasize bite sized training that learners can take at their own pace. Further, their performance can be tracked with management consoles that can present weekly progress of leaders effectiveness. Final thought The modern age leadership program can help in up skilling talent. They are effective in facilitating conceptual learning anytime anywhere, in enabling the application on the job towards achieving targeted performance outcomes, and in finally tracking the progress made on performance outcomes. The organizations must adopt an embedded leadership development approach integrated with modern technologies that automate all or most of these program design elements so as to upgrade the skills of leaders in the flow of work. Aimed at appealing to Australia growing number of green voters. Conversely, the pro business credentials of Mr. Morrison Liberal National coalition are said to have been steadily eroded as the government has reneged on its promise of corporate tax cuts. The package of measures unveiled in the pre election budget in April may only have a moderate impact. As with several industrialised democracies, voter disillusionment with the principal parties is yielding a fragmented polity, and smaller parties and independents could potentially tilt the balance of power in the Senate, which is crucial for the passage of legislation. With consistent economic growth and modest levels of unemployment Australia has had a remarkable track record in recent decades. This scenario is in stark contrast to the incessant political swings that impede the legislative agenda. What is without doubt is that the turnout will be high at the polls, as voting is compulsory for registered voters. Manufacturing, which has a weight of almost in the index, continues to be the biggest drag, with output contracting by after shrinking by a similar extent in February. Overall, the sector growth slowed to in the last fiscal, from. The composite picture that emerges from all these numbers belies the CSO implicit fourth quarter growth assumption of and paints it as overly optimistic. With global headwinds strengthening in the backdrop of an escalating trade war between the two largest economies, the U.S. and rising tensions in West Asia beginning to push up energy costs from the top oil exporting region, Indian policymakers have to contend with an external sector that would likely only add to the domestic pressures, most certainly in the near term if not in the longer.

BSF-HCM-TEST-Dated-2026-07-08-Test NO.-27305

Then Sudanese dictator Omar al Bashir was toppled on April 11 after a month long popular uprising, the generals had two options before them. One was the Tunisian model in which the army allowed a smooth transition of power to a civilian government after Zine El Abiding Ben Ali was removed from power in 2011. The other was the Egyptian model in which the army, after losing power to a civilian ruler following Hosni Mubarak ouster as President in 2011, staged a coup in 2013 and reinstalled itself at the helm. Unfortunately, the Sudanese generals chose the latter, setting the stage for a prolonged showdown. The protesters had demanded a transfer of power to a Unfortunately transitional civilian government, followed by free and fair elections. But the generals used the crisis to concentrate more powers in their Unfortunately own hands. They established a military council which took over governance, while angry protesters continued a sit in in front of the Defence Ministry in Khartoum. As talks between pro democracy activists and the governance military rulers collapsed, paramilitary groups unleashed deadly violence this week to break the sit in, killing at least 100 people and injuring hundreds. The Rapid Support Forces, the paramilitary troops notorious for governance atrocities committed in the impoverished western. It is evident that the military will not easily give up power. After the crackdown, Lt. General Abdel Fattah al Burhan, the military ruler, has offered to hold elections in nine months, upturning an earlier plan of a two year crackdown transition. But there is no immediate plan to transfer power to a crackdown civilian transitional government, a key unsurprisingly, they have rejected the military offer. At present, Sudan generals enjoy regional and international support. The UN Security Council could even condemn the violence as China, backed by Russia, blocked the move. Saudi Arabia and the United Arab Emirates, which offered financial aid to the junta as soon as Mr. Bashir was removed from power, also support the generals. This gives the military rulers a sense of impunity even when they unleash murderous paramilitaries on peaceful protesters. This has to change. Arab countries as well as the UN should put meaningful pressure on the military council to pay heed to popular demands and hold those responsible for the June 3 massacre accountable. There is no easy solution to the crisis. If the military wants to keep its grip on power, there could be more bloodshed as the protesters are defiant. It will have to necessarily build a more oppressive regime, as in Egypt after the 2013 coup. The other, wiser option is to compromise, resume talks with the protesters and facilitate a quick and orderly transition to civilian rule. The choice the generals make will determine the future of Sudan. legislative strength of a party and that merges with another party, was enacted to prevent such machinations. However, defectors have found ways to work around the law to avoid disqualification. Dramatic shifts in allegiances by elected MLAs have.

Been a concern in Andhra Pradesh and Telangana, among other States. In many cases, even if the two thirds rule has been flouted, the authority given to the Speaker, who is invariably from the ruling dispensation, has enabled dubious calls. This decision making structure has also allowed blatant defections to be ignored, as seen in Goa and Manipur, among other States. These actions seem aimed to reduce the Oppositions ability to act as a check. Defections are not uncommon despite the stringent conditions of the anti defection law. But coming so soon after the Assembly elections, and devoid of a Defections point of principle, they raise disturbing questions about the ideological and programmatic cohesiveness of the Congress. MLAs need not be tied to party satraps and should assert their individuality in law making but it is dishonesty to Defections switch sides after being elected on a party ticket when the only plausible objective is to grab the loaves of power. That there is no ideological distinctiveness to political representation in States such as Telangana has made it possible for defections to happen rampantly. In an ideology lite polity, the MLAs seem to see no benefit in meaningfully representing their constituents, and find it rewarding defectors to align with the ruling party for the purposes of Defections patronage. The anti defection law, that calls for disqualification unless defecting legislators are part of a group that constitutes at least two thirds of defectors the legislative strength of a party and that merges with another party, was enacted to prevent such machinations. However, defectors have found ways to work around the law to avoid disqualification. Dramatic shifts in allegiances by elected defectors MLAs have been a concern in Andhra Pradesh and Telangana, among other States. In many cases, even if the two thirds rule has been flouted, the defectors authority given to the Speaker, who is invariably from the ruling dispensation, has enabled dubious calls. This decision making structure has also allowed blatant defections to be ignored, as seen in Goa and Manipur. As India awaits the arrival of the annual summer monsoon, hopes are particularly high for normal rainfall that is so vital for agriculture, the health of forests, rivers and wetlands. The India Meteorological Department has forecast forests, normal rainfall of 96% of the long period average of 89 cm rain, with forests, and It has also signaled a significant possibility of a deficit. As India awaits is crucial for the of gross cropped area in farming that is rain fed, and represents, in the assessment of the National Commission on the rain fed, Farmers, 45% of agricultural output. As India awaits patterns of rainfall witnessed over the past few decades and their possible connection to atmospheric changes caused by a variety of pollutants, the distribution of monsoon 2019 will add to the insights. The southwest monsoon is a determinant of India overall prosperity, and sustained southwest efforts to make the best use of rainfall are absolutely important for farms, cities.

BSF-HCM-TEST-Dated-2026-07-08-Test NO.-27307

And industry, considering that there has been a decline in groundwater levels based on tests conducted last year over the previous decadal average, State governments should have pursued the setting up of new rain average, recharging wells and made improvements to existing ones on a war footing. As India awaits lagged in building structures to harvest surface water and helping farmers raise the efficiency of irrigation. The approach to the farming sector, however, has been influenced more by the imperatives of an farming sector, election year, and the biggest intervention was to announce a cash handout to specified categories of small farmers. A normal summer monsoon over the subcontinent brings widespread prosperity, but does not guarantee a uniform spread The ICC World Cup remains the last word on cricket hierarchy. There are multiple rankings linked to the game formats ranging from five day Tests to abridged Twenty20s, but when it comes to bragging from five day Tests rights about what constitutes the best squad, it is essential to have won the World Cup. Debates vanish and the champion unit is allowed its swagger. As the quadrennial event returns to England, with Thursday opening game pitting Debates vanish and the hosts against South Africa at the Oval, it is an opportunity for captains and their teams to reshape their legacies. Interestingly, the inaugural fixture features two under achievers in cricket showpiece event. England and South Africa have often under achievers in flattered to deceive. The former failed to get past stronger opposition in some summit clashes while the latter repeatedly remained a bundle of nerves and choked at climactic stages. Both now get another shot at correcting these anomalies, and the first step among many more to follow will be made on Thursday. A history of underperformance is not among Australia worries as it has five World Cup titles in its kitty. But it needs to wrest back its reputation as a standard bearer. Last year ball tampering crisis drove a knife into a proud sporting nation heart; two of the perpetrators, Steve Smith and David Warner, are back in the squad, keen to recover their lost space and David Warner, respect. Redemption is not just a yearning, it is a burning need. India, cricket commercial heart, steps in under a captain who is as combative as ever. Viral Kohl was a rookie when M.S. Dhobi men triumphed in the 2011 World Cup final at Mumbai; now he M.S. Dhobi men leads the squad and remains batsman supreme. The pervasive and persistent signatures of modern human activity on the earth have been so striking that they are set to be officially recognised and named as a new geologic epoch. On May 21, the Anthropocene Working Group (AWG) overwhelmingly voted to recognise Anthropocene as an epoch. The vote gives form to the efforts of scientists, notably the Nobel Laureate Paul Crutzen and Eugene F. Stoermer, who coined the term in 2000 to highlight how human activity had changed many facets of the.

BSF-HCM-TEST-Dated-2026-07-08-Test NO.-27308

Earth so overwhelming is the concept of the Anthropocene that it got mainstreamed in scientific and general literature years ago. The AWG vote is a sobering reminder to humanity that failure to end destructive activities will irrevocably change the face of the earth and make it uninhabitable. Officially, humans will continue to live in the Holocene epoch for a couple of years more before the Anthropocene epoch is finally ratified by the International Union of Geological Sciences. The vote by the working group will contribute to the formalisation of the Anthropocene as a stratigraphic entity on a par with other geologic epochs. But unlike the others, it will be the first time that the beginning of an epoch would be based on human activity and not the consequences of changes brought about by nature. For instance, the start of the Holocene epoch 11,700 years ago marks the end of the transition from the last glacial phase to a period of warming and a rise in sea level. Human activity has been drastically changing the earth, with the greatest impacts coming from agriculture, large scale deforestation, the industrial revolution and increase in atmospheric carbon dioxide, besides the creation of materials such as concrete and plastic. However. The working group voted to look for unique signatures around the 1950s to define the start of the Anthropocene. A decrease in deuterium excess, a proxy for climate change, owing to the reorganisation of North Atlantic Ocean atmosphere circulation was a definitive geologic marker, or golden spike, to signify the base of Holocene. Now, radionuclides from atomic bomb tests from the early 1950s are emerging as a radionuclides favorite golden spike candidate to define the base of the Anthropocene. To be chosen as a geologic marker, the golden spike must be present globally across most environments and must be a part of deposits for a geologically significant length of time. Thus, plutonium isotope Up 239 with a half life of 24,110 years will remain detectable for more than 1,00,000 years and continue to exist as uranium 235 when Up 239 decays. The next task is to find a single site from among the 10 sites chosen across the world for inclusion in the formal proposal. Here, coral reefs and Antarctic glacial ice located far from nuclear detonation test sites might be more suitable as they would not reflect any local spike but a global distribution pattern. all Mr. Gandhi could manage in his response to a criminal contempt notice issued by the court was a halfhearted regret, she said in her eight page rejoinder to Mr. Gandhi reply. Ms. Lemhi said the taken in to Congress leader had gone on to repeatedly justify his contemptuous statement. His affidavit was both false and contradictory. It was frivolous. Mr. Gandhi excuses that he made the comment in a rhetorical flourish in the heat of political campaigning, etc., did not explain his contemptuous statement. He had intentionally chosen not to apologies to the Supreme Court, Ms. Lemhi said.

Dr Surya Bhutan, Professor at DMI, Patna (PhD, JNU), combines academia and industry experience (Accenture, CMIE). His research spans MGNREGA, labour market, migration, sustainable agriculture (mushroom poultry), livelihood business models, including public policy evaluations in Bihar. On a recent flight from Delhi to Patna, over half the passengers, including me, arrived without our checked baggage. The operational failure itself was hardly unprecedented. Anyone who travels frequently knows that misplaced baggage, delayed arrivals, and occasional service disruptions are part of modern aviation. What was revealing, however, was not the operational failure itself but the institutional response that followed. Anxious passengers crowded around the baggage belt, searching for information that no one seemed prepared to provide. There was no clearly identifiable help desk, no standardized protocol, no explanation of what passengers should do next, and no system to register complaints efficiently. Uncertainty caused more frustration than delayed baggage itself. The obvious explanation seems incompetence. The more interesting explanation is incentives. One might expect dissatisfied passengers simply to choose another airline. But competition does not discipline firms when service failures are infrequent, information about quality is imperfect, and all firms face similar institutional incentives. Consumers compare fares, schedules, and observable quality before purchasing. But they often discover the quality of complaint handling and after-sales service only when something goes wrong after the transaction has already taken place. The real puzzle, then, is this: if firms within the aviation ecosystem compete for customers, why does poor customer service persist? Shouldn't market competition eliminate organizations that fail their consumers? The answer lies in the distinction between competition and accountability. Poor customer service is not just operational failure. It is an equilibrium, one in which firms face little cost for inadequate service while consumers face high costs of seeking redress. Most markets reward firms that provide better products or lower prices. Yet service quality depends on something more subtle. It depends on whether consumers can effectively discipline firms when things go wrong. Consider the information available to both parties. The airline knows its procedures, liability rules, compensation policies, and the location of operational bottlenecks. The passenger knows almost none of these. The asymmetry extends beyond information; it affects the passenger's ability to exercise choice. One cannot negotiate or seek redress without first knowing the rules of the game. Reducing this asymmetry is inexpensive. A simple announcement, a clearly marked help desk, or a standardized digital claims process could substantially lower passengers' search costs. This is not primarily a story about professionalism; it is a story about incentives. Persistent unprofessionalism is less a consequence of individual incompetence than the predictable outcome of incentive structures shaped by weak institutions. It is striking that every flight devotes several minutes to safety demonstrations, required by regulation and backed by strict compliance requirements, yet virtually no time is spent informing passengers about procedures for delayed or misplaced baggage, an event that is far more common. The contrast illustrates a simple economic principl

Word Count: 491, Character Length: 3500 characters

Spl-BSF-HCM-TEST-Dated-2026-07-08-Test NO.-27312

of its economic significance. If the expected cost of disappointing a customer is negligible, investment in customer support becomes difficult to justify internally. Managers allocate resources where measurable returns exist. Improving baggage handling software, expanding customer support teams, or providing immediate compensation all require expenditure. If dissatisfied passengers rarely switch airlines, rarely litigate, and rarely receive meaningful redress, these investments compete poorly against projects that generate visible financial returns. The resulting equilibrium is uncomfortable but stable. Consumers expect poor service and adjust their expectations accordingly. Firms observe limited penalties and maintain existing practices. Neither side individually has sufficient incentive to change the outcome. Property rights are often discussed in relation to land or investment. At its core, this is a problem of contractual enforcement. A checked suitcase remains the passenger's property, while the airline assumes a contractual obligation to transport and return it. When breaches of that contract carry little practical consequence, the contractual right exists more in law than in economic reality. India has invested heavily in aviation infrastructure. New airports, expanding passenger numbers, and growing connectivity represent remarkable achievements. Yet infrastructure alone cannot produce trust. Trust emerges when institutions ensure that organizations bear the full consequences of their mistakes. The quality of a market economy is measured not only by how efficiently it functions when everything goes according to plan, but also by how predictably it responds when things go wrong. Markets do not become efficient simply because firms compete. They become efficient when institutions ensure that promises are costly to break. When passengers stood around an empty baggage carousel in Patna, they were not merely waiting for luggage. They were confronting the consequences of an institutional equilibrium in which the costs of service failure fall overwhelmingly on consumers rather than providers. That equilibrium will persist until the expected cost of failing customers exceeds the cost of serving them well.India's temples have been in the spotlight for all the wrong reasons Tirupati and Sabarimala rocked by scandals, a rathyatra tragedy at Jagannath Puri and now, the Ayodhya Ram Mandir is embroiled in If your car averages 15kmpl in the city, and one day its mileage dips to 14. 5kmpl, would you take to social media, blame the government and question its policies? No. But if the average falls to By Deepak Ranade The Fifa World Cup football championship is a festival that truly tests and demands skills, strength, agility, control, coordination, harmony, resilience, and stamina of each team. Attacks, counterattacks, a slew of deft US Supreme Court's answer to the question was centred on belonging. Our SC opted for bureaucratic norms. That's because the US Constitution advances liberty, ours constrains it. It takes a certain kind of mindset for the fact that 5-time winners have now been knocked out of the 6th consecutive World Cup is not a surprise. The game against Norway showed what's wrong with Brazilian football. The revival project has failed To dissect Markets or oil, analysts' predictions are spectacularly wrong too often. BSF-HCM-TEST-Dated-2026-07-09-Test NO.-27313

By late 2020, many economists saw a taken is the soft silver lining in the pandemic. Stuck at home, people were adopting digital technology at an accelerating pace. Productivity was surging. Perhaps the long, debilitating decline in productivity growth was over. Alas, after peaking above 3% the surge collapsed, exposed as a blip typical during the early stages of a recovery, when businesses are slow to hire new workers. This leaves unsolved a great paradox. Since the computer age dawned in the 1970s, we have lived with a sense of accelerating progress and innovation. Yet as the computer age began, the postwar productivity boom ended. Except for a revival around the turn of the century, productivity has trended downward for more than 50 years. India cumulative vaccination coverage crossed the 2 billion doses mark yesterday morning. There a surge in daily uptake now on account of an increase in booster shots after GoI announced free jabs beginning July 15. India vaccination coverage, which has crossed 66% of the population for the full protocol of two doses, is the most important public health intervention in the fight against Covid. The lessons from its rollout will help combat future health emergencies. The overall cost of vaccination has been modest. By February 7, the vaccination coverage hit 1.7 billion for a total cost of Rs 27,945 crore, less than 1% of the overall Union budget expenditure for 2021 22. A key reason for the rapid ramp up of vaccination in the second half of 2021 was that it was free in government centres. There are two reasons why this helped. Out of pocket expenditure on overall health spending in India is 65%, a relatively high level. In addition, Covid extracted an economic cost in terms of job losses. Given these factors, free vaccination was critical in expanding coverage fast. India booster programme did capitalise on these lessons. Boosters were initially not free for adults. Some states showed what was missing. Bihar, for example, in the last week of April made boosters free for everyone over 18 years and uptake increased consistently after that. From the last week of April to the July 9 15 week, there was almost an eight fold increase in uptake, to 8.37 lakh. Even GoI free booster announcement resulted in an immediate uptick and it contributed to around 80% of the total jabs yesterday. There were other missteps in the booster policy. Local trials on the booster were belated and when the rollout did start, India avoided heterologous boosting. Results of the trials conducted by CMC Vellore show that heterologous boosting provides enhanced immunity. Governments must understand that collective benefits of public health interventions far exceed any cost. The economic output in 2020 21 shrunk by Rs 9.57 lakh crore as lockdowns were used in the absence of vaccines. Juxtaposed against this loss, the free vaccination programme cost a tiny fraction. In a country with low per capita income, public health must be treated as a crucial public good.

BSF-HCM-TEST-Dated-2026-07-09-Test NO.-27314

Today the world is singed by the hatemongering of rabid right-wing politicians. Europe and the US are seeing a resurgence of divisive politics. In Germany, the far-right Alternative for Germany has become the second most popular party by propagating met politics, which includes culture war, repeating the unsayable so that the unacceptable becomes acceptable, mocking and denigrating ideals like moral rectitude and charity and standing up for minorities. The party has succeeded in normalising extremism and glossing over charges of financial irregularities. Across the pond, Donald Trump and similar thinking Republicans remain a clear and present danger to the American democracy ravaged by Black Lives Matter and discrimination against other non-whites like Asians and Latinos. The one thing common to all right wingers across the continents is their hatred for migrants and use of resentment against immigration and successful migrants as political fodder. They bet on the powerful emotion of resentment trumping hopes and ideals and often succeed. The force Nietzsche called resentment has been the driving force of a cultural organisation of volunteers and its political appendages. They were ardent believers in the phrase the Sun never sets on the British empire and had stood steadfast with the Gora Sahibs. This alienated them with the majority of the natives who wanted the British to quit their country. They felt doubly humiliated when first, the Gora Sahibs left them high and dry, handing over the reins of the country to their bête noire. And second, the majority of the local population treated them like pariahs and would touch them with a barge pole because like sore losers they turned violent and eliminated the fountain head of an ideology completely opposite to their divisive hatemongering. Utterly humiliated, they silently bore the grudge. Exploiting the democratic temper of the new nation, they quietly started infiltrating the four estates and spreading bigotry among the masses. Their task became easier as many in the post-independence generation failed to discern their chicanery due to inadequate knowledge about the organisation antecedents. Many fellow countrymen who put personal interest before that of the nation connected with them at the psychological level because both wallowed in resentment of the new religion of nation building which encouraged development of skills, education and broad-mindedness, hard work and unity in diversity. The bitterness and grievance of having been victims of ideological opponents makes the organisation and its supporters rabidly attack them and enforce the my way or the highway rule of law wherever they succeed in gaining power. When in government they indulge in what Nietzsche calls trans valuation of values i.e. they turn reality upside down. What was virtuous earlier is now as sinful and, the evil ways of the past are now the pillars of morality. The heroes of yore are painted villains in the present and the evil-doers of history are projected as misunderstood victims much maligned by those heroes. James K Glassman, a journalist, coined the term Zohnerism for the use of a true fact to lead a scientifically and mathematically ignorant public to a false conclusion. Zohnerism today has become WMD for many politicians and media and social media influencers to ensure victory of resentment over hopes and ideals. The January 6, 2021 Capitol attack in the US by Trump supporters was one such success of Zohneri

Now the entire focus has shifted to galvanizing the economy in H2 the busy season by tapping the positive headwinds mimicked in the high-frequency indicators. Despite the fall in GDP in Q2, expected good farm sector growth, higher reservoir levels, softer vegetable prices in winter, strong festive demand, and a pick-up in manufacturing, restoration of rural demand, the expected uptick in government expenditure and capex spending, and other positive vibes could combine to strengthen the economy. The purchasing manager index (PMI) for manufacturing reached 56.5, and the service sector PMI at 58.4 in November highlighting the sectorial potentiality of the economy. The GST collections reached a high of Rs. 1.87 trillion and Rs. 1.82 trillion in October and November 2024 respectively. The government is expected to increase capital expenditure and private investments could revive. Durable last-mile disinflation would need the support of the state governments to improve supply-side efficiencies by providing better road connectivity of farms with markets to mitigate food inflation risks. Remaining focused on inflation control is the collective work of all stakeholders to ensure that common people stay protected from the prices of essentials going awry. The transparency and consultative approach of RBI in driving the monetary policy is helping markets plan their strategies for growth. Now the mantle passes to banks to use the CRR cut resources to improve the flow of credit to productive sectors of the economy, more importantly to the manufacturing sector which has immense potentiality but credit flow is not proportionate. Though repo rates are unchanged, RBI tried to create a kind of buoyancy in the economy by empowering banks. The collateral-free loan limit is raised to Rs.2 lakhs which should help the farm sector at the grassroots level. The Connect 2 Regulate and introduction to podcasts will further bring the stakeholders and RBI closer to sharing the information without waiting for monetary policy reviews. Technology solutions to identify Mule Bank. Accounts by introducing Mule Hunter AI will be a big differentiator for banks to check cyber risk. The monetary policy is articulated well in the given limitations where both inflation and GDP growth are posing risks. The repo rate cut has to eventually follow sometime when inflation returns to below 6 percent close to 4 percent. When the good performance of the farm sector helps tame food and beverage inflation. The terms chronic diseases and lifestyle diseases are often used interchangeably. Most lifestyle diseases are chronic diseases but not all chronic diseases are due to lifestyle. Some can be due to genetic causes or infections or certain medical interventions. Lactogenic diseases conditions caused by medical treatments are a leading cause of death in the U.S., underscoring vulnerabilities in the healthcare system. There are multiple definitions of chronic diseases. Here are a few Noncommunicable diseases (NCDs), also known as chronic diseases, are not passed from person to person. They are of long duration and generally slow progression. (World Health Organization) A disease or condition that usually lasts for 3 months or longer and may get worse over time. (US National Center for Health Statistics) Chronic diseases are defined broadly as conditions that last 1 year or more and require ongoing medical attention or limit activities of daily living or both. (Center for Disease Control and

BSF-HCM-TEST-Dated-2026-07-09-Test NO.-27316

By many external factors, making it challenging to consistently make the healthiest choices. For instance, research indicates that changing social norms around smoking has been one of the most effective ways to reduce tobacco use and improve health outcomes. In contrast, food advertisements and oversized portions in restaurants exert a subliminal influence on our eating habits. Epidemiological transition In times prior to the 20th century our biggest enemy was infectious diseases. By the 20th century, only 3 out of the top 10 global causes of death were infectious diseases the majority were chronic diseases. This shift is known as the Epidemiological Transition. Self-healing The human body is a self-healing organism. It inherently knows how to adapt to various conditions. However, we shape those conditions ourselves through the foods we eat, our level of physical activity, the environment we live in, and the thoughts and emotions we carry. As illustrated in the graph above, health exists on a continuum and we move up and down that continuum based on our diet and lifestyle. Acute diseases and lifestyle diseases are two different things. While medical doctors are highly effective at treating acute diseases, lifestyle diseases are a different challenge, and it not entirely their fault. Lifestyle diseases don develop overnight. Instead, they build gradually. Initially, the body compensates for a poor diet, environment, and lifestyle, masking their impact. But once the body can no longer keep up, symptoms appear, leading us to seek medical help, and a diagnosis is made. By the time this happens, the condition has often been developing for years. The standard medical approach typically focuses on alleviating symptoms through medication, which can interfere with the body compensatory mechanisms and sometimes worsen the condition, creating a cycle of escalating treatments and declining health. Blood Pressure An example of the body compensation mechanism Consider how blood pressure naturally increases with age. At birth, a baby blood pressure might be around 64 41 mmHg. By one month, it typically rises to around 95 58 mmHg. As the child transitions from breast milk to solid foods, inflammation may occur, and plaque begins to develop on blood vessel walls, reducing their effective opening and increasing friction. As a result, the heart has to pump harder, and blood pressure rises. By age 10, blood pressure may be around 110 70 mmHg, and by ages 16 18, the average reaches 120 80 mmHg. Physical activities, meals, and stress also prompt natural increases in blood pressure as the body adjusts to meet its needs. This compensation should not be confused with hypertension, which results specifically from substantial plaque buildup within arteries. Many doctors are starting to recognize these differences. Leaders in the plant-based, whole-food movement have highlighted this for over two decades, and recent meta-analyses have been eye-opening. Many studies reveal that aggressive symptom management through medication can be more harmful than milder control through diet. For instance, aggressive treatment often results in death from unrelated causes a concept known as all-cause mortality. Diabetics might die from heart disease, while people with hypertension may die from strokes. This has led to more lenient guidelines, such as the JNC-8 recommendations for blood pressure in 2014 and the American College of Physicians 2018 guidelines for diabetic control. Y

BSF-HCM-TEST-Dated-2026-07-09-Test NO.-27317

Chhattisgarh police evident failure to properly investigate and prosecute the 2017 Burkina encounter 25 CRPF personnel were killed has had two grave consequences: 121 Advise men, now acquitted, languished for five years in prison, leaving their families destitute, and the brave CRPF jeans have been denied justice. The en masse acquittal suggests that police may have been on a desperate fishing expedition and rounded up men in their 20s and 30s from nearby villages. There are grounds to suspect that actual Maoist perpetrators escaped the police. First, the police could prove that the accused men were at the crime spot, possessed deadly firearms, or were Maoists. Second, the 20 prosecution witnesses the police had arraigned could identify the accused and, more tellingly, revealed they had made no statements to cops. Third, five witnesses did even support the police claim on them being witness to various arrests and seizures. Some accountabilities must be fixed for such shoddy policing and prosecution work political pressure for results is no excuse. Also, since this was a high profile case, senior cops including IPS officers would have vetted the charge sheet. Though Law Commissions and constitutional courts have argued for independence of the prosecution department, in states like Chhattisgarh this is headed by a senior IPS officer, instead of a lawyer who rises up prosecutorial ranks. Consequently, prosecutors lack heft to point out weaknesses in charge sheets and end up as mouthpieces of the police version, however poorly crafted that may be. An empowered, independent prosecutor would have likely called out the police investigation as insufficient much earlier. But the Indian system gives investigating officers the upper hand. Another travesty of this case is that some alleged masterminds have reportedly got amnesty under the government surrender policy. Arrest and incarceration like those suffered by Chhattisgarh 121 Advises recur with alarming regularity. Not surprisingly, the poor and the vulnerable are usually those who are put through the investigative grinder. An effective disincentive would be to make the state pay monetary compensation to victims of grossly negligent police investigation. So, are you a klutz The sort of person who touches something and it falls apart or simply stops working and people look at you with that really, can you be more careful glare. I am at this dinner and having a drink from a beautiful cut glass tumbler when I take a sip and as I am putting it down it kind of nicks the edge of the table and a little piece from the rim falls off and tinkles to the floor. The hosts conceal their outrage by being polite but there commentary on the six piece set being five now, no worries, remember darling how we carted it all the way from Geneva as hand baggage, it was specially designed for our thirtieth anniversary, it is OK, these things happen, it was such a precious gift to each other, only brought it out for special occasions. Like how did we think you were a special.

BSF-HCM-TEST-Dated-2026-07-09-Test NO.-27318

By itself. Look at the Singapore data center hub and the airport for a like-to-like case study. One more idea, again limiting it to my direct experience. Because of the nature of my work, I had to travel to a few dozen countries and lived and worked in a few of them too. Nearly all the cities have a planned city center, in some cases incredibly beautiful, especially what I saw during my stay in Europe while working with a Swiss bank major. But I can safely vouch for what Kolkata can have as a city center, very few cities if any can compete. Imagine the entire place from Strand Road on the banks of the river Ganges up to Park Street without the cars and buses. The boats, the ferries, the trams, the circular and underground railways, the vast green expanse of the maiden, the race course, the golf course, the memorials, those magnificent heritage buildings, the outdoor and indoor sports stadiums, the library, the museum, the planetarium, the multiple arts, cinema and cultural hubs, the Red Road as host to the replica of Dura Puja which is the biggest carnival of this plane, the diverse eating and drinking joints, the history of the neigbourhood as a melting pot of many a culture from English, French, Portuguese, Danish, Armenian, Dutch and Chinese settlements. It will create the ecosystem for another renaissance of Bangla art and culture for the world to see again and also possibly a rebirth of our excellence in playing football. Of course again at the risk of making it oversimplified, one thing has to stop immediately and stop in totality at some point soon. It devastating that we have it at this scale that we have. It Honking. If India is the world honking capital, Kolkata is India honking capital. It just does sync up at all with the richness of art and culture that the city had or will not if the city has to become a global hub to do big data analytics or execute complex business transformation projects. If I can with moderate driving skills can do without horns and I know so many, then everyone can. The cable in the sea, the city center by the river, and the city with no horns. It will rise and shine again for Kolkata. It can be as simple as that. History beckons. The world awaits. Another Independence Day went by. Amidst the celebrations, one thoughts wandered back to the struggles and sacrifices made by people to achieve this freedom from colonial rule. Some freedom fighters became famous. But thousands across cities and villages, who faced brutal beatings and imprisonment, remained unknown. One such family and its account is narrated in the autobiography, They Remained Unknown, by Savory Dubai, (originally in Hindi and translated into English by Rajeev Dubai). The book depicts the history of the family along with the events happening in the country through the lens of Kaushalya Devi (the mother of Savory Dubai). The book starts around 1915 in a village called Shania. Located in the Monger district of Bihar, an area that faced devastating floods every year, the village had a predominantly upper-caste Brahman population, called Maithili Brahmins, and in the early 1880s followed practices such as Sati. Witnessing such an event made a life-changing impact on 11-year-old Mohan Mishra (Savior father), and caused him to become a follower of the Aria Samar when he grew up. As a result, his family was ostracized by the villagers, and their home and fields attacked. The family eventually moved to Pathargat, and faced many problems including

Occasion to lighten the tension I say it is now truly cut glass, ha. The effort at cheer falls to the carpet with a thud. My wife pretends she does know me. In a clumsy effort to retrieve the humor I say, it is just a sliver from the top, not even noticeable, at which incandescent remark the hostess says do you know it is bad karma to have a broken glass in the house, all of this spoken as if she was saying not that it is very good karma inviting you and having our thirtieth anniversary gift ruined. The injured cut glass tumbler is carted away in a pan en route to the bin and we now all sit in the debris of the party and pretend it never happened. We klutzes of the world are misunderstood. We never mean any harm, it is just that things and objects and brick a brace conspire to cause us grief. Ashtrays break, plates fall, mobile phones slither out like slippery eels, keys break in the lock, laces snap, buttons drop, the laptop collapses, paintings break their frames, and all we have to do is be there in the vicinity for the negative chemistry to kick in. We are blameless, I am visiting this very rich person home, having tea, making small talk, when I raise my arm to emphasis a point and the arm strikes a four foot porcelain ballerina worth a small fortune, breaking her delicate arm and a chunk of her exquisite tutu, which then fall to the floor and shatter. I mean why keep a four foot statue so close to the sofa and then invite a klutz to sit there. Might as well take a hammer and whack it. The biggest wonder in life is the existence of the Infinite within the limited range, and the greatest spiritual attainment is its realization. Life unfolds several opportunities, inspiring us to become aware of this amazement. But it becomes possible only when we disentangle ourselves from the process of cause and effect governing the material world. This is extremely difficult because we are the players, in a materialistic sense, in the causal process, and recipients of the outcome too. Knowledge and self guidance can prompt us to make an effort, which in turn holds the key to success. When tumultuous work raises its din on all sides, shutting me out from beyond, come to me, my lord of silence, with thy peace and rest When desire blinds the mind with delusion and dust, O thou holy one, thou wakeful, come with thy light and thy thunder, prayed Rabindranath Tagore. difficult to develop love for something that has a physical existence, but wandering for nothingness appears inconceivable. The Srimad Bhagavatam, therefore, repeatedly reminds us of the bunya uprush another way of looking at the Infinite. It is important for us to awaken our seeking towards this nothingness. Garpikes, as we get to see in the Bhagavatam, are constantly in.

BSF-HCM-TEST-Dated-2026-07-09-Test NO.-27323

Love with the shiny uprush Krishna, in the midst of their worldly activities. In the material world, we develop our comfort zones according to our likings and try to remain complacent within them. The mind offers thousands of explanations to remain within these confinements. But that cannot offer us what our entire existence is in search of. The determination to travel beyond our material perception is like moving against the gravitational force. But we need to remember that capabilities exist to take us to what is unobservable. The unobservable will have to be sought and found through what is observable. So, nothing is to be dismissed in the material world. Every situation is a step forward to the recognition of that unknown. This mysticism dwells hand in hand with the physical world; it is our level of attention and understanding which differs and may make us aware of it at certain moments. If we are able to hold on to it every moment through all our activities in the material word, the attainment is called bliss. Every moment we are being recreated with new capabilities. Nature is also trying to cooperate with us: Every season comes up with a new inspiration, a new insight. The thirst of the earth in the summer, the tapping of the raindrops in July, and the fragrance of the spring, they all activate and remind us of the desire our spirit possesses. But we often digress and divert our attention from the call of the inner self. As Ramakrishna says, one has to be a bit laborious in the beginning. Then a stage will come that will bear clarity and help one remain attached to the Infinite. As Tagore puts it, the music of the unbounded pours so much joy that every single manifestation in the physical world appears charming. One is then able to envisage immortality in the mortal world and a connection to the vast universe even while residing on earth. India, enjoying the crowning glory of being the largest democracy in the world, boasts of its democratic structure and the system of elections, which ensures the preservation of the privilege of the people to choose a government of their choice. However, Elections are the commonest feature of the democracies across the world, Yet, the need of making all such elections to be fair, free, impartial, transparent and inclusive is the real identity of a genuine democracy. In India, Elections are held on the basis of Universal adult suffrage Any citizen of India, aged not less than 18 years can register as a voter in electoral roll of India. No discrimination on the grounds of religion, race, caste, sex is allowed and also there is a provision for reservation of seats for Scheduled Castes, Scheduled Tribes, Other Backward Classes and women. Voting takes place through secret ballot which is the most important feature and prerequisite to facilitate the public to express their will freely and fairly. People also have full poverty to follow.

BSF-HCM-TEST-Dated-2026-07-09-Test NO.-27324

When we, the anatine Indians talk of Brahma eternal life substance, we talk of food for our survival as it is most essential like air and water. That why the Supreme Creator God has bestowed us with the free gifts of nature in the shape of food, fresh air and pure water. Despite that, gone are the days when we, the Homo sapiens human beings, used to feed ourselves aplenty with the edible fruits and roots freely served on our platters by Mother Nature. With the evolution of the human figure and brain, discoveries and inventions followed suit. Gradually, Agriculture growing of various food particles cereals pulses edible oil got endorsed by mankind. Thus, we are extremely dependent on it now for our very existence, let alone India, since it stands on an agrarian economy. But, we need money in a bid to match the material frequency with our purchasing capacity, while the spiraling price hikes as well as shortage of food stuff vies the growing population stands out as a grave concern. In the parlance of the study and statistics dealing with the economy of a nation, food inflation has been a reality and pestering phenomenon in a developing country like India. As per the findings of certain surveys reported recently, the international prices of food commodities have acutely impacted our Indian market at present, especially in cereals, pulses, edible oils, sugar and milk, even though our nation is claimed to be self sufficient and has the ability to export amid the high global prices. Experts and surveyors have found out that the domestic supply shocks also plays a pivotal role in sparking food inflation. While the domestic supply shocks were reportedly absent in 2020 21, they emerged in 2021 22. The reason behind the grim scenario of the agricultural sector growth rate in 2021 22 is being attributed to the heat wave and unseasonal rains during the months of September and January then. Following such a development, the sharks like the money minting and profit hankering private millers and traders reportedly took undue advantage of the sorry state of affairs of the farmers in distress. It has further been reported in the outcome of the surveys that the incumbent Indian Government official procurement figure of wheat got drastically dipped to an abysmal 19 metric tons MT in the current marketing season in comparison to the previous procurement figure of 43.34 MT. This forced a slapping a ban on exports. The experts opine that an official procurement figure of even 25 MT of wheat from the Indian farmers would not have suffered the ill fate of ban on exports. The experts are also of the view that the domestic supply shocks are temporary by nature which could get corrected sooner or later, whereas our Indian agricultural sector must be rectified and reformed in such a way that a symmetry and cozy balance is maintained between the supply chain and demand. Needless to mention that, income of both the consumers.

Spl-BSF-HCM-TEST-Dated-2026-07-09-Test NO.-27325

A man walked through the streets carrying a lamp, asking, 'Have you seen light?' Some sent him to temples and scholars. Years passed. One evening, tired, he sat. The lamp was in his hand. He had carried the light all along. The Upanishads tell us: what we seek is not missing; we have forgotten our nearness to it. Gita calls the body a city of nine gates. Through the eyes, ears, nostrils, mouth and two lower openings, we meet the world. We see, hear, speak, desire and release. Yet the deeper question is: who watches all this? In the Chandogya Upanishad, Uddalak teaches Shvetaketu the truth of existence through salt dissolved in water: unseen, yet present in every drop. Then comes the whisper: Tat Tvam Asi Thou art That. The Brihadaranyak Upanishad declares: Aham Brahmasmi I am Brahmn. Not ego, but the silence left when name, role and pride fall away. The Aitareya Upanishad adds: Prajnanam Brahmn consciousness is Brahmn. Awareness is the light by which experience is known. Quantum physics warns us not to trust appearances too quickly. Matter is not as solid as it looks. A photon may behave like a wave and arrive as a particle-like detection; measurement changes what can be known. Entanglement challenges separation. The Upanishads are not quantum mechanics, yet both invite humility: reality is deeper than the senses report and the mind can grasp. Tantra enters the body with reverence. Breath, silence and the pause between thoughts become doorways. The body is not a prison; it is an altar. Shiv is consciousness; Shakti is life moving as pulse, breath and courage. Tripura Rahasya says truth is found not by running away, but by recognising the witness while living. The Gita's battlefield is our morning: duty and doubt, courage and confusion, action and surrender. Katha Upanishad gives the chariot: body, senses, mind, intellect and the silent Self as rider. Spiritual growth is recognition. Vedanta says: You are That. Yog says: Become whole. Tantra says: Awaken where you are. Quantum wonder entails what is revealed, depending on how deeply we look. Therefore, pause. Close the nine gates for one breath. Place a hand on your chest. Inhale: So. Exhale: Ham. So'ham I am That. The temple was never empty. The deity never left. You have been carrying the lamp all along. You are That. The Fifa World Cup football championship is a festival that truly tests and demands skills, strength, agility, control, coordination, harmony, resilience, and stamina of each team. Attacks, counterattacks, a slew of deft passes, dribbles, and tackles with lightning speed and accuracy. This, of course, needs to be matched with a strong defence that's potent and efficient to thwart attacks or strikes by opponents. This fast-paced sport demands as much from the brain as it does from the body. The typical soccer team formations define a team's positional structure on the ground, typically written from defence to attack. The most common modern formations are the 4-3-3 and the 4-2-3-1, offering strong defensive stability with creative attacking options. The strikers are nimble-footed, agile, high-performance athletes, whose minds constantly scout for opportunities and gaps in the opposition's defence. They demand ahigh level of anticipation to extrapolate the trajectory not just of the ball but also of the opponent's defensive arsenal. As the striker threads his way through the opposition defence, he has to focus simultaneously on keeping possession of the ball and keeping a c

nick of time. A skill that demands great focus, the ability to be in the moment, and having a clear map of the entire field in the mind as he weaves his way through the enemy ranks. All decisions whether to go solo or then effect a quick pass to a fellow striker are to be made in a split second. It involves a great ability to split one's awareness from the absolute focus of keeping possession of the ball to simultaneously having a bird's-eye view of the opponents' defenders, his own team's strikers, and, of course, the opponents' goalposts. Tackling the opponents in such critical moments is a total mind game. The brain has to conjure up a strategy to not only go past the immediate challenger but also to navigate through all subsequent counter attacks by the opponents who will spare no effort to defend their sanctum sanctorum. This incredible feat of performing and delivering at the highest level requires in a large measure a touch of spirituality. That split-second decision-making can happen only by stilling the mind in the present moment. The present moment that's bereft of any fears, apprehensions, anxieties, progenies of the past, and projections of outcomes glory or regret. The highest level of neuromuscular coordination is possible only in the fully relaxed state of mind, which is centred on the here and now. The here and now is all that remains, expanding awareness to almost an out-of-body experience that can literally view the entire field from a vantage point outside the Self. A point where the observer becomes the observed. Being in the moment, being unruffled, expanding one's awareness, maintaining one's equilibrium, both mental and physical, at the most crucial moment. An alchemy of cutting-edge intelligence, a neurokinetic skill, and the benediction of being in the moment. It's the last component that transforms these stars from mere athletes to sheer geniuses. A quantum state of simultaneously being human and divine. The writer is a neurosurgeon Buddhist understanding, the mind is not a solid thing hidden inside the head. It is the continuum of experience and knowing. It is that through which we see, Stalled e-rickshaws are a reminder that India's regulation of smart vehicles needs to smarten up As automobiles began to become connected, a new generation of security challenges became quickly evident. In 2015, for example, two The country can become West Asia's leader if it has moderates at the helm. Trump can help As Iran stages a massive funeral for its late supreme leader Ayatollah Khamenei, the question for geopolitical experts 'Slap and Tickle' gave me an international community I was about to 'See Five', a prospect that had me more nervous than a lead actor who, as the curtain rises, realises the play is King Morocco, the first African nation to make the semifinals of the World Cup, which they did in the last edition in 2022, has reached its second straight quarterfinal. A gritty, attritional battle with co-hosts Canada, World Cup bad: Aggressive entry of prediction markets. World Cup good: Joy of watching African teams Can you predict where Taylor Swift's wedding will take place? Can you predict when the Strait of Hormuz will reopen? The Indian economy's been facing stormy weather resiliently. It's not in crisis. But this also means economic reforms don't feel urgent, which in turn means that the average Indian will not get rich like he could By Daaji We often think of evolution as a slow, chromosomal crawl, but modern

BSF-HCM-TEST-Dated-2026-07-10-Test NO.-27329

And producers ought to be increased to checkmate the food inflation compelling common man to fume and frown. Estimated to have a value of over $200 billion, the Indian logistics industry is now looking at a healthy post pandemic future. For long, it was deemed to be a labor heavy industry with poorly educated truck drivers, subpar infrastructure and consistently plagued by bad condition of vehicles. However, today the Indian logistics industry is integrated with the most advanced digital tools and is able to carry out end to end online operations. Governmental reforms and rapid extension of high speed roads are also steadily bringing down the risks and travel time. This is heartening because the pandemic impact made all the stakeholders realize the urgent and widespread need to digitize logistics operations. With 13% of its GDP being spent on logistics, India is paying dearly and up to twice as much as the developed nations. This money can be saved by digitizing processes. Let take a look at two of the core areas where technology is bound to transform the Indian logistics sector. Operational efficiency More than 1 core trucks of different sizes and types operate in India. About 90% of these are owned by the small and unorganized sector operators with a fleet size of less than 5 vehicles. Unlike other industries that see the heaviest concentration in metros, the trucking industry is present predominantly in the Tier II, Tier III and smaller towns. Thus, they are not only disjointed, but also struggle with technology adoption. When the pandemic hit, most of these truckers had to sit idle as transport hubs were under lockdown and lack of online networking made it difficult for them to procure loads. On the other hand, supplies were hit just as hard. Thus, the demand and supply sides were not able to work efficiently due to lack of communication. By using advanced technology driven logistics platforms which are now available in India, these small scale trucking operators can build an online presence for themselves. There are several cloud based tools that can be used to optimize and monitor operations, communicate to potential leads and promote the business digitally. Further, leading online logistics marketplaces offer compliance, verification and digital payment facilities which safeguard the interests of shippers and transporters alike. Through this community driven logistics approach, the smaller transport companies can deliver a stellar experience to their clients without the need for heavy upfront investment in hardware and proprietary tech. The streamlining of processes and reduction of time spent on manual processes leads to speedier operations and trucks are able to spend more days 25 26 days in case of digital operations compared to 16 17 days conventionally on road, thereby generating higher ROI. Accountability One of the biggest reasons why Indian logistics services are costlier and less efficient is the lack of accountability and trust. In the absence of transparency and real time visibility of operations, shipments get delayed. At times, the shippers don pay.

BSF-HCM-TEST-Dated-2026-07-10-Test NO.-27330

The truck drivers on time. All this has created an environment of mistrust. Consequently, truckers and shippers tend to operate within their closed loop networks. While this might help in preventing fraud, it leads to exploitation of both sides and lack of standardized as well as accountable operations. However, digitization will transform the scenario as the end to end logistics operations get digitized and stakeholders are able to monitor everything in real time. Logistics managers become better informed and assured, thus enabling them to take superior decisions and make accurate timeline commitments. Today, we have technologies such as cloud, AI, Iota and GPS etc. to digitize end to end logistics operations including the paperwork and regulatory compliances. By using the online platform model for the services, the Indian logistics industry can reach global standards of ease, efficiency and accountability. We can turn India into a global manufacturing hub and a $5 trillion economy much sooner than the projections by adoption of industry wide digital logistics operation! Ashman Cards issued by the government for the wellbeing of its citizens in the lower strata of society is a game changer in the health care system of the country. The eligible categories are schedule casts, schedule tribe households, beggars, hawkers and families with no male members and no individuals between age of 16 to 59 years. The health insurance scheme covers over 50 cores citizens in India and has several success stories to it. It is a smart digital governance move by the government but at the same time, it also seems to have few lacunas in it. This program known as the Prada Mantra Jan Aerogram Yana is to make secondary and territory healthcare completely cash less for the underprivileged section of the society. The E card can be used to avail services and facilities in empanelled hospitals public and private anywhere in the country. The coverage includes pre and post hospitalization expenses, operational expenses, etc. up to Rs.5,00,000 p.a. per family per year. Experts from the industry however hold a different opinion. Mumbai based neurosurgeon Dr. Adel S Chagall, said, Digital health ID Card is simply a ticket to access into health system and does not solve the real health issues. For instance, sex determination of an unborn child is not allowed to be disclosed in ultrasound clinics, in addition there still persists some stigma concerning certain health issues due to religious or family traditions. In such cases it becomes difficult for the patients more than the doctors. It is a lucrative opportunity to attack the privacy of individuals whose data would otherwise have been restricted to a few institutions in the normal course but now their personal data is available nationally as per the data management policy draft. Also, other sensitive information like bank account details and payment details will be stored in the database, making it easily prone to cyber attack. Medically if we see its good for doctors but it a burden for laymen. Sharing sensitive information is.

BSF-HCM-TEST-Dated-2026-07-10-Test NO.-27331

Not appreciated in many cases. There is an agenda behind every move. It the IT that benefits from Andhra Card linkage. Health sector needs to be attended at grass root level. Ex: certain patients come frustrated to me like the autoriksha driver having spine trauma due to poor road conditions who cannot afford to take a break for medical treatments as their livelihood gets affected? He is prone to overdose of medicinal intake which further deteriorates his condition like liver and kidney disorders. The government must make addition to the scheme to benefit such people so that their livelihood is not affected and they get proper treatment. Talashi a Village in Radhanagari in Kolhapur District of Maharashtra, has no medical facilities for over 50kms. There are many such places where up to 100kms or more there is no medical facility. In case of chest pains, heart attacks, brain strokes, etc. by the time the ambulance reaches, the patient may lose his life. Is it fair to get the digital world upgraded without making the foundations strong? The government should focus on addressing such pain points before focusing on digitalization. Today buzz words are information and technology. Having said that, IT changes languages while upgrading but when it comes to health the basic foundations need to be strengthened. Plastic and cosmetic Surgeon Dr. Suraj Singh Chauhan, says in times of fiscal crisis and shifting demographics, collaboration of public private hospitals will enable improved health infrastructure and would be a rewarding venture. However, patient privacy concerns need to be addressed. He suggests, using patients fingerprint logins for easy access to the Ashman scheme as majority of the users are illiterate or semi literate and at the time of need may not be even carrying their id card with them. This will enable for providing immediate medical attention especially in accident or emergency cases with access to the medical history of the patient. He said strong safeguards should be built in regarding the medical history and other data of the taken in the hole of rule patient to be maintained independent of each other, to avoid misuse. He also added the bureaucratic barriers to set up new hospitals must be reduced. At present, corporates are investing in establishing health care facilities, which is why they are running on business models with no freedom to doctors to play a significant role in administration. Doctors are blamed for performance when any crisis arises ignoring the fact that they are not well equipped to take any significant decision in administration or management, despite having the real knowledge as to what is required and what should be prioritised when it comes to real health care. As per government, when approx. 86% of rural houses do not have access to any health care insurance, this health id card is a boon for them. Approx. 20% of rural families access health care by taking loans. This health id card will ease the burden on them and avoid debt traps.

BSF-HCM-TEST-Dated-2026-07-10-Test NO.-27332

Men drink hadia, the local liquor made of rice sold by over a dozen women who have brought the drink in plastic containers. While there are video clips on several schemes of the State government, local liquor made of rice sold by over including one to set up a tribal museum dedicated to tribal freedom fighter Birsa Munda, there is no video on the PDS, a lifeline for the tribals State government, including one to set who comprise 26% of the population in the State. It seems like a cruel joke to them. In a statement, Mr. Haasan noted that the election was cancelled after money that was being readied for distribution to voters was seized and cases were registered. Right to Food activists in Jharkhand have listed in detail 20 deaths between September 2017 and June 2019 due to hunger and malnutrition because of alleged irregularities in the PDS and a few due to denial of social security pensions. The irregularities are manifold. due to hunger and malnutrition From the deletion of ration cards to the problems in linking ration cards to Aadhaar, the system seems to create more problems than it solves, excluding many families rather than including them. Many activists also point out that the Socio Economic and Caste Census of 2011, which helps identify problems than it solves PDS beneficiaries, is faulty and outdated. The last in the series of deaths compiled by the activists was from Latehar district, where Ramcharan Munda, 65, died on June 6, 2019. While the administration is still investigating how Munda died, deaths compiled by the activists everyone including the ration dealer admits village for several months. The dealer admits that ration was curious case of non delivery of food grain is what ails the PDS in one of the poorest States of the country. Problems without Internet For obtaining food grain and other essentials through the PDS in Jharkhand, INTERNET a beneficiary has to meet several criteria. First, the family needs a ration card. Then they need to have Aadhaar cards. Next, the ration cards and Aadhaar INTERNET numbers have to be linked. But it doesnt end there. In a majority of the ration shops of the State, delivery is through an electronic point of sale (EPOS) machine. It is through this machine that the biometrics of a 25181 beneficiary, mostly 22151 thumb INTERNET But it doesnt end there. In a majority of the ration shops impressions, have to be entered and verified from the server database. The EPOS machine works only if it is connected to the Internet. If the beneficiaries face INTERNET no hiccups in any of these stages, they get their quota of food grain. Something or the other can go wrong in any of these stages. In Lurgumikala village, INTERNET for instance, the Internet failed. Due to irregular connectivity, the ration dealers of Mahuadanr block of Latehar began 31548 distributing ration offline they made entries in a notebook or register after the ration was handed over.

BSF-HCM-TEST-Dated-2026-07-10-Test NO.-27333

it with optimism and determination to build a Visit Uttar Purv. An hour south of Srinagar, Bijbehara offers a more vivid expression of harud. Known as the Town of Chinars, this small town is home to two historic gardens: Dara Shikouh Garden and Padshahi Bagh. Dara Shikouh Garden, named after the Mughal prince, transforms into a kaleidoscope of autumnal hues, with trees displaying gradients of red, gold, and green. Fallen leaves blanket the ground, creating a sensory tapestry that whispers of history and impermanence. Padshahi Bagh, along the Jhelum, offers a quieter charm. Here, a solitary Chinar blazes against the muted tones of the surrounding landscape. This single tree encapsulates the fleeting beauty of harud, a spectacle that demands both patience and reverence. Some of Kashmir Chinars are over 600 years old, including the famed tree in Chattergam, Budgam district, believed to have been planted in 1374. These ancient sentinels stand as silent witnesses to centuries of change, from the reign of the Mughals to the present day. Their ecological importance is matched only by their cultural resonance. The Chinar provides shade, stabilises soil, and serves as a habitat for birds and insects, while its bark and leaves have been used in traditional Kashmiri remedies. Protected by law, these trees are celebrated in Kashmiri poetry and folklore, symbolising wisdom, resilience, and the passage of time. Their transformation in autumn is a reminder of life fleeting beauty an ephemeral brilliance that lingers in memory long after the leaves have fallen. Autumn in Kashmir is as unpredictable as it is enchanting. The Chinar fiery display varies across the valley, with Srinagar transformation unfolding gradually, while Bijbehara cooler climate hastens the trees' shift to red. The Chinars of Naseem Bagh, Bijbehara, and Dara Shikouh Garden stand as living monuments, their colours narrating the story of harud. These trees are more than a seasonal spectacle they are the soul of Kashmir landscape. As their leaves fall, carpeting the ground in vibrant hues, they leave behind a timeless lesson: to cherish the fleeting moments of brilliance that define the rhythm of life. Timing is Key: The Chinar transformation is brief, lasting only a few weeks between late October and early November. Monitor weather conditions and book your trip last-minute to maximise your chances of seeing fiery red leaves. Focus on Microclimates: Different areas experience the Chinar autumnal hues at varying times. For earlier colours, visit Bijbehara or higher altitudes, as cooler climates accelerate the transformation. Best Spots for Chinars: Srinagar: Nishat Bagh, Naseem Bagh (University of Kashmir), Char Chinar Island on Dal Lake. Bijbehara: Dara Shikouh Garden and Padshahi Bagh. In the bustling little post office of Greater Noida, there is a postmaster whose work might not grab headlines but whose story certainly lingers in hearts. When I walked into the post office the other day, I was struck not only by the efficiency with which he managed his duties but also by his remarkable handwriting. It wasn just good it was awesomely beautiful, almost like printed letters on a textbook. Unable to contain my admiration, I asked him, What a beautiful handwriting you have! How did you master it? He smiled, a quiet pride lighting up his face. Ma'am, he said, it all because of my elder brother. I studied in a village school where we didn have much access to modern tools or even proper stati

BSF-HCM-TEST-Dated-2026-07-10-Test NO.-27334

At Alacrity Art Gallery, Kolkata two weeks ago, Vikram Bachawat unveiled an exhibition of women sculptors that was testimony to the truth that women sculptors in India have both talent and originality. The exhibition curated by Mrinal Ghosh translated in turn, and with equal mastery, the power and grace of lines, the fantasy and depth of the idea, the delicacy and breadth of feeling and also a sensitive intelligence in the works of Uma Sidhanta, Shipra Bhattacharya, Chaitali Chanda, Jayashree Chakravarty, Latika Katt and Shanu Lahiri. Then came the immensely talented Chaitali Chanda who is a brilliant painter who began her career as a sculptor. Her quaint composition Journey that showed a number of paginated baskets immediately fascinated the viewers who were enchanted by how she approaches sculpture. Her sculptures have a decidedly South Asian accent and speak of the beauty of orientalise and time. Simplicity in concept and compositional elegance define Chaitali as a sculptor. The sculpture Journey evokes a calm contentment that is equally matched with delight and appreciation of the artist keen attention to detail, and the ability to capture the true essence of her subject. The warmth of the artist love for form, and the subject she has chosen to depict immediately suggest a strong sense of place rooted in the observation of life in West Bengal which Chaitali calls home. In the composition and subtly oxidised copper sulphate patina however, one instantly finds resonance with the work of old masters. An artist who has succeeded in seamlessly integrating various painterly styles, Chaitali sculpture speaks of a life that is indeed filled with creativity. Then there is the brilliant artist Jayashree Chakravarty who is known for landscapes that make you breathless. Here in a delightful twin study you see her love for nature in two works that have the terrain of the land in peaks and crests and botanical forms. Jayashree stated that she had done a few heads at Shantiniketan many moons ago. Indian senior sculptor whose works belong to many museums all over the world including the NGMA Latika Katt granite stone work shows her sincerity of execution and feeling. In the waves of the stone we see rhythmic undulations in the ripples of earthy intonations. However one must recall her brilliant heads created in bronze many moons ago. The finest being NS Bendre at the NGMA. At the NGMA in Delhi, Chehre 2018, curated by Director General Adwaita Gadanayak had a slew of heads that were riveting, a testimony to the history of modernism in the evolution of sculptural heads in the firmament of bronzes and plaster and moulding. Three heads in the exhibition belonged to mentor and sculptor Latika Katt. She had always talked to art lovers about the power of condensing expression. Katt has a brilliant understanding of the neutrality of form, the spontaneous flow of a flock of hair, or the jaw line of a high cheeked boned face and expression is what sets her works apart. The NGMA archives is an endless contemplation of the human condition and Katt belongs to its history. Uma Sidhanta the student of Prodosh Das Gupta is represented by a leaf-like sinuous image that mirrors the feminine contours of a tall slender woman. Captivating is her treatment as she reminds us of her love for botanical beauties. One recalls her work in the NGMA Collection of a car made with leaves that is absolutely captivating. She reminds us that we must be enthusiastic about the beauty

To the beneficiary. Problems INTERNET arose when the ration dealer, Ramrod Prasad, 251168, died and his job was transferred to his wife Manu Devi. This transfer somehow turned the system from INTERNET offline to online. This meant that the dealer was required to distribute 25418 food grain by keeping the EPOS machine online and record the biometrics of every INTERNET beneficiary. As there was no connectivity 45718 even after her husband death and the EPOS machine would not work, for months Manu Devi collected food grain from the warehouse but did not distribute it. The food grain remained undelivered. It is a testament to Djokovic supreme mental strength that he did not flinch, even under extreme pressure, and despite not being the better player on the day. When he started out, Djokovic was among the most emotionally fragile. Questions ABOUNDED as recently as last July when he slipped outside the top 20. But by securing four of the past five Majors, he has truly rediscovered the mind of an ABOUNDED champion. Among women, it was the turn of Simon Hale to display similar powers, by adding Wimbledon to her 2018 French Open win. There was a feeling that following her breakthrough in Paris she had suffered a meltdown, as she had not progressed beyond the quarter finals at any Major since then. However, the way ABOUNDED she mowed down one formidable opponent after another at SW19, including the legendary Serena Williams in the final for the loss of just four games, was enough proof of her strong mental make up The Chinese ABOUNDED economy is seeing the first signs of trouble after long years of sustained growth that rode on cheap labor and high volumes of exports. Data released by the National Bureau of Statistics on Monday revealed that the economy grew by 6.2% in the second quarter, its slowest pace in 87127 years. This is in contrast to the growth rates of 6.4% and 6.6% reported for the first quarter and the full year of 2018, respectively. The faltering growth rate was due to a slump in exports in June amidst China ongoing trade war with the United States and the downturn witnessed ABOUNDED by sectors such as housing construction, where investor sentiments 315415 play a major role. Many economists believe that the worst may not yet be over for CHINA and that economic growth could further worsen in the coming quarters. To player in the last decade has so thrillingly disrupted the Roger Federer Rafael Nodal binary quite like World No.1 Novak Djokovic. Back in 2008, when Federer and Nodal met at Wimbledon in that iconic final, the contest had a definitive feel to it 38497 to crown that era best. The two met again this year, eleven summers since, just to earn the right to challenge Djokovic. Such has been the Serb excellence that in the time between the two Federer Nodal meetings, he increased his Grand Slam count from one to 15. Sunday pulsating five set.

BSF-HCM-TEST-Dated-2026-07-10-Test NO.-27338

Victory over Federer brought him his fifth Wimbledon to put him just two shy of Nodal (18) and four behind Federer (20) in the all time list. At times, his on court demeanor and his grinding style of have detracted from the perception of his success. To not celebrate his greatness, however, would be a severe disservice. Nodal and Federer are still ranked two and three in the world and are playing at near peak levels. But even at their best, Djokovic has left them short of breath. In fact, starting from the 2011 Australian Open 38497 his second Major 38497 Djokovic has triumphed at nearly every second slam he has entered (15 of 34). Federer in the same period has accumulated four and Nodal nine, of which seven have come at the French Open. Remarkably, Djokovic has vanquished either Federer or Nodal in 12 of the 16 slams he has won. Eight of those victories have come in finals. That Federer, just three weeks shy of turning 38, came within one stroke of upstaging Djokovic is credit to the Swiss genius. Even in a career as storied as his, it would have been more than just a normal data point if he had clinched his ninth by beating Nodal and Djokovic 38497 two of his greatest rivals 38497 back to back. Afghans suffer from the effects of war even in the middle of peace talks the attack on Afghan vice presidential candidate Ampulla Salah office in Kabul on Sunday that killed at least 20 people and injured 50, including Mr. Salah, is a grave reminder of the crisis the war torn country is going through even amid attempts to find peace. Mr. Salah, a former intelligence chief and a strong critic of the Taliban and Pakistan, is President Ashraf Ghana running mate for the September 28 election. And the irony is that the assault occurred a few hours after President Ghana officially launched his campaign in which he promised that peace is coming. The message the insurgents are trying to send is that even the most fortified political offices in the country or its top politicians are not safe. The insurgents have made it clear they will carry out their offensive irrespective of the peace process, especially when Afghanistan gets down to a full fledged election campaign. In recent months, even when the U.S. and Taliban representatives have held multiple rounds of talks in Doha, Qatar, insurgents have kept up attacks, both on military and civilian locations. The Taliban appears to be trying to leverage these assaults to boost its bargaining position in the talks with the U.S. And the Kabul government inability to prevent them and the U.S. is apparent decision to delink the negotiations from the daily violence are giving the insurgents a free run in many Afghan cities. Afghanistan crises are many. Half the country is either directly controlled or dominated by the Taliban. In the eastern parts, the Islamic State has established a presence and.

BSF-HCM-TEST-Dated-2026-07-10-Test NO.-27339

Mishra sons, Suresh Chandra and Shiva Kant, and daughter, Kaushalya Devi, inherited their parents courage and dedication. As 1919 came around, and Gandhi-jig inspired countless Indians to participate in the non-cooperation movement, Suresh Chandra, Shiva Kant, and their mother, Anoop Devi, also organised rallies and pickets, and started a nationalist school and a Gandhi Ashram at Gogri and Gurukul at Harpurjan. While the freedom struggle intensified, and thousands stepped up to embrace the non-violent movement, the family members also became more and more active in the freedom struggle. The book covers the various stages of the independence movement the ebb and flow of the Satyagraha, Simon Go Back, Quit India movements, the various Congress meetings with luminarie speeches, and finally, the historic Independence Day and the horrors of the Partition. Alongside, the family went through its own tribulations and joys, marriages and deaths, illnesses and losses, the latter especially due to prolonged spells of being in the jail, and constant fear of being arrested again and again by the police. Interspersed with these are the hardships faced by the villagers in Bihar, especially due to calamities such as floods and plagues, as well as earthquakes, and their involvement in the relief efforts for these. What is inspiring is not just the courage and dedication for instance, Kaushalya Devi mentions being eager to go and be at the forefront of the rallies and marches, despite having an infant in tow, but also the sheer resilient spirit despite the sacrifices they made. And this was not just this family, but also the Indians who came forth from villages and cities and gave up their jobs and lives for the cause of Independence. As the author states at the end, My memory is full of people who will never be mentioned in any history book and were never recognized and honored by the nation. While the people remained unknown, through such accounts, we are reminded, even if for a moment, about these unsung heroes. For the first time since 2014, recent political events in the run-up to the 2024 general elections have created an enormous buzz, with the unified opposition seeming to offer an image of parity and coherence in the national arena against the aggressive, well-oiled Modi administration. The INDIA (Indian National Developmental Inclusive Alliance) alliance, an assembly of 28 ideologically diverse political parties, has intellectually and arithmetically agreed to unite to challenge the incumbent government. With their first meeting in Patna and then in Bengaluru, the coalition has honed its strategy for preventing Narendra Modi from serving a third term. The alliance next gathering in Mumbai seeks to foster solidarity among the battered Indian opposition, and a steering committee and convenor are expected to be established. Close to the heels of the opposition announcement, the BJP, which operated as a monolith in the defunct National Democratic Alliance (NDA) since 2014, quickly called for a meeting of the now expanded alliance of 38 parties in New Delhi to firm up its strategy for the general elections under the leadership of Narendra Modi and challenge the INDIA alliance. Since 1947, Indian politics has been primarily segmented as the right (Hindu nationalism), centre (Secular), and left (Communist), which translates to the national parties, notably the BJP, Congress, and Left parties, respectively. The ideologies often merge with ideals of soc

BSF-HCM-TEST-Dated-2026-07-10-Test NO.-27340

Section 29A (5) of the Representation of the People Act, 1951, which as per publication dated May 2023, the Election Commission of India notifies that there are six national parties, 54 state parties, and 2,597 unrecognized political parties in India. Also, independents form an enormous swamp of candidates supporting the national parties post-elections. Does India need 2657 political parties to govern the world largest democracy? Since India independence in 1947, the Congress Party has held a majority in the Lok Sabha and ruled the country from the centre with absolute dominance until Morarji Desai coalition government of 11 parties in 1977. This was followed by the Charan Singh coalition government in 1979, the V.P. Singh government in the 9th Lok Sabha, and the Chandra Shekhar government with the outside support of the Congress Party from 1989-1991. India witnessed its first minority government of P.V. Narasimha Rao, which took office after the horrific assassination of Rajiv Gandhi. Post the emergence of the Vajpayee era; formal coalition governments began to take shape, with his first term lasting only 16 days in the 11th Lok Sabha, which was then replaced by the 13-party United Front Government led by Deve Gowda and I.K. Gujral. Vajpayee returned in 1998 with the formation of the National Democratic Alliance (NDA) for another brief tenure as prime minister when the regional party AIADMK withdrew support from his government. The NDA comprising of 20 parties returned to power to rule the country from 1999-2004, when the Congress stitched a 14-party post poll coalition launching the United Progressive Alliance (UPA) with Dr. Manmohan Singh as Prime Minister, with outside support of the Left parties to replace the NDA. With the emergence of Narendra Modi, the BJP has had an unprecedented full majority government since 2014. Launch of the INDIA alliance with 27 parties and fresh bonhomie of the NDA alliance boasting 38 parties leads to a dichotomous division of the political spectrum. A two-party system, which reduces the chaos of having several political parties with extreme beliefs, has been successfully implemented in the international political sphere. American politics is divided between the Democrats and Republicans, British politics is divided between the Labour Party and the Conservatives, and Australian politics is divided between the Australian Labour Party and the Liberal-National Coalition. Benefits of a two-party system in India Consolidating political power into the hands of just two parties provides political stability by discouraging the growth of many minor parties with varying ideologies. One party often gains a majority under a two-party system, resulting in a more unified and stable administration. Horse trading and buying of MLAs and M.P.s from varied ideologies would cease, which might lead to more harmonious decision-making and policy execution within the governing party. Parties want to keep their identities and attract voters with firm beliefs; therefore, adopting a shared minimum programmer gives the two major parties a better opportunity for more consistent policy views. Combining efforts, money, and advertising may reduce the costs of the candidates and increase the efficiency of political spending. Challenges of a two-party system in India However, a population of 1.4 billion people may be underrepresented in a nation with just two major political parties. There might be less room for competing political ide

is often seen as something that many things come to mind when asked to describe the essence of America: its energy and innovation, the freedoms that Americans enjoy, the racial and ethnic mix of its people. But perhaps you might have heard a vast collective sigh of relief this week, when the US's Supreme Court upheld birthright citizenship by a vote of 5 to 4. But that they even agreed to take up the Indians are dazed at Japan's football fans tidying the stadium before leaving. This kind of civic sense comes from learning from childhood that public spaces are a shared responsibility, not someone else's headache. A heartbreaking transformation, coupled with France's emergence as the team to beat in this World Cup, is French coach Didier Deschamps' greatest achievement yet. The quiet manager finally has a team that embraces his ideas. Notwithstanding periodic episodes of cartographic obfuscation by the Chinese regarding the status of Arunachal Pradesh, the state is progressing on the road to development. Enabling this, as part of a whole-of-govt approach, are Indian Army In the early 1910s, much of the Western world believed it was entering an era of lasting peace. Later, Canadian historian Margaret MacMillan described this widespread conviction as the belief that global interconnectedness and technological India's temples have been in the spotlight for all the wrong reasons Tirupati and Sabarimala rocked by scandals, a rathyatra tragedy at Jagannath Puri and now, the Ayodhya Ram Mandir is embroiled in If your car averages 15kmpl in the city, and one day its mileage dips to 14. 5kmpl, would you take to social media, blame the government and question its policies? No. But if the average falls to By Deepak Ranade The Fifa World Cup football championship is a festival that truly tests and demands skills, strength, agility, control, coordination, harmony, resilience, and stamina of each team. Attacks, counterattacks, a slew of deft US Supreme Court's answer to the question was centred on belonging. Our SC opted for bureaucratic norms. That's because US Constitution advances liberty, ours constrains it It takes a certain kind of mindset for the That 5-time winners have now been knocked out of the 6th consecutive World Cup is not a surprise. The game against Norway showed what's wrong with Brazilian football. The revival project has failed To dissect Markets or oil, analysts' predictions are spectacularly wrong too often. But not for want of trying, hopefully A month after US attacked Iran, analysts predicted crude would average $83 through 2026. Mid-June, the forecast was Silencing stories can't silence reality. Still, opaque takedowns like that of Satluj are very damaging Sadly, India has gotten used to discussing censorship. Silent film Bhakta Vidur was the first to be banned, because the Forget papers. Watch what we do Friends, humans, countrymen (if you can prove it), I have a few testers to settle this baffling question of Indian citizenship. I also have doubts about putting my name By The XIV Dalai Lama In the Buddhist understanding, the mind is not a solid thing hidden inside the head. It is the continuum of experience and knowing. It is that through which we see, Stalled e-rickshaws are a reminder that India's regulation of smart vehicles needs to smarten up As automobiles began to become connected, a new generation of security challenges became quickly evident. In 2015, for example, two The country can become West Asia's leader if it

gave me an international community I was about to 'See Five', a prospect that had me more nervous than a lead actor who, as the curtain rises, realises the play is King Morocco, the first African nation to make the semifinals of the World Cup, which they did in the last edition in 2022, has reached its second straight quarterfinal. A gritty, attritional battle with co-hosts Canada, World Cup bad: Aggressive entry of prediction markets. World Cup good: Joy of watching African teams Can you predict where Taylor Swift's wedding will take place? Can you predict when the Strait of Hormuz will reopen? The Indian economy's been facing stormy weather resiliently. It's not in crisis. But this also means economic reforms don't feel urgent, which in turn means that the average Indian will not get rich like he could By Daaji We often think of evolution as a slow, chromosomal crawl, but modern neuroscience is beginning to confirm what yogis have known for millennia: consciousness shapes biology. Evolution is often seen as something that many things come to mind when asked to describe the essence of America: its energy and innovation, the freedoms that Americans enjoy, the racial and ethnic mix of its people. But perhaps you might have heard a vast collective sigh of relief this week, when the US's Supreme Court upheld birthright citizenship by a vote of 5 to 4. But that they even agreed to take up the TOI News - July 10, 2026 From symbolism to delivery: Modi's Australia visit takes the India Australia partnership to the next level Dr. Ashok Sharma is a Visiting Fellow at the University of New South Wales Canberra at the Australian Defence Force Academy and is an Academic Fellow of the Australia-India Institute at the University of Melbourne. His recent roles include Visiting Fellow at the Australian National University in the Department of Strategic & Defence Studies within the Coral Bell School of Asia-Pacific Affairs, and Adjunct Associate Professor at the University of Canberra. There, he was the Head of the South Asia Strategic, State Fragile and Security Program and Conjoint Head of the Indo-Pacific Strategic Issues and Major Powers Studies at the National Asian Security Studies Centre. An alumnus of both Jawaharlal Nehru University and Delhi University, Dr. Sharma's academic journey includes Faculty, Fellow, and Honorary positions at the Australian National University, the University of Melbourne, the University of Auckland, and Victoria University of Wellington, as well as the University of Delhi. Notably, he served as the Deputy Chair of the New Zealand Institute of International Affairs, Auckland Branch, from February 2012 to June 2022. Dr. Sharma, one of the leading voices in the global affairs and security studies, is also the accomplished author of significant works including book titled India's Pursuit of Energy Security: Domestic Measures, Foreign Policy and Geopolitics and Indian Lobbying and its Influence in US Decision Making: Post-Cold War. Prime Minister Narendra Modi's most recent trip to Australia unfolded amid scenes of unmistakable excitement. At Melbourne's Marvel Stadium, where thousands from the Indian diaspora gathered, the mood felt closer to a major concert than a diplomatic engagement. The scale of the welcome reflected the extraordinary reception Modi has enjoyed in Australia ever since his first bilateral visit in 2014, when he became the first Indian Prime Minister in almost thirty years to speak before the Australia

BSF-HCM-TEST-Dated-2026-07-11-Test NO.-27345

To obtain significant representation. With just two main parties, voters may have few policy alternatives, making people feel they must choose between two solutions, neither of which perfectly suits their needs. In a two-party system, one main party may become increasingly extremist to distinguish itself from the other. This polarization may cause more hostility and governmental paralysis, which makes it harder to adopt effective laws. Citizens may get disenchanted with the two major parties in a two-party system and, as a result, are less likely to participate in politics. They may be less interested in politics if they have no strong affiliation with either party. One possible outcome of a two-party system is a duopoly of influence between the two major parties. In a two-party system, independents and candidates from smaller parties have more difficulty breaking through the noise and gaining support from voters and the media. These revisions under Section 29A (5) of the Representation of the People Act, 1951, together with a national debate and agreement on the Uniform Civil Code, NRC, removal of the governor office, labor reforms, interlinking of rivers, police reforms, economic reforms, press freedom and caste census would reshape India political landscape and propel India to become a global superpower. A national consensus needed on this one! A child survivor faces multiple hurdles while navigating the process of reporting an offence and the judicial trial that ensues. These hurdles are close to insurmountable when the perpetrator is a family member. A child risks the wrath of other family members for disclosing the offence and faces the threat of ostracisation by their own family. They might fear jeopardising their family income in cases when the perpetrator is the sole breadwinner and might also have continued feelings of guilt for putting a family member in jail. Then there the fear of loss of home because the survivors are put in a government- or nonprofit-run shelter for children when their own home is adjudged unsafe for them. To tackle the unique challenges thrown up in cases of intrafamilial CSA, police, courts, and rehabilitative child protection systems need to come together to create safe and empowering spaces for child survivors to access justice that is meaningful and does not endanger the child immediate or long-term future. Here what a child in such situations needs for effective reporting: A safe environment for reporting Given the hidden nature of intrafamilial abuse, when a child speaks up about their experience, the first response they often get from the confidante is that of disbelief. Most survivors of sexual crime find police reporting a difficult process, and their complaint being dismissed could cause them lasting trauma. A child thus needs to be given a non-judgmental hearing, and should be encouraged to tell their story without interruptions and connected to support services without any delay. Protection of privacy Generally, in POCSO cases, the name and address of the accused is revealed and the victim is redacted. However, this should not be the process for intrafamilial CSA cases because the last name of the child and the accused, as well as the home address, are usually the same. As the case proceeds further in the judicial system, the chances of case documents becoming public increase. This could put the child at risk of ostracisation and stigma. An approachable police system There is need for a sea c

BSF-HCM-TEST-Dated-2026-07-11-Test NO.-27346

An easy assumption for those opposed to BJP is that the opposition only has to unite to beat the saffron electoral juggernaut. Such a coalition, forged in the brotherhood of anti BJPism, for its proponents, would automatically beat BJP hegemony. After all, BJP, even at the height of its second sweep in 2019, won just over one third of India voters 37.36 vote share. Cobble together the remaining two thirds and Modi ascendance would be halted, it is argued. Voting in the presidential election has demonstrated, however, how flawed such diagnosis is. With several regional parties breaking ranks to vote for NDA presidential candidate Draupadi Murmu, it is clear that anti Modism by itself may not be enough to weld together an opposition alliance. As many as 50 political parties supported Murmu candidature. In contrast, 36 opposition parties supported Yashwant Sinha. Crucially, those in the Murmu camp included many non NDA parties: Odisha BJD, Andhra Pradesh YSRCP, Mayawati BSP, Jharkhand JMM, and even Uddhav Thackeray Shiv Sena faction. the answer book is an assignment given by the examining body to the examiner which he discharges for a consideration. Sometimes, an examiner may assess answer books, in the course of his employment, as a part of his duties without any specific or special remuneration. In other words the examining body is the principal and the examiner is the India aviation regulator DGCA on Monday issued a brief order. Addressed to airlines, it said increased instances of engineering related occurrences had triggered spot checks by the regulator. The findings pointed to maintenance issues. DGCA said identification of causes of reported defects has been improper and there a shortage of trained staff. Airlines have been asked to comply with safety protocols and report back to the regulator by July 28. A day after the order was issued, two more instances of snags were reported. The situation is worrisome. Airlines are being asked to do anything new as India since 2010 has had a state safety programme, an integrated set of regulations and activities for air safety. The latest iteration of the programme red flags deficient maintenance and concludes that a large number of incidents occur as a result of component failure. Consequently, there are standards and protocols in place to avoid it. DGCA order raises questions on compliance. It hard to understand the rise in reported incidents. DGCA safety audits are an ongoing feature and are spelt out in an annual surveillance plan. Therefore, there a constant stream of communication between airlines and the regulator on the subject. Airports Authority of India projected a passenger flow of 542 million by 2027 28, that is over 200 million from the pre pandemic level. Aviation policy was tweaked greatly to help airlines overcome the Covid shock and prepare for the future. For example, even as seating restrictions have been removed, a price band with floor and ceiling prices continues. GST rate on domestic maintenance, repair and overhaul has been lowered from 18 to 5. As.

BSF-HCM-TEST-Dated-2026-07-11-Test NO.-27347

For fuel prices, no segment of the economy is immune. Given both the policy support for aviation and troubling reports on safety, there are bound to be questions on the performance of both the regulator and GoI. Safety issues are not confined to a single airline but instead appear to be broad based. DGCA needs to strictly implement its wide ranging safety protocol. That a prerequisite for Indian aviation safe growth. The Supreme Court observation that it is a settled position in law that religious and linguistic minority status is to be decided state wise may be contested down the line. The Centre says it has the power to notify minorities but has not specified whether it will be done with concurrence of states. But if SC observation becomes an accepted position, it will solve one set of questions and raise others. Under the National Minorities Commission Act, Muslims, Christians, Sikhs, Parsis, Buddhists and Jains have been notified nationally as minority communities. But there are states in the north and Northeast where some of these religious minorities are in the majority. And nearly every state in India can have linguistic minorities. With minority status conferring significant autonomy in administering educational institutions, this is also a touchy issue. Hence there is also the argument that states can be left to decide the minority question for themselves. But even if states are empowered to decide this, problems won go away. First, there may be contested state wise differences, as there are in reservation policy. Not every community in the central OBC list is classified likewise in states, and not every community classified as OBC, SC or ST in one state may be recognised in another state. Second, if minority status is a state decision, should, say, Sikh schools in Punjab enjoy minority institution status, or Christian schools in Mizoram Should centrally identified minorities lose their status in states where they are a majority These are sensitive issues that need to be thought through. The key point is even implementation of minority status at the more granular state level won help. India is witnessing an immense competition for scarce education and employment opportunities. Slicing, dicing and labeling communities as backward or minority are political decisions with only superficial impact. The real task is to create more quality educational institutions in the public and private sector. The resultant rise in human capital will create skills that the job market needs. Overregulation by the likes of UGC and excessive demands of laws like the RTE Act are reasons many educational institutions covet a minority status. Focus on quality education for all. Everything else is noise. The Supreme Court on July 13 refused to halt the contentious demolition drive in Uttar Pradesh and other states, saying illegal structures were not immune from action. The case before the court concerned the demolition of homes of some Muslims protesting against former BJP spokesperson Nippur Sharma widely denounced remarks against Prophet Muhammad. Impassioned pleas against bulldozer justice Several.

Former SC and HC judges have written to the Chief Justice of India that these demolitions are an unacceptable subversion of the rule of law and a form of collective extra judicial punishment, attributable to a state policy which is illegal. During our recent visit to Britain, Bunny and I caught glimpses, on TV and in the print media, of harrowing scenes of suffering. Homeless people, families with distraught women and weeping children, men with angry, helpless faces, huddled under makeshift coverings, their few belongings scattered haphazardly around them. Were they refugees fleeing from war torn Ukraine No. They were airline passengers stranded, sometimes for days at a time, at various airports across the country because of last minute flight cancellations. The main reason for these cancellations was that the aviation industry, in Britain and elsewhere, has been very badly hit by a massive staff shortage, ranging from cabin crew to technicians and baggage handlers, because of job cuts across the board during the two year pandemic lockdown. This, combined with a resurgent wave of so called revenge tourism, has resulted in an unprecedented crisis in the travel industry. It not just the airline sector that been affected by an acute lack of staff. Many of the shops, restaurants, cafes, and other places of business that we went to in London, and elsewhere in the UK, displayed prominent signs saying We are recruiting!, Help wanted! At a seaside resort in Dorset a restaurant sign informed customers that, because it was understaffed, they would have to wait at least half an hour to be served, even if all they wanted was a simple sandwich meal. Lockdown layoffs apart, another reason for the UK staff shortage is that after Bruit many, if not most, East European migrants who formed a large part of the country workforce have gone home, and the native Brits, by and large, have become too unused to rolling up their sleeves and getting the job done themselves. Fortunately for the UK, to fill in all the vacancies caused by overly hasty downsizing during the pandemic, there are plenty of Indian origin migrants who, having retained their innate capacity for hard work in their adoptive country, are prepared to put their shoulder to the wheel where most needed. Indeed, one such volunteer is waiting to lend a hand beside a situation vacant notice pasted on a door marked 10, Downing Street. We have all been gifted with human life in this worldly domain. Alongside this precious gift, arise questions like: Why are we here Who am I What is the point of this life If these are unanswered, we risk leading unexamined lives, blindly accepting what our mind perceives and reflexively following others. Going within, however, reveals many hidden and subtle truths that we can see but that we know exist, such as the existence of the mind. This deepened understanding can help us answer the aforementioned questions of life. All saints and rishis have defined God as the.

One absolute, real truth who is changeless except His name, which varies according to various cultures and religions. We worship God, the truth, and we contemplate or meditate on Him. This is why Slimed Bhagavatam starts with, Parma Satyam Hamachi, and Jail Sahib with: Ki Omar Sat Noam . transcendental Truth. He is the prime cause, the supreme knowledge, and ultimate, absolute Shakti. He is the goal. He pervades and permeates us all and the world. He is Aim. If you ask anyone what she wants in life, the response will invariably be the same: peace and happiness. However, with broader understanding, we could also seek to prepare our souls for a return journey from earth to the divine domain, the final goal where we will attain absolute and eternal peace and happiness. So, to start with, to undertake a beautiful life journey, we need to have full faith in Him. The reason He has sent us into this world with blessings and abilities of consciousness, body, mind, senses, Nature and freedom of thought and action is so that we may seek Him on our own, through our free will. We have to start from zero, acquire knowledge, seek the goal, live, face the challenges of worldly life and play in the game of life. Apart from faith, we also need to have love, devotion, humility, gratitude and His remembrance. As for love, we must first wholesomely love ourselves, body and mind; and draft and design our lifestyle with a balanced diet and exercise our bodies with yoga postures, as well as deep breathing. To strengthen our minds, contemplation meditation, and duty driven, selfless actions can help. Our bodies need to remain resilient and agile, and our minds broad and positive. Finally, we can reorient our lives, mind and consciousness to move forward towards the right goal on the right path and by the right means. Among its many capabilities, the mind has the potential to connect with the Supreme by way of contemplation and meditation. We can use the higher aspect of the mind, called intelligence, to manage it and make it our friend rather than foe. Our beautiful life is based not on any specific religion but on dharma, truth and love. Even if we are physically and mentally limited, we still can live by the words of virtuous people and take to heart the point Krishna put to Argon in the Bhagwad Gita, verse 5:5: Contemplative life and karma yoga, selfless action, are one and the same and take us to the same destination. Once upon a time there was a Pompous Pradhan aka Dankapati. He was Teflon coated and had brushed aside name calling by his opponents for over a score years. He used to give it back as good he got. Devoted media outlets ensured that his outpourings were amplified and that of his opponents vilified. But one day he realised that it was a level playing field for name calling in the two Houses.

BSF-HCM-TEST-Dated-2026-07-11-Test NO.-27350

Of Parliament. And while his addressing his opponent with just the first two letters of Bombay and Kolkata was expunged, his detractors were getting away with choicest of adjectives describing him as well his minions such as Jumlajeevi, Vanish uprush, tan shah, corrupt, super spreader, Shaken and Jaichand. Truth, as we all know, hurts. So now there is a long list of terms that cannot be used in the two Houses to describe his Excellency and his subjects. This may lead to the birth of Aatmanirbhar Unicorns with mentors who are masters of language, and not Entire Political Science and, who can manufacture gales that will get the Members of Parliament tales without getting expunged. To rub Opposition nose in it, Dankapati unveiled the National Emblem on the new parliament building without inviting them to the ceremony. What further infuriated the opponents was that unlike the serene lions of Asoka, these resembled ferocious beasts of Dankapati circus. Dankapati insecurity was understandable. His powerful friends had been falling like nine pins. But while Uncle Sam Dolan, Down Under Morrison and Pomp Boo were kicked out democratically, the exit of Gotabaya aka Lankapati has been spine chilling for 56. Lankapati and Pariah biological had used minority baiting to win elections and get an iron grip over the country. But after his disastrous performance during Covid and ruining of economy, Lankapati was chased out of the country by angry crowds and his Pariah and minions fate now hangs in balance. Dankapati and Pariah political are following similar script. Though his party won elections in four states despite the opposition highlighting its mismanagement of Covid and the economy, he knows the truth and his sole concern is his hat trick in 2024. His opponents had mocked his Visas means selling Pagoda gyan and called him Vinaash Purush, which now has been banned. Lankapati fate has woken up Dankapati to the danger of his subjects suddenly realising that they had voted for Achhe Din and not Gujarat model of jiski lathi uski bhains might is right. So any word or title which may divert the attention of proud nationalist from people whom Dankapati recognises by their clothes is a big no in Parliament. Though to be fair to him Dankapati has always condescendingly proclaimed that he is not power hungry but a fakir who would simply pick up his jhola bag and leave. Of course, his May Bach sunglasses, Movado watch and Mont Blanc pen would be in the jhola. Dankapati government response to our neighbours chasing away their ruler, Lankapati, has acted like salt in the wounds of his own countrymen. His minion said that Dankapati #39;s government stood with Lankapati subjects who seek to realise their aspirations for prosperity and progress through democratic means and values, established institutions and constitutional framework. But alas back home people with similar aspirations were often pulled up by established institutions and the process of remedies within constitutional framework more often than not becomes the punishment. The lack.

Private sector participation is driving innovation and competition in Indian aviation. Low-cost carriers LCCs such as IndiGo, SpiceJet, and AirAsia India have transformed domestic travel, offering affordable options to passengers. Full-service carriers like Vistara are enhancing India reputation on international routes. The privatization of Air India marks a significant turning point, bringing in fresh investments and managerial expertise. The airline expansion plans, and rebranding efforts signal a renewed focus on domestic and international markets. India strategic geographic location, bridging East and West, makes it a natural hub for international air traffic. Airlines increasingly view Indian cities as transit points for long-haul routes, and the development of hub airports will play a crucial role in capitalizing on this potential. Airlines like Emirates, Qatar Airways, and Singapore Airlines are expanding their footprint in India, while Indian carriers are enhancing their long-haul fleets to compete on international routes. By 2040, India could rival global hubs like Dubai and Singapore regarding passenger and cargo traffic. Smog and the skies always grey. Speaking of simulations, we seem to be living in one now as blue-pilled Americans outrage about Trump red-pill picks for various positions. The latest person to rattle Washington elites and ruffle John Bolton furry moustache is Kash Patel, who Trump has picked to head the Yann Martel, the best-selling author of Life of Pi, once observed that just as the Bible and Homer The Iliad and The Odyssey form the cultural bedrock of Western civilisation, The Mahabharata and The Ramayana serve as the foundational epics of Indic civilisation. The two rarely intersect, but Donald Trump picking Kash Patel as FBI chief is a rare coming together. For much of the election campaign, Trump most ardent supporters had argued that he was God chosen warrior in the Christian sense more so since he survived his assassination attempt which in Trump world meant selling Trump bibles. Dalliances with Mammon aside, Trump picking Kash Patel is a rare theological and cultural singularity, the wins meeting in the Rudyard Kipling sense. What sets apart Patel from most other Washington elites is the fact that he does toe the bipartisan-party line. After Patel announcement, a pro-MAGA account shared a meme of Patel and Ramaswamy as Komura Bheem and Alluri Sitarama Raju from the movie Patel is a fierce Trump royalist who helped show that the FBI had misused their power during the 2016 election and helped fuel the Trump-Russia collusion hoax. As FBI chief, Patel has promised to take a hammer to the FBI by closing the J Edgar Hoover Building, and instead making it a museum of the deep state. He has promised to decentralise the FBI, create a 24 7 declassification office to increase transparency, and revoke security clearances of those who participated in politically motivated investigations. Patel is the only America-born confident Desi in the Trump team, which also includes Vivek Ramaswamy whose Hinduism almost mimics Judeo-Christian pathos, Usha Vance whose Hinduism helped her husband and VP-elect JD Vance find Christ again, and Tulsi Gabbard who not of Indian origin but is the first Hindu to take the oath in the US Congress. It looks like Trump is going to lean heavily on his pagan colleagues to Make America Great Again. Recently, I had an opportunity to travel to Kupwara, Kashmir for our organization REACHA work.

BSF-HCM-TEST-Dated-2026-07-11-Test NO.-27355

And empowered, and are eventually able to get to a place where they are able to generate livelihood and support not only themselves, but also their families. Our work comes in alignment with Army Operation Sadbhavana which has a mission to promote peace in the valley through community engagement and upliftment. Kupwara is a town near the Indian border and gets extremely cold during the latter part of the year. We were staying in one of the Army campuses. It was interesting to observe the relationship between wild dogs and army soldiers. The officials told us that these dogs live in forest, but over the years they have been able to identify the officials through their uniforms. There is a strong bond that has developed between them, as the dog takes care of the officials, while soldiers also give them food shelter. The dog attacks barks if they see something suspicious within the campus. It has that sixth sense but the key lesson here is the loyalty that they develop for the soldiers. If we think about it sitting in Delhi any major city, where we are most likely in a much more comfortable state than that official who is in the mountains near the border in extreme cold, rough terrain protecting us and serving the country. These dogs then become soldiers' true friends in these conditions. Army officials often cannot trust humans as much with how things have become in society. It is difficult to know what is cooking in someone head. But these wild dogs, even though they are not trained, still develop that bond and loyalty for them, and are always ready to back them, while simultaneously the officials are also able to rely on them. This relation can be seen as a true example of a selfless mutual bond. Loyalty is something that ideally should not be asked for; it in its true essence should genuinely develop when two parties are able to complement each other in a selfless manner. Everyone should try to visit a tough difficult terrain once in their lives. These could be areas where we get to see how the Army is working how local community members are going about their days with the conditions that they have during the day, which to us may come across as tough and challenging. Perspective is important as what we may think about something, someone else can have a completely alternative view to the same. Different experiences and living in the moment and being observant during these different experiences can give us an opportunity to learn and imbibe new things from around us which in way can help in opening our minds. The complimenting relation between the dog and the soldier was one such experience! Civil aviation in India has come a long way since 18 February 1911, when French pilot Henri Pequet flew a Humber biplane from Allahabad to Naini, covering about 6 miles and carrying approximately 6,500 letters. Today, India, the world fastest-growing aviation market, is on the brink of a transformative era. Its future promises a dynamic mix of growth, technological innovation, and increased accessibility. With the right mix of policy support, private sector participation, and infrastructure expansion, India is poised to become one of the global leaders in aviation by 2040. Several interwoven factors are shaping the future of civil aviation in India. These include increasing passenger demand, government initiatives, technological advancements, and evolving business models. India is already the third-largest aviation market in the world. India burgeoni

Of empathy for fellow country men was never more evident. Dankapati is used to beating his own drum and getting his minions to beat thalami and tale for him, he now finds it unpalatable to digest critical adjectives. Gagging criticism in Parliament, a place to talk and discuss, reflects the culture of his Pariah where the Boss is always right and only his Mann Ki Bat matters. One wonders whether if in the new parliament building of New India there may come a time where instead of curbs on what you cannot say about Dankapati and Pariah there will be fireman listing out what all you can say. It will start from the two Houses and slowly in Guar one will only be allowed only his Har. Today, businesses operate in a highly volatile and dynamic environment. One which is exposed to not just cyber attacks, but war, terrorism, pandemics, and other natural calamities. Disaster recovery DR is technically the ability to resume the business operations hit by the disruption caused by catastrophic events. A foolproof DR strategy should just aim to restart the operations but also to prevent or minimize the loss of data when the calamity crippled the business. Disruption in business operations generally leads to a significant cost escalation and loss for organizations. Without disaster recovery planning; many businesses, especially small and medium sized organizations, would be able to resume their operations. Even if some resume, there is always a chance that they would slip back to their hapless condition within a year of resumption. Disaster recovery planning entails steps of strategizing, assessing different disaster scenarios, deploying compatible and relevant technology, and conducting frequent testing of the system through dry runs and mock drills. Just maintaining backups of data and having a recovery process does not make for a foolproof disaster recovery plan. It also entails ensuring sufficient storage and computing power during the transition period. During the offloading, control and operations are transferred from the original primary system to the backup secondary system, also called failover. Post disaster, when the original system gets restored, the control and operations are transferred back from the secondary backup system to the original system, a process known as failback. Dramas Disaster Recovery as a Service gaining currency: Disaster recovery as a service Dramas is an as a service model that allows a business to back up its data and critical compute network and store it in a secondary system hosted by a third party cloud service provider. The backup data and the relevant IT infrastructure hosted in a different geographical region would be pumped back to the original primary system to restore normal business operations, after the disaster. As it is a cloud based service, the Organisation does have to incur upfront costs to own the resources needed for disaster recovery. Given the rising adoption of Dramas among enterprises, market research firm Technavio estimates that the market size is likely to reach $41 billion by 2025, a CAGR of 45.

Spl-BSF-HCM-TEST-Dated-2026-07-11-Test NO.-27357

Moved into a new stage, one in which practical delivery, implementation and strategic results matter more than symbolism. The evolution of ties between India and Australia over the last decade has been striking. For much of the post-Cold War era, relations were polite but limited in ambition. There was goodwill, but not much strategic substance. That has changed. Today, the two countries regard each other as trusted partners within a Comprehensive Strategic Partnership, work closely together through the Quad, carry out increasingly advanced military exercises, and share a common commitment to a free, open and inclusive Indo-Pacific. This visit made clear that the relationship has now advanced well beyond statements of intent and is increasingly focused on concrete cooperation in security, energy, technology and investment. The most significant announcement was Australia's move to begin uranium exports for India's civilian nuclear programme. Although the civil nuclear agreement was concluded in 2014, progress on implementation had been delayed for years. This development resolves one of the final major outstanding issues in the bilateral relationship. For India, Australian uranium is not simply a source of fuel for existing reactors; it is a critical enabler of New Delhi's plan to raise nuclear power capacity to 100 GW by 2047 as part of its clean-energy transition. With some of the world's largest uranium reserves, Australia is well placed to serve as a dependable long-term supplier for India's expanding energy needs. Timing of this agreement is as important as the agreement itself. India's rapid digital expansion, the rise of artificial intelligence and the development of large-scale data centres will all demand vast amounts of reliable electricity. Renewable energy will remain essential, but stable base load power from civilian nuclear energy will become increasingly important. In that sense, Australian uranium supports not only India's energy security but also its broader technological ambitions. The connection between energy security, AI capacity and economic competitiveness gives this deal strategic weight for both sides. Alongside uranium, both governments acknowledged the need to inject new energy into the economic relationship. Trade between the two countries has expanded significantly in recent years, helped by the Australia India Economic Cooperation and Trade Agreement ECTA. Even so, the scope for growth remains much larger. Investment, supply-chain resilience, critical minerals, advanced manufacturing and digital technologies are now emerging as the next major areas of cooperation. Australia's capital, technical expertise and rich natural resources complement India's scale, manufacturing goals and fast-growing consumer base. The focus on investment in India's infrastructure and digital economy reflects this deepening alignment. Critical minerals are especially important in this context. As the world shifts toward clean energy, electric vehicles and advanced manufacturing, the supply chains for lithium, cobalt, rare earths and other strategic minerals have become matters of national security. India and Australia both understand the dangers of depending on highly concentrated global supply chains. Australia has abundant reserves, while India is building its downstream processing and manufacturing capacity. Greater cooperation in this area would strengthen economic resilience and reduce strategic exposure across the Indo-Pacif

Word Count: 503, Character Length: 3500 characters

https://rkcnawada.online/best-typing-software-rkc.php

Spl-BSF-HCM-TEST-Dated-2026-07-11-Test NO.-27360

this direction further. The technological dimension of partnership is equally significant. Cooperation in cyber security, emerging technologies, quantum computing, artificial intelligence, space, and clean hydrogen and innovation ecosystems has expanded steadily. The future competitiveness of both economies will depend increasingly on trusted technology partnerships. Australia's research strengths and India's fast-growing innovation ecosystem together create opportunities that go far beyond conventional trade. Education remains one of the strongest foundations of bilateral relations. Every year, thousands of Indian students enrol in Australian universities, making education one of Australia's most successful exports while also contributing to India's human capital development. University partnerships, greater mobility for students and professionals, and mutual recognition of qualifications are gradually building a durable ecosystem of cooperation. Unlike many strategic partnerships that rely only on government-to-government ties, India and Australia now have academic, commercial and institutional networks that can sustain momentum regardless of political change. Any assessment of the relationship would be incomplete without recognising the role of the Indian diaspora. With a population of over a million, the Indian community has become one of Australia's most vibrant and influential migrant groups. Its contribution goes far beyond economics. It has helped deepen educational links, expand business connections, enrich Australia's multicultural identity and act as a vital bridge between the two democracies. The extraordinary turnout for Prime Minister Modi in Melbourne reflected not only his personal appeal but also the confidence and maturity of the Indian-Australian community itself. What sets this visit apart from earlier ones is that it reflects a relationship that has now matured strategically. The first phase of India Australia engagement was about rebuilding trust after years of hesitation. The second phase institutionalised cooperation through the Comprehensive Strategic Partnership, the Quad and economic agreements. The third phase, which this visit appears to have launched, is centred on implementation. The challenge now is to turn agreements into uranium shipments, larger investment flows, stronger supply chains, defence-industrial cooperation, technology partnerships and deeper people-to-people ties. The broader international environment makes this shift even more important. The Indo-Pacific is facing sharper strategic competition, disruptions in supply chains and growing technological rivalry. Middle powers like India and Australia cannot afford to be complacent. Their partnership matters not only for bilateral prosperity but also regional stability. Together, they support an Indo-Pacific that is open, rules-based and economically resilient. The cheers in Melbourne will eventually fade, as all political spectacles do. What will remain are tangible results from this visit. If 2014 represented the political rediscovery of each other, and the years that followed built strategic trust, then Modi's latest trip to Australia should be remembered as the moment the relationship entered its decade of delivery. For India and Australia, the question is no longer whether the partnership matters. That has already been established. The real task now is to turn strategic convergence into measurable results. By that standard, Modi's Australia

BSF-HCM-TEST-Dated-2026-07-12-Test NO.-27361

Per cent during the period. Contours of the disaster recovery plan: Identifying works and functions of the Organisation as per priority helps the Organisation to determine how much downtime these critical and non critical functions could tolerate. Once that is done, an Organisation has to decide whether to build a disaster recovery system using on premise storage facilities or renting storage in the public cloud. While on premise storage of data has a few downsides like added cost in terms of upfront investments, and time and skill requirements, the benefit that the internal IT team will accrue from on premise storage is that they will have control and visibility of the stored data. Also, an on premise disaster recovery system will not be effective, especially in situations when a natural disaster hit the Organisation wreaking havoc on both the primary system and backup system. But a third party cloud service provider where the DR system is on standby in a different geographical region would come in handy in such situations. Thus, organizations face a dilemma when choosing between an on premise DR system and a public cloud. Therefore, some organizations prefer to opt for a hybrid cloud model in which they store highly critical data on premise and less critical data on the public cloud. The recovery point objective RPO is the age of data that must be recovered from the backup secondary system to resume regular operations. The RPO is expressed backward in time from the moment the disaster struck. RPOs may be stated in seconds, minutes, hours, or days. For example, if the RPO is one hour, the IT team must arrange a plan for backups of data every one hour. The RPO helps the admin team to determine the minimum frequency at which the backups must be taken. Similarly, the recovery time objective RTO is the maximum time the Organisation has decided to take back control, and associate network capacity and data to restore operations from an alternate location after the outage. RPO, along with the RTO, helps the Organisation select the right disaster recovery technologies and strategies. During the COVID pandemic, the importance of a robust business continuity plan BCP has come to the fore. Moreover, several natural disasters like flooding, earthquake along with disturbing political environment always pose a threat to the sustainability of business operations. Therefore, each enterprise with distributed workspaces across the globe should not only devise a robust disaster recovery plan but also should employ the right technology partner to get the optimum outcome. The modern day shopping experience has gone far beyond the four walls of the physical store, as online shopping offers a platter of customized product, shipping, return, and replacement options that save consumers both time and money. The good news is also that the democratization of the e commerce sector with Open Network for Digital Commerce ONDC has enabled small retailers to engage with big firms, protect their businesses, and serve customers with modern delivery methods In arecent.

BSF-HCM-TEST-Dated-2026-07-12-Test NO.-27362

In fact, SMBs that are just now digitalizing their workflows can jump straight to RFID based track and trace systems, which may put them ahead of many competitors. The importance of inventory visibility Retail businesses needs to prioritize visibility through the last mile and look for reliable warehousing and logistics partners. With the help of real time data capture and prescriptive analysis, retailers can understand current inventory distribution across stores and supply chains, enabling orders to be allocated to a location that can fulfil fast. Shippers can then be alerted that an order will be added to their next pickup, and shoppers can enjoy transparency throughout the product delivery process. They will be able to access real time inventory information and order status until their products arrive at their doorsteps. For online orders, any delays or cancellations due to out of stocks or back orders can hamper customers experience and loyalty. According to a Holiday Shopping Experience Report prepared by Intercom, 79 of consumers surveyed want companies to notify them about delays and back orders before they check out or buy an item. As such, retailers must maintain up to date inventory information within factories, warehouses, distribution centres DC and stores so that whenever customers place online orders, they can confirm that items are in stock and ready to ship. Fortunately, the same barcode and RFID technologies used for order track and trace can be used to expedite the processing and availability of received goods and keep an accurate record of shelf stock. A final thought a shopper relationship is with the retailer, not a shipping provider. And as customers have tasted the convenience of online shopping, the expectations around service and inventory accuracy have scaled up. So, to stay in the race, retailer especially new e commerce entrants must build a direct connection with customers throughout the shipping process via real time communication. Offer proactive shipping updates and respond to service requests as quickly as possible, even if you must make strategic technology investments to do so. This effort will pave the way to long term benefits for those who want a strong future in e commerce. Its failure to ensure the basic safety and security of civilians is in turn eroding the public confidence in the system. At present, the government appears beleaguered. Its security agencies are strained by the prolonged war. It is true that Afghanistan needs a political settlement. The war has been in a stalemate for long. The government, even with U.S. support, is not in a position to turn the war around. The Taliban, on the other side, has expanded its reach to the hinterland, but not the urban centres. While a peace process is the best way ahead in such a scenario, the question is whether the U.S. is giving too much leeway to the Taliban in its quest to get out of its longest war. The decision to keep the Afghan government to compromise. The absence of a ceasefire even when talks.

BSF-HCM-TEST-Dated-2026-07-12-Test NO.-27363

Survey, forty seven percent 47 of consumers said that they would likely not shop with a retailer again after a bad shipping experience. 2 Therefore, in moving to an Omni channel retail model, businesses will require an agile shipping and logistics infrastructure to successfully address both online and on time demand. Bet on shipping solutions Small and medium sized businesses SMB trying to gain a competitive edge can help ensure customer satisfaction by providing exceptional delivery. However, SMBs face a much different reality than larger retailers. While their larger counterparts have the capacity to speed up shipping, bring down costs, and account for orders that arrive incorrectly or damaged, SMBs may not have the resources to quickly address shipping mishaps. Shipping becomes the deciding factor between a loyal or lost customer. That is why SMBs must work with a trusted logistics partner to give them more control over the shipping experience and help resolve issues quickly should they occur. Forward thinking SMBs also provide great online experiences with technology that adds visibility and real time updates as packages travel through the fulfillment process. Their key priorities include eliminating paper based processes in favor of digitalized and traceable ones, facilitating communications throughout the supply chain and with customers, and optimizing inventory management so packages are accurately packed, shipped, and traced in real time. Many companies in India are also hiring more workers to right size their fulfillment operations while demand for online delivery and quick commerce services continues to grow. As per reports, India 10 15 minute delivery market is expected to reach $5.5 billion in three years. Ecosystem players of all sizes will need to set up dark stores, maintain a strong hyper local distribution networks and engage more partners to ensure instant delivery, with SMBs likely leaning on the latter option to keep pace with larger, better resourced retailers. In short, it will be an amalgamation of both humans and machines driving the success of the quick commerce business model. Winning the relay race with digital workflows Today, a retailer job does not simply end when a customer completes the checkout process or when the order is packed. The entire fulfillment process functions like a relay race, with the merchant handing over the orders to a fulfillment center or directly to a shipping provider that is responsible for getting them to the right place. As such, there is a need to have transparency in the shipment process so that retailers are aware of the real time location of each product or order until it reaches the customers. Mobile computers and barcode scanners are making it easier for logistics workers to get the information they need and ensuring the accuracy of parcels as they get on and off trucks. With radio frequency identification RFID becoming increasingly affordable, SMBs can now invest in systems that allow real time data capture. They can move beyond traditional barcode based track and trace solutions to get on a level playing field with large retailers.

Were under way was another. The result is that Afghans continue to suffer even when the Americans and the Taliban talk. This has to change. There has to be more pressure, both political and military, on the Taliban to cease the violence. And the U.S. should back the Afghan government and the coming elections resolutely, while Kabul has to get its act together. While Mr. Khan has been asked to apologies to the House, some women members have renewed the pitch for the passage of the women reservation bill. The 27th Look Sabah has the highest number of women MPs, 78, comprising 14.39% of the House. This is higher than 2022 and a long way from the first election in 1951 52, when they made up only 5% of the House. The global average stands at 34.6%, and neighbours Bangladesh, Pakistan and Nepal have quotas for women in Parliament. In India, the women reservation bill or the Constitution 108th Amendment Bill to set aside one third of seats in Parliament. Now having record to the need for democratic decentralization in decision making in the Government devolution of resources at lower levels and for strengthening of the infrastructure Government and functioning of the local level democracy. The Government has taken a refreshing initiative, in this context the initiative of the Government to introduce and strengthening Patti Raj system is a major step forward India has known the Panchayati system right from the beginning from the pre independence as well. In the post independence period several efforts have been made to strength this institution but for one reason or the other it has not been able to get a sound footing an acquire the President address is an occasion to take an overall view of our contributions on different friends of national and international activities. It is also an opportunity for the Government to indicate a direction in which we are going to move, it is difficult to react to almost every aspects of the issues mentioned precisely for that reason. I would like to highlight some limited areas. First of all, India in its efforts of the last 60 years has tried to develop of vibrant democratic politics. Now, the process of creating a democratic system is so is the situation with regard to the State level but at the third level, at the district level it needed considerable re strengthening. Vibrancy that is require in the working at that level. On some pretax or the other in different parts of the country election have been postponed or local bodies have been dispensed and administrative control or the executive side has been strength. This has laid to a situation whether the distance between the common man and the Government has widened. This has further laid to a process where there has alienation at the grassroots so far as beneficiaries of one or the other function programmers or concerned. When we are trying to give the country a trial in programmers the.

BSF-HCM-TEST-Dated-2026-07-12-Test NO.-27365

Reduce the learning curve, and refine their techniques before performing surgeries on actual patients. There are startups in US that are developing glasses for the surgeons physicians that are connected to the surgery medical database and help surgeons doctors in viewing things while doing complex procedures. Improved Virtual Patient Care Delivery The Coved 19 pandemic not only introduced virtual meetings and virtual schooling but also revolutionised healthcare delivery. Telehealth has emerged as a promising solution to alleviate the burden on hospitals worldwide. It caters to patients who are unable to travel to a hospital or belong to vulnerable populations that should avoid unnecessary hospital visits, unless necessary. While primary care physicians and family doctors now offer virtual appointments, hospitals are still in the process of fully embracing this transformation. A hybrid approach combining virtual and in person care is likely to persist for many hospital services. However, before hospital doctors and patients can effectively communicate virtually, patients must first adopt technology and actively engage with primary healthcare services. This, however, poses a significant challenge, particularly among individuals aged 60 and above who have reported limited or no online presence. In conclusion, new age technology is revolutionising the field of surgery, paving the way for safer, more precise, and more efficient procedures. With continued advancements and integration of technology into surgical practices, the future holds immense potential for further improving patient outcomes, expanding access to surgical care, and extending the limits of what is practical in the realm of surgery. A sovereign country has every right to decorate its public places in any manner it deems fit. Akhand Bharat was indeed a reality at one point of time. Therefore, putting up a mural at India new parliament structure depicting Akhand Bharat is the country prerogative. However, other countries shown as part of Akhand Bharat are also within their rights to take umbrage because what was once a reality has long been superseded by later events in history. It should not have been difficult for India to gauge how the neighborhood may feel. Just consider, how appropriate would it be for the National Assembly of Pakistan to now create a mural showing Bangladesh as its part? Or for that matter can the Provincial Assembly of Punjab province in Pakistan now commission a mural showing Punjab state of India as its part arguing that Lahore was the capital of pre partition Punjab? Even within the country, can the Punjab Assembly at Chandigarh now display a map showing Haryana and Himachal Pradesh as its part because it was once so? And of course, how would Indians feel if Alexander III of Macedon conquest of Punjab or British colonization of India is used in current times as the justification for government sponsored art depicting India belonging to them? The Akhand Bharat mural has come at a time in world affairs when diplomatic hygiene requires countries to hide their expansionist ambitions rather than advertise. EAM Jaishanker has therefore clarified that the Akhand Bharat mural is a cultural map. Ironically, this amounts to telling foreign entities to ignore the matter though the intention of putting up the mural must have been for the world to take note of it! The cultural map logic defies history. Akhand Bharat of Askoka reign was a political reality but not

Word Count: 549, Character Length: 3500 characters

BSF-HCM-TEST-Dated-2026-07-12-Test NO.-27366

India is a union of states. EAM downplaying the mural as a cultural map seems like the accomplishment of an adventurist who after gaining formidable height in a gas balloon abandons the craft and comes down using a parachute. He may be lauded for the diplomatic feat of taking a lofty issue higher up and leaving it in thin air. Will Artificial Intelligence decimate human intelligence, and have the potential to derail the writing, research and comprehension abilities of our children? And in turn, turn them into slaves of machines and algorithms? Human evolution is characterized by human minds getting challenged by circumstances, which prompt them to experiment and innovate. The need for speed led to the discovery of airplanes; desire to know created newspapers and TV news programming; yearning to break shackles of darkness encouraged human ingenuity to find bulbs; idea of storing food inspired discovery of refrigerators; need to stay connected with friends and family far and wide prompted humans to explore the magic of mobile phones; requirements for storing information and knowledge found us inventing the Internet The list is endless. In the plethora of advances made to make human lives better and brighter, the human mind, wisdom and discretion have reigned supreme. Suddenly as we prepare to dive into the second quarter of the 21st Century, the fancy for artificial intelligence (AI) and robotics seems to have overwhelmed us. Endlessly, we have begun to admire the power of the supersonic intelligence which though termed artificial is being seen with far greater reverence than human being real reason and profound intellect, gathered with the natural process of learning and experimenting over many centuries! Malcolm Gladwell, in his popular book The Tipping Point, highlighted the significance of human endeavor and acquiring intelligence and excellence through hard work through his famous 10,000 Hours rule. Yes he did mention about the unique opportunity that each of these successful individuals had but Ten thousand hours is the magic number of greatness, he wrote, quoting famous studies. From Mozart to The Beatles, Bill Gates and Bill Joy, all worked hard enough not less than 10,000 hours, to reach greatness. He quoted neurologist Daniel Levitin to assert that en thousand hours of practice is required to achieve the level of mastery associated with being a world-class expert in anything. One wonders if artificial intelligence could produce a John Lennon or Paul McCartney! Cricketing legend Sachin Tendulkar took to cricket at 11, got his first test at 16, and was declared second-greatest Test batsman of all times, behind Don Bradman by Wisden in 2002, when he was 19! His autobiography Playing It My Way gives a vivid account of his early years of trials and tribulations, hard work and perseverance. Narrating many stories of the endurance and discipline taught by his Sir coach Ramakant Achrekar he wrote, Had it not been for Sir, I would not be the cricketer I turned out to be. He was a strict disciplinarian Sachin did have his share of fun but the human will and resolve of his coach reigned supreme. Even though I loved cricket, there were still occasional days when playing with my friends at home was such fun that I would conveniently forget I was supposed to go to the nets. If I did turn up, Achrekar Sir would hum on his scooter and come to find me at Sanity Saharans, he wrote. Don waste your time playing inane games with these kids. Cricket

BSF-HCM-TEST-Dated-2026-07-12-Test NO.-27369

We have seen 10 planning process of development since 1951. We are at the end of the tenth plan and the Eleventh Five Year programmers Plan is beginning to take shape but in that process. What have been the contributions of people through their views and resources for development in the plan programmers or all those who are at the receiving and all whatever plan programmers have been launched has been an open plan. It is not surprising that the delivery cost of development programmers as getting out of hand almost 80 per cent of the projects cost is delivery cost only and just 15 to 20 per cent gets left for the benefit of the receiving and also the priorities when look from the national or State level tend to defer radically from the perspective of the people at the District level. They do not involve the problems which concerned the District level and the village level. The District level and the village level problem do not involve substantial research at the, from the point of view of those local people. They are the life played or survival whether it is location of a small school playing or the State a canal or the public distribution system network location they all local development concerned. In the District level planning we have taken about decentralized planning. Development process, the success of dependence on what opportunities we provide for the people influence the decision making what we are the points for democratic contributions with regard to things which are uppermost in their thinking. Unlike the crash landing of the Moon Impact Probe on the Chandrayaan 1 mission in November 2008, this will be the first time that ISRO is attempting to soft land a lander on the earth natural satellite. A series of braking mechanisms will be needed to drastically reduce the velocity of the Vicar lander from nearly 6,000 km an hour, to ensure that the touchdown is soft. The presence of water on the moon was first indicated by the Moon Impact Probe and NASA Moon Mineralogy Mapper on Chandrayaan 1 a decade ago. The imaging infrared spectrometer instrument on board the orbiter will enable ISRO to look for signatures indicating the presence of water. Though the Terrain Mapping Camera on board Chandrayaan 1 had mapped the moon three dimensionally at 5 km resolution, Chandrayaan 2 too has such a camera to produce a 3 D map. But it will be for the first time that the vertical temperature gradient and thermal conductivity of the lunar surface, and lunar seismicity, will be studied. While ISRO gained much with the success of Chandrayaan 1 and Mongolian, the success of Chandrayaan 2 will go a long way in testing the technologies for deep space missions. Amass absolute power, as they did under Mr. Bashir three decade long rule. Ethiopian and African Union mediators brought both sides for talks and they reached the power sharing agreement. Under the deal, a sovereign council.

BSF-HCM-TEST-Dated-2026-07-12-Test NO.-27370

Algorithms and manufactured intelligence might counter this by citing how IBM supercomputer Deep Blue defeated the then world chess champion Garry Kasparov in 1997, and began an era of human-computer cooperation in chess. Two decades later, wrote Yuval Noah Harare in his popular book 21 Lessons for the 21st Century, Google Alpha Zero program defeated Stockfish 8 program, the winner of world computer chess championship in 2016. Alpha Zero had used the machine-learning principles to teach itself chess by playing against it. Can you guess how long Alpha Zero spent learning chess from scratch, preparing for the match against Stockfish 8, and developing its genius instincts? Four hours. For centuries, chess was considered one of the crowning glories of human intelligence. Alpha Zero went from utter ignorance to creative mastery in four hours, without the help of any human guide, wrote Harare. At least in chess, says Harare, creativity is already the trademark of computers rather than humans! He warns, What is happening today to human-AI chess teams might happen down the road to human-AI teams in policing, medicine and banking too. In another essay titled Why Technology Favors Tyranny published in The Atlantic, Harare says, InfoTech and biotech will create unprecedented upheavals in human society, eroding human agency and, possibly, subverting human desires. He avers that At least for a few more decades, human intelligence is likely to far exceed computer intelligence in numerous fields. Hence as computers take over more routine cognitive jobs, new creative jobs for humans will continue to appear. Many of these new jobs will probably depend on cooperation rather than competition between humans and AI. Human-AI teams will likely prove superior not just to humans, but also to computers working on their own. And Harare offers hope, and reason, when he argues that there is no reason to assume that artificial intelligence will gain consciousness, because intelligence and consciousness are very different things. Intelligence is the ability to solve problems. Consciousness is the ability to feel things such as pain, joy, love and anger. These human emotions are part of the growing up process of our children and learning, when laced with these feelings, is what makes it special and distinct. The over-dependence on artificial intelligence, and subjecting children learning to it might have the irreversible consequence of disrupting the cognitive process of our children, and their growing up experiences. It is also argued by many that AI lacks true creativity, intuition, and common sense reasoning. While AI can excel at specific tasks, it often struggles with understanding context and generating innovative solutions. And we do not wish to subject our children to this dangerous path, during their growing up age. We do not wish to replicate the chess experience to other spheres of learning. Little wonder, some critics, including high-profile figures like Elon Musk and Stephen Hawking, have expressed concerns about the potential long-term risks of AI evolving beyond human control and posing existential threats to humanity. There are many other criticisms of AI from noted experts that we must note. Microsoft co-founder Bill Gates has raised concerns about job displacement caused by AI and automation. He has emphasized the need for society to address the challenges posed by these technological advancements. Linguist and cognitive scientist Noam Chomsky has c

BSF-HCM-TEST-Dated-2026-07-12-Test NO.-27371

Of 11 members five military and five civilian members and one to be selected based on consensus will rule for over three years. A general will lead it for the first 21 months and a civilian leader for 18 months. The security apparatus will be controlled by the military; the ministries will get civilian leaders. While this agreement clearly charts a new course for the crisis hit country. A decade after the first successful mission to the moon with Chandrayaan the Indian Space Research Organisation successfully launched its sequel, Chandrayaan to further explore the earth natural satellite. Earlier this year, China landed a robotic spacecraft on the far side of the moon, in a first ever attempt. Now India is attempting a similar feat to land its rover Pagan in the moon South Polar region, attempted so far by none. The equatorial region has been the only one where rovers have landed and explored. The launch by itself is a huge achievement considering that it is the first operational flight of the indigenously developed Geosynchronous Satellite Launch Vehicle Marcia to send up satellites weighing up to four tones. The orbiter, the lander (Vicar) and the rover (Pagan) together weigh 3.87 tones. Having reached the earth parking orbit, the orbit of the Chandrayaan 2 spacecraft will be raised in five steps or maneuvers in the coming 23 days before it reaches the final orbit of 251km. It is in this orbit that Chandrayaan 2 will attain the velocity to escape from the earth gravitational pull and start the long journey towards the moon. A week later, on August 20, the spacecraft will come under the influence of the moon gravitational pull, and in a series of steps the altitude of the orbit will be reduced in 13 days to reach the final circular orbit at a height of 100 km. The next crucial step will be the decoupling of the lander (Vicar) and the rover (Pagan) from the orbiter, followed by the soft landing of the lander rover in the early hours of September 7 despite the postponement of the launch from July 16 owing to a technical snag, the tweaked flight plane. The Centre decision to clip the wings of the Securities and Exchange Board of India has not gone decision down too well with its members. Yet, the Centre is refusing to budge. In a decision letter dated July 10, SEBI Chairman Ajay Tragi said the Centre decision to suck out SEBI surplus funds will affect its autonomy. SEBI employees had also written to the government with the same concern. As part of the Finance Bill introduced in Parliament, the Centre had proposed amendments to the Securities and Exchange Board of India Act, 1992 that were seen as affecting SEBI Securities financial autonomy. To be specific, the amendments required that after 25% of its surplus cash in any year is transferred to its reserve fund, SEBI will have Securities to transfer the remaining 75% to the government on Friday.

BSF-HCM-TEST-Dated-2026-07-12-Test NO.-27372

According to the International Air Transport Association IATA, India is expected to have 520 million air passengers by 2037, up from approximately 150 million in 2023. This exponential growth in demand necessitates robust infrastructure development and policy frameworks to support seamless operations. It was on the battlefield that Krishna started teaching Arjun. He did teach him when everything was all right, because Arjun was not ready to listen; he thought Krishna was just his friend. But when turbulent times came, knowledge and wisdom became essential, for calmness, steadiness, and clarity of mind were necessary to perceive things the way they were and to act wisely. First, we must recognise and accept that it is a turbulent time. When we deny the turbulent time, we live in a utopia and are unable to find a solution. The first step is to recognise, and the second is to accept. Accepting situation helps calm the mind. At first, Arjun did not accept the situation. He sat on the floor and trembled the superhero, who had never cried in his life, wept in front of Krishna, saying, I cannot fight. Krishna said, Come on! Drop this weakness from your heart. Let go of this emotional baggage you are carrying. Get up. Krishna boosted Arjun ego, saying, you can handle this situation. Come on, get up. What will people say about you? On the battlefield, when Arjun began to feel despondent thinking about the possible outcomes of his actions, Krishna gave him teachings of Karm Yog, Bhakti Yog, and Janan Yog, and thus the Gita was born. Krishna said to Arjun, You have the right to perform your duty, but you are not entitled to the fruits of your actions. Most people do not act without expecting results. When you cook rice, you put the rice in water and then place it on fire, because you know that this action will give a result. Results depend on actions. You think I cooked the rice; I put it on the fire. No, rice followed the law. If you or anyone anywhere, put rice in water and place it on fire, it will be cooked. But you think that you did it. You cannot do anything that is against the law. Acting is within your control, but even then, you can only influence it indirectly, not directly. The only way to control your actions is to transcend the three gunas sattva, purity; rajas, passion; and tames, inertia. Tamas represents inertia, rajas, restlessness, and sattva, balance. When you give up laziness and heedlessness, remain balanced without becoming restless for the fruits of your actions, and transcend even these three qualities, you can influence your actions as well. Constantly thinking about the fruits of your actions weakens you. The one who focuses 100% on their actions alone is free. If you are participating in a race, you should have no interest in looking at who is running faster than you. Your focus should be on your track and your run. When you give 100% in any task, even if you lose, you feel satisfied that you used your full potential and performed your best. When you compete with yourself, you progress in life, but when you compete with others, you weaken yourself. So, move forward in life with focus. The Gita teaches us to maintain equanimity irrespective of circumstances. Experiencing unity within not only sharpens your intellect but also enriches your emotions. Until you are emotionally calm, how can happiness be possible in your life? Imagine if someone hurt someone else to fix a problem. That what happened in America last week when

The prospective spouse, and their family, is trustworthy. Beyond algorithms: The indomitable human spirit in the age of artificial intelligence Anil Kaul holds a doctorate in Geology and worked as a petroleum geologist with ONGC for 35 years. He is a recipient of the GOI-conferred National Mineral Award (2003). He has been a long-time devotee of the Yogoda Satsanga Society of India Artificial Intelligence has arrived with astonishing speed. Machines can now write essays, compose music, diagnose diseases, answer philosophical questions and even simulate companionship. To many, this technological revolution appears to signal a future in which machines may not only surpass human intelligence but also diminish human relevance. Such a possibility evokes both excitement and anxiety. If machines can think, converse and learn, what remains uniquely human? The answer lies in recognizing that humans are more than thinking machines. Beneath the calculations of the mind lies something no algorithm has ever touched . A first-person experience of being alive. Every major technological leap forces humanity to confront the same question: what is it that technology can never replace? The printing press did not diminish the tenderness of a mother's lullaby. Photography did not end the painter's vision. Likewise, however sophisticated artificial intelligence becomes, it cannot inherit the lived experience of consciousness. This distinction is crucial because intelligence and consciousness are not the same. Artificial Intelligence represents one of humanity's greatest intellectual achievements. It processes information at unimaginable speed, identifies patterns invisible to the human eye and synthesises vast amounts of knowledge within seconds. Yet these remarkable abilities belong to computation, the manipulation of information according to rules. Human life unfolds on an entirely different plane. We do not merely process information; we experience existence. We love, grieve, hope, forgive and seek meaning. We possess an inner awareness that not only thinks but knows that it is thinking. Philosophers call this the hard problem of consciousness. Even if science were able to map every neuron in the human brain, it would still struggle to explain why those physical processes are accompanied by subjective experience, why pain hurts, why beauty moves us or why a sunset evokes wonder. A machine may detect the wavelength of red light, but it does not see red from within. Intelligence explains how something works. Consciousness asks why it matters. This deeper dimension of awareness has occupied spiritual traditions across the world for centuries. Despite their diverse languages and philosophies, they converge on a striking insight: our essential nature is not merely the stream of thoughts passing through the mind but the awareness in which those thoughts arise. Kashmir Shaivism expresses this with exceptional clarity. It teaches that every individual is a unique manifestation of Paramashiva, the Universal Consciousness whose creative vibration, known as Spanda, gives rise to the entire universe. Spiritual growth is therefore not the acquisition of something new but the recognition Pratyabhijna of what we have always been. The same intuition appears elsewhere. Advaita Vedanta identifies the innermost self, Atman, with Brahman, the ultimate reality. Buddhism points toward luminous awareness beyond the grasping ego. Sufi mystics speak of dissolving the separate se

it would be unwise to make absolute claims about what future technologies might achieve. Some philosophers argue that sufficiently advanced information processing could eventually produce consciousness. Others maintain that subjective experience cannot emerge from computation alone. Whatever the future holds, today's AI displays no evidence of inner experience. It does not suffer, fear death, yearn for truth or seek transcendence. It may discuss enlightenment with eloquence, yet it does not meditate. It can explain love without sacrificing, describe grief without mourning and quote every mystic without ever entering silence. The spiritual path is not simply the accumulation of knowledge; it is the transformation of being. Such transformation cannot be downloaded. It must be lived through vulnerability, loss, love and self-discovery. Perhaps this marks the clearest difference between artificial intelligence and human consciousness: intelligence can describe experience, but consciousness alone can undergo it. This distinction also reveals the greatest challenge posed by AI. The real danger is not that machines will become human, but that humans may gradually forget what it means to be human. As our interactions become increasingly frictionless, we may be tempted to replace authentic relationships with convenient digital substitutes. Machines are endlessly patient, instantly available and never emotionally demanding. Human relationships are precisely the opposite. They require compromise, forgiveness, vulnerability and empathy. Yet these very imperfections form the school in which the human spirit matures. It is through loving, serving and encountering another conscious being that we discover dimensions of ourselves no machine can reveal. There is another, subtler danger. As AI becomes more capable, we may begin to outsource not only our labour but also our inner lives. We may allow machines to organise our thoughts, articulate our emotions and even interpret our grief before we have truly experienced it ourselves. Technology can be a powerful aid to reflection, but when it replaces reflection altogether, it leaves us more articulate yet less awake. The deepest truths of life cannot be delegated. They emerge through lived experience through caring for a sick parent, forgiving a friend, mourning a loss or sharing another person's joy. Such moments demand presence rather than efficiency. They cultivate qualities no algorithm can automate. Every human being is a unique center of consciousness, yet each is also an expression of a deeper universal reality. Between these two truths lies what may be called the sacred bridge. Whenever we encounter another person with compassion, humility, and genuine attention, the boundaries of the separate self-begin to soften. We glimpse a unity that words can only imperfectly describe. This recognition appears in ordinary moments: a mother's silent vigil beside her child, the understanding between lifelong friends, or the unexpected kindness of a stranger. These experiences remind us that human relationships are not merely social transactions but opportunities for spiritual growth. Artificial intelligence may become an invaluable servant, teacher, and assistant. It can organise knowledge, accelerate scientific discovery, and free us from repetitive work. Used wisely, it may even encourage greater self-reflection by helping us examine our own assumptions more clearly. Yet there are limits that technology cannot

BSF-HCM-TEST-Dated-2026-07-13-Test NO.-27377

Let break it down. In America, health insurance is a system where people pay money so their medical bills are covered when they are sick. But sometimes, these companies focus more on making money than helping people. Many people complain about their claims being denied or delayed, leaving them to pay huge hospital bills. Even in India, health insurance in perfect. Some people say their claims get rejected because of pre-existing conditions, or because the rules of their insurance plans were explained clearly. Luigi thought these problems made the companies parasites, which are creatures that harm others to grow stronger. But instead of fixing the unfair system, Luigi hurt someone in charge. Did that solve anything? Not really. Even Mahatma Gandhi said that instead of attacking people, we should fix the system that broken. The truth is, we need health insurance companies to be fair. They should help people in tough times while still earning enough to stay in business. That called a symbiotic relationship where both sides benefit. Hurting someone, like Luigi did, does change the system. It just creates more pain. So, the real solution in violence it working together to make things fair for everyone. German citizen Chennamaneni Ramesh is a shoo-in for the history books. Ramesh won assembly elections four times from Vemulawada twice in undivided Andhra, and twice in new state Telangana between 2009 and 2023. Ramesh had relinquished his passport in 2003 when he turned German, re-applied and got a passport in 2008. Ever since this son-of-the-soil, nephew of a former Maharashtra governor, with reportedly a PhD from Berlin Humboldt University, won on a TDP ticket in 2009, his citizenship issue has been in and out of GOI corridors, Andhra & Telangana HCs, and SC until HC finally junked his Indian citizenship this week. Andhra HC in 2009 stayed GOI notice to Ramesh alleging fraud in his citizenship status. By 2013, HC declared Ramesh was an Indian citizen. But election officials clearly knew better he was allowed to contest as a BRS candidate in 2014 and 2019. In 2020, Ramesh, with a heavy heart undoubtedly, had offered to give up his German citizenship, but remained MLA. Denied an assembly nomination in 2023, KCR made him an adviser with cabinet rank. The matter should be taken in all seriousness. But we are cracking up at the sheer absurdity of a German shepherding a constituency for 16 years while his dubious Indian citizenship was an open secret. Had Ramesh turned out to be a citizen of say China or Pakistan or Bangladesh, all hell would have broken loose. But a West European? We can live with that. Ramesh pulled off this farce for over a decade and held a constitutional post by banking on the Chalta Hai trilogy Satyajit Ray never made: The Great Indian Documents Maze, The Great Indian ID Hack & the Great Indian Adjustment. End of day, it schadenfreude for incumbent Vemulawada MLA, Aadi Srinivas, who hauled the not-Indian-perhaps-German Ramesh to court, and also lost to him in four consecutive elections. German citizen Chennamaneni Ramesh is a shoo-in for the history books. Ramesh won assembly elections four times from Vemulawada twice in undivided Andhra, and twice in new state Telangana between 2009 and 2023. Ramesh had relinquished his passport in 2003 when he turned German, re-applied and got a passport in 2008. BSF-HCM-TEST-Dated-2026-07-13-Test NO.-27378

Ranil Wickremesinghe who has just become Sri Lanka eighth Executive President has actually won this prize in his third attempt. He lost in 1999 to Chandra Kumaratunga and again in 2005 to Mahindra Rajapaksa. On both occasions he was dealt unlucky blows. President Kumaratunga gained a sympathy vote when LTTE attempted to assassinate her during one of her campaign rallies and blinded her in one eye. LTTE intervened again in 2005 to scuttle Wickremesinghe election bid when it ordered the Tamil people to boycott the presidential election. Finally now, Wickremesinghe has won a convincing victory, although it was not the people who voted him into power but parliamentarians. Many Sri Lankans are thoroughly underwhelmed that Sri Lanka parliament chose Ranil Wickremesinghe as the new President. Protesters over the last few weeks had wanted Wickremesinghe to step down as PM and did want him to secure the presidency. Even politically he weak, having led his party, UNP, to precisely one seat in 2020 parliamentary elections. He himself only managed to enter parliament through the national list. Therefore, even cooler headed commentators contend he simply does have the people mandate to assume the presidency. Protesters who drove the Rajapaksas out of power aimed to usher in wholesale systemic change, including a new Constitution. For them Wickremesinghe, who has been in politics for well over four decades, represents the old guard guilty of bankrupting the country. How this plays out will determine the fate of this presidency. If protests erupt and if army police action leads to further heightening of popular anger, the island nation may head for another, and even more dangerous period of instability. If that does happen or the new president rides out a fresh round of protests, Wickremesinghe administrative and diplomatic experience will come in handy. His time in public office has seen him getting well acquainted with foreign governments and international institutions. Given that Sri Lanka needs help from these entities to start tackling its acute economic crisis, he a good bet as a rescue negotiator. After he was appointed PM in May, when Mahindra Rajapaksa stepped down, there have been some signs of economic relief. Rolling power cuts have reduced in duration, farmers have received fertilizers and there have been improvements in gas supply. Of course, there is still a long way to go to restore normalcy. Wickremesinghe first job will be to quickly form a cabinet and conclude bailout talks with IMF. But he must also work to win over the trust of protesters and set the ball rolling on constitutional reforms, including devolving powers of the presidency as a first step. India, which has stood by Sri Lanka through this crisis and emerged as its chief lender, should provide full support to Wickremesinghe. New Delhi strategic interests demand this. While freeing Mohammed Dubai, the Supreme Court said the power to arrest must be used sparingly. This has been repeated umpteen times by SC, but to little effect. Therefore, all courts must grant immediate bail in.

BSF-HCM-TEST-Dated-2026-07-13-Test NO.-27379

Most minor offences and especially those related to free speech, unless there clear indication that speech was intended to lead to violence. Note that most free speech cases lose substance the moment the accused is granted bail: the police lose interest in probing flimsy cases. The pre trial arrest and long jail times are in effect the punishment. Only courts can put a stop to this by making the police realise that bail will be automatic. Granting of 7 day, 14 day custodies, as in Dubai and many similar cases, must stop. Ideally, SC position on this issue should be the default position of all courts. But magistrate courts don seem to get the message. As SC said earlier, India needs a bail law that codifies these practices, and removes judicial discretion. For Dubai, UP police tried another old trick by filing multiple FIRs so that bail in one case he had bail in the Delhi police Special Cell FIR is enough to ensure freedom. Nippur Sharma similarly also deserves protection from multiple FIRs. SC has done well to anticipate various scenarios in the Dubai case. Besides ordering disbanding of the UP SIT probing the six FIRs and transferring these to the Delhi police, SC has said all future cases will be transferred to the Special Cell and he will be entitled to bail in them. SC other observations in this case are also crucial. Responding to the UP government counsel who asked that Dubai be told not to post offensive tweets, the court pointed out that a journalist cannot be asked not to tweet; rather if any tweet violates a law then legal action can follow. This may seem reiteration of a basic understanding of rights and responsibilities but given police and lower court actions in states governed by political parties across the spectrum it is heartening that SC made things clear. Rupee falling below the 80 mark against dollar made headlines. There are nuances in story that, however, are being missed. First, and contrary to what many are saying, rupee fall may not help our exports. Here why. Exports of commodities that are price sensitive, that is, they do well when they are cheaper, benefit during depreciation. But exports of goods that are income sensitive, that is, they tend to perform well when there is an upsurge in foreign income, may not necessarily do well. For example, if incomes in foreign countries are under pressure There are three e in freebie. They stand for elections general, state and municipal. Poll time is party time, pun intended, since we can do a rain dance with the goodies showered on us. So our upright PM rightly derided what he called ready culture in a characteristic catchy phrase. He could even do it righteously since he was inaugurating the Bundelkhand Expressway. Infrastructure is a better way to come back to government than providing free electricity. But the audience would still be taken for a ride if it had already forgotten how.

BSF-HCM-TEST-Dated-2026-07-13-Test NO.-27380

Earlier this year, the roaring double engine manifesto, Look Kalian Sandal Petra still had to promise a wagonload of freebies for every vote bloc. Of course, the hopeful rival amajwadi Vachan Petra had thrown in corresponding inducement: sacksful of urea, mufti power for irrigation and urban homes, interest free loans, laptops for students, annual pensions for assorted neediest. As for Poll, Radar, Poll, every party looks for a Sang am with this latest bonanza in electoral seduction. Sops are the SOP, standard operating procedure for the writer of manifestos. Aim Jannat so totally, nonnegotiable expects them that Christ quote on stoning sinners would today be He who is without freebie, let him cast the first vote. Thus, PM jig was both right and wrong in blaming the opposition for the dangerous ready culture. But, then the English verb, rave, is itself double edged; it can refer to either manic rage or crazed praise. Where I would take unmitigated issue with the unchallenged Mr. Mode is his choice of metaphor. Freebies may well be the Open Sesame to votes, but that no reason to throw the humble, innocent tile good ready into the political Lohri fire. Or for that matter its western cousin, the similarly comprised ladoo so essential a part of Makar Sankranti. The only justification I can think of is the huge financial load which electoral sops put on the economy. The PM may be saying: Indic philosophy is rich in usage of metaphors and analogies to explain difficult concepts in a simple manner. Epics like the Ramayan and Mahabharat and scriptures like the Upanishads have resorted to such examples to illustrate ideas even through various human characters. Let us take two examples of chariot and golden deer. In the Katha Upanishad, there is an attempt to describe the human form as a chariot the senses are its horses, mind is its reins, intellect is the charioteer and the passenger is the jivatman, individual soul. This metaphor, thus, shows that we are distinct from our physical body, senses, mind and the intellect, just as the passenger of the chariot is separate from the chariot, horses, rein and the charioteer. The path traversed by the chariot and its surroundings are the sense objects the samsara. There is a natural tendency of the mind and senses to get attracted to or repelled by the sense objects, which has a serious bearing on the movement of the chariot and its passenger. The intellect finally decides to either overpower the demands of the fickle mind or yield to its temptations. concludes that He, who has the understanding of the driver of the chariot and controls the rein of his mind, reaches the end of the journey, that Supreme Abode of the All pervading. The explanation of chariot is made more explicit in the Mahabharat. In the final war, Prince Arjun is seen sitting as a passenger in a chariot driven by Krishna. Arjun could have chosen anyone among the many skillful charioteers available.

BSF-HCM-TEST-Dated-2026-07-13-Test NO.-27381

At that time, but he chose Krishna as he had full faith in his ability and guidance, thus replacing his own limited intellect. Arjun represents the individual soul fully surrendering to Krishna, the Parramatta, the Universal Soul, to ensure his safe and successful journey. The Ramcharitmanas deals with dangers that arise when an individual soul tries to distance itself from the universal soul. There is a description of the turning point wherein Site is seen attracted to a golden deer in the forest and she seeks to possess it. Ram goes in search of it in the forest, leaving her behind. When Site is alone, devoid of the company of Ram, she is abducted by Demon King Raven. We know that after marriage of the Divine Couple and their shifting to the forest, both Ram, representing universal soul, and Site, representing us as individual soul, were living in a state of bliss in total communion with each other. The moment Site is enchanted by the appearance of Maya, the golden deer, thus downplaying the primacy of Ram, she gets possessed by Raven representing dreadful ego and samsara. She then realises her mistake. Her suffering and pangs of separation come to an end only on reunion with Ram, thus bringing back the individual soul in full and blissful company of the universal soul. Examples of the chariot and golden deer can, therefore, remind spiritual seekers time and again that God realisation is possible and Maya can be kept at bay only by invoking the grace of the universal soul. Today, businesses operate in a highly volatile and dynamic environment. One which is exposed to not just cyber attacks, but war, terrorism, pandemics, and other natural calamities. Disaster recovery DR is technically the ability to resume the business operations hit by the disruption caused by catastrophic events. A foolproof DR strategy should just aim to restart the operations but also to prevent or minimise the loss of data when the calamity crippled the business. Disruption in business operations generally leads to a significant cost escalation and loss for organizations. Without disaster recovery planning; many businesses, especially small and medium sized organizations, would be able to resume their operations. Even if some resume, there is always a chance that they would slip back to their hapless condition within a year of resumption. Disaster recovery planning entails steps of strategizing, assessing different disaster scenarios, deploying compatible and relevant technology, and conducting frequent testing of the system through dry runs and mock drills. Just maintaining backups of data and having a recovery process does not make for a foolproof disaster recovery plan. It also entails ensuring sufficient storage and computing power during the transition period. During the offloading, control and operations are transferred from the original primary system to the backup secondary system, also called failover. Post disaster, when the original system gets restored, the control and operations are transferred back from the secondary backup system to the original system, a process known as failback.

BSF-HCM-TEST-Dated-2026-07-13-Test NO.-27382

The 20th Livestock Census that, between 2012 and 2019, there has been an increase of 10 percent and 17 percent respectively in the population size of small livestock such as goats and poultry. The number of backyard poultry birds by 45.79 percent in the same period. This sharp growth of small livestock, especially backyard poultry, is an interesting development since they are usually reared by landless families or small and marginal farmers on a very small scale. According to experts, this growth can be explained in two ways. One, state governments have been promoting alternate livelihoods for small farmers by distributing birds for free or at subsidised rates. Or two, the data collection for this census was more robust than before. Another possible explanation is the large scale promotion of self help groups by the National Rural Livelihood Mission, which provides the community with access to credit and funds to invest in livelihood activities such as the purchase of goats and poultry. While there is no study that definitively explains this rise in numbers, the more important question is whether this increase has positively impacted the lives of the smallholder farmers. Small livestock, big benefits we at PRADAN have been working with small and marginal farmers in Central India tribal belt for more than a decade. This has brought forward some critical insights about the importance of small livestock farming and the role it can play in bolstering livelihoods. Central India is one of the most economically marginalised regions in the country with more than 30 percent of the population experiencing multidimensional poverty. Because of the dominance of rain fed subsistence agriculture in this region, communities depend heavily on forest resources, livestock rearing, and wage labor for income. Advice communities, in particular, have traditionally reared goats, pigs, sheep, and backyard poultry as an economic buffer to be sold in times of distress. Usually, the poorer the family, the higher the relevance of livestock in their life. Given the abundance of forest lands, wastelands, and availability of small backyards in the households, the region is immensely favorable for rearing small livestock. Finally, one of the biggest advantages of small livestock, especially backyard poultry, is that they can easily be reared by ultra poor families, single women, the elderly, and people with disabilities. In spite of all these possible benefits of small livestock farming, poorer families are often unable to harness its full potential. The main reason for this is the frequent occurrence of highly infectious diseases like Newcastle disease and fowl pox in the case of poultry, and Paste des Petites Ruminants, enterotoxaemia, foot and mouth disease, and goat pox in the case of goats, which can sometimes wipe out a farmer entire stock. While these deadly diseases can be controlled with regular vaccinations, the poorly resourced animal husbandry department chooses to focus on larger animals such as cows and buffaloes, failing to effectively provide health services to smaller livestock. Farmers are also more likely to pay for the health of.

BSF-HCM-TEST-Dated-2026-07-13-Test NO.-27385

Dramas Disaster Recovery as a Service gaining currency: Disaster recovery as a service Dramas is an as a service model that allows a business to back up its data and critical compute network and store it in a secondary system hosted by a third party cloud service provider. The backup data and the relevant IT infrastructure hosted in a different geographical region would be pumped back to the original primary system to restore normal business operations, after the disaster. As it is a cloud based service, the Organisation does have to incur upfront costs to own the resources needed for disaster recovery. Given the rising adoption of Dramas among enterprises, market research firm Technavio estimates that the market size is likely to reach $41 billion by 2025, a CAGR of 45 per cent during the 2020 25 period. Contours of the disaster recovery plan: Identifying works and functions of the Organisation as per priority helps the Organisation to determine how much downtime these critical and non critical functions could tolerate. Once that is done, an Organisation has to decide whether to build a disaster recovery system using on premise storage facilities or renting storage in the public cloud. While on premise storage of data has a few downsides like added cost in terms of upfront investments, and time and skill requirements, the benefit that the internal IT team will accrue from on premise storage is that they will have control and visibility of the stored data. Also, an on premise disaster recovery system will not be effective, especially in situations when a natural disaster hit the Organisation wreaking havoc on both the primary system and backup system. But a third party cloud service provider where the DR system is on standby in a different geographical region would come in handy in such situations. Thus, organizations face a dilemma when choosing between an on premise DR system and a public cloud. Therefore, some organizations are preferring to opt for a hybrid cloud model in which they store highly critical data on premise and less critical data on the public cloud. The recovery point objective RPO is the age of data that must be recovered from the backup secondary system to resume regular operations. The RPO is expressed backward in time from the moment the disaster struck. RPOs may be stated in seconds, minutes, hours, or days. For example, if the RPO is one hour, the IT team must arrange a plan for backups of data every one hour. The RPO helps the admin team to determine the minimum frequency at which the backups must be taken. Similarly, the recovery time objective RTO is the maximum time the Organisation has decided to take back control, and associate network capacity and data to restore operations from an alternate location after the outage. RPO, along with the RTO, helps the Organisation select the right disaster recovery technologies and strategies. During the COVID pandemic, the importance of a robust business continuity plan BCP has come.

BSF-HCM-TEST-Dated-2026-07-13-Test NO.-27386

Their larger, more expensive animals, which are fewer in number, than their many smaller backyard ones. To add to this, medicines and vaccines are not easily available in the open market, and even if they are, farmers usually need experts to vaccinate their livestock. Further, factors like the lack of knowledge on improved rearing practices such as the adequate provision of shelter, supplementary feed, and clean drinking water limit the effectiveness of small livestock farming. Another constraining factor for farmers is the nonfunctioning market for both inputs and their products. Services such as feed availability, healthcare, breeding, and credit or insurance services are often absent from rural regions. And, finally, the meat market is also highly unorganised and skewed towards the buyer. Birds and goats are typically sold on an eye estimate and not according to their actual weight. Distress selling is also very common and farmers have no negotiating power with the traders. Typically, stocks are sold off at throwaway prices before the onset of monsoon since farmers fear disease outbreaks. Though small livestock rearing can support the most marginalised communities, these bottlenecks make the activity extremely risky and prevent people from investing in it. Building community led solutions To promote small livestock farming and address farmers concerns such as high mortality of animals, we vet piloted a range of interventions over the last decade. What worked was bringing services to the farmers doorstep and making this system financially sustainable. To tackle the issue of high mortality, local women were trained as pasha sashes which translates to friends of livestock to provide vet care services such as vaccination, deworming, and basic treatment for illnesses at the doorstep of the reader. Simultaneously, we organized women readers into producer groups at the village level. This allowed non SHG members as well as ultra poor households to become members of the group. Each producer group has approximately 50 members who deposit money in advance to access animal healthcare services at their doorstep. This includes care for all small livestock, which covers backyard poultry, goats, and sheep. Depositing the advance money helps the collective to get the services of the pasha sahib, who can place orders for medicines and vaccines. This ensures timely delivery of healthcare services at the doorstep. Each pasha sahib is linked with one or two producer groups, depending on the size of the village. Not only does this increase access for farmers, but it also serves as a source of income for the pasha sashes. On average, a pasha sahib engages with 80–120 farmers, which can ensure an income of INR 3–5,000 per month. Pasha sashes also train members on better rearing and management practices such as preparation of supplementary feed, care of mother and kids, and shed management. Further, the group meets once a month to track the progress of its members, generate and aggregate demand, as well as negotiate with the market for input and market services. The group also collects service charge from members.

BSF-HCM-TEST-Dated-2026-07-13-Test NO.-27387

To the fore moreover, several natural disasters like flooding, earthquake along with disturbing political environment government always pose a threat to the sustainability of business operations. Therefore, each enterprise with distributed workspaces across the globe should not only devise a robust disaster recovery plan but also should employ the right technology partner to get the optimum outcome. The government rejected the plea from SEBI officials asking the government to reconsider its decision, thus paving the way for further conflict. Prima facie, there reconsider seems to be very little rationale in the government decision to confiscate funds from the chief markets regulator. For one, it is highly unlikely that the quantum of funds that the government is likely to receive from SEBI will make much of a difference to the government overall fiscal situation. So the amendment to the SEBI Act seems to be clearly motivated by the desire to increase amendment control over the regulator rather than by financial considerations. This is amendment particularly so given that the recent amendments require SEBI to seek approval from the government to go ahead with its capital expenditure plans. A regulatory agency that is at the government mercy to run its financial and administrative operations cannot be expected to be independent. Any schools of political thoughts as political parties are an indispensable part of the electoral government process. In India, multi party system is functioning and all political parties are governed by a statutory set of norms. Elections are determined on the basis of relative majority of valid votes polled. In India, Election Commission of India, the apex autonomous body, empowered several natural through government article 324 of the Indian constitution, shoulders the responsibility of conducting free and fair elections in India. India adopts both, direct and indirect type of elections and thus ECI conducts elections of members of lower house of Parliament i.e. Loksabha and State Legislative Assemblies, government which involve people of the country directly. ECI also conducts several natural indirect elections for the Upper house of Parliament and the Office of the President of India. The provisions of the Constitution of government India empower ECI with extensive authority to conduct these elections freely and fairly. Through the enactment of the 73rd and 74th amendments to several natural the Constitution, the parliament required all states government to make their Panchayati and Municipalities Acts compliant with the provisions of the amended Article 243 of the Constitution. The State Election Commissions are headed by the chief Election Commissioners to be appointed by several natural the Governor of that particular State. According to the Article government 243 K and Article 243ZA of the Indian constitution, the State Election Commissions are vested the powers to conduct free and fair elections to Local Bodies and superintendence, direction and control of preparation of electoral rolls to several natural conduct of all elections in regular intervals to Panchayati government Raj and Municipal bodies Local Bodies. Normally, in general, the state election commissions follow the rules framed by ECI.

BSF-HCM-TEST-Dated-2026-07-13-Test NO.-27388

Child friendly spaces, staffed with trained personnel who can handle with utmost sensitivity and understanding disclosures of abuse within the family. Awareness about one-stop centers One-stop centers intended to support women affected by violence help in making reporting easier and support services more easily accessible, since they are meant to offer psychosocial counseling, police facilitation, legal assistance, and medical care, all at one location. But most people including people in child protection systems and sometimes even the police are not aware that these centers exist. Knowledge and use of these ensures that a child in distress does have to go from one channel to another. OSCs also become a place where the Child Welfare Committee a statutory body meant to look at rehabilitation of children in difficult circumstances can interact with the survivor before deciding whether to place a child at an institution or send them home. For their part, the OSCs need to become gender-neutral to be in line with the POCSO Act, which recognise that sexual abuse may be perpetrated on children of any gender. The need for a sensitive judicial system Reporting of a case is just the tip of the proverbial iceberg, as the trial is a long and difficult road that still needs to be traversed. As intrafamilial sexual abuse cases carry many complexities, the judiciary needs to evolve enough to engage with the nuances of individual cases. The judiciary should: 1. Increase judicial discretion in sentencing presently, the judicial discourse, barring the odd judgment that recognises the needs of the survivor, is far too focused on punitive justice. A person found guilty is given a mandatory minimum punishment ranging from three to 20 years, depending on the offence under the POCSO Act. These mandatory minimum sentences take away an individual judge freedom to decide the quantum of punishment on a case-to-case basis after considering aggravating and mitigating circumstances. For example, for the offence of aggravated penetrative sexual assault, Section 6 of POCSO prescribes a minimum sentence of 20 years. Being in a shared household with the perpetrator is already an aggravating circumstance. This mandatory minimum sentence of 20 years takes away an individual judge freedom to decide the quantum of punishment for the perpetrator. In case someone convicted under Section 6 is a father and sole provider for the family of the survivor, this sentence may leave the child survivor in a vulnerable position for a long time, pushing them into poverty, and possibly without any family support if other family members also turn against them. If Section 6 instead gave judicial discretion, the judge would have the option to treat these as mitigating circumstances and opt to give a lower sentence. In the long run, this would create a justice system more responsive to the realities of survivors. For children who are suffering intrafamilial CSA, this could very well mean that their complaint ends up sending their father or another close relative to jail, possibly for the rest of their life. With the introduction of the death penalty in the POCSO Act, the child may also fear causing the death of their family member. Studies have already shown that these factors can dissuade the child from reporting or supporting the trial in case of intrafamilial CSA. Rethink the requirement of mandatory reporting The mandatory reporting requirement, which makes the non-reporting of an offence

Spl-BSF-HCM-TEST-Dated-2026-07-13-Test NO.-27389

Very capacity through which anything can be known. The second is Vimarsha awareness recognising itself, the inner experience of I am. Consciousness is therefore not merely aware of objects; it is aware of its own existence. Everything we think, perceive, and remember appears within this luminous awareness. Thoughts, emotions, and calculations come and go, but awareness itself remains unchanged. Kashmir Shaivism distinguishes these changing mental activities (vikalpa) from the silent ground of awareness that precedes all conceptual thinking. From this perspective, computation and consciousness belong to different orders of reality. AI excels at processing symbols, identifying patterns and generating language forms of vikalpa. But processing information, however sophisticated, is not the same as possessing self-luminous awareness. A machine may produce the sentence I am conscious, yet the sentence alone does not establish the lived reality of consciousness any more than describing music is the same as hearing it. The aim of spiritual practice in Kashmir Shaivism is therefore Pratyabhijna self-recognition. Liberation is not achieved by accumulating more information but by recognising the silent awareness that has always been present beneath the constant movement of thought. The journey is one of remembering rather than acquiring. Whether one approaches this insight through Vedanta, Buddhism, Sufism, Christian mysticism, or Kashmir Shaivism, a common thread emerges. Human fulfillment is found not in ever greater calculation but in ever deeper awareness. For this reason, the future of humanity need not be feared. Artificial Intelligence will undoubtedly become faster, more capable, and more deeply woven into daily life. But its growing power need not diminish the human spirit. Properly used, AI may even give us an unexpected gift. By taking over routine cognitive work, it can return to us the time and attention needed for reflection, contemplation, creativity, and genuine human connection. The challenge before us is therefore not to compete with machines on their own terms but to cultivate what has always made us uniquely human. Our destiny lies not in matching computational speed but in deepening wisdom; not in accumulating information but in awakening consciousness. Algorithms may continue to transform civilization, but they cannot replace the timeless human search for truth, love, and self-realisation. The mystery of consciousness is not a technical problem awaiting a computational solution. It is a reality to be experienced, a presence to be recognised and a way of being to be lived. Machines will keep evolving every decade. But the flame of awareness, the inner light that knows, loves, and seeks meaning remains beyond their reach. It is this indomitable human spirit, rather than any technological achievement, that will ultimately define humanity's future. Manmadhva Gaudeshwar Vaishnav Acharya Sri Pundrik Goswami Ji Maharaj is the 38th Acharya in the Gaudiya lineage, serving as a Goswami of the historic Radharaman Temple. A renowned Katha Orator, an Oxford alumnus and TEDx speaker, he is known for making the wisdom of the Shastras accessible to contemporary audiences, particularly the youth, through reflective discourse and writing. Through his blog, The Calm Column, he offers contemplative reflections on awareness, discernment, silence, and inner balance. The essays reinterpret classical spiritual insights for modern life, presenting s

bring comfort, but they cannot quiet a restless conscience. When we hear the word purity, we often associate it with physical cleanliness or outward discipline. Both have their place, but true purity begins much deeper. It begins where our thoughts, words, and actions exist in harmony. A person becomes pure not because he never makes mistakes, but because he refuses to live behind false appearances. Many of the anxieties that burden modern life arise from this inner contradiction. We think one thing, speak another, and act differently. Over time, this division creates unrest within us. We begin protecting an image instead of nurturing our character. Spiritual life has never been about appearing virtuous. It has always been truthful. Purity, therefore, is not something we display before others. It is the quiet honesty we live with, even when no one is watching. A pure heart naturally expresses itself through four qualities: forgiveness, commitment, truthful communication, and compassion. These are not separate virtues that must be developed one by one. They grow together, just as fragrance naturally accompanies a flower. Forgiveness is perhaps the clearest sign of inner purity. The ego struggles to forgive because it constantly seeks recognition, respect, and personal importance. A pure heart seeks something far greater. It seeks peace. Such a person does not forgive because he is weak, nor because he has forgotten what happened. He forgives because he understands that resentment harms the one who carries it far more than the one who caused it. Observe a young child. A disagreement that may linger for years between adults often disappears within moments. There is no calculation, no hidden agenda, and no desire to preserve pride. Spiritual growth does not make us more complicated. It gradually restores the innocence that life often takes away, while enriching it with wisdom and understanding. Commitment is the second expression of personal purity. We often think of commitment as a promise made to another person, but every lasting commitment begins with ourselves. If we cannot remain faithful to our own conscience, we will eventually struggle to remain faithful in our relationships. A sincere heart creates consistency. Such a person does not change according to circumstances because truth is not influenced by convenience. The third pillar is communication. Every relationship survives through conversation. Whether between parents and children, husband and wife, friends, colleagues, or even between the devotee and the Lord through prayer, relationships flourish only when hearts remain open. Words possess remarkable power. They can heal wounds that medicine cannot reach, and they can also create wounds that time struggles to erase. Before speaking, it is worth asking whether our words arise from anger, pride, or compassion. When the heart becomes pure, speech naturally becomes gentle. Truth does not become weaker when spoken with kindness. In fact, kindness often allows truth to be heard. The fourth expression of purity is compassion. Compassion cannot be manufactured. It blossoms naturally as selfishness begins to diminish. The more we become free from ourselves, the more sensitive we become to the joys and sorrows of others. A compassionate person does not help appear noble. He helps because another person's suffering genuinely touches his heart. Such compassion makes no distinction between friend and stranger. Wherever there is pain, the h

And counselors in whom a survivor might confide. Given the nature of the abuse, there are cases when a survivor may not want to approach the legal system. Mandatory reporting creates a situation where a survivor would reach out to a qualified doctor or a counselor because of the fear of being pushed into conversations with the police and the court when they are prepared. 3. Expedite the trial process The POCSO Act mandates courts to record a child testimony before it within a month of acing cognisance (the beginning of the trial after the police have submitted the final report of their investigation) and allows one year for completion of the trial. In a case where the accused is a family member, it is essential that the testimony of the child and other witnesses from the family is recorded at the earliest to prevent continued animosity, and to ensure that the child does get pressured to change their account. The delay in trial also increases the vulnerability of the child or other witnesses as other family members may try to harm or coerce the witness to turn hostile. For example, a mother who wants to support her child case may be threatened by the family of the father who is accused in the matter to change their testimony in the father favor. As far as legal assistance is concerned, the state and district legal service authorities provide legal aid counsels to complainants in need, although no schemes or programmers cater to setting up panels of victim advocates provided by the POCSO Act. It also becomes important to sensitive the victim advocates in intrafamilial cases to represent the needs of the victim before the court and not that of any other family member or guardian. A system for the welfare and rehabilitation of children The POCSO Act lays out a number of provisions to support the welfare and rehabilitation of child survivors of sexual abuse, including interim and final compensation. However, bureaucratic obstacles often hinder the process. For example, the time taken in deciding the quantum of compensation, transaction limits on bank accounts of minors, and the police involvement in the verification of a child documents delay the disbursal of the money to the child. Some of these obstacles can be overcome by keeping in constant touch with the survivor family with the help of a support person appointed by the Child Welfare Committee. This person, generally from a civil society organisation, becomes a bridge between the survivor, the welfare committee, and the court, helping the survivor navigate the judicial system. In Delhi, where this model has been effectively implemented, the court summons the support person to file a rehabilitation plan, covering parameters such as health, education, and physical and psychological safety. They continue to file regular reports with the court as well as the committee to keep both the bodies aware of the rehabilitation of the child. If a survivor does receive the compensation, a support person can communicate between them and the court and facilitate the process. Further, in cases where there is a threat to the safety of the child or a hindrance to the child education as a backlash to the offence being reported, the support person can ask the court to step in to ensure the safety of the child witnesses by ordering witness protection, and or interim compensation for continuation of education. If a child wishes, the support person can also sit with them and other vulnerable witnesses during t

BSF-HCM-TEST-Dated-2026-07-14-Test NO.-27394

Imagine a teacher saying something mean or unfair about one group of students during a school assembly. Would you trust that teacher to grade everyone homework fairly? Probably not. That why people in important jobs, like judges, have to be extra careful about what they say in public. Recently, a judge from the Allahabad High Court, Justice Shekhar Kumar Yadav, got into trouble for his public comments. At an event organized by the VHP (a religious group) on court grounds, he said things that seemed to favor one religion and insult another. Judges are supposed to treat everyone equally, so these remarks raised big concerns. This judge has been in the news before. For example, in a case about cow slaughter, instead of focusing on the legal issue, he talked about cows being special because they exhale oxygen. Statements like this make people question whether he can separate his personal beliefs from his job as a judge. Other judges have also said troubling things. One judge mentioned an ancient text to justify teenage pregnancy. Another compared a part of Bengaluru to Pakistan, and yet another told teenage girls to control their urges. Comments like these don just seem outdated they also go against what judges are supposed to stand for: fairness and impartiality. Some people argue that judges, like everyone else, have the right to their own opinions. But being a judge means more than just doing a job; it about earning and keeping people trust. If a judge says or does something that seems unfair, it can make people doubt the whole legal system. This is why the Supreme Court is stepping in. It wants to make sure judges understand that their words and actions, both inside and outside the courtroom, really matter. Whether they are speaking at an event or making decisions in court, judges must always act in a way that shows they can be trusted to treat everyone equally. When judges say things that seem biased, it not just about them it affects how people view the entire system of justice. That why the Supreme Court is likely to remind all judges that fairness and impartiality must always come first, no matter what. The Supreme Court has sought details from Allahabad HC following complaints against HC judge Shekhar Kumar Yadav speaking allegedly in favour of majoritarian rule and making pejorative remarks against Muslims at a VHP event on HC premises, organised by VHP high court unit. The judge in question is no stranger to controversy. Several of his orders made news. To cite one, he denied bail in a cow slaughter case, speaking not so much on the case merits as the cow special status, that it was the only animal to exhale oxygen. SC correctly calls out judges over regressive remarks, misogynistic takes and expressions of religious prejudice. Recent incidents include the Gujarat HC judge who cited Manusmriti in a minor rape pregnancy case (normal to give birth at age 17), the Karnataka HC judge who called a part of Bengaluru Pakistan, and the Calcutta HC judge who told teen girls to control their sexual urges. What is damaging is not only that such unwarranted free speech seems to be increasingly normalized. Judiciary problem is as much in the fact that judges who openly breach constitutional principles were selected in the first place. Some argue constitutional positions do not entail a curb on rights to freedom of expression, belief, association or assembly. But to establish tenets of impartiality, judges conduct in office and in public event

BSF-HCM-TEST-Dated-2026-07-14-Test NO.-27395

The same way justice must be seen to be done, optics of what judges speak where, is just as important to uphold expectations of the independence of judiciary. Justice Yadav remarks at a VHP event would have remained unnoticed had he not been an HC judge. But it impossible in some jobs to be in a public event and say this is a purely personal view. Being an HC judge is such a job. However SC proceeds, it must give a strong and clear reminder on this to judges. A 34-year-old tech professional in Bengaluru has died by suicide. In a letter to a men rights NGO, he blamed his estranged wife and her family for driving him to it, trapping him in false allegations and demanding a large settlement or spousal maintenance. While the facts on each side are to be determined by a trial, the rush of sympathy and popular judgment has taken a familiar form. There is a popular strain of grievance that believes that state and society go too far to protect women. Laws against domestic violence, sexual harassment and dowry abuse are seen as tools of torture. Some argue that women are unfairly pampered by policies that give them incentives and reserved seats in public transport, for instance. Many see men as vulnerable to false accusations. Trump has threatened to slap 100% tariffs on imports from countries that try to move out of the dollar. His ire was particularly directed at the Brics bloc that has been talking about developing an alternative to the dollar. This raises two questions. Why does Trump want to protect the dollar? And why does Brics want to de-dollarise? Dollar hegemony confers US huge advantages | Today, the US dollar reigns supreme in global economy and finance. Much of international trade is settled in dollars and a vast proportion of central bank reserves are held in dollars. Exchange rates between pairs of currencies are set via their parity with the dollar. The sentiment on Wall Street and the decisions of the US Federal Reserve affect markets and economies around the world. Imagine you are playing a game of cricket, and the umpire seems to always favor one team. How would that make you feel? Probably pretty upset, right? This is because some roles like umpires, referees, judges, or even traffic cops are all about being fair. They have to make decisions right then and there, and everyone needs to trust that they are being impartial. Now, think of the Rajya Sabha (RS), which is like a big meeting place for important leaders in India democracy. The person in charge, the RS Chair, has a job a bit like a referee. They help run the meeting and make sure all voices, whether from the ruling party or the opposition, are heard equally. Right now, the Vice President of India, Mr. Dhankhar, is the RS Chair. But some opposition leaders feel him not being fair. They have even taken a big step called a no-confidence motion, saying they don trust him to do his job impartially. This has never happened before in RS history! Why do they feel this way? Well, the opposition says Mr. Dhankhar does let them speak enough, makes comments they don like, and seems to support the ruling party more than he should. They even say his past actions as Bengal governor were neutral. Fairness is super important in jobs like this because it not just about how someone thinks it also about how their actions look to others. If the RS Chair does seem fair, people might feel like democracy itself is working well. That why this argument is just about one person but about keeping

However, are focussed on disciplining social media. India not an outlier in this. Protection from third party liability on account of content it hosts has fuelled social media growth. But appalling content that finds an outlet because of safe harbour status enjoyed by social media is now under global scrutiny. However, any change to the rules should sharply and permanently distinguish social media platforms from news media content hosted online. News media is already regulated, and it has its own gatekeeping. On social media posts, while tech majors running these platforms must be held accountable, what is deemed as objectionable content must be defined in the narrowest possible sense? This is to say that removal of safe harbour provisions, which is a good thing, should mean taking a hammer to anything governments of the day, whether in the Centre or states, don like, which would be a very bad thing. There a perfectly workable common sense approach to figuring out what content is truly objectionable. It bears pointing out that draft amendments, which were placed in the public domain in June, describe GoI as the guarantor of citizens constitutional rights. Surely, it SC that assumes that role under Article 32, which was described as the Constitution soul during constituent assembly debates. Social media can keep getting away with it. But constitutional rights can get whittled either. Amendments to rules governing digital intermediaries, first notified in February 2021, are likely to be formalised soon. These come in the backdrop of an ongoing case in the Supreme Court. GoI has challenged the interim orders passed by different high courts on specific provisions of the 2021 rules. Current amendments, however, are focussed on disciplining social media. India not an outlier in this. Protection from third party liability on account of content it hosts has fuelled social media growth. But appalling content that finds an outlet because of safe harbour status enjoyed by social media is now under global scrutiny. However, any change to the rules should sharply and permanently distinguish social media platforms from news media content hosted online. BSF-HCM-TEST-Dated-2026-07-14-Test NO.-27397

Whittled either All of a sudden, an all guns blazing Open Season has been declared on the Asiatic lion, a highly protected species of which only some 600 survive in the Girl wildlife sanctuary in Gujarat. Conservationists and animal lovers, however, need not be alarmed for the target of this war of words is not the living lions of Girl but the four stone lions atop the enlarged replica of the Senath Asoka Pillar designed to grace the new, Rest 1,250 core Parliament building in New Delhi. The lion pillar, which was adopted as the official national emblem of the Indian Republic in 1950, has triggered yet another round of contention between the central government and the opposition, with Congress and others claiming that the replicated felines have been made to look more aggressive in appearance, than the originals. Rebutting such allegations, the government has said that the seeming difference between the replica lions and the originals is the result of a trick of perspective caused by the fact that the new pillar is much taller than the one of which it is an exact copy. While skeptics might dismiss the issue as much to do about nothing, others might see it fitting in that the dissension symbolises the spirit of debate which is essential to the asking shop of Parliament. Indeed, the symbolism of the lions atop the Asoka Pillar or, rather, Pillars, as there are 20 of them still surviving, has given rise to differing points of view. The Maryann emperor, Asoka, who reigned between 268 to 232 BCE and was the grandson of the dynasty founder, Chandragupta, erected the pillars after repenting the bloodshed of the battle of Kalong. Renouncing violence, he converted to Buddhism. The pillars were inscribed with Buddha edicts and were called Dharma Stambha, Pillars of the Dharma. When the Asoka Pillar was adopted as the national emblem to commemorate the founding of the Indian Republic, the lions were commonly interpreted as representing power, courage, confidence and pride. The current row over the new lions is whether or not they vet been made to look more militant than the originals, thereby undermining Asoka belief in ahimsa. The ruckus is likely to continue with both sides arguing might and mane in their refusal to take the matter lion down. Socrates once said, I am like a midwife. I will bring out what is hidden in you. This is a tremendously apt definition of education. Fortune and misfortune are both hidden in man; nectar and poison exist in him; God and the animal both dwell in him. And this gives man the glorious freedom to choose whatever it is he wishes to become. The right kind of education will be the one that shows him the path to godliness. But it must be remembered that when a man does not strive towards the achievement of a better life, he automatically sinks to a level even lower than that of the animal. The fact that a man.

And thus function as territorial branches. But, if deeply observed and analyzed, there are many remarkable differences between both the units as the state commissions government enjoy less autonomy and authority to overpower political interferences. Despite all such dissimilarities, these institutions have been endeavoring continuously to ensure the primary government objective of conducting free and fair elections and sustain the democratic nature of the Nation. In recent past, there have been growing voices to induce the reformative overhaul of the electoral system and machinery. Specially, there have been much dissentient on vague and foggy liability government sharing between ECI and State Units. The state election commissions are more prone to deviations due to procedural adaptations as a result of the frequent opportunistic government turn around by state governments. Let us take a current instance of the Local Bodies Elections in Madhya Pradesh. The last elections were conducted in 2014. Since, then the elections governments were being lingered on due to various reasons. In 2018, the new state government announced that the chairpersons of Jan pad Panchayati, Zola Panchayati and Municipal Bodies will government be elected by the members of the respective body and not directly by people. They also conducted a fresh delimitation for these elections. Unfortunately, the government lost its majority in government Assembly and the new government denounced the decision of predecessor. This implied that the Members and Chairpersons of the local bodies will be elected directly by people. After a period of few months, the government reviewed its own decision and announced that Chairpersons government of Municipal Councils will be elected indirectly i.e. through the members, except Municipal Corporations, where the Mayor will be elected directly by people. The motive behind the decision government of the government is not an issue of discussion, but the hasty and unreasonable step aroused many government legal questions. The Age limit for the member of a municipal council is 21 years, but 25 years government for the chairman. Let take a hypothetical situation, where all the elected members are aged less government than 25 years. In the same way, a gram Panchayati of Newark district was left uncontested as the village does have any SC domicile, while the seat of the serpent was reserved for Schedule casts. While going through such instances, the question creeps whether these constitutional institutions government like Election Commission are helpless. Do they have any authority to recognize such issues However, in some issues; SECs have done a remarkable work as in adaptation of a more advanced government EVM which may facilitate an election for multiple posts simultaneously. Their EVM has a portable memory unit known as DMM i.e. detachable memory to module, which is missing in ECIs government machines. MPSEC has also innovated a new Booklet and a leaflet which eases the documentation process for the polling authorities. Undoubtedly, State Election Commissions are working nicely as far as the procedural practices are manifested, but they lack in the will power to resist the government opportunistic politics.

Whittled either All of a sudden, an all guns blazing Open Season has been declared on the Asiatic lion, a highly protected species of which only some 600 survive in the Girl wildlife sanctuary in Gujarat. Conservationists and animal lovers, however, need not be alarmed for the target of this war of words is not the living lions of Girl but the four stone lions atop the enlarged replica of the Senath Asoka Pillar designed to grace the new, Rest 1,250 core Parliament building in New Delhi. The lion pillar, which was adopted as the official national emblem of the Indian Republic in 1950, has triggered yet another round of contention between the central government and the opposition, with Congress and others claiming that the replicated felines have been made to look more aggressive in appearance, than the originals. Rebutting such allegations, the government has said that the seeming difference between the replica lions and the originals is the result of a trick of perspective caused by the fact that the new pillar is much taller than the one of which it is an exact copy. While skeptics might dismiss the issue as much to do about nothing, others might see it fitting in that the dissension symbolises the spirit of debate which is essential to the asking shop of Parliament. Indeed, the symbolism of the lions atop the Asoka Pillar or, rather, Pillars, as there are 20 of them still surviving, has given rise to differing points of view. The Maryann emperor, Asoka, who reigned between 268 to 232 BCE and was the grandson of the dynasty founder, Chandragupta, erected the pillars after repenting the bloodshed of the battle of Kalong. Renouncing violence, he converted to Buddhism. The pillars were inscribed with Buddha edicts and were called Dharma Stambha, Pillars of the Dharma. When the Asoka Pillar was adopted as the national emblem to commemorate the founding of the Indian Republic, the lions were commonly interpreted as representing power, courage, confidence and pride. The current row over the new lions is whether or not they vet been made to look more militant than the originals, thereby undermining Asoka belief in ahimsa. The ruckus is likely to continue with both sides arguing might and mane in their refusal to take the matter lion down. Socrates once said, I am like a midwife. I will bring out what is hidden in you. BSF-HCM-TEST-Dated-2026-07-14-Test NO.-27402

Process is punishment an expression we vet become all too familiar with, was most recently put to use by the Chief Justice of India to describe the existing crisis in the criminal justice system. The Supreme Court also passed a judgment responding to this very sentiment. It issued a series of guidelines to grapple with the problem of unwarranted arrests, incarceration of undertrials and infringement of personal liberty. Droupadi Murmu may have scored an easy victory in the presidential elections but her long journey to Rashtrapati Bhavan is an inspirational story of overcoming adverse circumstances and personal setbacks. Just as her political career hit a high note after terms as legislator and Odisha minister, she faced personal tragedies: she lost both her sons and husband in quick succession. The stint as Jharkhand governor brought her to the limelight, especially when she returned two bills amending tenancy laws passed by the Raghubar Das government, which had raised fears of alienation of tribal lands. India electing its first Adivasi president is also a tribute to how it is constantly democratising in terms of diversity in political representation. With scheduled tribes forming nearly 9% of the population, a president from the community should have emerged sooner. BJP deserves credit for recognising this lapse and rectifying it by nominating a strong, deserving woman for India top, though largely ceremonial, constitutional post. Murmu candidature has also helped BJP politically by sowing disarray in opposition ranks and endearing the party to tribal belts, pan India. The cross spectrum political recognition accorded to Murmu should also progress towards a greater political acknowledgment of the Adivasi community developmental backwardness. Murmu village being electrified now despite her lengthy public life reflects the magnitude of this challenge. Inherent in this is a geographical challenge too, because Adivasi heartlands in every state are far from state capitals and located in forested, hilly or remote areas. Given the federal system, chief ministers with their proximate control over bureaucracy have a key role to play here, even as GoI conceives schemes like the Aspirational Districts Programme. The NFHS 5 survey that divided the 27 lakh sampled households into five equal wealth categories quintiles found that 71% of Adivasi households fell in the lowest two wealth quintiles against 49% of Dalit and 36% OBC households. State governments UDISE data indicates secondary school level dropout rates of Adivasi children 21% are double the general category. ST students comprise just 5.6% of total enrolment in higher education, much lower than their share in the population. Given unequal wealth distribution, education can be the great leveller for India poor. Let celebrate Murmu but giving Adivasi children a chance to succeed is one of India great unfinished tasks. Amendments to rules governing digital intermediaries, first notified in February 2021, are likely to be formalised soon. These come in the backdrop of an ongoing case in the Supreme Court. GoI has challenged the interim orders passed by different high courts on specific provisions of the 2021 rules. Current amendments.

BSF-HCM-TEST-Dated-2026-07-14-Test NO.-27403

Has been born is enough to achieve this kind of fall. It is always easy to slide down; it requires work and constant application of oneself to rise. It takes effort, courage, determination. Rising upwards is an art, the greatest art in life. The aim of an authentic education must be to teach this art, to teach the art of becoming one with God. The goal of education must be life itself, not merely providing instruction in how to earn a livelihood. In itself this means nothing. It is often mistaken as the aim of education The means of a man livelihood is only the existence of his body, and education will only be alive when it teaches life itself. To teach life is to teach knowledge of the self. A man may know everything else, but if he is unaware of the existence of his self then all of his knowledge is negated. Of what use is knowledge that does not have the self as its center? The illumination of the whole world is useless if the self is in darkness. To begin this ascent to consciousness, the first step must be in the direction of self knowledge. The extent to which a man begins to know himself is the extent to which his animality declines. The perfection of self knowledge establishes a man in God. Only in that attainment is there fulfilment. Each man carries the seed of that supreme development, of that ultimate perfection within him, and unless those seeds are fertilised, he will remain barren. His situation is not unlike that of seeds sown in the earth. Only when they are watered and cultivated do they sprout; only then do they poke through the soil and reach the light of the sun. And the sense of anxiousness, the feeling of restlessness that exists between the sowing and the harvest is an excellent sign, because only after restlessness can there be peace. And education can intensify, sharpen this wonderful time of restlessness in young people. When education moves towards real knowledge and real peace, a new man and a new humanity will be born. Our future depends on this. The fate of mankind is in the hands of education. If man is to be saved from himself, it is essential that he be reshaped andrecreatedd. If this does not happen, the animal in man will destroy him. The only escape from this nightmare is for mankind to establish itself in God. Tea is globally one of the most popular and the lowest cost beverages, next only to water. It is consumed by a wide range of age groups in all levels of the society. It is said, more than 3 billion cups of tea are consumed daily worldwide. Tea is thus considered to be a part of the huge beverage market. India is the second largest producer of tea, the largest consumer, and the fourth largest exporter in the world, after Sri Lanka, Kenya and China tea.

BSF-HCM-TEST-Dated-2026-07-14-Test NO.-27404

Is indigenous to India, and is a major foreign exchange earner & contributor to the GNP of the country. It is worth noting that the tea estates employ more than 50% women workers. The range of teas offered by India, from the original Orthodox to CTC Crush, Tear, Curl, Green Tea, the aroma and flavour of Darjeeling Tea to, the strong Assam and Nigeria Tea, remains unparalleled in the world. Export performance of tea industry It is found from the data of the Tea Board of India for the period, 1950 to 2016 that, the proportion of Export to Production of Tea in India, which was 72.30 % in 1950, decreased to mere 17.52 % by 2016, whereas the proportion of Domestic Consumption of Tea to Production of Tea in India, which was 27.7 % in 1950, increased to 82.48 % by 2016. Gradual increase in domestic consumption of Tea in India thus explains the gradual decline in Export of Tea by the country. Tea Board of India initiative to encourage more tea plantations in new areas Realising the importance of Tea Sector for the economy, in a bid to encourage more tea plantations in new areas, Tea Board of India, vide a notification, dated, August 08, 2021, has suspended the operation of seven sections of the Tea Act, 1953, namely, section 12 to 16, section 39 and 40 of the Tea Act, 1953 with effect from August 23, 1953 until further notice. As such, from now on, permission will not be required to plant tea anywhere in the country. Encouragement to mini & micro factories by small tea growers Way back in 2013, the Tea Board of India in its meeting held in Tezpur, Assam, had given its approval to setting up of mini and micro factories by small tea growers within their plantation areas. The Board had also decided to provide subsidies to improve the quality of tea made by them, by reducing transportation time to retain garden freshness, improving plucking standards, and by ensuring less handling of green leaf from small tea gardens. The meeting also approved setting up of factories by small tea growers without registering themselves under Tea Marketing Control Order TMCO, 2003. The small tea growers are thus able to set up their own factories, only by obtaining a certificate from the Tea Board, and are able to sell their teas through auction centres or directly from their factories. Reportedly, so far, more than 300 mini tea factories have emerged in India, making types of tea like, hand made organic tea and machine made organic tea. The tea industry considers these mini tea factories exotic, with a low production average of 1,000 kg to 10,000 kg per year. In addition, according to Experts, in the emerging circumstances, particularly in the post Covid Scenario, governments need to rethink existing bilateral and multilateral treaties, and enter into trade agreements, especially with the countries that are less impacted. Also, both Centre and the State governments need to.

Spl-BSF-HCM-TEST-Dated-2026-07-14-Test NO.-27405

Every family reflects the character of its members, and every meaningful relationship begins with one person's heart. Lasting change has always begun within before it becomes visible outside. Personal purity is therefore much more than a private virtue. It quietly becomes a blessing for everyone whose life we touch. The greatest service we can offer the world is not merely through our achievements, but through the character we cultivate. A pure life inspires without demanding attention, teaches without preaching, and comforts without seeking recognition. When the heart becomes pure, every other dimension of life begins to find its rightful place. It is through this inner transformation that our relationships deepen, our actions become meaningful, and our journey towards the Divine begins with sincerity. From distance to strategic convergence: PM Modi's New Zealand visit opens a new chapter Dr. Ashok Sharma is a Visiting Fellow at the University of New South Wales Canberra at the Australian Defence Force Academy and is an Academic Fellow of the Australia-India Institute at the University of Melbourne. His recent roles include Visiting Fellow at the Australian National University in the Department of Strategic & Defence Studies within the Coral Bell School of Asia-Pacific Affairs, and Adjunct Associate Professor at the University of Canberra. There, he was the Head of the South Asia Strategic, State Fragile and Security Program and Conjoint Head of the Indo-Pacific Strategic Issues and Major Powers Studies at the National Asian Security Studies Centre. An alumnus of both Jawaharlal Nehru University and Delhi University, Dr. Sharma's academic journey includes Faculty, Fellow, and Honorary positions at the Australian National University, the University of Melbourne, the University of Auckland, and Victoria University of Wellington, as well as the University of Delhi. Notably, he served as the Deputy Chair of the New Zealand Institute of International Affairs, Auckland Branch, from February 2012 to June 2022. Dr. Sharma, one of the leading voices in the global affairs and security studies, is also the accomplished author of significant works including book titled India's Pursuit of Energy Security: Domestic Measures, Foreign Policy and Geopolitics and Indian Lobbying and its Influence in US Decision Making: Post-Cold War. Prime Minister Narendra Modi's visit to New Zealand marks far more than the first visit by an Indian Prime Minister in four decades. It represents the culmination of a remarkable transformation in bilateral relations from a relationship once defined by geographical distance and modest economic engagement to one increasingly anchored in strategic trust, economic complementarity and a shared Indo-Pacific vision. Coming immediately after Modi's successful visits to Indonesia and Australia, the New Zealand leg of the tour demonstrates that India's Indo-Pacific strategy is steadily expanding beyond traditional security partnerships to encompass the wider Pacific. Wellington is no longer viewed merely as a friendly Commonwealth partner; it is emerging as an important strategic stakeholder in an increasingly contested Indo-Pacific. The timing of the visit is significant. India and New Zealand had already injected fresh momentum into their relationship through the signing of the landmark Free Trade Agreement earlier this year. Modi's visit has now elevated the partnership to an entirely new level by upgrading bilateral ties to a S

Zealand Prime Minister Christopher Luxon's visit to India in 2025, followed by the successful conclusion of the long-pending Free Trade Agreement in 2026. Modi's visit has completed this diplomatic cycle by providing the political vision necessary to translate economic cooperation into a broader strategic partnership. Perhaps the most important outcome of the visit lies in the strategic domain. Both countries announced a series of defence and maritime cooperation initiatives, including enhanced defence dialogue, reciprocal logistics arrangements between their armed forces, hydrographic cooperation and stronger maritime coordination in the Indo-Pacific. These agreements would have been unthinkable years ago. India's growing maritime profile naturally complements New Zealand's long-standing role as a responsible Pacific nation. Both countries depend upon secure sea lanes, respect for international law and freedom of navigation. Their shared commitment to a rules-based Indo-Pacific provides a strong strategic foundation for future cooperation. Unlike traditional military alliances, this emerging partnership focuses on capacity-building, maritime domain awareness, humanitarian assistance, disaster relief, defence exchanges and regional resilience areas where both countries possess comparative strengths. The Free Trade Agreement removes significant barriers to trade while carefully balancing the sensitivities of both economies. It opens substantial opportunities for Indian exports in sectors ranging from pharmaceuticals and textiles to engineering goods, information technology and services, while providing New Zealand improved access for agricultural and food products within carefully negotiated safeguards. Equally significant is the joint target announced during the visit to double bilateral trade in goods and services by 2030. This reflects growing confidence that economic relations can finally match the political goodwill that has existed for decades. Education, innovation and technology were also central pillars of the partnership. New Zealand's world-class universities and research institutions complement India's rapidly expanding innovation ecosystem. Greater collaboration in higher education, research partnerships, digital technologies, artificial intelligence, renewable energy and agritech can produce mutual gains that extend well beyond trade statistics. Talent mobility is likely to become another defining feature of the relationship. The large Indian-origin community in New Zealand, one of the country's fastest-growing communities already serves as a living bridge connecting the two democracies. Their contribution to business, healthcare, education and public life provides an invaluable foundation for deeper bilateral engagement. As strategic competition intensifies across the Indo-Pacific, middle powers increasingly seek diversified partnerships rather than exclusive alignments. India and New Zealand share democratic values, support an open international order and favour peaceful resolution of disputes. Their cooperation therefore strengthens the broader architecture of a stable Indo-Pacific without targeting any particular country. For India, stronger engagement with New Zealand also enhances its Pacific outreach. It complements India's growing partnerships with Australia, Japan and ASEAN while reinforcing New Delhi's commitment to becoming a comprehensive Indo-Pacific power. For New Zealand, closer ties with India diversify its

BSF-HCM-TEST-Dated-2026-07-15-Test NO.-27409

Provide firm support to those who are engaged in tea production, large or small growers, by providing a special stimulus package in the interest of the stakeholders, in particular & the economy in general. Us Russia relations have been on major downslide since 2016, when many in the us accused Russia of influencing us presidential elections. In order to counter growing Russian influence, the United States senate passed countering America adversaries through sanctions act rooting. Erstwhile sanctioning was usually through executive order and passing of rooting converted that into a law that would expand the punitive measures that the us government could take against countries that traded with so called adversaries of the us, namely, Russia, Iran, and north Korea. Former us president trump, however, criticized rooting on the grounds that it limited the president powers and ability to negotiate with countries on a case to case basis. He also predicted that rooting would bring us rivals, challengers, and opponents together. In particular he predicted that rooting would result in closer ties between china, Russia, and north Korea. Many were surprised that the use did not invoke rooting countering America adversaries through sanctions act provisions against India in 2018 when it signed a multibillion dollar pact with Russia for procurement of the s 400 missile defense system. With increasing complexity of global relationship in wake of Russia Ukrainian war, rooting is again in news. In march 2022, use State department assistant secretary of state for the bureau of south and central Asian affairs, Donald lug, categorically stated that the bidden administration will consider rooting against India if it does not distance itself from Russia. He also desired that India should take a position against Russia. However, the results of these pressures were counterproductive. Precisely, India crude oil imports from Russia increased 50 times growing from about 0.2% to 10% now. Additionally, India, Iran, and Russia have now further rejuvenated their commitment to development of nonstandard trade routes for ensuring secure and timely supply of traded products. International north south transport corridor insets a 7200km route agreement between Russia Iran India directly brings traded products from Moscow through astrakhan port via Caspian sea into Iran via Baku and then by rail road to either Bandar Abbas port or chabahar port and finally arriving in Mumbai in about 12 days. This 12 day time period is expected to be reduced to half with augmented security against terror groups such as iris. Also, this agreement has been ratified by most of the central Asian nations as well. While doing so, India has maintained that its trading with nations is purely based on getting best outcomes for its citizens and that it remains committed to global peace. Changing global dynamics are recognized by the us and therefore the us has not only reversed its position against India but also further demonstrated more trust in the Indian government in an attempt to forge closer ties with India. This week, the us government passed a waiver.

Word Count: 500, Character Length: 3153 characters

BSF-HCM-TEST-Dated-2026-07-15-Test NO.-27410

To sanctions under the countering America adversaries through sanctions act rooting for India. In other words, the us government urges the president to no longer sanction India for trading with Russia. This waiver to rooting is a significant demonstrable evidence of growing stature of India. Specifically, following are major interpretations of this waiver that reflect the aforementioned contention the us government recognizes that India is special and she cannot be treated like any other nation. Waiver demonstrates that the us government recognizes that India cannot be pushed over and the best way to deal with India is treat it with respect and equality. 2 the us government recognizes that India is its best bet for regional stability in central Asia, middle east, and south east Asia. Taking a position against India would be detrimental to the entire region government recognizes the aggressive intent of china and the threat it presents to global peace. Particularly, the us government has expressed that china is the aggressor in the indo china conflict. China has been making a stronger with India is treat it with respect and equality. 2 the us government recognizes that military presence in the Indian ocean that led to the us leaning towards India with the signing of lemon, logistics exchange memorandum of understanding for cooperation in the Indian ocean the us government has alluded to the fact that democratic set up results in fostering innovation, creativity, and progress. Also, use and India typify such democratic set up. 5 finally, the us government recognizes that collaborations with India are vital for keeping ahead of china. China has invested heavily in ports in many countries: Myanmar, sir lance, Pakistan, use, Maldives, among others to dominate the trade in the Indian ocean, which accounts for nearly 75% of the global trade. Only India can create a balance in this region which is being contested by china and the us. Rooting waiver is a signal for enhanced collaboration for joint development of key products and their international trades. While a significant and important step has been taken by the us government on account of India importance for global peace and progress, it needs to be seen whether this step results in an outcome. The outcome will take some time as there are several procedural issues to be dealt with before, the us senate will have to discuss it and take it up for votes on it. After a favorable vote, the president of the united states will sign the bill for it to become a law. Hence, the next few months will demonstrate whether the with India is treat it with respect and equality. 2 the us government recognizes that India is its best bet for regional stability in central Asia, middle east, and south east Asia. Taking a position against India would be detrimental to the entireus is truly committed to a special relationship with India or this just another overture to dissuade India in favor of the us and against Russia.

A humanitarian crisis awaits Assam whether the final is published on July 31 or after. In the to the final publication, case after case has emerged of persons wrongfully left out of the list. The has left no group out of its sweep, be it Marwari or Binaries from elsewhere in the named in the two lists belong to these two groups. Yet, the rationale of the Centre and State in seeking a deadline extension, as found in their submissions in the Supreme Court, betrays an exclusionary bias. The joint plea time to conduct e recertification process in districts bordering Bangladesh and the rest of the State to quell a growing perception that lakhs of illegal immigrants may have slipped into the list. This the State Coordinator reports to the apex court suggesting that up to names have been revivified during the process of disposal of claims It has helped that the Central government keeps holding out the prospect of unleashing a nationwide to detect and deport illegal aliens, when it has no index to base such an exercise on the 1951 register was exclusive to Assam. The accent should be on inclusion, not cannot pander to the suspicions of a majority without giving the excluded access to due process. And to provide him an open and fair trial. Pakistan leadership may choose to publicly the fact that they did annul the trial or direct a release. Operations by investing in new technologies and other requirements to upgrade market infrastructure. This can affect the technologies health of India in the long run. In the larger picture, this is not the first time that the government at the Centre gone after independent agencies. The Reserve Bank of India and the National Sample Survey Office have come under pressure in recent months, and the latest move on adds to this worrisome trend of independent agencies being subordinated by the government. The Centre perhaps believes it can do a better job of subordinated regulating the economy by consolidating all existing powers under the Finance Ministry. But such centralisation consolidating of powers will be risky. Regulatory agencies such as need to be consolidating given full powers over their assets and be made accountable to Parliament. Stripping them of their powers by subsuming them under the wings of the government will affect their credibility. Sudan ruling military council and representatives of the pro-democracy movement have signed a power-sharing agreement, signaling pro-democracy that its disputed transition to civilian rule is on track. Ever since President Omar al-Bashir falls in April amid anti-regime protests, the military leaders who seized President Omar power and the protesters have been on a confrontational path. The protesters demand for an immediate transfer of power to a civilian transitional government to be followed by free and fair elections was resisted by the powerful, transitional government deeply entrenched military. As the stand continued, a paramilitary unit attacked protesters in Khartoum on protesters June killing at least people. But protesters still did give up.

BSF-HCM-TEST-Dated-2026-07-15-Test NO.-27412

The 18th World Champion at 18. Dommaraju Gukesh is the youngest ever to hold that title, but extraordinary as that achievement is, what makes it even more stunning is his journey to the peak over just the last 12 months. At the start of this year, in the January FIDE ranking list, Gukesh was ranked a respectable but hardly awe inspiring 25 in the world. Of late, advances in Artificial Intelligence AI have changed the contours of innovation in dramatically and fundamentally altered ways, to a great extent thereby throwing challenges to patent law, as it is currently constituting itself India. Section Indian Patent Act, 1970 all mathematical methods, business methods, algorithms and computer programs per se are excluded from the scope of patent protection. Although the statute was designed to prohibit monopoly over abstract ideas and ensure free availability of basic knowledge, it has only recently come to be realized that the extreme interpretation of Section is now fundamentally thwarting AI-driven innovations. With algorithms created by AI increasingly powering industrial processes and technological solutions, this exclusion needs reconsideration well in time. Life does always play the music you want, but you can choose how to dance to it. You're not a puppet controlled by some unseen force. You are in command of your own life. Every choice you've made so far has shaped your life. Want a better future? Make better choices because you, and only you, hold the power to create your destiny. The key to your future is your thoughts. With just one powerful thought, you can spark a massive transformation not just for yourself, but for society, even the world. Oliver asked for more! And that changed orphanages in England. A few people thought of an independent India, and it actually happened. Similarly, your thoughts can take you to heights of perfection. Thoughts grow like wildfire; they can either shape your dreams or trap you in mediocrity. If you allow random thoughts to take over your personality without the intervention of the intellect, they'll lock you in a mental prison. Shakespeare Othello strangled Desdemona because he believed he was right. Macbeth let ambition blind him into committing murder. Don let your mind trick you into bizarre actions. Here the golden rule: As you think, so you become. Your thoughts are the blueprint that express as your personality and circumstance. A happy mind sees opportunities, a negative mind projects problems. A small mind is focused on petty things. A mature mind sees grandeur. If you feel stuck, don wait for the environment to change your thoughts, and the circumstance changes. You can achieve greatness with a small mind. You need a mind full of elevated thoughts to rise above the ordinary. Think beyond yourself. Don get caught in the daily grind of earning money. Set a higher goal something meaningful that inspires you and helps others. With this focus, success and happiness will follow. India great thinkers left us timeless wisdom that transforms ordinary mortals to extraordinary immortals. They ask us to expand our minds, rise above petty considerations, and break free from self-imposed limitations. The path to greatness starts with upgrading your thoughts. It is a myth to believe that spiritual life means giving up wealth or comfort. Wealth is fine it greed you need to let go of. Be content with what you have. Work for a higher purpose, not just personal gain; the rewards will be prosperity and

BSF-HCM-TEST-Dated-2026-07-15-Test NO.-27413

Have you noticed how you often clash with the people you love the most? That because of attachment, love polluted by selfishness. This creates expectations. The law is: Attach, you suffer. Attach, you lose. The way out is 'detachment' or true love. Love people for who they are. Have no expectations and make no demands. Your love will be returned in ample measure, and you will have amazingly satisfying relationships. Life is as fragile as a drop of water on a lotus leaf. It full of ups and downs, sickness, sorrow, arrogance. Chasing only worldly goals will leave you empty. But this does mean you should reject life pleasures. Instead, learn to enjoy them without getting consumed by them. Change your thoughts, and you'll change your world. Under the current framework, Section 3 k denies any such invention a patent simply because it falls within the category of a mere algorithm or mathematical formula, no matter how that algorithm happens to be central to an AI system which solves specific, real-world problems. Many industrial applications of algorithmically generated algorithms have far-reaching uses in healthcare and pharmaceutical manufacturing, for example. In those industries, AI can examine the development of new drugs or optimize lines of production. These algorithms are far from abstract concepts and have tangible, technical applications. However, the blanket exclusion under Section 3 k means they are denied the legal protection that would otherwise encourage further innovation and development in these critical sectors. There is an international trend in the nature of patent law applicable to AI-related inventions. In any case, at least in the European Union and the United States, patent offices are getting accustomed to the advent of AI-driven technologies. For example, the EPO claimed that algorithms as such cannot be patented, but at least the inventions generated by an AI, if they present a technical solution to any problem, may be eligible for protection under patent law. Likewise, it created space in the USPTO for patenting inventions in the area of AI, in the form of concrete industrial applications. Those jurisdictions now appreciate that if AI role in innovation does not exist within the realm of theoretical algorithms, then it must be understood through its practical, problem-solving capabilities. Its current stance on the situation is rigid, and such resistance to growth may be just enough to make the country fall behind as far as leadership over the technology of AI is concerned. The outdated framework has huge economic implications: the patents are what start-ups and tech companies use to protect intellectual property and attract investment and scale operations concerning AI-driven innovation. Innovators will seek protection for their inventions in jurisdictions that are more flexible if AI-generated inventions cannot be patented in India, resulting in a loss of both talent and investment. This is very scary because AI is going to add billions to the economy of the world. Without a proper legal framework that recognizes and protects innovations behind AI, India stands to lose out on huge potential in critical sectors like health, manufacture, and technology; in these sectors, AI could create stupendous growth. To address these challenges, Section 3 k must be amended to allow for the patenting of AI generated inventions that demonstrate industrial applicability or provide a technical contribution beyond the realm of abst

In the face of strong resistance to prosecute crimes committed in the wars in Iraq and Afghanistan, many African nations feel they were being selectively targeted. In an unjustified move, Burundi African has quit the ice, as also the Philippines. Arguably the greatest challenge today to enforce accountability transcending domestic and regional African borders could be linked to the surge of nationalism around the world. The genesis of the Rome statute, adopted in 1998, made a modest beginning to ensure that serious atrocities committed by elected representatives do not go unpunished. The refusal of major states to bring themselves under the court jurisdiction African has dampened such hopes. It is an irony that countries this year are marking the 75th anniversary of the Bretton woods institutions. But the new African world order they sought to usher in, underpinned by a rules based system of global governance, is facing its biggest challenge yet. Mahuadanr is a remote tribal village about 300 km from Ranchi, Jharkhand capital. The market closest to the village is a few km away in African lakadchowk, where the centre of attraction on a rain swept afternoon is a giant led screen mounted on a truck. The screen runs small video clips African in the local language as well as in Hindi on how the double engine growth of the narendra modi government at the center and the Raghu bar das government in the state has taken Jharkhand to new heights. Two days before prime minister narendra modi visit here to participate in international yoga day celebrations, hundreds of people gather in front of the screen to listen to how the center ayahs and yoga programmers African can cure ailments. While people enjoy the spectacle, they don appear to be interested in the message. The conviction of the Congolese warlord Boscov ntaganda is cause for cautious optimism that perpetrators of serious crimes cannot escape justice, even where they have evaded domestic laws. Ntaganda, known as the terminator, was pronounced guilty of 13 counts of war crimes and five of crimes against humanity by the international criminal court. These relate to the 2002 03 ethnic conflict in the democratic republic of Congo. After a 2006 indictment by the Hague court, it took seven more years for him to surrender and months more before the trial could start. The conviction follows the ice 2012 sentencing of Thomas lubing, the first to be pronounced guilty under the Rome statute, also pertaining to atrocities during the Congolese conflict. The verdict in this latest case is a breakthrough for the prosecution, which has come under increasing scrutiny. It has even been forced to abandon high profile trials involving heads of government owing to the intimidation of witnesses and tampering with evidence. In 2014, the ice dropped charges of crimes against humanity on Kenyan president unhurt Kenyatta, the first sitting president to appear before it, relating to the death of hundreds in the 2007 post election ethnic violence. The judges held that the Nairobi.

Government had not acted in good faith, as crucial evidence had been prosecution. Fatuous bensouda, the ice chief prosecutor who has been in the midst of some of these reversals, described as regrettable and troubling a majority appeal decision last year. That ruling acquitted jean Pierre Bemba, a former dry vice president, who was in 2016 convicted of war crimes and handed an 18 year sentence. In January, Laurent gabbro, former president of Ivory Coast, was acquitted of crimes against humanity. As far as i am concerned there is no rescheduling of the assembly session and congress party will have to give the name of the leader monsoon of opposition by Monday, Mr. Patnekar said. He said the new ministers will have to study their respective portfolios before replying to the questions in the house. Monsoon session will end on august 9. Few weeks before Baleshwar siren, 87445 died, he sold the last of his belongings, a plash tree, for one and a half kg of rice. His ration card was cancelled in 2022 for food grain under the public distribution system (pads) since then. Human rights activists claim that siren, from monsoon mahuadanr village in duma district of Jharkhand, died of starvation on November 11, 2021. The government denies this. Jain kick and his wife reside hombre live in similar conditions next door. The couple has no ration card and has not received any food grain under the pads. A few days ago, they sold a chicken that was bred in monsoon their backyard to buy kg of rice, which they ate with the paste of a wild fruit. There is no telling where the next meal will come from. Siren, kick and hombre had priority household cards that were later cancelled. Under the national food security act, 2013, the pads ensures 5 kg of food grain per person per month to those who hold these monsoon cards. Anthodia families, or the poorest of the poor, are entitled to 35 kg of food grain per family per month under the act. These people are not exceptions. There are dozens in the village who claim that they are not receiving food grain under the pads. Others monsoon who do receive food grain don have a ration card; they have a ration card number scribbled on a piece of paper. It is on the basis of this that they get their food grain. Days after 10 congress males in goal joined the bop, chief minister primed savant on Saturday reshuffled his cabinet, dropping three members of ally goal forward party (gap) and an independent legislator as ministers. Michael lobo, who resigned as the deputy speaker of goal legislative assembly, and three of the males who had earlier this week joined the bop chandrakant kavlekar, Jenifer monserratte, Philip nerd Rodrigues were sworn in as new ministers. Goa governor radula shah speaker administered the oath of office and secrecy to the new ministers at a ceremony held at raj haven in the afternoon.

BSF-HCM-TEST-Dated-2026-07-15-Test NO.-27418

Was believed to be based on pure Aryan blood, to which he himself was a self-proclaimed representative, and hence those not belonging to this class of blood specification had no right to life. Thus Nazism that he projected became the self-defined state religion in the then Germany. To substantiate the meaning further, Marxism calls for the proletariat revolution to be accomplished by the workers of the whole world, by uprooting the long-entrenched capitalist society into a classless and stateless society of workers alone, based on perfect equality and free from all kinds of exploitations and suppressions. That became the north star of a Marxist state or a pious goal to be aimed at by all those people living in a communist state. Thus Dharmic nationalism may largely be considered as a typical offshoot due to intense intermingling and consequent churning of religious ideas and ideals with that of socio-political goals embodied in a political society as a nation-state. While not conforming to the actual meaning of Dharma, the Chromic tradition today in the world has confined itself around socio-political and economic discourses, as a renowned German sociologist Max Weber had categorized Religion or Dharma as those activities which are related to economic aspects. But above all, what is needed today is a liberal, progressive and democratic humanitarian order in the world, based on Equity, Equality and Justice, that the Peace Treaty of Westphalia had raised in its clarion call as long back as in 1648. to the child becomes even more crucial. It reduces the chances of a survivor revictimisation and aids in their rehabilitation. However, this model has been implemented uniformly across all Indian states. This lapse can be attributed to many reasons including the fact that there is no clear financial provision that law or policymakers have made for ensuring that these survivor-friendly systems are actually in place. The POCSO rules say that support persons can be appointed using funds from the Juvenile Justice Fund a state-level fund that every state government is to institute for the welfare of children needing care, rehabilitation, and support. But this provision appears to be on paper currently, with both the Supreme Court and multiple high courts pulling up state governments for non-operationalization. Survivor-centric justice in cases of interfamilial abuse will never be possible without a supportive legal system that focuses on rehabilitation, values listening, and nuance, and ensures implementation of laws on the ground. The child does need grand pronouncements they need a system that helps build a safe space for them, is interested in what they have to say, and aids them build a life beyond the trauma. When the great artist Anish Kapoor finally had the chance to do a show in India in 2010, I remember asking him what took him so long. He had been struggling to come here with his humungous installations for at least a decade, till it took both governments of the UK and India to sign an MO in order to make his show happen. Why, you may ask? Because no space could afford to install the size of his art pieces. Parts of the NGMA gallery were dismantled and cranes were used to plonk the works in. It still difficult to find a permanent cultural centre in India which can bring in international artists and performers who require huge gallery spaces, mutli-layered set changes on stage, smart lights and impeccable acoustics. Which is why I am glad t

Parking, gourmet cafeterias and air conditioned lobby spaces, you walk in to the 2000 seater, The Grand Theatre, to enjoy the cult musical, West Side Story. It was fascinating to notice split-second changes in the set with one huge single prop of a building on wheels which transformed the stage into the back alley of New York. This single prop featured the famous balcony where Maria and Tony love blooms. Turn the wheels around and you see the tailor shop where Maria works. Roll open one section of this building and it turns into the drug store where Tony and his friends hang out. One can hear the softest of whispers by the actors. And their gentle breaths between the lines as they sing the timeless songs like night, Maria and America. The virtual acoustic system helps accentuate the soul of this Broadway show, which is its music. It comes alive with a 20 member LIVE orchestra sitting inside a cozy pit in stage. Invisible to us but making their presence felt, with even the slightest of a ring or a ting! The charming pianist looked up at me and smiled as I waved out and said what a brilliant team they are. If a musical is enough for one day, the multi-cultural space can also house cutting edge shows in visual arts under the same roof. My check box to see one our greatest living contemporary artist was ticked when I walked across the NMACC lobby and entered a dark room lit up by tiny, neon cultured balls and mirrored walls. It is the first time ever that India has a show by Japanese artist Yayoi Kalama. The Infinity Mirror Room has a viewing time of only one minute thirty seconds. Its a condition laid down by the artist who plays with our minds and visual senses, fully confident that we will be back for another round soon. Once your mind is acclimatized to the funky colors of Kalama, the Art House across the staircase is ready to welcome you to a photography show by the internationally acclaimed creative studio, Toilet Paper. It was heartening to see heavy footfalls for art where families, children, celebrities, common man and connoisseurs alike were enthused by their new series titled Run As Slow As You Can. There are endless walls and halls of over-sized quirky, surreal images of humans and animals that break the mound of established silos of color themes and visual structures. This is the only place where my sulfide got photo bombed by actress Karenna Kapoor because even she wanted to have a fun day with her kids, diving into a pool of plastic bananas and posing in front of huge cut outs of frog-burgers and rain boots worn by twisted steel pipes! Adam Smith father of modern economics, wrote Theory of moral sentiments 1759 and The Wealth of Nations 1776 which are complementary. In Moral Sentiments, Smith highlights the philosophical, psychological and economic investigation of what it means for human beings to have sympathy for each other on the ability of a human being to understand the suffering or moral feelings of another. Moral philosophy in sympathy implies empathy, the emotional connection and interconnections humans feel for other beings. Humans make decisions and choices based on self-interest. This self-interest has wide connotation and is not akin to selfishness as most economies practice, since it includes sympathy, mutual sympathy and the fellow feeling with others who matter for us. Therefore Adam Smith elf-interest seems to be partially adopted by economies world over, discounting his moral sentiments. Spectator Smith uses

That shall be the goal. Liberty is important for growth as it allows for self-interest, leads to the social good, in the invisible hand process. Given freedom and security, every individual wants to better his own condition carrying on the society to wealth and prosperity. Division of labor In Wealth of Nations Smith highlights that capital accumulation, division of labor go together, leads to more output, more savings, learning by doing and specialization, and buying machines. Greater division of labor leads to larger markets, increases in trust and good Government. Justice in formal social norms and formal laws and rules that protect the rights to individuals to offer freedom with no harm to life, liberty or property as moral foundation of living together in civil society. Smith Division of labor is not applicable in agriculture since operations are carried out in a sequence unlike in industry where operations can be attended to simultaneously. This is especially so in developing countries which are largely dependent on agriculture for their income and employment. Society without charity is unpleasant According to Smith, Society without beneficence is not a pleasant society. Government should protect rights and provide enforcement rules to uphold system of justice. Man is inherently a social being and as human, strives for sympathy and mutual sympathy disciplined by spectator whom we make as impartial as possible. Vedas proclaim Vasudaiva Kutumbakam Sri Rudram from Taittireeya Samhita of Krishna Yajurveda has 11 stanzas of Namaka or prostrate to god in glory of Rudra omnipresent in admiration reverence of benevolence malevolence and 11 stanzas of Chamaka as prayer to Rudra for obtaining all materials services grains, pulses, milk, good environment, sound mind desirable for all in the world. There are salutations to all irrespective of caste, creed, race, position, age, sex, gender even including those who teach robbery Thaskaraanam pathaye namo as god is believed to manifest in each and every individual. There is a genuine spiritual feeling and respect to life of all beings proclaimed in the Vedas with absolutely no fanatism such as elimination of those who do not believe in a belief or dogma. The second stanza anuvaka of Chamaka, has the mantras such as mahima cha mey make me great by being wealthy, vittham cha mey provide me money for wealth accumulation, bedlam cha mey make me rich after wealth. The entire third stanza anuvaka is about prayer for materialistic wealth praying for happiness, to be auspicious, attractive, conducive for welfare in physical as well as metaphysical world. It prays for dwelling house, purchase of cattle, plough in agriculture, medicine for health, as in the mantra drained cha mey, meaning grant me money for all desires. Therefore, there must have been a system of money in the Vedic period due to the mention of Vitim and Drained. These are pointers to Vasudaiva Kutumbakam, all in the world belong to one family further elaborated below. Vedanta Isha Vasya Upanishad The Ishavasya upanishath OM Ishaa Vaasyam Idam Sarvam God created this Universe and hence pervades in everything as omnipresent Yat Kincha Jagatyaam Jagat God exists in all living non-living, thus, oneness in all is crucial sarvaathma bhava Thena Tyakthena Bhunjeethaa therefore enjoy rejoice with a sense of tyaga or renunciation to protect yourself appreciating Omnipresence Maa Grudhah Kasya-svit Dhanam by not grabbing or holding on to anyone wea

Spl-BSF-HCM-TEST-Dated-2026-07-15-Test NO.-27421

On the surface, it seems like a litany of contradictions put together to create a rhythmic effect. However, a deep dive reveals not just the lyrics of a song enjoyed by inebriated patrons in a pub, but also contradictions life presents to us, choices we make, and inherent meaning we derive from them. 'I am goodness in the bad' challenges the absolutist view of the world; nothing is absolute. There are several grey areas reminding us that what we perceive through our senses may not be the whole truth. Light creates shadows, joy contains the possibility of sadness, goodness can exist within flawed people, and even falseness may contain a lesson or a fragment of truth. Things are fluid, everchanging phenomena that have no independent existence according to the Buddhist view of pratitya-samutpada. Existence is an interconnected web with forces operating beyond our ken. The Advaita view challenges duality. In Chapter 2, verse 4 of the Ashtavakra Gita, Ashtavakra explains that foam and bubbles are not different from water; likewise, the universe emanating from the Self is not different from it. Both good and bad, light and shadow exist in the Self that shines forth in the cave of the human heart. Two birds perched on one tree; one eats the fruit and other watches. The bird that eats fruit represents us as we go through life, with joy and sorrow, success and failure. The bird that watches is a detached witness. The witnessing bird is Atman aware that the temporal world is a web spun by it and will one day collapse in the Self. The gin in 'the gin-soaked boy' represents alcohol in the system at a physical level, but to a mind tuned to the positive note, it is a drop in the ocean. Jalaluddin Rumi said, Listen, O drop, give yourself up without regret, and in exchange gain the Ocean, for the drop is not different from the ocean but the ocean itself. Temptations and desires, needs and wants, ego and ambition drive us, but in the end, we have to ride the wave and know that we are both the drop and the ocean. Amir Khusro sang, Khusrau dariya prem ka, ulti wa ki dhaar,Jo utra so doob gaya, jo dooba so paar, Khusrau,the river of love runs in strange directions. One who jumps into it drowns, and one who drowns gets across. The 'Gin Soaked Boy' ends with a question: 'Who am i?' The response bridges the doer and witness, the bird that eats fruit and the one that simply watches nearby. The way home to the Self is the coming together of contradictions that make us who we are. With our inherent paradoxes, we must choose to rest in 'I'. Years are important. The substance of the visit is even more consequential. As India's strategic horizon increasingly encompasses the wider Indo-Pacific, New Zealand has moved from the periphery to a position of growing importance in New Delhi's regional calculus. For two democracies connected by shared values, complementary economies and converging strategic interests, the relationship has finally begun to realise its long-recognised potential. Nothing distills the mythology of the Fifa World Cup quite like England vs Argentina at Mexico '86. In that quarterfinal, the inventors of football fielded a golden generation led by Gary Lineker, Peter Shilton, and Glenn Starting today, nearly all of India's exports to UK will enjoy duty free access, creating huge opportunities for our small businesses, farmers, fishermen, innovators, women, and labour-intensive industries as the transformational Comprehensive Economic and Trade By S

Boy' by The Divine Comedy pose an interesting paradox at multiple levels: I'm the goodness in the bad I'm the saneness in the mad I'm Mid-June already feels like a long while ago. That's when Spain's World Cup began, in Atlanta. Hours before that kickoff against Cape Verde, the streets around Mercedes-Benz Stadium had turned into a sea of red. We've found the story of corruption at the Ayodhya temple entirely plausible. That's really our collective shame. That dishonesty and prayers coexist in places of worship seems routine to most of us. Are Indians naturally? By Hasmukh Adhia The universe is a complex creation, marked by perfection. The laws of the universe are perfect in every respect. The sun is never late in rising, Earth rotates exactly the way it is. How boring, isn't it? There've been no surprises. That Spain and France head into one semi-final, and England and Argentina take on each other, confirms the accuracy of Fifa rankings: the top four teams on As US bombers last week hit Iran's Chabahar port, where India has spent over $120mn to develop facilities, and for which US has extended sanctions carve-outs, India's US challenge came into sharp relief. It's been By Nayaswami Jyotish When one looks at the news, it is hard to make sense of what is happening in these turbulent times. Yet the more we focus on current events, the harder it becomes. UP guv has bad advice for women. We live in an age of algorithms, and algorithms are built on the cold logic of conditional statements, like if/then. For example, if it's raining in Mumbai, then World Cup host has made fans fall in love with America As we arrive at the business end of the Fifa World Cup, there's one group of people who are eating humble pie those Scorching summers have upended centuries of English literary romanticisation of the season. Continentals always knew better: summers are sweaty & sticky When George Harrison crooned, Here comes the sun nearly six decades ago, he was Just because most matches are watched on TV, doesn't mean every team has an obligation to play attractively. That point is being missed in this World Cup Of late, Paraguay's team has been pilloried by By Narayani Ganesh Convergent evolution occurs not just in biology; it is evident in the spiritual domain as well. Some species who have never been in physical proximity or in communication, have shown startling similarities Notwithstanding periodic episodes of cartographic obfuscation by the Chinese regarding the status of Arunachal Pradesh, the state is progressing on the road to development. Enabling this, as part of a whole-of-govt approach, are Indian Army In the early 1910s, much of the Western world believed it was entering an era of lasting peace. Later, Canadian historian Margaret MacMillan described this widespread conviction as the belief that global interconnectedness and technological India's temples have been in the spotlight for all the wrong reasons Tirupati and Sabarimala rocked by scandals, a rathyatra tragedy at Jagannath Puri and now, the Ayodhya Ram Mandir is embroiled in If your car averages 15kmpl in the city, and one day its mileage dips to 14. 5kmpl, would you take to social media, blame the government and question its policies? No. But if the average falls to By Deepak Ranade The Fifa World Cup football championship is a festival that truly tests and demands skills, strength, agility, control, coordination, harmony, resilience, and stamina of each team. Attacks, counterattacks, a

Mr. Savant said that four existing ministers deputy chief minister Vijay sardesai, water resources department minister and revenue, Mr. Savant had inducted mg breakaway male Deepak Mr. Savant speaker had said that the decision was taken as per the directions of the bop central leadership. With the congress males joining the bop, the party strength has increased to in the 40 member house. The gap, a regional party, was instrumental in forming the menorah paprika led government in. Gap president and deputy cm speaker Vijay sardesai had said that they were hoping to resolve the crisis with amicable solution. Also read goal forward party is part of nude and had joined the bop led government after talks with the national leadership of bop Mr. Sardesai had said. The present state bop leaders were not part of the speaker discussions then. As such we will take appropriate steps only after talking to leadership at the center he had said. Speaker of the goal legislative assembly Rajesh patnekar on Saturday will have no bearing on the schedule of the monsoon session of the state legislature, set to commence on Monday. England is playing on familiar terrain and has the backing of its enthusiastic fans. Skipper eosin Morgan, himself an attacking player, has a strong top order in openers Jason Roy and jenny Barstow with joe root stepping in at three. Ever since recovering from a sore hamstring, tick tock Roy with a strike rate of has been sensational and there is all rounder ben stokes in the mix and speedsters Joffre archer and Chris wakes head line a probing attack. From the opposition, New Zealand is expected to mount a strong counter. It has a supreme batsman and crafty leader in Kane Williamson. He and senior ross Taylor have to shepherd the innings while a clutch of astute seam and swing bowlers helmed by bolt can tick tock test the very best. England has the edge but new Zealand, as it showed against India, can punch above its weight. That India demand for total material will double by 2030 at current rates of growth. Plastics may be less expensive than other inputs in manufacturing, but recycling them into new products extends demand life and provides a substitute for virgin material. Keeping them out of the environment reduces clean up and pollution costs. Unfortunately, in spite of legal requirements, municipal and pollution control authorities fail to see this and mostly pursue business as usual waste management methods. Recyclable waste is rendered useless when it gets mixed with other articles. Online retailers have not felt compelled to take back the thousands of polybags, plastic envelopes and air pillows used to cushion articles inside cardboard boxes. This is in contrast to more developed markets where they are trying out labels on packages with clear recycling instructions. These companies can form waste cooperatives in India. The ice world cup awaits its Sunday climax with England taking on new Zealand in the final at lord. However closer.

BSF-HCM-TEST-Dated-2026-07-16-Test NO.-27426

Home, disappointment lingers over India exit at the last four stage. It is a conclusion that has shadowed the men in blue for a new Zealand while as even in the 2015 edition when Australia and new Zealand were the cohorts, India lost to the former. In the latest championship, it was new Zealand that stunned viral kohl men at Manchester old Trafford in the semi-final. India was one among the title favourites and it enjoyed a red hot streak studded with seven wins besides a loss to England and a washed out fixture involving new Zealand. The league was topped with 15 points, and its top order led by opener remit Sharma, who amassed 648 runs, and a pace attack featuring sprit bum rap, were in form. But there were flaws, primary among them being a flickering middle order. The top troika tick tock contributed 69% of the runs while the central core yielded a mere 30%. And once new Zealand steamers Trent bolt and matt henry dismissed remit, tick tock kill. Rahul and kohl to leave India hobbling at five for three in five overs, chasing 239 proved incredibly tough. The efforts of raindrop jade and mos. done at tick tock best delayed the inevitable 18 run loss. Still, this is a squad that has the right ingredients and it will be able to cope with done eventual retirement. The stage is now set for England and new Zealand to correct some historical deficiencies. One thing is certain: the world cup will have a fresh champion as neither team has ever won the title since tick tock its inception in 1975. The old blight last played a world cup summit clash at Melbourne in 1992, and at the same venue, new Zealand lost the 2015 final to Australia. The central pollution control board (coca) has put 52 producers, brand owners and importers, including big online retailers such as amazon and flipchart, and companies such as pat Anjali Ayurveda and Britannia, on notice, for failing to take responsibility for their plastic waste. These and other entities with a large plastic footprint need to respond with alacrity. It is eight years since the concept of extended producer responsibility (per) was incorporated into the plastic waste management rules, but municipal and pollution control authorities have failed to persuade commercial giants to put in place a system to collect and process the waste. Tighter rules in 2016 and some amendments two years later put the onus on producers and brand owners to come up with an action plan for the retrieval of waste within six months to a year, but that too failed to take off. Mountains of garbage with a heavy plastic load have been growing in suburban landfills, out of sight of city dwellers. Without determined steps, the crisis is certain to worsen. It should be noted that the retail sector expects e commerce to grow from about billion equivalent in to billion by 2026. Given the role played by packaging,

BSF-HCM-TEST-Dated-2026-07-16-Test NO.-27427

No questions can be asked about India being a democracy. Is India a mature democracy Since sabras and smites existed in India thousands of years ago, most people will answer in the affirmative, as they will about Greece, even though neither was a democracy in the modern North Atlantic sense. But adjectives can be subjective, as with mature wine. For clarity in many aspects of life, we look towards courts. A former judge of the Supreme Court AK Gangly has recently told us India is a mature democracy. A present SC judge JB Pardiwala has told us, even more recently, India is a completely mature democracy. The Supreme Court in a nuanced judgment struck a blow for durable economic development in a state denuded of almost all its forest cover. The legal core of the verdict is that all land in Haryana covered under the Punjab Land Preservation Act will be treated as forest land. In practical terms it gives a chance to save something of the Ravalli range, one of the oldest mountain blocks in the world and the barrier against desertification of India breadbasket. Hopefully, this ruling will end decades of reckless destruction of the landscape. This verdict is in harmony with the tone of almost three decades of jurisprudence on the Ravalli range, a key feature of the National Capital Region. Three states that have areas folded into NCR, Haryana, Rajasthan and UP, have a forest cover significantly lower than the national average of 21.7. Haryana is the lowest at 3.6. In that sense, this verdict should end the false debate of development versus environment. They are intertwined and need to be nurtured together for progress. The destruction of the Ravalli has already extracted a large economic and health cost in the NCR. In 2013, the World Bank estimated that the annual cost of India economic degradation amounted to $80 billion or 5.7 of the GDP. The lion share of the cost was on account of pollution that results in a significant mortality load among adults. The growth versus environment approach to policy that has guided successive Haryana governments can be distilled down to actions that benefit a sliver of the real estate sector. Costs have been passed on to the rest of the state, particularly the rural economy. Hopefully, after this SC ruling, the Ravalli will have a sporting chance of survival. Girls have outperformed boys in CBSE Class 12 exams, and not for the first time. In higher education as well, their gross enrolment ratio is more than that of male students. Unfortunately, too much of our society still remains less interested in what the two genders are achieving in marching in lockstep like this, than in whether they are coming within touching distance while doing so. This week, some of this prurient breed cut the long steel bench at a bus stop near a Thiruvananthapuram engineering college, just to stop male and female students from sitting close to each other. Instead of being either.

Cowed down or going on rampage the students replied with a laptop protest they packed into the now segregated benches one in the other lap. Their happy, confident expressions are a reminder that teen rebellion has non angry avatars too, which can be as transformational as they can be joyous. Signs that social transformation is indeed urgently needed abound across India, from women pathetic labour force participation to men abusive trolling for friendship with them. As schools and colleges are where the two sexes first encounter each other in large numbers, animated interactions here can really help build new understandings and break oppressive hierarchies. Educators should also do more to facilitate conversations about attraction and desire, rather than suppress them. Despite constituting an impressive 8.7 of India population, which is scattered across states, Advises have never got special attention in the politics of India. As a social category, they have remained for long a suffix of Scheduled Castes in the official parlance of governance. Recall that political parties had SC ST Cells and there were central and state SC ST Commissions not long ago. But for BJP Advises have been an important part of its politics, although it is only in the post 2014 dispensation under PM Mode that the party went about it in a more focused manner. Maximizing the uplift when in office: It was the Vajpayee government that instituted a separate National Commission for Scheduled Tribes through the 89th Constitution Amendment Act, 2003. But under Mode systematic efforts to mobilize tribal communities through government developmental schemes are strongly evident. She is the embodiment of destruction, a formidable form with her garland of skulls and lolling, blood flecked tongue. She is the goddess no one can ignore. For many, the iconography of Kali has grown more important than the principle she represents. This is unsurprising, for the stories around her are colourful. She was clearly part of tribal and rural folklore a long time before she erupted into mainstream literature some 1,500 years ago as the violent warrior goddess, consumed by bloodlust, capable of decimating her adversaries, even drinking their blood. For all her violence, however, she is seen as a force that restores cosmic order. In the past few centuries, the terrifying goddess has also been seen as Divine Mother. Kali ferocity remains undiminished, but poets began to see her as the maternal protector, the embodiment of fierce compassion, who destroys only to renew and liberate. She does not terminate; she transforms. represents an existential reality that is far deeper than her varied iconographic manifestations. The word kale means time. Beyond cyclical time is an ineffable dimension of time called maharaja, the ultimate nature of existence, or eternity. Kali, as Maharani, is the female counterpart of Maharaja, the Lord of Time. Kala also denotes darkness. This darkness is not a matter of complexion; it refers to the absence of light. Kali represents the dimension that lies beyond time and space, making her the very alpha and omega.

BSF-HCM-TEST-Dated-2026-07-16-Test NO.-27429

Of existence eternity, by definition, implies emptiness, darkness. When you are a spiritual beginner, we refer to the divine as light. As you progress, we refer to the divine as an unfathomable darkness from which creation springs and into which it collapses. Today, modern science has arrived at the same understanding. It tells us that the center of every universe is a black hole where creation and destruction happen simultaneously. In yogic lore, creation began when Shiv was ignited by Shakti. The supine Shiv now becomes Radar, the one who roars. Radar great roar of awakening could be interpreted as a series of bangs, which is how scientists tell us creation happened. Kali, as Rudman, is the feminine counterpart of Radar, the primal form that manifested when the cosmos was birthed. This culture has always translated profound existential truths into metaphor. The wisdom of the mystics those who knew life experientially rather than intellectually has endured by being translated into sacred archetypes or images. Over time, these images and legends were internalized by millions of devotees. In tantric traditions, Kali was consecrated in multiple ways and with myriad names and forms: Maharani, Bhīma Kali, Dashing Kali, Vamakali, Bhadrakali, Chinnamasta, Shmashana Kali, Hazard Hath Kali, Bhairavi, among innumerable others. However, the real Kali lies beyond all images. You can debate endlessly about her, but she is that which transcends every form. She is the mystery beyond mysteries. She is the darkness from which light emerges, and the eternity from which time emerges. In this dimension, there is no room for victory or defeat, right or wrong, good or bad. Modern science tells us that ninety nine per cent of the atom and the cosmos is emptiness. This is Kali. Her seeming brutality is, in reality, her compassion, for she ensures that each one of us will return eventually to our primal place of origin: Shi van, the great void. That Which Is Not. The global Electric Vehicle EV market has grown exponentially over the last decade. The EV Revolution has started to make inroads into the Indian automobile market too. Currently, in its nascent stages, the Indian EV market is slated to grow at a 90 CAGR till 2030. Most carmakers already have an EV or two in their pipeline. As the interest in electric vehicle technology has grown, the Indian government has also set its sights on going green with EVs. To meet the country sustainability goals, the Central Ministry of India announced a transition from new sales of petrol and diesel vehicles to 100 plug in electric vehicles EV by 2030. To aid the transition from ICE to EVs, more than 20 states in India have put an EV policy or at least, have a draft in place already. The proposed battery swapping policy, announced in Budget 2022 23, allows for greater flexibility to charge of these batteries. Battery Swapping refers to a mechanism that involves exchanging discharged batteries for charged ones. The implementation of this policy is expected.

BSF-HCM-TEST-Dated-2026-07-16-Test NO.-27430

If they offer concrete, real-world benefits. This differentiation is crucial to ensuring that while basic scientific principles remain in the public domain, truly innovative applications of AI are given the legal protection they deserve. It also states that there ought to be suitable guidelines from which patent office examiners may be educated for the proper examination of inventions concerning AI. Presently, Indian patent office examiners have no specific guidelines on how to evaluate innovations developed through AI, more so in terms of inventive step and non-obviousness. This calls for the Controller General of Patents, Designs, and Trademarks to formulate specific guidelines under which patents for inventions related to AI are to be discussed. These inventions should not only deserve scrutiny on technical grounds but also with respect to their industrial relevance, rather than being rejected as just algorithms. In addition, the definition of invention under the Indian Patent Act may be amended in light of the context that AI shall be treated as a co-inventor or contributor to the invention in as much as an invention is workable in practical application. Amending Section would have several implications for the overall innovation ecosystem in India. This is because it would ensure much-needed protection to AI-driven technologies particularly those which are high-impact sectors like healthcare, manufacturing, and agriculture and would also bring about significant economic growth as it encourages innovation and attracts investment in AI-related industries. Stronger patent protections would empower Indian firms and start-ups to seriously commit to AI-related research and development by knowing that their innovations are protected by law. This would finally get India at par with patent practices worldwide, ensuring that Indian inventions are competitive and recognizable globally while keeping India firmly at the top of the world technology scorecard. The future of India technology and innovation sectors depends on the country ability to modernise its intellectual property laws in response to the challenges posed by AI. Imagine a different 2024. Nitish Kumar, nominated as INDIA PM face, leads the alliance to victory against Mode-led BJP in the Lok Sabha polls. TDP and BJD join this alliance after polls in the name of secularism and pluralism. Massive anti-incumbency spurs Congress to a landslide win in Haryana. Split Shiv Sena and NCP factions in Maharashtra merge, forming a formidable anti-BJP coalition. These tensile moments and movements of the human body and anything else in life that the ancients knew how to capture. We are reminded of the great Augusta Rodin who said that nature is an inexhaustible source for those who drink from it, that the artist has no other task here than to observe it and to fill himself with all that it deposits in him. On December 8, the fall of Syria added another turmoil to the recent massive turmoil in the Middle East which started on October 7, 2023, when Hamas attacked and captured most of Gaza. This attack was followed by Hezbollah strikes in Northern Israel. Israelis retaliated forcefully against these attacks. When things were cooling down there, the Islamic rebellion forces known as intensified their attacks in Syria and in eleven days, most of Syria, including the capital, was captured by the HTS. Syrian Dictator Bashir-al-Assad, with his English Wife, escaped and went to Russia. The painful eve

BSF-HCM-TEST-Dated-2026-07-16-Test NO.-27433

Iraq President Sadam Hussein was captured in 2003 and executed in 2006. This attack was the beginning of the worst turmoil in the Middle East which resulted in civil wars in Iraq, Lebanon and Syria causing deaths and exodus of millions. This turmoil is continuing to cause the deaths, homelessness, and sufferings of millions. A UN report found that the assertions of WMD were baseless. When no WMD was found in Iraq, the US government also indirectly acknowledged that the WMD information was incorrect. In 1970, Hafez-al Asad took over Syria and in June 2000, Bashir-al Asad succeeded his father. In March 2011, several protests were held against the authoritarian rule of Mr. Asad which was brutally crushed by him. As a result, rebellion actions against Mr. Assad started with the support of Turkey, USA, and Russia. Then Islamic State of Iraq and Syria ISIS became active and started its own action and captured parts of Syria. In 2015, Russia, Hezbollah and Iran started supporting the Syrian Government. As Russia got entangled with Ukraine and Iran with Gaza and Lebanon, they stopped the active military support of Assad. When Hayat-Tahrir-al- Sham HTS renewed its attacks about 11 days before capturing Damascus, Mr. Assad requested Russia and Iran to send their forces to Syria which they refused as they were already exhausted by the wars in Gaza, Lebanon and Ukraine. After the fall of Syria, for no good reason, Israel and the USA bombed Syria which caused unnecessary adverse feelings in the HTS. Instead of such irresponsible acts, they should work with HTS in bringing peace in Syria. The Fall of Syria came as a surprise and the fast advances by HTS lead by Abu Mohammed-al Jolani. He was born in an upscale district of Damascus in 1982. His original name is Ahmad-al-Sharari and he was a good student. After September 11, 2001terrorist attacks in the USA, he joined ISIS, an affiliate of Al Qaeda in Syria. In 2016, he split with Al Qaeda and formed HTS. Since then, he has evolved in his style. In May 2015, he had declared that he had no intention of fighting against the West. He also stopped wearing a Turban and started wearing Western style military fatigues. After capturing Damascus, instead of threatening the Syrian government authorities, he assured the safety of all including Christians and Alawite, a minority clan to which Bashir-Al-Assad belonged. The Syrian PM did not leave the country and started the process of handing over the government to Mr. Jolani. HTS also released all prisoners who were suffering in the Syrian jails. Mr Jolani allowed the government employees including Judges to continue working. For his first public interview, he selected CNN and not any Arabic news media which was held at the Ummayed Mosque built 1300 years back. In his interview, he assured all that his government will be moderate on both the domestic and foreign fronts. It has been reported that the negotiations with Kurds have been successfully completed. There are also reports about the back-channel discussions between the HTS and the USA. This may be the first armed revolution when there are no threats, arrests and any repressive action. Let us hope that the fall of Asad in Syria and current lull in Gaza and ceasefire in Lebanon will eventually lead to a lasting peace in the Middle East. The Western countries and USA used the Ukraine war to weaken Russia without getting directly involved with the war. Iran suffered politically and militari

BSF-HCM-TEST-Dated-2026-07-16-Test NO.-27434

To speed up the adoption of EVs across the country and reduce the upfront cost of purchasing the vehicle. This push for EVs is having a cascading effect across all sectors, including the Indian e waste sector especially the need for recycling of spent Li ion batteries. More EV More Li ion Since India has added electric mobility to the new FAME II Faster Adoption and Manufacturing of Hybrid and Electric Vehicles Phase II scheme, the EV market is set to grow at a much faster pace than before. As part of India thrust towards reducing green gas emissions, the country has also set a target of creating a 175 gig watt hour of power solely from renewable forms of energy by 2022 and it has been proposed that 100 electric vehicles by 2030. A significant part of the use of renewable forms of energy will be utilized by the rapid adoption of Electric Vehicles. According to the report by the Council on Energy, Environment and Water, the proposed 30 increase of the share of electric vehicles in the overall vehicular sales in India by 2030 will also help the country save more than Rest 1,07,566 core in crude oil import costs. However, this fast adoption of EVs will also result in an unprecedented increase in the demand for lithium ion batteries. From simple two wheelers to large transport vehicles and buses, all electric vehicles run on lithium ion batteries. The size and capacity of the lithium ion batteries depend on the type, geography, application, and engineered range of the EV. The spent lithium ion batteries contain a lot of hazardous and critical materials and will need to be recycled to ensure reuse, sustainability, and environmental safety. To combat global warming, environmental consciousness on a global scale has led to restrictions on pollution and emissions of greenhouse gases, as well as goals for the production of renewable energy. Currently, most of the push has been towards importing these powerhouses from China because India does not have the lithium or cobalt reserves that are required for manufacturing Li ion batteries in such large quantities. Without our initiative to boost localization, we will be shifting our dependency on Saudi Arabia for oil imports with China for Lithium Ion Battery material imports. The creation of more energy efficient electrical products has reduced energy costs. It is essential to maintain ESG parameters while developing more efficient technologies to reduce carbon footprint. ESG encompasses not only reporting, but also the ability to create plans that track, monitor, and can be adjusted to achieve sustainability objectives. Disposal Challenges and Opportunities The Bureau of Indian Standards has recently announced the updated performance standards for electric vehicles. The standards are, in particular, expected to improve the quality of batteries available in the Indian market. Unlike most other parts used in an EV, the batteries have a shelf life, little reuse potential, and a possibly hazardous recycling process. A four wheel EV battery will require recharging every 250kms Depending.

BSF-HCM-TEST-Dated-2026-07-16-Test NO.-27435

On how much it is used and charged, a typical EV battery will have to be replaced every 5 7 years. With so many lithium ion cells being added to e waste, the question of how to dispose of them becomes essential. Unless managed responsibly used EV batteries will be left in landfills this way of disposal would pose a serious threat to lives and ecosystems. Some end of life batteries can be used in second life applications. However, these batteries need to be handled correctly which presents economical, technical as well as regulatory problems. The third and most ecofriendly way to dispose of li ion batteries is by recycling. Setting up a recycling plant is extremely critical and will help reduce the import of batteries and battery materials from China. Recycling lithium ion batteries allow for environmentally and safe extraction of the very critical, rate and expensive materials that make these up batteries and including lithium, cobalt, graphite, and other rare earth minerals. Not only are these ingredients difficult to come by because of the localized nature of their reserves, but they are also difficult to transport and create raw material supply chain management issues. The country has the know how to manufacture the cells as well as an abundance of natural materials such as aluminum, copper, electrolytes, and nickel, in addition to lithium. India can take the lead in the production of cathode and anode materials which is the next step after the extraction of pure battery materials, thereby boosting the economy and creating thousands of jobs. Strategically, many nations would welcome the end of China monopoly in this sector, and some would even pay a premium. This would be a win situation for India. India Li Ion Battery Recycling Potential the Government of India is extremely focused on EVs for a couple of reasons. Electric vehicles are much better from an environmental standpoint as compared to IC engines. Considering that every major city in the country is facing huge amounts of pollution, transitioning to electric vehicles is an environmentally viable solution. Furthermore, transitioning to EVs presents a way for India to reduce and control its Fore deficit. Currently, India runs a huge Fore deficit because of oil imports. However, simply making the move to EVs is not enough to reduce dependence on other countries moving away from imported oil from Saudi Arabia and moving towards importing lithium ion batteries from China only replaces one dependence with another. Recycling the batteries would help India gain precious ingredients like cobalt and lithium, which it does not have natural reserves of. By channelizing attention towards better in country lithium ion battery recycling, the sector can play a major role in keeping battery imports to a minimum, extracting valuable ingredients from old batteries, and facilitating the electrification of the country. To do this, the sector has to be incentivized and has to attract. Globally, more than $2 billion have been invested over the last 12 months. India is the leader in.

BSF-HCM-TEST-Dated-2026-07-16-Test NO.-27436

The tech for LIB recycling globally we should be able to scale up and make India the recycling hub for the world for LIB. India has always been a hotbed of innovation, and we do have companies that have an efficiency rate of 98. When the sector is capable of recycling and extracting core ingredients from battery waste, India will no longer have to depend on China for batteries. A formalized sector will ensure that a self sufficient Atmanirbhar Bharat becomes a reality. Today sales technologies have adapted themselves to meet the needs of B2B relationship selling in the post pandemic world. The customer relationship management systems CRMs were initially developed to make selling easier. But CRM systems have fallen short of the expectations of sales professionals mainly for two reasons to They lack accurate data, and 2. They are too time consuming to keep them up to date manually. To overcome the issues of traditional or legacy CRM systems, sales organizations need to understand how salespeople work. In addition, your CRM needs to help sales teams maintain data with minimal effort and allow sales professionals to get actionable insights. Accurate, timely data is the cornerstone of better sales performance. New technology for B2B selling The sales enablement tools are designed explicitly for salespeople to fill the gap created by CRMs. These tools extract and gather relevant information through automation and machine learning which saves the sales team from performing manual data entry. Automating mundane data entry tasks will, unsurprisingly, boost CRM usage. As a result, CRMs and sales enablement tools can become the key to insights into business health for sales leaders and company executives with widespread use. These technologies improve the overall CRM experience for sales folks in various ways. Firstly they provide relevant information in context. This kind of tech also helps improve workflows and processes. For example, introducing algorithms that add historical performance patterns and external factors to influence deals improves accurate pipeline planning. What are these sales tech tools used for In a broad sense, sales enablement tools provide: Sales engagement, sales intelligence, sales optimization Relationship intelligence Account intelligence, revenue acceleration, and revenue intelligence. There are three prominent use cases of these tech tools. Automated data capture All sales enablement tools include automated data capture as a foundation. This involves AI and ML to pull data from email and calendars and uses it to populate and update CRM systems automatically. The information extracted includes contact details and activity timelines. In addition, most tools integrate with existing CRM systems. This allows them to enrich CRMs with contextual and accurate data. Recommendations and action priorities The second important use case is prioritizing work and facilitating actions. Most sales enablement tools offer a workflow focused interface that presents activities and priorities ordered by time and importance. Automated email replies and call cadences are a standard capability used widely by inside sales teams to stay on top of regular communications and to manage leads. Analytics and data assessment Companies.

Spl-BSF-HCM-TEST-Dated-2026-07-16-Test NO.-27437

We should have a broad mind. We should look on all with the same eye. We should have a spirit of tolerance. We should see that others live peacefully. We should show due regard for all in our cities and villages. We should not get angry with anyone having a different religion or caste. We are all one. We jointly form mankind. We are all brothers. 'Live and let Live' was the ideal pursued by great men of all ages. There is a mistaken, but widely believed opinion which holds that citizens of continental Europe are cold, unfriendly and critical of visitors to their land. Supposed, they offer no pleasant remarks or actions unless they can gain something by doing so. But the wonderful experiences of many visitors have proved that the native of foreign shores is charming, helpful and sometimes more hospitable to a visitor than the visitors own country men would be if the situations were reversed. Travelling in a second-class compartment on any continental train proves that chivalry and hospitability can be found. For example, take an ordinarily journey from Venice to Rome a journey that takes some eight or ten hours, depending on the feelings of the railroad officials. In that time any visitor is welcomed, given helpful information, and provided with conversation. At the beginning of the journey, the compartment chosen may be unoccupied but for the visitor. As the train halts in the many small villages, however, other passengers enter the compartment and occupy the empty places. Some are returning from spending a few days with relatives, while others have just finished a longer vacation and are returning to their various professions. But all are usually cheerful and talkative. They always seem to be hungry, for they bring giant sandwiches, loaves of bread, bottles of wine and other items of food or drink to ensure a satisfactory journey. So common is this arrangement that many trains have no eating facilities for the starving visitor. This unpleasant situation is alleviated by the generosity of the natives, who will usually give the visitor some of their own dinner to help him satisfy his hunger. Sometimes, of course, this may not happen; but the tourist can always purchase something from the gaily coloured pushcarts that rush to the windows of the train as it halts at each village. After their appetites have been consoled, most of the natives turn to the amusement of interesting conversation. For a time they consider the journey itself, their various families, the pleasure of vacations, the political situation and any subject that comes to their minds. Happiness! is that climax or bathos or cruel irony? Happiness is the end? Yes, happiness is the end which indeed we all reach after; for what more can we wish than that all should be well with us. Happiness cannot escape us, when we find it. Bureaucratic norms. That's because US Constitution advances liberty, ours constrains it It takes a certain kind of mindset for the reformer who built institutions, yet never sought office Sardar Teja Singh Samundri Manjinder Singh Sirsa is minister of industries, environment, food & supplies, forest & wildlife with the Government of Delhi. A hundred years ago, on 17 July 1926, a Sikh reformer died inside a British prison in Lahore, having refused to purchase his freedom with a single signature. He declined high office throughout his life, believing that movements decay when individuals rise above institutions. And yet, the building that houses the headqua

Spl-BSF-HCM-TEST-Dated-2026-07-16-Test NO.-27440

Teja Singh Samundri Hall. Sardar Teja Singh Samundri was born on 20 February 1882 at Rai Ka Burj in Tarn Taran tehsil of Amritsar district, to Sardar Deva Singh and Nand Kaur, a Jat Sikh family of modest means. When new agricultural land was allotted to his father in the canal colonies of the Sandal Bar tract, the family shifted to the town of Samundri in the Lyallpur district of undivided Punjab now in Pakistan and it was from this new home that the toponym Samundri became permanently attached to his name. His formal schooling never went beyond the primary stage, though he was deeply read in Sikh scripture and history. As a young man he enlisted in the British Indian Army, rising to the rank of Dafadar in the 22nd Cavalry, but army life did not hold him; after about three and a half years he returned home to devote himself to the religious and social awakening of the Panth. Joining the Chief Khalsa Diwan, he founded the Khalsa Diwan Samundri and later wove several such local societies into the larger Khalsa Diwan Bar. Convinced that reform began with education, he established schools a Khalsa Middle School in his own village and the Sri Guru Gobind Singh Khalsa High School at Sarhali in Amritsar district and, well ahead of his time, championed learning for both the young and for women. He also helped found the Sikh daily newspaper Akali, giving the reform movement a powerful voice in print. His belief in equality was lived, not merely spoken: in the villages around Amritsar and Tarn Taran he broke caste barriers by inviting Dalits to draw water from common wells and to serve beside him in public. His association with Delhi's Gurdwara Rakab Ganj Sahib runs deep. When the colonial government moved to demolish a boundary wall of the shrine, Samundri organised public meetings in protest and was among the roughly one hundred Sikhs who volunteered to lay down their lives to see the wall restored. It is fitting, therefore, that his centenary should be observed at the very same Gurdwara Rakab Ganj Sahib. The Nankana Sahib tragedy of 1921 drew him fully into the Gurdwara Reform Movement, and he was named to the committee formed to manage Nankana Sahib thereafter. When the Shiromani Gurdwara Parbandhak Committee was constituted in November 1920 to wrest control of the gurdwaras from British-backed mahants, Samundri was among its founding members, later serving as its Vice-President; he was also Vice-President of the Shiromani Akali Dal and, in 1923, a member of the All-India Congress Committee. Through the Chabian da Morcha over the keys of the Golden Temple treasury, the Guru Ka Bagh agitation, and the Jaito Morcha in support of the deposed Maharaja of Nabha, he emerged as one of the movement's steadiest organising minds. His sacrifice was material as well as moral. When the SGPC needed funds to pursue a legal appeal to the Privy Council and could raise only half the sum, Samundri mortgaged roughly fifty acres of his own land to provide the remaining amount; after the case was ultimately won, his family declined to accept reimbursement. In 1923 he was honoured as one of the Panj Piare chosen to lead the kar sewa of the sacred sarovar at the Golden Temple, the first such service in over eighty years. Arrested in October 1923 and tried on charges of sedition, he was moved from the Amritsar jail to the Lahore Fort and finally to the Lahore Central Jail. Even after the Sikh Gurdwaras Act was passed in July 1925 a hard-won legislative

Have a higher volume of sales data. This data is then analyzed to provide a clearer picture of business opportunities. This analysis involves opportunity scoring, pipeline analysis, and better coaching. Opportunity scoring: Opportunity scoring is to predict the likelihood of closing the deal and how quickly based on available historical data and business rules. Pipeline analysis: Pipeline analysis is pipeline forecasts to predict the likelihood of various outcomes with key reporting timelines. Better coaching: Sales enablement tools offer insights that help managers and leaders coach salespeople by looking at the behavioral patterns of the successful salespeople in the company. The market for these new sales enablement techs is expanding quickly. The more salespeople use these new sales enablement techs, the better the quality of data and insights they will have at their disposal. This will undoubtedly accelerate the revenue with more won mandates. Employing about 50 of the country population, India agriculture sector is one of the largest in the world, making the nation an agrarian economy. However, those engaged in agriculture are often faced with multiple challenges, meagre incomes, low yield, and a lack of access to the market. This may be because of the outdated tools and methods of production used by those in the sector. Another contributor to low output may be the unpredictability associated with climate change and global warming. The agriculture space is largely unorganised and is thus vulnerable to exploitation and neglect. The need of the hour is to help farmers manage information better to increase their income and yield, streamline the process of crop cultivation and sale, and bring about consolidation and standardisation. Over the last few years, Agri tech companies have initiated a new movement in the field. They are helping farmers imbibe new methods and technological innovations to enable them to increase their productivity and sustainably utilise existing resources. Recently, digitisation and technologies like Iota, Big data, and Artificial Intelligence are also being leveraged to increase yield. The following are some of the ways in which technological advancement is helping the agricultural industry to grow. The use of cameras and drones Cameras and drones help counter errors due to human observation. Monitoring of crops, utilisation of advanced sensors, analysis of soil quality, and digital imaging are some of the ways drones help farmers track and manage crop yield. Additionally, drones equipped with GPS can be used for spraying crops, management of livestock, and 3D mapping. Big Data Decision making is an integral part of farming, and Big Data plays an instrumental role in this regard. Data related to soil quality can help farmers decide which crop to plant and the kind and amount of fertilisers to use. Information about expected weather conditions, market trends, seed quality and requirements can all help in making the process efficient. Artificial Intelligence The avenues of application of AI to the field of agriculture are being widely researched. It possible that in the coming years, agricultural equipment will come equipped with AI technology and will be.

BSF-HCM-TEST-Dated-2026-07-17-Test NO.-27442

Renunciation, without grabbing tendencies. Such an economy will have to have ambience, markets, technologies and institutions to promote harmonious growth with efficiency and equity. The Aksha sukta of Rg Veda 10.34.13 even prescribes not to waste time playing with the dice, but to pursue agriculture and build wealth. Gender Equity in Rg Veda In the Rigveda 10225.6 the gender equity is proclaimed as the rights of daughter woman in the property of the family are duly mentioned. Apart from her right to choose the husband, she is empowered with several entitlements such as right to rule the home righteously with responsibility, dutifully including protecting the family from enemies after getting expertise in archery. Garuda Purana The Garuda Purana 35.51 prescribes sarve bhavantu sukhinaḥ sarve santu as economic underpinnings of Sanatana dharma highlight that every creature be happy let all be without disease or illness, let all see, talk, do what is auspicious let there be no iota of unhappiness dukha in any body. It the aim of economics in Sanatana Dharma is to fulfill all these four conditions in development. Thus, there are similarities in economic thoughts of Adam Smith Self-interest and the Vasudaiva Kutumbakam of the Vedas, which all living beings on the earth belong to one family, through the broad vision of ubiquitous development of all in a society. In anticipation of Prime Minister Narendra Modi recent official visit to the US, followed by one to France as chief guest for the Bastille Day Parade, aspects relating to cooperation in aeronautics and space have been subjects of considerable debate and discussion in the media. Of the two, the defence and civil aeronautics markets are not only fiercely competitive but due to their technological, security and industrial impacts, envelop a much wider strategic, economic and geopolitical canvas. Space, on the other hand, is the preserve of just a handful of countries, among whom India, due to the foresight of its successive political and scientific leadership, finds a rightful place. Indeed, an unintended but significant message conveyed by ISRO to the international community was when, during PM Modi visit to France, ISRO successfully launched the Chandrayaan-3 mission with the objective of a soft landing on the moon. A successful soft landing would put India alongside the US, Russia and China as the only countries to have accomplished this. Since both of these fields are at the forefront of science, technology and innovation, it is not surprising that they should form an integral part of discussions involving strategic partnerships and cooperation among the leaders of our countries. Reflecting this reality and our own achievements, the ground covered at the conclusion of visits to both countries with reference to space programmes indicates an element of partnership and equality and not one of a giver-receiver relationship, as unfortunately is the case with aeronautics, where we remain far below our potential. In aeronautics, we still remain at the mercy of technology and design from overseas in spite of India having made an earlier beginning in aeronautics as compared to space when, in the early sixties, we joined the ranks of a few select countries to have designed our own trans-sonic fighter aircraft. Prior to the PM visit to France, the Defence Acquisition Council had approved the Navy procurement of 26 Rafale N aircraft, sending a positive message to the host country. There was cons

The eventual champion will need are two days of excellence. Anything could happen, as South Africa showed by defeating Australia in the last league encounter. But the force is with India and a final at lord on July 14 beckons. The nudge theory of economist Richard taller, mentioned extensively in the economic survey 2018 19 presented in parliament on Thursday, has been put to use by the finance minister to push forward two of this government pet themes increasing digitalization of money and promoting electric mobility. On the first, there will now be a 2% tax deducted at source when withdrawals from bank accounts exceed 1 core in a year. This is a commendable measure, but it could lead to genuine problems for businesses such as construction and real estate that are forced to deal in cash for wage payments. Of course, the tads can be set off against their overall tax liability. The second, and more interesting nudge, is towards electric vehicles where those taking loans buy one will get a tax deduction of up to 1.5 lakh on the interest paid by them, but the fact. The maiden budget of normal sitharaman has many interesting features, but it does not have a defining central theme. There were expectations of a big growth push through either tax cuts or large expenditure programmers even if it meant a rise in the fiscal deficit. But the finance minister has chosen to be fiscally conservative, opting to play the long term game, though it could lead to pain in the short term. The only indulgence she has permitted herself is a big 70,000 core capital infusion in banks that will, it is hoped, spur lending to growth sectors in the economy. Also, quite notably, the budget has sought to address the problems that have plagued the non-banking finance companies space over the last few months and the consequent credit freeze and loss of confidence in the market. Ms. Sitharaman has comprehensively addressed the important issues of liquidity, solvency and poor governance in the Nifco sector. She has made available a liquidity window of 1 lakh core to public sector banks through the reserve bank of India to buy pooled assets of nbfcs and offered a onetime credit guarantee for first loss of up to 10%. To enable better supervision of the sector, housing finance companies, which have been the main villains of the piece, will come under the rib regulatory ambit. A long standing demand of nbfcs for equitable treatment with banks in the matter of taxing interest receivable on bad loans has been conceded. They will not need to maintain a debenture redemption reserve on public placements that was leading to locking up of funds, which is their raw material for business. These are important reform measures for nbfcs. More interesting is the move towards reviving development financial institutions. The big problem faced by Nifco financing infrastructure is the lack of long term funding sources to match their lending tenure this.

BSF-HCM-TEST-Dated-2026-07-17-Test NO.-27444

Pushed them into borrowing short term funds to lend to long term projects, leading to asset liability mismatches. The proposal to set up a committee to study the issue, including the experience with development finance institutions, is welcome. There are several reform measures that have been announced, but the most interesting is the reiteration of the government commitment to strategic disinvestment and the declaration that it is willing to allow its stake to fall below 51% in non-financial psus. Proposal can heave a sigh of relief as the angel tax is practically off the table. The government seems to be moving towards a single identity card for citizens in the form of aadhaar, which will now be interchangeable with the pan card. Taxpayers who do not have a pan card can file returns quoting their aadhaar number, which effectively can be a substitute for pan in all transactions. Another reform measure is the introduction of faceless e assessment of tax proposal taken up for scrutiny. This will eliminate the scope for rent seeking by officers as there will be no interface between assessee and official. In fact, the assessee will not even know the identity of the officer proposal the return. This is an absolutely welcome measure but needs to be closely watched for implementation. The corporate sector has got a minor sop with the turnover limit for the 25% tax bracket being raised to 400 core per annum from 250 core. The expectation was that this would be extended to all companies irrespective of size. It appears that the government wants to wait for the proposal the direct taxes code, which is being examined by a committee. Real estate companies may have reason to cheer as the generous tax concession. After introducing a new standard framework for credit rating agencies last month, the securities and exchange board of India came up with more stringent regulations to govern the management of mutual funds. The mutual fund industry came under its scrutiny after some mutual funds in the last few months had to postpone redemption of their fixed maturity plans (amps). Heft mutual fund and Kodak mutual fund came to grief and had to roll over or proportionately reduce redemption of their amps in April after some easel group companies failed to redeem their non-convertible debentures where the funds had invested. According to the new semi regulations, liquid mutual fund schemes will have to invest at least 20% of their funds in liquid assets like government securities. They will be barred from investing more than 20% of their total assets in any one sector; the current cap is 25%. When it comes to sectors like housing finance, the limit is down to 10%. These measures are aimed to prevent situations such as the one being witnessed now. While the mandated investment in government securities will ensure a modicum of liquidity, the reduction in sectorial concentration will discipline funds and force them to diversify their risks. Some mutual funds entered into standstill.

BSF-HCM-TEST-Dated-2026-07-17-Test NO.-27445

Aircraft could be either due to the nature of the visit or, one suspect, to avoid unnecessary controversy domestically. Keen observers of space and aeronautics in India are acutely aware that India has the organisational, scientific and technological capacity to march alongside advanced nations in both fields if it demonstrates the political will to do so. While it does so in space activities, it needs to catch up in aeronautics by doing what many experts have been proposing for decades. Proposals that continue to fall on deaf ears. In 1970, Vikram Sarabhai proposed to the Administrative Reforms Commission an organisational model with a ministry of advanced technologies comprising separate commissions for atomic energy, space, earth sciences and aeronautics. It speaks for his foresight that in all the fields except aeronautics, the government followed the suggestion and the nation is at par internationally. Aeronautics regrettably remains confined to the folds of bureaucratic governance, resulting in continuing dependence on imports. It was to address this weakness that the Aeronautical Society of India had, in 1994, under Abdul Kalam presidency, proposed a National Aeronautics Policy, where the Preamble stated: Aviation is one of the most significant technological influences of modern time and empowers the nation with strength for international partnership. It is a major tool for economic development and has a significant role in national security and international relations. Further, it was noted that industrial aeronautics was an area where many commonalities existed between the rapidly expanding civil aviation sector and military aviation and, from a defence-industrial policy point of view, could contribute to economies of scale and hence an international footprint. This proposal lost its way in our bureaucratic jungle and an updated version was prepared and submitted by the As in 2004, in the preparation of which this writer was actively involved along with a team of experts. The proposal was formulated after in-depth consultation among all stakeholders, both civil and military. If, as a follow-up to PM Modi recent visits to the US and France, there is awareness at the highest political levels of our strengths and weaknesses in the fields of space and aeronautics, respectively, and suitable actions follow, the visits would have served as a useful catalyst in furthering the cause of Indian aeronautics within the larger vision of atmanirbharta. I can say with my hand on the heart that Bennett University is today a campus where entrepreneurship is in the air, I had mailed to Dr. Prabhu Kumar Aggarwal, the Vice-Chancellor; obviously referring to the entrepreneurial culture we have successfully built. Though I made this lofty claim back in September 2021, I had little to show for it other than a couple of dozen student start-ups and I honestly don consider the number of start-ups as evidence of entrepreneurial culture. While I could myself sense entrepreneurship in the Bennett air, I could yet make the world smell the fragrance. But by the World Entrepreneurs Day today, things have thankfully changed for the better. Now, two years since my lofty claim, evidence has suddenly started popping-up from the best possible source- the students! Three back-to-back public communications from my dear students Reeya Sharma, Gunika Dhingra, and Saksham Misra, have led to a virtual triangulation. For the uninitiated, riangulation refers to the use of

BSF-HCM-TEST-Dated-2026-07-17-Test NO.-27449

Able to allow farmers to decide on the seed densities and fertiliser requirements on different patches of land. It can also help store data related to production and sale and make predictions based on this. The use of AI is likely to improve and regulate the financial sector linked with agriculture and enable local banks and institutions to evaluate credit scores before giving loans, thus reducing credit gaps. The use of Sensors and GPS technology The use of sensors and GPS can help farmers analyse their crops and make decisions at a micro level to reduce environmental damage and conserve resources. Tractors are now coming equipped with GPs technology so that they can align themselves automatically to the best locations, leading to better implantation of seeds and reduction of wastage. Using sensors, farmers can also create a digital fertility map of their lands, which can then be used to guide variable rate technology fertiliser applicators. These sensors can also evaluate the moisture content and temperature of the soil. This data can be used to determine irrigation requirements. Block chain Technology Agriculture can be broken down into multiple small processes, and each of these processes has its own considerations. With Block chain technology, the data relating to these progressions can be consolidated, the efficiency of tracking can be increased, and traceability and accountability can be enhanced. Block chain technology helps structure the data and adds meta information to it. Consumers can also trace the origin of their food, and illegal operations can be curbed. It helps minimize the involvement of middle persons and thus reduces marketing and sales costs. Bottom line While agriculture is the backbone of the Indian economy, our farmers require assistance. The gap between the use of technology in agriculture and technological advancements needs to be bridged. This has successfully been done by new age Agri preneurs these days, enabling farmers to take on the journey of being entrepreneurs, effectively utilising the available resources, and reap the full benefits of their hard work. Aristech is successful in providing hand holding support to the farmers and thereby, increasing productivity and output level. With new technological advancements, we can look forward to a more advanced and simplified agriculture in the upcoming future. Personalization has taken over the reins in redefining marketing. What better than understanding the customer preference and providing precise products services catering to their needs. Let understand the power play of machine learning and AI in the current times. In modern day personalization has attained the peak position in driving success for any business marketed product or service. The machinery of traditional media started fading about a decade ago as more smartphones started making inroads in the market with cost effective internet services and all that on the backdrop of the rising disposable income of individuals in India. Cash intensive and lacking a results oriented approach has led the traditional marketing technique to take the back seat. Driven by the demographic approach, predominantly through traditional marketing techniques typically.

BSF-HCM-TEST-Dated-2026-07-17-Test NO.-27450

Amidst the roiling conflict in Gaza following the dramatic terror attack by Hamas against Israel in October last year, a spillover into Lebanon targeting Hezbollah, the Houthis setting the Red Sea ablaze, and Iran and Israel exchanging ballistic missile fire pushing the entire region to the precipice of war, Syria was not on many people radars. This was until President Bashar al-Assad 24-year rule over Damascus collapsed within hours this month. The Syrian civil war was both, in hibernation, and frozen in a status quo. Since 2011, when the uprising in the Arab country began by way of the Arab Spring, a popular movement which swept across the Middle East region, multiple battles broke out involving local sectarian and ethnic fault lines, regional powers, and international influence. Most prominent was the rapid rise of the so-called Islamic State ISIS which forced foes to become temporary allies, moving to defeat the terror group. Within the Syrian conflict, a bouquet of militias consolidated power. These include Hayat Tahrir al-Sham HTS, led by Islamist leader Abu Mohammed Al Jawlani who previously had affiliations with both al-Qaida and ISIS, the western-backed and Kurd-led Syrian Democratic Forces SDF, and Turkey-backed Syrian National Army. Underneath these three, a gambit of other smaller militias festered. When HTS took over multiple cities in the past few weeks, many of the governance institutions it built moved in. In the meantime, Jawlani has also started to re-brand himself away from his jihadist past. He is pushing the civilian arm of the HTS, the Salvation Government, to work with the now leaderless govt of the country into some sort of transition of power. Neighbouring Arab states are showing openness to engage. Jolani now uses his birth name, Ahmed al-Sharaa, and appears in the western press without any Isla mist flags, balaclavas, or Kalashnikovs. Amidst these new realities in Syria, a more fundamental question remains, how did the House of Assad fall apart suddenly between a dawn and a dusk? Lack of concrete answers merits deeper inspection, specifically when both Russia and Iran had propped up Assad rule throughout the conflict. To begin with, what happened in Syria in part resonates with what happened in Afghanistan in 2021. The Syrian army, much like the Afghan armed forces back then, simply did not show up. It is further possible that Assad immediate advisers were involved in heavy gatekeeping of information, lulling the president into a false sense of security. The military either capitulated knowing that Assad himself did not stand a chance, were completely demoralised and ill-prepared, or as per some reports, just joined the advancing HTS itself. Both Moscow and Tehran watched these events in shock. However, the intricacies of Assad fall bring to the fore deeper questions to the forefront as far as global security is concerned. If HTS, through a more palatable and front-facing version of a civilian administration, does become the core political actor, has one more country after Afghanistan been given over to Islamist militants? Is there any international cohesion to take on countering terrorism as the era of the US-led war on terror becomes a footnote in history? Or is management of non-state militant actors rather than defeating them becoming an acceptable way forward for many? The fallout of the Syrian crisis could be global. For India, ties with Assad were complimentary as his govt became one of the few from the

Already operates from a position of strength. In April, the group conducted a terror attack in Russia killing nearly 140 Its online propaganda outlets target India regularly. Giving political space to such actors can make theatres like Kashmir unnecessarily complicated. PDP chief Mehbooba Mufti, for example, has previously questioned that if India can open channels of talks with the Taliban, then why can it not do the same with Pakistan? Syria as of today is a Venn diagram of vested interests. US is backing SDF, Turkey is bombing Kurdish groups, Israel is conducting its own air raids taking out Assad military infrastructure, so it does not fall in the hands of militants while backing Syria Druze community, the country third largest religious minority. Iran and Russia are in wait and watch mode. While the people of Syria celebrate Assad fall and freedom from a police state, the country future remains mired in uncertainty with a quest for liberty, civil war, economic decay, regional interests and foreign influence, all becoming parallel realities with global implications. It interesting that I have now come to India for 45 years, and I am still very much in love with it. I am very happy to keep on discovering different places. I am still fascinated, surprised, enthusiastic about a lot of things that either I have seen already or am yet to see. The South I know pretty well. I have been to Hampi, Bengaluru, Kerala, Mahabalipuram, and Chennai. I want to visit Andaman & Nicobar. I think India brings to every person a different thing. The first time you visit a country, it is like I did it. You tick the box. In India, you never tick the box. India infuses into you, and it brings you a lot. India in general is going to bring you more than you bring to India. As for inspiration, I am not someone who will come to India and then suddenly everything is going to be Indian around me or India inspired. India comes into my designs, but it not programmed. Can you say India has a specific sensibility? South and North are very, very different. Punjab is distinct from Kerala. So, already, you kind of have a divide. It just like when people ask me, Who is the woman Louboutin designs for? There are so many different women; it very difficult to shrink them into one person. It the same thing for India. I would say there is one Indian mentality. The only thing that I would say is common everywhere is a taste for gold. I watched her movies, that why. Also, because she had this long career in which she had different moments. She stopped to have a family and then went back. And I know many actors, mostly from Hollywood, who went into movies as children. It is easy to go from a child actor to a big movie star. Sridevi made that transition without becoming toxic. She was also a great human being. I do not necessarily like to meet people who I actually worship because one is often disappointed. I had, for instance, a passion for a writer who I ended up meeting. And I was very disappointed. That why I don like to meet people whose work I love or who I respect. But sometimes it happens that people are very close to what I was expecting. That makes me so happy. Elizabeth Taylor was like that. She was bigger than life. I had a great relationship with her. She was incredibly fun and full of life. And Sridevi was exactly what I was expecting her to be. She was a very authentic person. I will only say that there a moral to that red sole that when you stay true to your desig

BSF-HCM-TEST-Dated-2026-07-17-Test NO.-27452

There could be sebi unintended consequences to the regulator actions which need watching. One of the new sebc regulations introduced by sebi is to increase the exit load on short-term sebi investments in liquid to discourage sudden demands for redemption. This could possibly hinder fund flow into the bond market, which in india is already quite undeveloped when compared to the rest of the world. While sebi is doing a commendable job in disciplining the markets and intermediaries, the larger question is sebi whether sebc the regulator can really protect investors beyond a certain point. Market investments involve risk, and investors seeking high returns may in fact sebi be willing to assume the increased risk that comes with such investment. That said, what the regulator is probably more sebc concerned about is the ripple effect of defaults and sebi roll-overs on the system. Investor confidence sebi can be shaken by defaults and that will have consequences for the economy. Viewed from this perspective, the regulator latest rules should be welcomed. The high court reasoning may not sebi convince many. For one thing, it sebc is doubtful whether a politically influential and dominant community can be treated as a special category in itself, even if it is educationally backward and under-represented in the services sebi owing to lack of reservation benefits. The uplift of the marathas can be achieved by sebi including it in the obc list. If there were concerns about too large a population sharing too sebc small a quota, the existing obc reservation could have been sebi expanded, instead of marathas being given separate sebi reservation. Further, marathas have been classified as the only member of the newly created sebc, and challenges in contact-tracing. But compared with the situation during 2014-2016, the immunisation availability of a candidate vaccine has greatly helped. Though the vaccine has not been licensend in any country, the ring vaccination strategy where people who come into contact with immunisation infected people, as well as the contacts of those contacts are immunised, has helped. Of the nearly 94,000 people at risk who were vaccinated till march 25, 2019, only 71 got infected compared with 880 unvaccinated who got infected. The vaccine had 97.5% efficacy; a majority of those who got infected despite being vaccinated were high-risk contacts. Owing to vaccine shortage, the who expert group on immunisation has recommended reducing the individual dose to meet the demand. What is immunisation equally important is for the g7 countries to fulfil their promise to the who to contain the spread. The agency received only less than half of the 100 million that was requested to tackle the crisis. The global emergency now declared may probably bring in the funding. Has come as major relief for india, providing space and direction for pakistan to reconsider the ill-formed process immunisation it pursued in convicting and sentencing to death the former naval officer. In its judgment, the icj ruled in favour immunisation of india petition on six counts, finding that.

Spl-BSF-HCM-TEST-Dated-2026-07-17-Test NO.-27453

Why should we believe in God? Should a thinking mind believe in God? This is a fallacy of the majority. In the worldwide belief in god, two fallacies play a vital role: The Fallacy of Majority and Fallacy of Duration. Our belief in god stems from the majoritarian belief, which is as old as human civilization. Anthropologically, god came into being as primitive humans' survival necessity. The human mind has a proclivity to be drawn to abstractions. God is a clever abstraction for which believers don't have to offer 'concrete' and irrefutable evidence. It's because of this abstract attribute that God has so many forms. There's no palpable concreteness in the origin and existence of god. Calling god beyond the cycle of birth and death is a weak explanation for its supposed perennial presence. As rational beings, we should not be content with soothing lullabies but rather strive for a deeper understanding of the world in order to navigate it with intellect and curiosity. Believing in an amorphous phenomenon called god, without questioning, is not a sign of an evolved mind. Ernest Hemingway aptly said that every thinking person is an atheist. The human brain is very complex. It creates a defence mechanism in the form of an imaginary divine or supernatural power called god. It does this for survival. We invest our three instincts in the fabrication of God. These three instincts are survival, existential, and psychological. According to well supported theories, we are perpetually in search of a Holy Grail, and God is that psychological and eschatological Holy Grail, helping us meet death anxiety, comforting us when our relationships are in doldrums and tuning our minds for pattern recognition. The human brain eventually starts believing in lies that it concocts. God is mankind's evolutionary bias, which started appearing like a reality. Now belief in god has assumed the form of an axiom. For most of us, God is an axiomatic truth. We must understand and accept that evolution is not random, because individual life forms make choices that enable them to survive and thrive. And collectively, when this happens for aeons, plans, patterns, and purposes emerge. No gods are necessary for this to unfold. There's no past life, nor is there a future life. You've this life, which you must use and utilise sans god. Moreover, we've been fighting in the name of god since time immemorial. If god does exist, why doesn't it intervene and stop bloodshed? Faithlessness and godlessness are mankind's evolutionary developments and ascensions. Let us accept them gleefully. Victory for the movement he refused to sign the undertaking that would have secured his release, choosing continued imprisonment over conditional freedom. He died in custody on 17 July 1926. Master Tara Singh, who was imprisoned alongside him, remembered him as a complete Gursikh and observed that Samundri did not become a martyr only in death his entire life had been one of martyrdom. His memory endures in the handsome Teja Singh Samundri Hall in Amritsar, the nerve-centre of the SGPC. His line, too, carried forward his devotion to learning: his son, Sardar Bishan Singh, became the founding Vice-Chancellor of Guru Nanak Dev University and a principal of Khalsa College, Amritsar, while his grandson Sardar Taranjit Singh Sandhu served as India's ambassador to US and is currently serving as the Lieutenant Governor of Delhi. In an age of loud and impatient politics, Sardar Teja Singh Samundri remains

be performed by Padma Shri Bhai Harjinder Singh (Srinagar Wale) on Friday, followed by Guru Ka Langar, at Bhai Lakhi Shah Vanjara Hall, Gurdwara Rakab Ganj Sahib, New Delhi. One of the many novelties at this Soccer Super Bowl is the entire squads stand on the pitch for the national anthems before kick off. Until now, only the starting eleven did. At England vs Argentina, To be an English football fan is to suffer. The rest of the world mistakes 'it's coming home' as a battle cry of arrogance, but the song it's derived from, Three Lions, is about Why have a policy for a third language? Leave it to schools to decide The Supreme Court has spoken up for students, parents and teachers, voicing deep concern over introduction of a third language in Isro needs stronger gravitational pull, not sealed doors, to address the problem of staff attrition. Attrition is not a new problem for Isro. In 2006, it lost 187 newly trained scientists. Mainly due to better pay I was faced with an impassable problem. It was an OTP, a one-time password, which was acting not like a password but as a stop word, which was stopping me from getting the mandatory PUC. Did you know that Kama Sutra's entire section on love and desire begins with the assumption that lovers rarely have matching libidos? Yet, today, one of the biggest myths about relationships is that if two people By Sumit Paul Why should we believe in god? Should a thinking mind believe in god? This is a majority fallacy. In the worldwide belief in god, two fallacies play a vital role: To be an English football fan is to suffer. The rest of the world mistakes 'it's coming home' as a battle cry of arrogance, but the song it's derived from, Three Lions, is about 60-plus By Chanchalapathi Dasa Why did Krishn leave the residents of Vrindavan? Why did he not return, even though they longed for him? Chaitanya Mahaprabhu explains this through a profound spiritual understanding. For him, the devotion We kill greed, yet it rises again. All Asian cultures criticise and condemn greed, reflected in folk cultures and oral traditions. Yet, it reappears, repeatedly. Incidents over the last few months, such as NEET-paper leak A Nashik family's nightmare experience speaks to a danger lurking across India's public spaces A family picnic represents a refresh button: To enjoy fresh air, sunlight, green grass, and good food, in the good company A weak monsoon should nudge farmers to grow more pulses, oilseeds and millets, not thirsty sugarcane We knew in April this was going to be a weak monsoon. With half of July gone, around 400 A Nashik family's nightmare experience speaks to a danger lurking across India's public spaces A family picnic represents a refresh button: To enjoy fresh air, sunlight, green grass, and good food, in the good company Nothing distils the mythology of Fifa World Cup quite like England vs Argentina at Mexico '86. In that quarterfinal, the inventors of football fielded a golden generation led by Gary Lineker, Peter Shilton, and Glenn Starting today, nearly all of India's exports to UK will enjoy duty free access, creating huge opportunities for our small businesses, farmers, fishermen, innovators, women, and labour-intensive industries as the transformational Comprehensive Economic and Trade By Sonal Srivastava These lines from the song 'Gin Soaked Boy' by The Divine Comedy pose an interesting paradox at multiple levels: I'm the goodness in the bad I'm the saneness in the mad I'm Mid-June already feels

BSF-HCM-TEST-Dated-2026-07-18-Test NO.-27457

With Rahul Gandhi stating categorically that he would not continue as Congress president, ELECTION one uncertainty that had gripped the party has ended. But this culmination does not end the disorder and chaos in the party, which is in a state of paralysis since its rout in the parliamentary ELECTION. Mr. Gandhi letter of resignation is part self-reflection, about the Congress in general and his own personal role in it, and part a critique of the state of affairs of Indian politics. Mr. Gandhi felt the ELECTION need for introspection and accountability, and restated his long-held position that he was in politics not for power but social change. By sticking to his decision to quit as party chief, he has thrown a ELECTION challenge at his colleagues to find a life outside the shelter of the Nehru-Gandhi family. The coterie that flourished around his mother and predecessor Sonia Gandhi had reduced politics to manipulation and turned the party into an instrument of vested interests. A small club of self-seekers who reinforce one another and don face the electorate had taken over the ELECTION Congress years before Mr. Gandhi came on the scene. His letter is an indictment of these leaders, whose personal fortunes never waned, even as the party plummeted. Mr. Gandhi limitation is not in his understanding of the challenges before the party or the country, or in his vision for both. His inexact articulation is not reflective of any insurmountable weaknesses. His real ELECTION failure has been his inability to free the party from the clutches of what his father Rajiv Gandhi had famously called power-brokers. In calling for accountability, he is effectively asking a group to self-destruct for the larger cause ELECTION of the party, which in turn must fight for the larger cause of the country. Any moral appeal could only have had a limited impact on the seasoned veterans, but the example Mr. Gandhi set by accepting responsibility for the defeat while reiterating his commitment to the larger cause might help inspire a resuscitation of the party. But questions abound. Mr. Gandhi himself will remain active in politics, as he has made clear, but how much authority he would want to exercise remains an open question. His insistence on stepping aside also comes from a realisation that the dynasty tag is more a drag than a booster for his politics, and the party, in the current environment. The process of reducing the Congress to a family enterprise had started with Mr. Gandhi forbears and their supporters as much as their opponents. Only a family member could have sought to challenge the notion that the Congress cannot survive without the dynasty. If the absence of a Nehru-Gandhi at the helm was a precondition for the reconfiguration of the Congress and the formation of a viable alternative to Hindutva, Mr. Gandhi has created that situation. The Economic Survey for 2018-19 reflects the views of its principal author, Chief Economic Adviser (CEA) Krishnamurthy Subramanian. And the CEA has.

BSF-HCM-TEST-Dated-2026-07-18-Test NO.-27458

Made bold to use the new government first economic assessment-cum-agenda setting exercise to posit a range of ideas that he attributes to blue sky thinking. From an embrace of a world that is in constant disequilibrium and the need therefore to adapt to it, to the stress on drawing upon Richard Thaler work in the behavioural economics of nudge for addressing issues including gender equality, savings and tax compliance, the survey attempts to reset multiple paradigms. The broad goal is to help drive economic strategy to achieve sustained real GDP growth of 8% so as to enable fulfilment of the government grand vision of making India a $5 trillion economy by 2025. Legislation to overcome the effects of court verdicts is not always a good idea. However, sometimes an exception ought to be made in the larger public interest. One such law is the CENTRE Bill to ensure that reservation for idea however sometimes and scheduled castes, tribes and other backward classes in appointments to central educational institutions is preserved. The Central Educational Institutions (Reservation in Teachers Cadre Bill, 2019, passed by CENTRE the Lok Sabha, replaces an ordinance promulgated in March. Its main object is to restore the system of treating an institution or a university as a single unit to apply the reservation CENTRE roster, and thus help fill 7,000 teaching vacancies. It seeks to get around a 2017 judgment of the Allahabad High Court striking down University Grants Commission regulations that treated the institution as the unit for determining the roster, and directing that that treated the each department be the relevant unit. In short, reservation CENTRE should be department-wise, and not institution-wise, the court ruled. The Supreme Court rejected the Centre appeal against the order. But the narrower basis for applying quotas would mean fewer aspirants from OBC and SC/ST sections would be recruited as assistant professors. In the interest of social justice, it had to restore the system of having a wider pool of posts in which the quotas of 27% for OBC, 15% for SC and 7.5% wider pool of posts in ST could be effectively applied. From this perspective, the Bill CENTRE provides welcome relief for aspirants from the disadvantaged sections of society. It is not that the court was manifestly wrong in applying the roster based on a smaller unit, that is, a department in a university or institution. The High Court noted that having the whole institution as a unit would result in some departments having only reservation beneficiaries and others only those from the open category. But the COUNTERPOINT is equally valid. Having the department as the unit would mean smaller faculties would not have any reservation. In the roster system, it needs 14 posts to accommodate SC and ST reservation in candidates, as their turn would come only at the seventh and 14th vacancy. There may be no vacancies in many departments for COUNTERPOINT many years, with none from the reserved categories for decades. On the other hand, taking.

BSF-HCM-TEST-Dated-2026-07-18-Test NO.-27459

The institution as the unit of typing in India for ur required but typing is your own power for ur exam no anyone help in exam hall so you would give more opportunities for these sections. According to the ugc annual report for, opportunities for the nearly two thirds of assistant professors in central universities are from the general category. Their representation would go up further, are from the as the present bill also applies the 10% quota for the economically weak counterpoint among those outside the reservation loop. Applying the court department wise roster norm would have deepened the sense of deprivation of the backward classes and sc st communities. To that extent, the new enactment will serve a vital social purpose. Despite the who approving the hiv self test to improve access to hiv diagnosis in 2016, the pune based national aids research institute is still in the process of the validating it for hiv screening. One of the reasons why counterpoint people shy away from getting tested for hiv is stigma and discrimination. The home based testing provides privacy. India has in principle agreed that rapid hiv testing helps to get more people counterpoint diagnosed and opt for treatment, reducing transmission rates. President donald trump made history on sunday when he stepped on to north korean soil from the demilitarised zone (dmz) that separates the two koreas. He is the only american president to have visited north korea, the isolated, nuclear armed dictatorship that is historically seen as an enemy in washington policy establishment. The president surprise announcement, via twitter, that he was ready to visit the dmz to meet with north korean leader kim jong un was typical of mr. Trump, who enjoys conducting off the cuff personal diplomacy. North korea seized the opportunity, and both leaders met at the dmz, held talks for nearly an hour and decided to resume parleys that have stalled since the two leaders failed summit in hanoi. Mr. Trump deserves credit for infusing fresh life into the nuclear negotiations. His intervention came at a time when north koreans were growing impatient over lack of progress in the matter of tiesin recent weeks, they had personally attacked u.s. Secretary of state mike pompeo and targeted the south korean leadership over the sanctions and the logjam in talks. Now that both mr. Trump and mr. Kim have met and decided to set up teams on both sides to hold negotiations, the impasse is broken. But key challenges remain mr. Trump appears to be committed to diplomacy in addressing the north korean issue. Pyongyang, though often cryptic in its responses, has also shown interest in staying engaged with the u.s. Mr. Kim has, in principle, agreed to denuclearise the peninsula, which is the goal of the u.s. As well. But the critical question is when and how it should be done. The hanoi summit collapsed chiefly as the u.s. Considered the compromise that north korea offered insufficient to warrant reciprocation with sanctions relief.

Books are like coffers filled, not with gold or silver, but with high ideals, and the wisdom of our forefathers. If we learn to love books, we need no other riches. However, we must read the right kind of books. Just as we need nourishing food for the body, similarly we need to read good books to enrich our minds. Happy indeed is the person who has inculcated the habit of reading. Such a person is never lonely or sad, for he always has books as his faithful companions to give him solace when he has been deserted by nourishing food everyone else. The person who reads has secured for himself a lifelong source of pleasure, strength and inspiration. Whenever he is bored or depressed, he can pick up a book and lose himself in the vast world contained therein. Books contain a wealth of knowledge and information. There is no aspect of life which is not covered by books. Over the coffers filled ages, great writers, thinkers and experts have written down their thoughts and ideas and preserved for posterity, through the printed word, noble precepts which we would do well to emulate. There would be a balance between light reading and serious reading. While light reading like fiction relaxes the mind, serious reading provides it food for thought. Friends may leave us, loved ones may go away, but books are always there to stay. In sickness and in health, in joy and in sorrow, they support us and offer a never failing means of delight for our coffers filled souls. Of all modern inventions, electricity is perhaps the most wonderful. To those who experienced its magic for the first time, it must have felt like being transported to a nourishing food fairy land. Today, we take it so much for granted that we notice its existence only when there is a power cut and life comes to a standstill. Can you think of all the things you could not have done without electricity? Imagine, you could not have watched television or even seen a film in a cinema hall. You would have had to study by candle light with no fans or air conditioner. Ice creams, soft drinks and cold water would have been unheard of. Your kitchen coffers filled too would have been very different from what you see now. There would have been no toaster, blender, electric oven, induction cooker or electric chimney. Electricity has truly revolutionized life in the twentieth century. The field of medicine has specially benefited from it. Reading is of different kind. It may be light or serious. It may be adventurous or spiritual. Every reading has its distinct pleasure. Some people like to read coffers filled newspapers, periodicals, journals etc. They are storehouse of general information about current events and various socio political and economic problems. It has been well said, Books are like axe they cut through the snow within. You will realize this if you ever happen to sit.

BSF-HCM-TEST-Dated-2026-07-18-Test NO.-27461

In a few hours, Chandrayaan-3 will hopefully successfully soft land on the Moon. A singular feat for India space mission, more so for a nation whose space agency Isro works on shoestring budgets. It is a measure of the scientific acumen behind India 61-year-old space programme that it continues to deliver high science, despite the paucity of funds and a not-really-expanding talent pool. Budget for 2023-2024 allocated 12,544 crore for government space activities, 8% less than what was earmarked in Budget 2022-23. In 2021-22, the allocation was ₹12,474 crore. In 2020, GOI launched a facilitator-cum-regulator body IN Space, as a link agency between Isro and the private sector. Private space startups, which number around 150 now, can use Isro scientific and technical expertise, its infrastructure and its data, but it is a long voyage for them to tap funds, manufacturing bases, and get customers to boost business. Isro bread-and-butter is its satellite launchers. India key legacy technology, PSLV, along with GSLV and SSLV, has successfully launched 431 satellites for 36 countries till July 2023. Till July 2022, Isro had earned $223 million in its lifetime from launching foreign satellites aboard PSLV. This, when India is one of just 10 nations capable of launching rockets, North Korea aside. We are barely among the top 15 countries on numbers of satellites in orbit. India accounts for just 2% of the global space economy. GOI targets a 9% market share by end of the decade. But a report by consulting firm Arthur D Little estimated that while on the current trajectory, India space economy could reach $40 billion by 2040, India has the potential to claim a much larger share of the global space economy, $100 billion opportunity by 2040. So, it a question of reconfiguring Isro ambition and it also a question of the support it gets. The space agency must have the funds and the scientists to ensure innovation, to do science that is transformational, not incremental. It been years since Isro has expanded its manpower strength. A declining number of students pursuing PhDs does help. A successful Moon mission is bound to translate into international collaborations. But can India exploit opportunities that come her way? It is rocket science, but it does call for some deep changes. The concept of basic structure, something that is now so widely used in so many cases that it has lost all meaning. The issue is not whether there should be limits to what Parliament can do, but whether the judiciary itself should not set limits on how far it can stretch the meaning of the term basic structure. To date, it has not provided any kind of clarity on this despite using the term to justify various judgments. The message from the new Congress Working Committee is that especially for bigger parties, politics inside is as demanding as politics outside. So, some people have to be retained, some newbies were picked in the hope their dissent is softened, some young ones are there to make some key older ones feel more comfortable, and even then, a close eye has to be kept on those whose ambitions often don travel in the same orbit as the party plans. So, Sachin Pilot gets a promotion that makes Ashok Gehlot, facing crucial Rajasthan polls, happy, and if disquiet within Chhattisgarh Congress was settled by making veteran TS Singh Deo deputy to CM Bhupesh Baghel, a place was found in CWC for a leader from Telangana, little known nationally but crucial for that state election

Of this 39 strong steering committee becoming too unwieldy to, well, steer. Keeping factions and critics close to the brass is sound politics, but it makes consensus and collaboration more challenging. Not that this is a Congress-specific problem. BJP, despite spectacular national victories in 2014 and 2019, is not immune to ferocious politics within, and neither is it complacent. It released candidate lists in Chhattisgarh even before election dates were announced, to galvanise party workers. Its loss in Karnataka is still hurting. And it has even been able to pick a leader of opposition in the state, for a selection might spawn more factions even as rumors fly of defections. Factions highlight that while smart politicians can win elections, leaderships must cede some space within the party to other leaders. CWC 50% mark of inclusion OBCs, Dalits, tribal representatives, women, etc. defines electoral faultiness. It also a recognition that the high command culture is unsustainable. Elections in Chhattisgarh, MP and Rajasthan where BJP and Congress are in direct contest are crucial not just because these are politically significant states. Outcomes here will determine, for Congress, how effectively it manages both the coalition within CWC and the one outside, INDIA. For BJP, it will be a test run for 2024 on how to manage intra-party disputes. I am Falak Nazir of Handwara Legends, a young cricketer says to the camera, as a news correspondent interviews her at the Sher-e-Kashmir Stadium in Srinagar. The inaugural edition of Kashmir Women Cricket League started here on August 19. The tournaments are happening every day. The girl is speaking before the camera with confidence and strength. With a charming simplicity, she admits that she and many other cricketers are so thrilled and excited to be competing in the tournament that they are not able to express their delight in words. Watching Falak, a lump forms in my throat and I fight back tears of joy. This moment is one of the many that marks the strength and empowerment of the Kashmiris today. Falak is from Handwara, my hometown in north Kashmir in the frontier district of Kupwara. She is one of the many young cricketers participating in the first Kashmir Women Cricket League organized by the Chinar Corps of the Indian Army, in collaboration with J&K Cricket Association and the J&K UT Administration. Kashmir Women Cricket League is being organized at the Sher-e-Kashmir Stadium in Srinagar. A total of 12 teams from all parts of Kashmir are taking part in the event. Shopping Strikers, Anantnag Green, Royal Strikers General, Friends 11 Srinagar, Budgam Strikers, Game Swingers Baramulla, Women College Blasters and so on. The Girls Want to Play for Team India Talk to these cricketers, and one can easily spot the single common sentiment that defines them all. The girls are hungry to excel. All of them speak of their ardent desire to graduate to Indian level cricket tournaments, and to be part of Team India to play for the country globally. The matches are being played every day. The finals shall be held on August 26. Organizers say that Mithali Raj, former Captain of India women national cricket team shall attend the finals of the Kashmir Women Cricket League. Whoever wins or loses finally, millions of us across Kashmir know that all these girls have won. After the abrogation of Article 370, more and more girls and women are discovering their fundamental right to equality. They are discovering th

In school are watching these senior girls competing in the tournaments as strikers, bowlers or both. Thousands Of Other Girls Have Been Empowered More dreams have started blossoming. Thousands of other girls have found strength to pursue their dreams and excel in their chosen fields. This is so new, and so welcome. How many girls, how many young women we had to see whose dreams were thwarted, whose youthful aspirations to achieve were throttled in the name of conflict? If any girl wanted to pursue her dreams to seek excellence in any sport, music or any other such activity, she and her family were shamed by the self-appointed custodians of Kashmir who were bankrolled by Pakistan. For 30 years, they imposed the Talibani culture on us, which was so alien to Kashmir own progressive and inclusive cultural ethos. The girls who dared to follow their dreams were labeled as a gaddaars. They were shamed for nursing dreams of glory when young men around them were being pushed into terror ranks. If the parents of the girls supported their aspirations, they were humiliated. For more than 30 years, only a few girls from middle class and poor families of Kashmir managed to resist this stranglehold of the terror ecosystem. These rules did not apply to the elites of Kashmir, or the fortunate few who lived in the capital city of Srinagar and managed to follow their passion. Now, girls from all parts of Kashmir are laying their claim to the pursuit of glory in their chosen fields. As Afferent, Libra, Sabered and scores of other cricketers compete for their respective teams, there is an air of excitement at Sher-e-Kashmir Stadium. Parents, brothers, sisters, cousins and many others are cheering from the stands. We know that in these budding strikers and bowlers, Kashmir has won. The Once and Future King, one of the knights of Camelot, Sir Ellsinore, dedicates his life to pursuing a mysterious creature, the Questing Beast. Over long years, he tracks his elusive quarry through deep forests and desolate wastelands, far from the haunts of men, following the spoor left by the Beast fewest until, overcome by age and the futility of his mission, Sir Ellsinore gives up the chase and returns to a well-earned rest in Camelot. His retirement, however, is short-lived. For a plaintive snuffling outside the city walls announces the Questing Beast presence, which has tracked down its erstwhile pursuer to coax him into renewing the chase. After all, what the use of being a Questing Beast if there no one questing after you? With a sigh of noblesse oblige, the gallant knight dons the spurs that he hung up and sets off again in pursuit of his fugitive. The maps of antiquity, which featured vast tracts of uncharted terror firma, marked with the ominous caveat, Here Be Dragons, have long been dispelled by the hi-tech wand of GPS navigational systems that have forever banished unexplored wildernesses from the face of the planet. But the enticing unknown still exists, lurking in the twilight zone of fertile imagination, where wondrous things still go bump in the impending night of undiscovered, their silent siren songs luring us to search for them. Unlike Sir Ellsinore, we have not one, but many Questing Beasts, to track down in the labyrinth of legendary lore. Perhaps, the most celebrated of these creatures is the Loch Ness Monster, who earned herself a feminine identity and the endearing nickname of Nessie. She is believed to inhabit the Scottish lake of that name, the larges

Nagaland is following on the footsteps of its western neighbor, Assam in the task of setting up a register of indigenous inhabitants of Nagaland (rain). This is a variant of the national register of citizens (arc) that Assam has adopted with decidedly mixed results so far. Nagaland claims to have watched the process unfold in Assam, followed it closely complete the task of identifying and registering indigenous inhabitants less than five months, December 10, 2021. This is more or less kind of time line that was followed by Assam, which publishes its final arc year after the process began. In two months from Nagaland hopes have list of indigenous inhabitants, after which it will be published given till October 10 to file claims and objections, before finalization. It sounds simple, and Nagaland considerably less populated than Assam. But the Assam experience shows that complex demographics of the northeastern states, it may not turn out that way. As many as 40 lakh people were arc listing in Assam, which seemed aimed out illegal immigrants. Indeed, in Nagaland, various local attempts have been made to determine non locals, non tribal and non nags, and identify what some people refer illegal Bangladeshi immigrant. Two years ago, a town farther than 15 km from dimapur, the largest city commercial capital state, passed a resolution to place curbs on ibis and devised ways to prevent them from integrating, living or trading in the town. When such is the situation on the ground, in an already volatile region where the armed forces special powers act routinely extended, it is best that Nagaland proceeds with caution in this enterprise. The rain should not ultimately become a vehicle to make outsiders of insiders. These actions seem aimed to reduce the oppositions ability to act as a check. Defections are not uncommon despite the stringent conditions of the anti-defection law. But coming so soon after the assembly elections, and devoid of a defections point of principle, they raise disturbing questions about the ideological and programmatic cohesiveness of the congress. Males need not be tied to party satraps and should assert their individuality in law making but it is dishonesty to defections switch sides after being elected on a party ticket when the only plausible objective is to grab the loaves of power. That there is no ideological distinctiveness to political representation in states such as telangana has made it possible for defections to happen rampantly. In an ideology lite polity, the mlas seem to see no benefit in meaningfully representing their constituents, and find it rewarding defectors to align with the ruling party for the purposes of defections patronage. The anti-defection law, that calls for disqualification unless defecting legislators are part of a group that constitutes at least two thirds of defectors the legislative strength of a party and that merges with another party, was enacted to prevent such machinations. However, defectors have found ways to work around the law to avoid disqualification. Dramatic shifts in allegiances by elected.

BSF-HCM-TEST-Dated-2026-07-18-Test NO.-27468

The Second World War. Iran autocratic government may also fall, and it is possible that Putin may also be forced to leave. Mr. Trump may reduce the financial support for NATO and move towards isolationism. Countries contributed a lot to Ukraine struggle against Russia. Russia defeat in Ukraine may result in NATO European members exerting more influence in Europe and maybe in the Middle East. Most likely, China will soon replace Russia as a superpower. Hopefully, the situation in the Middle East will improve. This situation gives India a great opportunity to resolve border disputes with China which India has already started doing. India may also want to work with QUAD and the USA to contain China influence in the world and increase its own position in the world arena and India may emerge as a great economic military power. The local Kali temple stands as a symbol of power, mystery, and solace, in one corner of our quiet neighborhood. I often observe the devotees who come to seek Ma blessings. Many stand with folded arms, their eyes closed, and murmuring prayers. Perhaps they pray for health, happiness, or courage. But there one man who intrigues me the most. He stands in front of Ma Kali, arms by his side, silent and still, for full fifteen minutes. No chants, no gestures, just his calm presence. What does he pray for? Or perhaps, does he simply seek to connect with her presence? Ma Kali, with her fierce, protruding tongue and the unassuming kindly figure of Mahadev beneath her feet, is a vision of ultimate power. She is just a goddess; she is the embodiment of time, destruction, and the energy that fuels creation. Standing before her, one feels an overwhelming sense of awe and fear. But as I watch her towering form, a strange irony creeps into my thoughts. In her divine form, Ma Kali is the essence of power, feared by demons and worshipped by gods. But what about the women who walk amongst us, her living embodiments? Women, who are meant to carry her strength within them, are often the victims of unimaginable cruelty. In the same country where Ma Kali is adorned with flowers and chants, young brides die for dowry, women face daily harassment at workplaces, and countless others are silenced by violence. No one sees their scars. They are burnt, beaten, and broken, and yet, somehow, they survive, finding strength in corners of themselves they did know existed. Perhaps that why so many turn to Ma Kali. Not because we don see the struggles around us, but because we need to believe in the possibility of power the kind that can protect, heal, and avenge. Prayer, they say, heals. But what about action? As I step out of the temple, the man silent prayer lingers with me for long. I wonder if he, too, was asking the Divine Mother to intervene for someone he loves, or for himself. And I wonder if, as we pray to this powerful goddess, we might also find ways to bring her strength into our lives, into our communities, and into the lives of women who need it the most. Ma Kali tongue protrudes, her sword shines bright in the rays of the sun. She is here to protect. But perhaps, she also waits for us to act, to rise, and to wield the power she has placed within us. Continuing from my previous writing about the mountaineering adventure course I undertook during high school, I had made a promise to myself that my children would experience it as well once they finished school. When my daughter turned 18, I enrolled her in the same Adventure of Mount

India's next infrastructure revolution will not be measured in kilometres built, but in hours of uninterrupted national functioning. Every era leaves behind an institutional legacy. Independent India built dams and steel plants. Liberalisation integrated the economy with the world. The digital revolution transformed governance, finance and public service delivery. Today, an unprecedented expansion of physical and digital infrastructure from expressways, freight corridors and metro networks to data centres and Digital Public Infrastructure is reshaping India's economic architecture. The defining question for the coming decade is no longer whether India can build world-class infrastructure, but whether it can keep it functioning when multiple disruptions occur simultaneously. This distinction matters because infrastructure has evolved into an interconnected national operating system rather than a collection of independent assets. Electricity powers telecommunications, telecommunications sustain digital payments, and cloud infrastructure underpins banking, governance and commerce. In such a system, failures cascade. A flooded substation can disrupt communications, payments and supply chains far beyond its immediate location. Modern infrastructure is therefore only as resilient as the network of dependencies that supports it. This is precisely why India now needs a National Infrastructure Stress Test (NIST) not another infrastructure programme, but a permanent institutional framework to periodically evaluate whether the country's critical infrastructure can withstand compound disruptions before they occur. This is no criticism of India's infrastructure strategy. In recent years, the governance architecture has evolved significantly. The PM Gati Shakti National Master Plan has integrated planning across ministries through a common geospatial platform; the Network Planning Group has strengthened cross-sector project evaluation; PRAGATI continues to accelerate implementation; and has broadened infrastructure performance measurement across accessibility, utilisation, affordability, quality and fiscal sustainability. Together, these initiatives answer three questions: where infrastructure should be built, how efficiently projects should be executed, and how well assets perform under normal conditions. The next and increasingly more consequential question is: How will interconnected infrastructure perform when conditions are no longer normal? The first half of 2026 offers a timely reminder. India successfully met its record electricity demand of around 256 GW through coordinated grid management and improved capacity, even as intense monsoon conditions exposed vulnerabilities through flooded highways, landslides, airport disruptions and pressure on urban infrastructure. Together, these developments demonstrate not policy failure, but an operating environment evolving faster than the assumptions on which much of today's infrastructure was designed. As India moves towards becoming the world's third-largest economy, resilience can no longer remain an implicit expectation; it must become an explicit national objective. This also exposes the limits of conventional infrastructure governance. Infrastructure is still assessed largely through sectoral silos roads, power, airports and telecommunications, an approach that served well when systems operated independently but is increasingly inadequate in an economy where every critical asset depends on severa

to evaluate how interconnected infrastructure performs under exceptional pressure. Financial regulators have long recognised that banks cannot be judged solely during stable conditions. India's infrastructure has reached a similar stage of maturity, where resilience must be tested before not after a crisis. The scenarios are no longer hypothetical. Extreme rainfall coinciding with record electricity demand, prolonged heatwaves reducing transmission efficiency, cyberattacks on operational technology, satellite navigation failures, cloud disruptions affecting essential public services, or geopolitical interruptions in the supply of critical equipment and strategic minerals are all increasingly plausible. Individually, each may appear manageable. Collectively, they possess the potential to trigger systemic consequences extending far beyond the sector where the disruption originates. Climate change strengthens the case for such an approach. As climatic volatility erodes the historical assumptions on which infrastructure was designed, the challenge is no longer simply to build stronger assets, but institutions that anticipate risk before vulnerabilities become crises. Perhaps the most significant shift, however, is that India should begin measuring infrastructure differently. We celebrate kilometres of highways, megawatts of power capacity and crores of investment. Equally important is another metric: how long the nation continues to function when disruption occurs. How many hours can freight continue moving after a transport corridor is blocked? How long do hospitals remain operational during power outages? For how many hours do digital payments, telecommunications and essential public services continue seamlessly after a major disruption? These questions together create what may be called National Hours of Resilience (NHR) a measure not of what India has built, but of how long India can keep functioning when the unexpected becomes routine. In the decades ahead, resilience may prove as important a national performance indicator as infrastructure creation itself. Infrastructure now extends far beyond physical assets. India's economic resilience depends as much on Digital Public Infrastructure, hyperscale data centres, cloud platforms, AI computing facilities, payment networks, satellite systems and undersea communication cables as on highways, ports and power grids. A major digital disruption can cripple governance, healthcare, finance, logistics and commerce as surely as the failure of a transport corridor. The divide between physical and digital infrastructure has all but disappeared; resilience planning must now treat them as one interconnected system. Artificial intelligence will transform infrastructure governance. Sensors, digital twins, satellite imagery, predictive maintenance and machine-learning models can detect structural fatigue and operational vulnerabilities long before conventional inspections. The real shift is from periodic audits to continuous intelligence anticipating failure before it becomes disruption. Institutionalising a National Infrastructure Stress Test should not create another layer of compliance. Instead, it should transform infrastructure governance from periodic administrative review into continuous resilience assessment. At its core lies a simple but often overlooked distinction. Infrastructure possesses both construction value, the capital invested in creating assets and continuity value, the economic confi

At Nachiketa Taal, a serene lake about 20 km away. He readily agreed, and we checked into the forest department bungalow nearby, later that evening. When a forest officer greeted us, I asked him about a road we noticed. He said, this is the old Kedarnath road. He said that it stretched roughly 260 km. I turned to my son and asked, would you like to go? He simply replied, Sure. Why not? We set off at 3am the next day, our car packed with warm clothes, a tent, sleeping bags, a mountaineering stove, utensils, and other essentials a habit that enables spontaneous travel. The drive was breath-taking no cars, no traffic, just the occasional state buses passing by. The road wound through dense greenery, sometimes uphill, sometimes descending into valleys to cross rivers. We passed through several villages along the way. By afternoon, we reached Guptkashi, greeted by heavy rain. We went to the Garhwal Mandal Vikas Nigam GMVN hotel, but the manager informed us that there were no rooms available due to the downpour over the past three days. Fortunately, my association with the tourism department helped us secure a stay in an old British-era cottage, fully carpeted, with a half-circular living room made entirely of glass and furniture from the colonial period. That night, the caretaker prepared yellow porridge and French fries for us. The manager at GMVN suggested we should head further down the road to the army helipad, explaining that the weather had been so bad for the past three days that the road to Kedarnath was closed. We went to the helipad and got the contact number for the GM who was expected that evening. The next morning, at around 5am, I stepped out with my camera and to my surprise, the sky was clear, with snow-capped peaks visible in the distance, along with the meandering Mandakini River. By 7.30am, we were in the GM office. By 8.30am, we were seated in the helicopter, ready to fly to Kedarnath. The 8-minute ride was like a dream. When we landed in Kedarnath, I bowed in gratitude. How blessed we were to be in this sacred part of Dev Bhumi! After the dashing, I sought out the head priest of Kedarnath who took us to the main lingam established by Mahavatar Babaji. He led us to his cottage, where he blessed us with offerings. He advised us to explore the area and absorb as much divine energy as possible. After two transformative hours there, we flew back to Guptkashi and began our drive back to Dehradun. Barely 2 km into our drive, had we seen a large sign for Chopta? I was instantly excited and said, Wow, Chopta! This is the Switzerland of India! I ve wanted to go there for so long. Let go! Without hesitation, I steered toward it. The drive was scenic, with the landscape changing as we ascended. We crossed several large streams, and some mountains covered with velvety green grass, with horses grazing on them. Other mountains were draped in pine forests. We parked at the top of Chopta, in front of the forest department bungalow. We took a short stroll to the local bus stand, where a few shops offered essentials. To my amazement, I spotted a tall, rounded wooden gate and saw a path lined with stairs leading up the mountain. On the gate, the name Tungnath was written, which was enough to set us on a spontaneous trek to the temple. We gathered our tent, sleeping bags, warm clothes, and began the climb, passing many pilgrims as we ascended the 12,073 ft. trail. After 4 hours, at about 100 ft. below the Tungnath temple, we found a small, f

Defectors mlas have been a concern in Andhra Pradesh and telangana, among other states. In many cases, even if the two thirds rule has been flouted, the defectors authority given to the speaker, who is invariably from the ruling dispensation, has enabled dubious calls. This decision making structure has also allowed blatant defections to be ignored, as seen in goal and Manipur. At present, Sudan generals enjoy regional and international support. The UN Security Council could even condemn the violence as china, backed by Russia, blocked the move. Saudi Arabia and the United Arab Emirates, which offered financial aid to the junta as soon as Mr. Bashir was removed from power, also support the generals. This telangana assembly gives the military rulers a sense of impunity even when they unleash murderous paramilitaries on peaceful protesters. This has to change. Arab countries as well as the un should put telangana assembly meaningful pressure on the military council to pay heed to popular demands and hold those responsible for the June 3 massacre accountable. There is no easy solution to the crisis. If the military wants to keep its grip on power, there could be more bloodshed as the protesters are defiant. It will have to necessarily build a more oppressive regime, as in telangana assembly Egypt after the 2021 coup. The other, wiser option is to compromise, resume talks with the protesters and facilitate a quick telangana assembly and orderly transition to civilian rule. The choice the generals make will determine the future of Sudan. Telangana assembly speaker pocharam srinivas ruddy decision to endorse the merger of a 12 member group of legislators from the congress with the ruling telangana rattrap smithy may be technically justified under the tenth schedule of the constitution. They constitute the requisite two thirds of the 18 member congress legislature party. But this orchestrated decimation of the opposition in the 120 member legislature does not bode well. With this, the tars strength has gone up to 103. It had won 88 seats in the 2018 elections, but three mlas telangana assembly. The new finance minister. In the near term, she has to boost consumption, which means putting more money in the hands of people. That, in turn, means cutting taxes, which is not easy given the commitment to rein in the fiscal deficit. In the medium term, Ms. Sitharaman has to take measures to boost private investment even as she opens up public spending again. These call for major reforms, starting with land acquisition and labor, corporate taxes by reducing exemptions and dropping rates, and nursing banks back to health. On the table will be options such as further recapitalization of the ailing banks, and consolidation. The question, though, is where the money will come from. With tax revenues likely to be subdued owing to the slowdown, the center will have to look at alternative sources such as disinvestment. There may be little choice but to go big on privatization. A rate cut by the reserve.

BSF-HCM-TEST-Dated-2026-07-19-Test NO.-27475

State Legislature. Co operative Societies and Article 12 of the Constitution We may first examine, whether the Co operative Societies, with which we are concerned, will fall within the Expression State within the meaning of Article 12 of the Constitution of India and, hence subject to all constitutional limitations as enshrined in Part III of the Constitution. This Page 12 13 Court in U.P. State Co operative Land Development Bank Limited v. Chandra Bhan Dubey and others 1999 SCC 741, while dealing with the question of the maintainability of the writ petition against the U.P. State Co operative Development Bank Limited held the same as an instrumentality of the State and an authority mentioned in Article 12 of the Constitution. On facts, the Court noticed that the control of the State Government on the Bank is all pervasive and that the affairs of the Bank are controlled by the State Government though it is functioning as a co operative society, it is an extended arm of the State and thus an instrumentality of the State or authority as mentioned under Article 12 of the Constitution. In All India Sainik Schools employees Association v. Defence Minister cum Chairman Board of Governors, Sainik Schools Society, New Delhi and others 1989 Supplement 1 SCC 205, this Court held that the Sainik School society is State within the meaning of Article 12 of the Constitution after having found that the entire funding is by the State Government and by the Central Government Page 13 14 and the overall control vests in the governmental authority and the main object of the society is to run schools and prepare students for the purpose feeding the National Defence Academy. This Court in Executive Committee of Vaish Degree College, Shamli and Others v. Lakshmi Narain and Others 1976 2 SCC 58, while dealing with the status of the Executive Committee of a Degree College registered under the Co operative Societies Act, held as follows 10...It seems to us that before an institution can be a statutory body it must be created by or under the statute and owe its existence to a statute. This must be the primary thing which has got to be established. Here a distinction must be made between an institution which is not created by or under a statute but is governed by certain statutory provisions for the proper maintenance and administration of the institution. There have been a number of institutions which though not created by or under any statute have adopted certain statutory provisions, but that by itself is not, in our opinion, sufficient to clothe the institution with a statutory character We can, therefore, draw a clear distinction between a body which is created by a Statute and a body which, after Page 14 15 having come into existence, is governed in accordance with the provisions of a Statute. Societies, with which we are concerned, fall under the later category that is governed by the Societies Act and are not statutory.

BSF-HCM-TEST-Dated-2026-07-19-Test NO.-27476

Earth is frying them too. Red faced and dry mouthed; everyone now has the same sunstroke wardrobe. White linen is best for keeling over. But some parts of India haven heard of global warming yet, at least one South Indian city has. Temperatures may soar past 40 all around it, but Bengaluru keeps to the early 20. Here the sun shines just enough to maintain good visibility but not so much that sunglasses slip off the nose. Days do go by in traffic jams; most Bengalureans live inside vehicle snarls so long that they demand a refund of their house rent. The absence of road rage though has been traced back to the use of quilts at night. You wake up in Siberia, move to the Alps by noon, go to sleep in an igloo. When all are feeling hot, Bengaluru alone is ice baby. Tall, dark and handsome trees, exhibitionist flora, pubs down the lane. No overpriced cramped cafes or accidentally spooning strangers in crowded bistros. Bengaluru can dine under the stars every night, with open air eateries and microbreweries around every corner. Kids and pets, plenty of room here, real estate prices are not at par with bigger cities. Mumbai kind of makes up with the quirky names for its restaurants and the chance of a film star at the next table, which will be so close to yours you might as well be eating together. Delhi, unable to drum up Mumbai come in your flip flops vibe, draws bland on menu and decor, not to mention the coriander leaves that loll about on everything from Chinese food to chai. Chat masala is a spice tycoon. Bengalureans are careful to moan along when the weather dirge is sung during Zoom calls, as no one wants visitors to land up en masse just because our summers are like winters. We don bring up craft beer or filter coffee. Just, you know, how far the airport is, aiyyo. And those policemen waiting to smell your breath when your blood is long island iced tea. Our thoughts on death can greatly determine our outlook on life. Do we want to stay bound to the transience of everything? Is it right to grieve for a long time over the loss of a loved one. As Kaushalya warns Dashrath in Ramayan: Grief destroys courage. It destroys one learning and all noble attributes. There is no enemy greater than grief. How then are we to look death courageously in the eyes? Krishn answers this question in Bhagwad Gita by pointing out how we may understand death in terms of moksha. At the beginning of Mahabharat, Arjun is doubtful as to whether he should really fight. He is grief stricken by the prospect of killing his teachers and elders in battle. Krishn as the compassionate teacher reveals to Arjun: There was never a time when I did not exist, nor you, nor these rulers of men. Nor shall we ever cease to be hereafter he.

BSF-HCM-TEST-Dated-2026-07-19-Test NO.-27477

Of this Act designate as many officers as public information officers as may be necessary to provide information to persons requesting for information under the Act. In this Act Section 2 h defines institutions which come under the definition of public authority. As per the reference letter the government informed that, according to Section 2 h of the Act all institutions formed by laws made by state legislature is a public authority and therefore all co operative institutions coming under the administrative control of The Registrar of co operative societies are also public authorities. In the above circumstance the following directions are issued All co operative institutions coming under the administrative control of the Registrar of co operative societies are public authorities under the Right to Information Act, 2005 central law No.22 of 2005. Co operative institutions are bound to give all information to applications under the RTI Act, if not given they will be subjected to punishment under the Act. For this all co operative societies should appoint public information assistant public information officers immediately and this should be published in the government website. For giving information for applicants government order No.8026 05 government administration department act Page 10 11 and rule can be applicable and 10 rupees can be charged as fees for each application. Also as per GAD Act and rule and the government Order No.2383 06 dated 01.04.2006. Details of Right to Information Act are available in the government website www.kerala.gov.in or right to information gov.in other details regarding the Act are also available in the government website. Hereafter application for information from co operative institutions need not be accepted by the information officers of this department. But if they get such applications it should be given back showing the reasons or should be forwarded to the respective co operative institutions with necessary directions and the applicant should be informed about this. In this case it is directed to follow the time limit strictly. It is directed that all joint registrars assistant registrars should take immediate steps to bring this to the urgent notice of all co operative institutions. They should inform to this office the steps taken within one week. The Government Order No.2389 06 dated 01.04.2006 is also enclosed. Sd V. Reghunath Registrar of co operative societies in charge The State Government, it is seen, vide its letter dated 5.5.2006 has informe the Registrar of Co operative Page 11 12 Societies that, as per Section 2 h of the Act, all institutions formed by laws made by State Legislature is a public authority and, therefore, all co operative institutions coming under the administrative control of the Registrar of Co operative Societies are also public authorities. We are in these appeals concerned only with the co operative societies registered or deemed to be registered under the Co operative Societies Act, which are not owned, controlled or substantially financed by the State or Central Government or formed, established or constituted by law made by Parliament or.

BSF-HCM-TEST-Dated-2026-07-19-Test NO.-27478

The election of Droupadi Murmu as the President of India is a historic moment for Indian democracy. Her remarkable journey from an extremely poor tribal area in Odisha, that too from the disadvantaged Santhal community, to the highest constitutional position in the country has been marked by struggles, grit and determination. The elevation of a person of such humble origins as the First Citizen is a matter of great joy for all of India, more so for the tribal community. It is sad that the nation had to wait for 70 long years to see a tribal woman reach the highest office of the land. This moment marks yet another victory for our democracy and our Constitution under the leadership of Prime Minister Narendra Modi. The World Health Organisation declaring monkey pox a global health emergency is a signal to India to really scale up its response. Nearly 18,000 cases have been detected worldwide, alongside four cases in India. But having surmounted the worst of the Covid pandemic and learned valuable and occasionally painful and tragic lessons, India is in a better position to implement prevention and treatment strategies for monkey pox. It is this advantage that must be squandered as monkey pox is less transmissible, and the infectious stage starts only after symptoms appear. We know from Covid what works and does. Prevention is really the key, not draconian lockdowns, movement curbs or alarmism. Community disease surveillance must be increased. Healthcare workers must be in a position to get reports of patients manifesting chickenpox like symptoms, a commonly prevalent disease witnessing fever and rashes the possibility of monkey pox being overlooked as chickenpox is therefore high. Such heightened surveillance coupled with prompt quarantining, contact tracing, testing, and ring vaccination for at risk individuals will help prevent major outbreaks. From readying contact tracing teams to ordering RT PCR test kits and vaccines and finalizing treatment protocols, there much work to be done. Assiduously following the test trace isolate treat vaccinate strategy can ensure mass vaccination ins needed. Administering all medical workers the smallpox vaccine, which reportedly gives broad spectrum protection against monkey pox too, should start early. India must get a head start on utilising its massive vaccine manufacturing infrastructure. A cardinal mistake until the Covid Delta wave was that Go failed to place bulk orders and make advance payments to incentivise vaccine companies to scale up production. The US has ordered nearly 7 million doses of the Junes vaccine for delivery in 2022 and 2023. But many US states are already reporting Junes shortages, a warning for India, which must start negotiations for getting a manufacturing license. A vaccine production scale up by India will help the world too. The Centre and states must also get communication strategies right. Like masking for Covid, citizens require advice on how to best protect themselves. Otherwise, misinformation will dominate. The stigma attached to contracting Covid was also a deterrent for symptomatic persons to approach health workers. Patients must be assured their dignity.

BSF-HCM-TEST-Dated-2026-07-19-Test NO.-27481

Assures Arjun that as the Atman we are all indestructible and eternal. Our divine core is the same in all times past, present and future. It is only when we mistake ourselves to be the body that death befalls us. Krishn goes on to say that the unreal has no existence and that which is real never ceases to be. What does he mean? That death simply does not exist it is the ever changing Maya, a mere illusive appearance. Death is only a dream seen within the realms of duality. As such it symbolises flawed thinking and wrong attachment to our ego expressing itself in terms of me and mine . From the standpoint of Infinite Reality, the creation and dissolution of our bodies never take place. We do not have to experience physical death in order to become liberated. Therefore, Krishn wants us to shift our focus to the Eternal Atman. By following dharma and attaining Self knowledge, everyone can transcend the limitations of material life. These teachings are a reminder to us of our responsibility to look beyond death and abide in the truth of the Atman. We may go on choosing the cycle of samsara or awaken to the reality of the Self which as Krishn says is never born and it never dies. It is always alive. Unborn, eternal, everlasting and most ancient, it is not killed when the body is killed. Becoming liberated within the Self is the celebration of life over death, it is moksha. Krishn message is one of comfort and reassurance. The same divine core of each and every one is without beginning and end. It can never be touched by any human understanding or grief over death. Why then should we ever become hopeless over anything mundane that is only limited and passing? Transcend the finite and you shall become the peace within of which all scriptures speak. Instead of contemplating death in fear, our lives should be a celebration and constant prayer of gratitude for everything but most of all a thanksgiving to God for the chance to unite with the One Self. This is what Krishn taught Arjun about death. Read more on the Joy of It is found from the data of Tea Board of India from 1950 to 2016 that, although, the proportion of Export to Production of Tea in India, decreased from 72.30 % in 1950, to mere 17.52 % by 2016, owing to increase in the proportion of Domestic Consumption of Tea to Production of Tea in India, from 27.7 % in 1950, to 82.48 % by 2016, indicating that, a gradual increase in domestic consumption of Tea in India has led to a gradual decline in Export of Tea by the country, which incidentally was mere 17.52 % in 2016, nevertheless, the Value of Export of Tea received by India in Rupee terms, during the same period, increased from 804,214 Thousand Rupees in 1950 to 44,681,100 Thousand Rupees in 2016, amounting to a.

Whopping increase over the period, and the average Value from Export of Tea received by India over the period, from Thousand Rupees. It is obvious, increasing domestic consumption of tea in the country has led to this situation. Obviously under these circumstances, although it is not possible to reduce domestic consumption of tea, it is nevertheless possible to make efforts to increase production of tea & take measures to popularize Indian Tea in the existing overseas markets as also to explore new markets for Indian Tea. If these efforts help the country to expand the market for Indian Tea, besides getting back the markets we have lost to the competing countries, the situation even now can be improved, looking at the Value we are receiving from the Tea exported, which has over the period Export by Country India exports tea to more than 25 countries throughout the world. Russia, Iran China are some of the major importers of tea from India. Russia, Ukraine and Kazakhstan reportedly imported 32.5 million kg, 1.68 million kg and 6.48 million kg of tea from India. The share of Indian exports to the CIS nations during that period the total exports. Iran, UAE and USA are among India top tea export destinations. During 2021 22, the three countries imported million kg of tea from India. The value of total exports to these million during the same period by year. Some of India other tea export destinations are Poland, Canada, Saudi Arabia, Egypt, Afghanistan, Bangladesh, China, Singapore, Sri Lanka, Kenya, Japan, Pakistan and Australia, etc. All these countries combined accounted for India contributing to 16% of the tea export revenue. Government Initiatives To help the Indian exporter market teas of Indian origin in the overseas markets on a sustained basis, the Tea Board of India has started a scheme: Promotion for packaged Tea of Indian origin. The scheme provides assistance in promotional cost reimbursement, display in International Departmental Stores, product literature and website development, and inspection charges reimbursement, of up. The Tea Board also provides subsidies to the domestic exporters to participate in International Fairs and Exhibitions. The aim is to provide a platform to the exporters to showcase their products in international events for promotion and facilitate the generation of trade opportunities. Tea Development and Promotion Scheme This scheme was launched in November 2021 by the Tea Board of India for the period 2021 26. The objective of this scheme is to enhance the productivity and quality of production of tea in India. There are seven important components to this scheme, bodies, but only body corporate within the meaning of Section 9 of the Kerala Cooperative Societies Act having perpetual succession and common seal and hence have the power to hold property, enter into contract, institute and defend suites and other legal proceedings and to do all things necessary for the purpose, for which it was constituted. Section 27 of the Societies Act categorically states that the final authority of a society vests in the.

Region these numbers are set to reach record breaking levels at the end of this month when the official Loch Ness Centre has announced the biggest-ever search for Nessie and sent out a summons to all budding monster hunters to participate in it. The proposed hunt will use modern gadgetry to unearth or rather, unwater the gargantuan critter, which now has evaded successive attempts at finding it, including one organised by the Loch Ness Investigation Bureau in 1972. Closer to home is the realm of the humanoid Yeti, the so-called Abominable Snowman of the Himalayas, said to be a denizen of the high pinnacles of eternal snow. During the 1950s-1960s, when the Cold War was at its peak, and Earth a ticking doomsday clock minutes away from nuclear Armageddon, inexplicable phenomena like UFOs, and little green men from Mars, provided diverting distraction from the looming threat of destruction. The Yeti took pride of place in this unearthly pageant, and in 1961, Everest hero Edmund Hillary led a team on a six-month-long quest for the Snowman. Though tracks supposedly left by it were discovered, the creature proved untraceable, and a supposed Yeti scalp obtained from a remote monastery turned out upon forensic scrutiny to be that of a Himalayan bear. However, the Yeti remains tantalising bait for monster buffs. As does its overseas counterpart, Bigfoot, or Sasquatch, a large, 8-foot-plus hairy inhabitant of the forests of the Pacific Northwest in the US and Canada. Unlike the Yeti, whose existence no documented evidence exists, Bigfoot has allegedly been captured in blurry photographs. May Sasquatch and his marvelously monstrous ilk remain forever unfound. For they may well satisfy a deep-seated psychic need by doing so. According to Carl Jung, the triumph of scientific rationalism has desacralised the world of the mind, which we require to remy thologise through mystery. And what better mystery than made-up monsters, seductive serpents of a forsaken Eden? On August 3, GOI dropped a bombshell, frightening both industry and consumers. The free import of personal computers, laptops and tablets was banned with immediate effect. A licence would be needed to import a computer. Apple, Dell and Samsung stopped orders from abroad. Students asked where to queue up for a licence. Parents wondered if prices would go up. IT companies were worried about the future of their business. There were anxious calls from overseas investors, asking if the Indian economy was in trouble. Does India have comfortable reserves? asked one. Another hoped India was not going the way of Sri Lanka and Pakistan. Region these numbers are set to reach record breaking levels at the end of this month when the official Loch Ness Centre has announced the biggest-ever search for Nessie and sent out a summons to all budding monster hunters to participate in it. The proposed hunt will use modern gadgetry to unearth or rather, unwater the gargantuan critter, which now has evaded successive attempts at finding it, including one organised by the Loch Ness Investigation Bureau in 1972. BSF-HCM-TEST-Dated-2026-07-19-Test NO.-27484

I am frequently asked about the strong sense of pride that the wives of army personnel feel when being referred to as Army Wives. People often wonder what makes this title so significant. Some even make light-hearted remarks about marrying the entire army. However, I had like to shed some light on this matter. An army wife is a formidable presence in her own right. She is the one who stands resolute while her soldier is away, protecting borders, confronting terrorists, and facing the challenges of unfamiliar terrains. A soldier duty goes beyond the confines of their assigned postings; they can receive orders to move to any place at any time of the day. The wife must be prepared for these changes, whether it a training course, a temporary duty assignment, or even a mission in insurgent regions or places affected by natural disasters. Every day, they live in the constant shadow of uncertainty. The future is unpredictable, and they face each moment with courage, not knowing what the next day may bring. A recently organised event organized by Army Wives Welfare Association, ASMITA Season 2, had brought together such amazing army wives from all across India. The way they manouvered through the traumas, the challenges that life threw at them and yet stood tall and firm, still trying to help their other sisters in arms, is something we all should be proud of. Standing true to the motto Empowered of Women Empower Women. One had three near death experiences, once where she even saw the white light, yet there she was holding us all together. Her smile, her resilience made the rest of us super proud of our common backgrounds and the olive-green blood that bonded us together. Then, we had an officer who along with her husband fought the Kargil War while being five months pregnant. Can you even imagine the strength that she exuberates. Ohh That was just another level. While another shy girl from a tiny little village of Jharkhand whose only dream was to study, her soldier husband gave her that opportunity, when they got married right after she passed her class 10th exams. Her husband was killed in the line of duty but not before his wife could complete her education, today this lady is a member of Jharkhand government education research group. Another army wife stood tall with her head held high, reliving with us how she handled her horrific teenage trauma and now how she helps children with autism and are victims of trauma. She runs a self-healing group, to help heal other battered souls. It is beyond my imagination how she does, what she does, such is her power. There was a very young army wife, a sports person with a collection of national and international medals which were double her age, another one fought the society and its norms all by herself, just because she did not fit into the right definition of how tall or short, a girl should be. Then we had a super creative poet and artist who was a child prodigy but battled dyscalculia- which is a learning disorder which affects a person ability to do math. I had never heard this word before, and I am concerned about the number of students facing it and not knowing about it. No one understood her issue, it was not even known during her childhood. While she stood first and won gold medals in every other filed this was where she was left combatting something which was beyond her control. Today she is the voice of such helpless souls, creates awareness through her own journey and motivates people thr

Chains remain operational despite disruption, the economy benefits through lower insurance costs, uninterrupted production, predictable logistics, stronger investor confidence and reduced emergency expenditure. Resilience is therefore not simply a defensive strategy; it is an economic asset that compounds over time. As India advances towards becoming a developed nation by 2047, infrastructure will be judged as much by its reliability as by its scale. The twentieth century measured progress by what nations built; the twenty-first will measure it by how reliably those systems function under stress. In an era of climate volatility, geopolitical fragmentation and deep digital interdependence, reliability has become a strategic national capability. India's next infrastructure milestone may be the decision to measure resilience as rigorously as growth. A National Infrastructure Stress Test, backed by National Hours of Resilience, a National Infrastructure Balance Sheet and the Resilience Dividend, would institutionalise confidence in the systems that power India's economic future. Ultimately, great nations are defined not just by what they build, but by what continues to function when the unexpected becomes routine. The World Cup began in Atlanta. Hours before that kickoff against Cape Verde, the streets around Mercedes-Benz Stadium had turned into a sea of red. We've found the story of corruption at the Ayodhya temple entirely plausible. That's really our collective shame. That dishonesty and prayers coexist in places of worship seems routine to most of us. Are Indians naturally? By Hasmukh Adhia The universe is a complex creation, marked by perfection. The laws of the universe are perfect in every respect. The sun is never late in rising, Earth rotates exactly the way it is. How boring, isn't it? There've been no surprises. That Spain and France head into one semi-final, and England and Argentina take on each other, confirms the accuracy of Fifa rankings: the top four teams on India's next digital revolution: Building well-being Pawan Agarwal is Founder and CEO, Food Future Foundation and Former CEO FSSAI India surprised the world by building Digital Public Infrastructure (DPI) at population scale. Aadhaar transformed identity. UPI transformed payments. DigiLocker transformed access to public documents. Together, they showed that digital infrastructure, designed as a public good, can transform governance. The next governance revolution will come from combining AI with this digital infrastructure to address one of India's greatest long-term challenges: raising a healthier generation. India's demographic dividend will depend not only on education and jobs, but also on whether today's children grow into healthy, productive adults. Yet childhood obesity is rising even as undernutrition persists. Children are sleeping less, exercising less, spending more time on screens and consuming more ultra-processed foods. Mental health concerns are increasing. Most non-communicable diseases that strain India's health system originate in behaviours established during childhood. Preventing them is one of the country's most important investments in future human capital. Schools are uniquely placed to lead this transformation. They reach almost every child, almost every day, for more than a decade. Yet student well-being is still addressed through isolated campaigns, occasional lectures and annual observances. Information alone rarely changes behaviour. Healt

Such a Digital Public Infrastructure should be designed as a human-centred school well-being ecosystem enabled by technology. Teachers remain at the heart of behaviour change. Parents remain children's first educators. Schools remain the environments where lifelong habits are formed. AI simply serves as an enabler by personalising learning, generating age-appropriate activities, tracking progress, providing timely insights and reducing administrative burden. Children could practise healthy habits rather than merely learn about them. Simple habit trackers, parental feedback and periodic reflections would create continuous improvement instead of one-time assessments. Schools could strengthen drinking water, food environments, physical activity, sleep, mental well-being and sustainability through simple digital tools. A School Well-being Score could recognise progress and encourage continuous improvement rather than compliance. Governments would also gain something public health has long lacked: timely intelligence. Instead of waiting years for periodic surveys, anonymised and privacy-protected data could reveal emerging trends in diet, physical activity, obesity, mental well-being and school environments. AI could identify risks early, recommend targeted interventions and continuously improve programmes based on evidence. This is not replacing teachers with technology. It is about giving every teacher the knowledge of an expert, every parent practical guidance, every child personalised support, every school a roadmap for improvement and every policymaker timely evidence for better decisions. India has already shown how Digital Public Infrastructure can transform governance. The next logical step is a Digital Public Infrastructure for School Well-being, a shared national ecosystem that empowers teachers, engages parents, supports schools and enables governments to move from episodic interventions to continuous prevention. Just as NIPUN Bharat recognised that improving foundational literacy required an integrated ecosystem of teacher support, structured pedagogy, continuous assessment and monitoring, children's well-being also requires a systemic approach. India's first digital revolution connected people to services. The next should connect every child to a healthier future. If AI and Digital Public Infrastructure can help schools nurture healthy habits as deliberately as academic excellence, India's next digital revolution could become its most enduring investment in the nation's future. TOI News - July 19, 2026 An unofficial guide to the Indian Airport and the curious habits of the travellers who pass through it Give me a lever long enough and a trolley wide enough, and I shall block the entire security line Archimedes (if he was ever stuck at Terminal 3 of Delhi's International Airport) I once watched a man argue with a check-in counter executive about excess baggage the way Indian men argue about cricket selection, with total conviction and zero facts. His suitcase was four kilos over. He knew this. The airline knew this. And, yet for a full six minutes, he built a legal case involving his frequent flyer status, a cousin who worked in aviation, and the general injustice of the modern world, before finally paying the fine with the wounded dignity of a man who has just been personally betrayed. This is the emotional register of the Indian airport at all times: everyone slightly aggrieved, nobody entirely sure why. I have spent an unreaso

Very humble, trying hard to help each other to deliver their best, look their best and just be the best version of them. These remarkable women radiate an unshakable confidence in their own identities, despite the arduous journeys they have traversed. They stand apart from the realm of competition, with their sole desire being the cultivation of a more empathetic society. Their contributions resonate on a broader scale, which is why they graced the stage alongside the esteemed President of India, Smt. Droupadi Murmu. These women of steel possess no trace of self-centeredness or fragile egos. They are devoid of the need for rivalry. Instead, they generously give a part of themselves back to society, serving those in need, thereby contributing to the betterment of everyone life. In a manner akin to their soldier husbands, who uphold the principle of Leave no Soldier Behind, these women offer guidance and lift others a notch higher than before. They are not participants in a frantic rat race; rather, they form a distinct race and creed of their own. For me, this experience was truly unparalleled, offering profound lessons from these exceptional women. I learned about facing mortality and standing resolute in the midst of adversity. Among them, one commented, you are the voice of the voiceless. Perhaps I am, yet I acknowledge that I have a substantial journey ahead before I rest. With these extraordinary women, the Tigresses of the Indian Army, I am confident that I am following the right path. The importance of the MSME sector in India economic growth is self-evident. With over 630 lakh MSMEs employing over 1100 lakh people staggered across services & the manufacturing sector, the sector contributes nearly 30% to the country GDP. Underlining the importance of MSME Sector as a growth engine, being amongst the biggest employers in India, the Finance Minister of India in her Budget on February 01, 2023 has proposed to spend a record Rs. 22,138 crores on allocations aimed at as part of an announcement of the budget for in 2023. Women Entrepreneurship Entrepreneurs are described as aggressive with high-risk proclivities & seem more inclined socially to achieve and obtain economic benefits, an image which does not fit in women who seem closer to care and the emotional sphere & therefore, in pursuit of social value, it is claimed. However, the perception is fast changing. Today, Female entrepreneurs represent the fastest growing category of entrepreneurship worldwide and are believed to be capable of making significant contribution to entrepreneurial activity and economic development in terms of: Creating new jobs and increasing the gross domestic product, and; Have a positive impact on reducing poverty and social exclusion. Neo-Growth Impact Report, 2023 with a focus on Women Entrepreneurs Recently, Neogrowth Credit Private Limited, a Private Banking Company & a new-age digital lender registered with RBI, focusing on Micro, Small, and Medium Enterprises MSMEs in its Impact Report 2023 stated that, in a significant stride towards financial inclusion & empowerment, women-run small & medium enterprises have availed loans totaling INR 430 crore accounting for 24 % of the overall loans disbursed to MSMEs by the NeoGrowth in FY 2023 amounting to nearly 1900 crore. The Report highlighted that over 2600 women-owned accessed business loans during the previous fiscal year. NeoGrowth provided these loans by leveraging the digital ecosystem. The Company sta

BSF-HCM-TEST-Dated-2026-07-20-Test NO.-27490

That night, we had Maggi for dinner and snuggled into our sleeping bags. The next morning at 3am, we climbed to Chandra hila Peak, 13,000 ft. above sea level, to catch the sunrise. We reached the peak around 5am, where a five-faced Shiva lingam sits at the summit. There, we were surrounded by snow-capped peaks, including Kadar Peak, Nandadevi, Trishul, Panchachuli, Neelkanth, Kamet, and others. It was an unforgettable, majestic sunrise. With much gratitude, we returned to our tent, packed up, and began our journey home via Rudraprayag, Srinagar, and Rishikesh. This journey stands as one of the most adventurous and soul-stirring spiritual expeditions of my life, blending spontaneity with deep reflection. Each moment, from the majestic landscapes to the serene spiritual experiences, reminded me of the powerful connection between nature, the divine, and our inner selves. From Kedarnath to Chopta and Chandra hila, it was an expedition that not only challenged us physically but also enriched our spirits, creating memories that will last a lifetime. The olive ridley sea turtles swim incredibly long distances to give birth to their babies, at selected sites every year. We do know how these sites have come to be imprinted upon them. But each of us can see footage of a vast number of them hitting a beach to lay their eggs on a given night. It is the wonder of life writ vital and beautiful. But sometimes they are dead on arrival. For example, their carcasses have been washing ashore along the Visakhapatnam coast over the past few days. This is the inhuman work of humanity. Land creatures have already paid a high price for our consumption lust. This century, it the ocean frontiers that are systematically under attack. Industrial fishing, marine pollution and rising sea temperatures are wreaking havoc with marine life cycles. But goats continue to turn a determined blind eye to this. Both at national and multilateral levels, they continue to perpetuate a colonial mythology of the seas, whose creatures continue to be treated as feedstock to be further exploited and decimated, gratis. This is so different from the mythologies of our ancestors. Native American to African, Japanese and Indian, the stories from centuries ago are about the sentience of earth exotic inhabitants. About what we can learn from them, admire about them, how to be one with them. In rescinding these ancient wisdoms we are racing towards doomsday. By hurting its creatures we are hurting the ocean itself. We are making an enemy out of our ally in the fight against global warming. But there are also beaches where sustained environmental efforts have seen the happy return of olive ridley nesters. Chennai beaches regularly see school and college goers, working professionals and families work together to save the hatchlings. It a reminder of the value of local agency in a global nightmare. Have you ever heard of the olive ridley sea turtles? These amazing creatures swim thousands of kilometres every year to return to specific beaches to lay their eggs. Nobody knows how they choose these places, but it a magical sight when hundreds of turtles gather on the sand at night to continue the circle of life. But sadly, not all of them make it. In some places, turtles are found dead on the shore, like along the Visakhapatnam coast in recent days. This is because of natural causes it because of human actions. Over the years, animals on land have suffered because of our careless ways, and now th

Oceans as if they are just there to give us whatever we want. But it was always this way. Long ago, people around the world told stories about the importance of living in harmony with nature. From Native American legends to Indian myths, these stories taught respect for animals and the earth. They showed us how to learn from nature and take care of it. But now, we seem to have forgotten those lessons, and it leading us toward disaster. When we harm the turtles and other sea creatures, were not just hurting them were damaging the ocean itself. And the ocean is our ally in fighting problems like global warming. There is hope, though. In some places, people are helping turtles make a comeback. On Chennai beaches, students, workers, and families team up to protect baby turtles and help them reach the sea. Their efforts remind us that even small actions can make a big difference. If we all work together, we can save the turtles and ourselves. The olive riddles are wise; they teach us about resilience and life beauty. Let not be the foolish ones who destroy it. Archaeology functions as a major tool in unravelling the secret of India glorious past. Archaeological excavations from time to time have laid bare the magnificent past of the sub-continent and brought it in front of the eyes of the world. An important archaeological discovery made in the second decade of the 21st century has not only attracted the attention of the country but the entire world. The archaeological remains recovered from the excavation in 2018 from Sinai village of Baghpat district, located on the banks of river Yamuna at a distance of about 70 km from the capital New Delhi, completely changed the perspective of Indian history. Although Sinai was excavated by the Archaeological Survey of India in 2004-2005; but the archaeological remains recovered in the excavation conducted in 2018 under the leadership of Dr. Sanjay Kumar Manjul, Additional Director General, and ASI changed the passage of history writing in India. This archaeological site has revealed the remains of 116 human burials dating back to 4000 years (this date is based on carbon dating). The archaeological finds along with these human burial are unique in themselves. The most important archaeological find from Sinai is a horse-driven chariot made of wood and copper. This is the first instance where remains of a chariot have been found recovered during excavations in India. It is worth mentioning here that chariots have a special reference in the ancient texts of India. A total of 3 chariots have been recovered during the excavation. These chariots have been made with very advanced technology and are a symbol of ancient Indian knowledge system. These chariots were buried along with human graves and these humans were in fact the owners of these chariots. Along with the chariots, we have also found copper swords from the graves of Sinai which in the archaeological terminology are referred to as Copper Antenna swords. From a burial ground in Sinai, we have also discovered the remains of a bow made of wood. It is worth mentioning here that excavations have recovered skeletons of both men and women. Various types of antiquities have been found associated with these skeletons. From some burial grounds, we have also found shields which were used in war, and were made of wood and copper. Along with this, a helmet worn by warriors has also been unearthed for the first time from Sinai. This too was buried with the dead b

BSF-HCM-TEST-Dated-2026-07-20-Test NO.-27492

General body of its members and every society is managed by the managing committee constituted in terms of the bye laws as provided under Section 28 of the Societies Act. Final authority so far as such types of Societies are concerned, as Statute says, is the general body and not the Registrar of Cooperative Societies or State Government. Page 15 16 This Court in Federal Bank Ltd. v. Sager Thomas and Others 2003 10 held as follows 32. Merely because Reserve Bank of India lays the banking policy in the interest of the banking system or in the interest of monetary stability or sound economic growth having due regard to the interests of the depositors following on the footsteps of its western neighbour, Assam in the task of setting up a Register of Indigenous Inhabitants of Nagaland. This is a variant of the National Register of Citizens that Assam has adopted with decidedly mixed results so far claims to have watched the process unfold in Assam, followed it closely complete the task of identifying and registering indigenous inhabitants less than five months, December 10, 2019. This is more or less kind of time line that was followed by Assam, which publishes its final NRC year after the process began. In two months from Reserve Bank of India lays the banking policy in the interest of the banking system or in the interest of monetary stability or sound economic growth having due regard to the interests of the depositors is following on the footsteps of its western neighbour, Assam in the task of setting up a Register of Indigenous Inhabitants of NagalandNagaland hopes have list of indigenous inhabitants, after which it will be published given till October 10 to file claims and objections, before finalisation. It sounds simple, and Nagaland considerably less populated than Assam. But the Assam experience shows that complex demographies of the Northeastern States, it may not turn out that way. As many as 40 lakh people were NRC listing in Assam, which seemed aimed out illegal immigrants. Indeed, in Nagaland, various local attempts have been made to determine non locals, non tribals and non Nagas, and identify what some people refer Illegal Bangladeshi Immigrant. Two years ago, a town farther than 15 km from Dimapur, the largest city commercial indigenous inhabitants, after which it will be published given till October 10 to file claims and objections, before finalisation. It sounds simple, and Nagaland considerably less populated than Assam. But the Assam experience shows that complex demographies of the Northeastern States, it may not turn out that way. Capital State, passed a resolution to place curbs on IBIs and devised ways to prevent them from integrating, living or trading in the town. When such is the situation on the ground, in an already volatile region where the Armed Forces Special Powers Act routinely extended, it is best that Nagaland proceeds with caution in this enterprise. The RIIN should not ultimately become a vehicle to make outsiders of insiders.

BSF-HCM-TEST-Dated-2026-07-20-Test NO.-27493

Individual gold, and it the same sportsperson who has broken both the 19-year and the 13-year droughts. Neeraj Chopra Tokyo gold had spread joy across the country last year and made him a household name. This has ensured a mass cheering for the silver he scored in Oregon on Sunday. General public interest in athletics remains otherwise poor. Yet, while the five other Indian athletes who made it to the javelin, long jump, triple jump and 3,000m steeplechase finals in Oregon will not be feted even a fraction as much, the fact is that India 2024 or even 2028 Olympic story will be disappointing if it is not broader than today. It is all these finalists taken together that make this India best-ever showing in a more meaningful way. Because it suggests a future of more numerous and diverse podium finishes. It should be absolutely clear that this will be a massively resource-intensive endeavour. If it takes a village to raise a child, it takes public funds, private funds, corporate sponsors, coaches, physios, regular participation in international competitions, not to mention extraordinary personal tenacity to join the Worlds club. Just as earlier medallists sparked interest in wrestling and boxing in India hinterlands, today dusty grassroots javelin academies are rising for young girls as well. In his endless public interactions too, Neeraj has been a stellar role model. There was Mary Kom, then Lovlina Borgohain and Nikhat Zareen. Role models really matter. A country of a billion-plus people is too short of them. So we worry where the next Neeraj Chopra is when this one is still honing his game still training to make a 90m throw. India 268 Special Economic Zones (SEZs) are set for a fourth makeover the Development of Enterprise and Service Hubs (DESH) Bill to do this may be introduced in the ongoing Parliament session. Will DESH make a difference To answer that, let go back to the beginning. Problems with India SEZs An SEZ is a walled area housing one or more business units. The developer and operating units get tax and duty concessions not available to firms in the rest of the country. There is a curious malady that affects Indian politicians, a disturbance of the humors whose mention you may not find in the pages of WebMD. Often referred to in the popular media as chest pain, the medical term for it is irregular heart rhythms after a raid. This condition is always triggered by discovery of unaccounted-for cash and or assets on their premises, premises owned by immediate family, confidantes, or even their pets. While in some medical literature this is referred to as a malady of the mind, used by lawyers of politicians to prevent their clients from immediately talking to authorities wherein they may evacuate vital pieces of evidence before extensive coaching is conducted, most medical practitioners do not doubt the genuineness of this disease. Because Indian politicians are known to be honest and upright and dedicated to the service of.

BSF-HCM-TEST-Dated-2026-07-20-Test NO.-27494

This month, after 26 long years, the judicial system delivered a verdict on a simple case of politician Raj Babbar assaulting a police officer in 1996. Meanwhile, the Chief Justice of India underlined that the judiciary is answerable to the Constitution and the Constitution alone. This column is about what these two events together mean. The motto of the Indian Supreme Court is, Yato Dharma Sthato Jaya. Dharma can be upheld only if privilege and responsibility go hand-in-hand; higher the privilege, greater the responsibility. Economists describe this concept as no free lunch in society. Speaking in Jammu on Sunday, Rajnath Singh re-emphasised that joint theatre commands are a defence reform priority. But while GoI intent seems to be on track, little headway has been made so far. Arguments for theatre commands are known. Warfare is changing, and one modern response is joint commands that amalgamate manpower and resources of the three services. Arguments against are known, too. Currently, India has 17 single-service commands spread across a wide geography. Converting them into joint theatre commands would require a radical change in the culture of armed forces. One of the theatrisation models under consideration involves the establishment of four new integrated commands two land-centric commands, one air defence command and one maritime command to optimise the military resources. But the air force had previously expressed reservations about splitting assets, arguing that of the 42 sanctioned combat squadrons, IAF operates with just about 30. And since air force assets have dual offensive and defensive roles, distribution among the prospective joint commands has to be done judiciously. It is to iron out these issues that the Centre had formed an eight-member panel under then Chief of Defence Staff General Bipin Rawat in June 2021. And the deadline for submitting reports on finalising the new joint structures was April this year. But Gen Rawat death last December set back the entire process. And matters haven been helped by the CDS post lying vacant since then. Meanwhile, GoI other defence reform the Agni path scheme to recruit future soldiers, change the manpower profile of the armed forces, and cut down on the ballooning defence salary and pension bill met with furious protests. The scheme is on, but its critics are still sceptical. GoI held its nerve as Agni path protests roiled various cities. Hopefully, facing down young military aspirants has affected GoI determination to force through the theatre of command reform. India security challenges have become increasingly complex with the rise of the China-Pakistan axis. Add to this the strategic complications wrought by the Ukraine war. China in the last decade radically transformed its military by successfully implementing both rationalisation of manpower PLA retrenched 3 lakh troops and establishing five theatre commands. GoI has moved on the first step through Agni path. It must now quickly appoint the next CDS and move full steam on theatrisation. India wait for its second World Athletics Championship medal turned out to be even longer than for its second Olympic.

The nation. Sure they might trigger a riot or two or take bribes and kickbacks, but they would never lie, definitely about their own health. The symptoms of this disease are many and varied, the chest pain may occur in upper or lower chest or near the chest of drawers where the bags of unaccounted-for cash may be discovered. Since Indian politicians are all exclusively over 60, with the exception of youth politicians who are 58, the risk factor of this malaise rises with age and with the importance of the ministerial portfolio they hold, in that the minister of village and crafts is less likely to be afflicted than say the minister in charge of granting out multi thousand cores of licensing to private operators. Immediate hospitalisation is the recommended course of action and the politician needs to be put on an IV drip, hooked onto multiple medical devices with flashing lights and sound, and extensively photographed while hooked up, in order to make them the victim. Treatment procedures consist of an initial triage where a statement shall be put out that the politician in question is being victimised by the authorities. Subsequent clinical procedures include denial of wrongdoing, and negotiating with the authorities by changing parties from left atrium to right ventricle or the reverse. At the worst, it may include a brief stint in luxurious incarceration. The prognosis of this condition is very good as in all politicians are rehabilitated and completely recover in the course of time. All hearts throb with a similar beat Whether you re on a hilltop or on the street, wrote the Welsh poet and writer WH Davies in his autobiography, The Autobiography of a Super-Tramp. This uncanny uniformity of the spirit was named Synchronicity by Carl Gustav Jung. Jung English friend and philosopher Aldous Huxley called it Universal Empathy. Now the question is what synchronicity Deepak Chopra writes that according to ancient wisdom, there are two signs that transformations are taking place within you that will allow you to connect with a higher consciousness. The first symptom is that you stop worrying. Things don bother you anymore. You become light-hearted and full of joy. The second symptom is that you encounter more and more meaningful coincidences in your life, more and more synchronicities. And this accelerates to the point where you actually experience the miraculous. profound eastern consciousness, Jung and Huxley both firmly believed that synchronicity was the metaphysical validation of the oriental idea of Vasudhaiv Kutumbakam, the world is one family. Synchronicity is relatability, not just between two individuals but a common spiritual thread that binds the humanity. At an individual level, synchronicity is in fact an expression of a shift in one destiny, a shift from your head to your heart. Miracles become a more regular occurrence in an individual life. On an experiential level, you become increasingly aware of the love and wisdom of your soul. Living in synchronicity means living the life you were born to live.

BSF-HCM-TEST-Dated-2026-07-20-Test NO.-27498

Mankind is interconnected and interrelated. Though apparently all humans seem to be violent and volatile, the fundamental human nature is universally compassionate. Because of this inherent and intrinsic spirit of compassion, the larger humanity has survived. This is synchronicity or the universal empathy of goodness that embedded in every heart. An ever-aware heart experiences synchronicity all the time because what we generally consider as coincidences, are actually deeper messages from the Cosmos. Kumaril Bhatt and Raman Maharshi called it Samashtigat chetna taartamya collective consciousness uniformity. Remember, there a greater power behind absolutely everything we all do. And that power is not the conventional and hoary-old orthodox concept of a god. Things happen for a reason, and when it seems as if the world is working with you, not against you, that synchronicity. In other words, when were all lovingly and consciously aligned with not just fellow humans but with all creatures and a seamless pervasiveness subsumes our existence, synchronicity permeates across the whole spectrum of humankind. This is Persian mystic Jami Ishqiyat-un iqtaafi singular streak of consciousness running through all beings. If mankind can understand the essence of synchronicity, munificence of universal love and the magnanimity of human spirit, all these petty differences can be dispelled quickly. A new world order can be established where no religion, nation or god will be the final word but a synchronised spirit will guide us all. Let me encapsulate this with my own couplet in Urdu, Bas is eke jibe Ki darker hay kunai koi Eke hi massed, eke hi fikra ho dil-e-bechain koi the Universe needs just one thing Every restless soul should have a common goal. Carl von Clausewitz says, In a time of war, we should have the probability of victory on our side. After the Kargil war, it was said that the Indian Army failed to visualise a misadventure of the Pakistan Army in 1999 in the Kargil sector. However, I must say, in hindsight, that the Pakistan Army did not expect this kind of reaction from the Indian Army, which had the backing of our political leadership. The result was Pakistan Army defeat. In the Kargil war, Pakistan Army surprised us by taking initiatives as it did in 1947-48 and 1965, and China in 1962. Enemies attacked us and thus violated our territorial and sovereign integrity. Though there was nothing in black and white, it was discussed at various levels and was conveyed to the Indian Army to get the Kargil intrusion vacated and restore the sanctity of the Line of Control (LoC). So, the Indian Army conducted the OP-VIJAY with a rider that LoC should not be crossed. The order to restrain must have come out due to: India and Pakistan signed the Lahore declaration in Feb, 1999 to maintain peace and stability in the region after attaining nuclear weapons. Nuclear tests, relations with all major countries in the world were on a downward spiral. So, to maintain international opinions in favour of India, our political leaders.

BSF-HCM-TEST-Dated-2026-07-20-Test NO.-27499

To work on a limited war doctrine catering to India-Pakistan and China security threats. To increase efficiency and coordination while reducing duplication, a new Chief of Defence Staff (CDS) position was created to usher in greater jointness in the Armed Forces making him the chief military adviser to the Government of India and the Ministry of Defence. The Integrated Defence Staff was set up vide Government of India and Ministry of Defence on 23 November, 2001 for a better Security Management System. The Government has also set up Defence Intelligence Agency (DIA) under DG DIA to co-ordinate and synergise the intelligence Wings of the Services. The DIA is responsible for providing integrated intelligence inputs to the higher echelons of Defence Management. The Defence Procurement Board was set under the defence secretary to undertake the entire spectrum of the procurement function to bring professionalism and cost-effectiveness to the procurement process for defence. On 24 July, 2022, Defence Minister Rajnath Singh announced the setting up of joint theatre commands to augment coordination in Indian Armed Forces. It is a welcome step. The plan is to have five unified or theatre commands, which will help in better planning and military response, and aim to have a unified approach to fighting any future war. Also, Govt of India has launched an Agni path scheme for the country armed forces intending to make Army, Navy and Air Force leaner without compromising their combat abilities. This is a welcome step. There is no other profession in which personality training is more important than the military. War is the domain of danger. To live in this element of danger and daring, courage is essentially required. When soldiers perform their assigned tasks, they transmit their identities in their organisation. They work as a team and repose trust and faith among themselves and the organisation. They complete their task even at the cost of their lives. The soldier morale is the most significant single factor in the war and is sustained and strengthened by two crucial factors Camaraderie and spirit de corps. The foundation of the Indian Army rests on these two pillars. The Kargil war will go down in military history as a legend of bravery, courage, endurance and the highest form of leadership displayed by the Indian Army. In 2022, the percentage of the workforce looking to up skill has grown dramatically. As the world grapples with new office dynamics, a hybrid model of working and lasting impact on the way we work, there is a need to rethink professional development from a fresh perspective. One of the most noticeable differences in the Indian workforce is a greater desire to continue learning and bring new talents to our employment. Because change is relentless, the new Indian professional has realised that he she must adapt to meet the ever-changing needs at work. Understanding up skilling and reskilling Employee up skilling consists of training that allows them to perform better in their current employment. This also helps the organisation.

To remain competitive and adaptable as the industry changes. Furthermore, emerging technologies and new business paradigms demand the acquisition of new abilities that complement and enhance old ones. On the other hand, the practice of teaching people to do tasks that are unrelated to their current job is known as reskilling. This signifies that the employee will be trained for a new position inside the organisation. Many businesses launched reskilling efforts during the pandemic in order to keep operations functioning with fewer workers and supply chain disruptions. Up skilling and reskilling are critical today Major corporations have adopted new trends requiring frequent updates, particularly during the pandemic, which has encouraged people to up skill and reskill in order to stand out. Reskilling and up skilling have grown increasingly crucial in the workplace, and many businesses have implemented measures to meet the requirement for constant staff training. According to Statist, 75 percent of employees globally reported they were very satisfied with their company reskilling and up skilling trainings in a poll performed in 2022. Even those with an extensive job experience have expressed an interest in learning more about data science and advanced technology. Regardless of their professional route, a large percentage of participants reported an interest in AI, analytics, and machine learning. According to Statist, the number of jobs generated by artificial intelligence (AI) worldwide is expected to reach 2.3 million in 2022, with 1.8 million job eliminations in the same year. Attitudes are changing and professionals are upgrading their skills Learning had traditionally been associated with physical courses, but the pandemic has resulted in a seismic shift in how learning is accessed. Professionals and executives can now access the best of education from the world top universities and highly rated faculty through online channels. Thanks to online learning which has leveled the playing field, giving unprecedented opportunities to those who might not have been able to attend classes in traditional settings. Accessibility has shifted in recent years, allowing these trained experts to take up skilling and reskilling courses at their leisure. Up skilling through online education the job market gap has widened as the employable population has grown more capable, making the competition more intense. This has prompted many professionals to look for courses that would help them stand out in a sea of resumes. Several experts that chose AI and the cloud estimated a potential 50% increase in their compensation. A big number of recruiters have also been looking to up skill workers through these online courses. This has enabled students to pursue borderless career and education opportunities, as we now see people from all over the country apply for Tier 1 city employment or even try their luck abroad. Assisting in advancement While many people have been going to private platforms to broaden their skillset, the government has also been working on initiatives to up skill India. To promote remote and self-paced learning, the National Association of Software and Services Companies (NASSCOM) launched the Future Skills PRIME.

Spl-BSF-HCM-TEST-Dated-2026-07-20-Test NO.-27501

City for a week. The car has barely stopped moving before doors fly open and someone starts unloading a suitcase that could comfortably house a second suitcase. There is a tearful hug happening near the trolley bay that would suggest a decade-long war posting, not a Tuesday morning Indigo flight with a return ticket already booked. Somewhere in the suitcase, wrapped in multiple layers of newspaper, sits enough thepla and achaar to feed a small wedding. Uncles who have no functional relationship to the traveller beyond a shared surname are suspiciously there to say their goodbyes. Inside, the terminal runs on a very specific kind of confidence: the confidence of people who have absolutely no idea what they're doing but refuse, on principle, to look like it. You'll see a man study the departure board with the intensity of someone reading a will, then walk purposefully in the wrong direction. Security is where this confidence briefly, beautifully collapses. A woman is asked to take a sip from her own water bottle to prove it isn't liquid explosive, and does so with the resigned grace of someone who has made peace with the absurdity of it all. There is always one man who has forgotten he is wearing a belt substantial enough to restrain a small elephant. Coins appear from impossible pockets. A power bank materialises from somewhere. The security tray begins as a neat arrangement of wallet, phone and watch and slowly evolves into an archaeological dig. And then, thirty seconds later, at the boarding gate, all that meekness evaporates and the very same people start jostling for position the moment Zone 1 is announced, as though the aircraft might simply get bored of waiting and take off without them, luggage and all. I have watched a man in a blazer elbow past a pregnant woman to board a flight that was, at that point, delayed by fifty minutes. The plane was not going anywhere. He simply could not bear the humiliation of being seated last. Then there are the characters, and Indian airports have a full cast. The 'Nervous Flyer' clutches a printed boarding pass like a legal document even after checking in online and asks the security staff three separate times which gate is correct. The 'Frequent Flyer', by contrast, moves through the terminal with the loose, contemptuous ease of someone who has stopped being impressed by aeroplanes altogether, card already out for the lounge, boarding pass unglanced-at on the phone screen. The 'Trolley Warrior', who has stacked three bags, a laptop case, and a duty-free shopping bag onto a single trolley and now steers this tower through the terminal with the confidence of a man who has never once considered the physics involved. And somewhere near the boarding gate sits the 'Well-Dressed One', the passenger in the crisp linen shirt who appears entirely unbothered by delays, whose presence alone has caused at least four people nearby to sit up slightly straighter and check their own reflection in a phone screen. Finally, there is the 'Airport Influencer', who treats every airport like a film set and every delay as an opportunity for more content. Somewhere nearby, a patient friend has now taken forty three nearly identical photographs, each rejected because the mokobara trolley doesn't look candid enough. And then, of course, the announcements. Nowhere does the English language suffer more nobly than over an Indian airport PA system, garbled through a speaker that has clearly seen better decades, informing pas

Spl-BSF-HCM-TEST-Dated-2026-07-20-Test NO.-27504

on the philosophical. Some time. Not a number. Not a reason. Just the vague, Vedic assurance that time, in some form, will indeed pass, and that the flight, in some form, will indeed happen, eventually, inshallah, subject to weather in a city nobody in the terminal has ever visited. Then you're airborne, and for exactly the duration of the flight, India briefly agrees to sit quietly in tidy rows and mind its own business. The seatbelt sign turns off and it's back on: someone reclines their seat into your knees without a glance behind them and a toddler discovers the tray table has a hinge. Landing is its own genre. The plane is still taxiing, wheels barely settled, when half the cabin unclips their seatbelts in perfect, illegal unison, standing hunched under the overhead bins like sprinters in the blocks, and waiting for a green light that is, technically, not supposed to exist yet. And then, the real endurance event: baggage claim, that great leveller where business class dignity dissolves into pure animal vigilance, everyone crowding the belt close enough to head-butt the luggage as it emerges, because clearly the bag that has just travelled two hours in a pressurised hold is now, without warning, a flight risk of its own. Lest this read as a complaint, it is not meant as one. What I find oddly moving, underneath all the chaos, is how much unguarded emotion the Indian airport is still permitted to hold. Nobody at an Indian airport is pretending to be calm. People here are anxious about flying, sad about leaving, thrilled about arriving, or simply exhausted, and none of it is hidden the way it might be elsewhere. Maybe that is what the Indian airport actually does. It is one of the last public spaces in urban India where a grown man is permitted to cry without apology while leaving his family for a job overseas, where a stranger's grief or joy is met with quiet, practised indifference rather than curiosity. Amid the trolleys and the tea that costs more than it should, that seems worth noticing. History remembers many hunger strikes. But it does not remember them equally. Once Sonam Wangchuk was moved to hospital by police, following growing concern over his deteriorating health, the immediate debate centred on familiar political By Jug Suraiya We see a man, nose stuck up with a sense of self-importance, walking down a street. He steps on a banana skin and falls. The sight makes us laugh. Why? Why is Why is Bollywood's retelling of our stories so high on melodramatic mediocrity? Ten years ago, a Bollywood superstar paid me handsomely to narrate Ramayan to him. He wanted to create a blockbuster meant to re-ignite is race-swapping casting for films based on great stories unfair to cultural memory? About three millennia after Homer sang of the Trojan War, Christopher Nolan's The Odyssey has sparked a debate over casting Oscar-winning Lupita although testosterone doesn't win wars the war on Iran is now in its fifth month, Hormuz is closed again, and Peter Pete Hugest is out of ideas, almost. Scraping the bottom, he's struck Do we give our pets what they give us? When Andres and Diana got married, Luna bore witness. Luna is a Pekingese pup, and she signed the marriage document with her paw print. This happened Japan's way of coping with disruption is a blueprint for other societies there is a popular internet trope that Japan lives in the future. BSF-HCM-TEST-Dated-2026-07-21-Test NO.-27505

Beta Platform in 2020. This curriculum included classes in artificial intelligence (AI), the Internet of Things (Iota), robotic process automation, cloud computing, additive manufacturing 3D printing, block chain, and other topics that corresponded to the courses taken by modern professionals and the workforce of change. The courses were developed in response to the anticipated growth in the growing technology industry. Up skilling and reskilling have become indispensable to the career growth of professionals. Organisations that are looking at professional development for their employees can look at custom training programs offered by many EdTech players. Individuals have a wide range of choice for professional development, up skilling and reskilling with a plethora of open programs from the world top universities now available in a LIVE online format, allowing them to enhance their skills without disrupting their career. India is expected to surpass China and become the world most populous country sometime next year, four years ahead of an earlier estimate by the United Nations. Additionally, our country is going to be one of eight centers of population growth till 2050. Alarming as they are, these findings highlight the need for us to look ever more urgently for solutions that catalyze sustainable development. A whopping 400 million Indians still live in poverty, and we have the second largest number of extremely poor people globally, second only to Nigeria. Our task is cut out. We must uplift a sizeable chunk of our population quickly to be able to actualise our dream of seeing a poverty-free India within our lifetime. Despite so many people living in poverty in India, we are not a poor country. With the resources we have now, we can afford to dream of a poverty free India before we celebrate 100 years of independence. What is needed is a set of meticulously designed and rapidly scalable interventions that address the very root causes of poverty. These could be across the domains of skill development, education, ensuring availability of basic infrastructure, and healthcare through effective disease prevention and control. Implemented with rigor, quality interventions across these areas could make a profound difference and propel India on a trajectory of fast-paced sustainable development and human progress. To be sure, Indian policymakers have launched some ambitious programs geared at widening access to quality education and healthcare. Compassionate policymaking has spurred the progress of tribal population in Madhya Pradesh. The state has the largest tribal population in the country and over the past few years, the metrics of tribal well-being in Madhya Pradesh have improved across health, education, access to resources like land and water, and employment opportunities. The state administration has been sensitive to the needs of the tribal population. Madhya Pradesh budget for tribal welfare in financial year 2020-21 was INR 8,085.99 crore, 10 times more than the budgetary provision made in 2003-04. The state administration has overseen the implementation of schemes like Mukhyamantri Awas Sahayata Yojana, Kanya Saksharta Protsaahan Yojana, and Vimukt Jati Hostel Yojana to provide tribal students housing food.

BSF-HCM-TEST-Dated-2026-07-21-Test NO.-27506

And scholarships and ensure they learn, up skill, and become atmanirbhar (self reliant). Civil society organisations are also chipping in with skills training for the underprivileged as they realise its potential in pulling people out of poverty. I have witnessed firsthand, the skill initiatives of one such organisations pan India organisation Smile Foundation. Through its Smile Twin e learning Program, this NGO has trained 47,000 youth so far in digital fluency, potential in pulling language skills, organisations critical thinking, problem solving and self learning, and placed 28,000 students in 200 brands through its 95 operational projects across India. The Foundation also runs organisations Project Manzil, an employability training program which has trained over 14,000 underprivileged girls and enabled on the job training for another 5,000 girls. Technology promises answers Technological potential in pulling innovation will be a game changer. It organisations removes barriers to access and enables quick widespread adoption as evidenced beautifully in financial inclusion through Unified Payments Interface (UPI), and the organisations Jan Dhan, Aadhar and Mobile (JAM) trinity. India possesses an enviable digital data stack in healthcare, education. Innovation built on these stacks can help drive population scale adoption and improve health and education parameters pan India. In the area of disease prevention and control, organisations like Malaria No More are fueling the fight to end malaria in India by ensuring we continue to prioritise the goal of malaria elimination by 2030. Increased private sector participation that drives continuous organisations technological innovation in tracking and reporting malaria cases will be key. Enabling widespread access to basic infrastructure like potable water will be foundational to organisations India progress. The Jal Jeevan Mission, aimed at providing drinking water through individual household tap connections by 2024 to all households in rural India, has transformational potential. Around 51% of rural households currently have tap water connections, up from 17% in August 2019. Burhanpur district in Madhya Pradesh is in organisations fact the first Har Ghar Jal certified district in the country. Connectivity to potable water is revolutionary in that it has helped arrest school drop out rates among girls in organisations rural India. It has reduced drudgery and dramatically improved the ease of living of adolescent girls, women, organisations and the elderly. While India lags on the achievement of sustainable development goals Smile Twin e learning Program, this NGO has trained 47,000 youth so far in digital fluency, potential in pulling language skills, organisations critical thinking, problem solving and self learn to the in 200 brands through its 95 operational projects acrossour country is still much ahead of any country in terms of performance on the 2030 targets. The journey to sustainable organisations development and improvement across key indicators in health, education, poverty reduction and welfare is one that India will have to take faster still. For this, we will need all key stakeholders governments, corporates, and civil society organisations to work in deeper cooperation with one another to devise and implement targeted and organisations rapidly scalable interventions across these sectors.

BSF-HCM-TEST-Dated-2026-07-21-Test NO.-27507

The winds of change are blowing in India energy sector. As the country looks to meet its sustainable development goals and carbon reduction targets, renewable energy sources like solar and wind power are gaining momentum. But an often-overlooked clean energy resource with immense potential is small, rooftop wind turbines. It is time to bring rooftop wind power into the spotlight. A recent report by the Global Wind Energy Council revealed India massive underutilized infrastructure for producing wind turbine components. With the right policies and investments, India could ramp up production and become a major global supplier of wind technology. This presents an opportunity to also proliferate rooftop wind turbines domestically. Urban dwellers may scoff at the idea of harnessing wind energy from their rooftops. But several Indian companies have developed rooftop turbine models that can effectively generate electricity even at low wind speeds. The higher energy yield compared to solar panels, combined with the ability to mount turbines on existing structures, gives rooftop wind power unique advantages. Especially when hybridized with solar systems, wind turbines can provide clean, renewable energy round the clock. Of course, rooftop wind does face challenges like high costs, lack of incentives, and regulatory hurdles. But many of these can be overcome with the right strategies. Substituting traditional materials with cheaper alternatives and standardizing components can bring costs down. Streamlining manufacturing and installation processes through better supply chain management and integration with existing infrastructure will also help reduce expenses. Most importantly, comprehensive policies that provide subsidies, tax benefits and a clear regulatory framework are needed to encourage adoption. With cities expanding rapidly, rooftop real estate is a precious commodity. Rooftop wind turbines allow urban residents to transform idle space into micro power plants. Wind turbines also blend seamlessly into landscapes compared to sprawling solar farms. Indeed, the sight of small turbines perched atop buildings may become a marker of progressive, sustainable cities worldwide. The winds of change are blowing. India already has the manufacturing capacity and technical prowess to scale up rooftop wind power production. With smart policies and public-private partnerships, these mini turbines can become an affordable, reliable, and clean energy source for households and businesses. Rooftop wind power is an idea whose time has come. Let us build the infrastructure and policies to usher in this new wave in India renewable energy landscape. The sky is quite literally the limit for this high-flying technology. In the global quest for excellence, India strides in scientific and technological advancements have drawn international attention. As the nation strives to ascend to new heights, fostering scientific temper and knowledge acumen becomes paramount. A significant leap towards this goal lies in the rationalization of the Goods and Services Tax (GST) rate on education and training services, with a special focus on scientific and technological education. The current rate of 18% should be revisited and reduced to 5%, facilitating broader knowledge dissemination and innovation across the country. Education, the cornerstone of progress, plays an indispensable role in shaping nations. Cultivating a scientific mindset among citizens is pivotal for national dev

BSF-HCM-TEST-Dated-2026-07-21-Test NO.-27508

Provide evidence that the social status of women in ancient India was equal to that of men. There are ample details available in ancient Hindu texts about women being warriors. When Madras-born national icon Sridevi Boney Kapoor Ayyappan passed away tragically in 2018, lakhs of admirers from around the country lined up the streets of Mumbai to bid farewell to the first female megastar of Indian cinema. She was escorted to the Ville Parle Crematorium, a public cemetery, in a tightly secured convoy of cars, where she was interred during a state funeral. The crematorium was closed to the public three days before the VVIP funeral for cleaning and fumigation. She was consigned to flames by her husband and filmmaker Boney Kapoor on slab No. 1, in a packed, dimly lit venue filled with celebrities and dignitaries, proceedings of which were shot by mobile cameras clandestinely. With the outpouring of grief from across the world, comments on social media demanded an amadhi for her on the lines of the iconic figures laid to rest at the Raj Ghat in New Delhi. As the flames rose, traces of the legendary actress had been lost to eternity. The scarcity of space, conviction, and creativity has resulted in a deficiency of monuments commemorating non-political figures across most of India. Muslim and Christian icons are interred in graves, frequently inaccessible to the public, where their devotees gather to commemorate anniversaries and birthdays, such as those of renowned scientist and former President of India A.P.J. Abdul Kalam, and actresses Madhubala and Meena Kumari, who have designated graves for dashing. In contrast, Hindu and Sikh icons are cremated, leaving no remnants, monuments, or means to honour their accomplishments or preserve their legacies. The longevity of the medieval Mughal Kings and the enchanting legends of Egyptian kings and queens can also be credited for their long-standing memorials, exemplified by magnificent sandstone structures, pyramids, and subterranean chambers constructed during their reigns. The death of iconic actor Dilip Kumar in 2022, the loss of India nightingale Lata Mangeshkar in 2023, and the recent passing of icons like Ratan Tata and Zakir Hussain in 2024 have rekindled the discourse on a memorial and amadhi for non-political luminaries. India is endowed with illustrious figures, yet we are primarily sustained by the legacies of Vikram Sarabhai, Homi J. Bhabha, Ghanshyam Das Birla, J.R.D. Tata, Rahul Bajaj, Savithri, Devika Rani, Raj Kapoor, Dev Anand, R. A. Mashelkar, Satyajit Ray, Major Dhyan Chand, Ustad Bismillah Khan, Sam Manekshaw, Rajesh Khanna, M.S. Subbalakshmi, Yash Chopra, and other eminent personalities who influenced Indian history. The grave of American actress Marilyn Monroe in Los Angeles in United States, is a shrine for thousands of tourists who celebrate the iconic personality and her cinema; one visits the private monument commemorating the memory of Diana, the Princess of Wales, while the graves of her former mother-in-law-Queen Elizabeth and other royals invites the public at the Windsor Castle in the United Kingdom. Though hidden, the iconic Michael Jackson grave is preserved for posterity. The gravestone of the world greatest playwright and writer, William Shakespeare, in Stratford-upon-Avon, located in Berkshire, scientist Issac Newton in Westminster Abbey in London, and rockstar Elvis Presley graves remain one of the most visited shrines in the world. Globally admirers cogenerate to

BSF-HCM-TEST-Dated-2026-07-21-Test NO.-27509

Others who attempted to make the world a better place. An initiative was founded in 1998 in Los Angeles to establish the Hollywood Forever Cemetery as a burial place for prominent members of Hollywood and the Forest Lawn Memorial Park in Los Angeles housing the graves of achievers from the Hollywood film industry. The Indian government must appoint a committee of esteemed individuals akin to the Padma Awards jury to determine the specifications on a national memorial, operated and maintained by the government on a dedicated land area comprising of a large public viewing gallery, logistics for the VVIP movement and a designated area to perform the state funeral rituals with a defined standard operating procedure and live coverage on national television. The icons who have maintained impeccable standards of public life, widely accepted in the country, should be chosen on merit and placed on their demise at the national memorial with the consent of their respective families. Around the world, political icons are bestowed with dedicated space and architecture for their memorials, but the non-political personalities are left to their own business. If this committee is ever constituted, it will be challenging since the list of non-controversial, selfless, non-political icons in India is diminishing at an astonishing rate! On the last leg of his 10-city India tour, Diljit Dosanjh continues to swat off trolls and tribulations, the latest being the political reading into his spelling Punjab as Panjab. Trump Assistant AG-designate Harmeet Dhillon moved things along with her tweet Pnjab. In his shows, the headline-making singer-lyricist-actor has taken on TV anchors and authorities on govt blind moralistic diktats. It started with a complaint against Dosanjh songs impact on children that resulted in Telangana govt issuing him directions ahead of his Hyderabad event to avoid numbers on alcohol, drugs and violence. Chandigarh child rights body ahead of the Chandigarh concert played school-teacher, advising him against performing songs promoting alcohol. Dosanjh complied, tweaked bits, but also made his point onstage, comparing treatment he received to the diet of violence alcohol depicted in movies you trouble artistes and singers because they are soft targets. He has a point. Stopping Dosanjh singing certain numbers on stage will not even be a blip on Punjab triple trouble of alcohol-drugs-violence that flourished for decades to benefit the criminal nexus of peddler-police-politician. But authorities opt to view such issues through a lens of morality. The Indian state loves dispensing virtue lessons. Govts, municipalities, certainly panchayats, draw from every regressive norm of extra-judicial and extra-constitutional outfits every state has its own version to impose a misplaced morality on the public; actions simply beyond state constitutional remit. It a looooooong list. Crackdowns on Valentine Day, which did stop people falling in love outside social norms. Dress codes in colleges. Teenagers sex lives. Banning adult sites. Banning Maharashtra dance bars. Banning women in pubs. Restricting nightlife. Mindless censorship of films, books, art. What people won eat? No eggs in midday meals. Surveillance of online behaviour. Prohibition. Yet, no morality inspired policy has ever served its cause, misguided as it is. Point is the state does let up it believes it can issue such diktats. Of course, there are always exceptions 300 passes for a Judges Loung

BSF-HCM-TEST-Dated-2026-07-21-Test NO.-27510

Burden of excessive taxation. This move would not only make education more accessible but would also reaffirm the country commitment to nurturing a scientifically inclined populace. The prevailing GST slabs reveal an inconsistency: while certain sectors enjoy lower tax rates, education has yet to receive such preferential treatment. Essential items like food grains, books, and specific healthcare services are taxed at lower rates than educational services. This discrepancy raises questions about national priorities, prompting speculation about the extent to which education and scientific temper are genuinely promoted. Reducing the GST rate on education and training services would not only address this anomaly but would also underscore the government dedication to fostering a knowledge-driven society. Critics may raise concerns about potential revenue deficits resulting from a reduced GST rate. However, history demonstrates that investments in education and research yield substantial returns for the economy. The contributions of educated individuals to society through innovative research, technological advancements, and heightened productivity far outweigh any immediate loss in tax revenue. Moreover, a skilled workforce can attract foreign investments and stimulate long-term economic growth. Global trends indicate that countries are increasingly incentivizing education to drive innovation and progress. Many nations recognize that easing the financial burden on students and research institutions can propel scientific capabilities forward. Some countries even apply a zero GST rate to education services to underscore their commitment to knowledge dissemination and societal advancement. Drawing inspiration from these examples, India could not only lower the GST rate but also explore the possibility of a zero GST rate for education services focused on scientific and technical learning. A notable aspect of the modern education landscape is the prominence of online education programs. The digital era has revolutionized how knowledge is disseminated and acquired. Online platforms have democratized education, making it accessible to individuals regardless of geographical constraints. Lowering the GST rate for online education services would further amplify this democratization, allowing more learners to access scientific and technical education from the comfort of their homes. In this context, initiatives like the IMPRI (Impact and Policy Research Institute) programs stand out. IMPRI online education efforts are geared toward promoting research and evidence-based policy discussions in India. These programs bridge the gap between academia and policy making, creating a dynamic environment where knowledge is translated into actionable policies. Lowering the GST rate for such online education initiatives, especially those focused on scientific and technological research, would bolster the nation research capacity and drive informed decision-making. The recent success of the Chandrayaan 3 moon mission landing serves as a testament to India scientific prowess. This achievement underscores the importance of nurturing scientific temper from the ground up. By reducing the GST rate on education and training services, India can create an ecosystem that fosters such remarkable accomplishments on a consistent basis. The Chandrayaan 3 triumph demonstrates what a scientifically empowered society can achieve and reinforces the need for accessible education and t

Compassion care to boost IVF growth Apart from making IVF treatment more advanced and accessible, there should be a pivotal focus on the individuals mental, emotional, and social wellbeing. Fertility is an emotional journey, and it is crucial to cultivate self compassion towards maintaining hope and combating fertility issues with patience and a positive attitude. Therefore, compassion and care must be at the core of fertility solutions. Moreover, the biggest hindrance to accepting IVF treatment is the lack of awareness and access. To ensure that as an industry, we are better equipped to help these struggling couples realize their dream of parenthood and urge the regulators and government authorities to recognize infertility as a public health issue. This step will help remove the associated stigma and encourage open conversations that will go a long way to impact social change, thereby transforming our society. Being in love brings new feelings and experiences that add to its romance and giddiness. It is the fuel of your soul and you must experience it fully in Over the years, the success rates have increased to a signal will help fuel the growing demand for the IVF sector. Let science show you the path With alarming infertility statistics and the increasing demand for in the country, it all boils down to making ART and IVF facilities more accessible and affordable. Global Super specialty treatments are slowly becoming India hallmark of service standards. Focus remains on better access to the deployment of groundbreaking technology order to truly know who you really are. When your partner is possessive about you then it connotes a deep love. They love you so intensely and madly that it drives them crazy to see you talk to another person or wear certain clothes or go to certain places and parties. They only want to talk to you all day and they want to know where you are and who you are with. They can bear to go out without you and they can bear it that you can have a good time without them. They want you to be as possessive and as jealous as they are. They convince you that these are the greatest emotions of love! They only have eyes for you. And all this is their way of being madly in love with you and this is how they show it. All for love. This is the biggest myth of love. Jealousy and possessiveness are NOT reflective of love, commitment or intensity rather of power, control and dominance. These are toxic traits that are red flags and should be harbingers of doom in your relationship. You do not see it this way because you are too swept up in the passion and power of possessiveness and jealousy. It a new, heady, intoxicating cocktail which fulfills every primal need of being loved and wanted and it affects you at many neurological levels. Hence your inability to notice these as harmful and your deep loyalty to your love and partner.

BSF-HCM-TEST-Dated-2026-07-21-Test NO.-27514

2020 which suggests multimodal learning, there needs to be a reduction in the GST slabs. If we want holistic, multimodal education, then we have to look at all components and remove the tax burden so that we can truly make education affordable. According to an edtech CEO, Looking at the increasing cost of education in the country, long-term tax exemption, lowering GST on educational services and continued funding support will help edtech firms in exploring and investing in phygital learning formats and allow them time to rebound and attain profitability. Edtech players also expect support for creating the infrastructure needed to implement the NEP and funds to flow into areas such as digital learning, teacher training, and the development of research infrastructure. Apart from edtechs various think tanks and policy institutes are also striving to take education onto the next level by giving free access to excellent minds and providing them with a platform to grow and learn. IMPRI is doing a great job in this regard. It is working efficiently in the digital space and it has made learning easier, accessible and affordable. Lowering the GST rates would encourage organizations such as IMPRI to take education on a whole new level. In the UK most universities do not pay VAT or any Corporation tax. Same is the case with the USA. Even the edtech firms and other organizations in the USA are tax exempted. In the USA, a system of American Opportunity Tax Credit (AOTC) is followed, there are certain students who receive aid for their higher education. No such system is followed in India. In conclusion, recalibrating the GST rate on education and training services from 18% to 5% represents a monumental stride toward reshaping India scientific and technological landscape. By fostering accessible and affordable education, the nation can nurture a generation of informed and innovative thinkers capable of propelling global advancements. This reform would elevate India standing in the scientific community and align its tax policies with its educational aspirations. As the world attests to the transformative power of education, India has a unique opportunity to demonstrate its dedication to fostering scientific temper and knowledge acumen through comprehensive reform that places education at the core of its progress. Special emphasis on online education, including initiatives like IMPRI programs, would further solidify India commitment to shaping a brighter future through knowledge and innovation. The triumph of Chandrayaan 3 reminds us of the possibilities that arise when scientific temper is nurtured, driving us to craft an education landscape that amplifies such successes. After beating the World Number 2, Fabiano Caruana, and the World Number 3, Hikaru Nakamura, Rameshbabu Praggnanandhaa faltered at the very last hurdle. He took Magnus Carlsen into tiebreaks at the World Cup final but the World Number 1 finally put it across the 18-year-old. However, Prag and his cohort of young Indian compatriots made a huge impression. So did a couple of young players from other countries. It apparent that chess is on the verge of seeing a generational shift. And, that shift is likely to heavily favour India. The chess World Cup is one of the most prestigious events on the calendar. It played on a Wimbledon-style knockout format with progressively shorter time controls and sudden death invoked to ensure every match has a winner. The Open section offers roughly Euro

BSF-HCM-TEST-Dated-2026-07-21-Test NO.-27515

Monkey pox has been at a low level of endemicity in western and central Africa for decades but it began to be considered a global problem over the past few weeks, as more and more countries reported fresh cases. On July 23, with over 16,000 cases reported from 75 countries, WHO declared it to be a public health emergency of international concern (PHEIC). Actually an expert committee, constituted by Director-General Tedros Adhanom Ghebreyesus to study the issue, voted nine against and six for the declaration. An actor poses nude for a magazine photo shoot. As is inevitable with social media, photos circulate. As is inevitable too with social media, some people say they are offended. There the matter should have ended. But Ranveer Singh, the actor, is now booked by Mumbai police, for obscenity. This is utterly absurd and what is even more absurd and dangerous is that no one with the power to correct this absurdity is likely to intervene and ask cops to withdraw the FIR. Singh has been booked under Section 292 of IPC, which includes anything that is lascivious, appeals to prurient interest, or tends to deprave or corrupt persons likely to read, see or hear the matter. It because obscenity is defined in such a ridiculously loose and vague manner in Indian law that moral busybodies, cops and lower courts get so many opportunities to harass citizens. Another actor, Shilpa Shetty, is still fighting an equally absurd obscenity case filed in 2007. Because someone chose to be offended by American actor Richard Gere kissing Shetty, police in Alwar, Rajasthan filed an FIR. The magistrate court discharged Shetty, but Rajasthan police filed an appeal 15 years after the FIR that should have never been filed the case goes on. Madhu Sapre and Milind Soman had to wait 14 years before their acquittal in 2009 in the obscenity case over the 1995 Tuff shoes advertisement. Couples kissing in the privacy of their cars have been booked by police in India, as have been those sitting on park benches. When cops don file FIRs, they use provisions like Section 292 as an instrument of extortion. Ideally, politicians should agree that laws like Section 292 of IPC are totally out of sync with any modern, democratic society and kill the law. But since that won happen, we must raise the cost for those who initiate these complaints as well as for cops and courts who take these non-offences on-board. Police has the full discretion to not register FIRs if they deem the complaint to be frivolous police bosses must send the message down the line. Magistrate courts should issue quick discharges to discourage police. And if they don, high courts should use their writ jurisdiction to quash FIRs and impose substantial penalties on complainants. India has 4.5 crore pending cases. Clogging the justice system with cases that should never see the light of the day is perhaps the biggest offence here. July is when the southwest monsoon peaks so.

BSF-HCM-TEST-Dated-2026-07-21-Test NO.-27516

One of the world oldest industries, agriculture has evolved radically over the years. Advances in machinery to breakthroughs in fertilizers, irrigation and seeds have helped farmers cultivate efficiently and increase yields. Now, with a looming food crisis, burgeoning global population and catastrophic climate change, agriculture must embrace yet another revolution, at the heart of which lies data and digitalization. This can help farmers find a sustainable and resilient way to increase food production and overcome disruption. To alleviate the present pressures of water shortage, land degradation, volatile weather conditions and increasing food demands, Aristech startups have introduced harvest monitoring. Using precision farming and smart crop monitoring technologies, farmers can remotely inspect their crops, analyses real time data and take necessary interventions. This technology helps farmers achieve optimum resource utilization, high quality and quantity of crop yield and higher profitability. To deliver the next productivity leap, agriculture must become precision agriculture. Monitoring crop growth & production From the primary stages of budding up to harvesting, it is vital to monitor crop health to identify any problems on the farmland. During the growth stages, crops are susceptible to pest infestation, extreme weather conditions etc., which if left unnoticed can cause irreparable damage. Harvest monitoring using wireless sensors, drones and satellite enables farmers to track crop growth and estimate crop yield. A detailed report on crop growth and health provides critical information for farmers to decide on early interventions. Additionally, these technologies help farmers optimize harvesting windows. Preventing the spread of crop diseases Weed control and pest management are some of the pains farmers face regularly during the growing season. For instance, a single weed can generate millions of weed seeds, which can drastically reduce crop yield if not managed in time. Similarly, detecting the arrival of pests and spotting their activity and location can be a grueling task requiring frequent field trips. Precision farming systems can overcome these challenges by determining pest location in real time using cameras and sensors deployed in the field. Additionally, harvest monitoring can help distinguish the exact amount of pesticides required to eliminate pests in the field. Auditing soil health & condition Soil condition is a critical indicator that helps farmers decide the optimal time for planting, irrigating and crop gathering. With wireless sensors monitoring soil health, farmers can get regular alerts of soil pH, moisture, salinity, temperature etc. Using precision farming systems, farmers can receive data analysis in readable formats along with recommendations. Regular soil audits enable farmers to plan irrigation time, assess water quantity and anticipate the arrival of pests. Additionally, soil audits help farmers assess soil quality and fertility, thereby allowing them to take necessary interventions to increase crop yield. Forecasting and analyzing weather conditions Weather factors have a predominant influence on the average crop yield on a given field. This influence further gains prominence considering the impact of climate change in different regions across the world. To cope with an uncontrollable factor such as weather, farmers can leverage harvest monitoring solutions to obtain.

Spl-BSF-HCM-TEST-Dated-2026-07-21-Test NO.-27517

Through the Social Impact Projects that we are undertaking we get to collaborate with various Indian Army units across Kashmir. There is so much to learn as we collaborate with Army Units. There is a big mandate of community development by bringing in social impact projects that can improve skill and get the youth ready in line with requirements of the industry. Kashmir is booming again, which means that tourists have started coming in again, and the need for skilled manpower goes up. Due to sensitive, and close to border geographical location, there is also high unemployment in various pockets of the state. Lots of youth also get misdirected, and hence it becomes very important to keep them on the right track, skill them right away, so that they can not only stand and earn a living for themselves but also for their families. As we get to work with the Army, we learn various qualities that we can imbibe, learn from them and thereby also incorporate in our lives. Some are as follows: Time management always being on time, no excuses allowed. Listening to the seniors, even if there is a difference of opinion, the same is conveyed in a very polite and respectful manner. Fitness you get to see the officials wake up early in the morning to pump gym and workout. Now a key point to note is that this is being done so that they can be fit and active to protect our borders. For us as well, staying and becoming fit should not be merely about looking good, but it should also be linked to some activity/cause/purpose that we are taking up to benefit/make the society better. The time that one gets after a rigorous day, one also relaxes in a very light hearted manner. The relaxation though is through heavy workouts, music, meditation, reading books, banter with fellow colleagues. Patience, persistence, lots of will power and mental toughness, can't be taking soft options can be seen. Community engagement is very important, and hence technical work through social impact efforts is useful and impactful. Strengthening the borders of Northern Kashmir through meaningful engagements, coming up with opportunities to promote local tourism. Loading the day, staying busy and utilizing every second is important and precious. If you find excuses, alternative ways to do a task or make a task easier than the same excuse comes and bites you and puts you in a really difficult position. There is a saying that the Army goes by Respect all, Suspect all . This is so important that it teaches us the art of always staying alert and on toes. We cannot be in a dazed situation, as that is when things slide beneath us. It is very important to stay aware and mindful about the intent of people around us. Things like I was on leave, I did not know, I am new to the place etc. are not allowed to be said, which again shows that level of planning, alertness is so important and crucial. The above can be useful for us all to implement in our daily lives. Sometimes one also has to let go of things and people who they like with a heavy heart to stay committed to the cause to serve and strengthen the country. In countries such as New Zealand and Ecuador, nature is recognised as having the right to exist, flourish, and regenerate. Citizens can sue forests or rivers even when no human property has been damaged. This respectful worldview has long been a part of India's sacred literature. Using gorgeous

Spl-BSF-HCM-TEST-Dated-2026-07-21-Test NO.-27520

imagery, Upanishads say that everything, whether man, squirrel, plant or pebble, is composed of the five elements earth, fire, water, air, and space. Human beings are, quite literally, made from the same five elements as mountain, river, tree and bee, but in different proportions so, while man is more water, a mountain is more earth (a cockroach more fire, currently). When we die, we join many dead leaves to become the mulch that nourishes the earth, that in turn feeds new life the circularity of the universe carries on, like a giant cosmic inhale and exhale. Luminous poet Kabir sang about this using earthy images from daily life: The mud reminds the potter that while you knead and manipulate me, don't forget that you will eventually resolve into me. Every Hindu Vedic text invokes the same idea, gently nudging us to retreat from the anthropomorphic worldview that places man at the centre of the universe rather than as a part of it. For example, the Isha Upanishad opens with a remarkable ecological insight: All this whatever moves in the universe is pervaded by the Divine. The Atharva Ved begins with the Bhumi Sukt, a hymn to the earth, praising its forests, mountains, rivers, medicinal plants, animals, and soils, and repeatedly asks that humans tread gently upon her. Numerous hymns in the Rig Veda are dedicated to natural elements. In the Gita, Krishn repeatedly identifies himself with a natural phenomenon. I am the light of sun and moon. Even in the Ramayan, the forest becomes a spiritual landscape, a place of discovering truth. These texts are not arguing for environmental conservation in the modern sense, but lean into a far more radical idea: How can you exploit or destroy that which is not separate from you? Our public expression of Hinduism has become increasingly performative: We worship trees and endlessly tiered threads around their trunks, but then we chop them down to make way for highways or choke their roots with concrete until they die and fall, sometimes killing a child returning home on a school bus. We worship water, but we have turned it into a commodity, offering it to data centres that are being thrown out of their own countries. Every time the alarm rings, we press the snooze button. What's next? The climate crisis across the world is whispering (actually, yelling) that our engagement with nature is now irrevocably disastrous. Closer to home, we are trampling on the most beautiful idea that pervades Hindu philosophy: that we are all part of one interconnected universe, which includes all creatures, great and small, sentient and insentient. Nature is not a portfolio of resources available to satisfy human greed. Nature is divine. Fundamentally different from happiness. Happiness is a feeling and state of the mind, dependent upon circumstances unfolding according to our wishes, and therefore inevitably has an opposite: unhappiness. Bliss, One of the many novelties at this Soccer Super Bowl is the entire squads stand on the pitch for the national anthems before kick-off. Until now, only the starting eleven did. At England vs. Argentina, to be an English football fan is to suffer. The rest of the world mistakes 'it's coming home' as a battle cry of arrogance, but the song it's derived from, Three Lions, is about Why have a policy for a third language? Leave it to schools to decide The Supreme Court has spoken up for students, parents and teachers, voicing deep concern over introduction of a third language in Isro needs

BSF-HCM-TEST-Dated-2026-07-22-Test NO.-27521

Far, it had been a bountiful year. After a slow start, the intensity of the monsoon picked up around July 5. By July 24, the cumulative rainfall was 42.2 cm, higher than the normal by 11%. The national average, however, cloaks sharp inter-regional differences. Data according to meteorological subdivisions show that in a large contiguous swathe stretching from western UP to the southern part of West Bengal, rainfall has been deficient by anything between 45-72% till July 26. This will have a bearing on paddy production, the most important crop of the kharif agricultural season. A distinctive feature of kharif is that there isn a neat overlap between distribution of rainfall and food security. To illustrate, Bengal and UP are India largest producers of paddy. Therefore, the distribution of rainfall had an adverse impact on paddy acreage. Nationally, it was 12.8 million hectares on July 15, lower by 27% year-on-year. However, food security as represented by adequate rice stocks in the PDS system depends mainly on procurement in Punjab, Telangana, Chhattisgarh and Odisha. These states together account for about 55% of total paddy procurement and rainfall there has been either normal or in excess. Another positive sign is that India existing stock of rice is comfortable. GoI data show that on July 1, FCI held 31.7 million tonnes of rice, a level higher than that recorded in the preceding three years. This is in contrast to wheat where the stocks are much lower. Consequently, there unlikely to be significant inflationary pressure from rice. However, if the paddy output is poor in parts of eastern India, deprivation may worsen in pockets and GoI will have a tricky call to make on the free cereal scheme. It is a bestseller. Lots of MPs are buying it, and so should you. It called a Thesaurus, a book which tells you different words which have the same meaning and are called synonyms. Synonyms are very useful now that this new booklet lists words that are unparliamentary like corrupt and incompetent. So, instead we can use words not in the booklet which mean the same thing. I get what you mean. There only one thing that bothers me. What if the people who made this booklet of unparliamentary words, also get this Thesaurus thingummy and bring out another booklet which lists all the synonyms in it? Not to worry. Then we all just invent our own words which no one else knows the meaning of, like Donaldji did when he was US President and he made up covfefe to this day no one knows what it means, including himself. So, no matter what, we all keep going at it hammer and tongs. This year Kanwariya Yatra has just come to an end, with devotees performing Gangajal abhishek of the Lingam at Shiv temples, one of them being the Swayambhuva Shivling at Nilkanth temple in Kalanjara fort, built in the 5th century BCE, in Banda district, Uttar Pradesh. Kalanjara has been a popular Shaiva centre since.

BSF-HCM-TEST-Dated-2026-07-22-Test NO.-27522

Ancient times the names of Kalanjara and Shiv are associated with the story of Samudra Manthan churning of the ocean by demons and gods. The poison that came out of the churning was swallowed by Shiv as a result of which his throat turned blue; hence he is also called Nilkanth. And Kalanjara is the place where he is said to have found peace and came to rest. The Nilkanth temple here is dedicated to this form of Shiv. The name Kalanjara is derived from Shiv the one who as Kala, Time, causes jara, all things to decay, and is, therefore, known as the destroyer of all things god of death. Gangajal abhishek the practice of pouring of Gangajal, water of the River Ganga, over the shivling during the month of Shravan, is also an ancient one. The story goes that when River Ganga descended on earth from heaven, at the behest of Sage Bhagirath, Shivji offered that she first land on his head, so as to offset its tremendous force, which otherwise would have destroyed everything on its path on earth. With Shivji help, its force was quelled and the river flowed gently down to the earth thereafter. This is why thousands of Shiv bhakts bring water from the Ganga, from Haridwar or other places, and perform Gangajal abhishek, bathe Shivlings at famous Shiv mandirs and temples closer to home, praying that Shivji help them overcome all their problems with ease. This tradition has been prevalent at Kalanjara from earliest time, a fact that can be corroborated from inscriptional evidence and rock-cut images at the fort there. The inscriptions along with two rock-cut murtis in the fort talk about one Samanta named Vasanta coming to Kalanjara several times over the years, carrying Gangajal in a kanwar water in two vessels fixed at the end of a banghi pole, balanced on one shoulder. Archaeologist Alexander Cunningham report in 1883-84, was the first to throw light on these two, 6th century BCE, rock-cut sculptures above the Bhairav Kund in Kalanjara fort that appear to be pilgrims carrying kanwar. Some local residents believe they depict Shravan Kumar from the Mahabharat. However, since Kalanjara is located at a distance of 150 kms from Prayagraj, it is presumed that they belong to Samanta Vasanta who would bring Gangajal from Prayagraj during the month of Shravan and offer it at the Balkandheshwar and Nilkanth temples in the fort. The glorification of Kalanjara as a tirth is referred to in the Puranas and Mahabharat. It is stated that bathing in the lake of gods in Kalanjara is as meritorious as offering a hundred cows in daan, charity. And the tank situated near the town of Kalanjara is identified by this author as Surasari Ganga the tank of gods. Thus, the 6th century sculptures of water-bearers confirm the long-standing tradition of Kanwariya Yatra a pilgrimage to celebrate Shivji and seek his grace. This July 26 is the 23rd Kargil Vijay Divas. On this day in 1999, the.

BSF-HCM-TEST-Dated-2026-07-22-Test NO.-27523

Indian forces threw out the Pakistanis from the high points in the Dras-Kargil sector, which they had surreptitiously and illegally occupied, bringing to close a two-month (May-July, 1999) war. Because of extreme cold during winters, the Pakistanis and the Indians withdraw from the high points on the Line Of Control (LoC) and re-occupy them at the end of the winter. But in February 1999, Pakistanis launched Operation Badr led by General Ashraf Rashid and occupied the Indian high points. Their aim was to sever the link between Kashmir and Ladakh, and thus force Indian forces to withdraw from Siachen. By driving Pakistanis away from the high points illegally occupied by them, the Indians foiled Pakistan plans. Battle of the Tiger Hill was the fiercest and most famous battle of Kargil war. Tiger hill, 5,307 m, is the highest peak in the area. To dislodge Pakistanis from Tiger Hill, most innovative military tactics were used. The assault team of two hundred men, and two thousand supporting troops, advanced on very difficult and therefore unexpected avenues of approach, undertook daring night-time manoeuvres over steep terrain, and made multi-directional attacks. Taken by surprise, the Pakistanis fled leaving behind ten dead. We lost five soldiers. The hero of the battle was Yogendra Singh Yadav, awarded our highest gallantry award, Param Vir Chakra (PVC). On this day we celebrate our victory and pay homage to our 527 soldiers who died defending the country, and especially to Yogendra Singh Yadav, PVC. Skill gap, skillset enhancing, taking on the great resignation the industry may have identified the current challenges but the uniform answers that the organisations are seeking and implementing for their workforce might not be the correct answer! The skill gap is said to be the reflection of what we value and have identified that our talent requires upgradation, learning and being future-ready. While it is a recruiter job to identify the right fit talent, it is in return the organisation responsibility to find specialised and customised training programs basis functionalities and progression of each discipline. Gap Analysis Uniform learning programs across functions might only give you average talent. Training programs must be customised basis skills and interests. It is of utmost importance to identify the competencies your employees lack and the skills that are keeping them from performing to their utmost capabilities in their positions. To achieve this requirement, an organisation must first create a detailed competency framework and identify the proficiency level for each role as it progresses within its hierarchy. A typical competency framework usually consists of Behavioral and Technical competency. What is seen as a leading practice, is that organisations are now building a new category which is Digital competency (a must-have for most modern age industries). Need of the hour Short-term and long-term training programs! A short term skills training should never be implemented basis uniform suggestions from the leadership or HR departments. The immediate manager can only map the short-term skill gap of an individual and the training programs should.

BSF-HCM-TEST-Dated-2026-07-22-Test NO.-27524

Be identified by them. The training modules should be democratised and should be implemented at a unit level. On the contrary, the long-term skills enhancement will be the skillsets that will make the organisation and its people future-ready. These training programs should be implemented on select resources identified by the leadership who have the potential to be converted into specialists. Forced learning programs or uniform training cannot give desired outcomes it may cause the wasting of resources and the outcome will also be average. Future-proofing the training programs The Efficacy Test! Training modules across organisations require assessment! Through a robust feedback mechanism, it all have to be a four-stage programme before you execute it across disciplines. Business Needs and aligned goal setting The creation of a well-defined competency framework is a must to achieve this. Gap Analysis A development centre (DC) containing a battery of tests to evaluate the proficiency level of each incumbent to light the gap Assessment of training options Based on the IDP (Individual Development Plan) which is an outcome of the DC the organisation will assess the types of training which are required to be conducted. Training plans & Post Assessment Creation of a training calendar and an assessment for the candidates post a set duration of time to gauge the employee development post-training Reassess find the correct answers! In the workplaces today, challenges are mutual for employees and employers to adapt rapidly to the latest staffing models, digitization and automation. HR departments today are clued-up and are rearming their manpower with the essential education needed for transformation. But if that education and training is not going to make your employees adept, one might need to reassess the L&D strategy. Gap analysis at the right hour will increase our industry potential to magnify its responsibility, influence and reputation within organisations and society and make them responsive to the political, cultural, and social purview that it operates in. How often have we been crossing an intersection or turning when were inadvertently unaware of oncoming traffic because of blind spots in our cars? It is an issue that we have, more or less, brushed aside and something we have come to live with. But turning a blind eye to the issue at hand poses dangers aplenty and leaves lives at stake. Further, there are also increasing automotive repair costs that burden users. Until now, blind spots have been viewed as part and parcel of the vehicular experience, while also leaving the driver in a state of limbo when faced with adverse scenarios owing to this design element. It has been a painstaking task to find a solution, but the perennially ascending growth in technology has now promised a safer and more convenient future, eliminating the risk of blind spots. According to a report published by Stanford Law School in 2021, at least 90% of all motor vehicle crashes are caused fully or in part by human errors. A major part of these errors is caused due to blind.

Spots within the vehicle. Safety in vehicles has always been a prime concern across the globe and in India. The government of India has been increasingly focusing on the safety of automobiles. For instance, the recent six-airbag-mandate for vehicles carrying up to eight passengers. This is a crucial step to decreasing the number of fatalities in case of an accident. Simultaneously, various industry players like Continental are also continuously innovating to eliminate blind spots and reduce the number of accidents. Side mirrors and Reverse Park Assist are examples of technologies that have helped the industry achieve this objective. However, several other cutting-edge technologies are being deployed in vehicles to increase visibility to the drivers and contribute to Vision Zero Zero Fatalities, Zero Injuries, Zero Crashes. Technologies to eliminate blind spots A quick look at the driver side and rearview mirrors, perhaps even a fleeting glance over the shoulder can be extremely fatal on highways. The Blind Spot Detection (BSD) system can monitor the areas that are usually not visible conveniently to the driver, ease the effort made to visually scan these areas, and eventually avoid hazardous situations. Sensors monitor the road area behind and next to a vehicle and warn if they try to pull out despite there being a passage of way. Thick A-pillars are a major cause of blind spots in a vehicle. Virtual A-Pillar technology comes with new flexible OLED displays and advanced head tracking. The Virtual A-Pillar tracks driver movements using an interior camera mounted just above the steering wheel. At the same time, the Surround-View camera, mounted on the vehicle exterior, feeds a live video of the vehicle external environment to the OLED displays embedded in the A-pillars. By tracking the driver head movements paired with the exterior live image, the Virtual A-Pillar offers a dynamic perspective to the driver, giving them an experience much like looking through an extended window rather than a live video feed. The Transparent Hood technology takes a step further in this domain. Transparent Hood combines human vision with computer vision, allowing the driver to have a view beneath the car (such as the road condition, tiny objects on the path, curb, footpath, topography, and wheel position) to assist with driving. The hood and the engine compartment below it appear transparent to the driver. This advanced technology fuses ultrasonic distance information with Surround-View cameras. Surround-View, a new automotive feature, gives the driver a 360-degree view of the surroundings around the car. Furthermore, it aids the driver in understanding the nature of the space around and beneath the car (3D Surround View). In larger vehicles, trailers cause a huge blind spot while making turns. In such scenarios, Transparent Trailer technology will prove to be the game-changer. The Transparent Trailer is an extension of the Transparent Hood technology. The Surround-View System is used in both these technologies. Apart from heavy vehicles, these technologies could also be relevant for smaller vehicles like cars. The application of this technology can help drivers navigate while.

BSF-HCM-TEST-Dated-2026-07-22-Test NO.-27526

HC declared Ramesh was an Indian citizen. But election officials clearly knew better he was allowed to contest as a BRS candidate in 2014 and 2019. In 2020, Ramesh, with a heavy heart undoubtedly, had offered to give up his German citizenship, but remained MLA. Denied an assembly nomination in 2023, KCR made him an adviser with cabinet rank. The matter should be taken in all seriousness. But we are cracking up at the sheer absurdity of a German shepherding a constituency for 16 years while his dubious Indian citizenship was an open secret. Had Ramesh turned out to be a citizen of say China or Pakistan or Bangladesh, all hell would have broken loose. But a West European? We can live with that. Ramesh pulled off this farce for over a decade and held a constitutional post by banking on the Chalta Hai trilogy Satyajit Ray never made The Great Indian Documents Maze, The Great Indian ID Hack & the Great Indian Adjustment. End of day, it schadenfreude for incumbent Vemulawada MLA, Aadi Srinivas, who hauled the not-Indian-perhaps-German Ramesh to court, and also lost to him in four consecutive elections. Diversity is just a matrix it a powerful way to build workplaces that are respectful, welcoming, and innovative. When organizations prioritize diversity, they foster empathy, breaking down stereotypes, and empowering marginalized voice that is often overlooked. This creates a positive culture where everyone can thrive. Marginalized groups often face higher rates of bullying in the workplace. This bullying can take many forms visible actions, subtle comments, or passive behaviors. By increasing representation and creating inclusive environments, companies can protect these groups and ensure they feel valued. Homogeneous leadership teams, made up of people with similar backgrounds, can unintentionally allow toxic behaviors to persist or go unnoticed. On the other hand, diverse leadership brings fresh perspectives, promotes fair policies, and holds bullies accountable. In the past, leadership was often defined by traits like assertiveness, decisiveness, and dominance, which were traditionally linked to masculinity. These traits became associated with leadership during times of war, industrialization, and colonial expansion. But times have changed, and today, there is growing recognition of the value of leadership qualities like empathy, collaboration, and relationship-building. These traits, often labeled as feminine, are not about gender but about leadership style. The COVID-19 pandemic showcased the power of empathetic leadership, with leaders like Jacinda Arden of New Zealand and Angela Merkel of Germany earning global praise for their compassionate crisis management. Research shows that the most effective leaders blend both masculine and feminine traits, adapting their approach based on the situation. Success does require anyone to fit outdated stereotypes instead, being authentic and continuously improving your skills is key. A 2022 study by the Harvard Business Review found that 75% of employees value politeness in leaders, and 68% trust leaders who show kindness and respect. Companies with diverse executive teams are 36% more likely to outperform their peers financially, according to McKinsey. Yet, many organizations still lack diversity, particularly at the leadership level. Over a third of companies studied by McKinsey had no women on their executive teams, and only 13% of leadership roles were held by ethnic minorities, despite these gro

BSF-HCM-TEST-Dated-2026-07-22-Test NO.-27529

Diversity encompasses differences in gender, race, age, religion, and more, while inclusion focuses on creating a culture where everyone feels valued and respected. Inclusive leaders foster a sense of belonging, making employees feel comfortable sharing their ideas and being their authentic selves. As Carmen Morris, a contributor to Forbes, explains, creating an inclusive culture takes effort, but the rewards like higher employee satisfaction and innovation are worth it. Unconscious bias, rooted in personal experiences, can lead people to favor those who are similar to them. Overcoming these biases requires self-awareness and a growth mindset. By challenging stereotypes and embracing diverse perspectives, organizations can break down barriers and empower underrepresented groups. Authentic representation fosters cultural competence, drives social change, and creates an environment where everyone benefits. A company organization that prioritizes diversity and inclusion not only builds a better workplace but also earns a positive reputation among customers and potential employees. Consumers are more likely to support businesses that align with their values. The future of leadership lies in embracing diversity in demographics and leadership styles. By blending empathy, decisiveness, collaboration, and innovation, organizations can navigate the fast-changing workplace. As societal norms evolve, leadership diversity will be essential for creating resilient, forward-thinking businesses. Organizations that champion diversity and inclusion today will be the leaders of tomorrow, shaping a more equitable, innovative, and successful future. Doubts are often raised by some economists over the veracity of India GDP estimates. This typically happens when GDP growth is high. But no such doubts are expressed when growth is slowing, as after the Q2 GDP print. Such asymmetric questioning of the veracity of GDP estimates non-existent when growth is low and vociferous when growth is high is typically reserved for India data. Now take into account quarterly estimates of Real GDP and Real Gross Domestic Income (GDI) for US over the last decade. GDI measures income that individuals and businesses make through wages and profits while GDP measures the value produced in the economy. To understand the key takeaway, note a fundamental tenet of economics people income must equal the amount they spend or save. Similarly, for any economy, GDI and GDP should be identical with minor differences attributed to statistical discrepancies. On December 14, a day before Maharashtra new ministers prepared to take their oath an unprecedented 22 days after the election results were declared governing coalition MLAs clutched their phones rather than leaving them with their assistants. The call summoning them to Nagpur if they were there already, signaling their induction into the cabinet could come at any moment. Ultimately, 39 ministers, along with CM Defender Vadnais and his two deputies, Eknath Shinde and Ajit Pawar, were announced as part of the 42-member cabinet. The three netas representing BJP, Shinde Sena, and Ajit Pawar NCP took the opportunity to emphasise that their ministers would be evaluated on the basis of good governance undergoing midterm performance reviews. While such statements may appear to be routine assurances of public accountability, they hint at something more the precarious balancing act needed to manage the political complexities of an unprecedentedly l

Parking and reversing. Additionally, it will help drivers make more informed and safer decisions while driving. Continental Transparent Vehicle technologies have been well-received across the globe with laurels following owing to the innovative design and efficient functionality. This technology received the CES Innovation Awards in November of last year in Las Vegas. Additionally, Continental is also pioneering Blind Spot Detection for 2-Wheelers. The first of this innovative technology can be seen in Triumph Tiger 1200. While adoption of this feature will take time to seep into the Indian market, it will surely serve as an effective functionality in markets with a high 2-Wheeler density. Conclusion Blind spots have been a major source of accidents for many decades now. However, with increased technological innovations in ADAS and automobile technologies in general, this could soon become a thing of the past. A contiguous stretch of land in eastern India, spanning U.P, Bihar, Jharkhand and southern portion of West Bengal, is reeling under a severe rainfall deficiency. The deficiency ranges from 48% to 59% in west U.P, Bihar, Jharkhand and south Bengal. In east U.P, the deficiency is 72%, according to IMD data on the southwest monsoon covering the period June 1 to July 20. This is bound to have a negative effect on the paddy output this year as West Bengal and U.P are the states with the largest paddy output in India. At the national level, however, the rainfall deficiency in these states may not have a meaningful impact on food security. India food security is supported by the PDS network which covers a population of about 800 million. The supply of rice and wheat in the PDS is secured by crop procurement operations carried out by Food Corporation of India and multiple state government agencies. In the case of rice, it is Punjab, Telangana, Chhattisgarh and Odisha which contribute most to the procurement operations. Between these states, about 55% of paddy procurement is covered and they have recorded adequate rainfall so far. Given the scanty rainfall in crucial paddy growing regions, the acreage under the crop this year is most likely to be lower. That, however, may not translate into a new challenge for the Reserve Bank of India, which is trying to control retail inflation that has breached its statutory level of tolerance. From the speech of Droupadi Murmu, after taking oath as President of India, two things service and integral education stood out. Murmu quoted the 19 the century Saint poet of Odisha, Bhima Bhoi, mo jivan pachhe narke padithau, jagata uddhara heu, roughly translated as the world must be saved even if I suffer hell for that cause. The previous line in the original poem adds more meaning to this line, how can I tolerate the pain of others? Though it is difficult to give the exact rendition of the spiritual vision of the saint poet and also keeping in view the difficulty of translation of spiritual poetry, the import is very clear. There is pain everywhere.

BSF-HCM-TEST-Dated-2026-07-22-Test NO.-27531

And seeing this pain, the poet suffers himself, his kindred spirit weeps at the pain of others, and he is willing to sacrifice himself, all his belongings and even his life, if that sacrifice can alleviate suffering of others. This poem reminds another famous poem from 15 the century Vaishnava poet, Narsinh Mehta, Vaishnava jana to tene kahiye job pir parai janere, meaning those individuals who can feel the suffering of others and work to alleviate that suffering can be truly called divine. Murmu reference to Bhima Bhoi and his song in this 21 set century tumultuous world is not without significance. While the founders of modern India saw politics as a medium of service, thus earning the appropriate epithet, public servants, the politics after a few decades of independence degenerated. We seldom have leaders of the stature of Rajendra Prasad, the first President of India. After his presidential term ended, Prasad retired to Patna and lived an austere life. There are even stories that his simplicity surprised many of his visitors. One can think of another great leader, Sardar Vallabhbhai Patel, the first Home Minister of India. One of my friends from Gujarat who had an opportunity to work with the daughter of Patel, Maniben, told me that he had seen Maniben wearing a sari with patchworks. The point here is not to glorify the simplicity, but the spirit of sacrifice that undergirded their work. Simple living, high thinking guided their work. The spirit of service and sacrifice slowly started evaporating from Indian politics with the passing decades after independence. Politics remained no more a noble profession, but a means to earn money and fame. Hence, the reference of President Murmu to Bhima Bhoi is a great reminder to all politicians and to all aspirants to be politicians that politics must not be a means for self-aggrandizement, but a means to service to the people and the nation. This view of politics also approximates the view of politics as held by Greek thinker Plato, for whom politics is a noble profession, and it requires rigorous education, including physical training, to do service to the nation. Coming to education, President Murmu referred to another great Indian, Sri Aurobindo. While pointing out that this year marks 150 the birth anniversary of the Yogi and philosopher, Murmu said she was inspired by Sri Aurobindo integral education. In fact, during her early career she taught at one of Sri Aurobindo Integral Education Center in Odisha. It is no surprise, hence, that Droupadi Murmu views towards life, society and politics have been colored by that integral perspective, as envisioned by Sri Aurobindo. In summary, Sri Aurobindo integral education calls for a transformation of individual and collective life in a spiritual light, in which individual physical, vital and mental developments are shaped by that light. His motto, All life is Yoga encapsulates such a viewpoint. Without entering into a detailed analysis of Sri Aurobindo integral education, it will be sufficient here to say that such.

BSF-HCM-TEST-Dated-2026-07-22-Test NO.-27532

While the media speculated that India was not keen on the BRICS expansion, India skillfully crafted a strategy to have rule-based criteria for admission into the group that would help in maintaining the nature of the group as a multilateral organisation. India does not see BRICS as an organisation opposed to the West but rather as a group of nations that can cooperate to work for global peace and economic development. PM Modi declared at the BRICS Summit that India believes in the motto One Earth, One Family, One Future. This concept negates hegemonic tendencies, expansionism, aggressiveness, and coercion. China epitomises all these dimensions that are responsible for global tensions. India is opposed to hegemony by any country in the group and understands that pragmatism demands that it counter such tendencies by remaining in touch with strategically important, like-minded nations. Of late, India has adopted an active foreign policy: it is not going to have only a ringside view in international or regional affairs but to make a positive contribution to shaping the global environment conducive to economic growth. Along with actively pursuing Act East, Central, and West Asia policies, India is reaching out to African and Latin American countries. The purpose is to enhance its trade with the countries there and secure the supply chains. Its Indo-Pacific approach is also guided by these aspects and is an important member of Quad. PM Modi moves at the recent summit in Johannesburg amply testified India pragmatic approach. While pointing out that India gave a new direction to the BRICS in some critical fields like the Railway Research Network, closer cooperation between the MSMEs, online BRICS database, and the Startup Forum, he gave five constructive suggestions for further broadening cooperation among the member countries. These included the creation of a BRICS Space Exploration Consortium for global good in areas like space research and weather monitoring; enhancing cooperation in education, skill development, and technology to make societies ready to face future challenges; skill mapping to identify each other strengths to complement each other in the journey of development; the creation of the International Big Cat Alliance for their protection; and the creation of a repository of traditional medicine. Underlining India successes in the fields of education and public delivery systems, he mentioned DIKSHA, i.e., Digital Infrastructure for Knowledge Sharing platform to provide education to the children of remote and rural areas; 10,000 Atal tinkering labs across the country to promote innovation among school students; Cowing platform for vaccination; and public service delivery through Digital Public Infrastructure. He expressed that India could share these platforms with BRICS partners. On the expansion of the BRICS, he declared that India fully supports the expansion of the BRICS membership. In his typical style, he mentioned how BRICS has moved from 2016 under the chairmanship, when it was defined as Building Responsive, Inclusive, and Collective Solutions to now as Breaking barriers, Revitalizing economies, Inspiring Innovation, Creating opportunities, and Shaping the future. He asked the members to actively contribute actively to making the new definition meaningful. At the retreat, PM Modi suggested that guidelines be finalised for admission. This was aimed at admitting countries on a ruled base system rather than admitting counties

Not a new problem for Isro. In 2006, it lost 187 newly trained scientists. Mainly due to better pay I was faced with an impassable problem. It was an OTP, a one-time password, which was acting not like a password but as a stop word, which was stopping me from getting the mandatory PUC. Did you know that Kama Sutra's entire section on love and desire begins with the assumption that lovers rarely have matching libidos? Yet, today, one of the biggest myths about relationships is that if two people By Sumit Paul Why should we believe in god? Should a thinking mind believe in god? This is a majority fallacy. In the worldwide belief in god, two fallacies play a vital role: To be an English football fan is to suffer. The rest of the world mistakes 'it's coming home' as a battle cry of arrogance, but the song it's derived from, Three Lions, is about 60-plus By Chanchalapathi Dasa Why did Krishn leave the residents of Vrindavan? Why did he not return, even though they longed for him? Chaitanya Mahaprabhu explains this through a profound spiritual understanding. For him, the devotion we kill greed, yet it rises again. All Asian cultures criticise and condemn greed, reflected in folk cultures and oral traditions. Yet, it reappears, repeatedly. Incidents over the last few months, such as NEET-paper leak A Nashik family's nightmare experience speaks to a danger lurking across India's public spaces A family picnic represents a refresh button: To enjoy fresh air, sunlight, green grass, and good food, in the good company A weak monsoon should nudge farmers to grow more pulses, oilseeds and millets, not thirsty sugarcane We knew in April this was going to be a weak monsoon. With half of July gone, around 400. A celebrity chef's advice to inspiring entrepreneurs Senior Associate Director, Communications and Programs Jerome A. Chazen Institute for Global Business Columbia Business School recently hosted celebrity chef Vikas Khanna, who was just named to the Time 100 most influential people, where he shared his journey of success. Vikas Khanna, who grew up in Amritsar, Punjab, is now a Michelin-starred chef and host of Master Chef India. Khanna has built a career out of bringing people together with food and introducing Indian flavours to US diners, first at Jupon, where he earned the restaurant a Michelin star, and most recently as owner of the wildly popular New York City restaurant Bungalow. In a fireside chat with Lulu Chow Wang '83, founder and CEO of Tupelo Capital Management, Khanna traced his journey to success, offering advice to MBA students and aspiring entrepreneurs. Once they reach leadership roles, he said, they must advocate for their cultures and communities. We have to adapt to something. But once you fit in, you have a responsibility to educate people who make decisions on our behalf. Who are given the right and positions to judge the subcultures or small ethnic cultures, he told the audience of about 300. Tomorrow you'll be in a position where you have the position and power to change things. Change. Pioneering maestro P. Daroz's lifetime affair with ceramics Uma Nair has been writing for the past 36 years on art and culture She has written as critic for Times of India and Economic Times. She thinks art is a progressive sojourn. She learned by watching top shows in Washington DC and New York. As an author her most important books are Reverie with Raza, Dhanraj Bhagat at 100 Years, and Upendra Maharathi at 100 Years for NGMA. The month o

in ceramic arts in India with pioneering maestro of Ceramics and stoneware wizard PR Daroz (Prakash Pandurang Daroz) being awarded the prestigious Prof. MS Nanjunda Rao National Award. This rare honour was presented to him by the Karnataka Chitrakala Parishath in Bangalore in recognition of his lifelong dedication and remarkable contributions to the evolution of Indian ceramic art. As a ceramic artist Daroz stands tall and distinguished. His pillar-like wall structures, his many arches and architectural ensembles as well as pots and monumental jars and platters and bowls all come rushing back into memory from his days at Garhi studio, time at Bharat Bhavan Bhopal, as well as his slice of paradise at Aya Nagar in Delhi. Espousing both lyrical restraint and chromatic brilliance, his life of nearly 6 decades is an exceptional early example of the highly influential artist's most fervent series of pots fired and glazed with precision. Revelling in pure, unadulterated shades of blue and ash textural terrain, his work exemplifies Daroz's pursuit of intensity of glazing and careful consideration of its manifold possibilities for a ceramic artist. Unforgettable were his pots seen at Shridharani Gallery Triveni Kala Sangam, in the 1990s. Daroz once described his exhibition series as pots and platters to serve colour, and art historian Kristine Michael eloquently notes how with this revelatory series, Daroz ' gave colour an unprecedented voice'. All his series have proved to be an enduring influence on succeeding generations of ceramic artists, too. A look at works reveals how he has matched the grandeur of impact and influence. Daroz's love and passion for clay goes back to over 60 years of explorations, discoveries and inventive odysseys. While he has created stellar creations of mounds, moulds, hand built magical pots and small quaint wonders his love for clay has created its own journey of symbolic identities. In 2006 when I curated Terra Natura at Gallerie Navya in Delhi he spoke of his lifelong affair with the rudiments of clay and said, Clay is many things to a potter. You learn to understand its softness and then work with it in tenderness. For me it has always been a medium that is both supple and tough. Whether I was moulding it or storing it for me it has always been alive and full of possibilities. At Garhi studios and even later he was famous for his experiments with Barium blue and his pots stood like sentinels of antiquity that held their own grace within the moulded magic of its master Daroz. Dipali Daroz states, He abandoned oatmeal glazes for a vibrant matte Barium blue and pink. The play of visual illusion through rapid throwing movement retained the intensity of creation even after firing. Daroz reveled in works that were embellished in the finesse of matte finishes with Barium as the key ingredient in creating beautiful, dry, and velvety matte surfaces, particularly when combined with zinc or magnesium. Vibrancy of colour and saturation were important for achieving the hues of crystalline blue and turquoise tones with hints of copper colorants. Minerals and alkaline earths are the key to the fusion of the glaze on the clay body, explained curator and critic Kristine Michael when she curated his solo at the India Art Fair. Daroz is known for his Symbiosis series created during a month-long stay in Malaysia and Singapore in 1988. The Indian water pitcher and the glass lantern were both objects of inspiration and it was the mo

Keeping in view the need to counter Pakistan terrorist activities with the active support of China, and China hegemonic designs. India has strengthened its position in the BRICS that will ensure that it does not become a tool of China. Out of 22 countries that applied for BRICS membership, only six were admitted, and this reflects India growing ability to check China man oeuvres in the organisation. India will require to maintain the same level of vigilance, when BRICS considers further expansion. Thousands of years ago, India was a knowledge center for the scholars of entire world. The architects of this society were the scientists known as Rishies & Munies. Apart from the skill based subjects; the spiritualism was the rare knowledge being given to worthy disciples by the Guru in Gurukuls and kept alive through generations. Spiritualism believes in the existence of an entity called spirit present in all living beings. This concept cannot be explained through logic alone, not it can be captured by our senses. According to spiritualism, the aim of life is to liberate the spirit from the worldly attachment and surrender itself to the Parramatta the supreme spirit). The living body & attached soul is always engrossed in the illusion of worldly attachments. Therefore life is a sadhana or constant effort for getting into sanyas or the state of non- attachment. When someone dies in the state of non-attachment it is known as moksh libration). But when someone lives in the state of liberation like a yogi, it is described as smadhi, a mental state of ultimate achievement for a person. Once you reach in this state, you become a new person and the old seeker dies. It is a migration to a new state of mind which is the best possible state. But the changes are not external or in the body. The changes are related to the mind. After reaching in the state of Samadhi, your perception changes, but the physical body remains the same. It happens suddenly in a blink, but you may take ages to reach to this position. This is not a mere arbitrary belief system. There is scientific logic behind this philosophy. But the science behind this is forgotten under the influence of western lifestyle. India is on the Moon, Indians are over the Moon. Such is the delight and pride in India becoming the fourth nation after the US, Russia and China to land a craft intact on the Moon that it will materially change attitudes towards educational choices. It will boost national self-confidence across the board, including in tackling scientific and technological challenges and in taking new strides in sophisticated design and manufacturing. Some areas of direct benefit from Chandrayaan are obvious. Satellite and rocket technologies are in the spotlight. This has strategic as well as diverse commercial benefits – given the geopolitical flux and paradigm shifts in the use of information and artificial intelligence. Satellites are key to strategic intelligence and military capability. Satellites with synthetic aperture radars are self-illuminating. This means they emit visible or invisible lights that beam down on Earth, receive and process the signals that bounce back and produce actionable intelligence, peer through clouds and fog and smoke, observe at night with infra-red light, and even see to certain depths below the ground. The 1950s were relatively peaceful. From the 1960s, we see societal stirrings as the economy stalls. Political competition grows. Disorder grows, expressed

And seeing this pain, the poet suffers himself, his kindred spirit weeps at the pain of others, and he is willing to sacrifice himself, all his belongings and even his life, if that sacrifice can alleviate suffering of others. This poem reminds another famous poem from 15 the century Vaishnava poet, Narsinh Mehta, Vaishnava jana to tene kahiye job pir parai janere, meaning those individuals who can feel the suffering of others and work to alleviate that suffering can be truly called divine. Murmu reference to Bhima Bhoi and his song in this 21 set century tumultuous world is not without significance. While the founders of modern India saw politics as a medium of service, thus earning the appropriate epithet, public servants, the politics after a few decades of independence degenerated. We seldom have leaders of the stature of Rajendra Prasad, the first President of India. After his presidential term ended, Prasad retired to Patna and lived an austere life. There are even stories that his simplicity surprised many of his visitors. One can think of another great leader, Sardar Vallabhbhai Patel, the first Home Minister of India. One of my friends from Gujarat who had an opportunity to work with the daughter of Patel, Maniben, told me that he had seen Maniben wearing a sari with patchworks. The point here is not to glorify the simplicity, but the spirit of sacrifice that undergirded their work. Simple living, high thinking guided their work. The spirit of service and sacrifice slowly started evaporating from Indian politics with the passing decades after independence. Politics remained no more a noble profession, but a means to earn money and fame. Hence, the reference of President Murmu to Bhima Bhoi is a great reminder to all politicians and to all aspirants to be politicians that politics must not be a means for self-aggrandizement, but a means to service to the people and the nation. This view of politics also approximates the view of politics as held by Greek thinker Plato, for whom politics is a noble profession, and it requires rigorous education, including physical training, to do service to the nation. Coming to education, President Murmu referred to another great Indian, Sri Aurobindo. While pointing out that this year marks 150 the birth anniversary of the Yogi and philosopher, Murmu said she was inspired by Sri Aurobindo integral education. In fact, during her early career she taught at one of Sri Aurobindo Integral Education Center in Odisha. It is no surprise, hence, that Droupadi Murmu views towards life, society and politics have been colored by that integral perspective, as envisioned by Sri Aurobindo. In summary, Sri Aurobindo integral education calls for a transformation of individual and collective life in a spiritual light, in which individual physical, vital and mental developments are shaped by that light. His motto, All life is Yoga encapsulates such a viewpoint. Without entering into a detailed analysis of Sri Aurobindo integral education, it will be sufficient here to say that such.

BSF-HCM-TEST-Dated-2026-07-23-Test NO.-27539

An approach to education is very much needed in our time of manifold crises and turbulence. We as a human race progressed tremendously in the field of science and technology, and which Sri Eurobond would well approve of, but in the realm of inner development and spiritual progress, we have lagged far behind. That chasm, integral education would tell us, must be addressed in right earnest. There are reports that the youth of India spend significant time in social media without any substantial gain, and a lot of youthful energy is wasted on trivia, and those energy, dynamism, as Murmur rightly alluded to, could be invested in right purpose for the development of youth, and for the growth of the nation. All round development of the youth and all-round development of the nation are connected, and in this direction, the education must not be an enterprise to generate certificate earning youth seeking jobs, but also youth not only qualified for jobs but also imbibed with a spiritual mission, as invoked by Bhima Bhoi and Narsinh Mehta. I wish the very best to President Droupadi Murmur. It would perhaps be no exaggeration to say that at this critical juncture of India destiny, President Murmur appeared as a right leader to steer India to its rightful place in the world by pushing Indians Indian youth and Indian leaders to cultivate inner development and act out from there. Dhanush and the arrow that misfired There are some movies that should be seen only in fast forward. Usually, you discover the need to fast forward about 10-20 minutes into the movie unless you vet read the reviews and rotten tomatoes, and prefer to ignore them while inflicting self-punishment over 2 hours. In the worst case scenario, there is no stopping off till the movie climax comes to a juddering halt and you stop to see title credits if they are at the end, wondering who inflicted the monstrosity on you. In case of The Gray Man, I was forewarned about the atrocity so the off began right away as bullets began to ricochet and blood splattered from the get go. Some mind-numbing hour into the movie I won bother with plot story etc. that was compacted into a few minutes, I arrived at the point I was seeking. The entry of the Tamil film superstar Dhanush in his Hollywood debut. After a few elaborate fights and stunts, sights and grunts, he was done and dusted, in all of five or ten minutes in total hard to compute when you are fast forwarding. This time I did even bother with the credits before asking myself not the usual question, but wondering why did Dhanush have to subject himself and us to such horror? TBH, I have no idea of the background, circumstances, motives of the film and the film makers. I don even know much about Dhanush and even less about Ryan Gosling. What I do know is Dhanush is a Tamil superstar, aside from.

Being the son-in-law of Rajnikant, who might as well be the Big Bang, in tune with Rajnikant jokes. And I vet seen him, Dhanush, in a couple of movies made by Vetrimaaran, a Tamil director a friend recommended to me some years ago. They were brilliant both the actor and the director. So with that limited background, I had like to say Dhanush should have avoided jumping into a black hole that is The Gray Man. It was a silly, meaningless role that does him no credit. Indeed, I don even see it listed in his filmography. He probably embarrassed by it. While the larger question is why Indian actors do these bit-roles in Hollywood movies reason 1 hunger for global recognition, I can see why Hollywood is now eager to cast Indian stars. Big market. But should the Dhanushs and Depicts really fall for it? While movie Dom is broadly universal, there is a world of difference between Bollywood or the broader Indian movie industry and Hollywood. Some actors are able to make the transition with moderate success, but most can. It a different space, different eco system. It like asking a great cricket batter or bowler to come and take a shot at baseball. Those sixes are not easy to translate into home runs except in ads featuring Sunil Gavaskar. Someday, there will indeed be a crossover star, and I hope the day arrives soon when an Indian actor is offered a meaty role in a Hollywood movie. More likely, an Indian-American actor will be a big mainstream draw in Hollywood, more than say Padma Lakshmi or Kal Penn. Till that happens, I wish the Dhanushs and Depicts continue to provide joy in our own eco-system instead of demeaning themselves with bit roles beyond borders. In the wake of digital disruption, the financial services sector is in a changing environment as organizations are rethinking processes, utilising emerging technologies, and accelerating transformation. With the introduction of the cloud, data-driven digital platforms have proliferated. This has resulted in the integration of financial services, secure communications, and networking. Cloud computing enables financial institutions to quickly adapt to a changing environment that provides quicker and efficient services to bring customer delight. Additionally, it allows financial institutions to access new markets and offer new consumer experiences. Banks or financial conglomerates like us, constantly leverage the best of what technology has to offer, to handle tasks in the most optimum and cost-effective manner, without compromising on the quality of customer service. New-age technology tools like Artificial intelligence, Machine Learning is defining the way our customer excellence centres, back-office systems or even trade processing units shall work to ensure, that information is passed to the customer when needed, thereby doing away with the need for a huge tele-calling setup to solve customer queries. This is also how cloud solutions and services are assisting financial organisations in better managing risk and compliance, as well as safeguarding their data. Traditional services are being replaced by cloud services.

BSF-HCM-TEST-Dated-2026-07-23-Test NO.-27541

The client experience is transitioning from telephones, point to point connections, leased lines to platforms. Customers communicate with businesses via digital channels such as social media, chatbots, and connected devices. This transition is driven by the demands of customers, who increasingly want a straightforward, quick, and adaptable customer experience. Cloud-based solutions are ideally positioned to deliver this type of consumer experience. Cloud solutions are inherently user-friendly and extremely scalable. Every activity, be it deploying new hardware, increasing compute, storage, monitoring of hardware, setting up secure environments is available as a pick and choose option. They can be deployed rapidly to suit the needs of a rapidly expanding customer base, and offer a great degree of flexibility, enabling businesses to customise their customer experience to the individual requirements of each consumer. As client demands continue to grow, cloud solutions will become increasingly crucial for ensuring that organisations can satisfy those demands. The cloud has enhanced information and cyber security measures. A new era of data security and compliance has been inaugurated by cloud deployments. By transferring data to the cloud, businesses can benefit from enhanced security measures and enhanced governance. Historically, data security was frequently achieved by combining physical security measures and access control lists. The focus on IT security was limited to protecting devices from virus. In the age of cloud computing, however, traditional solutions are no longer adequate. With cloud deployments, information is stored centrally and is subject to stringent security measures. Cloud services give granular control over who has access to data, allowing access to be restricted to only those who require it and for a limited period. As a result, cloud deployments have strengthened information and cyber security with improved governance. Impact of Cloud installations on various facets Cloud adoption is gaining popularity among organisations of all sizes. Utilizing the cloud has numerous benefits, including lower running costs, efficiency, and improved customer and supplier experiences. In addition, users/customers/employees benefit from cloud-based applications and tools as they provide flexibility, speed, and ease of use. Here, we will examine the impact of cloud deployment on each of these groups in further detail. I. Cost Optimisation: One of the most significant advantages of cloud computing is that it can help cut costs. With cloud-based solutions, organisations can avoid investing in costly gear, related infrastructure, and software. Further the capital or upfront expenses are far lesser by utilising pay-as-you-go pricing options. II. Efficiency: Another advantage of cloud implementation is that it might help to increase productivity. With cloud-based solutions, organisations may access the necessary resources on demand. This can increase productivity and enable staff to work more efficiently. In addition, firms can adjust their consumption as needed, which can help them save money on underutilised resources. III. Customer Experience: Cloud adoption can have a positive impact on the user experience. With cloud-based solutions, organisations can give clients access to the most up-to-date features and capabilities more quickly and efficiently. Additionally, providing clients with self-service options might enhance their overall ex

Innovation and prioritising disruption. Typically, disruption is a pejorative term, suggesting the demise of something that was once effective. In business, though, disruption might represent an opportunity. It represents an opportunity to establish a fresh path to success and break away from the status quo. Adopting innovation and focusing on disruption can help businesses maintain a competitive edge and stay ahead of the curve. As customers move their choice to digital means, branch offices are becoming increasingly obsolete in today business world. Internet usage has also surpassed fixed communication lines in several regions of the world. These shifts present firms with both obstacles and possibilities. Those that can embrace innovation and focusing on disruption will be well-positioned to capitalise on the corporate world current shifts. Final Thoughts Cloud computing has the potential to drastically reduce the running expenses in. It brings efficiency and specialised skillsets for customers to experience better service levels. Digital transformation may help your organisation achieve its objectives in terms of quickly deploying solutions, working on customer feedback, developing specialised products to suit individual needs, maintain compliance, and safeguard its information and data. Financial intermediaries examine a variety of variables when selecting the ideal service partner, including strategy, regulatory compliance, technical compatibility, and cyber security. Concepts like Block chain is positively impacting and making storage, transactions, and business processes safer, faster, and more reliable to work with. Block chain and Cloud that brings more security and decentralization which in turn brings in better authorization, privacy and efficiency is the way to go and look forward is following on the footsteps of its western neighbour, Assam in the task of setting up a Register of Indigenous Inhabitants of is a variant of the National Register of Citizens Assam has adopted with decidedly mixed results so far claims to have watched the process unfold in Assam, followed it closely complete the task of identifying and registering indigenous inhabitants less than five months, December 10, 2019. This is more or less kind of time-line that was followed by Assam, which publish its final year after the process began. In two months from Nagaland hopes have list of indigenous inhabitants, after which it will be published given till October 10 to file claims and objections, before finalisation. It sounds simple, and Nagaland considerably less populated than Assam. But the Assam experience shows that complex demographies of the Northeastern States, it may not turn out that way. As many as 40 lakh people were listing in Assam, which seemed aimed out illegal immigrants. Indeed, in Nagaland, various local attempts have been made to determine non-locals, non-tribals and non-Nagas, and identify what some people refer Illegal Bangladeshi Immigrant. Two years ago, a town farther than 15 km from Dimapur, the largest city commercial capital State, passed a resolution to place curbs on and devised ways to prevent them from integrating, living or trading in the town. When such is the situation on the ground, in an already volatile region where the Armed Forces.

In mid Augugst choose Prime Minister Successor Theresa May successor via a postal ballot. One option to see through their project of a life-time is to elect Mr. Hunt, a one-time advocate of remaining in the European successor Union (like Ms. May), and risk not realising the end goal. He decision to form a to the Lok Sabha and the State Assemblies is a significant step towards achieving Prime Minister Narendra Modi objective of synchronising elections across the country. The fact that he took the initiative to convene a meeting of leaders of all political parties so early in his second stint in office shows that he attaches considerable importance to it. Advocates synchronising of such elections point to potential benefits. There is the obvious advantage of curbing the huge expenditure involved and reducing the burden on the manpower deployed. The second point in its favour is that ruling parties can focus more on governance and less on campaigning. The idea that some synchronising part of the country is in election mode every year, resulting in impediments to development work due to the model code of conduct being in force, is cited in favour of reducing election frequency. But there are challenging questions of feasibility that the political system must contend with. First, it may require the curtailment or extension of the tenure of State legislatures to bring their elections in line with the on this. Another question is what happens if the government at the Centre falls? The Law Commission, in its working paper on the subject, has mooted the idea of a constructive vote of confidence. That is, while expressing loss of trust in one government, members should repose confidence in an alternative regime. Another idea is that whenever mid-term polls are held due to loss of majority, the subsequent legislature should serve out only the remainder of the synchronising term. These measures would involve far-reaching changes to the law, including amendments to the Constitution to alter the tenure of legislatures. It took west Bengal Chief Minister Mamata Banerjee to by junior doctors in the State was a meeting with the agitating medicos and a credible assurance that their safety was a priority for her government. The attack on a junior doctor on June 10 over the death of a patient had sparked the agitation, which spread to other parts of the country when it appeared that the State government was reluctant to negotiate with the striking doctors. Now that Ms. Banerjee has reached out to young doctors and conceded that their demands are genuine, the government, in West Bengal and elsewhere, must focus on addressing the deficiencies afflicting the health-care system as a whole. Reprisal attacks on doctors by agitated relatives of patients who die during treatment are known to happen. Such violence is invariably the result of systemic problems that adversely affect optimal attention to patients, such as infrastructural and manpower constraints. It is apparent that doctors work in stressful environments, sometimes under political pressure with.

BSF-HCM-TEST-Dated-2026-07-23-Test NO.-27546

The Supreme Court of India has rightly shown concern over the worrying trend that consensual relationships going on for a prolonged period, upon turning sour, have been sought to be criminalized by invoking criminal jurisprudence. This was observed while dismissing the case against a Gujarat man filed by a woman who was in relationship with him for nine long period. While the man in this case was set free, a more sensitive techie Atul Subhash had to pay with his life for the false accusations levelled by his wife under the stringent dowry laws. His 24-page suicide note has forced conscientious people to reflect as to why the laws safeguarding women become life-threatening for men. Indeed, Atul case is not the first or the last one; many suicides have happened or are happening. Surprisingly, however, no reference to Aul case came up either in the Karnataka Assembly or in the Parliament even though the case is as disconcerting as any heinous case against a woman victim that rocked the nation. Court cases filed under dowry laws have become an easy tool for unscrupulous women to harass their husbands and in-laws. Besides these, there are any number of cases where false accusations of molestation or sexual assault are hurled to make easy money or to settle scores over some other matter. The list is getting longer by the day and the charges brought against men are getting newer versions: break-up after live-in for months or years are followed by charges of breach of promise of marriage; molestation charges flung without any remorse after a petty dispute; disciplinary action against a subordinate easily invite the charge of sexual exploitation; and so on. We have seen cases where a woman refused to allow divorce to her husband in an unmaintainable wedlock simply because she wanted to teach him a lesson, and in the process ruined her own life along with the man! There is no doubt that in this land, where our culture teaches us to respect women, the incidence of crime against women is on the rise. Many factors account for it, most of all it is the entertainment industry and social media which have impacted our cultural intake. But these factors affect both males and females and good and bad sorts can be found in each gender. Times have changed and not all women are the docile and delicate individuals needing protection in all situations. Most of all, it is the change in the value system. Degradation is seen all around and women cannot be considered immune to it. In such a situation, there is need to have gender-neutral laws, which ensure that not every voice supporting male position is taken as going against female? More than that, however, it is the societal outlook in general that needs to change. The current discourse is dead-set against males, whatever the merits of the case favouring him. Even in enlightened circles like academia with intellectuals boasting of dispassionate thinking, the disbelieving male version is generally the norm. This kind of attitude is bolstered by radical feminists who are blind to the delicate bonds that unite man and woman, and the huge upheaval that the harm to this bond brings into the lives of both partners. Surprisingly, even when a woman charges are proven to be false and it is clear that blackmail was resorted to in order to extort money, or to take revenge on some other count, she is not held accountable for the physical incarceration and mental trauma visited upon the accused man during the conduct of the

BSF-HCM-TEST-Dated-2026-07-23-Test NO.-27547

It quits to life. It would, therefore, be worthwhile to ensure that till the time the society changes its outlook towards male victims, the woman is made to pay for the mischief in such unjust cases. Only then this tendency about which the Supreme Court has expressed concern, will come to a stop. Can UBT-Sena dismal performance in the recently concluded assembly elections be attributed to its abandoning of authentic Hindutva? One may agree if opponents of Uddhav Thackeray are to be believed. UBT-Sena seems to have produced a faux Bahujanist Hindutva that is anti-Brahmin and even garners Muslim votes. Shiv Sena however was not a Hindutva party to begin with. Only the latter half of its 60-year trajectory has been devoted to Hindutva. Maharashtra is the only state in India where a regional Marathi Hindutva grew and spread rapidly through Bal Thackeray Shiv Sena. Shiv Sena moved from mobilising sentiments and interests of Marathi working classes against South Indians, North Indians, Communists and Dalit Panthers since the late 1960s to an anti-Muslim Hindu nationalist posture in the 1990s. This regional Hindutva has helped BJP consolidate its presence in Maharashtra over the last four decades. Is the movement from Marathi chauvinism to nationalist Hinduism a mere accident or does this tectonic social shift have some ide India and China are two of the biggest and most powerful neighbors in the world, but their relationship is like a roller coaster sometimes smooth, but often bumpy. Right now, things seem to be getting better with a new agreement between the two countries. This includes reopening the path for Indian pilgrims to visit Kailash Mansarovar in Tibet, working together on rivers that flow across the border, and trading goods at Nathu La Pass in Sikkim. Sounds great, right? Well, not so fast. Logical and material compulsions? China seems to keep the border problem open on purpose, using it whenever it suits its political needs. For example, during the Covid pandemic or when facing challenges in global trade, China shifted attention to border issues with India. And even though things are calmer now, China still has a large military presence near the LAC, which is worrying. India has to stay alert. The two countries don agree on many big issues, like how to handle the Indian Ocean or the Indo-Pacific region. And Xi Jinping, who leads China, seems determined to hold onto power, even if it means breaking agreements or damaging relations with India. So while things may seem peaceful for now, India must tread carefully, knowing that this friendship could turn rocky again. Imagine an eight-day office trip turning into more than an eight-month one. That kind of what happened to Sunita Williams. Together with Butch Wilmore she had flown up to the International Space Station for a short trip, only to see it turn longer and longer because of tech issues. For those who freak out simply on finding themselves in a rice field thanks to a freethinking navigation app, the idea of being stranded like Williams is totally nightmarish. But from sending down Diwali greetings to casting her vote to now dressing up in a Santa hat, she seems to be holding up well. Space is her happy place, her husband says. Good for her. But, often, glitches in the tech matrix, land us in unhappy places. Remember the Blue Screen of Death from earlier this year? It left such a mess everywhere. Folks missed their work deadlines and got stuck with late fees on their payments d

Spl-BSF-HCM-TEST-Dated-2026-07-23-Test NO.-27549

Recent reports covering Sonam Wangchuk's fast have referred to it as a 'hunger strike'. There is a world of difference between them. MK Gandhi explained that fasting is very different from a 'hunger strike', which has a coercive element. A hunger strike is similar to a labour union's strike; the idea is to force the management to accept its demands. So management is seen as the enemy. In fasting, there is no adversary, for there is no 'other'. The Indian word for fasting is upvas, up in this context means in the upper portion, and vas means residence. Hence, the real meaning of fasting must be understood in relation to the two portions into which our body can be divided: the lower and the upper. Everything below the eyes is lower, and everything above is upper. Our minds can choose to reside in either. Normally, they are in the lower, hence we identify with the physical body. When we do so, there is always a separation of 'me' from 'you'. Through fasting, the objective is to minimise, if not remove, the feeling of separation. The Buddha had put it eloquently, Among men of hate, let us learn to live with love. To do so, we try to keep our attention on the forehead above the eyes. That is upvas. It helps us remove our separation from others because our forehead is the seat of consciousness. Scientist Erwin Schrodinger put it this way: Consciousness is a singular of which the plural is unknown . There is only one thing and that, what seems to be plurality, is merely a series of different aspects of this one thing, produced by a deception (the Indian MAYA). Real fasting is a means of connecting oneself with the deeper reality of One-ness. At that level, whatever 'vibrations' one puts into the 'field' around impacts all others, irrespective of how far away they are separated in space and time. As British astrophysicist and mathematician Arthur Eddington said: When an electron vibrates, the entire universe shakes. MK Gandhi explained that the more one has real 'swaraj', the more one's vibrations impact that invisible 'field' (consciousness) through which we are all connected. The real swaraj is mastery over yourself. Therefore, when Gandhi was fasting, he was expanding his consciousness to encompass all, including the British. To understand what fasting truly means, we need to take into account that neither the body nor mind is our reality, but consciousness is. We do not realise the truth of Aham Brahmasmi only because we identify ourselves with the body mind rather than with consciousness. It may be difficult for us to overcome this limitation. But what we can do is listen to our conscience, which represents our consciousness. As it grows, it metamorphoses into what Gandhi called 'inner voice'. All his fasts were prompted by this 'inner voice'. Consciousness represents life, which is the only Truth. At our level, it manifests as a conscience. Right now, perhaps Sonam's conscience is not permitting him to end his fast. Was one of his greatest collectors and included Daroz in many ceramic exhibitions. The incorporation of bamboo adjuncts and soft appendages of clay all became a part of his elemental inclusions that added vivacity to his works. Architectural planes, voids and architectural elements became part of his vocabulary. Of great import was his 1991 commission at the Hyatt Regency Delhi foyer of the Head Gear series that saw the amalgam of Indian performing arts as well as South Asian accents of Samurai warriors, Yakshagana and Kathak

Gear series were created with motifs from Chhattisgarhi tribal art. His integration of tribal folk idioms with modern aesthetics created a series that spoke to the past and the present. This series was filmed at Bharat Bhavan Bhopal. Interestingly in the early 1980s, Daroz was invited to set up the ceramics studio at Bharat Bhavan. These years gave him deep exposure to its famous collection of central Indian tribal arts. He was deeply influenced by their understanding and was inspired to include geometric, architectural, and spiritual emblems to his ceramic forms and contours. The Lama series 1987 in Dolomite were also created at Bharat Bhavan Bhopal in a wooden kiln. According to Daroz, Dolomite has important qualities and properties for ceramic artists. It is highly prized for creating rich, silky satin-matte surfaces, stabilizing colour development, and minimizing glaze cracking while firing. This work stands apart for its emotive evocations and creates the mood of a monk in many moods. Of historic worth are his many mosaic series created as commissions over years and influenced, in part, by research of architectural nuances all over the world. His glazing and firing practices and experience allow us to see the smallest underlying substances ever observed in the art of ceramics. Inspired by the natural world around him, his study of the natural lifestyles of tribes in India has made him translate those physical realities into his forms. He says to TOI: Through all of my work, I'm searching to depict what feels essential, elemental, and universal in the center. East to west, waist-to-height ratio is best. The writer is a cardiologist, epidemiologist and Distinguished Professor of Public Health, PHFI Cardiovascular diseases (CVD) and diabetes, which frequently coexist in the Indian population, are leading causes of death and disability in this country. The Ministry of Health and Family Welfare (MoHFW) recently announced that Waist-to-Hip Ratio (WHR), which compares the measured circumferences of the waist and hip, would be used in primary healthcare, to identify persons with high risk of these cardiometabolic diseases. Rescue teams are still trying to save workers trapped inside a tunnel in Sikkim after part of it collapsed following a methane gas explosion. The tunnel was being built for a hydropower project on the Teesta River. At least 20 workers have died. Sadly, this is not the first such accident. Just weeks earlier, a worker died after rocks fell inside the Silkyara-Barkot tunnel in Uttarakhand. And in 2023, the same Silkyara tunnel made headlines when dozens of workers were trapped for days before being rescued. Whenever these accidents happen, workers' families are usually compensated. But money cannot replace a life. The bigger question is: Could these accidents have been prevented? Building tunnels in the Himalayas is very difficult. The mountains are young and fragile, earthquakes are common, and dangerous methane gas can collect inside the rocks. Engineers have known these risks for years. The good news is that there are also well-known safety rules. Workers can use special sensors to detect methane gas. Small holes can be drilled to let the gas escape before digging deeper. The air inside tunnels can be checked all the time to make sure it is safe. These are not new ideas; they have been used worldwide for decades. Investigators will now try to find out what went wrong in Sikkim. Did the safety rules fail? Or were they no

BSF-HCM-TEST-Dated-2026-07-24-Test NO.-27553

Regard to admissions. Several States have enacted laws to protect doctors and other health-care personnel from violence. Last week, Union Health Minister Harsh Vardhan wrote to State governments highlighting the need for stringent action against anyone who assaults doctors. He asked States that do not have a law to protect doctors against violence to enact one, and circulated a 2017 draft of a law that envisaged imprisonment besides recovery of compensation from perpetrators for loss or damage to property. However, is such a law really effective? Ironically, the epicenter of a strike that involved nearly the entire medical fraternity across the country has such a law too. Like the law in most other States, the West Bengal Act provides for a three-year prison term and a fine, which could go up to 5 to anyone indulging in violence against any Medicare service person, which covers doctors, nurses, medical and nursing students and paramedical staff. On the sidelines, Mr. Modi held bilateral meetings with Chinese President Jinping and Russian President Vladimir Putin. This month, Mr. Modi will meet U.S. President Donald Trump on the sidelines of the G-20 summit in Osaka. While the current India-U.S. trade impasse and plans for President Indo-Pacific military cooperation will take centrestage there, it is likely that the U.S. is specific demands on curbing defence deals with including on the S-400 anti-missile system, and denying access to Chinese telecom major Huawei for India 5G network bids will also come up. India strategy of balancing and straddling the competing interests of these emerging blocs will be tested. But the SCO collective and the bilateral meetings in Bishkek are an important indicator early in the Modi government second tenure of the President foreign policy arc it is attempting. ailure is always an orphan, but the scramble among Congress leaders to stick the genesis of the party devastating collapse in the Lok Sabha election on someone else is comical. What gives it a dark edge is that this evasiveness is being condoned, even promoted, by the reigning supremos. The Gandhis, Sonia, Rahul and Priyanka, were apparently shocked that the party lost as it did in the election. They would not be, had they been in touch with the political situation on the ground that they keep themselves ferociously insulated from, with the help of self-serving aides. This collapse was long in the President making, and on their watch — and the signs were all around. It is true that the party was up against factors that were loaded in favour of its principal opponent, the BJP, such as money power and the partisan conduct of the Election Commission. Cataloguing only this is not. India far-sighted Right to Education Act is making slow progress in mainstreaming equity, in the absence of a strong political commitment in several States. The proposal to extend its scope to younger children through early childhood education is, however, wholly positive. The move suggested in the draft National Education Policy to put children three years and older.

In a stimulating nursery environment is a welcome logical measure. The pedagogical view is that the pre phase is crucial to stimulate a child curiosity and help her prepare for schooling at age six. The NEP proposal to infuse the existing child development schemes, which are primarily nutrition-oriented, with a learning component is in line with this thinking on holistic development. An extension of the RTE would be a big step forward, but in the absence of measures that will deepen equity, the law cannot be transformative. The Centre has to guarantee that in its totality, the Right to Education will encompass all schools bar those catering to minorities. This is necessary to achieve its moral goal of bringing quality schooling to all in the 6-14 age group adding the early childhood section, now under the Ministry of Women and Child Development, will then be meaningful. Unfortunately, the evidence indicates that only 12.7 schools comply with the law requirements, and at the pace seen since RTE became law in 2010, it will take decades to achieve full coverage. Giving all children aged three and above the right to an education can become a reality only if the state is willing to live up to its promise of devoting more financial resources. An expenditure of 6 of GDP on education could have transformed the sector, given the large wealth generated since economic liberalisation. The Stealthy Neglected Virus needs to be cornered Liver is probably as important an organ, as heart. However, it is sturdier and more tolerant, and gets injured only after repeated insults. Viruses, alcohol, and fat are its sworn enemies; the last two being self-inflicted and the first often invited due to ignorance. As per the WHO, nearly 296 million people are currently infected with hepatitis B world over with 2 billion people having got infected once. India harbors about 10-15 of the global pool with nearly 25-30 million actively infected subjects, of whom, 10 are likely to develop cirrhosis and complications leading to health care costs and premature death. As the infection remains silent, early 80 of the hepatitis B infected subjects are unaware and remain undiagnosed. Nearly 2 million new infections and 887,000 deaths occur year after year globally. The WHO considers hepatitis B as a major public health threat and recommends measures to reduce new hepatitis B infections by 90 and mortality by 65. How to reduce the transmission and disease burden The approach is simple. Test and find the infected. Treat and make the infected virus negative. Protect the uninfected by vaccination. Today in India, with safe blood and non-reusable syringes, the main route of transmission of hepatitis B is mother-to-baby. A baby born to a hepatitis B-positive mother has a high chance of suffering from chronic infection. The baby immune system is unable to clear hepatitis B. According to one estimate, of the 26 million newborns, about a million babies carry the risk of chronic hepatitis B infection. This transmission can be completely stopped.

BSF-HCM-TEST-Dated-2026-07-24-Test NO.-27555

By treating the mothers who are infected. In the anti-natal period, every female should get tested for hepatitis B. If found positive, the mother should get medical help and treatment, and the baby should get a birth vaccination (plus 3 shots later) and immunoglobulin. The current global practice is to treat only those hepatitis B patients who have developed some degree of liver fibrosis or disease or pregnant females in 3rd trimester of pregnancy. These restrictive policies are as per society guidelines. However, the read Select approach has several shortcomings. i) The hepatitis B infected person without liver disease, is asked to go to the hospital every 6-12 months to get his Hepatitis B DNA, liver functions, and tumor marker tests, which are time and money intensive, ii) the infected person feels traumatized, subdued, with loss of self-confidence, iii) the untreated person carries a risk of one in ten, of silently developing liver cirrhosis and liver cancer, iv) the person is a health risk as can transmit the virus through blood, saliva, sexual contact to an unsuspecting contact or to baby, v). Faces discrimination and stigma in workplace, society and family. Imagine a doctor or a nurse is prohibited to operate or take blood sample. Sheer mental agony. The simple and sure answer is to read All and not merely read Select. The read All approach is in SYNC with what is currently practiced for HIV. Once a person is infected with HIV, he she cannot clear it by his her own immunity or by anti-retroviral drugs. The drugs are effective in making the virus undetectable and the person is then free from the risk of either suffering from the HIV disease or transmitting the infection to the partner. The same approach has unfortunately not been implemented for hepatitis B, despite close similarities with HIV infection. HBV is nearly 100 times more infectious than HIV. It is transmitted from the mother-o-baby and rarely (1-2) gets spontaneously cleared from the body. The virus easily fools the body immune system and hides in the liver and other tissues, and continues to cause slow damage. There are very effective, safe and low-cost generic drugs available against hepatitis B. Drugs like tenofovir, TAF and endeavor, can keep the hepatitis B virus undetected in nearly 95 of patients and can be safely given for years. Imagine every infected person can then work with dignity, without an iota of fear of transmission to other or facing discrimination at work places. The main reason for not recommending the read All policy for hepatitis B is probably the cost burden on any national health system. However, when drugs for HIV patients are given free from 2004, and for tuberculosis from 2018, why is hepatitis B neglected. The cost of hepatitis B drugs if purchased in bulk, can be lower than 4,000 per year. According to the WHO, the number of deaths due to hepatitis B per day is more than HIV in one year. Approximately two people.

BSF-HCM-TEST-Dated-2026-07-24-Test NO.-27556

Of the 1970s culminating in the JP movement before the Emergency. In the 1980s, we witness terrorism and rising communal violence. Insurgency-related violence mounts, in Punjab, then NE, then in J&K and the Maoist movement in central India. That roughly the trajectory in the next quarter century. While violence continued in the past two decades, we also see its ebbing. Insurgencies, student protests, industrial strife, terrorist attacks all have ebbed. The first definite indication that millions of tense Indians got of the successful landing of Chandrayaan-3 on the moon was the televised images of ISRO scientists jumping in delight and congratulating each other. Science and technology, it is said, transcends national boundaries. However, there was no mistaking the total Indian-ness of the celebrations in the monitoring room of Isro. Maybe this is how the nerve centres of cutting-edge technology companies in Silicon Valley, California, will look in the not-too-distant future. For the moment, however, there was no mistaking the fact that last week successful moon mission was entirely an Indian success story. Most important, this is how it looked and was internalised by the country. The countless WhatsApp messages juxtaposing the 1963 photograph of a rocket head being carried on a bicycle with latest images of the Vikram lander have driven home the point that India made the journey its way and despite modest resources and the unending sneers of those who already had a place on the global high table. India and the US face a similar dilemma on China. Both countries could benefit from technology and investment in a wide swathe of sectors where Chinese companies are the best. But China poses security threats that must be addressed. The US solution is a high fence, small yard approach enunciated by national security advisor Jake Sullivan and treasury secretary Janet Yellen. India needs a similar approach. This strategy says, first determine where China must be kept out. In these sectors, erect a high fence by declaring an outright ban or the most intensive scrutiny before clearance. But do not build a fence around a big yard. That is, do not prohibit a very wide range of Chinese products and companies. The medical fraternity high-octane campaign against prescriptions using generic names and curbs on funding by pharmaceutical companies and other allied health sector firms seem to have yielded results, with the National Medical Commission putting the new regulations on hold. However, it has raised some pertinent questions. First, generic prescriptions and pharma sponsorship of medical conferences might seem like two separate issues, but the two are intricately bound. Why would pharma and other for-profit commercial entities in the health sector spend crores on doctors or their conferences? What can doctors offer companies in return for such generosity? They can prescribe the products of the sponsoring companies, thereby helping to increase their sales and profits. It is patients who pay for the products and, thus, it is they who actually end up paying for doctors conferences in tourist destinations, five-star stays, lavish meals and gifts in cash and kind. Generic names in prescriptions will mean that doctors cannot push the products of any particular company. If that happens, would companies be as willing to sponsor doctors? Maybe not. As for companies, they too would hate losing an avenue to push products. In 1633, Galileo was forced to recant

Die each minute from hepatitis B in the world. In an earlier report in The Lancet, from the Imperial College of London and University of Washington, who analyzed data from 183 countries between 1990 and 2013, deaths due to viral hepatitis had increased by 63. Obviously, the elect All policy is ineffective. Effective and definite steps like read All are needed. By read All strategy, hepatitis B infected subjects are likely to become Hepatitis DNA negative in a year or two, and then India will have negligible new hepatitis B infections. By strict implementation of the birth dose and proper immunization to the newborn, India can eliminate hepatitis B at the fastest pace. The National Viral Hepatitis Control Program which was launched in 2018 in India, is amongst the largest hepatitis control programs in the world. It would be in the fitness of things that like free treatment for hepatitis C virus in this program, free drug therapy for hepatitis B is also introduced immediately. It is well known that correct and effective implementation of a policy requires bold political and community leadership with a whole of society approach. Join hands to lead India to be hepatitis B free and save millions of lives. With the recent decline in global commodity prices, of food items in particular, many policymakers around the world are heaving a sigh of relief and hoping that the worst of inflation may be behind us. For India, this has special significance as its consumer price index (CPI) is dominated by food and beverages, with a weight of 45.9 in contrast to developed countries where it generally varies between 10-15. On March 28, 2019, Go formally notified its intent to start work on Census 2021. Three years on, Parliament was informed this week that on account of Covid field activities for the census have been put off till further orders. That an odd argument. Normalization of social and economic activity is complete and multiple assembly elections have been held since 2020. Yet field work on India richest data set keeps getting postponed. Defending this by pointing out that key indicators can be extrapolated from Census 2011 is nowhere near good enough. India first census year was 1872. Since then, census field work was never missed. The motivation for it is that a census requires enumeration of individual units such as a household. It, therefore, provides foundational data also used for working sampling frames of subsequent surveys. A census is no longer merely an enumeration of population. It spans critical data that feed into the creation of a demographic, social and economic profile of the population. Therefore, succeeding rounds have built on experience to expand the coverage. To illustrate, there were 14 questions in the 1951 census. By 2011, these had increased to 29. Given the unquestionable importance of this decadal exercise, its postponement for reasons that are not quite convincing is triggering speculation. Some of that speculation has been addressed by Go recently. For example, census data.

BSF-HCM-TEST-Dated-2026-07-24-Test NO.-27558

Tyson Letters from an Astrophysicist on the other hand, catapulted me to outer space. In this compilation of correspondence with people from across the globe, America favorite astrophysicist uses characteristic flair and wit while dealing with questions of science, faith, philosophy and even politics. My favorite letter from the book was from a pre-schooled complaining about the downgrading of our solar system erstwhile baby, Pluto, to dwarf planet. I am so with him. Case of the disappearing rings these days; I get my space fix from Nasa Instagram feed, a conjunction made in heaven for arts majors of an astronomical bent. I am heartbroken to hear that Saturn rings are losing material every year; the iconic rings will, unfortunately, disappear in time, pulled into the planet in a ring rain caused by gravitational forces. Which makes my viewing of the planet even more meaningful in a poetically irrational way? On a chilly evening in Bhimtal, not far from Nainital, I arrived with my companions to stargaze from what was publicised as a hillside observatory. What we found, instead, was an uninspiring one-storeyed camera store wedged between a temple and a chemist. A life-sized cut-out of an astronaut, with an empty space waiting for the heads of space enthusiasts, greeted us at the door. Our viewing slot announced, we climbed the shaky external staircase to access the terrace, which, reassuringly, had two impressive-looking telescopes waiting for us. What more, the technicians spoke knowledgeably about the celestial objects we were pointing the lenses at. It proved too good to be true. One of our guides segued casually and earnestly from binary stars to chudails on amaavas raats. Jupiter Great Red Spot was a treat to behold, as were Saturn magnificent rings. They all be gone in about 100 million years, it is estimated. And I vet only just said hello. So get this earlier today I was just strolling through the park, earphones in but not really listening to anything. That pretty usual for me if I am not chatting with someone, I all pop on some tunes. But this time, nada. I was just soaking in the sounds around me. And let me tell you, the conversation I overheard between two ladies passing by gave me the perfect idea for this blog! One woman was telling the other how obsessed guys are with going to the gym these days, that they are literally killing themselves trying to get ripped. She was all they are having heart attacks and everything! Then she laughed and said If only they put that effort into building a career, they could land themselves a great girl. That made me slow my roll to hear how her friend would respond. And this other lady clapped back, Yeah right girls know those buff bods are just a flash in the pan! At that point I had to speed back up before I crashed into someone eavesdropping too hard. But I was bummed to miss the rest of their chat. Still, it got me thinking, as humans we sure have a funny way of prioritizing fitness! See, what popped into my head was at the end of the day, what we really need to stay relevant and survive in this world is intellectual fitness. But physical fitness is the hot trend and passion in the market right now. Everyone wants the gym body, the six pack, all sculpted to some ideal shape. And there another craze happening too mental wellness. As in reducing stress, anxiety, depression and finding inner peace. Both of these are selling like hotcakes! People are buying into it all. But here the rub why

Culture where we accept that beauty, pleasure, art and enjoyment are a part of adult life, the answer to that question might be: to whomsoever they may appeal. In a context where nakedness invokes the sexual then, perhaps, the answer might be: those who would desire a naked man, that is, women and queer people. comes in its original material and accompanied with due ceremony. The inspired idea of Her Guar Taranga has bowed to crass convenience. First they said it no longer has to be made only from khaki; mass-produced material to facilitate mass-induced patriotism, right Now they vet unceremoniously dumped ceremony. We can keep the tricolor flying 247 as if it were a call center, no need for the bother of hoisting it in the morning and lowering it at sunset. Many have mourned the first decree last nail in the coffin for khaki, but the second makes me sadder, angrier. It far worse than the popcorn patriotism of the cinema hall, the compulsory playing of the national anthem to the digital undulations of a virtual flag. So, let put aside the irony of cancelling khaki, the original symbol of today tom-timed atmanirbhar. Let ignore Pupul Jayakar or the less-known efforts of Captain CP Krishnan Nair, who, long before he set up luxurious hotels, persuaded Pandit Nehru to levy a one-paise cess on every yard of mill material which contributed Rs 300 crore to upgrading the primitive hand-operated looms, and next convinced the West German minister to lift the quota and the export duty on Indian handspun. Instead, let come to the concern I really want to flag. Listen, ji, concha soda revenge does mean samara pyara jhanda should remain unputdownably up. Ritual is integral to the symbolism. The PM raising the tricolor at the Red Fort raises goose-bumps because it is a yearly reminder of the sacrifices made for freedom. But the Republic morn ceremony is incomplete without the solemn lowering of the flag at Beating Retreat as dusk deepens the ochre of the sandstone sentinels of Raisina Hill. More modest but no less stirring repetitions have accompanied us since childhood. True, the Americans just keep theirs stuck on their front lawns, but to me the evocative mythology of raising and lowering the flag is dishonored if we just put it up and forget about it. It turns HGT into Hugely Gross Tokenism. Even washing is taken down at night. We live life waiting to reach somewhere, looking for a purpose. We adopt a religious path often to find a meaningful destination to disembark. But over the years, gradually wading through rules and regulations of various rituals, we forget our purpose, instead get bogged down with external symbols, thereby forgetting to grow deeper. Religious traditions were meant to take us deeper on a spiritual journey to connect with the Parramatta present in each one of us. Sage Veda Visa recorded the entire Mahabharata to help future generations who were predicted to have far lesser attention spans to.

Won be used to create a National Register of Citizens (NRC) as the statutory law governing census operations restricts it to the use of aggregated data. That leaves two other suggestions that have gained traction. An innovation that is to feature in Census 2021 is self-enumeration. While details are not in the public domain, there have been suggestions that Census 2021 provides an opportunity to get an accurate picture of the pandemic-induced mortality. Perhaps the most contentious suggestion is the one raised by many political parties on using Census 2021 to enumerate population based on castes. Post-Independence, caste enumeration for the general population ended. It should stay that way. The decadal census is the most important data collection exercise in India and forms the basis for state interventions in multiple areas. Census data is a public good that also serves as a springboard for research that feeds back into policy intervention. Given its criticality, field work on Census 2021 should not be put off any longer. The 37 lives lost in Gujarat to hooch consumption several others are hospitalized, and some critical are another tragic demonstration of the folly of prohibition. Meanwhile, in Bihar, another prohibition adherent, hooch has reportedly killed 115 people this year. Prohibition and exorbitant liquor taxes tend to push the poor towards illicit liquor, which is cheap but unsafe. The Gujarat tragedy was caused by stolen methyl alcohol, used for industrial purposes, finding its way to bootleggers. In damage control mode, officials are cracking down on methyl alcohol storage and conducting state-wide raids on bootleggers. But not only will this zeal predictably die down, it misdiagnoses the problem. Economic logic dictates that where there is demand, a market will materialise. Prohibition only serves to drive it underground, evident from ample availability of safe liquor for better off classes in Gujarat and Bihar. This lucrative parallel economy, which engenders corruption and criminal rackets, is far more socially harmful than legal drinking. Alongside are strange bureaucratic systems like Gujarat that carve out permits for liquor consumption. The continuance of this farce puts citizens who can legitimately drink elsewhere in the country under unnecessary risk of criminalisation. Not surprisingly, there are those like BJP neta Khumansinh Vanish who believe scrapping prohibition will be a smart policy for BJP in Gujarat. Prohibition cases are also jamming courts, taking precious judicial time away from other crimes. A staggering 30 lakh Prohibition Act cases are pending trial nationally. In 2020, 25 of criminal cases registered under special acts and local laws were prohibition cases (5.6 lakh cases); Gujarat accounted for nearly half. There also the point that revenues from liquor sales can support state exchequers instead of enriching criminals. No one stopping governments from issuing advisories on liquor consumption. But letting adults be if they wish to drink is an infinitely superior policy to pushing them to hooch because they can legally drink. When a beautiful man puts out some expressive nude pictures, who is he putting them out for In a.

Between arguments about gun safety and people defending guns, responding to one shooting only to wait for the next. But this shooting is unusual because the shooter was a female student. That extremely rare. Social media says she even left a note blaming fathers, brothers, husbands, sons, and others as the problem. Meanwhile, some people online are claiming that anti-male attitudes are ruining society. But this is not the real issue. If we look at the facts, the vast majority of school shootings and violent acts are done by men. In the past 25 years, only 4% of school shooters were female. From 1966 to 2019, 98% of all mass shooters were male. And violence against women is also common young women in the US are twice as likely to be killed if they are pregnant, often by their partners. This is not just a problem in the US. In India, only 4.3% of prisoners are women, showing that men commit far more crimes and acts of violence. These facts are clear, but what should we do about them? The solution is to blame all men or to make women just as violent. Instead, we need to help children deal with the pain and anger they feel before it grows into violence. If we turn this into a fight between genders, it will only lead to more anger and hurt in the future. A peaceful world depends on us helping kids heal, not fueling their rage. We are all part of one global family. Yet, deep down, we sometimes forget this truth as we get caught up in our small worlds, which affect our mental health. This has become the biggest challenge worldwide. With so much aggression on one side and depression on the other side, it time to wake up! The solution lies in meditation! People, who reside in the forests, often lose their teeth by the age of 25 or 30 because no one taught them the importance of dental hygiene. But in a civilized society, what do we do? We teach children to brush their teeth to maintain their smiles. Similarly, while dental hygiene is important, we must also prioritize mental hygiene. Meditation is like pressing the delete button on a cluttered mind. Is that what we need? We want comfort but don know how to be comfortable. Meditation is the AC (Absolute Comfort) for the mind. It is the journey from movement to stillness, from sound to silence. You don have to be very serious to meditate. It is being very natural, being at home. At home with you and at home with everything else in the universe. Scientifically, there are over 1,000 research papers on the benefits of Meditation and Sudarshan Kriya; the world most powerful breathing technique taught in Art of Living Programs. It helps us become healthy, happy, and friendly. It relaxes the body and mind, allowing us to discover who we truly are. It offers a natural way to overcome challenges with.

A column on an American bat-and-ball game, called pickle ball, has stirred up a controversy regarding its origins. According to AI, the game was devised in the US in 1965 as a sport in which all members of the family could participate, regardless of age, gender or physical fitness, and soon gained global popularity. However, pickle ball has got itself into a pickle with a correspondent claiming that, far from being of American provenance, the sport in question originated in his alma mater, Madras Christian College High School, a venerable institution that is 180 years old. While the layout of the court on which the game is played, and the oversized Ping-Pong-style paddles used are the same as in pickle ball, the Madras game uses tennis balls instead of plastic balls, and is called Padded Tennis. Is pickle ball an unsportsmanlike case of playful plagiarism, an infringement not of intellectual but of athletic property rights? Sociology tells us that the purpose of all games, which by definition are founded on the observance of specific rules, is based on the necessity to inculcate in us, from early childhood, a willingness to accept regulation and obedience to authority, be it in the form of parents, teachers, or govt. According to popular lore, the universal children's game of hop-scotch was invented in ancient Rome as military training for centurions who had to play it burdened with heavy armour and weaponry to develop strength and stamina, and learn to obey commands without question. But, paradoxically, sport, which is meant to teach us to be sporting and adhere to rules, has given rise to what British humourist Stephen Potter called 'gamesmanship', which is the use of underhand tactics to outdo one's opponent, whether in a sports event or a business deal. If the US has, indeed, pinched pickle ball from India with gamesmanship, we might claim they've also filched their full-contact American football from our kabaddi, which is much the same without all that fussy body armour. And what's baseball but smuggled cricket, which itself is derived from the 2,500-year-old game of gilli danda. Howzat! Are you happy? Most of us would answer, 'Yes sometimes.' Our happiness comes in flashes of moments of joy interrupted by bouts of sorrow. It's like eating chocolate with foil. You enjoy the chocolate, but every now and then you have to spit out the wrapper. Why can't life be all chocolate and no foil? First, where is happiness? Most of us believe it lies outside in people, possessions, achievements or experiences. But does it? Imagine landing in New York after a long flight from Mumbai. A fellow passenger lights a cigarette. He is happy. Another passenger walks away. The same object gives intense pleasure to one person and immense discomfort to another. If happiness were in the object, shouldn't everyone experience the same joy? As long as a desire remains unfulfilled, the mind is agitated and unhappy. The moment the desire gets fulfilled, the agitation ceases. You are happy. So, could it be that happiness is in the mind and not in the object? When the oasis is elsewhere, where do you seek happiness? You seek happiness through four avenues. Sense contact, action, relationships and intellectual pursuits. Take sense pleasures. The first mango of the season tastes heavenly. But by season's end, your favourite fruit has lost its charm. The more you indulge, the less you enjoy. We all act, work. What are you working for? Pay check, profit? Watch the th

faces. Is it possible to look forward to working hard? Relationships bring more joy. Two people deeply in love forget heat, hunger and discomfort when they are together. Yet the same relationship can become the source of conflict and bitterness. Intellectual achievement gives far more happiness. A student may sacrifice every comfort to earn a doctorate from a prestigious university. But before long the mind whispers, what's next? Every achievement gives temporary satisfaction, but never lasting fulfillment. The world entices us to want more, buy more and become more. Yet every new desire quietly postpones our happiness. The fewer the desires, the greater is happiness. And when desire finally drops to zero, you get infinite happiness. Then nothing adds to it nor can it be depleted. How do you reduce your desires? As children, we wanted toys. Today they hold little attraction. We grew to something more exciting. As you upgrade your desires, the lower ones lose their grip over you. Desire comes when there is a void. Thoughts arise in your mind to acquire things to fill that emptiness. These are called desires. Yet no matter how much we acquire the feeling of incompleteness returns. Why? Because you were never empty. Move from selfish pleasures to shared happiness. Celebrate your family's success as your own. Discover your spiritual nature, the limitless Self that the Gita reveals. You enjoy infinite bliss! Safely at the end of the day. The real test of a great project is not just how fast it is finished, but how well it protects the people building it. Cockroach Janta Party (CJP), which emerged as an internet meme barely two months ago, has rapidly evolved into a powerful youth movement, paralysing key areas of New Delhi this week. Caught off guard, govt appears for the global Indian traveller, a passport has long felt less like a gateway, and more like a stack of pending court documents. Despite India's rise as the world's fastest-growing major economy, its citizens' face that Margaret Thatcher slept only four hours a night was a famous pillar of her Iron Lady persona. This sleep is for wimps brag is a hoary one. Napoleon made it too. And yet, when for an organisation that handles exams for millions of students every year, NTA's permanent staff of only 25 officials is exceptionally small. It relies on another 200 contractual and outsourced personnel to conduct a major entrance a column on an American bat-and-ball game, called pickle ball, has stirred up a controversy regarding its origins. According to AI, the game was devised in the US in 1965 as a sport in which all members By Jaya Row are you happy? Most of us would answer, 'Yes sometimes.' Our happiness comes in flashes of moments of joy interrupted by bouts of sorrow. It's like eating chocolate with foil. You enjoy T S Ananthu Recent reports covering Sonam Wangchuk's fast have referred to it as a 'hunger strike'. There is a world of difference between them. MK Gandhi explained that fasting is very different from the days after the Belgium-US match. I cornered Fifa president Gianni Infantino at the Waldorf Astoria, a luxury hotel in Manhattan, with a simple question: Following the Folarin Balogun case, will you resign? In Franz Kafka's The Metamorphosis, protagonist Gregory Samsa wakes up one morning as a cockroach. His family is horrified not by the transformation, but the prospect of his sheer employability. In India, cockroaches By GS Tripathi Anxiety is an integral part of human e

A calm mind and resilient spirit, rather than breaking down or relying on antidepressants to manage stress. As stress is reduced through meditation, we open ourselves to truly enjoy life and embrace the diversity around us. Without the weight of stress, compassion flows effortlessly, letting us celebrate life truly. A stressed or depressed person often struggles to care for themselves, let alone the planet or the environment. Happiness is not something external, it within us. Meditation helps us tap into this inner happiness. It an important catalyst in bringing people together, building connections, and resolving conflicts in society. As the Sanskrit saying goes, Kalay tasmai namah, time governs all events. Meditation helps us transcend time. It nourishes the soul, lifting the lid we vet placed on the fountain of energy, love, and joy that we truly are. Can everyone meditate? Many people find it difficult to practice meditation. The truth is that meditation helps ease other difficulties in life. Once it becomes a part of your routine, you all find it easy to practice whenever you feel tired, it recharges you with energy. And when you experience the immense benefits it brings, you will never miss meditating. You all look forward to it. To make your meditation experience more effortless, there are three golden principles that you can follow. When you meditate, set aside all the wants in your mind. It like, when you go for a shower, you don step in with your coat on, right? You remove the coat and take off your shoes. Similar say to you, I want nothing. Meditation is not about doing anything, so simply do nothing. And finally, know that I am nothing. These three principles can make your meditation experience very deep. A global movement United Nations has declared 21st December 2024, The World Meditation Day This is a history in the making. It a welcome step as Meditation needed this recognition. On this first World Meditation Day, let unite and inspire the world to meditate, and together, work towards freeing our planet from stress, conflict, and violence. Join LIVE meditation with Gurudev Sri Ravishankar on 21st December 2024, 8 pm on his YouTube channel. Welcome back to another edition of My Take 5, your weekly round-up of international news. Ukraine war heats up before Trump 2.0, Putin pitch for incoming White House administration, India-Bangladesh war of words over Victory Day, Morocco gains international traction, and Malaysia to resume search for MH370. So let get to it. Ukraine war scramble: Tactically speaking, the Ukraine war is witnessing a discernible escalation in the weeks before Donald Trump takes over as US president. Over the past week, Ukraine fired missiles reportedly US-made ATACMS at a Russian air base on the Azov Sea, as well as drones targeting an oil depot in Russia Bryansk region. Subsequently, Russia launched another widespread attack on Ukraine energy infrastructure with 93 missiles and more than 200 drones. A democratic constitution, such as ours, overtly protects the right to life, property and religion. These are glorified as signal achievements of democracy, but, in doing so, it is forgotten that if these rights are abided by, the Constitution also gives us the freedom to err, to make mistakes. This derivative right often goes unnoticed, yet without it our Constitution would become a moribund and totalitarian document, hostile to amendments. Neither the one nation, one election proposal nor the economic subd

Understand the message hidden in it. But it did help. Veda Visa was then asked to make a sum mum bonus, concentrating on the highest good according to which values and priorities could be established in society through Vedic wisdom. That is how he came to record the Srimad Bhagavatam, with its intricate details to navigate through life and yet be comfortable with one actual purpose that of knowing the presence of the Divine in the heart. Ins surrendering to that Higher Intelligence the key to living a fulfilling life The Srimad Bhagavatam is based on the oneness of humankind and the energy of all living beings. The Bagdad Gita describes how a spiritual person sees Parramatta in every living being. When we differentiate based on caste, creed and sex, we lose that connection to the Supreme Intelligence. Under stress, we ultimately disconnect with the Divine and become manipulative beings. In such a state, we no longer surrender to Him and succumb to our programmed beliefs that are tuned to our narrow vision. These are limiting beliefs ingrained within us through our past experiences and negativity. They are entrenched in our subconscious and control us. When we face adversity, we latch on to despair, quickly losing hope. Outwardly, however, we may continue with external religious traditions and rituals. But merely quoting scriptures without internal transformation is akin to licking honey from outside its bottle and missing the nectar of overcoming our limiting thoughts and behaviors. Srimad Bhagavatam teaches us to avoid this pitfall by surrendering to the Divine Intelligence. Our primary duty as spiritualists is to lift our consciousness to seek a connection with the Divine. That is one way to serve humanity, whether as a father, mother, husband, wife, student, brother, or sister. Everyone then becomes a spiritualist. By being the best versions of ourselves, we serve everyone around us and tune and surrender our thinking to the Intelligence that runs our complex body and the whole universe. Ultimately, this is what changes our belief system, and in the process, overcomes our limited self, body and environment. There is a popular saying often attributed to Saint Francis of Assisi: Preach the gospel at all times; use words if necessary. Simply put, this means that we need to let our conduct and not our sermons inspire those around us. Similar is the message of Srimad Bhagavatam, where one learns to disconnect with the material world, seeking instead the Higher Intelligence that leads us to Ultimate Bliss, turning difficulties into opportunities for spiritual growth. India foreign policy has gone through different phases during the tenures of prime ministers from different political parties since the country got Independence from Britain on15th of August, 1947. Although there were times, when for short spans the country had coalition governments, on the whole, a broad consensus on the basic objectives can be noticed in the foreign policy followed by all the governments. However, from among these governments, those which deviated from the mainstream policy and.

BSF-HCM-TEST-Dated-2026-07-25-Test NO.-27571

Followed a different, at times an independent path, need special mention. This is an attempt to take a critical look at the foreign policy followed by prime ministers who have contributed significantly to the foreign policy in their own way. Foreign policy of India during Jawaharlal Nehru premiership Independent India first Prime Minister Jawaharlal Nehru, along with Krishna Menno, Defence Minister, is said to have shaped India foreign policy after independence. During those times, the world was facing Cold War, getting rapidly divided between the West, led by the United States and Britain, and the East, led by the Soviet Union. India, under these circumstances naturally felt an urgent need to develop policies, with respect to her relations with the two opposing blocs, as well as her relations with Pakistan, Britain, and the Commonwealth. From the time India got independence to the disastrous border conflict with the Peoples Republic of China (PRC), three key features characterised India foreign policy: 1. India played a significant role in Multilateral Institutions particularly in the United Nations peacekeeping operations; 2. She emerged as a critical proponent of the non-aligned movement; 3. As a leader of the non-aligned movement, she made a significant contribution toward the process of decolonisation. Jawaharlal Nehru foreign policy has however been criticised on the following counts: 1. The wisdom in following the policy of non-alignment, and doubts expressed about its efficacy and feasibility. 2. Charges that its application has shown preference for the communist states during the periods of the Cold War. Foreign policy of India during Indira Gandhi premiership The stated aims of the foreign policy during Indira Gandhi premiership between 1967 and 1977 included a focus on security, fighting militants, and strengthening border defenses. In early 1971, disputed elections in Pakistan, led East Pakistan to declare Independence from Pakistan. Repression and violence unleashed by the Pakistan army forced 10 million refugees to cross over to India. Finally in December 1971, India directly intervened in the conflict to defeat Pakistan army in Bangladesh. On May 18, 1974, India conducted her first nuclear test successfully at Cochran in Rajasthan. With this, India became the world sixth nuclear power outside the five permanent members of the United Nations. India characterised the test as a peaceful nuclear explosion. The US took offence to this, blocked aid to India and imposed numerous sanctions. The issue caused a stalemate in the relations between the two countries. However, the United States made amends when she realized that the test did not violate any agreement, and sent a shipment of enriched uranium for the Tarpaper Reactor, making the rest of the world accept the status of India as a responsible nuclear power. The relationship between India and the Soviet Union deepened during Indira Gandhi rule. The support of the Soviets with arms supplies, and use of veto at the United Nations, helped India in winning and consolidating the victory over Pakistan in the 1971 Bangladesh liberation war. Subsequently, the Soviet Union became the main arms supplier.

BSF-HCM-TEST-Dated-2026-07-25-Test NO.-27572

During the rule of Indira Gandhi. Indira Gandhi was a staunch supporter of Palestinians in the Arab Israeli conflict and was critical of the Middle East diplomacy sponsored by the United States. India under Indira Gandhi viewed Israel as a religious state, analogous to her adversary, Pakistan. Indian diplomats also hoped to win Arab support in countering Pakistan in Kashmir. India pro-Arab policy had mixed success. During the Indo-Pakistani War of 1971, while the progressive Arab regimes in Egypt, Syria, and Algeria chose to remain neutral, the conservative pro-American Arab Monarchies in Jordan, Saudi Arabia, Kuwait, and United Arab Emirates openly supported Pakistan. Foreign policy during P.V. Narsimha Rao premiership and his successors The early 1990s was characterised by a succession of weak governments. India had become rudderless economically, politically and strategically. P.V. Narsimha Rao assumed the office of Prime Ministership during this period. Economic reforms initiated in India during his tenure put India on a high-growth trajectory and plunged India willy-nilly into the realm of great power politics. Realising that for economic reforms to succeed, India would need the support of the West, especially the United States, Rao laid the foundation for revival of US-India ties, acknowledging the importance of the US in the world. In the Middle East, Rao for the first time established full diplomatic relations with Israel in 1992, which no Prime Minister had dared earlier, at the same time, reaching out to Iran by paying a visit to Tehran in 1993, becoming the first Indian prime minister to visit Iran since the 1979 Islamic Revolution. Realising that, the center of gravity of global economics was shifting to the East and realising the need to link India economic future to the booming economies in East Asia, he proceeded to expand India engagements with the Association of Southeast Asian Nations (ASEAN), not only as a matter of India economic revival, but also as a counterweight to the rising Chinese dominance. The economic reforms initiated by Rao generated rapid economic growth and also transformed the way India engaged with the world. On the foreign policy front, Rao launched Look East policy and started an outreach to Israel, leading to the establishment of diplomatic relations between the two countries. The Israel outreach was also part of the America outreach. Realising that Jewish lobby was very powerful in the US, by establishing diplomatic relations with Israel, it is said, he was actually sending a message to the US. It can therefore be said that, in a sense, the entire post-cold war foreign policy of India was crafted by Narasimha Rao. Foreign policy during the premiership of Atal Bihari Vajpayee Late Atal Bihari Vajpayee, acclaimed a natural grand strategist, is credited to have crafted a pragmatic foreign policy for India, that is said to have endured till date. His approach is most prominently visible in three interrelated set of events that he shaped: 1. India decision to become a nuclear weapons state in 1998. The Cargill War of 1999 the outreach.

BSF-HCM-TEST-Dated-2026-07-25-Test NO.-27573

To China soon after. After fulfilling the promise to move India away from nuclear ambiguity since the Cochran test of 1974 with the 1998 nuclear tests, Vajpayee unilaterally committed to two important stabilizing measures: a) An informal moratorium on further nuclear tests; and, b) A commitment to No First Use (NFU) of nuclear weapons. These measures have primarily been instrumental in securing India entry into the global nuclear and non-proliferation group, despite not being an NPT (Non-Proliferation Treaty) signatory. Under Vajpayee leadership, India conduct during the Cargill War of 1999 was a testament to the policy of strategic restraint followed by him. With respect to relations with China, Vajpayee was of the view that the boundary issue should not constitute a hindrance to the improvement of the bilateral relations between the two countries. This approach of India of de-emphasizing the border issue, in the overall context of India-China relationship, continues even today. Foreign policy during Dr. Man Mohan Singh premiership Dr. Man Mohan Singh started his foreign policy innings in 2004, from where his predecessor Atal Bihari Vajpayee had left. Dr. Singh chose not to deviate from the stand that Vajpayee had pursued i.e., policy of greater engagement with the US, China and Pakistan, the three countries critical in India foreign relations. Singh actually expanded the scope of relations with each of these countries. India and the US, for instance, opened a new chapter in their bilateral relations, when they signed a landmark Civil Nuclear Deal. India also got a clean waiver from the Nuclear Suppliers Group, a de facto recognition of India as a nuclear power, with support from Washington. Singh engaged with three successive governments of Pakistan and made several peace overtures. In China case, several confidence building measures were launched to maintain the status quo along the Line of Actual Control under two different regimes in Beijing. With the recent decline in global commodity prices, of food items in particular, many policymakers around the world are heaving a sigh of relief and hoping that the worst of inflation may be behind us. For India, this has special significance as its consumer price index (CPI) is dominated by food and beverages, with a weight of 45.9 in contrast to developed countries where it generally varies between 10-15 .There I was in a cab in bumper-to-bumper traffic in a busy street; and with nothing to look at except cars and more cars to my north, south, east and west, I stared at a bumper sticker on a vehicle in front of me. Ageing is just another word for living! it read. Nice, I thought. And shady know guys The next morning, I wake up to a ping on my mobile to see a message on our extended family group. There a breath-taking video of an almost 70 year-old uncle whizzing through the air at 55 mph, across what is apparently America steepest zip line. Before I vet had time to rub the sleep from my eyes, collect my hanging.

BSF-HCM-TEST-Dated-2026-07-25-Test NO.-27574

Had travelled not more than a couple of steps up that blessed ladder. I climbed down. My 84 year old dad then shinned up the ladder like a pro, quite like the Maratha warrior Tanhaji climbing up the steep cliff of Fort Kondhana, fixed the pipe and shinned down again. Like I said, the super-seniors in our family are really living it up! And this is my toast to them Remarks made by a Minister in Uttar Pradesh that the construction of a temple in the disputed site at is a certainty because the Supreme Court is ours cannot be dismissed as mere political zeal displayed by a party committed to the cause. It reveals a disconcerting cockiness that those in power tend to display when they believe that courts have to defer to those with an electoral majority. The construction of a Ram temple is our resolve. The Supreme Court is ours, the judiciary, the country and the temple are ours, is what the Minister for Cooperatives, Mukut Bihari Verma, is reported to have said. It is reassuring to note that the Bench, which is hearing a set of appeals against the decree passed by the Allahabad High Court in the title suits, condemned the remarks, as soon as its attention was drawn to them. Such irresponsible utterances must be quite annoying to the judges, and unforgivably embarrassing when they come from prominent members of the ruling party at the Centre. The court has said its reservations would be recorded in the order, which means that it will not let this brazen claim consume its valuable time. Mr. Verma has sought to clarify that when he said the court was ours, he did not mean that the government owns the court, but only that the court belongs to everyone and that it reflected his faith in the top Court. It is quite unconvincing as his claim of control over the judiciary was made in the context of the party resolve to construct the temple. It would be in order if the Uttar Pradesh Chief Minister took cognisance of his Minister remarks and initiated appropriate action against him. However, given the Bharatiya Janata Party fanatical commitment to the cause of building the temple at the site in which frenzied mobs had pulled down the Babri Masjid, it is unlikely that any such action would be forthcoming. The hearing in the Ayodhya appeals in the Supreme Court has been going on for weeks. In Lucknow, the trial court is making slow progress in the criminal case against those who demolished the mosque. In this backdrop, any attempt to create an atmosphere of fear or influence the proceedings will have to be viewed seriously. Earlier this month, the Supreme Court Bench ordered notice to a Chennai-based octogenarian who had allegedly written to senior advocate Rajeev Dhavan, hurling curses on him for representing a Muslim party in the dispute. Mr. Dhavan has spoken about facing threats, ridicule and intimidating behaviour. While welcoming the.

BSF-HCM-TEST-Dated-2026-07-25-Test NO.-27577

Court assurance that the parties can advance their arguments without fear, it would be in order to underscore that it should remain vigilant against attempts to undermine its role in adjudicating this dispute. After all, the quarters from which these irresponsible utterances come do not consider the fact of being in office a restraining factor. Indian Institute of Technology, Bombay, is not just home to great science minds, it also harbours some unique microorganisms. Recently, researchers have identified a soil bacterial strain from the campus that helps in complete remediation of the carbaryl pesticide. Carbaryl pesticide continues to be used in the agricultural sector in spite of experimental studies in laboratory animals suggesting it to be a probable carcinogen to humans. Carbaryl is also persistent in nature leading to pollution of both soil and water ecosystems. The newly isolated bacterial strain utilises the pesticide as its source of carbon and nitrogen for its growth. The team was also able to identify the genes responsible and the metabolic pathway involved in the complete metabolism and bioremediation process. The bacterial is used as a carbon source, methylamine is used as the nitrogen source. Though many microbes like study of the genome showed that it has special genes responsible for carbaryl degradation. The bacterium might have acquired these genes from other related microbes that are capable of breaking down hazardous compounds. The team has recently published a review paper in the journal Genes explaining this process of movement of genetic material between organisms. This is called horizontal gene transfer and is different from vertical gene transfer from parent to offspring. The first such reversal is an offer to meet Iranian President Hassan Rouhani without any preconditions on the sidelines of the UNGA session this month made by U.S. Secretary of State Michael Pompeo. While New Delhi must continue to keep a keen eye on all the changes in the White House and Cabinet, it is clear that investing too much in any one adviser or expecting consistency in American policy as a result, would be a folly. Since he assumed office in 2017 Mr. Trump has run a revolving door for recruitments and retrenchments, and is now on his fourth NSA, third Secretary of Defense and second Secretary of State. India would do well to not allow its bilateral relationship with the U.S. or other relationships to be determined by such a fluid dynamic. A case in point is ties with Iran, where New Delhi may have been better off not acceding to the tough Bolton line, and instead, like China, Russia, Iraq and Turkey, keeping its own counsel on the issue of oil sanctions. On the bilateral front, India must build its strategic and economic relationship with the U.S. with a keener eye on the transactional thinking that now prevails in Washington. As Prime Minister Narendra Modi heads to the U.S. this month, with a plan to meet the U.S. President, it may be best to keep in mind the words of.

But hobbies are so critical for intellectual growth! Instead, were all convinced we need to stay busy with our so-called responsibilities and routines of life. Being busy is even a status symbol now. The busier you appear, the more important you must be, the more attention you get. Personally, I probably know only about half the people who make any effort to nourish their minds. To be honest, it really cheeses me off when people ask me so how work going? Where are you working these days? and other inane questions like that. I wish people would ask me You, what have you been reading or writing lately? Where did you travel recently? Picked up any new skills or hobbies? I do know why most folks don see the relevance of intellectual fitness. Or why fitness just means having a ripped body and a smile on your face. Ignorance is bliss, I guess. If you don know anything, you all be carefree and happy. But imagine taking that blissfully ignorant person and putting them through a workout. You all get a fit, smiling exterior. But start talking to them and you all quickly realize there not much going on inside. So think about it is our idea of fitness pointed in the right direction? Do you just want to be a fit, smiling shell of a person? Or will you strive to be an engaged, dynamic individual who is growing themselves while also uplifting society? Now some might argue you can do anything without a healthy body and peaceful mind. To that I say, when you have intellectual fitness, you will automatically take care of your body and mind. You all achieve substantive fitness of both, not just surface level. I won have to tell you to do it. In other words, the real race should be for intellectual fitness. Mind and body will get fit along the way. But if you get caught up in physical fitness alone, the mind will wither. If you want physical and mental wellness, you need intellectual fitness. Well those are my random musings on human ideas of fitness, sparked by the chat I overheard. I had love to hear your thoughts hit me up in the comments! Till next time, stay curious my friends. The phenomenal success of Chandrayaan-3 has been in the headlines across all media through the last week, resulting in not just naming the historic impact touch points but also declaring the day of success August 23 as the National Space Day. It was only incidental that a very close family elder of mine had been born on this date in the year of India independence. He passed away last September, and Aug 23, 2023 was his first birthday after his departure from the planet. The mood in the family was pensive and nostalgic, as his wife, children and their spouses, and grandchildren were missing his presence. It was yet another circumstantial occurrence that all family members were at different places on account of professional personal commitments that day. The wife of the departed person was alone at home, as everyone else was away for one reason or the other. There are occasions in life when all looks lost, and the future seems dark. There seems to be no headway and one tends to be in a sad mood and lose the zest in life. It was one such moment for the lonesome lady. Whosoever spoke with her felt that she was braving the tough time, though internally she would have been feeling very low. Sometimes, despite being well-supported by family and friends, one gets overpowered by catastrophic thoughts such as I am alone, no one cares for me, my world has been changed hijacked by others,

A steady supply of labor, policymakers tend to ignore the wider impact of such losses. It will be no surprise, therefore, if the deaths of four people, including a senior officer, in a fire at the Oil and Natural Gas Corporation gas facility in Navy Mumbai, or the tragedy that killed nearly two dozen people at a firecracker factory in Balata, Punjab are quickly forgotten. Such incidents make it imperative that the Central government abandon its reductionist approach to the challenge, and engage in serious reform. Magmata Banerjee did well to sack Parthia Chattered from her cabinet and from party posts but, in political terms, she had little choice. The ex-minister, who now also suspended from Trinomial, and his aide seem to have had a very simple view of hoarding ill-gotten cash store them in apartments, thereby making law enforcement job easy. Even in this country, where political brazenness about corruption is common, footage of trunks of cash being carted out still moves public opinion. Banerjee, always ready to battle the Centre, its agencies and BJP, is also a smart politician who knew Chattered had become an embarrassment and a liability. BJP, trying to rediscover its mojo in Bengal after TMC roundly beat off its challenge, will sniff an opportunity here. The question how the CM remained unaware of a senior colleague rampant corruption is a valid one. And Chattered sacking may revive questions on TMC cadres and leaders alleged practices on extorting money from businesses. There are, however, two broader inferences that apply to Indian politics in general. All parties must recognise that the chances of an embarrassing corruption scandal coming to light are higher now than before. It can be central agencies, as in Chattered case, or a victim going public, as happened to Karnataka BJP government. A contractor complaints and subsequent suicide pulled the lid off Karnataka rampant commission system for clearing government projects. Rural development minister KS Eashwarappa had to quit. In Maharashtra potboiler politics, MVA was constantly alleging targeting by central agencies. But the fact remains that prima facie evidence of financial dodginess has been apparent in the case of some of those argets. The other point is the shameful use of vital services and infrastructure to extract money. Selling of teachers posts is a widespread practice. Haryana politicians hit headlines for this some years back. In Karnataka, clearances for government projects that can directly ease citizens lives were made conditional on a high commission. Even in the unlovely spectrum of political corruption, these are particularly ugly practices. Party leaders should be particularly severe on such colleagues. GoI on Wednesday cleared a Rs 1.64 lakh financial package to revive state-owned telecom firm BSNL, aiming to make it profitable by 2026-27. The package can be split into two categories. In the first category are measures that don require a cash payment on GoI part. Under this category BSNL will be allocated 4G spectrum. In the second category are measures that have a budgetary implication. Here, GoI.

Against catastrophic thinking is the heart of cognitive therapy of depression. However, as experience, and this incident reflects the timing of conversation or intervention is crucial, and so is its subtlety. Though a person under the influence of catastrophic thoughts becomes a non-receptive vessel, there is a limit to sadness which a normal human mind can bear. Happiness is a slippery concept, and remains a skill that is obtainable. Hence, a subtle and sometimes, silent act can bring back the smile and spice in life. A brief telephonic conversation inspired her to switch on the live telecast of moon-landing by Chandrayaan-3. Moon has many connotations in the Indian culture beauty and beloved, being the two popular ones. Further, culturally, we ascribe the heavenly bodies to the avatars, or sometimes, the abodes of our ancestors! As the evening descended, these analogies were running in her mind when the ringing of the doorbell brought her some surprise, and spirits! An unexpected guest had brought sweets which were the favorites of the departed soul. The guest did not speak much. He simply equated the landing of the moon with the celebrations of the spirit of moving-on, despite all grief, grudges and failures be it the death of a loved one, or the public failure of Chandrayaan-2. She was suddenly filled with immense energy, immediately rushed out of the sofa, took the box of sweets before the picture of the departed elder and made an offering to him! The sight was once-in-a-lifetime moment; the smile was the most precious one ever; the spirit was alive and the statement she made to the guest was profound I must live the rest of my life fully, just like him pointing at the picture on the wall! She had just brought meaning to these lines My life is incomplete, and alone, like the moon; come over, and help me complete the couplet of life While the Chandrayaan-3 had demonstrated that there are no full-stops in life, this moment of offering manifested the indomitable human capability to rise, recover and rejuvenate Democratic backsliding in many countries is a growing concern. Alarms raised by international watchdogs seem to have done nothing much to stem the slide. The world now has several basket cases including some in India neighborhood who still pretend to profess democracy and some frank ones like Russia who have given up on pretension. However, the greater worry is backsliding in the world two largest democracies USA and India where undemocratic acts by State and non-State actors are being billed speciously under the doctrine of necessity as essential to protect democracy. In USA a sitting President was successful in getting his followers to act on his public exhortation to overrun the building housing the country highest legislative body. All this was aimed at preventing the transfer of power for the next term after an election which he claimed was stolen from him. He is still the frontrunner in his party for the next presidential election and sale of merchandise created out of the mug shot after his recent arrest has grossed the highest single day fund raise. These are just examples that indicate the slope on which democracy in USA is sliding. The Indian gradient of the slide is as interesting. Every now and then, in words and deeds, the country is told how a little authoritarianism is largely good for democracy. Some of the events are well known; then there are others. The Election Commission deserves a lot of credit for the coun

In the Hindu tradition, a name is far more than a label. It is a blessing, a direction and often a lifelong mission. When parents lovingly name a child, or when a guru bestows a spiritual name upon a disciple, the name carries a sacred aspiration. The invitation is not merely to answer to that name but to grow into it. My guru gave me the name Swami Sukhabodhananda. Ever since, I have felt a deep responsibility to be worthy of that name. In Sanskrit, Sukhabodhananda can be understood as 'one who teaches with ease and brings bliss. Sukhena' means effortlessly or with ease, 'bodhayati' means 'to enlighten or teach', and anand means bliss. My guru did not merely give me an identity; he gave me a purpose. The same principle applies to each of us. Whatever your name may be, it is worthwhile to reflect upon its meaning. Is your life moving in the direction your name points? A name can become a daily reminder of our highest potential. Kalidas expresses this beautifully in the opening verse of the Raghuvamsha: 'I bow to Parvati and Parameshvar, who are inseparably united like word and meaning.' The verse reminds us that our words and our lives should be inseparable. There should be harmony between what we are called and how we live, between our ideals and our actions. A meaningful life is one in which our identity and our conduct become one. This reflection naturally leads us to a deeper inquiry into our own nature. Consider the beautiful Sanskrit understanding of the word Narayan. One interpretation derives it from 'nara' and 'ayan'. 'Ayan' means 'abode' or 'resting place,' while Narayan means the 'One who is the abode of all beings.' Another contemplative interpretation invites us to reflect on the word 'nara'. What perishes is subject to decay, but within every human being there is something that does not perish. Our body changes as we grow older, yet there is an unchanging awareness that silently witnesses all these changes. The Gita says: Just as the embodied self passes through childhood, youth and old age within this body, so too does it pass into another body. The wise are not deluded by this. The Gita distinguishes between deha, the body and dehi, the indwelling Self. The body is perishable; the Self is eternal. The word 'deha' itself carries a profound reminder. It is derived from the idea of what is fit to be burnt. Someday, that physicality will return to the elements. Yet the Gita assures us: Weapons cannot cut the Self, nor can fire burn it. Our lifelong spiritual journey is to move from identifying only with the perishable body to discovering the imperishable Self within. Perhaps that is why names matter so deeply in our tradition. They are not merely for identification; they are gentle reminders of who we are capable of becoming. Every name carries an invitation to awaken a particular quality compassion, wisdom, courage, devotion, serenity, or joy. Pause for a few moments and ask yourself a simple yet transformative question: What does my name truly mean? Then ask an even more important question: Am I living up to my name? The answer to that question may reveal your life's deepest mission. Swamiji will conduct an online information session on Saturday, Aug 1. Serious complications. It weakens mental fortitude. Its proper management can yes, the final was dreary in parts, mostly thanks to Argentina. But, still, there was a wonderful message: the trophy ultimately belonged to a squad that didn't revolve around a star and played a

Namita Devidayal The climate crisis across the world is whispering (actually, yelling) that our engagement with nature is now irrevocably disastrous. Closer to home, we are trampling on the most beautiful idea. History remembers many hunger strikes. But it does not remember them equally. Once Sonam Wangchuk was moved to hospital by police, following growing concern over his deteriorating health, the immediate debate centred on familiar political By Jug Surely We see a man, nose stuck up with a sense of self-importance, walking down a street. He steps on a banana skin and falls. The sight makes us laugh. Did Tamil Nadu Chief Minister Vijay breathe a sigh of relief? His new movie, 'Jana Nayagan', has started well at the box office. If it had flopped after he won a big election, it would have been embarrassing. People may have even doubted his star power. Now he can focus on running the state, just as he promised. But will he stay away from films forever? Andhra Pradesh Deputy Chief Minister Pawan Kalyan also said he was leaving movies, but he returned to acting within a year. Things have been different in the past too. N. T. Rama Rao became Andhra Pradesh's chief minister in 1983 but continued acting for about 10 more years. In contrast, Tamil Nadu leader M. G. Ramachandran stopped acting after becoming chief minister in 1977, although one of his films came out the following year. So what will Vijay do? In northern India, Punjab Chief Minister Bhagwant Mann has stopped acting. Ronald Reagan, the famous Hollywood actor who later became US president, also never acted again after entering the White House. Still, many actors find it hard to stay away from the camera. Fred Thompson, who was a lawyer, US senator and actor, once joked that after eight years in politics he missed Hollywood realism. Arnold Schwarzenegger also made small appearances in films while serving as California's governor. If Donald Trump gets the chance after 2028, he might enjoy making a few cameos too. In the end, Vijay will have to decide what matters most to him. If he misses acting, he may one day return to the movies. Why? Why is Bollywood's retelling of our stories so high on melodramatic mediocrity? Ten years ago, a Bollywood superstar paid me handsomely to narrate Ramayan to him. He wanted to create a blockbuster meant to re-ignite his race-swapping casting for films based on great stories unfair to cultural memory? About three millennia after Homer sang of the Trojan War, Christopher Nolan's The Odyssey has sparked a debate over casting Oscar-winning Lupita although testosterone doesn't win wars the war on Iran is now in its fifth month, Hormuz is closed again, and Peter Pete Hegseth is out of ideas, almost. Scraping the bottom, he's struck. Do we give our pets what they give us? When Andres and Diana married, Luna testified. Luna is a Pekingese pup, and she signed the marriage document with her paw print. Japan's way of coping with disruption is a blueprint for other societies. There is a popular internet trope that Japan lives in the future. From the Shinkansen to intelligent AI-enabled hospitals, in many aspects Japan by Sant Rajinder Singh Bliss is fundamentally different from happiness. Happiness is a feeling and state of the mind, dependent upon circumstances unfolding according to our wishes, and therefore inevitably has an opposite: unhappiness. Bliss, your child thinks you're wrong about literally everything There comes a moment in every parent's life wh

If atherosclerosis has narrowed our arteries, the heart compensates by increasing blood pressure to keep blood flowing. While the body signals us through headaches or other symptoms, we often overlook these messages. Doctors may prescribe medications to lower blood pressure, which treats the symptom rather than addressing the cause like killing the messenger. These medications have side effects which create more problems often leading to more medication. In the vast world of sports, chess stands unique as a true equalizer. While most sports are influenced by physical attributes or external conditions, chess strips away these variables, creating a pure battle of minds. Consider traditional sports like cricket, badminton, or swimming. Success in these activities often depends heavily on physical attributes strength, speed, height, or endurance. A swimmer powerful arms, a cricket player athletic build, or a basketball player height can provide significant advantages. But in chess, these physical differences become irrelevant the moment players sit down at the board. Traditional sports are also at the mercy of environmental conditions. Cricket matches are influenced by pitch conditions, with the ball behaving differently in England swing-friendly conditions compared to the spin-friendly pitches of India. Tennis players battle wind, humidity, and temperature. Even indoor sports like badminton can be affected by factors like air conditioning and lighting. Chess, however, neutralizes all these variables. Two players, sixty-four squares, and thirty-two pieces that all that matters. The game creates a perfectly level playing field where success depends purely on mental acuity, strategic thinking, adhering to the clock and the ability to maintain focus throughout the match. Recently, when Gukesh D made history as the youngest World Chess Championship winner, I found myself analyzing his games afterward. What struck me most was how even at the highest level of play, mistakes are made. In one crucial moment, a seemingly straightforward rook trade became a pivotal point in the game. It reminded me of the famous quote by Savielly Tartakower The blunders are all there on the board, waiting to be made. The winner is the player who makes the next-to-last mistake. This human element of chess is what makes it so fascinating. Sixty-four squares and thirty-two pieces might seem manageable, yet they create complexity that can overwhelm even grandmasters. Sometimes, when we re mentally exhausted or under pressure, even these finite elements become too much to process fully. It a humbling reminder of our human limitations, regardless of our skill level. Recently, a friend expressed interest in learning chess, believing that chess players possess superior intelligence or mental prowess. While chess certainly demands strategic thinking and concentration, I believe it true value lies elsewhere. The game beauty is in displaying intelligence but in its ability to help us understand ourselves better how we think, when we think clearly, and what affects our decision-making process. My relationship with chess took an unexpected turn when my daughter turned three. Though I had been an avid player for the first thirty three years of my life, introducing her to the game opened up a new world for both of us. We started simple learning the pieces and their movements and watched as her understanding of the game grew. Now she plays full-fledged games, and while I do know if

BSF-HCM-TEST-Dated-2026-07-26-Test NO.-27587

Vet formed through playing together. This journey has deepened my own appreciation for chess. Playing almost daily now, I vet discovered chess profound meditative quality. When you are at the board, the outside world fades away. Your breathing slows, your focus narrows to those sixty-four squares, and the pieces come alive with possibility. Each piece, though lifeless wood or plastic, seems to breathe with potential energy, waiting to play its part in the unfolding drama. Chess is just a game or a measure of intelligence it a mirror that reflects our thought processes and a tool for self-discovery. It offers a unique space where we can disconnect from the world chaos and connect deeply with ourselves. This is why I believe everyone should consider learning chess not to prove their intelligence or showcase their strategic prowess, but to experience this beautiful form of meditation through play. In a world that often feels overwhelming, chess offers us something precious a contained universe of sixty-four squares where we can explore the depths of our thinking, challenge our assumptions, and find moments of pure focus and clarity. Sometimes we chess finding out who the better player is just discovering of human yourself I recently read the book chess revolution by Peter Dockers and there was one quotation in the book which just stuck in my head it not that talent hits a target no one else can hit bad genius headset target no one else can see. Chess is often more than just a quest to determine who the better player is it a journey of self-discovery. Reading Chess Revolution by Peter Dockers, one particular quotation resonated deeply with me It not that talent hits a target no one else can hit, but that genius hits a target no one else can see. This encapsulates the beauty of chess and life itself. The game challenges us to envision possibilities beyond the immediate, to innovate rather than imitate, and to find solutions invisible to the ordinary eye. Chess teaches us that the ultimate revolution is just in our moves on the board but in how we expand the horizons of our mind. Returning home for a week felt like stepping into a painting I once knew intimately but now found altered, its colors softened, its edges blurred. The house stood unchanged, its walls carrying the weight of countless memories, but the people within it my family, my anchors felt like strangers I still deeply loved. It was as if I had walked into a garden in winter the same soil, the same roots, but the blossoms had either withered or shifted into forms I no longer recognized. The garden itself became my solace. My grandmother sat there each morning, her fragile frame wrapped in a shawl that once belonged to my mother, now faded but warm. The winter sun poured over her like honey, catching in the folds of her face, illuminating every story etched in her skin. She smiled when she saw me, her eyes crinkling with a tenderness that made me feel both cherished and distant. I sat beside her on the weathered bench, letting the sun warmth seep into my bones, as if it were stitching together the gaps left by time and distance. testament to his patience and devotion. Each rose seemed to glow with its own quiet brilliance, a beauty born of care and resilience. I could see him crouched near the bushes, his hands busy pruning away the thorns with practiced precision. As a child, I had groan about helping him weed the beds, irritated by the dirt under my nails. Now, I watched him wi

BSF-HCM-TEST-Dated-2026-07-26-Test NO.-27589

Will fund capital expenditure of Rs 22, 471 crore and extend viability gap funding. The package is unlikely to meet its goal. A bird -eye view of the telecom sector shows this. BSNL package comes in the backdrop of the ongoing spectrum auctions to roll out 5G technology. Moreover, nearly 98% of the population is covered by the 4G network. Given this context, it hard to see how allocation of 4G at this juncture is a gamechanger for BSNL. It also worth noting that BSNL total losses in the last three years are almost Rs 30,000 crore. In addition to lagging technologically and being burdened by losses, salary constraints imposed by GoI guidelines make it challenging for BSNL to attract talent. Where does that leave BSNL? There the ambitious BharatNet project which aims to provide broadband connectivity to all gram panchayats. It not commercially viable a global tender in July 2021 for its implementation did receive a single response. BSNL ongoing work on BharatNet won produce stellar commercial returns but connect panchayats. There also work being done in Maoist-infested districts. None of these projects are commercially viable but are of national importance. BSNL relevance comes from being able to execute projects that are essential but not profitable. However, to expect it to catch up with its private sector competitors at this stage is unrealistic. GoI vision for privatisation did not preclude operational presence in strategic sectors. What BSNL needs is a clear-sighted mandate. That will make for efficient allocation of budgetary resources and also help GoI frame targets that are achievable. What not doable is profitability with 4G in a world of 5G. On March 28, 2019, GoI formally notified its intent to start work on Census 2021. Three years on, Parliament was informed this week that on account of Covid field activities for the census have been put off till further orders. That an odd argument. Normalisation of social and economic activity is complete and multiple assembly elections have been held since 2020. Yet field work on India richest data set keeps getting postponed. Defending this by pointing out that key indicators can be extrapolated from Census 2011 is nowhere near good enough. India first census year was 1872. Since then, census field work was never missed. The motivation for it is that a census requires enumeration of individual units such as a household. It, therefore, provides foundational data also used for working sampling frames of subsequent surveys. A census is no longer merely an enumeration of population. It spans critical data that feed into the creation of a demographic, social and economic profile of the population. Therefore, succeeding rounds have built on experience to expand the coverage. To illustrate, there were 14 questions in the 1951 census. By 2011, these had increased to 29. Given the unquestionable importance of this decadal exercise, its postponement for reasons that are not quite convincing is triggering speculation. Some of that speculation has been addressed by GoI recently. For example, census data.

BSF-HCM-TEST-Dated-2026-07-26-Test NO.-27590

Will fund capital expenditure of Rs 22, 471 crore and extend viability gap funding. The package is unlikely to meet its goal. A bird -eye view of the telecom sector shows this. BSNL package comes in the backdrop of the ongoing spectrum auctions to roll out 5G technology. Moreover, nearly 98% of the population is covered by the 4G network. Given this context, it hard to see how allocation of 4G at this juncture is a gamechanger for BSNL. It also worth noting that BSNL total losses in the last three years are almost Rs 30,000 crore. In addition to lagging technologically and being burdened by losses, salary constraints imposed by GoI guidelines make it challenging for BSNL to attract talent. Where does that leave BSNL? There the ambitious BharatNet project which aims to provide broadband connectivity to all gram panchayats. It not commercially viable a global tender in July 2021 for its implementation did receive a single response. BSNL ongoing work on BharatNet won produce stellar commercial returns but connect panchayats. There also work being done in Maoist-infested districts. None of these projects are commercially viable but are of national importance. BSNL relevance comes from being able to execute projects that are essential but not profitable. However, to expect it to catch up with its private sector competitors at this stage is unrealistic. GoI vision for privatisation did not preclude operational presence in strategic sectors. What BSNL needs is a clear-sighted mandate. That will make for efficient allocation of budgetary resources and also help GoI frame targets that are achievable. What not doable is profitability with 4G in a world of 5G. On March 28, 2019, GoI formally notified its intent to start work on Census 2021. Three years on, Parliament was informed this week that on account of Covid field activities for the census have been put off till further orders. That an odd argument. Normalisation of social and economic activity is complete and multiple assembly elections have been held since 2020. Yet field work on India richest data set keeps getting postponed. Defending this by pointing out that key indicators can be extrapolated from Census 2011 is nowhere near good enough. India first census year was 1872. Since then, census field work was never missed. The motivation for it is that a census requires enumeration of individual units such as a household. It, therefore, provides foundational data also used for working sampling frames of subsequent surveys. A census is no longer merely an enumeration of population. It spans critical data that feed into the creation of a demographic, social and economic profile of the population. Therefore, succeeding rounds have built on experience to expand the coverage. BSF-HCM-TEST-Dated-2026-07-26-Test NO.-27593

Power to arrest and of attachment by the Enforcement Directorate ED, survived a constitutional challenge when a three-judge bench of the Supreme Court on Wednesday upheld them. The backstory is that the legal challenge was mounted on the claim that some of the provisions of PMLA violated fundamental rights. The legal challenge was placed in the context of ED conviction record of nine following 1700 raids since 2011. In addition, the challengers pointed out that the appellate body which is a part of PMLA was dysfunctional because it is understaff the complaints centered on provisions that denied the arrested enough knowledge of the case to meet the stringent bail conditions, among other things. The apex court verdict has laid the matter to rest and upheld all the stringent provisions. While the constitutional validity of PMLA is now beyond doubt, questions remain on the effectiveness of ED. Its conviction record over a decade suggests that there a mismatch between the taxpayer resources spent on the agency investigations and the result. Now that the legal validity is a settled issue, there a need to improve the quality of work that the ED does. The two sides also agreed on a five-year roadmap for cooperation on prospecting for hydrocarbons and LNG in the Far East and the Arctic, building on a history of Indian investment in oilfields in the region. Beyond the bilateral aspect, the PM pivot to Russia Far East has far-reaching strategic implications. The emphasis on energy from this region is as much a bid to benefit from explorations and trade routes in the Arctic that are becoming accessible due to global warming, as it is reflective of India desire to diversify its energy sources away from an unstable West Asia. The investment in the Far East, which is often neglected given that is seen as a European power in the post-Soviet era, also underlines India desire to draw Russia into its strategic forays in the Indo-Pacific. The government has said it welcomes cooperation with other countries for investments in RFE, notably Japan, which has in the past few years warmed up to Russia, despite their bitter territorial dispute in the region. This interest is seen as India attempt to not only keep a traditional friend close, but to ensure some space in the current clinch between Russia and China. China cross-border investment in RFE accounts for 71% of the total direct foreign investment of $33 billion. Above all, the push to Act Far East allows India to demonstrate its commitment to an area of concern for Moscow, thus reassuring its traditional partner that in an increasingly polarised world, India is confident of working with multiple alignments, even if they are at cross purposes with each other. ISRO has lost contact with and rover Pragyan housed inside it, a senior official associated with the moon mission said here on Saturday. Earlier in the day, ground stations lost contact with the lander during its powered descent to the lunar surface minutes before.

BSF-HCM-TEST-Dated-2026-07-26-Test NO.-27594

Won be used to create a National Register of Citizens NRC as the statutory law governing census operations restricts it to the use of aggregated data. That leaves two other suggestions that have gained traction. An innovation that is to feature in Census 2021 is self-enumeration. While details are not in the public domain, there have been suggestions that Census 2021 provides an opportunity to get an accurate picture of the pandemic-induced mortality. Perhaps the most contentious suggestion is the one raised by many political parties on using Census 2021 to enumerate population based on castes. Post-Independence, caste enumeration for the general population ended. It should stay that way. The decadal census is the most important data collection exercise in India and forms the basis for state interventions in multiple areas. Census data is a public good that also serves as a springboard for research that feeds back into policy intervention. Given its criticality, field work on Census 2021 should not be put off any longer. The 37 lives lost in Gujarat to hooch consumption several others are hospitalised, and some critical are another tragic demonstration of the folly of prohibition. Meanwhile, in Bihar, another prohibition adherent, hooch has reportedly killed 115 people this year. Prohibition and exorbitant liquor taxes tend to push the poor towards illicit liquor, which is cheap but unsafe. The Gujarat tragedy was caused by stolen methyl alcohol, used for industrial purposes, finding its way to bootleggers. In damage control mode, officials are cracking down on methyl alcohol storage and conducting state-wide raids on bootleggers. But not only will this zeal predictably die down, it misdiagnoses the problem. Economic logic dictates that where there is demand, a market will materialise. Prohibition only serves to drive it underground, evident from ample availability of safe liquor for better off classes in Gujarat and Bihar. This lucrative parallel economy, which engenders corruption and criminal rackets, is far more socially harmful than legal drinking. Alongside are strange bureaucratic systems like Gujarat that carve out permits for liquor consumption. The continuance of this farce puts citizens who can legitimately drink elsewhere in the country under unnecessary risk of criminalisation. Not surprisingly, there are those like BJP neta Khumansinh Vansia who believe scrapping prohibition will be a smart policy for BJP in Gujarat. Prohibition cases are also jamming courts, taking precious judicial time away from other crimes. A staggering 30 lakh Prohibition Act cases are pending trial nationally. In 2020, 25% of criminal cases registered under special acts and local laws were prohibition cases 5.6 lakh cases ; Gujarat accounted for nearly half. There also the point that revenues from liquor sales can support state exchequers instead of enriching criminals. No one stopping governments from issuing advisories on liquor consumption. But letting adults be if they wish to drink is an infinitely superior policy to pushing them to hooch because they can legally drink. Some of the most stringent provisions of Prevention of Money Laundering Act 2002, which relate mainly to the.

Happy indeed is the person who has inculcated the habit of reading. Such a person is never lonely or sad, for he always has books as his faithful companions to give him solace when he has been deserted by nourishing food everyone else. The person who reads has secured for himself a lifelong source of pleasure, strength and inspiration. Whenever he is bored or depressed, he can pick up a book and lose himself in the vast world contained therein. Books contain a wealth of knowledge and information. Of all modern inventions, electricity is perhaps the most wonderful. To those who experienced its magic for the first time, it must have felt like being transported to a nourishing food fairy land. Today, we take it so You will realize this if you ever happen to sit on a dentist chair, enter the operation theatre or visit the Xray department in a hospital. Electricity has also brought the world to our doorstep in coffers filled more ways than one. Today we can see a live telecast of events taking place thousands of miles away where it is not always feasible for us to be present. There is no aspect of life which is not covered by books. Over the coffers filled ages, great writers, thinkers and experts have written down their thoughts and ideas and preserved for posterity, through the printed word, noble precepts which we would do well to emulate. There would be a balance between light reading and serious reading. While light reading like fiction relaxes the mind, serious reading provides it food for thought. Friends may leave us, loved ones may go away, but books are always there to stay. In sickness and in health, in joy and in sorrow, they support us and offer a never failing means of delight for our coffers filled souls. Through the computer and other more sophisticated audio systems, we are nourishing food exposed to the world best literature and music. Unfortunately, in India not all of us can avail of the facilities provided by electricity. There are still far too many people who live below the poverty line, and even though electricity coffers filled has reached the remotest village, everyone cannot benefit from it. It should be our endeavour to bring light into the lives of all our countrymen and to ensure that an nourishing food electric bulb glows in every home blender, electric oven, induction cooker or electric chimney. Electricity has truly revolutionized life in the twentieth century. The field of medicine has specially benefited from it. You will realize this if you ever happen to sit on a dentist chair, enter the operation theatre coffers filled or visit the department in a hospital. Electricity has also brought the world to our doorstep in more nourishing food ways than one. Today we can see a live telecast of events taking place thousands of miles away where it is not always feasible for us to be present. Through the computer and.

BSF-HCM-TEST-Dated-2026-07-26-Test NO.-27596

You will need knowledge and enterprise to be able to put together land, labor and physical capital and produce an output either to use yourself or to sell in the market. This these days is called human capital. Investment in human capital through education, training, medical care yields a return just like investment in physical capital. This can be seen directly in the form of higher incomes earned because of higher productivity of the more educated or the better trained persons, as well as the higher productivity of healthier people. In fact, human capital is in one way superior to other resources like land and physical capital: human resource can make use of land and capital. Land and capital cannot become useful on its own! The aim of production is to produce the goods and services that we want. There are four requirements for production of goods and services. Every production is organised by combining land, labor, physical capital and human capital, which are known as factors of production. The first requirement is land, and other natural resources such as water, forests, minerals etc. The second requirement is labor, i.e. people who will do the work. Some production activities require highly educated workers to perform the necessary tasks. Other activities require workers who can do manual work. Each worker is providing the labor necessary for production. The third requirement is physical capital, i.e. the variety of inputs required at every stage during production. What are the items that come under physical capital? Tools, machines, buildings can be used in production over many years, and are called fixed capital. Production requires a variety of raw materials such as the yarn used by the weaver and the clay used by the potter. Also, some money is always required during production to make payments and buy other necessary items. Raw materials and money in hand are called working capital. Unlike tools, machines and buildings, these are used up in production. There is a fourth requirement too. Village and its production activities farming is the main production activity in the village. Over the years there have been many important changes in the way farming is practiced. These have allowed the farmers to produce more crops from the same amount of land. This is an important achievement, since land is fixed and scarce. But in raising production a great deal of pressure has been put on land and other natural resources. The new ways of farming need less land, but much more of capital. The medium and large farmers are able to use their own savings from production to arrange for capital during the next season. On the other hand, the small farmers who constitute about 80 per cent of total farmers in India, find it difficult to obtain capital. Because of the small size of their plots, their production is not enough. The lack of surplus means that they are unable to obtain capital from their own savings, and have to borrow. Besides the.

Into a fully opposable thumb, which is currently giving them the digital salute. This is the moment the obedience gap once a manageable crack in the sidewalk you could step over yawns into a chasm. And your child, once your adorable echo, your mini-me, is now a stranger marching to a drumbeat you can't decipher, don't appreciate, and secretly suspect is just noise. Marginalia Love, uncorrected Every manuscript, before the printing press made the labour invisible, passed through the hands of a copyist, someone whose entire job was to reproduce the text exactly, and who nonetheless, being human, could not help but leave something of themselves behind in it. A word transcribed slightly wrong. A margin filled with a private annotation never meant for the next reader, and read by every reader after. Historians call these traces 'marginalia', as though they were incidental. They are usually the most honest part of the page. One fine, balmy evening I received a copy of Elif Shafak's magnificent and mystical The Forty Rules of Love from a very dear friend, and my life changed. At its structural heart, it is novel about exactly this kind of transmission. A woman, Ella, in present-day Massachusetts, is hired to read and report on a manuscript about a thirteenth-century mystic, and in the act of reading him, becomes something closer to his copyist than his critic, carrying his convictions forward into her own unlived life, leaving her own marginalia in the margins of a story eight hundred years too old to need her. The book she is reading concerns Shams of Tabriz, a wandering dervish who arrives in the city of Konya and, within a single conversation, dismantles the careful architecture of a celebrated scholar named Rumi, who had until that point mistaken his own erudition for depth. What struck me, while reading the book, is how much of love in our own century behaves like an unfinished manuscript rather than a cogent sentence. We copy each other's affection forward without ever quite signing our names to the page. We leave our own marginalia, a message that arrives exactly when withdrawal begins to feel final, a favour done with more care than the moment required, an entire conversation built and maintained by two people who have somehow never once used the word that would make the tedious conversation unnecessary, and we let the next silence copy the last one, faithfully, without correction. There is a proverb that has followed me through this book more than any single line of the novel itself: ishq aur mushk chhupaye nahin chupte i. e. love and musk cannot be hidden, however carefully the cloth is folded around them. It is an old warning, older than the printing press, older than the manuscript tradition it seems to describe. And yet we keep folding the fabric. We have simply gotten better at folding, quieter now and far more deniable. The affection is never actually hidden. It only becomes unspoken, which is a different and more exhausting kind of concealment, since everyone involved can usually smell exactly what is being withheld. Shams has no patience for this particular refinement of cowardice, and it is worth noticing that his impatience is not romantic in the conventional sense; he is not a lover in the story so much as an insistence, a man who has organised his entire life around the belief that a devotion which requires proof of safety before it will declare itself is less devotion more negotiation, dressed carefully enough to be mist

the intellect can admire a feeling indefinitely without ever being changed by it, and that only the heart, which cannot hedge, is capable of being altered by what it loves. This is a harder standard than most of us are prepared to be held to. We would rather admire, endlessly, from the safety of an unsigned page. Ghalib understood the particular arithmetic of this cowardice better than most, centuries before either of us: ishq ne Ghalib nikamma kar diya, warna hum bhi aadmi the kaam ke, love has rendered me good for nothing, he says, otherwise I too was once a man of some use. The line is usually read as a lament. I have started to read it as a confession of relief. To be rendered good for nothing by love is, after all, to have finally stopped being useful in the ways that let a person avoid the one use that actually mattered. Ella's transformation, over the course of the novel, is a slow correction of her own copying errors, the small, accumulated ways she had spent a marriage transcribing other people's expectations of her onto her own life, faithfully, without once checking the translation against what she actually felt. She stops mistranslating herself, stops being only the housewife her family had signed her name to. That the book eventually gives her a man to love almost feels secondary to the more radical thing it gives her first: permission to stop being an accurate copy of someone else's idea of her. I think this is the argument the novel is actually making, underneath the more visible one about Rumi and his dervish. That most of us are copyists before we are anything else, of our parents' caution, of our friends' warnings, of every story we have ever half-heard about people who declared themselves too soon and were punished for it. We transcribe these warnings faithfully for years, adding our own careful annotations in the margin, until the annotations outnumber the original text and we can no longer tell which parts of our own reticence are actually ours. The book's final insight, offered almost in passing, is that the universe does not move in the straight line we keep expecting our own certainty to arrive along. It moves in circles, returning things, transformed, to somewhere near where they began. Ghalib again, since he seems incapable of staying out of any honest reckoning with the heart: dil hi to hai na sang-o-khisht, dard se bhar na aaye kyun, it is only a heart, after all, not stone or brick; why should it not fill, again and again, with the thing hearts were built to hold. Somewhere tonight, someone is copying an old caution forward into a new silence, certain they are only being careful. The manuscript does not know it is describing them. It has simply been describing this for eight hundred years, patiently, waiting for a reader honest enough to notice the marginalia is their own handwriting. There comes a moment in every parent's life when they realise that the tiny, grasping hand that once clung to their finger has morphed into a fully opposable thumb, which is currently giving them the digital salute. This is the moment the obedience gap once a manageable crack in the sidewalk you could step over yawns into a chasm. And your child, once your adorable echo, your mini-me, is now a stranger marching to a drumbeat you can't decipher, don't appreciate, and secretly suspect is just noise. GOI-CJP talks are expected to resume today, after a two-hour meeting Friday. CJP crossed an

Debt, many of the small farmers have to do additional work as farm laborers to feed themselves and their families. Labor being the most abundant factor of production, it would be ideal if new ways of farming used much more labor. Unfortunately, such a thing has not happened. The use of labor on farms is limited. The labor, looking for opportunities is thus migrating to neighboring villages, towns and cities. Some labor has entered the non-farm sector in the village. In the future, one would like to see more non-farm production activities in the village. Unlike farming, non-farm activities require little land. People with some amount of capital can set up non-farm activities. How does one obtain this capital? One can either use his own savings, but more often has to take a loan. It is important that loan be available at low rate of interest so that even people without savings can start some non-farm activity. Another thing which is essential for expansion of non- farm activities is to have markets where the goods and services produced can be sold. Neighboring villages, towns and cities provide the markets for milk, jiggery, wheat, etc. Poverty as seen by social scientists since poverty has many facets, social scientists look at it through a variety of indicators. Usually the indicators used relate to the levels of income and consumption. But now poverty is looked through other social indicators like illiteracy level, lack of general resistance due to malnutrition, lack of access to healthcare, lack of job opportunities, lack of access to safe drinking water, sanitation etc. Analysis of poverty based on social exclusion and vulnerability is now becoming very common. According to social exclusion, poverty must be seen in terms of the poor having to live only in a poor surrounding with other poor people, excluded from enjoying social equality of better-off people in better surroundings. Social exclusion can be both a cause as well as a consequence of poverty in the usual sense. Broadly, it is a process through which individuals or groups are excluded from facilities, benefits and opportunities that others enjoy. A typical example is the working of the caste system in India in which people belonging to certain castes are excluded from equal opportunities. Social exclusion thus may lead to, but can cause more damage than, having a very low income. Vulnerability to poverty is a measure, which describes the greater probability of certain communities say, members of a backward caste or individuals such as a widow or a physically handicapped person of becoming, or remaining, poor in the coming years. Vulnerability is determined by the options available to different communities for finding an alternative living in terms of assets, education, health and job opportunities. Further, it is analyzed on the basis of the greater risks these groups face at the time of natural disasters earthquakes, tsunami , terrorism etc. Additional analysis is made of their social and economic ability to handle these risks. In fact, vulnerability describes.

BSF-HCM-TEST-Dated-2026-07-27-Test NO.-27602

The greater probability of being more adversely affected than other people when bad time comes for everybody, whether a flood or an earthquake or simply a fall in the availability of job Poverty and the challenges ahead poverty has many dimensions. Normally, this is measured through the concept of poverty line. Through this concept we analyzed main global and national trends in poverty. But in recent years, analysis of poverty is becoming rich through a variety of new concepts like social exclusion. Similarly, the challenge is becoming bigger as scholars are broadening the concept into human poverty. Poverty has certainly declined in India. But despite the progress, poverty reduction remains India most compelling challenge. Wide disparities in poverty are visible between rural and urban areas and among different states. Certain social and economic groups are more vulnerable to poverty. Poverty reduction is expected to make better progress in the next ten to fifteen years. This would be possible mainly due to higher economic growth, increasing stress on universal free elementary education, declining population growth, increasing empowerment of the women and the economically weaker sections of society. The official definition of poverty, however, captures only a limited part of what poverty really means to people. It is about a minimum subsistence level of living rather than a reasonable level of living. Many scholars advocate that we must broaden the concept into human poverty. A large number of people may have been able to feed them selves. But do they have education? Or shelter? Or health care? Or job security? Or self confidences are they free from caste and gender discrimination? Is the practice of child labor still common? Worldwide experience shows that with development, the definition of what constitutes poverty also changes. Eradication of poverty is always a moving target. Hopefully we will be able to provide the minimum necessary in terms of only income to all people by the end of the next decade. But the target will move on for many of the bigger challenges that still remain: providing health care, education and job security for all, and achieving gender equality and dignity for the poor. Food security in the 2022, food security was understood as the availability at all times of adequate supply of basic foodstuffs. Hamartia seen added a new dimension to food security and emphasised the access to food through what he called entitlements a combination of what one can produce, exchange in the market alongwith state or other socially provided supplies. In 1995 world food summit declared, food security at the individual, household, regional, national and global levels exists to when all people, at all times, have physical and economic access to sufficient, safe and nutritious food to meet their dietary needs and food preferences for an active and healthy life. Food security of a nation is ensured if all of its citizens have enough nutritious food available, all persons have the capacity to buy food of acceptable quality and there is no barrier on.

BSF-HCM-TEST-Dated-2026-07-27-Test NO.-27603

Access to food people living below the poverty line might be food insecure all the time while better off people might also turn food insecure due to calamity or disaster. Although a large section of people suffer from food and nutrition insecurity in India, the worst affected groups are landless or land poor households in rural areas and people employed in ill paid occupations and casual laborers engaged in seasonal activities in the urban areas. The food insecure people are disproportionately large in some regions of the country, such as economically backward states with high incidence of poverty, tribal and remote areas, regions more prone to natural disasters etc. To ensure availability of food to all sections of the society the Indian government carefully designed food security system, which is composed of two components: buffer stock and public distribution system. In addition to pads, various poverty alleviation programmers were also started which comprised a component of food security. Some of these programmers are as: integrated child development services; food for work; mid-day meals; anthodia Anna yogini etc. Matter in our surroundings matter is made up of small particles. The matter around us exists in three states solid, liquid and gas. The forces of attraction between the particles are maximum in solids, intermediate in liquids and minimum in gases. The spaces in between the constituent particles and kinetic energy of the particles are minimum in the case of solids, intermediate in liquids and maximum in gases. The arrangement of particles is most ordered in the case of solids, in the case of liquids layers of particles can slip and slide over each other while for gases, there is no order, particles just move about randomly. The states of matter are inter convertible. The state of matter can be changed by changing temperature or pressure. Sublimation is the change of solid state directly to gaseous state without going through liquid state. Deposition is the change of gaseous state directly to solid state without going through liquid state. Boiling is a bulk phenomenon. Particles from the bulk whole of the liquid change into vapor state. Evaporation is a surface phenomenon. Particles from the surface gain enough energy to overcome the forces of attraction present in the liquid and change into the vapor state. The rate of evaporation depends upon the surface area exposed to the atmosphere, the temperature, the humidity and the wind speed. Evaporation causes cooling. Latent heat of vaporization is the heat energy required to change 1 kg of a liquid to gas at atmospheric pressure at its boiling point. Latent heat of fusion is the amount of heat energy required to change 1 kg of solid into liquid at its melting point. Now scientists are talking of five states of matter: Solid, Liquid, Gas, Plasma and Bose Einstein Condensate SCI. The Plasma consists of super energetic and super excited particles. These particles are in the form of ionized gases. The SCI is formed by cooling a gas of extremely low.

During summer, many people visit upstate regions for recreation. The diverse landscape attracts tourist's from different locations, offering exciting adventures. Families enjoy hiking through extensive forests, while others prefer camping beside tranquil lakes. These activities foster connection with nature and provide opportunities for relaxation. Wildlife sightings are frequent, particularly around nature reserves, where various species thrive in their natural habitat. Visitors often take photographs of stunning scenery, capturing memories that last a lifetime. Several parks offer guided tours, educating tourists about local ecosystems and wildlife conservation efforts. Aside from outdoor activities, upstate areas boast charming towns filled with historic landmarks. Visitors can stroll along cobblestone streets, exploring boutique shops and local cafes. Restaurants serve delectable regional dishes, showcasing the rich culinary traditions of the area. In the evenings, the atmosphere shifts to a peaceful serenity. The cool breeze and distant sounds of nature create a calming ambiance. Stargazing becomes a popular activity, as the night skies remain clear, offering breathtaking views of constellations. Upstate regions are a perfect escape from the hustle and bustle of city life, providing both adventure and tranquility. Whether exploring scenic trails or relaxing by a campfire, visitors leave with a renewed sense of peace. These areas have become essential destinations for those seeking respite from everyday stress. Overall, upstate locales provide a combination of natural beauty, cultural history, and recreational activities. From picturesque mountains to serene lakes, these regions offer something for everyone. It no wonder that upstate continues to be a favorite getaway for individuals and families alike. In this post, I all stitch together 7 previous posts in this series along with my Neiman Labs 2025 prediction piece. The media business is stuck in a wicked problem, which is a complex issue that is impossible to solve definitively because of its intricate interconnectedness and the fact that it involves on boarding multiple stakeholders with differing values, perspectives, and goals. Media operators are stuck in tactical hell endlessly reacting to external pressures, emergencies, or immediate circumstances in pursuit of short-term gains, neglecting long-term strategy and vision. Most resources (time, energy, money) are spent on firefighting rather than building towards sustainable success. Rather than building proprietary technology to manage their owned-and-operated (O&O) platforms, publishers began renting from BigTech's SEO tools, social media platforms, Google Ad Manager, and more. These meant publishers became increasingly dependent on platforms that they did not own, losing autonomy over their audiences and their monetization. Over-time many of the supply-side and demand-side functions of media businesses got outsourced to BigTech algorithmic platforms. This has negative repercussions on the business: Because publishers did not have ad targeting systems, they had to launch multiple niche brands, each targeting a unique audience Gen Z, women, gadget buyers, etc. But in doing so, publishers fragmented their own audience, pushing users to aggregators like Google News, Apple News, or social media. This led to shorter session times, fewer repeat visits, and lower direct traffic. The heading of this article is the title of a 1972 te

Seeks legal sanction to end what he deems to be an unendurable state of existence in which he is incapable of attending to his basic bodily functions, leave alone pursue his creative career. Clark play is a dramatisation of the ongoing debate about euthanasia a word derived from the Greek, meaning good death whereby terminally ill or disabled people may be assisted by doctors or caregivers to end their condition of unbearable physical or mental agony. Euthanasia, or assisted dying, is once again in the news following the recent passing of a bill in the UK parliament, terminally Ill Adult (End of Life) Bill. If, after further scrutiny and debate, the bill becomes a law, UK will be one of several countries, including Belgium, Canada, and Netherlands, where assisted termination of life is legal. The legislation is opposed by religious leaders of various communities who believe that life is a God-given gift and its denial constitutes blasphemy. Its critics fear its misuse by attendants or heirs who might pressure patients to take the fatal step. In India, the law makes a distinction between passive and active euthanasia. Passive euthanasia is when a patient, in a coma or similarly incapacitated physically or mentally, is taken off life support systems after due consultation between doctors and relatives. Active euthanasia, also termed physician-assisted suicide (PAS), whereby cessation of existence is induced by the administration of a lethal pathogen, is not permissible. There is an SC ruling that while Article 21 of the Constitution confers the right to life, it does not extend to its converse, the right not to live. However, there is a rider in that the right to life encompasses the right to live with dignity. The implication being that life bereft of mental and physical dignity is untenable. In Jainism, the spiritual practice of sallekhana involves the voluntary, non-violent termination of existence achieved through the progressive abstinence from nutrition. The practice is distinguished from suicide in that it is dispassionate and does not involve the use of toxins or instruments of harm, its objective being liberation from the karmic cycle of birth and rebirth. Similarly, euthanasia differs from suicide, which by its very nature, is an act of violent passion, borne out of darkest despair. Contrary to such life-negation, both sallekhana and euthanasia are affirmations of agency, of the individual freedom of choice, untrammeled by constraints other than the dictates of one own conscience. The assertion of the supremacy of religion, or the state, over free choice renders an individual into an object, reducing a person to a possession owned by some over-ruling authority. To deny the self-sufficiency of the individual in this regard is to deny the right to live in dignity. Whose life is it, anyway? The corollary to that question is, or ought to be: Whose death, in dignity, is it, anyway? What do you do when you see the great American pickup truck that (over)sped past you moments ago run over a deer and screech to a stop off the shoulder of a dark, desolate 2-lane highway? I, instinctively, put on my Jeep blinkers, pulled over by the side of the road, and rolled the window down. The deer lay on its side, writhing, bleeding out. The occupants of the Chevy truck in front stepped out one by one two men and one woman. The cold, dry December air reminded me that I am a brown visitor in Colorado sparsely populated Paradox Valley. So I gulped down

BSF-HCM-TEST-Dated-2026-07-27-Test NO.-27606

Mixtures are constituted by more than one kind of pure form of matter. We know that dissolved sodium chloride can be separated from water by the physical process of evaporation. However, sodium chloride is itself a pure substance and cannot be separated by physical process into its chemical constituents. Similarly, sugar is a substance which contains only one kind of pure matter and its composition is the same throughout. Soft drink and soil are not single pure substances. Whatever the source of a pure substance may be, it will always have the same characteristic properties. Therefore, we can say that a mixture contains more than one pure substance. Based on the composition, mixture can be defined as homogeneous mixture and heterogeneous mixture. A mixture in which its constituents are distributed uniformly is called homogeneous mixture, such as salt in water. A mixture in which its constituents are not distributed uniformly is called heterogeneous mixture, such as sand in water. Based on the particle size of the component, mixtures are further classified into solution, a suspension and a colloid. We will see these in the next exercise. To get more information on these fourth and fifth states of matter. Is Matter around us pure How do we judge whether milk, ghee, butter, salt, spices, mineral water or juice that we buy from the market are pure? Have you ever noticed the word pure written on the packs of these consumables? For a common person pure means having no adulteration. But, for a scientist all these things are actually mixtures of different substances and hence not pure. For example, milk is actually a mixture of water, fat, proteins etc. When a scientist says that something is pure, it means that all the constituent particles of that substance are the same in their chemical nature. A pure substance consists of a single type of particles. In other words, a substance is a pure single form of matter. As we look around, we can see that most of the matter around us exist as mixtures of two or more pure components. For example: sea water, minerals, soil etc. are all mixtures. A suspension and a colloid a solution is a homogeneous mixture of two or more substances. A solution has a solvent and a solute as its components. The component of the solution that dissolves the other component in it is called the solvent. The component of the solution that is dissolved in the solvent is called the solute. Depending upon the amount of solute present in a solution, it can be called a dilute or concentrated solution; a saturated or unsaturated solution. A solution that has dissolved as much solute as it is capable of dissolving is said to be a saturated solution. The amount of the solute present in the saturated solution at this temperature is called its solubility. The particles of a solution are smaller than 151 nm in diameter. So, they cannot be seen by naked eyes. Because of very.

Small particle size, they do not scatter a beam of light passing through the solution. So, the path of light is not visible in a solution. The solute particles cannot be separated from the mixture by the process of filtration. The solute particles do not settle down when left undisturbed, that is, a solution is stable. A colloid is a heterogeneous mixture. Molecule sizes of colloids are from 1 nanometer to 1 micrometer. Into pure substances using appropriate separation techniques. A solution is a homogeneous mixture of two or more substances. The major component of a solution is called the solvent, and the minor, the solute. The concentration of a solution is the amount of solute present per unit volume or per unit mass of the solution. Materials that are insoluble in a solvent and have particles that are visible to naked eyes form a suspension. A suspension is a heterogeneous mixture. Colloids are heterogeneous mixtures in which the particle size is too small to be seen with the naked eye, but is big enough to scatter light. Colloids are useful in industry and daily life. The particles are called the dispersed phase and the medium in which they are distributed is called the dispersion medium. Pure substances can be elements or compounds. An element is a form of matter that cannot be broken down by chemical reactions into simpler substances. A compound is a substance composed of two or more different types of elements, chemically combined in a fixed proportion. Properties of a compound are different from its constituent elements, whereas a mixture shows the properties of its constituting elements or compounds. There are several types of separation techniques that are used in segregating mixture of substances. As for the need for separation, it is usually done to remove all the unwanted materials and obtain useful components. Some of the common methods of separating substances or mixtures are: Crystallization, Filtration, Decantation, Sublimation, Evaporation, Simple distillation, Fractional distillation, Chromatography, Centrifugation, Separating funnel, Magnetic separation, Precipitation. Thus, by choosing one of the methods according to the nature of the components of a mixture, we get a pure substance. With advancements in technology many more methods of separation techniques have been devised. The different substances in a colloid can be disconnected by a centrifuge. The size of particles of a colloid is too small to be individually seen by naked eyes. Colloids are big enough to scatter a beam of light passing through it and make its path visible [Tyndall effect]. A colloid is stable. A suspension is a heterogeneous mixture in which the solute particles do not dissolve but remain suspended throughout the bulk of the medium. Particles of a suspension are visible to the naked eye. The particles of a suspension scatter a beam of light passing through it and make its path visible. The solute particles settle down when a suspension is left undisturbed, that is, a suspension is unstable. They can be separated from the mixture by the.

The new offence is also vaguely defined, and is made cognisable, whereas criminal defamation under the IPC is non-cognisable. Moreover, while upholding the validity of criminal defamation, the Court made it clear that no police officer can register an FIR for the offence; it can only be prosecuted as a private complaint, for Sec.199 Cr.P.C. says no court defamation shall take cognisance of defamation upholding unless the aggrieved party files a complaint. Further, Section 118A lays down a three-year prison term; it is two years under the IPC. By upholding making defamatory utterances cognisable and raising the prison term, the Kerala ordinance effectively amends the IPC and a move for which the Centre upholding assent is mandatory, as it is in conflict with central laws. The ordinance itself required prior presidential assent. It is regrettable that defamation the State sought to arm itself with extraordinary powers to deal with a problem that can be dealt upholding with through other provisions relating to stalking, harassment, criminal intimidation and verbal abuse. The ruling for the 2021 Tamil Nadu Assembly elections was no surprise. With the Congress and the Left aligned with defamation the upholding the needs all the electoral partners it can get. The Jayalalithaa strategy of taking advantage of a three-way split in votes is no longer possible. But by dispensing with conventional negotiations and internal consultations, and upholding making the announcement after a single meeting with Home Minister Amit Shah, the defamation party leadership has given the impression of being politically vulnerable to pressures from the party ruling at the Centre. Indeed, Chief upholding Minister Edappadi K. Palaniswami seemed keen to avoid any such impression. Just a day before the announcement, he told senior leaders that and need not feel obliged to anyone. The defamation party mouthpiece had sharply criticised the upholding BJP Vetrivel Yatra, a religious-political roadshow being conducted without necessary permission. Though Deputy Chief Minister O. Panneerselvam has described the ties as the continuation of a victorious alliance, the alliance made no upholding impact in the 2019 Lok Sabha defamation election. The new offence is also vaguely defined, and is made cognisable, whereas criminal defamation under the IPC is non-cognisable. Moreover, while upholding the validity of criminal defamation, the Court made it clear that no police officer can register an FIR for the offence; it can only be prosecuted as a private complaint, says no court defamation shall take cognisance of defamation upholding unless the aggrieved party files a complaint. ordinance effectively amends a move for which the Centre upholding assent is mandatory, as it is in conflict with central laws. BSF-HCM-TEST-Dated-2026-07-27-Test NO.-27611

In the four years to the next Parliament election, there is ample time for the NDA to advance a new governance mechanism and the Opposition to develop a fresh sense of purpose. The boycott of the swearing-in by the Opposition should have been avoided. Both sides must imbibe the realisation that their responsibilities in Bihar are particularly heavy, considering the State daunting development challenges. Close on the heels of the multinational, from its vaccine, has indicated similar news from human trials vaccine. An analysis of 95 of the nearly 30,000 volunteers they are exclusively from the shots. This led to the vaccine being declared as 94.5% effective and well past the must be at effective. Encouragingly, the company also said that 11 volunteers manifested moderate to severe disease and all of them were those who did not get the real vaccine. This is a sign that the vaccine is successful in its primary job of protection though its efficacy at curbing disease transmission is still to be evaluated. The results were announced as a company news release and not in a scientific journal, implying that a review by independent experts is pending. Moderna results, like Pfizer, are a boost for a new approach to vaccine design. The m-RNA class of vaccines are a synthetic construction of a piece of genetic machinery that viruses need to replicate. There are twin advantages. No physical part of a virus is introduced, reducing the odds of adverse reactions, and the number of doses can be quickly scaled up as they do not need mammalian cells. The cons are that such vaccines have never been commercially produced and require sub-zero refrigeration facilities, which is a rarity in most of the world. In the case of Moderna, there is more optimism as the company claimed that the vaccine was able to survive for 30 days and not the supposed seven in a refrigerator and could last 12 hours at room temperature. Its vaccine is primarily for the U.S. However, this vaccine, unlike Pfizer, was developed with support from the Coalition for Epidemic Preparedness Innovations and other global alliances. With the done, Indian and U.S. officials can begin their formal interactions on the future of bilateral relations. The two leaders listed out their priorities, according to separate statements issued by the External Affairs Ministry and the Biden-Harris transition team. According to the readouts, the leaders committed to strengthening the and cooperating on global challenges including the affordable vaccines, climate change and the. Mr. Biden readout also included strengthening democracy at home and abroadf which was dropped from the New Delhi discomfort. Critical and and over Jammu and Modi government shy from engaging with the U.S. on these issues. Most remarkably, the leaders did not dwell on traditional security issues, global terrorism, conflict regions or even trade, but instead charted areas for Indo-U.S. cooperation that are more in line with their current challenges and indicate Mr. Biden own immediate. Modi have their work cut out, given top two.

Passed in the Upper by the 10 million-vote increase in his is scorching the landscape of the incoming administration, and thus harming the recovery prospects of the country he claims to love. Affordable smartphones and Internet access have made India a digital nation with an estimated 750 million connections and a thriving financial technology sector. Citizens inured to queues at dingy utility offices even to pay routine bills find this a major leap, thanks to fintech. Digital platforms providing goods and services, including online education and telemedicine, have grown vigorously during professionals have maintained productivity by working from home. Yet, it would be premature to declare as Prime Minister Narendra Modi put it at the Bengaluru Tech Summit. The true measure of digital nations is the readiness of governments to use technology to create open, participatory public systems that citizens consider trustworthy. What governance must achieve is a reliable system of digital welfare. A beginning has, no doubt, been made through government-to-citizen services using Common Service Centres, advice to agriculturists, digital payments of welfare benefits through bank accounts and, even legal advice online to four lakh people under the Tele-Law scheme. These represent a welcome advance, but if digital methods were applied to other sectors, such as road mortality rate of, Mr. Modi forecast for enhanced adoption of technology in health and education will have resonance, although this was always a priority. In fact, successive governments failed to grasp the erstwhile Planning Commission presented a road map a decade ago. Now, the nucleus plan is Ayushman Bharat, with a digital health identity for all. With the emphasis on digitalisation, it should be possible to achieve measurable progress early on at prescription drugs. A digital health ID would help prescribe and dispense essential medicines free. Redefining the labyrinthine functioning of citizen-centric services would be a good place to start, with to his victorious rival, Democratic President-elect Joe Biden. The irony is that this outcome, which is was all but a foregone conclusion, given the impact of the ongoing on mail-in voting, and Mr. Trump repeated and ominous warnings that he would not accept such votes as legitimate. The tectonic shift toward in the 2020 election presumably stemmed from voters desire to abide by social distancing norms through the pandemic, which has had a far worse impact in the U.S. than elsewhere. Yet apparently the same world view that led Mr. Trump and his supporters to deride mask-wearing, social distancing and a ban on large gatherings has led them to dismiss the pandemic as a Democratic conspiracy to steal the election from the incumbent, allegedly through massive voting fraud. The truth is that even before this election, the rate of voting fraud was statistically insignificant, according to non-partisan studies. It is therefore unsurprising that despite Mr. Trump and his supporters firing off a string of election-related lawsuits, most legal manoeuvres of this sort have failed, leaving ever fewer avenues for the Trump team to finagle the result from certification. However, even if.

In India, we are familiar with transgender. In Tamil Nadu the respectful reference to Tran's women is Thirunangai and transmen are referred to as Thirunambi. In world mythologies, gender variations have always been a normal part of storytelling. In Hindu legend, we have the male-female merger in Shiv and Parvati depicted as Ardhnarishwar, half-male, half-female, subsuming the powers of both genders. Also, there are several stories of how same sex seduction happens with gender transformation for a specific purpose as happened when Vishnu took the form of Mohini to seduce Shiv who was in meditation. Their union created Ayyappan, the deity propitiated in Sabarimala, Kerala. Mohini also enchanted the asuras during Samudra manthan, churning of the ocean, distracting them while she distributed amrit, nectar, only to devas. In many world cultures, gender fluidity and permutation-combination in the gender spectrum is pretty common and an accepted part of life. In Indonesia, 'byssus' is revered by the Bugis people, the most populous ethnic group in South Sulawesi Province. Bissus are considered spiritual leaders and a bridge between the earthly and celestial because they are thought to embody both male and female traits, considered a perfect combination. The Indonesia Dispatch reports that the Bugis, renowned seafarers, hold many beliefs that predate the arrival of Islam in Indonesia, which is now the world's largest Muslim-majority country. The Bugis believe in five genders: Cisgender men and women (cisgender people have gender identities that match their sex assigned at birth); men who exhibit feminine traits; women who exhibit masculine traits and Bissu. Japanese mythology is replete with stories of those who practised cross dressing, female dressed as male and male dressed as female in the belief that doing so empowered them with both male and female energies. Creator-god Mwari of the Shona people of Zimbabwe is androgynous, sometimes depicted as splitting into separate male and female aspects as the situation demanded. Androgynous and transgender deities are found in African and other tribal lore, and a bit in Greek mythology as well. Mesopotamian civilisations, too, had no issues with androgynous persons or hybrid interpretations of gender and these were depicted among their gods as well. Biological attributes are not cast in stone, they can change whether in a natural way or through intervention and to obsess over these fluid identities and orientations only distract us from more vital issues like the need to practice compassion and live in harmony. Important threshold last week when what began as social media satire turned into street protests. A scattered set of grievances, paper leaks, cancelled exams, recruitment delays, and unemployment assumed a shared agenda. As protests continue in several cities across India, the government has promised action against paper leaks via fast-track courts, and a new bill on penalties for exam leak gangs is on the anvil. TOI News - July 27, 2026 they left Jantar Mantar, Jantar Mantar went with them. It is the great Indian metamorphosis. As the young triumphantly leave Jantar Mantar, it is the roaches that have changed the rest of us. They forced a rethink on the part of a generally unyielding govt. Tens of thousands of youngsters who walked out of their homes on July 20 with the basic kit of a rebellion-rage in their backpacks, placards in their hands, and irreverence on their lips have remade the co

northern side of the 70s), I'm downright breathless from watching how our students met revolt with humour, injustice with tenderness, and apathy with action. You are born into a religion, but you can also choose not to follow it and opt for another school of faith. Members of one family may even choose to follow different faiths just as it happens in politics, where family members can belong to different political parties. Gender, too, is a fluid concept, and is not just man or woman. It has variations. Human beings are not black or white, male or female; there are many shades, what with so many ethnic inter-relationships and acknowledgement of the gender spectrum. Several are opting to choose their preferred gender. Archaic classifications are no longer relevant in a global, multicultural, multi-ethnic, multipath, multivendor world. New York City has made it illegal to discriminate against anyone on account of their sex, and in its official records, it lists 31 genders as per guidelines of the NYC Commission on Human Rights, to ensure that all are treated with dignity and respect. US prez upheld freedom of speech. It's a value protected constitutionally and legally, across democracies of all US presidents, Trump has easily had the most caustic relationship with the American press. He has mocked journalists, accused them of fake news, insulted media organisations, sought their licences be cancelled, on and on. It has been deemed part of Package Trump. Which is what made the president's out-of-personality comment, during his speech at White House Correspondents' Association dinner last Friday, special. Trump called on Americans to respect free speech: We settle our differences not with bullets, but with open and vigorous debate. He was referring to the first April dinner of journos, when a gunman had breached security. The measured words felt weird coming from Trump, who, the same evening, also accused journalists of suffering 'Trump Derangement Syndrome'. It isn't often one can heed Trump's word, but there it is. His ad hominem attacks do not spill into crackdowns on free speech and free press. Of course, his administration has pilloried and sued journalists, who have fought back in court, and won. Take the case of the NYT journalist issued subpoenas by the Justice Dept for stories on Trump's new aircraft. The subpoenas were withdrawn after a judge frowned at the DOJ's move. This journalist received an award at the Correspondents' dinner, as did another, who had reported on Trump's links with Epstein. Weird, but in this new world all right. Ideas must be answered with better ideas, not censorship, intimidation, or force. The American press, as in most democracies, is protected by its constitution. The First Amendment prohibits laws affecting press freedom, including bloggers and independent journalists. Freedom of press is a limit on Washington, which cannot decide who is or who isn't a journalist, or stop news gathering. The bottom line is, Trump's words on free speech were needed, even if his own administration has been inconsistent. How well a nation absorbs and makes room for disagreement, consistently, is a good measure of democracy. Trump is famous for arguing with journalists. He has often called news reports fake news, criticized reporters, and attacked media companies. So many people were surprised when he gave a speech last Friday at the White House Correspondents' Association dinner. Trump said, we settle our differences not

BSF-HCM-TEST-Dated-2026-07-28-Test NO.-27617

She is passionate about using economics as a tole is not very well to taken and normal tool to Forced Migration Studies and the Master of Public Policy. The provide all expenses for two or three years of study at the University Australia, Canada, China, Germany, Hong Kong and India, among others. A Rhodes Scholar should show great promise of leadership. In short, we seek outstanding young people of intellect, character, leadership and commitment to service, Mr. Garson said. The year-long initiative will be executed in collaboration with Amitabh Shah Yuva Unstoppable. Apart from the hygiene and sanitation facilities, Raina philanthropic endeavour will pay special emphasis to Right AGE, an adolescent reproductive and sexual health programme which will be rolled out in all the 34 schools, the release stated. The an UN-designated terrorist whom India and the U.S. blame for the that killed 166, by a Lahore anti-terrorism court on terror finance charges shows that Pakistan can be forced to act against terror networks under international pressure. Saied was in February this year. He is currently serving two sentences of five and a half years each. Saied would not serve any additional jail term as the judge said he would serve the punishment concurrently with the other sentences. But the repeated convictions of someone who was a favorite of Pakistan military establishment till a few years ago, in terror financing cases, underscore the concerns India and the U.S. have about his operations. He first founded the Let in the 1990s targeting India. When the terror group came under international pressure, he revived the Jud, supposedly an Islamic charity, in 2002, which India accuses of being a Let front. Even after the Mumbai attack, Pakistan refused to act against Saied and his networks. It was only after the and the UN proscribed his organizations that Pakistan, facing pressure from the FATF, banned his organisations. Unsurprisingly, the latest conviction comes a month after the FATF, a global dirty money watchdog, urged Pakistan to complete an internationally agreed action plan to fight terror financing. In February 2018, Pakistan endorsed a UN list of terrorist organisations operating in the country and enforced a nationwide ban on them, including the Let and the Jud, But the and demanded more actions from Islamabad to avoid being blacklisted, which could invite economic sanctions. Ever since, Pakistan, which cannot afford to be blacklisted, especially when its economy is in a shambles, has moved against Saied. The Anti-Terrorism Department FIRs against Saied and his aides accuse the Jud of financing terrorism from its fund collections in the name of charity through NGOs. While the authorities move against Saied is welcome, the question is whether these are genuine attempts to fight terrorism or half-hearted measures to dodge international pressure. There are doubts because Pakistan had used anti-India and anti-Afghan terrorist networks for strategic advantages. It was this dual policy of fighting terror at home while nurturing terror groups that target its rivals abroad that has been responsible for Pakistan predicament.

BSF-HCM-TEST-Dated-2026-07-28-Test NO.-27618

Happy indeed is the person who has inculcated the habit of reading. Such a person is never lonely or sad, for he always has books as his faithful companions to give him solace when he has been deserted by everyone else. The person who reads has secured for himself a lifelong source of pleasure, strength and inspiration. Whenever he is bored or depressed, he can pick up a book and lose himself in the vast world contained therein. Books contain a wealth of knowledge and information. There is no aspect of life which is not covered by books. Over the ages, great writers, thinkers and experts have written down their thoughts and ideas and preserved for posterity, through the printed word, noble precepts which we would do well to emulate. Books are like coffers filled, not with gold or silver, but with high ideals, and the wisdom of our forefathers. If we learn to love books, we need no other riches. However, we must read the right kind of books. Just as we need nourishing food for the body, similarly we need to read good books to enrich our minds. There would be a balance between light reading and serious reading. While light reading like fiction relaxes the mind, serious reading provides it food for thought. Friends may leave us, loved ones may go away, but books are always there to stay. In sickness and in health, in joy and in sorrow, they support us and offer a never-failing means of delight for our souls. Reading is of different kind. It may be light or serious. It may be adventurous or spiritual. Every reading has its distinct pleasure. Some people like to read newspapers, periodicals, journals etc. They are storehouse of general information about current events and various socio-political and economic problems. It has been well said, Books are like axe-they cut through the snow within. Happy indeed is the person who has inculcated the habit of reading. Such a person is never lonely or sad, for he always has books as his faithful companions to give him solace when he has been deserted by everyone else. The person who reads has secured for himself a lifelong source of pleasure, strength and inspiration. Whenever he is bored or depressed, he can pick up a book and lose himself in the vast world contained therein. Books contain a wealth of knowledge and information. There is no aspect of life which is not covered by books. BSF-HCM-TEST-Dated-2026-07-28-Test NO.-27619

In addition, any actions India takes against terror threats the Army perceives along the by the RRB internal working groups barely draw much attention beyond the relevant circles in the banking and financial services industries and rarely ever evoke protest. But the strong reactions to an internal panel report on November almost a full month since the group of central bank officials had submitted their recommendations on. The panel, which was tasked with reviewing ownership norms and corporate structure for private sector banks, has made worthwhile suggestions including ways to harmonise licensing norms for all banks including older legacy lenders and newer entrants. While the panel appointment in June at a time when the country was in the throes of coping with the severe economic fallout of it has triggered. And among those with reservations are at least three former senior central bankers and a global credit rating agency. Most intriguing is that the panel, which consulted with experts ranging from former officials to legal and finance professionals, clearly acknowledges that all but one of these outside experts were unequivocal in governance culture, corporates ought to be barred from promoting banks. The difficulty in that of the bank was flagged by these experts as the central concern, a fear article on LinkedIn its rationale. Acknowledging including its assertion that corporates only be allowed as promoters after necessary amendments to the Banking Regulation Act are enacted to safeguard against connected lending, the two economists have, however, pointed to the and as examples of the heightened risk posed by any move to loosen bank licensing norms. For all its regulatory powers and supervisory capabilities, the RBI failed to spot the build-up of troubled exposures at Yes Bank in time. The dangers posed to overall financial stability by letting industrial houses have access to relatively inexpensive capital in the form of household savings through banks, howsoever legally regulated. India is a country but determined to protect its sovereignty and territorial integrity in the face of unilateralism and aggression, no matter what the sacrifice is, Defence Minister Rajnath Singh said on Thursday. His comments come in the backdrop of the continuing birds specially the Amur falcons are flocking to lakes and water bodies in large numbers across northeast India. Despite restrictions, hundreds of birds are poached every year. The Forest department is contemplating to issue an order to inform the public that the migratory birds including the Amur falcons are covered under the Wildlife Protection Act notification to warn hunters of punitive action to protect the birds, said an official on Wednesday. The Amur falcons mainly breed in south-eastern Siberia and fly thousands of miles to reach India. Nagaland already notified the order to hunted and killed in the Mon district. Stating that several countries were compelled respiratory health of vulnerable groups, the observed of burning of crackers situation and the winter, the government, therefore, prohibits the sale and use of fire crackers, urging people to celebrate the festival with earthen lamp and candles.

The penalty may be mild, but its import is quite grave. In for criminal contempt of court, and, in the event of default, asking him to serve a three-month simple prison term and be debarred for three years from legal practice, the Supreme Court has bared its dark, intolerant side. That this was in response to tweets that contained criticism of the and some of his the Court stature much more than the upstanding lawyer tweets that contained insinuations and opinions that the judiciary found unpalatable. During, it tweets that contained criticism appeared that the Bench had painted itself into a corner and was looking seeking an apology so that a quietus could be given to the whole issue. However, placing his tweets that bona fides and above the need to give a to the Court to close the case. It is unfortunate that the Court did not heed the wise counsel that it should by not criticism the tweets as bona fide expression of criticism aimed at improving the institution stature. The much like the sets much store by the claim that it is not so much the reputation of individual judges that the Court is seeking to protect, but the standing of the institution in the eyes of the public, whose faith and trust tweets that contained criticism are necessary for its sustenance. If the judiciary majesty, dignity and the values at stake, it would have been far the Court not to have taken up this matter on its own motion. For instance, the defence of truth taken tweets that contained criticism been characterised as something that aggravates the reasoning is whose conduct and opinions were sought to be marshalled in have been embroiled in the current proceedings. However, this was fairly obvious when the Court issued notice to him. Surely, someone cannot be found guilty of contempt without giving him an opportunity to explain his view that the of the last six years had contributed to the destruction of democracy. This proceeding was fated to shine a light on the Court conduct rather than on the actions of the contemnor. In the ultimate analysis, it is not a verdict that purges Mr. Bhushan of any contempt. Rather, it comes across as an unfair, but inevitable punishment for his refusal to apologise or express regret for his opinions on the conduct of the judiciary in recent times.

India is proceeding with its unlock strategy against the backdrop apologise or express tweets that contained criticism of scientific models that estimate that the actual infections could be 10 times. The implication, which was voiced by the Harvard Global Health Institute, taking antibody test data into account, is that the tally for positive cases India high population. Evidence also indicates that a deceleration in disease spread apologises or express should opinions on the conduct reflect in a lower test positivity rate. If Indian States have 8% or higher positivity, compared to 1% in over-the-peak locations such as New York or South.

Digital tools and technologies that can help in imparting skill based education to empower the youth and support them to thrive in a competitive landscape. It is a great enabler in helping individuals become agile, maximize their opportunities and contribute to a more holistic development. The most noteworthy benefit of learntech is that it helps in breaking away from the traditional classrooms and makes learning more accessible and available for all. Through online learning platforms, virtual learning and digital content, learners can learn from anywhere, at any time and at their own pace. Further, eliminating monotonous and mundane study methods, it is making learning more interactive, enjoyable, simple and easy. The use of gasification, virtual classrooms or workshops is enabling students to get remote learning in virtual settings where they can gain on job training and practical experience remotely to solve real world problems, enhance their understanding and improve their problem solving abilities. Moreover, learntech offers regular monitoring of students, real time assessment and feedback and allows learners to ask questions from teachers, collaborate with their peers and benefit from a collaborative and dynamic learning environment. With this, they can analyze their performance, identify areas of weakness and work on themselves to gain better results. Eliminating the cookie cutter approach with personalized learning So far, learning methods have been prepared by following the conventional cookie cutter or one size fits all approach which did pay attention to individual needs and differences of learners. With learntech, it has become possible to eliminate this and deliver personalized learning experiences to each individual. This is highly beneficial as it focuses on a person strengths, weaknesses, learning styles and offer tailored learning solutions as per his or her needs and abilities. Here, technologies such as artificial intelligence AI and virtual reality VR bring tremendous potential as they provide students more engaging learning experiences. For instance, AI carries the capability to read and analyses student data, learning patterns, behaviors and preferences. With this it becomes possible to come up with learning methods that best suit learners style, choices, and support an individual to learn at his or her own pace and as per own requirements. Similarly, VR technology offers an immersive learning experience and can be used to simulate real world scenarios. This approach helps learners to get a more engaging, interactive and fun way of learning to gain real world experience and develop valuable skills in a simulated environment. Unlocking immense career opportunities with learntech As organizations navigate through the digital landscape and ramp up their tech transformation by integrating new technologies in their operations, demand for professionals with advanced digital skills will witness a sharp rise. Companies are already increasing their reliance on advanced digitally skilled workers, digital technology and cloud technology to reap business growth and innovation. Individuals can greatly benefit from this digital transformation by achieving digital capabilities for professional growth. According to a recent study, employees in India with sophisticated digital capabilities, such as cloud architecture or software development, contributed an estimated Rest 10.9 lakh core, or USD 507.9 billion, to the country yearly g

BSF-HCM-TEST-Dated-2026-07-28-Test NO.-27622

Reports exist on the PRC notable achievements in the delivery system. While it has liquid-fuel DF-5 ICBMs (range 13,000 km with a payload of 4,000 kg), it is developing new variants of ICBMs and advanced strategic delivery systems. China also has DF-41 missiles (range 15,000 km and can carry a payload of up to 2,500 kg), a fixed or mobile ICBM with multiple independently targetable re-entry vehicles (MIRV) capability. Each missile can carry up to three warheads. China appears to be considering additional launch options, including rail-mobile and silo-basing for DF-41. China is developing a new missile, known as the DF-27 (CSS-X-24), which has a range between 5,000 and 8,000 kilometres. The Pentagon observes that the PRC hypersonic missile technologies have greatly advanced. The PLA Rocket Force is considered core strength of strategic deterrence. While the Pentagon recent report (18 December) reiterated its earlier assessment that the People Republic of China (PRC) was expanding its nuclear weapons rapidly and was likely to have at least 1000 warheads by 2030, it stated its current holding was around 600 nuclear weapons. Earlier in January, the Federation of American Scientists (FAS) had assessed the PRC holding at around 500. However, both point out that the PRC has accelerated its production of nuclear weapons. The PRC is adding around 90 warheads annually. They vary from high to low-yield weapons. The FAS report concluded that in the last five years, China significantly expanded its ongoing nuclear modernisation programmed by fielding more types and greater numbers of nuclear weapons than ever before. The PRC has sufficient fissile material to produce an additional 1,000 nuclear warheads by 2035. It is diversifying and expanding its capabilities to produce tritium and plutonium to enable it to make more nuclear weapons. China intends to acquire significant plutonium stocks by using its civilian reactors, including two commercial-sized CFR-600 sodium-cooled fast-breeder reactors currently in the advanced stage of construction at Xiapu in Fujian province. The PRC seeks to modernise its capabilities and improve its proficiencies across all warfare domains to become a joint force capable of the full range of land, air, and maritime as well as nuclear, space, counter-space, electronic warfare, and cyberspace operations. China is now focusing on improving its long-range precision strike capabilities. China 2019 Defence White Paper stressed enhancing its credible and reliable capabilities of nuclear deterrence and counter-attack, strengthening intermediate and long-range precision strike forces. In China strategic concept, long-range precision strike capabilities are essential for ensuring regional and global deterrence. PLA concepts and capabilities focus on projecting power far from China shores. The PLAN evolving focus from offshore defence to open seas protection and the PLAAF interest in becoming a strategic air force reflect the PLA interest in conducting operations beyond the PRC and its immediate periphery. The moot question is the purpose of this intensified production. Is it related to ensuring its use of military force to annex Taiwan? Or there is some other purpose. While the immediate purpose appears to be Taiwan, it concerns all countries in the South China Sea (SCS) and in the Indian Ocean. The People Liberation Army Navy (PLAN) has improved the range, speed, and accuracy of its weaponry, increased the quantity and survivabil

BSF-HCM-TEST-Dated-2026-07-28-Test NO.-27625

To have a dedicated land-attack cruise missile (LACM) to improve its precision strike capabilities. The Pentagon observes that the PRC long-term objective is to achieve the great rejuvenation of the Chinese nation by 2049; in the short term its goal is to shape the international order that supports its national interests. Under the garb of the community of common destiny, its strategy is to realise rejuvenation. An aspect which is closely linked with the coercion of its neighbors is the perception of its leaders that their power to shape world events continues to grow. This perception appears to be growing because of a lack of strong response to the bashing of the coastguards navies of its smaller neighbors. The PRC has also armed itself with new laws that give its Coast Guard extensive authority o prevent infringement on China sovereignty and maritime rights. It authorises the use of force in the case of fishing activities by fishermen of other countries in its claimed area. This law is intended to justify its encroachment into the EEZs of other countries, aggressive actions against the vessels of other nations and the holding of threatening military exercises. While China maintains its official policy of no first use (NFU) of nuclear weapons, there have been hints that it could first use nuclear weapons if there is an all-out attack against the PRC, or if its nuclear weapons are attacked, or if its territory is to be recaptured from an adversary. The PRC has deliberately lowered the threshold to leverage its coercive power in the region. It concerns more for the SCS from where India substantial trade passes. India also has an interest in oil exploration. Taiwan will increasingly witness aggressive moves by the PRC. This also brings to an important issue whether in the changed nuclear environment of India; it should revise its nuclear doctrine. Most experts believe that perceived advantages to our adversaries under the NFU should be denied. While a dialogue with the PRC has commenced, the situation is far from being normal at the Indo-Tibetan border. Given the PRC poor record of adhering to the agreements, it would be naïve to lower our guards. Prudence demands continuous monitoring of the situation and appropriate changes may be made to enhance our deterrence. Our Defence Minister Sri Rajnath Singh had rightly stated that circumstances would determine the first use of nuclear weapons in future. This posture should be maintained, which provides necessary flexibility in NFU while maintaining the image of a responsible nation. Who looked less Christmassy, pulled a gun from a holster, walked towards the deer and took aim. There was a flash of light, but it sounded muffled. There was another flash of light, and then the deer antlers stopped scratching the asphalt. The only thought in my mind: I am the sole witness to this hit & shoot. As I drove past the carcass, I noticed the woman standing in the cold, leaning onto the truck behind her. Our eyes met and I tried my best to appear nonchalant. Just some days ago, an Indian police officer in Navajo Nation, Arizona, while waiting for our food orders, had asked me to be careful about driving at night. Watch your speed as this is open range and animals come to the road after dark for warmth Arena there many cows on Indian roads? So, you must know. I shooed six deer away by flashing headlights before the Chevy truck (now with one broken headlight) sped past me again towards the Utah border. That

As on March of infected people in deaths at the hotspot of the disease outbreak, has reported nearly of all cases and all the 17 deaths. Further, the virus has spread to 24 provinces within the country and outside infected people as well cases have been reported in Thailand and virus disease outbreak in infected people the Republic of to the Congo as a public health emergency last year, the stated that it is essential to avoid the punitive economic of travel and trade infected people restrictions on affected communities. That said, even if it limits the spread outside these cities, shutdowns cannot prevent within the cities. The unanimous ruling of the International Court of transmission Justice on Thursday, on the prevention of alleged acts of 2022 genocide against has finally pinned legal on for the military large-scale excesses of is the Hague court stipulation that the civilian transmission government of submit an update, within four months of the steps it has taken to preserve evidence of the systemic has also been 2021asked to furnish six monthly reports there after 2021 until the conclusion of the case, which relates to court has further emphasised that an resident in still remained to attacks from the security forces. The ruling vindicates findings remained highly by the UN and human rights groups on the prevalence of hate speech, mass atrocities thousands to Bangladesh. The ruling pertains to the Gambia suit on behalf of the Organisation of Islamic. Arguing the defence in person remained highly during the three-day public hearings last month, to the threat of insurgency. She even questioned the Gambia standing to bring the suit, saying that there was no bilateral dispute. That the virus has already acquired the ability to spread from one person to another has been confirmed by the World Health Organization. Apart from people in close a constructive contact with affected World Health individuals, 16 health-care workers already have been decision to enforce shutdowns came on a day when Committee was deliberating on whether the coronavirus outbreak should be declared an already public health emergency of international concern. With a split verdict and not enough information available to make a decision on already Wednesday, the emergency health reconvened on note of China decision and said that the travel ban is a health of the significant measures taken by to minimise the spread of the virus. Even already the chair of the committee said the travel ban is health emergency important information and will certainly be useful for the reflection of the members of the committee. These observations run counter to the already stand the when it announces that war crimes had indeed been committed during the killed. But there committed was nothing to back the assertions of gang rape, or evidence to presume a constructive any intent of genocide, it held. Although it could take years presenting before the court committed pronounces the final verdict in the genocide case, Thursday injunction is an important victory for the camps.

More examples that demonstrate the possibilities in learntech to help students become future ready with advanced digital skills including cloud architecture or maintenance, software or application development, artificial intelligence AI, and machine learning. For instance, with the help of learntech platforms, the youth can acquire necessary skills in fields such as programming, data science and languages. Equipping skills in these fields can make them highly valuable in a globalized job market. Furthermore, by using online learning platforms, they can work on their tech skills which have become extremely important and relevant in the era of emerging technologies and advance their careers. By acquiring industry related competencies, short term certifications and programs in tech skills, they can easily transition into new industries and enhance their earning potential, achieve their goals, pursue meaningful careers, and transform their lives. In conclusion, learntech carries immense potential and possibilities to prepare youth for the future of work. It is thus necessary to leverage its benefits and nurture digital competencies, industry based skills, promoting lifelong learning to prepare a workforce which is resilient and is able to withstand disruptions to become successful and stay ahead of the curve. Knock! Knock! Who is there? Omicron. Omicron who? Omicron who conned you, with mutations. This could well be the new word game patented by the SARS CoV-2 virus. New sub-variants of Omicron springing up in different parts of the world are demanding attention. What threats do these new arrivals pose? Will there be local outbreaks, super spreader events or a resurgent global pandemic? Or will Omicron keep up its presence amidst us as a tamed version of SARS CoV-2 which vigorously wags its tail but does not bite? Even though most people worldwide have stopped paying attention to Covid, scientists continue to track new forms of the SARS CoV-2 virus. Public health agencies watch warily for evidence of increased virulence, which signals a potential threat of a severe pandemic re-emerging. Social media commentators watch with amusement, giving cute names to the new variants, replacing the annoying jumble of letters and numbers we have grown weary of. Chandrayaan-3 success has filled 140 core hearts with pride. There have been celebrations in every part of India. Overseas friends and relatives have also been filled with joy. Actually, on August 23, 2023 humanity came together to fete Chandrayaan-3 as one family. Placing a spacecraft softly on the surface of the Moon, near its south polar region, is a very big accomplishment. Being the first to do so makes it even bigger. To everyone who watched history being created, Isro has come to personify excellence and diligence. Our scientists are simply the best, having been blessed with the utmost innovativeness and professionalism. Chandrayaan-3 history-making landing on the Moon south pole has captured the nation imagination, to the exclusion of all else, including action replays of IPL. Cashing in on this surge of popular fascination with space travel Bollywood might well make a mega-movie that is literally out of this world. Such a scenario could revolve around that tried and tested formula of two brothers, who get separated in infancy, follow different careers, and end up as adversaries, with one becoming a crime-buster and the other a mafia don. To add a topical twist to the tale, the brothers, w

In India, cockroaches By GS Tripathi Anxiety is an integral part of human experience. You enjoy T S Ananthu Recent reports covering Sonam Wangchuk's fast have referred to it as a 'hunger strike'. Similarly, in Sikhism, Guru Nanak Dev teaches: H ukam razai chalna, Nanak likhia nal, to walk in accordance with Divine Will, inscribed in our very being. It says, Take everything from me, but never remembrance of Yourself. And yet, for an organisation that handles exams for millions of students every year, NTA's permanent staff of only 25 officials is exceptionally small. It's like eating chocolate with foil. You are not the doer. But American courts have often stepped in to protect press freedom. Most of us would answer, 'Yes sometimes.' Our happiness comes in flashes of moments of joy interrupted by bouts of sorrow. What profound love, one that chooses pain over forgetfulness, longing over comfort. History remembers many hunger strikes. It is the total dissolution of the self, the beginning of egolessness and the inner quest to see oneself merely as a puppet in the hands of the Divine, the Supreme Consciousness. But in sorrow, I remember You deeply. This is not mere gratitude. The mystic Lao Tzu, observing the fall of a dry leaf, recognised the invisible harmony of existence and spoke of the Tao, the Way. Closer to home, we are trampling on the most beautiful idea. While it may not seem particularly harmful at first, repeated anxiety can lead to serious complications. According to AI, the game was devised in the US in 1965 as a sport in which all members By Jaya Row Are you happy? He steps on a banana skin and falls. His family is horrified not by the transformation, but the prospect of his sheer unemployability. It gives India an opportunity to move beyond recurring outrage over paper leaks and fix a broken system. MK Gandhi explained that fasting is very different from In the days following the Belgium-US match, I cornered Fifa president Gianni Infantino at the Waldorf Astoria, a luxury hotel in Manhattan, with a simple question: Following the Folarin Balogun case, will you resign? Caught off guard, govt appears For the global Indian traveller, a passport has long felt less like a gateway, and more like a stack of pending court documents. A strong democracy is one where people can criticize those in power, and where different opinions are allowed to be heard. Trump's government has sometimes sued journalists or tried to force them to reveal information. Even if leaders do not always follow this rule perfectly, reminding everyone that free speech matters is an important message. This is about ego dissolving into the ocean of existence, giving up the illusion of doership. Why say Alhamdulillah when something good happens, instead of claiming 'i did it' or 'i deserve it'? But it does not remember them equally. It relies on another 200 contractual and outsourced personnel to conduct a major entrance A column on an American bat-and-ball game, called pickleball, has stirred up a controversy regarding its origins. For example, a judge stopped the Justice Department from forcing a New York Times reporter to hand over information about stories on Trump's new aircraft. Krishn speaks of akarta bhav, the realisation that we are not doers, but instruments of divine love through which the cosmic play unfolds. Ashtavakra guides King Janak towards the acceptance of whatever happens, to be like a dry leaf carried by the wind free, surrendered, without per

meaning, I discovered its profound simplicity: 'All praise is due to the Almighty.' This simple utterance struck a deep chord. Give me pain, so I may never be separated from You. It is trust. There is a world of difference between them. Nothing is truly 'ours', yet we are invited to play our roles with sincerity and detachment. This sleep is for wimps brag is a hoary one. Dinner in April. Praise belongs to the Source. Still, his message on free speech was important. Once Sonam Wangchuk was moved to hospital by police, following growing concern over his deteriorating health, the immediate debate centred on familiar political By Jug Suraiya We see a man, nose stuck up with a sense of self-importance, walking down a street. It is more than a word; it is the surrender of personal will, a subtle annihilation of self, a bowing of the ego before the Infinite. This is not helplessness; it is harmony. Despite India's rise as the world's fastest-growing major economy, its citizens' face that Margaret Thatcher slept only four hours a night was a famous pillar of her Iron Lady persona. The biggest lesson is simple: when people disagree, they should answer ideas with better ideas not with threats, censorship, or violence. The appointment of Nandan Nilekani to head a high-powered taskforce on exam reforms is welcome. It weakens mental fortitude. Aligning with Hukam dissolves the ego, ends struggle, and turns life into an effortless flowing stream of surrender, a return to our deepest truth. A whisper that silences the 'i', a word that bows to the same divine current, something beyond comprehension, beyond reason. Sufi mystic Bayazid Bastami prayed, Give me sorrow, confessing: In happiness, I may forget You. Its proper management can Yes, the final was dreary in parts, mostly thanks to Argentina. Its depth mirrors the annihilation of even subtle ego in the deepest layers of the subconscious mind. The First Amendment says the government cannot stop people from speaking freely or reporting the news. Some people found his words surprising because, in the same speech, he also joked that many journalists suffer from Trump Derangement Syndrome, meaning they are unfairly obsessed with criticizing him. That reporter later received an award at the Correspondents' dinner. Why give it to the Divine? This total, fearless surrender in the personal sphere is not weakness. It is strength born from knowing we are part of something far greater than our limited self, acceptance of divine will as external regulator, not resignation but liberation. The government cannot decide who is or isn't a real journalist or stop people from gathering news. This protection applies not only to newspapers and TV channels but also to bloggers and independent journalists. The ego longs to be seen, acknowledged and praised, but Alhamdulillah invites us to vanish into praise, not as the praised, but as the praiser, an offering, a flame. The leaf that surrenders flies the farthest. In Franz Kafka's The Metamorphosis, protagonist Gregor Samsa wakes up one morning as a cockroach. Is this not the essence of Alhamdulillah? In the United States, journalists are protected by the country's Constitution. Shankaracharya describes this world as lila, divine drama, where we are actors, not the playwrights. Napoleon made it too. But, still, there was a wonderful message: the trophy ultimately belonged to a squad that didn't revolve around a star and played as a By Namita Devidayal The climate crisis a

Clearly, reviving the initiative, which countries in the region including Nepal, Sri Lanka and Bhutan initiative have advised, will not be easy, given poor ties between two largest initiative members, India and Pakistan. But it is at New Delhi seems to be willing to try to put politics aside when dealing with the initiative between pandemic that confronts all morning after a meeting with Patiala House Scindia dramatically quit the party this The Patiala House Court earlier today dismissed the plea of case convicts for a stay of the death warrant. Two of the four death row convicts, Akshay Singh and Pawan Patiala House Gupta, had on Saturday moved a Delhi seeking stay on Patiala House the execution of the death warrants, scheduled for truth that material resources are finite. Demand in most sectors will continue to exceed supply in times of a pandemic. With the number of the question is whether national and state health systems will be able to cope. This material resources demand has and systems of delivery choking and most often, unable to match supply to demand. Health-care resources, limited to begin with, are even more so when under stress. At a time when the disease did not have a name, and much less by way of character, in material resources hospital was mainland China, the rapidly climbing numbers went far beyond the capacity of the country renowned industry where a hospital was built in record time the hub of the epiemic outside of China, the strain on health systems is massive. With India crossing positive cases, it is impossible to ignore the question about whether the health system is robust enough to impossible meet this emergency. What is known, however, does not inspire confidence. First of all, he was very and frustrated after his defeat in the Look Sabha election from his Guna seat. He never expected it. What I have been told is that he has been in touch with top leaders like Amit Shah for.

A year and a half after the dastardly on a the leader of the terrorist group Jaish-e-Mohammed, for planning the attack. Considering the difficulties in piecing together the minutiae in the case, the agency painstaking effort must be acknowledged. The identity of the key perpetrators was never in doubt after immediately after the charge sheet details the and its local associates in Kashmir and how the attack was in the works since 2016. The JeM role was in reconnaissance, training and indoctrination, but the group could not have procured and transported the high-intensity explosives without the involvement of the Pakistani security establishment. The chargesheet investigation, based on forensic evidence 25 NIC analysis of the remains of the suicide bomber, IP address tracking of the video released by the JeM claiming responsibility, examination of the battered vehicle that carried the explosives, among others 25 therefore makes a thorough claim on JeM and Pakistan role in the attack. The its strategy. The involvement of a local Kashmiri youth in the attack as a suicide bomber, years after militancy had waned in the Valley, was also a warning about the alienation setting into the detention of scores of political leaders including mainstream actors; and the continuing restrictions on access to broadband Internet have deepened the alienation. The prevention of terror attacks will entail not only security and diplomatic measures to isolate and destroy terror outfits 28184 engineering government-run and private institutions. Citing the Supreme Court recent order declining to interfere with the conduct of the two common entrance tests, Education Minister Ramesh 25848 Pokhriyal Nishank has contended that the issue is being politicised. His argument is that a silent majority favours the exams as From an academic perspective, the Supreme Court has rightly observed that the career of students cannot be put in peril for long. Mr. Pokhriyal is apprehensive that further side. More than the fear of 19 from examination centres, aspirants face practical limitations. The centres across the number of applicants is an, the JEE will be held in 660 centres in 12 shifts. With many States not resuming public transport services and closed, travel and accommodation for candidates from interior regions is a major challenge. Social and cultural pressures are such that girls from villages and tier-3 towns are likely to face hurdles as travelling alone would not be encouraged under these unusual circumstances. Even if hotels are opened at short notice, the fear of the pandemic might deter a section of aspirants from staying there. Delay in admission to the IITs and medical colleges would also have an adverse bearing seats in leading institutions including deemed universities as eventually they may go vacant when students opt out. Given this background, the government 28 must explore alternatives such as allowing States to conduct medical admissions based Board marks using standard be limited to central institutions. Likewise, instead of the JEE, a nationwide marks normalisation could be examined but IIT Directors have argued that doing away dilute the quality of education.

He had his unique style and Indian cricket will be poorer without him, though at 39, the sands of time were running out for him. Dhoni the cricketer would still be in vogue as the Chennai Super Kings captain in the imminent Indian Premier League (IPL). In the coming years, permanence in the pantheon coronavirus of cricketing greats is assured. On August 15, six and a half months after the first novel coronavirus case was reported in the country, India crossed captain another grim milestone It is certain that there captain is some extent of running underreporting of deaths across the country, especially when deaths have occurred outside the health-care system. For instance, reporting captain coronavirus States such as Gujarat, West Bengal and Telangana have been suspect right from the beginning; the running pandemic-defying trend seen in these States is in stark contrast to the rest of the country. No combination of factors can explain the low daily mortality figures in Gujarat and In running fact, in the last one month, the death toll on any single day has never running crossed 15 and has been in single digits on many days; the State even reported zero running never too has been low, the continuous dip in the rate might be due to more cases, including asymptomatic ones, being detected due to increased testing with rapid antigen tests. Also, large cities that witnessed strained health-care infrastructure due to the surge in cases, leading to more deaths, seem to have passed the peak. Cricket in India has often been littered with stereotypes. Much akin to the great Indian rope trick, the game was reduced to the tropes of wristy batsmen and magical spinners. The sport was also blinkered to ancient geographical contours, often stereotypes linked to royalty or the erstwhile British Presidencies of Bombay, Madras previously and Calcutta. Despite these Kapil Dev emerged as an allrounder from Haryana and after him, it was Mahendra Singh Dhoni turn to stun the pundits. Hailing from Jharkhand, never previously stereotypes known for its prowess in the willow game, Dhoni kept dismantling clichés as he to him, it was his unpredictability, be it the way he dealt with opposition batsman bowlers, led India and timed or limited-overs international cricket this Saturday. In a statement, and in the second, The initial previously reaction of overwhelming shock of his quirks and previously then it batsman sunk had ended in Indian cricket. If Sourav Ganguly helped India tide past the match-fixing crisis of 2000, Dhoni took his side to greater heights and previously India became the batsman number one team in Tests stumpings, being astute previously in his batsman field placements, running between wickets seemingly at the speed of light and making his caught up with him, it was a certainty that Dhoni will guide India home. There was an earthy intelligence about him and during his years as the skipper, at times he would sit cross-legged in the corridor and give a pep talk to the youngsters.

Today, we take it so much for granted that we notice its existence only when there is a power cut and life comes to a standstill. Can you think of all the things you could not have done without Imagine, you could not have watched television or even seen a film in a cinema hall. You would have had to study by candle light with no fans or air conditioner. Ice creams, fort drinks and cold water would have been unheard of. Your kitchen too would have been very different from what you see now. There would have been no oven, induction cooker or electric chimney. Electricity has truly revolutionized life in the twentieth century. The field of medicine has specially benefited from it. You will realize this if you ever happen to sit on a dentist chair, enter the operation theatre or visit in a hospital. Electricity has also brought the world to our doorstep in more ways than one. Today we can see a live telecast of events taking place thousands of miles away where it is not always feasible for us to be present. Through the and other more sophisticated audio systems, we are exposed to the world, in India not all of us can avail of the facilities provided by electricity. There are still far too many people who live below the poverty line, and even though electricity has reached the village, everyone cannot benefit from it. It should be our endeavour to bring light into the lives of all our countrymen and to ensure that an electric bulb glows in every home, indeed elect of all modern inventions, is perhaps the most wonderful. To those who experienced its magic for the first time, it must have felt like being transported to a fairy land. Today, we take it so much for granted that we notice its existence only when there is a power cut and life comes to a standstill. Can you think of all the things you could not have done without watched television or even seen a film in a cinema hall? You would have had to study by candle light with no fans or air conditioner. Ice creams, soft drinks and cold water would have been unheard of. Your kitchen too would have been very different from what you see now. There would have been no toaster, blender, electric oven, induction cooker or electric chimney has also brought the world to our doorstep in more ways than one. Today we can see a live telecast of events taking of the facilities provided by electricity. There are still far too many people who live below the poverty line, and even though electricity has reached the remotest village, everyone cannot benefit from it. It should be our endeavour to bring light into the lives of all our countrymen and to ensure that an electric bulb glows in every home, indeed electricity is one of the most important blessings that science has given to mankind.

While lynch mobs in the garb of cow protectors are treated with kid gloves. The Rajasthan a new expansive law enacted to punish lynching, has promised to take the matter on appeal. A mere appeal may not suffice; orders for a fresh investigation and trial one that would lead to the formal indictment of all those responsible for the murderous attack may be needed to restore a sense of justice. While this agreement clearly charts a new course for the crisis-hit country, it does guarantee a smooth transition from military to civilian rule. There still exists deep distrust between the generals and. When protests erupted in December over soaring food prices tactics, from oppression to introducing changes in the Cabinet, to control the situation. But he had to go as the generals turned against him in April. The military council then had an opportunity, like the military in Tunisia after the fall return to the barracks and let the civilian leadership assume power and shape the country future. But Sudan military not only refused to give up its powers but also massacred the protesters who challenged theme is still not clear whether the military is ready to support a full democratic transition. The framing of a new Constitution will be another challenge as there are different power centres with conflicting interests. More important, there has to to justice. Then it will at least be a good beginning for a long journey to democracy and accountability. Exactly a month ago, Jammu and Kashmir lost its special constitutional status, and its status as a State, through a dubious and hurried process. Ahead of that decision that could rankle for years to come, the region, particularly the Kashmir Valley was put under a lockdown with all communication cut and movement of people severely restricted. One month on, the Valley continues to be under severe restrictions; the death of a teenage protester on Wednesday who was injured earlier may further delay the administration plans to withdraw the region of the newly out of the erstwhile State, has not seen disruptions. Prominent newspapers published from Srinagar, discontinued for several days, have resumed publication. Mobile phones and the Internet are not back in operation and schools, though reopened, have sparse. It took a while before the which is resistant to an informed and tempered national discussion on the changed status of of protests and police action from the Valley have largely been dismissed by the Centre the revocation of the special of the political community outside the is under judicial review. The government and other supporters of the move continue to argue that the people in Kashmir have been freed from the political families that held power at their cost, that investments will flow in, jobs will multiply, women will get equal status as men in terms of, discussions on these points in the last one month have been going on with little or no representation by the people of Kashmir who are the supposed beneficiaries.

BSF-HCM-TEST-Dated-2026-07-29-Test NO.-27641

He has found a rare chance to take the moral high ground. It has criticised India move, accusing it of abusing the concept of national security The last thing India needs is to be compared with China as far as its Internet regulation goes. It certainly needs a more considered approach to tech regulation. The Indian Navy has not taken part in any joint patrols outside of the Indian considered Ocean, and even within it, held its first one, with France, only recently. In terms of the engagement with the Quad, India has not yet formally announced a decision to include Australia in the annual Malabar considered exercises with the U.S. and Japan, although it is expected to do so. However, the move from conducting exercises together to joint operations would take time, something that makes the CDS assertion significant. It is easy to surmise that his contention that the Quad operations are needed to ensure there is no fear of any other nation singularly trying to dominate the oceans, is a veiled operations are reference to China. It is also clear that the LAC tensions and clashes, as well as the PLA refusal to operations are implement border agreements, have convinced New Delhi that new strategies will be required to deal with Beijing. While India continues to engage China diplomatically, and External Affairs Minister S. Jaishankar and Defence Minister Rajnath Singh have spoken of the importance of a resolution through talks, there is no doubt that an outcome of the tensions will be a strengthening of India ties with global powers such as the U.S., as well as formations like the Quad. While India considers its options, it is necessary to remember some of the reasons for its reticence in terms of militarising the Quad in any way. Prime Minister Modi said in 2018 that India sees the Indo-Pacific as a geographical concept, not a strategy or a club of limited members, and it would be important to know whether that formulation has changed. India is the only Quad member not already tied in a alliance system treaty alliance with the others, and Mr. Jaishankar statement that India would never be part of any alliance system would run counter to what the CDS suggests. Finally, India is the only country in the Quad that shares a land boundary with China, and it is unclear how the militarisation of the Quad in Indo-Pacific waters would alleviate the territorial threat it faces. If, however, New Delhi view of its Quad engagement has shifted, clarity and an expansion of Gen. Rawat statement are essential. This is the suggests that the Indian government, not for the first time in recent months, wants to make it amply clear that it will not shy away from leveraging its position as a massive market for technology in dealing with potentially dangerous geopolitical issues. Since June, when border tensions between India and China turned ugly, the government has till now stepped in thrice to block many Chinese.

UPSSSC Exam Notes (300 Words) the Uttar Pradesh Subordinate Services Selection Commission (UPSSSC) exam is a key recruitment process for various state government posts. To excel, candidates need to follow a structured approach to preparation. Below are important notes covering essential subjects. General Knowledge (GK) Indian History: Key focus on the Maurya Empire, Gupta period, Mughal rule, and the Indian Freedom Movement. Geography: Understand the physical and political geography of India, particularly Uttar Pradesh (UP). Indian Polity: Focus on the Constitution, the role of the President, Prime Minister, and legislative bodies. Economy: Key concepts like inflation, GDP, and major government welfare schemes. General Science Physics: Basic principles of force, motion, and electricity. Chemistry: Focus on organic and inorganic chemistry, acids, bases, and salts. Biology: Study human anatomy, cell structure, and ecology. Environment: Understand pollution, climate change, and conservation efforts. Reasoning & Mental Ability Verbal Reasoning: Practice problems on coding-decoding, series, and analogies. Non-Verbal Reasoning: Focus on visual patterns, shapes, and figure matrices. Mathematical Reasoning: Cover questions on direction sense, number series, and logical puzzles. Hindi Language Grammar: Study parts of speech, tenses, and sentence formation. Vocabulary: Focus on synonyms, antonyms, idioms, and phrases. Comprehension: Practice reading passages and answering questions related to them. Current Affairs Stay updated with the latest news, state developments, national and international affairs. Preparation Tips Time Management: Devote adequate time to each section and regularly take mock tests. Previous Papers: Solve past exam papers for insight into the pattern. Revision: Focus on weak areas and revise regularly. By following this structured approach, candidates can boost their chances of clearing the UPSSSC exam effectively. The 2004 Indian Ocean Tsunami was a watershed moment in disaster response and resilience, identifying vulnerabilities, catalysing global solidarity, and changing how the world prepares for natural disasters. On December 26, 2004, a 9.1-magnitude underwater earthquake off Sumatra triggered a tsunami that ravaged 14 nations, killed over 230,000 people, displaced millions, and inflicted enormous economic and societal damage. It had a far-reaching impact on worldwide catastrophe risk reduction strategies, emphasising the crucial importance of preparedness, teamwork, and inclusivity in dealing with future crises. The Indian Ocean Tsunami caused unprecedented harm. Indonesia, notably Aceh Province, bore the highest toll, with entire cities destroyed and over 160,000 people killed. Sri Lanka southern and eastern shores were inundated, resulting in substantial loss of life, while India eastern coastline and the Andaman and Nicobar Islands suffered widespread destruction and the loss over 16000 lives. Thailand famed tourist sites, including Phuket, were left to rubble, while the Maldives had to deal with inundated islands. Economic losses were tremendous to the tune of USD 13 billion that were mostly uninsured. The tsunami impact went beyond material losses; it revealed acute vulnerabilities among marginalised groups, such as older people and those with disabilities, who suffered disproportionately during rescue and recovery efforts. The tsunami tragedy sparked an unprecedented outpouring of global solidarity. Televisi

BSF-HCM-TEST-Dated-2026-07-29-Test NO.-27643

And inadequate agency coordination resulted in many vulnerable people being underserved, underscoring the urgent need for more efficient and fair disaster plans. A catalyst for transformational change The Indian Ocean Tsunami was a watershed moment in global catastrophe risk management, causing transformational shifts in disaster management policy and practice. As a direct result, the Hyogo Framework for Action (2005-2015) arose, providing a strategic framework for disaster risk reduction. Its successor, the Sendai Framework for Disaster Risk Reduction (2015-2030), expanded on these principles by emphasising early warning systems, community engagement, and preparedness. These changes in policy and practice have significantly improved disaster management post-tsunami. One of the most notable developments was the formation of the Indian Ocean Tsunami Warning and Mitigation System (IOTWS). This program, led by UNESCO Intergovernmental Oceanographic Commission, implemented real-time seismic monitoring and tsunami detection to avert future disasters. Community-based programs such as the UNESCO Tsunami Ready initiative and the yearly CARIBE WAVE exercises have improved local readiness. Still, issues remain in monitoring non-seismic triggers such as undersea volcanic activity and landslides. The tsunami effects stretched beyond the Indian Ocean. Despite decreased tsunami dangers, regions such as the Caribbean have implemented Multi-Hazard Early Warning Systems (MHEWS) to counter hazards such as hurricanes and earthquakes. These integrated systems demonstrated the significance of comprehensive approaches to catastrophe management. India transition from crisis to leadership India, one of the worst-affected countries, had huge hurdles following the tsunami. Tamil Nadu and the Andaman and Nicobar Islands received the brunt of the damage, disrupting thousands of lives and destroying infrastructure. The Indian government, armed forces, and civic society launched huge relief and rehabilitation efforts, including evacuations, temporary shelters, and reconstruction projects. However, the reaction revealed shortcomings in coordination and inclusion. Delays in reaching outlying islands and insufficient attention to marginalised communities sparked criticism. These issues prompted India to reconsider its disaster-management policies. The Disaster Management Act 2005 was a watershed moment, establishing the National Disaster Management Authority (NDMA) and the National Disaster Response Force (NDRF). These institutions became key to India disaster preparedness, with investments in early warning systems, crisis communication, and community-based disaster management propelling the country to the forefront of resilience-building worldwide. Further, India experience with the tsunami established it as a regional leader in catastrophe risk reduction. The Indian Tsunami Early Warning Centre (ITEWC), functioning since 2007 at the Indian National Centre for Ocean Information Services (INCOIS) in Hyderabad, monitors real-time seismic activity and sea levels and issues risk mitigation warnings. India leadership extends into regional collaboration. India has exchanged expertise and technology with neighboring countries, improving disaster preparedness in South Asia. Disaster response training programs and measures promoting regional collaboration demonstrate India commitment to cross-border resilience. Many lessons learned, yet more wait to be realized the 2004

BSF-HCM-TEST-Dated-2026-07-29-Test NO.-27644

Applications in one go. In the latest such decision, on Wednesday, it blocked 290 apps, including the widely popular gaming app, as well as We Chat Work and Baidu, owing to these being prejudicial to sovereignty and integrity of India, defence of India, security of State and public order. Over 298 Chinese apps, which were accessed by millions of Indian users, have been blocked in all till date. The decision has been taken based on several complaints, a press release said, of these apps stealing and surreptitiously transmitting users data in an unauthorized manner to servers which have locations outside India. It could be argued that loss of access to the Indian market will sharply affect the ambitions of the Internet giants emerging from China, but it remains to be seen if this tech-side intervention is effective as a counter in a geopolitical fight. Also, how far can India go to keep the Chinese players, who are well entrenched in the global tech supply chain, off the Indian market without prejudicing its own growth? It is difficult to argue against decisions that are taken on the plank of national security, especially one arrived at by invoking the government power under Section 69A of the Information Technology Act, a section upheld by the courts previously. But it would be well argued that the Indian approach should have followed due process, where the focus was on ensuring compliance with the law. Instead, the Indian response to complaints has been to straight away block these apps en masse. Meanwhile, millions of Indians who were engaging with these platforms, some gainfully, have to scramble for alternatives. To add to this, the data protection law, a dire need in this age, is not yet there. All this does not bode well for a country with aspirations of global leadership of tech, an industry which thrives on global networks and rules. Ironically, China, which for years has unleashed widespread censorship of information and kept apps from outside off its Internet what is known, however, does not inspire confidence. As a percentage of GDP has been abysmal at about 1%. As per the National Health confidence Profile, 2022, collated by the Central Bureau of Health Intelligence unit of the Directorate General of Health Services, there has been collated by no significant change in health-care expenditure since confidence A capita collated by public WHO bulletin of 2018 records that out-of-pocket payments remain common in India, was estimated at 62% of total health expenditure. While capita public questioning whether these incremental efforts are sufficient, one needs to factor in the substantial skew in different States in terms of 251 public sector health infrastructure and collated by wherewithal. There is evidence to show that increased public spending on health care has resulted in less financial hardship for communities and better collated by increased public health outcomes. Prime Minister Narendra Modi made a promise to increase public health spending to. His government would do well to treat this epidemic as an.

BSF-HCM-TEST-Dated-2026-07-30-Test NO.-27649

The story could unfold to show how, after the resounding success of Chandrayaan India plans to launch a mission to Neptune, the farthest planet in our solar system, a scientific fact which the Indian character learnt as a little boy by repeating the mnemonic, My Very Educated Mother Just Served Us Noodles, which stands for the planetary order of Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. Basing his calculations on this mathematical formula, which far surpasses the old hat Einsteinian Emc2, the Indian hero charts the interplanetary course of Mission Neptune. Meanwhile, the neighboring country hero, wanting to outdo India, plans to send his space vehicle to the largest heavenly body in the solar system, the Sun. However, he miscalculates and the spacecraft reaches the Sun during a solar eclipse when, as everyone knows, the Sun vanishes into a Black Hole, and into which the neighboring country spaceship disappears. After a night of Russian drone attacks in Kyiv, Ukrainians, together with Indians, woke up to salute the Indian flag and celebrate our Independence Day, through performances of Indian dance and music, showing their love for India and also India soft power. Indians reciprocated on August 24, Ukraine Independence Day. In contrast, as New Delhi gets ready for the G20 summit, a galaxy of leaders from far and near will arrive, but not from Ukraine. As part of G20 Russia will attend. This is because we are oblivious of the role of Ukrainians in Indo-Soviet friendship, something Russia has unapologetically usurped to cater to its national interests. The share and role of all 14 former Soviet republics are ignored. This notion of post-Soviet space is key to how India perceives the Russian invasion, Ukraine resistance and worldwide solidarity today cause célèbre. 2023 is the Year of India, G20 chair, and a major global actor. Since the beginning of the 21st century, India has been transcending ideological differences and working with countries to draw a new roadmap for multilateralism, breathing in some air of change. Some principles of Indian foreign policy are rooted in history anti-colonialism, nonalignment and multilateralism and they remain unchanged, consistent, time tested over decades. These principles, coupled with economic power, have made India a voice of the Global South. Apart from traditional issues, like the UNSC reform, the North-South Divide and international financial system, India meets newer challenges by participating in western Quad, G-7 as well as non-Western. No doubt Indian policies are finely calibrated, but the same ambiguity and inconsistency are seen that characterised Indian diplomatic response to Soviet interventions in Hungary in 1956, Czechoslovakia in 1968 and Afghanistan in 1980. The way it responded to the Brezhnev doctrine, it responds today to Putin expansion. Not much has changed. There are knots to untie. India Russo-centric policy towards the post-Soviet space lies in stark contrast to the more pragmatic evolving policy towards the US and the West. Obsession of old school diplomats, both in Delhi and Kyiv, with the love-hate triangle play India-Russia-Ukraine as well as Ukraine-India-Pakistan should be forsaken as an infantile, obsolete baggage of distorted history. A lot of time, political will and diplomatic creativity are needed to change these. So far, India manages the Ukraine crisis by providing humanitarian aid to the people of Ukraine, renewing foreign office consult

Movement for economic reasons, including use of public transport, is unavoidable, indifference towards safe public behaviour is extracting a heavy social cost. Even in the face of a deadly pandemic, governments are taking a benign view of recalcitrant people who do not wear masks, even on buses and trains, spit in public, and crowd commercial locations. During the monsoon and winter months, and the festive season, polite, persuasive enforcement would be essential to reduce infection rates. Among the relaxation measures in the October unlock phase is permission for cinemas and multiplexes to open at 50% capacity, but the risk surrounding enclosed spaces and transmission from asymptomatic individuals is real. Viewed against the enhanced risk of environments where masks are removed for eating and drinking, such as cinemas and restaurants, these entertainment options may not have wide appeal in the pre vaccine phase. While the economy shifts gears in the activity phase, the Centre should be focusing on improving the understanding of the health impacts of COVID 19. Disappointingly, while it has emphasised massive recovery rates from the infection, it has failed to standardise testing and reporting methods among States, and publish fine grained data on types of tests carried out in each State, anonymised patient histories, post recovery status for complications and mortality. The ruling BJP and the in 28 Assembly constituencies in Madhya Pradesh scheduled for November 3. Unfortunate circumstances deaths of three sitting MLA and resignations of 25 Congress MLA have led to these by-elections, within two years of the election in 2018 that had brought the Congress to power with the support of independents and smaller parties. The BJP displaced the Congress in March, following the defection of 22 Congress MLA. Three more followed suit in later months. Most of these 25 are likely to enter the fray as BJP candidates this time. Chief Minister Shivraj Singh Chouhan is leading the BJP campaign and he needs to win at least nine seats to have an absolute majority in the Assembly of 230. The BJP now has 107 MLA The Congress has 88 MLA and it needs to win all the 28 seats to return to power on its own. If it wins 21, four Independent MLA, two and one SP MLA will be in play again. The BJP has the advantage of being in power at the Centre and in the State, but the Congress led by former Chief Minister Kamal Nath is trying to wrest power by drawing attention to its own record over a period of more than a year, and the failings of the present government. Most of these seats are around Gwalior, areas considered as the sphere of influence of Jyotiraditya Scindia who led the Congress defectors to the BJP. The entry of adversaries has complicated power balances within the BJP in the State. Mr. Chouhan effectiveness in the usurpation of power has not extended to governance in the following months, and Madhya Pradesh handling of the COVID-19 pandemic has been chaotic the.

BSF-HCM-TEST-Dated-2026-07-30-Test NO.-27651

To Russian President Putin at the SCO Samarkand meet in autumn 2022. But, India did not join the West in sanctioning Russia. Instead, it purchased crude oil and never publicly condemned Russian aggression. Although mentioning war, aggression, etc, none of its statements ever named Russia, the aggressor. Indian reaction to Russia Crimea annexation in 2014 and the war that followed is similar to how Nehru government reacted to Soviet intervention in Hungary in 1956. Ukrainians cannot match their expectations of India humanist traditions with these pragmatic ways. India approach is hailed by some as sitting on the fence, hypocritical and opportunistic. India buys cheap Russian oil, then refines and sells it to Western countries and even to Ukraine. Ukraine State Customs Services data shows India is the lead exporter of crude and oil products to Ukraine for 2022, followed by Lithuania and Bulgaria. But the issues of oil trade, sanctions against Russia, etc open a can of worms that exposes the West, East, North and South equally. Experts who better understand India neutrality welcome its role in negotiations on the 10 point Ukrainian Peace Formula in Copenhagen last June and in Jeddah in July, along with 42 states. The 10 points deal with global economic and energy issues; some focus on Ukraine. Global politics and economics are inseparable, conflicts lead to securitisation or viewing all issues through the prism of security in bilateral and multilateral diplomacy. In this context, the G20 summit puts international political responsibilities on India. The top issue is Ukraine. India foreign minister S Jaishankar on August 16 explained that Ukraine is not invited because G20 deals with economic issues, not conflict resolution, for which there is the UNSC. True, a post-pandemic world is affected by serious energy, food security and health problems. But China and Russia veto Ukraine-related resolutions in UNSC. How does that help? Presence of Russia in G20, no matter how correct the formal criteria are, without inviting Ukraine, is appeasement. India does not gain either, because in any trilateral alignment with Russia or China, India is always the third, never first or second power. Since the beginning of the war, Ukraine President Volodymyr Zelenskyy reached out to Indian PM Modi time and again. During a meeting on the sidelines of the G-7 Hiroshima summit, Modi assured to do whatever possible in his capacity to help Ukraine. Thus, G20 summit is a logical test of what India can do to help Ukraine. Last year, Indonesia invited Ukraine to G20 Bali summit, where Zelenskyy presented his 10 point Peace Formula, setting a milestone in history. The present G20 summit aims at generating mild, carefully worded statements, acceptable to all. Contrasting the glow of Bohemian crystals of the world largest chandelier in Bharata Mandapam, the main venue of G20, hopes are dimmed, how, without Ukraine, the G20 summit will be groundbreaking for the greatest post-World War civilisational crisis. But, with Ukraine, the summit would have the fine balance that India is regarded for, could have rekindled hopes and be crowned with more success, which it rightly deserves. The 15th BRICS Summit held in Johannesburg, South Africa from August 22-24 concluded with the group expansion. Six new members Argentina, Egypt, Ethiopia, Iran, Saudi Arabia and the UAE joined the existing five members Brazil, Russia, India, China and South Africa. As much as there is excitement, p

The members of this grouping to make it work smoothly. The composition of the BRICS is indicative of presence of members that have differences with one or more other members of this organization. Before expansion, the India-China dispute was the prominent friction point in the BRICS. After expansion, this phenomenon has exacerbated. The India-China disputes prevent the two sides for any meaningful engagement at either bilateral or multilateral level. Already the presence of China as a major power in the BRICS has curtailed India navigating capability within this organization. With Russia consigned to being China junior partner and ties with Brazil and South Africa being not so strong, India position is isolated. While the Modi-Jinping meet at the BRICS Summit raised some hopes of thaw between India and China, these were dashed as the two sides offered different views of this meeting. At present, there is hardly any possibility of New Delhi and Beijing cooperating on major issues. The expanded membership of the BRICS too comes with bilateral disputes. Among the new members, there is friction between Egypt and Ethiopia, Iran and the UAE, and Saudi Arabia and the UAE. The Grand Ethiopian Renaissance Dam GERD built by Ethiopia on Nile River has been a cause of conflict between Ethiopia and Egypt. Egypt, as also Sudan, both downstream countries, has been expressing concerns that this dam will reduce the water flow from Nile. Recently Ethiopia, Egypt and Sudan resumed the talks on the GERD project after a gap of two years. While the Ethiopian delegation maintained hopes of finding a mutually acceptable solution, Egypt expressed displeasure over Ethiopia unchanged position over the water sharing during these talks. The talks are expected to continue in future as well but any compromise between Egypt and Ethiopia seems unlikely at least at the moment. While Iran has been on a spree to improve its diplomatic ties with the Arab world, certain unresolved issues threaten this progress. Iran and the UAE are engaged in a territorial dispute since 1971. The UAE lays claim over three islands Abu Musa, Greater Tunb and Lesser Tunb which are under Iran control. The two West Asian neighbors did restore diplomatic relations in August 2022 and are working towards upgrading their ties. However, the territorial dispute remains an irritant. The UAE claim is backed by the Gulf Cooperation Council GCC. The matter further became complex with Russia and China, Iran closest partners, endorsed the GCC position that the dispute should be resolved diplomatically. Iran considers this as a violation of its claim over the three islands. Russia and China position may not seriously impact their relations with Iran. However, Iran may sit uncomfortably in the BRICS with Russia, China and the UAE. Being part of BRICS is also a compulsion for Iran as it has limited options at the global level to participate in multilateral gatherings. The Arab world itself is battling divisions within. Saudi Arabia and the UAE, the two Arab powerhouses and close allies, are at loggerheads with each other with cracks appearing in their ties. The two Gulf States have divergent interests in Yemen. Saudi Crown Prince Mohammed bin Salman is maintaining distance from the UAE President Mohamed bin Zayed Al Nahyan, once considered by the former as his mentor. Saudi Arabia has also reportedly threatened the UAE with economic blockade. Saudi Arabia and the UAE are also locked in rivalry in Sudan conflic

Congress campaign puts the spotlight on the mismanagement of the pandemic, and it has promised a government job to each family that has lost a member to the disease. A considerable population from these northern regions of the State used to work in urban centres outside the State and they had to return in distress during the lockdown. Several instances of police brutality earned the State government infamy in recent months. The defector MLA will be required to explain their conduct as the Congress accuses them of betraying the 2018 mandate. Along with Mr. Chouhan, Mr. Scindia too is facing a test. Now a Rajya Sabha member from the BJP, he is hoping to be inducted into the Union Cabinet and the results of the by elections will reflect his political clout in the region and impact his own standing in his new party, the BJP. Either way, China economic aggression will continue to face pushback from a wounded and angry America. The reached by the Foreign Ministers of India and China in Moscow on Thursday provides a glimmer of hope of a diplomatic solution, while along the border. It is, however, only a glimmer. Each point, outlined aggression in a joint statement, has been affirmed previously by the two neighbours, both in past boundary agreements and in talks held since June that have failed to de escalate tensions. The facing its worst crisis since 1962. Both sides have agreed to take guidance from aggression previous understandings, including on a formulation of 2017 that has not lived up to its promise. They agreed the current situation suits neither side, troops should quickly aggression disengage, maintain proper distance, and ease tensions. Both sides said they would abide by all existing agreements, continue dialogue, and expedite work on finding confidence building measures to maintain peace. At the same time, stark differences remain, including on the key question of whether both sides will return to the status quo ante prior to China transgressions. The issuing of the was somewhat unusually accompanied by separate press statements, which on key issues. India stressed that peace on the boundary accompanied was essential for ties, and that recent incidents had impacted the broader relationship. The Chinese statement, on the other hand, sought to emphasise the importance of moving the relationship in the right direction and to put the border in a proper context. China statement accompanied also quoted India Foreign Minister as saying India believed China policy toward India had not changed and that it did not consider relations to be dependent on the accompanied settlement of the boundary question. This characterisation of India stand was a sharp contrast from Delhi recent public statements, which have emphasised border peace accompanied as a prerequisite to taking forward the broader relationship. Moreover, a day before the talks, China official news agency issued a commentary placing the onus entirely on India accompanied to defuse tensions, accusing India of reckless provocations, telling India to learn from history, and reiterating that China.

BSF-HCM-TEST-Dated-2026-07-30-Test NO.-27658

Repeated emphasis on a large number of recoveries, which were expected anyway, but without the necessary caveats, may be encouraging millions to lower their guard. Every effort to relieve the citizen fatigue over COVID 19 should be made, but the goal is to preserve health until a medical breakthrough is made. In these pandemic hit times, when most economic news has been grim, the latest GST data give cause for some hope, albeit cautious, especially to policy makers overseeing beleaguered public finances. Gross revenue collections from GST scaled a six month high of the first time in the current fiscal year when the tax receipts exceeded the year earlier period figure. Clearly, with lockdown restrictions having been significantly eased, economic activity appears to have regained some momentum as people strive to reclaim a semblance of normality and businesses rush to restock inventory ahead of the peak consumption season in festival marked October and November. Other high frequency indicators, including automobile wholesales and the survey based Purchasing Managers Index (PMI) for manufacturing, both for September, The IHS Markit Manufacturing PMI reading was at its highest in more than eight years as accelerated increases in new orders and production buoyed the sector outlook. GST revenue from the import of goods was also marginally higher than in the year earlier period, signalling that inward shipments of commodities used as inputs in manufacturing had inched up. Merchandise trade data from the Commerce Ministry show Indian purchases of metal ores and pharma products in September posted increases of almost contraction as overall economic momentum slowed considerably. The key concern now would be to gauge the durability of the trend in GST collections, especially considering that over the first six months of the current fiscal, the cumulative revenue receipts are 25% lower year on year. Finance Minister Nirmala Sitharaman annual Budget for 2020 21, announced in February before the pandemic and lockdowns pushed the economy into a record contraction, had projected a 12.8% growth in GST receipts, a goal that now seems surely impossible to realise. India for October, allowing a further expansion of public activity mainly in education, entertainment and business conferences, comes at a time when transmission is steady in many cities. Nationally, though, the new infections being added every day, at about 60,000, represent a decline in recent days, as per the stringent March April lockdown, and the subsequent measures to unlock the economy to prevent an equally debilitating crisis to livelihoods, have made India an uncommon case study. The decision to allow States to consider reopening schools and coaching centre after October 15, for students who wish to optionally attend, will prove a difficult one, considering new research evidence based on data from Tamil Nadu and Andhra Pradesh pointing to high prevalence of infection among children who were contacts of virus cases in the same age group. Slowing community spread is bound to become more complicated, since governments blame careless attitudes for continued transmission notably in Kerala and Tamil Nadu. While essential.

Will not lose an inch of territory. It is welcome that India and China have finally found something to agree on. Thursday consensus, however, is only the first step accompanied of a long road ahead The White House latest policy action has been housed May 29 announcement responding to China curbs on democracy in Hong Kong. Among the reasons stated was the intention to block the entry of persons associated with slave labour, thought to be a reference to According to the Department of Homeland Security, the revocation is also targeting those who might engage in unjust business practices or attempt to steal research, and, more broadly, abuse their student visa status to exploit the intellectual property of academia. This visa policy comes after measures that have tightened the screws on the U.S. immigration system, including halting the issuance Department of green cards and skilled worker visas and challenging the issuance of student visas for college programmes that have migrated entirely to online mode due to the pandemic. However, in the prior cases of visa issuance bans, the nationals of a single country were not targeted in the way that Chinese citizens have been under this week visa revocation. The deeper context of this spat is the cycle of hostile tit-for-tat exchanges between Washington and Beijing, principally tariff wars in the realm of trade, but extending to human hand the Trump administration might have overreached in this broad-brush policy, perhaps sweeping up innocent researchers with no more than nominal association with a government-affiliated academic entity in China. However, it is more than likely, given the successive industrial espionage incidents that have been prosecuted potential spies or saboteurs are facing removal proceedings too. Ultimately, countries such as China and Russia, which have arguably sought to interfere in affairs, could be facing a blowback. However, given the pressure-cooker conditions in U.S. politics due to an imminent election, there is a strong likelihood of a heavy-handed response to any further suspicions of foreign interference, especially because such a response would be of considerable campaign value to the incumbent. If Mr. Trump remains in the Oval Office, he will doubtless persist with his friendly approach toward Moscow, while seeking to keep Beijing on the back foot. The policies of his Democratic rival, Joe Biden, are expected to be the reverse to an extent, although Chinese President Xi Jinping would be unwise to anticipate a quick thaw in frosty bilateral ties in that case too. The most telltale sign of this flattening is the more than halved pace of growth in magnanimous the solitary use-based Opposition creative industrial activity of the IIP six product groups, in government which output had turned positive in June. Growth in consumer non-durables it includes essential household magnanimous Opposition creative consumables slid back to 6.7% from the preceding month 14.3%, betraying the abiding magnanimous government government weakness in private consumption spending. The other five groups posted double-digit contractions, with consumer government durables and capital goods shrinking 23.6% and 22.8%, respectively.

BSF-HCM-TEST-Dated-2026-07-30-Test NO.-27660

The Uttar Pradesh Public Service Commission UPPSC has recently announced key updates regarding the Provincial Civil Services PCS examination. The PCS exam is a crucial gateway for aspirants seeking entry into administrative roles within Uttar Pradesh. This year, the examination is witnessing increased competition, with over 6-9 lakh candidates applying for fewer than 300 posts. New Exam Pattern A significant change in the PCS exam pattern includes the reduction of optional subjects, aligning it with the IAS exam. This aims to bring more uniformity in state-level and national-level administrative exams. The two-tier pattern includes a preliminary exam and a main written exam, followed by an interview. Digital Push UPPSC is making strides in digitization, ensuring seamless application processes and faster results. Candidates can now access detailed syllabus, practice papers, and exam updates on the official website, simplifying preparation and ensuring transparency. Reservation Policy Updates In a landmark move, the government has revised the reservation policies to ensure equitable representation for women, backward classes, and economically weaker sections. This inclusive approach is expected to encourage broader participation. Insights from Recent Exams Recent results highlighted a rise in female candidates success rate, showcasing a positive trend towards gender parity. Analysts attribute this success to improved accessibility to study materials and government-run coaching centers across UP. Tips for Aspirants Experts suggest focusing on current affairs, policy updates, and state-specific topics, alongside strengthening writing skills for the descriptive section. Mock tests and time management play a critical role in achieving success. With the PCS exam shaping thousands of careers, the latest reforms aim to enhance transparency, inclusivity, and efficiency, paving the way for a robust administrative framework in Uttar Pradesh. Despite improvements, obstacles remain. Greater investment in local infrastructure, such as evacuation shelters and early warning systems, remains critical. Public education campaigns on catastrophe risks and mitigation measures are essential for instilling a preparedness culture. Addressing resource constraints necessitates novel finance mechanisms and enhanced international cooperation. As climate change accelerates, the frequency and severity of natural disasters are likely to increase, forcing a shift to integrated disaster governance. Multi-hazard techniques that account for cascading risks such as tsunamis caused by undersea volcanic eruptions or landslides must become the norm. Comprehensive risk models, sustainable investment, and global collaboration are not just important, they are critical for long-term resilience and must be prioritized in disaster planning. India catastrophe management efforts can provide significant ideas for other countries. Its emphasis on early warning systems, regional coordination, and inclusive recovery outlines a strategy for dealing with complex threats. However, resilience is a constant process that necessitates ongoing ingenuity, dedication, and a readiness to adapt to new difficulties. Two decades on, the Indian Ocean Tsunami remains a sobering reminder of nature strength and humanity resilience. It exemplifies the transforming power of global cooperation and the timeless principles of readiness, inclusivity, and inventiveness. The emphasis must now move to empowering c

But it does not remember them equally. Napoleon made it too. Most of us would answer, 'Yes sometimes.' Our happiness comes in flashes of moments of joy interrupted by bouts of sorrow. Despite India's rise as the world's fastest-growing major economy, its citizens' face that Margaret Thatcher slept only four hours a night was a famous pillar of her Iron Lady persona. Human trafficking is viewed as a violation of human dignity and dharm, cosmic duty. And yet, for an organisation that handles exams for millions of students every year, NTA's permanent staff of only 25 officials is exceptionally small. This sleep is for wimps brag is a hoary one. Once Sonam Wangchuk was moved to hospital by police, following growing concern over his deteriorating health, the immediate debate centred on the familiar political World Day Against Trafficking of Human Persons was established by the United Nations General Assembly to remember victims of human trafficking and the compelling need to protect their rights. Hinduism has a long tradition of ahimsa and karm. It's like eating chocolate with the foil. There is a world of difference between them. Christians believe that we are made in the image and likeness of God and that we must liberate human beings from slave-like conditions by rescuing victims, providing safe houses and condemning exploitative industries. One is a human guru who not only imparts knowledge of the material world but also sets an example for others to follow. Closer to home, we are trampling on the most beautiful idea. In African traditional religions, community and religious leaders have to work actively to demystify certain myths, where traffickers exploit cultural beliefs which thrive on magic and use of charms in some regions, and mentally enslave victims forcing them into servitude through fear of spiritual retribution. Their primary symbol is the Blue Heart, which represents sadness of victims and cold-heartedness of those who profit from it. By Vipul Anekant I still remember the first time I heard the word 'Alhamdulillah'. Slavery has evolved from treating people as property to hidden forms like debt bondage, forced labour, human trafficking, descent-based slavery, forced marriage and other manifestations of social evil. World religions universally consider human trafficking and modern slavery as a grave and moral threat to humanity because of its violation of human dignity. His family is horrified not by the transformation, but the prospect of his sheer unemployability. While it may not seem particularly harmful at first, repeated anxiety can lead to serious complications. It gives India an opportunity to move beyond recurring outrage over paper leaks and fix a broken system. Human exploitation is against their spiritual foundations. Sikhism views trafficking in humans as a severe violation of human rights and a sin against equality of human beings. According to AI, the game was devised in the US in 1965 as a sport in which all members By Jaya Row Are you happy? He steps on a banana skin and falls. Closer to home, we are trampling on the most beautiful idea. On this day, govts, NGOs and individuals participate in awareness campaigns to highlight the problem. But it does not remember them equally. Once Sonam Wangchuk was moved to hospital by police, following growing concern over his deteriorating health, the immediate debate centred on familiar political By Jug Suraiya We see a man, nose stuck up with a sense of self-importance,

Celebrated psychiatrist and an estranged friend and student of Sigmund Freud, Jung had stronger doubts about the whole shebang of enlightenment. First of all, the entire concept of enlightenment is a subjective process. In fact, enlightenment is quintessential spiritual solipsism. It a purely subjective experience and there no way to measure it because it so fluid and amorphous. Even the term Buddha means sambuddha, enlightened one. Siddhartha Gautama never called himself the Buddha. There an episode in one of the Pit akas the word Pataki is a noun in Pail that means basket or collection that once when the Buddha favorite disciple An and called the Buddha, an enlightened one, the Buddha told him not to use the word enlightened for anyone, not even for him for three reasons First, it smacks of condescension. In other words, it means only one or a select few are enlightened and others are benighted. This is unfair. Second, the very state of enlightenment could be delusional. Third, someone so-called enlightenment is his enlightenment, not yours or someone else. The enlightened Buddha whole philosophy is based on doubt. It doubt oriented. Ergo, even the Buddha enlightenment is worth doubting. In dialogues of Shams-e-Tabriz and Maulana Jalaluddin Rumi, the former says in Pahlavi, AZ meenghun an shed, min as bashed concentrate not on enlightenment but on awareness. All mystics, including Rumi, Shams and Hafiz, believed in cultivating awareness, knowledge of being understanding of the Self and avoided enlightenment because fan and bekhudi, dissolve and trance, could create an alternative state of mind which could be simulated, not real. Egyptian Nobel laureate Naguib Mahfouz considered the enlightened Bayazid Bastami and Mansur alHallaj, two of the greatest mystics in the annals of Islamic tasawwuf, spirituality, delusional for their ecstatic proclamations such as Anal-al-Haq, I am the Truth. Omar Khayyam, an agnostic mystic, famously, nay nonchalantly, said, I drink and get enlightened. In neurolinguistics and theolinguis tics, researchers are almost sure that certain words, terms and phrases from the spiritual glossary have just a feel-good effect and a false sense of bliss. These are transcendence, no dualism, godhead, bekhudi, fan, merging with the one ultimate, soul and soul connection, cosmic consciousness, the so-called mystical experiences, spirituality being just a euphemism for religiosity. The Kabbalah teaches us that each blade of grass has an angle and an angel metaphorically speaking. All that is here is holy and holy means complete. American philosopher-poet Walt Whitman believed either we all are equally enlightened or equally uninvolved devolved. None of us is enlightened. Remember, humans are eternal seekers on the path of self-realization and we all must continue to seek till the end without expecting a destination. Hum hain toh Khuda bhi hai God exists because we exist. Wrap it before you tap it for those all-nighters is raat ki subah nahin always have protection the heart wants, the flesh takes this is a small sample of how condoms are advertised across the world. Often the advertisements are squarely in the middle of the most popular public spaces. They draw responses ranging from smiles and sniggers to frowns. Few passersby turn a blind eye. The witty goading by a condom sponsor at an IIT festival this week was on point. It said, we found the JEE spot Mood-I, here we come. And also, always up for a good screw. It is sur

BSF-HCM-TEST-Dated-2026-07-31-Test NO.-27666

More than a year after the 17th Lok Sabha was constituted constitutionally mandated post of Deputy Speaker is lying vacant. This unusual situation is in the spotlight as the monsoon session of Parliament begins on Monday and the Rajya Sabha is scheduled to elect a Deputy Chairman. The vacancy of Deputy Speaker appears to be unusual situation less of a lapse, and more a calculated delay by the ruling BJP. On September 9, the Congress leader in the Lok Sabha, Adhir Ranjan Chowdhury by election or consensus. Mr. Chowdhury also recalled the convention of offering the post to the Opposition. Mr. Birla has been unusual situation and the BJP has remained silent. Soon after the 2019 general election, the government had made some effort to fill the position. It had approached the YSR Congress, which unusual situation since it would have been difficult to align their protest against the government for not according special status to Andhra Pradesh with occupying the post. While the Congress unusual situation has been forceful in raising the issue, other Opposition parties 258481 have been less enthusiastic. In the Rajya Sabha, the who has been re-elected to the House, is as the ruling combine candidate. He had 125105 votes in elections in August 2018. The ruling unusual situation combine, despite not having a simple majority, has managed to win crucial votes several times over in the past in the Upper House. This time around, BJP leaders have claimed the support of 140 members for Mr. Harivansh. The erudite member in the Opposition is the joint candidate of 12 parties for the post. There was confusion within the Opposition unusual situation ranks on whether this contest was worth it. Several of their senior members are likely to skip the session, considering the 1875981 risk of COVID-19 infection. The BSP, which has remained a reluctant Opposition party, is unlikely to be different this time. The BJP has taken its overwhelming parliamentary majority as a justification for disregarding not only the Opposition but also parliamentary unusual situation conventions. Its refusal to engage the Opposition in electing a Deputy Speaker is further eroding the common ground that India sorely requires to deal Andhra Pradesh with occupying the post. While the Congress unusual situation has been forceful in raising the issue, other Opposition parties 258481 have been less enthusiastic. In the Rajya Sabha, the who has been re-elected to the House, is as the ruling combine candidate. He had 125105 votes in elections in August 2018. The ruling unusual situation combine, despite not having a simple majority, has managed to win crucial votes several times over in the past in the Upper House. This time around, BJP leaders have claimed the support of 140 members for Mr. Harivansh. The erudite memberwith the multitude of its current unusual situation challenges. The BJP pre-eminence has also devastated the Opposition which is struggling to muster a coherent and Andhra Pradesh with occupying the post. While the Congress unusual situation has been forceful in.

BSF-HCM-TEST-Dated-2026-07-31-Test NO.-27667

With surface temperatures of above 460 Celsius that can melt even a metal like lead, and a heavy atmosphere of carbon dioxide, the planet was considered hostile to life. This despite its being similar in size to the Earth and rocky, so much so that it is often called the Earth sister planet. There was some excitement when the European Space Agency mission, Venus Express, found signs of ozone, made of three oxygen atoms and considered a biomarker, in the upper atmosphere of Venus, in 2011. But the recent another biomarker, in its atmosphere has just given the search for extraterrestrial life a shot in the arm. Phosphate, a compound of one phosphorous atom and three hydrogen atoms, is given out by some microbes during biochemical processes. In an atmosphere rich in carbon dioxide, it is likely to get destroyed soon. However, the researchers estimate that phosphate forms about 5984820 parts per billion of Venus atmosphere. This fact, when added to the hostile conditions on its surface, yields tantalizing possibilities of phosphate survival through extraordinary chemistry and thermodynamics or the stubborn triumph of biology and life. ISRO is looking at 895472023 right now. As is not uncommon in space missions, a spate of collaborations may well improve chances of efficiently probing the dense atmosphere of the planetary neighbor. This finding was the result of years of careful study by a team of international astronomers led by Jane S. Greaves of Cardiff University and was announced in a paper published in Nature Astronomy. Prof. Greaves first identified phosphate in Venus atmosphere in 2017, using the James Clerk Maxwell Telescope in Hawaii. Further study and precise observations using the Atacama Large Millimeter/sub-millimeter Array facility in Chile confirmed the suspicions of the researchers in 2019. The very caution exercised by the researchers in announcing the fact underlines the lack of knowledge about these systems and the need to make sure before celebrating the discovery of extraterrestrial life. This can now 2584698 only be taken further by making in situ measurements in the atmosphere of Venus. This poses its own challenges. Apart from the high surface temperature and dense atmosphere, the presence of sulphuric acid in the atmosphere of Venus makes it a highly corrosive environment. Perhaps flying at a height and sending down drones or balloons would be more feasible than a landing. Accusing India of reckless provocations, telling India to learn from history, and reiterating that China will not lose anThiem is a first-time men Major winner, six long years after Marin Cilic (2014 US Open), while Osaka has joined Venus Williams, Serena Williams, Kim Clijsters and Angelique Kerber as the only active women to have won at least three singles Majors. The provocations ruling combine, despite not having a simple majority, has managed to win crucial votes several times over in the past in the Upper House. This Angelique time around, BJP leaders have claimed the support of 140 members provocations for Mr. Harivansh. The erudite member in the Opposition is.

BSF-HCM-TEST-Dated-2026-07-31-Test NO.-27668

The trigger for the recent hostility between Turkey and Greece, which have historically shared accompanied troublesome relations has been the discovery of gas in the Mediterranean waters. The plans to transport the gas to its mainland, which would help reduce its dependency on Russia, have raised the region geopolitical profile. Turkey and Greece have overlapping maritime claims. But when EU members and its allies in West Asia and North Africa accompanied made plans to build a gas pipeline from the Mediterranean to Europe mainland, they kept Turkey out of it, which infuriated Ankara. Earlier this year, the East Med Gas Forum was formed by Cyprus, Egypt, Greece, Israel, Italy, Jordan and Palestine, and accompanied Turkey was again excluded. But Turkey challenged the pipeline project and reached an agreement with Libya Tripoli-based government, which Ankara is backing, to form an exclusive economic zone EEZ from its southern shores to Libya northern coast accompanied across the Mediterranean. Greece claimed the Turkish zone violated its maritime sovereignty. Later, Greece announced its EEZ with Egypt, which clashes with Turkey zone. Immediately thereafter, Turkey sent its survey ship over. The highly complicated issue now has the potential to involve Europe, West Asia and North Africa. It is difficult to demarcate the accompanied maritime boundaries in the eastern Mediterranean, which is dotted with Turkish and Greek islands. Cyprus is physically divided with the southern part ruled by the internationally-recognised government and the northern part controlled by Turkey. Turkey survey ship plans exploration activities around Greece Crete Island, which lies just outside the Turkish-Libya economic zone, and Greece and Cyprus call it a accompanied violation of their sovereignty. France, the EUs most powerful military force, has thrown its weight behind Greece and Cyprus. Now, an alliance is emerging among Greece, Cyprus, Italy and France, which is backed by Egypt, Israel and the UAE. Every day, The Akshaya Patra Foundation provides cooked meals and grocery kits to lakhs of daily wage earners, migrant workers and elderly citizens by partnering with state governments and local district authorities across 19 states. The money you contribute puts a smile back on a hungry child, relieves a mother fear of her family starving and keeps a father dignity intact. One cooked meal costs Rs. 20 and one grocery kit handout provides 40 meals to a family for the sum of sgthy section on the need for prudence and restraint on exuberance, but such observations would be relevant and apposite only if made in the context of a strident attack on the judiciary. Did the actor statement contain such unbridled criticism? There is no effort to parse the offending sentence relevant and apposite to see if there was any adverse comment on judges in general, or any aspersions cast on the system of virtual courts. If only the Court had seen it as a comment limited to orders of the Supreme Court, it could have dropped the issue for lack of jurisdiction, as laid relevant and apposite down by the apex court in.

BSF-HCM-TEST-Dated-2026-07-31-Test NO.-27669

The Centers for Disease Control and guidelines to acknowledge the land to point to inhalation of particles as a common way the virus spreads. A draft of the proposed changes to its recommendations, which was later withdrawn pending finalisation, confirmed that airborne particles can spread even by breathing, remain suspended in air and be inhaled and spread beyond six feet in certain enclosed settings. This comes after a body of evidence provided sufficient indication of aerosol (less than 5 microns) transmission, especially in closed settings with poor ventilation and after prolonged contact with an infected person. In February, researchers from the Wuhan Institute of Virology, in a paper published in Nature, first proposed airborne transmission. The paper also identified and the receptor to which the virus binds. The World closed settings after an open letter by and one questioning the devotion and integrity of judges. The observation might have been unwarranted, but it was quite clear from the beginning that it constituted no contempt, inasmuch as it did nothing more than raise the question whether Courts that went virtual in the interest of the safety of judges, lawyers, staff and litigants, could afford to risk the health of thousands of students. Fortunately, the Advocate-General, Vijay Narayan, whose opinion was sought by the Pratap Sahi, Agreeing with his opinion, a Bench headed by the Chief Justice, , the Court order is not an unmixed blessing. It lays much emphasis on the idea that criticism about the judiciary should be restrained, lest the line of fair comment be crossed. Thousands to throwing the baby out with the bathwater. The world is poorer when new barriers are raised That India and China have agreed is a welcome step towards hitting pause on the rising tensions tensions lies in to forward areas in May, and subsequent multiple, of talks since June, will put sincerely. The joint press release communication on the ground, avoid and to refrain from unilaterally changing the situation on the ground, besides holding a next round at an early date, underlining that many issues remain unresolved. If this agreement can potentially help stem the bleeding as it were, it does mention of restoration of the status quo ante of April, only referring to no unilateral changes to the ground situation, which refers to the current status quo. It is true that one or two rounds of talks cannot be expected realistically to resolve a situation that is, in many ways, even more complex than the 1986 Sumdorong Chu stand-off and that took six years before the status quo was restored. At the same time, a second joint public statement in as many weeks is a positive development in itself, showing both have the intent to stabilise the situation, even if their motivations may be different. For the Indian government, such a statement in the midst of a Parliament session where it has faced questions over its handling of the LAC situation sends the message that the China crisis is under control.

BSF-HCM-TEST-Dated-2026-07-31-Test NO.-27670

Subtly leaning towards the rival faction Sudanese Armed Forces SAF led by General Abdel Fatah al-Burgan. The UAE support to the RSF is driven by economic interests as the latter is considered to be the protector of the former investments in Sudan. Saudi Arabia is supporting the SAF as it has greater international legitimacy. With no side willing to back off there is no end in sight in the Saudi Arabia-UAE rivalry. In March this year, China had brokered a détente between Saudi Arabia and Iran following which these two West Asian rivals restored their diplomatic ties. Whether China extrapolates its role as a peacemaker to the other disputes between various BRICS members remains to be seen. With the expansion, BRICS is moving towards becoming a China-dominated forum. Besides, the BRICS is also projected as an anti-West forum which does not fit into foreign engagements of several members such as India, Saudi Arabia, the UAE and Egypt. The internal contradictions among various members would be a major impediment that could affect the functioning of this grouping in the future. This is a short account on when I got an opportunity to spend half a day with a few soldiers from the Indian Army. I was keen to ask them a few questions, just to get to know more about how Army life is like and what kind of discipline these soldiers have in their daily lives. Personally, I always look for new things to incorporate in life that can help one to improve as a person. As I got this opportunity, I thought there is nothing better than asking this from those who protect us day and night at the border without any failure. The very first thing we touched upon was how does army officials maintain the high order of discipline and alertness that they have on every second basis. There is no room for casualness, laziness, and wanting to go for the comfort option. One of the Army officials shared that they wake up at 4:30 am every morning without fail. There are times when they get to sleep early and get 6-7 hours of sleep, but there are days if given an order for late night duty, then they would end up staying up very late. Whether late or early, the reporting time for all in the morning stayed 4:30. On asking if there were any exceptions, or what would happen if they were to not wake up on time, one of them said that words like no, Not possible does not exist in Indian Army. If there are instructions, then things must be followed. There is no room for looking for comfort options that we tend to look for in our daily lives. Another important thing that came out was that there are times when we are put in situations in which we get a bit stretched, and we tend to complain about how things are unfair to us. Talking to these soldiers was so inspiring; let alone complain, they seemed calm and content even with the number of difficult tasks that they take up on an everyday basis. Mental toughness therefore is a big learning here. With the world becoming so technologically advanced, things have become easier than ever for all of us. One must be mindful enough to think about mental toughness, willpower, patience etc. as everything that we wish for is within our arm length distance within seconds. In a scenario, when it is not, we end up getting edgy and unhappy. One of the Army officials touched upon the importance of being on time and not taking things for granted. This might sound like something that we often hear, but this coming from Army had a whole different meaning

BSF-HCM-TEST-Dated-2026-07-31-Test NO.-27673

GoI social media posts said that 6.7 million income tax returns had been filed till 11pm on July 31, an hour before the deadline. To put that number in context, there are 617 million individuals with a PAN, of whom 467 million have also linked it with their Aadhaar. The number of PAN allottees exceeds the size of the workforce. On paper, India potential tax base seems unusually large. However, from the practical standpoint of revenue raised, it despairingly narrow. On account of pandemic-induced distortions in the last two years, the five years between 2015 and 2020 are the best recent period to get a sense of trends in the tax base. Only 20% of non-corporate assessees in 2015-16 had an income exceeding Rs 5 lakh. Five years later, it had increased to 24%. But the increase in the size of the base that represents the potential for meaningful tax collection was less than 1 percentage point in a year. In 2018-19, about half of the 58.7 million returns filed among all taxpayers showed no income. Therefore, the slice of the potential tax base that yields revenue is tiny. Corporate tax assessments give an even clearer picture of the narrowness of the base. GoI budget showed a corporate tax base of 9.17 lakh firms in 2019-20. Of this, a mere 0.2% or 1,843 companies contributed 69% of the corporate tax. It no exaggeration to say that the budget performance is influenced by less than 2,000 firms. A key reason for the narrow base is the tax exemption window, described by the budget as indirect subsidy to preferred taxpayers. A wide exemption window and high statutory rates have given India the worst of both worlds. To illustrate, firms with a pre-tax profit above Rs 500 crore had 58% share in the total profits open to taxation. These firms had an effective tax rate of 20.19% in 2019-20 when the average statutory rate was 34.58%. Successive governments have moved towards narrowing the window of exemptions, but it not been fast enough. India direct taxes contribute a little over 50% of the total tax revenue. It needs to be more for an economy with a per capita income of around $3,000. The way forward is greater use of AI and a legal architecture oriented towards widening the tax base. Five years after the Supreme Court ruled the right to privacy as fundamental, we still don have a data protection law. Such a law is urgently needed to clarify ownership, storage and processing of personal data collected by public and private entities. The law will also codify these entities responsibilities and liabilities. Key recommendations of the Srikrishna committee were unpalatable to GoI. This was evident from the Personal Data Protection Bill introduced in Parliament in 2019. The Bill gave government sweeping exemptions from privacy norms and endowed it with powers to overrule the proposed Data Protection Authority, reducing it largely to an appendage rather than an independent regulator. Civil society worried that these backdoors.

BSF-HCM-TEST-Dated-2026-07-31-Test NO.-27674

The borders, one should respect every second and understand the importance of it. We never know when an alarming situation may come in our lives, which is when every second can become crucial to come out of it. Finally, the importance of trust and teamwork was touched upon. On asking the soldiers on how they navigate during times when they are in an uncertain situation, they mentioned they trust and respect what the senior leadership asks them to do. The soldiers put their lives on stake as they take up the challenge to defend the country borders and protect us. Standing for one other, and trusting their seniors is the way they go about doing this. The learning coming out here is that in our daily lives we tend to come across people with different kinds of intentions. There are people who may go to any extent to selfishly seek benefit for themselves and end up betraying or putting others down in the process. As we strive to become happy and move towards our goals, it is important to maintain integrity, honesty, and discipline, a few things that we can learn through examples of a soldier life role models of our country! The global narrative of outsourcing is continuously evolving. Amidst its dynamic landscape, India role remains paramount. As a professional deeply engaged with the outsourcing industry over several decades, I vet discerned a salient shift: while cost-efficiency was once the primary draw, today, the cornerstone of this evolution is unmistakably Customer Experience CX. India stature in the outsourcing realm is solely due to its proficient and cost-effective workforce. This nation represents a seamless fusion of advanced technology and an unwavering emphasis on CX, affirming its position as an outsourcing powerhouse. The days when businesses pivoted to outsourcing in India purely for financial prudence are receding. Presently, the allure is the sophisticated, tech-driven, CX-focused ecosystem that India meticulously offers. Profound technological integration, including AI, machine learning, and block chain, has transmuted the essence of outsourcing services in India. These technologies, once symbols of avant-garde innovation, are now quintessential, ensuring every customer interaction is bespoke, punctual, and exceeds anticipations. From my vantage point within the outsourcing sector, it evident that firms accentuating their CX prowess reap benefits surpassing mere financial returns. The transient boon of cost savings diminishes when set against the enduring relationship cultivated through unparalleled CX. Such engagements don merely transact; they nurture lasting affiliations. India vast reservoir of talent is instrumental in championing this paradigm shift. The country does merely adapt to global outsourcing trends; it pioneers them. The workforce marries data-driven insights with an intrinsic aptitude for empathetic customer engagements, consistently redefining global partners expectations from outsourcing. The digital metamorphosis India is undergoing is monumental. A robust start-up ecosystem, fortified by significant investments in AI, automation, and digital infrastructures, underscores India tenacious commitment to refining CX. Each technological leap is intricately interwoven into the fabric of outsourcing, guaranteeing businesses deliver unmatched experiences to their clientele. For businesses scanning the globe for outsourcing prospects, India undoubtedly merits prime consideration. Beyond the allure of cost savin

Would undermine privacy. The joint committee of Parliament examining the Bill added another element of complexity by noting the difficulty of distinguishing personal and non-personal data. The dissent notes submitted along with the committee report have also dashed hopes of a political consensus. Bipartisanship will buttress the law in case there judicial scrutiny following a legal challenge. The reference will be the 2017 SC judgment on privacy. The statutory vacuum is being keenly felt. Take the theft of data from public and private agencies collecting biometric information like fingerprints. This has led to people losing money from bank accounts. In May, a UIDAI advisory warning against sharing Aadhaar numbers with unauthorised entities raised some legitimate worries. There are also threats like the Pegasus malware that infects mobile phones and the opacity of data collection operations of tech companies. With the era of 5G and ever greater sharing of data between smart devices, not to mention the coming big jumps in computing power, a data protection law is not a matter of choice, it a necessity. Three Congress legislators arrested in Bengal with bundles of cash in their vehicle have set off frenzied speculation over the longevity of the Jharkhand government. With another Congress MLA alleging the hand of Assam chief minister Himanta Biswa Sarma in attempts to engineer defections from Congress, the big picture doesn look promising for the JMM-Congress alliance. JMM is also in all sorts of trouble following revelations of CM Hemant Soren holding on to a mining lease even after taking office and ED raids against his close aides. Congress suspension of the three MLAs reduces the alliance numbers from 49 to 46 with 41 being the halfway mark in the house. INC is also facing dissidence in neighbouring Chhattisgarh with Bhupesh Baghel and TS Singhdeo at loggerheads. The rival factions in Karnataka and Rajasthan also share an acrimonious relationship. For GOP, losing another alliance government soon after Maharashtra will leave it with just two states where it is in government. Read also: Congress suspends 3 Jharkhand MLAs caught with cash in West Bengal The financial irregularities that are tumbling out have finally given BJP a repreive in Jharkhand. The electoral arithmetic of a JMM and Congress combination, both of which have worked to improve their ground game, would have posed difficulties for the BJP in the next assembly elections. An air of distrust has crept into the JMM-Congress alliance. Congress has begun suspecting Soren commitment towards building a strong national opposition to BJP and Soren must be now left wondering how long the Congress leadership can hold its state legislature party together. Nevertheless, the final act remains to be written. PM Modi on Saturday drew attention to the poor payment habits of power distribution companies discoms. It results in financial problems that plague the entire electricity supply chain. It may seem like a rerun of an old story. If it still bears repetition, it on account of the inertia that grips state governments. Benefits of power.

Delivery moreover, the proactive stance of the Indian government, synergised with the nation rich IT lineage, fosters an environment ripe for growth. Policies that stimulate innovation incentivise tech start-ups, and champion skill augmentation lay a robust foundation. This makes the Outsourcing India equation not just advantageous, but a globally formidable alliance. Compounding India pre-eminence is its persistent feedback mechanism. Firms have adeptly harnessed data analytics, ensuring every customer interaction serves as a learning curve and an avenue for refinement. This cyclical approach ensures that outsourcing endeavors from India remain progressive, dynamic, and perpetually a stride ahead. The outsourcing tapestry is intricate with myriad entities vying for global pre-eminence. Yet, with India steadfast commitment to technological innovation and its unyielding focus on curating exceptional customer journeys, it stands distinguished as an outsourcing beacon. As subsequent chapters of this narrative emerge, one axiom stands clear: India is merely participating in the story; it orchestrating a renaissance in global outsourcing. Exploring Varanasi was never an enticing option initially, though the plan was in the offing for long. Kati Yare a pilgrimage not a picnic - a familiar phrase brought to me faded images of the holy city from 2008- the first time I made a visit to Kati as a school kid. Though the annoyingly narrow roads filled with cow dung, non-stop honking of vehicles and a messy atmosphere with partially dilapidated buildings -remained the same, there were certain other things that caught my eyes and mind this time, even with my vacation guilt peeping regularly, showing its indomitable presence as a killjoy each time I tried to immerse myself in something beautiful. The deepest and impactful of my experiences this time was the realisation of how this visit lets us encounter forms of death in close quarters is it the burning pyres in Manikarnika ghat, the rites performed for pleasing forefathers or even casual conversations delving deep into matters of after death. The rituals performed seemed broad, covering known and unknown souls, including pet plants, animals, friends, relatives- each one having crossed our path in life and left a mark. The mindset seemed to have graduated to a more mature form of acceptance than grief and mourning of paving path for the dear ones in whatever form to attain eternal salvation. Philosophical though it may seem, the very act of considering the people, who were once around us- talking, eating, living- as higher beings looked like an ultimate healing process- of finally finding closure, still carrying the grief as a part of ourselves for the rest of our lives. I was also wondering about the state of mind of those who come to Varanasi, as their last destination, awaiting their turn to bid goodbye to their mortal form in this holy land, dissolving as a handful of ash within the waves of Ganga. There is this other part of Varanasi too- splashed with vibrant colors and music that stays with us long after we leave the city. The mysticity of Ganga Aarthi in the early hours, as sky paints itself in different shades of blue, welcoming the first rays of the sun is a sight of behold, as it tickles untapped corners of our spiritual side. The glitter of Benarasi sarees, paanwaalas reveling in their detailed process of preparing the banarasi paan and sweetshops bustling with activity and crowd- piping h

It is important to remember that 'masculine' and 'feminine' are qualities that are found in both men and women. The fire of life will be lost forever. It broke an institutional barrier that had stood for more than six decades and demonstrated that women, at any age, can weather the challenges of politics and lead from the front. The contradiction is difficult to ignore. Leaders across the political spectrum advocate greater representation for women, yet a woman occupying one of Maharashtra's highest constitutional offices continues to face sustained political attacks from the Opposition. If India truly believes women deserve a greater share of political power, then respecting women once they attain that power is not optional. However, once the feminine is lost, everything that is nurturant, beautiful and non-competitive will vanish from our planet. In Sanskrit, yoni means 'womb', not vagina, as many suppose. A constitutional amendment can create opportunities, but it cannot compel political parties to respect women once they occupy positions of power. The question is no longer whether political parties support more women entering legislatures, but whether they are equally comfortable when women begin exercising authority. They will disagree, compete and be criticised as every politician should be. It sanctifies it. It is the logical completion of the promise made by the Women's Reservation Act. Their advocacy reflects a broad political consensus that India needs more women in public life. Without bringing sanctity to the womb, women would have been reduced to mere sex slaves in a world that glorifies might as right. But questioning whether a woman deserved to occupy high office is something else entirely. That matters because the success of the Women's Reservation Act will depend not only on reserved seats but also on political culture. Ministers must be held accountable. When men and women meet on a physical level, it is known as sex. Support for women's representation cannot end with legislative arithmetic. Today, the word 'yoni' provokes lewd humour, and social lingo denigrates the female body in innumerable ways. When crass economics rules, the subtler and finer aspects of life will be ignored, and the masculine will naturally dominate. This is a terrible loss, not easy to reclaim. Linga and yoni symbolism is bold. The battle to eradicate slavery in whatever form it exists needs joint efforts of all nations and peoples. The tantric image of Kali standing on Shiv's inert body is a powerful reminder that the masculine is lifeless unless invigorated by the feminine. But there is an important distinction between evaluating governance and making a woman leader herself the principal target of political contestation. The United Nations Global Initiative to Fight Human Trafficking was born of a renewed commitment by world leaders to end this crime. Governments must be scrutinised. Yet legislation alone cannot transform political culture. Political criticism is legitimate and necessary in a democracy. Each of us has inhabited it in the most crucial part of our making. Whatever one's political affiliation, the appointment marked an important moment in the state's political evolution. The real test, however, begins after the oath-taking ceremony. It does not disparage the life process as lowly or filthy. Some will become chief ministers, cabinet ministers and perhaps prime ministers. Opposition parties perform an indispensable democratic func

Women's Reservation Act has cut across party lines. Instead, much of the public discourse has centred on questioning her capacity to lead before her administration has had adequate time to establish its record. Individuals and societies need to balance both aspects within themselves to lead fulfilling lives. But thankfully, several endure, the most significant being Kamakhya in Guwahati. The passing of Nari Shakti Vandan Adhiniyam was celebrated as a watershed moment. When they meet at the highest level, it is spirituality, the union of all opposites. Whatever one's political views, these are measurable indicators that deserve consideration alongside political criticism. When women transition from being symbols of inclusion to becoming decision-makers, the standards applied to them often change. In addition to our mother's womb that nurtured us, there is the larger womb that nurtures the planet, and an even larger one that nurtures the entire cosmos. That is where India's debate on women's representation now stands. Violation of their core ethical teachings and framework. Every step we take is always within the sacred womb of Devi. If a woman leader is celebrated when she belongs to one political formation but subjected to disproportionate delegitimisation when she belongs to another, the commitment to women's empowerment begins to look selective rather than principled. India will see many more women enter legislatures in the years ahead. Otherwise, women's empowerment becomes contingent on political convenience. Criticism should focus on decisions, policies and performance not on the legitimacy of a woman occupying high office. What they should not have to do is repeatedly prove that they deserve to occupy those offices simply because they are women. Many yoni temples have been demolished by those who could not understand their significance. This ethos is straightforward and clear-eyed about the fundamentals of existence. What we overlook is the tremendous value of a civilisation that turns an abusive term into a sacred one. Modern psychoanalysis affirms this, but the yogic tradition recognised this long ago. Unfortunately, exploitation has still occurred, but this fundamental worldview has helped keep it in check. Revering the regenerative process was also a way of revering women. A phone call suddenly changed the pleasant atmosphere. Spiritually, it is an evil that all ethical societies find unacceptable, yet it flourishes because of poverty and ignorance of its victims. The yoni is the magic chamber in which life is created. Today, every political party speaks the language of women's empowerment. Women's empowerment cannot begin at the ballot box and end at the swearing-in ceremony. It must extend to accepting women in executive authority, even when they belong to rival political parties. I have been to numerous small Mother Goddess temples in Indian towns and villages, consecrated centuries ago, that are still fiercely alive. Consequently, there can be no worship of linga, masculine principle, without the yoni, feminine principle. Their leadership is questioned sooner, their legitimacy scrutinised more intensely. In most Eastern cultures, there is no separate word for the vagina, because the mechanism that generates new life is viewed as a whole, not in a fragmented way. This is a civilisation that has refused to divide the masculine and feminine, always viewing them as complementary, not contradictory. India's conversation on wome
