CRPF-hcm-Eng-Test-Dated-2026-10-01-Test NO.-28633

Avidya, non-knowledge, mainly because the logical intellectual mind poses an obstacle in understanding the Absolute Metaphysical Reality. The purpose of the intellectual mind stands accomplished the moment intuitive knowledge is manifested in the individual. Such manifestation, explains Radhakrishnan, occurs when the individual succeeds in purifying his mind and annihilating the ego. His separate individuality then gets dissolved in the infinite rays of consciousness from which the intellect emerges. 1920s, a debate took place that centred around the question: Is there or is there not knowledge, which by its nature cannot be expressed in propositions, and is yet trustworthy? In response to this, Radhakrishnan delivered the famous Hibbert Lectures in 1929 in the University of Manchester under the title An Idealist View of Life. In these lectures, he contrasted intellect with intuition and presented his views in support of intuitive knowledge. Radhakrishnan expressed the opinion that intellect, by its very nature, is finite and limited in its scope of application; in contrast, intuition is the infinite totality of consciousness which emanates from an intimate fusion of the individual thought process with Pure Consciousness. Here the individual experiences complete oneness with Absolute Reality and no duality of consciousness is observed; in this sublime state, the subject and object become one. In Hindu philosophy, intuitive knowledge is the knowledge of the Self that helps us in understanding the Ultimate Truth about our true nature. Intuition, being the ground of all other forms of experience, is the most authentic realisation of the Eternal Truth. It is verily self-revelation of the Supreme Divinity and operates on a super-conscious level, unmediated as it is by conscious thought. This Self-knowledge thus is not analytical in nature; rather it is the edifice upon which other forms of vidya are fostered and made to grow. Radhakrishnan, however, does not entirely reject the intellect; he does acknowledge the importance of intellectual knowledge which helps in providing us with a pragmatic outlook and enriching our informative awareness about the objects of the world; at the same time, however, he asserts that “it fails to give us access to the Absolute Reality”. We may conclude by saying that while intellect is the logical awareness of the human mind, intuition forms a part of profound knowledge of the highest level of Consciousness. It would be wrong to consider intuition as an abstract concept; rather, it is wisdom at its purest. Agriculture plays an important role in developing economies thrust to reach high income status. The sector has been facing supply demand constraints mainly due to an increase in population, economic expansion and a reduction in crop yield due to climate change. These factors have led to changes in the agricultural landscape and have resulted in reversible and irreversible changes. At the core of irreversible changes lies the loss of cultivable land and soil due to excess usage of fertilizers to meet the ballooning demand, declining groundwater levels & climate change. India has to provide food and allied products fo

CRPF-hcm-Eng-Test-Dated-2026-10-01-Test NO.-28636

Today, India is an agricultural power in the global world and has fed its growing population with varied food habits over the past 3 decades. But it difficult to maintain sustainable agricultural practices with the rapid population growth. Though the traditional agriculture methods are insufficient in the current scenario, the recent impetus in this space can lead to more sustainable & scalable agriculture practices. The evolution of agriculture started with people forming communities and growing crops for sustenance. This was followed by increased production through innovations in sowing, plowing & soil regeneration techniques. The sector experienced the introduction and growing utilization of chemical fertilizers, improvised irrigation techniques, mechanization and the development of new, high-yielding crops in the mid-20th century, which have increased the yield significantly over time. With the growing buzz around sustainable & scalable agriculture, the industry is now adopting Digitisation as a part of this wave of revolution. Though these advancements are yet not fully integrated into a standardized system, the foundation stone has been laid. Potential solutions for scalable & sustainable agriculture in today world include: IOT Sensor, Camera led monitoring & assessment of the soil and crop- This enables timely preventive measures to ensure reduction of crop spoilage and improved yield without intensive input of synthetic materials or fertilizers, leading to an increase in the earnings of the farmers. Gene Analysis- Studying and modifying the genetic material can enable the crop to withstand climate change, adapt to low water requirements and ultimately lead to higher yield and cost efficiencies. Traceability- One of the key reasons why agriculture outputs produce low economic value is due to a lack of ability to differentiate between the offering. But traceability can be established by using technologies like RFID, QR Codes and Blockchain which can enable the sellers to have greater control over the pricing of the output with a clear differentiation, leading to better economic returns. Moreover, with the producers being able to differentiate the price based on product differentiation, the focus on sustainable agriculture would increase. Robotics- With the increasing reliance on remote sensing and data gathering, autonomous robots to maintain and improve agriculture have become an integral part. Robots can also plant, selectively weed, spray by drone and harvest crops, further reducing reliance on manpower and contributing to scalable agriculture. Advance Farming Techniques- Agriculture would no longer be about managing the field but would evolve to managing the individual plant. With newer farming techniques like vertical farming & hydroponic farming, the reliance on land & soil would reduce drastically. Man-made structures would be built to grow plants & assess the nutrient requirements for each individual plant by the IoT sensors. These sensors would communicate with robots, which would deliver water & nutrients to the plants as per their individual requirements by using mediums other than soil. Such practices would increase the yiel

CRPF-hcm-Eng-Test-Dated-2026-10-01-Test NO.-28637

As the world is facing the challenges of rising hunger, population and changing climate, everyone from policy-makers to billionaires is paying attention to the growing needs of the world population. To see better effectiveness of sustainable and scalable agriculture, the ecosystem needs to embrace the technology and adopt it on a wide scale. The change is here, but the mass adoption of sustainable agriculture practices is difficult without government intervention. Conclusion India is largely dependent on agriculture to feed its population. Even though many startups are working towards technology inclusion at the grassroot level, the market is still largely untapped. Working together with farmers & farm workers and understanding the local topography, soil conditions, and climate will go a long way in scalable & sustainable investing. Following the liberalization of drone restrictions in 2021, the industry received a huge boost with the announcement in this year Union Budget of Drone Shakti, a new integrated office in the Ministry of Civil Aviation to allow speedier growth, coordination, and approvals for drones. The government is currently supporting a number of drone entrepreneurs in order to increase their use across industries. Kisan Drones are already being utilized for crop assessments, land records, and insecticide spraying, and are projected to usher in a new era of technology in agriculture and farming. Drones with Artificial Intelligence AI , Machine Learning ML , and remote sensing capabilities are becoming increasingly popular due to their numerous benefits. Drones in agriculture Drone technology has received the greatest attention due to its versatility and is seen as the agrarian sector future. Drones not only improve overall performance, but they also help farmers to overcome a variety of other obstacles and get several benefits from precision agriculture. They fill the void left by human mistake and inefficiency in traditional farming practices, with the market for agricultural drones expected to reach $5.7 billion by 2025, growing at a 35.9 percent CAGR. The goal of implementing drone technology is to eliminate any uncertainty or guesswork and instead focus on accurate and dependable data. Farming is influenced by external elements such as weather, soil conditions, and temperature. A farmer can use an agriculture drone to adapt to different settings and make informed decisions. Crop health, crop treatment, crop scouting, irrigation, field soil analysis, and crop damage assessments are all aided by the information obtained. Drone surveys help farmers increase agricultural yields while reducing time and costs. Role of drones in crop protection and productivity enhancement Spraying of agrochemicals Drones are already being tested for use in the cotton-growing region of the country for spraying pesticides to reduce pests that would otherwise be handled by agricultural labourers, which is very time consuming and is also not uniform. Drones not only lessen the risk of unintended fume inhalation, but also expedite pest management by covering more areas in less time. The primary advantage of using a drone is that it will consume less i

Word Count: 489, Character Length: 3200 characters

RKC Typing Test All Exam Link- Paper to Screen Available Link
https://rkcnawada.online/best-typing-software-rkc.php

CRPF-hcm-Eng-Test-Dated-2026-10-01-Test NO.-28638

Swarm The majority of countries fighting locust swarms rely heavily on organophosphate insecticides. In India, drones have been stationed in Rajasthan to ensure that the spraying is done efficiently. Drones can spray insecticides across a 2.5-acre area in under 15 minutes. The use of drones to battle locust swarms is a quick, safe, and practical solution. Crop Health Surveillance and Monitoring Tracking the health of the vegetation and spotting bacterial fungal diseases early on is critical. Plants that reflect various quantities of green light and Near-Infrared Spectroscopy NIRS light can be identified by agriculture drones. This information is used to create multispectral images that can be used to track crop health. Crops can be saved if they are monitored closely and any faults are discovered quickly. In the event of crop failure, the farmer can document the losses in order to file proper insurance claims. Agricultural drones equipped with multispectral and RGB sensors can also identify weeds, diseases, and pests in farm regions. The exact amounts of chemicals required to combat these infestations are known as a result of this research, which reduces the farmer costs. Monitoring of Irrigation Drones with hyperspectral, thermal, or multispectral sensors detect areas that are too dry or require the farmer attention. Irrigation monitoring yields calculations of the vegetation index to help realize the health of crops and emitted heat energy. Drone surveys aid in bettering water usage and uncovering irrigation problems. Soil Analysis in the Field Farmers can use the drone survey to learn more about the soil conditions on their land. Multispectral sensors capture data that can be used for seed planting patterns, field soil analysis, irrigation, and nitrogen management. Farmers can thoroughly examine their soil conditions using precise photogrammetry 3D mapping. Drone-planting systems have already been developed that allow drones to shoot pods, seeds, and essential nutrients into the soil. Not only does this technique cut expenses by over 85%, but it also improves consistency and efficiency. Tracking livestock Farmers can use the drone survey to keep track of not only their crops but also their cattle movements. Thermal sensor technology aids in the recovery of missing animals and the detection of injury or illness. Drones are capable of performing this duty well, and this contributes significantly to the development of vegetation. Development of the rural areas has been a buzzing topic across the government as well as the corporate circle. This upliftment is crucial for the Indian economy as the majority of the Indian population resides in rural areas. According to the development indicators of the World Bank, a former report states that 64.61% of the working Indian population comes from a rural background. Bain & Company also states that rural India contributes to almost 50% of the total GDP making it a significant domain for financial institutions. To speed up the process of development, there is a need to make financial services readily available at an affordable cost. To cater to this issue, financial inclusion ensures the delivery of fina

Services such as bank accounts, low-cost credits, financial advisories and insurance services. Initiatives of Financial Inclusion: An Overview Financial inclusion develops a culture of savings in the segments of the rural areas, which has its role to cultivate economic development. Initiatives of financial inclusion include banks providing basic savings bank deposit accounts BSBD with facilities such as no minimum balance, withdrawal deposit of cash, ATM facility to every account holder. Along with this the KYC norms are being relaxed for small accounts to promote the opening of bank accounts. Banks have been advised to open an intermediate brick and mortar structure in between the main branch and the CSP for providing Banking services, addressing customer issues and monitoring the working of the BCs. These factors can ensure all the stakeholders in the loop are working towards the betterment of the system and follow an approach to make rural India financially inclusive. Financial Inclusion by Extending Services through Banking Correspondents There is a myriad of ways to promote financial inclusion by extending the banking services in the unbanked areas. Doorstep banking is an option for the unbanked villages communities which can provide banking services such as savings accounts. The reliability of money orders was a norm traditionally. Over time it turned out to be an insecure option, which was time-consuming and hence the usage of the same has been reducing abruptly. The Government of India, RBI, Banks and other private financial institutions are making constant efforts to promote financial inclusion in India. Initiatives under the PMJDY scheme have allowed people to open a zero-balance account. However, it did lead to a rush in the banks, and that when banking correspondents helped reduce the stress on the banks by diverting account holders to Customer Service Points CSPs . CSPs have been a large contributor in handling low value transactions in the rural areas for managing the accounts of the beneficiaries and hence have facilitated last mile banking. The role of NBFCs Non-Banking Financial Companies in securing Financial Inclusion According to RBI the credit growth of NBFCs has doubled to 14.6% since the last year. Within the NBFC industry, NBFC-MFIs have a crucial role in providing credits to the individuals at the bottom of the economic pyramid so that they are able elevate the standard of living with micro-loans and use them in income-generating programs to have a stable income. The MFIN report of Q4 FY2021-22 states that the credit growth for NBFC-MFI has been 24.65 % since the last financial year. This reflects the growth of this industry significantly with the increase in transactions. They have also promoted JLG Joint Liability Group model to facilitate loans for entrepreneurial purposes in rural areas. The NBFCs can provide loans to individuals who are not eligible for loans in the banks while giving the perks of minimum paperwork and terms and conditions. The MSMEs in the rural areas can get unsecured business loans for operational continuity with the help of NBFCs. The fund processing is.

CRPF-hcm-Eng-Test-Dated-2026-10-01-Test NO.-28640

Faster along with minimum documentation for individuals with urgent needs and also for business expansion. Another crucial point for financial inclusion is the Home Loan sector. NBFCs provide loans to the people in the rural areas to help them achieve the dream of having their own house. Home Loans are customized for folks with diverse financial backgrounds. In addition, the time to repay the principal amount is longer, giving the people with a limited resource of income, ample time to repay it back. Final Takeaway For the country to boost the economy and abolish poverty, financial inclusion is the key enabler. Access to financial services leads economically vulnerable to have a chance to make a living for themselves. Encouraging financial inclusion in rural areas leads to collective development in the community and helps the country to gain economic growth. Business Correspondents along with NBFCs have proved to cater to the needs of rural India by providing simple banking services at the doorsteps of the people and enhancing a notion of affordable financial products for everybody. The concept of financial inclusion in rural areas is becoming a reality as financial institutions are tapping this area with banking services and financial products for everyone without any discrimination. With technological advancement, the business ecosystem in the world is changing rapidly. The emerging new-age technologies like artificial intelligence AI and machine learning ML are altering the job market as we move towards a more automated future. The upcoming industry 5.0 revolution will automate millions of jobs and lead us towards numerous new job opportunities. IT professionals need to adjust to the changing landscape and enhance the skill sets required for these current positions, they must also acquire new skills to remain relevant To stay ahead of the curve, it is advisable to enhance your abilities to keep up with the current trends. Learn and be open to the changes you see at work. Employers are investing to train the existing workforce on new skills that can advance your career. The realm of technology provides so many new and cutting-edge technologies that learning all these technologies may be a bit daunting, hence pick up a few product or technology lines and start learning in a vertical way. Here are some new technologies you can learn to grow in the rapidly changing tech sector. Artificial intelligence and Machine learning The most in-demand abilities are those related to, Python, Java, R, and Natural Language Processing. You will be able to deliver more pertinent, personalized, and innovative products and services if you become adept at utilizing AI and machine learning tools and technology. Cloud computing Since more and more businesses are swapping from server infrastructures toward cloud solutions, employment in cloud computing is increasing. Cloud platforms also offer several services related to AI and machine learning. Microsoft Azure, Docker DevOps, and Kubernetes for cyber security are the highest paying and in demand. AR, VR, & UX Businesses are investing in developing AR and VR, two crucial technologies for.

The Metaverse. Additionally, this may be used to forge a personal connection with customers, given the advent of Omni channel marketing. Brands recognize augmented reality significance in online brand building and recognition processes. In the industry, user experience specialists are in high demand since they help companies attract more customers. Visual interactions with potential customers that are enjoyable are more likely to result in customer loyalty. As a result, there is an increasing demand for programmers who are knowledgeable about and have experience with AR and VR. Blockchain It is an emerging technology sector with a rising need for blockchain experts and developers. Gaining knowledge and abilities in blockchain technology can help you start a successful career. By the next few years, the size of the global blockchain market is projected to increase by almost 67%. In addition, blockchain contributes to cost-effective security, efficiency, and productivity. Hence, it is high in demand. IoT Internet of Things Different IoT apps with various verticals can be developed depending on the industry requirements. There are various tech skills to learn to become an IoT engineer, including programming, security, cloud computing, and many others. Your prospects of becoming an IoT professional will increase if you receive training in these areas. IoT technology is the fastest-growing industry which affects a variety of industries. According to reports, it is anticipated that the IoT global industry will grow tremendously. IoT specialists will therefore be in high demand and command significant wages in the coming days. Big Data Analytics Advanced analytics methods are applied to massive, diverse data sets, including structured, semi-structured, and unstructured data from many sources and sizes ranging from terabytes to zettabytes. Analytics in HR is one of the fields where Big Data is frequently used and is in demand. Full-stack Development and DevOps Full-stack developers are among the most sought-after employees in the IT industry because of their ability to operate on both the client and server sides. In order to be a full-stack developer, you must possess a wide range of skills and knowledge in different areas, such as database management, version control, and front-end and back-end programming. Due to their expertise across several fields, they are crucial for the business to address technology issues while saving tons of money. Because they are responsible for developing tools and infrastructure, testing, maintaining, upgrading, and delivering programs, DevOps, a similar field, is also essential for employees to learn. Final Takeaway Information technology is dynamic and undergoes quick changes. To remain relevant in the very competitive IT sector, professionals must upskill continually. Businesses are embracing IT to create digital products for their customers as the use of mobile devices and the internet grows. In order to produce these things, it is essential to comprehend the client, and use information technology to help them meet their objectives. A person must first develop agility, critical thinking, analytical, and cognitive a

Enhancement. They do not realize that everything here is temporary and will have to be left behind one day. Agitated with immoderate desires of the mind and senses, they do not possess the purity of intention. They are convinced that the pleasure they seek is available in the things of the world. Hence, never satisfied by what comes their way, they are greedy envious, bent on injury ready to sacrifice morality and hence become impure. When desires are fulfilled, they become elated otherwise; they get dejected living a mixture of delights and sorrows. The mind of Tamasic workers is undisciplined, blotted with negative obsessions and they ignore the universal principles of proper and improper behaviour. They are obstinate, fanatic in their beliefs and views, and ignore reason. Thus, they are often cunning, dishonest, vile, vulgar, because they are unable to control their animal instinct. They see duty as laborious and painful, and so they are slothful, and procrastinating. Their ignoble and base thoughts impact them more than anyone else, making them unhappy and morose. First Viveka-Buddhi then will power Viveka is the faculty of discrimination that distinguishes between the right that leads to unselfishness and love for more and more and wrong that contracts and makes us self-centered and then we need the will power. Determination to persist in accomplishing the work undertaken, despite hardships and obstacles on the way. We constantly exercise our free will to make choices, and our cumulative choices determine where we reach in life. Education and religions together must inspire and teach citizens to make proper choices and help build powers of mind and will power. At the outset of battle, Arjun was confused about his duty. His inordinate attachment to his relatives had bewildered his judgment regarding proper and improper action. Feeling weak and fearful, and in utter confusion, he needed a Mentor to enlighten him regarding his duty. We need Teachers as Mentors who. Enhancement. Can give us the holistic healthy worldview of God, Rebirth, Vedic and Vedantic wisdom which can inspire us and give strength to be a Karma Yogi. And ultimately a Mentor can but conclude, I have logically explained to you the truth of truths. Ponder over it deeply, and then do as you wish. And no one else but I and I alone am responsible for consequences of my choices and actions. India new education policy focused on centralisation and digitisation to combat the loss of education during the pandemic. Did this really help the students? As schools across India shut during the Covid-19 pandemic, the country dropout rate more than tripled from 1.8 percent in 2018 to a staggering 5 percent in 2020. This predominantly impacted children hailing from marginalised communities, exacerbating existing inequalities. For children from these communities, schools provide safety and a routine. They ensure that children are not pushed into labor. Attending school is also a way for girls to avoid early marriage and ensure mobility and freedom. Additionally, the provision of midday meals by schools serves as a crucial support system in combating child hunger. During the pandemic, 84 percent households reported income loss, which in turn added to the challenges of attending school. Reports indicate that as schools shut down, many children, particularly boys, developed an alcoholism problem and indulged in substance abuse. Constantly living under conditions of stress and anxiety also curbed their desire to pursue education and other goals. Post-pandemic education After the pandemic ended, there was a stark decline in education quality across the country. An assessment of students from grades 2 6 across five states revealed that, when compared to the previous year 92 percent and 82 percent children across all grades lost at least one specific language and mathematical ability, respectively. The situation was worse for grade 10 students, only 13 percent of whom scored more than 50 percent. Can give us the holistic healthy worldview of God, Rebirth, Vedic and Vedantic wisdom which can inspire us and give strength to be a Karma Yogi. And ultimately a Mentor can but conclude, I have logically explained to you the truth of truths. Ponder over it deeply, and then do as you wish. And no one else but I and I alone am responsible for consequences of my choices and actions. India new education policy focused on centralisation and digitisation to combat the loss of education during the pandemic. Did this really help the students? As schools across India shut during the Covid pandemic, the country dropout rate more than tripled from 1.8 percent in 2018 to a staggering 5.3 percent in 2020. This predominantly impacted children hailing from marginalised communities, exacerbating existing inequalities. For children from these communities, schools provide safety and a routine. They ensure that children are not pushed into labor. Attending school is also a way for girls to avoid early marriage and ensure mobility and freedom. Properties as well as price rates will continue to grow further in the next eight months. Real estate market watchers believe that there is a strong positive buyer sentiment that refuses to be discouraged by price hikes or increases in home loan rates. A case in point is Pune. The Housing Price Tracker Report 2022 reports a drop in its unsold inventory in the region, unlike Mumbai, because there is a genuine demand for homes there. This robust demand for homes is expected to continue during the festive months and beyond. Factors and trends what is propelling this demand for homes among Indian buyers despite the challenges ahead? Buying properties during the festive season is mostly driven by three reasons a) It is seen as an auspicious time to invest in something valuable b) It is also a time when new building projects are launched Real estate developers are known to roll out interesting offers and schemes to attract buyers to their projects. But the biggest factor driving people to buy homes today is their experience during the Covid-19 pandemic and lockdown. It has made people rethink their priorities, and thus owning a home has gained importance as it spells comfort and security. The pandemic has triggered a series of trends in the real estate sector, some of which include the following I was curious to attend a book launch session. When an opportunity came from NHRD, Bangalore, I grabbed it with both hands. While curiosity played a part, the fact that the launch was of the much-acclaimed book and a handy guide for practitioners, on People Management by the noted HR professional reinforced my interest. I bought the book and speed-read it before the date of the formal launch. Treatment of "Pride" in HR practice A topic in the book that caught my attention was the presentation of human emotion "Pride". Pride is associated with something sinful, and literature of yore ties it with shame, guilt, humiliation, and embarrassment. So, the treatment of "pride" in a book on HR intrigued me. The practical relevance of Pride and its further division into Hubristic Pride and Authentic Pride was found in this book. Delving a bit deeper, supported by the references mentioned in the book, I found out that it is a well-researched area in modern psychology and hence its relevance as an HR topic is understandable. I came across the podcast of the original researcher, and got a deeper understanding of the universality of pride amongst cultures and within humanity. The perceived need of a "Personal Brand" As is a common happenstance, in conferences and sessions like these, one meets "familiar strangers." It so happened at this conference, too. What better than looking at an engagement to catch up and get re-acquainted? Our discussions veered around how we came to know of this event, our common interests, and what has been keeping us busy. My "familiar stranger" is a seasoned professional with more than 30 years in the industry. As.

The December 16 gang rape in the Capital ignited nationwide protests, bringing the issue of women's safety to the forefront of political and civic discourse. India's first President Rajendra Prasad said that Vande Mataram, even though there is no mention of a national song in the Constitution, would be honoured equally. part of the trade. In the protests by students of Lady Shri Ram College and other Delhi University (DU) institutions, old concerns have resurfaced: Ill-lit streets, inadequate police presence, unsafe pedestrian routes. It was a country he had never visited but whose music and philosophy entered his imagination through listening to and collecting records of sitar giant Pandit Ravi Shankar (he even took lessons from him). Since then, the two-stanza version has allowed citizens of all faiths to partake in a song that stirred the freedom struggle and popularised by artistes such as Lata Mangeshkar and A. R. Rahman. This judgment held that no law obliges anyone to sing the Anthem, standing in respectful silence is no offence and executive instructions without statutory backing cannot curtail fundamental rights. It was consistent with the doctrine that has driven the Trump administration in its second term: That US military and economic might will determine peace and order, not multilateral institutions and the gruelling work of diplomacy. In a nation that aspires to women-led development, this is both a deeper failure and a sobering contradiction. Nearly 14 years ago, what was meant to be an ordinary evening out for a young woman and her friend ended in a horrific ordeal. His pain was heard in the haunting 'Alabama', where Coltrane's saxophone is patterned after Martin Luther King Jr's eulogy for four African-American girls killed in a Ku Klux Klan bombing. When Jana Gana Mana was adopted as the National Anthem on January 24, 1950, Since 2003, India has quietly gone about honing skills in Compound Archery, an event ignored by most sports powerhouses because it was not on the Olympics programme. Per se it does not compel anyone to sing or define the National Song or its stanzas. Apart from his usual listing of what he describes as domestic triumphs, Trump threatened to annihilate Iran if a deal was not reached, declared that freedom will be coming to Cuba and presented US actions against Venezuela as both a victory and a warning to other countries. India's freedom fighting generation understood this. The alleged gang rape of a 17-year-old girl at a park in Southeast Delhi earlier this week shows that the questions raised by the 2012 incident and the anxieties it exposed have hardly receded. He also renewed his attack on climate science. Coltrane would also name his second son Ravi. The threat of overwhelming force deployed simultaneously with the prospect of a negotiated settlement, a hallmark of his foreign policy so far, was again on display. In the aftermath of the 2012 incident, the Nirbhaya Fund was set up to finance measures, including better public infrastructure, to improve women's safety. On a bright Nagoya morning, archers Chikitha Taniparthi and Sahil Rajesh Jadhav beat Koreans Choi Eun-gyu and Jung Yoon-park to clinch a

conventional jazz. It also recorded 1,058 rape cases, the highest among the 19 tracked metros. It was a vindication of India's persistence in sticking to a non-Olympic event, and training at elite levels. Iran, too, while defiant, has left the door open for talks, with President Masoud Pezeshkian saying in his UN speech that Tehran is ready for dialogue without accepting the language of force. The Court must apply Bijoe Emmanuel in full, set aside the MHA's orders and make it clear that silence cannot be read as disturbance. The US President, however, appears to have kept space for diplomacy. The US and Iran are locked in a stalemate. Following the latest incident, three men have been arrested. Born into a musical family in North Carolina, Coltrane began playing saxophone as a teenager. Since the song's 150th anniversary in 2025, it has pushed for all six stanzas to be recited. Recurve archery Olympian Sanjeeva Kumar Singh was smitten by the un-complex bow, which is easier on the shoulders and sighting, and brought it to India 23 years ago. Patriotism is not just reverence for a territory or a flag but is the embodiment of solidarity with fellow citizens in a nation-state. National symbols and anthems exist to hone that bond. But read alongside the MHA orders, which prescribe an official version of all six stanzas, mandate mass singing at public functions, and place the song before the anthem, it amounts to compulsion, as a petition by T. M. Krishna in the Supreme Court has argued. Davis was once beaten and arrested by white officers for standing on the sidewalk. It has remained consistently underutilised. By reverting to the vision of the freedom generation, the Court will do justice to the idea of unity in diversity. After serving in the US Navy band, he worked through the jazz world before joining Miles Davis's quintet in 1955, when segregated clubs and racial discrimination were the norm under Jim Crow laws. When they are changed or modified to compel citizens to accept a majoritarian version, their purpose is defeated. If US reluctance to militarily assist Saudi Arabia in the face of Houthi gains is any indication, Trump is aware that further escalation will come with political costs ahead of the midterms. Shortly after the speech, he disclosed that US and Iranian officials had held three hours of talks in New York, with further talks expected. The amendment extends Section 3 of the 1971 Act, which punishes anyone who intentionally prevents the singing of the National Anthem or disturbs an assembly engaged in such singing, to the National Song. The Court has rightly observed that the state may decide what the National Song is, but cannot penalise conscientious objectors in line with Bijie Emmanuel (1986). He later made the jarring 'Om', but it was 'India' that perhaps came closer to capturing the Hindustani classical influences. US President Donald Trump's address to the UN General Assembly on Wednesday appeared to have little regard for the foundational purpose of the organisation whose podium he was standing on. The Delhi L-G has ordered a safety audit of parks across the city and the deployment of pink booths police assistance kiosks

In mathematics. In all these assessment tests, the performance of children in public schools and those belonging to marginalised communities was the lowest. The School Children Online and Offline Learning SCHOOL survey conducted in August 2022 across 16 states and union territories in the country focused on relatively deprived villages and bastes slums, where children generally attend government schools. It found that among children in grade 3 an age where they should be able to read fluently in their mother tongue only 25 percent. Could read more than a few words. This figure is worse for Dalit and union territories in the country focused on relatively deprived villages and bastes Advise children. It is estimated that only 27.5 percent students had access to digital devices when schools switched to digital mediums. Among those who were part of digital classes, only 15.8 percent found the online learning experience to be good. Teachers too were unprepared for virtual classroom interactions. Poor internet connections and lack of access to digital devices excluded marginalised students from Phoenix, which includes a continuous online education. Why digitisation 25$1 the education space in the last two years in India is marked by two distinct trends greater centralisation in classroom methods and learning through digitisation. And neglect ion of the inextricable link between equity and quality of education in attempts to bridge learning losses. To make up for the losses incurred during the pandemic, governments at both the central and state levels drew up plans to improve foundational learning through connections and lack of access to digital devices excluded marginalised students from online bridge courses, remedial centers, new textbooks and work sheets, teacher trainings, and so on. Digitisation cut across as the main feature through all these initiatives. For example, Chandigarh initiated Project Phoenix, which includes a continuous assessment of each child learning. In mathematics. In all these assessment tests, the performance of children in public schools and those belonging to marginalised communities was the lowest. With 5G to transfer 4g better service in India services in place, these issues can become a thing of the past. According to an IAMAI report, online gaming is the most popular activity in the entertainment sector. Another report by has also stated that online gaming is the leading emerging category in the entertainment segment—with its penetration already 55%. It is clear that online gaming is poised to drive the next big wave through the transition to 5G. With a thriving market for smartphones in the country, 5G promises to be a transformational experience in the sector. Further, with the current number of mobile gamers in the country at 430 million, it is expected to grow to 650 million by 2025. While mobile gaming has been playing catch up with mainstream gaming, 5G is likely to boost the segment with low latency and high speeds, which will also pave the path for cloud based gaming. 5G will be the enabler for operators in managing a complex and concurrent data volume, unfathomably enhancing the overall multiplayer interactive sports experience. The advantages of 5G in the Fantasy Sport space do not end at increased revenue for the sector, but contribute to a larger sporting ecosystem. Fantasy Sport promotes a healthy intake of live viewing of sports to allow sports fans to make informed decisions in forming their virtual teams. This increased engagement with the sport has a direct positive impact on the growth of Fantasy Sport sector. According to a Millward Brown report, the engagement on Fantasy Sport platforms also leads to an increase in sports viewership by 60%. While helping the economy grow, superior connectivity is also driving digitisation, establishing Fantasy Sport as a significant online skill gaming avenue. As per a Deloitte report, where the Fantasy Sport user base started at a modest 20 lakh users in 2015, it has now surpassed 13 crore users, with approximately 200 operators in the sector. The present size of the industry is around INR 34,600 crore, while already infusing FDIs worth INR 10,000 crore to the economy. Within the next three financial years, it is poised to attract another INR 15,000 crore. The industry has also helped generate employment in the country. The projected potential of growth in creating jobs is expected to rise to more than 5,000 in direct employment and more than 7,000 by way of ancillary jobs by 2023. While Fantasy Sport promises to be a driver of revenue for 5G, it will also serve to be a financial incubator for 5G. Enabling a multi sport ecosystem leading to an increase in sports engagement as a whole is just the beginning. With 5G services around the corner, the next step will be the integration of AR and VR into sports, and cloud gaming. India stands to see the next era of accessibility of Fantasy Sport across all platforms, eliminating issues of latency and low concurrency, allowing a larger user base to be part of a more cohesive gaming community.

A trend refers to a change in traditional way of doing things, especially during a particular season and time. What most people don realise is that most trends have a long-term influence on the market. Interior design industry is greatly influenced by trends and trying to spot the direction where the design trends are moving at any given time and can be challenging for designers and architects. An interior design trend is basically a central idea around which a whole concept is created. It the thread that binds together various elements in architecture and design of a project. In the last decade, interior design trends have gone through a major change, as they continue to be dictated by magazines and popular design channels. Traditional warm colors are back In last few seasons, warm colors had been traded for cooler colors but in 2022, warm colors are making a comeback. Earthy tones like brown and beige are a very popular interior design trend. Colors are of great importance in interior design as they are majorly responsible for establishing the look and feel of a space. Colors like red, tangerine and orange are also trending while the neutrals that have been preferred over the years are fading out. Curves over straight lines In last few years, many have been attracted to clear lines and boxy edges however they re now being replaced by the smooth edges and curves, channeling in a casual and comfortable vibe. Comfy chairs, puffy sofas, circular artwork and mirrors are all in trend at this time. Bold wallpaper prints are in In 2022, bold wallpapers are considered as artwork to decorate the surroundings. Wallpapers with animal figures, geometric prints, abstract or landscape sceneries are all very much in trend and are being used to make the space more decorative and bold in style. Nature on the inside One of the major changes that have happened in last few years is the affinity towards natural materials in interior design. Both faux and natural materials are being used to create a natural look inside the home. Wood is everywhere – from flooring, to cabinets, to countertops, to decor and to ceilings. Granite, pebbles and marbles are also very popular at this time. The biggest change is the growing affinity towards sustainable and eco-friendly products. So, this affinity for natural materials and décor is just for the aesthetics. It the overall eco-friendly approach that the biggest shift from traditional design practices. Multi-functional spaces In the past, spaces were mostly meant for single use. There were separate areas – dining, sitting, entertainment, meeting rooms etc. Nowadays, people look for multi-functional spaces that contribute to space saving and offers more flexible approach to architecture and design. Monochrome palette Classic black and white finishes are all in line with this season design trends. These black and white patterns are inspired from Scandinavian design styles, and seem like they are here to stay. The best part of such monochromatic palette is they can be used in any.

Interior style. Smart technology In 2022, most homes are becoming smart homes. From automated security systems, to curtains, to geyser systems and more – smart technology has become an essential part of interior design these days. Most of the modern interior design trends are often in sharp contrast with traditional trends. The traditional way of design has been more segregated and flamboyant whereas the modern trends are prioritising sustainability and flexibility in design. The priority towards quality ensures less wastage of materials and becomes more eco-friendly. Social media is rapidly impacting each of the trends as influencer choices are impacting where people draw their inspiration from for designing and decorating their homes. However, this may also mean some of these trends could be short-lived, quite in contrast with traditional trends that have lasted for quite a few seasons. At the moment, however, it looks like these trends are here to stay and the only choice there is towards interior design and decoration. In today time, most successful businesses led by authentic entrepreneurs place their emphasis on people, values, and ethics, creating a culture of authenticity, transparency, and honesty that ensures everything around them is empowered and heard. These types of entrepreneurs are those who demonstrate self-discipline and a strong moral code — they don take shortcuts or bend their morals to meet certain goals. Having an entrepreneurial mindset is not just for entrepreneurs. Or, let me put it another way – in today world, everyone (yes, I mean it – everyone, even teachers) has to see themselves entrepreneurially if they want to grow their impact. The question that we as leaders, educators, and parents must ask ourselves is this – What skills, behaviors, and attitudes do young people need in order to reach and thrive? What do they need to be successful and happy in their lives? A growing body of evidence suggests that the answer lies, at least in part, in an important constellation of non-cognitive skills known as the entrepreneurial mindset. Both anecdotal and scientific evidence supports the premise that entrepreneurs approach their work and life in a distinctive way. An entrepreneurial mindset is a set of skills that help people overcome challenges, identify and make the most of opportunities, and succeed in a variety of settings. Whether you want to start your own business, work in a big company, or be an individual artist, performer, or practitioner, here are five life skills you have to be good at: Put these together, and you have what nowadays is called an entrepreneurial mindset . Unfortunately, an entrepreneurial mindset is not that common. Some individuals are born in families where they learn it by observation from an early age. They have the drive to start something new, solve the problems they see in the world, and strike out on their own. The rest of us must work pro-actively at developing this mindset. Whether you are hoping to start your own business in the near future or work in a big company, developing an entrepreneurial mindset.

Business model. Automated deliveries, complex machine learning algorithms and a skilled workforce will be critical factors in shaping the future of the food service industry in India. As much as we aim to keep our surroundings germ free, did you know that our gut is the biggest storehouse of good germs ? These billions of gut bugs help us in various ways. What do these bugs that stay rent free in our gut do? A lot of things, right from helping us to digest the otherwise tough fiber and secreting some vitamins and factors for good health to preventing the bad, infection-causing bacteria from invading our body. These good gut bugs help train and support the immune system. For an infant, establishment of these gut bugs are particularly important for its health. Breast milk, the very first food for an infant, is a major factor that determines the health and immunity of an infant. It contains many nutrients and factors that promote the growth of beneficial gut bacteria. Apart from nutrients and immune-strengthening antibodies, breast milk also has a prebiotic known to boost immunity. Healthy breastfed infants in studies show the presence of Bifid bacteria and Lactobacillus, bacteria that is known to help with your baby immunity. Prebiotics in breast milk Good bacteria in your baby gut need a substrate or food for growth. This food for the gut bacteria comes in the form of indigestible fiber and other ingredients that bypass digestion and reach the colon. Once in the colon, this undigested food is fermented to release many products known to be beneficial for health. While breast milk has many good nutrients, a particular carbohydrate present in breast milk is especially known to increase the counts of helpful Bifid bacteria. This complex carbohydrate is called human milk oligosaccharide or HMO and they act like food for these bacteria to ferment and grow. Interestingly, studies have found good numbers of helpful bacteria in the gut of breastfed infants and lower levels of potentially infection causing bad bacteria. What are HMOs? In simple words, human milk oligosaccharides are type of carbohydrates uniquely present in breast milk. HMOs are 3rd most abundant component, after lactose and fats present in breast milk. HMO content in colostrum, the yellowish, thick milk produced within the first few days of delivery, is very rich with approximately 2g per 100ml. The level of HMOs then drops down to 1.2g to 1.5g per 100ml in mature milk. An interesting part about this unique component is that it escapes digestion and once in the gut, only a certain kind of bacteria can digest it. This selective digestion pattern helps to increase the number of beneficial bacteria in your child gut. While there are more than 1000 different HMOs present in breast milk, the most common one in human milk is called the 2 -Fucosyllactose or 2-FL Did you know, the total amount and composition of HMO secreted in the breast milk differs in women? Genetic history, breastfeeding duration time.

There a widespread consensus that global agricultural output could rise by nearly a third if we bridge the gender divide and provide women equitable access to resources like their male counterparts. This would mean at least a staggering 150 million more people would get enough food and not go hungry worldwide. As India embarks on a journey of unprecedented growth despite the Covid-19 pandemic and other challenges, fostering robust agricultural growth is crucial, not only to ensure food and nutritional security but also to drive the nation broader economic progress. To achieve this, it is imperative that the government. Gives a further impetus to promote women-led agricultural growth in India, ushering in an era of prosperity, aligning with Prime Minister Narendra Modi vision of Amrit Kaal. The world is grappling with the urgency of combating climate change, reducing greenhouse gas emissions, and ensuring sustainable energy sources against the backdrop of rising population and women will play an equally critical role in addressing these challenges. Recognizing these imperatives world leaders at the recent G20 New Delhi declaration have committed to working collectively to ensure everyone has access to safe, nutritious, and affordable food. These commitments include significant investments in sustainable agriculture, promoting research and development in agricultural technologies, improving market access for agricultural products, and addressing the root causes of food insecurity. In this context, India emphasis on driving gender-inclusive climate action and women-led development is significant. Among the four priority areas, the role of women and girls as change-makers in climate resilience action has been emphasized by the ministry of women and child development. Contrary to the general notion, agriculture is no more a man world. Women, constituting at least 43 percent of India farming workforce, are involved in various operations like seedling cultivation, planting. There a widespread consensus that global agricultural output could rise by nearly a third if we bridge the gender divide and provide women equitable access to resources like their male counterparts. Most of us dream of striking it rich to never be in want. Good goals. To achieve these, would entail considerable diligence and perseverance, resourcefulness and creativity. A rare few are endowed with inherited wealth, but for most, the process is a challenge that includes many struggles. To understand what it is that we are after we need to first know what it means to be wealthy, to be rich. But wait a second, wealth and riches are not really synonymous, points out Swami Swaroopananda, global head, Chinmaya Mission. He reminds us that the universe is a resource, it is wealth. Hence nature is called Sri, Lakshmi, bringing prosperity and wealth. Whatever you produce comes from nature. He adds that those who make the effort to make use of these resources productively find wealth. We benefit from the earth because the earth is a giver for millennia the earth resources have been used to create wealth. And for as long as we can remember, we have been takers. Except for human beings, all other species give back to earth. That why the world is rich. Adi Shankara was asked who was poor and he replied that the one who has insatiable, infinite desires and who feels he does not have enough, that he is not rich enough he is truly poor. If you have food, shelter and clothing and you sleep well, you are not poor. Having a fat bank balance does not guarantee happiness many among the richest are often unable to eat or sleep due to compromised health and stress, infinite desires and sense of dissatisfaction. An unhappy mind means your body too slowly becomes unhappy and therefore unhealthy. Diseases may creep in. Stress and anger are known to be major causes of high blood pressure. Iago in Shakespeare Othello says Poor and content is rich, and rich enough, but riches fineless is as poor as winter To him that ever fears he shall be poor, Good heaven, the souls of all my tribe defend From jealousy! Why be jealous of a super wealthy man who lives in constant fear of becoming poor and who is beleaguered by ill-health? Several references in scriptures, proverbs and stories hold a brief for contentment that you are truly rich only when you do not hanker for more when you are content with what you have, whether you have less or more than a monetarily wealthy person. When you share spontaneously, even if you are not so wealthy, even if you are poor. Not he who has much is rich, but he who gives much, says the Bible. We are poor when we hoard and we cling to what we have accumulated whereas the more we give, the more enriched are we. You may lose money, but try not to lose your mind, says Swamiji. And never lose your faith in a higher power, in nature, in knowledge. Faith comes from gratitude. When you are enriched by positive attitude, good mind and a spirit of sharing, and you enjoy good health since mind and body are closely connected, richness stays with you whereas wealth may come and go. Your capacity to smile makes you rich. You can feel the abundance. In short, you are richer than a so-called wealthy billionaire. Veteran actor K Chiranjeevi recently stated that he wants his son, Ram Charan, to have a boy to continue the legacy. His statement highlights how de

Recurve archery Olympian Sanjeeva Kumar Singh was smitten by the un-complex bow, which is easier on the shoulders and sighting, and brought it to India 23 years ago. 8%, employment by The World Wide Web, after all, was meant for instant communication, research and, for the creative types, a self-indulgent blog nobody asked for. 2 percent, and emoluments Perhaps that is the lesson young readers will take away from it. This is evident across a range of indicators. India boasts tremendous young talent in the men's team, following in the footsteps of pioneer Abhishek Verma. But its contribution to GDP and share in employment has barely budged. In 2024-25, the registered manufacturing segment's output grew by a 19th-century romance, with its promise of true love and a value system oriented towards home and hearth, could work as useful propaganda. With more than 300 GW of installed capacity, India ranks third globally in renewable-energy (RE) deployment. It is probably this insistence on equality that has lent the novel such appeal in China since it was first introduced in translation in the early 1920s. Successive governments have taken measures to boost the manufacturing sector. The scheme has earmarked Rs 1,36,378 crore for transmission infrastructure. Renewable projects are often concentrated in specific regions while demand is spread across cities, industries and rural areas within states. Only later, with an inheritance of her own and the independence it guarantees, does she return to Rochester. Since 2003, India has quietly gone about honing skills in Compound Archery, an event ignored by most sports powerhouses because it was not on the Olympics programme. In this modernist state re-reading, Eyre is rebellious, but not irredeemably so; independent, but not averse to settling down; outspoken, but unmistakably feminine. Charlotte Brontë's Jane Eyre is an unlikely heroine for a state seeking to teach young women a moderate face of feminism and the value of domesticity. That these vulnerabilities persist points not to a lack of laws or schemes, but to failures of implementation, maintenance and accountability. 3 crore were employed in the unorganised segment as per the Economic Survey. 72 crore in 2021-22. The emphasis on intra-state networks is particularly significant. Strengthening the network's last leg is critical to ensuring green power actually reaches consumers. It was a vindication of India's persistence in sticking to a non-Olympic event, and training at elite levels. The latest National Crime Records Bureau data reinforces this: Delhi recorded 13,396 crimes against women in 2024, the highest among metros. the US-China technological competition. However, other key indicators also warrant close attention. In fact, of all non-farm workers in the country, 73. import of Russian oil was based on an Executive Order, and could be rescinded through the same method. Manufacturing in India has not emerged as an engine of mass employment, unlike in the development trajectory of Asian economies such as Korea and China. There was a time, just a few years ago on the calendar and what feels like aeons in the internet's evolution, when watching vide

proof that a woman can have a mind of her own without turning her back on the domestic. The formal sector, both manufacturing and services, simply does not provide enough job opportunities. Marriage at the end of Jane Eyre is undergirded by clarity. Now, as the internet has transformed from optimistic frontier to an algorithmic nightmare, the puppies are its silver lining. India's formal manufacturing sector continues to chug along at a fairly healthy pace. Therein remains India's employment challenge. These developments have implications for consumption, investment and productivity in the economy. The fact that the accused pretended to be policemen when they apprehended the survivor and her friend also points to another failing: the moral policing routinely carried out by cops in public spaces made the deception possible. Love becomes, in Brontë's telling, a choice, not a surrender. The new scheme is expected to address intermittency during peak hours and meet demand when the Sun is not shining. Plain, financially constrained, lacking in social capital she might be, but Brontë's heroine wasn't short on self-awareness. It has not provided avenues for the millions entering the labour force each year, and those wanting to exit the farm sector. I need not sell my soul to buy bliss. As this newspaper reported on July 31, transmission constraints and the need to maintain grid security forced operators to curtail a significant amount of solar power-generated electricity during April to June. 08%, according to the Annual Survey of Industries. But for now, the day belonged to Chikitha and Sahil. The project will alsRenewables, especially solar and wind power, have transformed the country's energy basket, but their variability places new demands on transmission planning and storage. For those in the national capital gearing up for another year of pollution and traffic jams, On Tuesday, the final ballot to elect the fattest dog of Delhi is being cast. The Centre's Green Energy Corridor Phase-III scheme tries to address this constraint by strengthening systems in states to evacuate up to 135 GW of renewable energy. 1 per cent are engaged in informal-sector enterprises as per the Periodic Labour Force Survey 2025. Its implementation will require learning from past experiences, suggesting that challenges are not restricted to drawing investment. Organised manufacturing also continues to be dominated by small firms, whereas, according to the Economic Survey, it's the bigger factories (those employing more than 100 workers) that employ a larger share of workers, pay higher wages and have higher labour productivity. A substantial share of the workforce is still engaged in the informal economy. Now, however, the Chinese state has made it mandatory reading for ninth-grade students, arguably for quite different reasons: Beijing is waging an uphill campaign against plummeting birth and marriage rates. Eyre walks away from it when staying would have meant becoming lesser, unequal. On a bright Nagoya morning, archers Chikitha Taniparthi and Sahil Rajesh Jadhav beat Koreans Choi Eun-gyu and Jung Yoon-park to clinch a gold medal in the mixed team event, giving India

Generates outcomes that shape individual destinies and collective social realities. Patriarchal practices, such as the institutionalisation of gender-based hierarchies, have created entrenched systems of inequity. These actions, viewed through the lens of karm, are contributors to societal disharmony. Injustices embedded in such practices reverberate across generations, impeding social progress and spiritual evolution. Actions undertaken with awareness, compassion, and a commitment to equity can counteract the negative consequences of past deeds. This principle highlights the ethical responsibility of individuals and communities to address structural imbalances perpetuated by patriarchy. Through conscious, dharmic actions, societies can rewrite karmic patterns that have historically favored one gender over another, fostering inclusivity and mutual respect. Dharm serves as the guiding principle of moral and cosmic order. It emphasises harmony, justice, and the uplift of all beings. Rooted in the Vedic concept, the foundational cosmic order, dharm demands that human actions align with universal principles of fairness and balance. Patriarchal systems, by disrupting this harmony, represent adharm, leading to social discord and spiritual disconnection. When women are excluded from positions of authority or denied equal opportunities, this imbalance violates dharm. The philosophical foundations of dharm challenge alignment of patriarchal practices with its core metaphysical principles. The concept of Ardhanarishwar, depicting Shiv and Parvati as an inseparable whole, exemplifies the ideal of gender equality. Patriarchal systems that marginalise one gender or prioritise hierarchical dominance contradict these spiritual ideals. Contemporary practices are beginning to challenge entrenched patriarchal norms. Female spiritual leaders advocate for inclusivity in Hindu rituals. The increasing number of women pujaris, priests, across India further exemplifies the shift towards challenging patriarchal monopolies in spiritual leadership. Festivals such as Karwa Chauth, traditionally requiring women to fast for their husbands well-being, are now practised by many couples as mutual acts of devotion. These shifts reflect the broader principle of samatva, equity. Philosophically, addressing patriarchy involves not only critiquing its historical and cultural roots but also recognising its karmic implications. In India, contingency fee arrangements in lawsuits, where lawyers charge fees based on the outcome, are explicitly prohibited under the Bar Council of India (BCI) Rules. Specifically, Rule 20 of the Standards of Professional Conduct and Etiquette, under Section IV, Chapter II, Part VI of the BCI Rules, forbids advocates from charging fees contingent upon litigation results or agreeing to share the proceeds of litigation. The rationale behind this prohibition is ostensibly to maintain professional independence, prevent potential conflicts of interest, and uphold the dignity of the legal profession. However, this rationale sounds a tad droll, especially when juxtaposed with the ground realities of the Indian legal system. The Indian judicial system is plagued

Business model. Automated deliveries, complex machine learning algorithms and a skilled workforce will be critical factors in shaping the future of the food service industry in India. As much as we aim to keep our surroundings germ free, did you know that our gut is the biggest storehouse of good germs ? These billions of gut bugs help us in various ways. What do these bugs that stay rent free in our gut do? A lot of things, right from helping us to digest the otherwise tough fiber and secreting some vitamins and factors for good health to preventing the bad, infection-causing bacteria from invading our body. These good gut bugs help train and support the immune system. For an infant, establishment of these gut bugs are particularly important for its health. Breast milk, the very first food for an infant, is a major factor that determines the health and immunity of an infant. It contains many nutrients and factors that promote the growth of beneficial gut bacteria. Apart from nutrients and immune-strengthening antibodies, breast milk also has a prebiotic known to boost immunity. Healthy breastfed infants in studies show the presence of Bifid bacteria and Lactobacillus, bacteria that is known to help with your baby immunity. Prebiotics in breast milk Good bacteria in your baby gut need a substrate or food for growth. This food for the gut bacteria comes in the form of indigestible fiber and other ingredients that bypass digestion and reach the colon. Once in the colon, this undigested food is fermented to release many products known to be beneficial for health. While breast milk has many good nutrients, a particular carbohydrate present in breast milk is especially known to increase the counts of helpful Bifid bacteria. This complex carbohydrate is called human milk oligosaccharide or HMO and they act like food for these bacteria to ferment and grow. Interestingly, studies have found good numbers of helpful bacteria in the gut of breastfed infants and lower levels of potentially infection causing bad bacteria. What are HMOs? In simple words, human milk oligosaccharides are type of carbohydrates uniquely present in breast milk. HMOs are 3rd most abundant component, after lactose and fats present in breast milk. HMO content in colostrum, the yellowish, thick milk produced within the first few days of delivery, is very rich with approximately 2g per 100ml. The level of HMOs then drops down to 1.2g to 1.5g per 100ml in mature milk. An interesting part about this unique component is that it escapes digestion and once in the gut, only a certain kind of bacteria can digest it. This selective digestion pattern helps to increase the number of beneficial bacteria in your child gut. While there are more than 1000 different HMOs present in breast milk, the most common one in human milk is called the 2 -Fucosyllactose or 2-FL Did you know, the total amount and composition of HMO secreted in the breast milk differs in women? Genetic history, breastfeeding duration time.

Innovative technologies with robotics and Artificial Intelligence (AI) interface for cost reduction of prepared delivered food and improving standards of services. Cloud Kitchen being digital in nature is introducing innovative technologies e.g., the implementation of the Kitchen Display System (KDS) to enhance productivity in the high-octave kitchen space. Details of the customer food order are accurately mentioned in the KDS which helps the staff to curate the dish as per the customers needs and requirements. Unlike the waiters in the restaurants mixing up the orders which cause food wastage and damages customer service. The integration of AI-based technology in the cloud kitchen helps to streamline its operations more smoothly and efficiently. It identifies the right ingredients to use while curating a dish, helps in experimenting with menus, manages inventory and suggests ways to deal with the customer feedback in a professional manner. In this evolving world, technology including ground-based robots and aerial drones could further assist in reducing the delivery cost. Also, automated standardised processes that use machine learning-based prediction tools and robot chefs to prepare customised quality meals in less time at lightning-fast delivery speed are set to redefine the future of the cloud kitchen industry. Lucrative business model – Restaurant business vest Cloud kitchen: The cost factor involved to start a cloud-kitchen business is relatively very low in comparison to the brick-and-mortar business model and set-up of a restaurant. A cloud kitchen includes a low Cape and its setting up typically needs 1 3rd of the investment required to start a restaurant business. Cloud kitchen entrepreneurs do not need to worry about high rental costs, restaurant interiors and guest facilities, unlike traditional dine-in restaurants. However, the larger chunk of investment in cloud kitchen business is infused in technology that drives its operations, well-equipped kitchen infrastructure, training the manpower, delivery fleet and supply chain management. Some of the benefits of operating a cloud kitchen over a restaurant include lower rental costs, quick business set-up, buildable scalability with low investment and increased customer reach with delivery-optimized channels. The cloud kitchen model generates value and creates win-win situations for both end-consumers by offering them the convenience and service of ordering food from home and business owners in the F&B industry by significantly reducing their operational and real estate costs. Trends driving the popularity of cloud kitchens: Today, in the race to offer unique services and maintain their individual identity, many cloud kitchens have emerged as environmentally conscious brands. Many cloud kitchens have adopted a sustainable and authentic approach that flows through their cooking techniques to food packaging material. The food is delivered in authentic earthenware, steel cutlery, reusable glass jars, paper bags and cardboard boxes that encourage the customers to help minimize plastic waste and pollution. These initiatives not only help in preserving the flavor and nutrition of the food

CRPF-hcm-Eng-Test-Dated-2026-10-03-Test NO.-28670

Of delivery, the overall health and diet of the mother and her geographical location seem to influence the levels of human milk oligosaccharides in mother milk. This makes breast milk very unique and made especially for the baby. Away with the bad bacteria Not only do they boost the levels of good bacteria, but HMOs also prevent bad bacteria from causing infection in your baby. Since they are not digested, they form a physical barrier preventing the bad bacterial from attaching and causing infection. In addition to this, not every bacteria can use HMOs for energy, only the good bacteria survive while the infection-causing ones perish. Studies have also found that some infection-causing bad bacteria just stops growing in the presence of HMOs. All in all, HMOs are helpful in preventing recurring infections in your baby. Take home message While all this scientific mumbo jumbo might be confusing, mothers must remember that breastfeeding is the best for your baby. It has all the nutrients and immune factors in the correct proportion. Breast milk is naturally rich in good gut bacteria promoting HMOs that are the most beneficial for a healthy baby. You can ask your paediatrician to help you make the right choice that will help boost your child immunity and let them have a good gut health. We live in a digital age where everything is readily available at the click of a mouse, but have we ever imagined a doctor who can predict a patient illnesses beforehand and prescribe preventive medication in no time? Or think about a smartphone app asking you about the stomach ache you had yesterday and if you would like to consult a doctor. While all this may seem like a faraway dream, this vision of healthcare is not too far off. Thanks to recent advancements in artificial intelligence (AI) in healthcare. AI has already made progress in the healthcare industry and is poised to further redefine the role of the medical practitioner and empower patients like never before with matters concerning their health. With its potential to revolutionise healthcare, it can lead to an age of personalised, accessible, and lower-cost medicine for all. This transformative potential comes from its ability to interrogate, parse and analyse vast amounts of data. AI is particularly useful in diagnostics creating customized treatment plans and even helping doctors keep up to date with the latest research. The potential power of the usage of artificial intelligence in healthcare is enormous and undeniable. AI is used in hospital settings to help clinicians take clinical decisions in radiology, cardiology, laboratories, surgeries, post-surgery, ICU care to name a few. Image recognition and speech recognition technologies are also being used for patient care. AI being a machine-generated algorithm-based level of care helps avoid manual errors thereby aiding accurate clinical decisions and treatment plans with no additional cost to the patient. In addition, AI frees up the internal staff with automation such that they can further add value in their area of sent expertise.

Opportunities offered by AI in the healthcare sector are limitless and go a long way in enhancing patient safety, satisfaction, and immensely improving patient care. The healthcare domain in India has been enthusiastic about adopting the technology as it is increasing the capacity of healthcare providers enabling them to offer higher quality care without over-burdening the system. Besides, treatment costs are lower when a disease is identified in the early stages, hence reducing the healthcare cost for individuals and the economy. Major areas of growth With the current computing power and technological advance, AI solutions are the only way to bridge the inequities in health care. AI is being explored in all fields of health care, specifically image-based diagnosis is a key area that has found its place in healthcare. AI will certainly play a very strong role in diagnosis, disease detection and management. It will help individuals take care of their bodies in real-time and significantly alter the life spans of humans beyond 100+ years. The most impactful will be very early detection of a disease before it spreads and becomes dangerous. Various Smart Technologies are in the making and Intelligent Machines have helped in areas like the first diagnosis including radiology & imaging, operating rooms, post-operative care monitoring, care inwards, etc. Challenges encountered The biggest challenge with AI is the difficulty around the extent of data points available and for the period for which it is accurately available. Further, when dealing with human beings as a species, any number of scenarios and data models need not guarantee an accurate prediction. Since you are dealing with the life of an individual, you cannot entirely base your decision on what a machine or program tells you. It is therefore pertinent to interpret the predictions and information correctly to arrive at the right procedure, and interventions and this is a skill that a good clinician has. Therefore, artificial intelligence and cognitive computing should be used by experienced clinicians to improve the patient experience and provide a higher degree of satisfaction and safety. Industry experts believe that AI is still an evolving space and it is yet to hit the mass market or penetrate our consciousness. "We are not yet accustomed to it. Can you imagine our first experience when we would personally get into a driverless car? Likewise, in a healthcare setting where advanced surgery is carried out on a patient remotely, some degree of skepticism is natural. As, first and foremost, the large user community is still skeptical and yet to turn around and trust it totally, this cultural obstacle is the biggest challenge. Coming to specifics, a lot of solutions are being offered in the name of AI and there is certainly a buzz about it. However, selecting the right solution for your specific industry vertical is not an easy task given there are no clear winners in the space currently. Another challenge faced with AI is patient confidentiality which is a major concern for healthcare providers. Acceptance and.

Amount of water flowing into tributaries that ultimately make their way into the Indus River. No, it is not an isolated incident, and this has happened before. The history of the Sindhu Civilisation has encountered numerous course-threatening floods. Numerous Hindu kingdoms in Sindh minimized destruction due to floods by building indigenous borewells. The people of the Indus valley civilization even had the ability to construct a Garbarband on the Indus River near Mohenjo-daro and Harappa to raise the water slope and divert waters into nearby lands. However, when Pakistan was created, the first thing they did was destroy its real roots and the history of the Indic Kingdoms from Ancient India that ruled the region. Pakistan systematically threw all the books that spoke about indigenous cultures under the bus, thereby losing knowledge of the land. History has taught us that if you lose the history of the land, if you lose the knowledge of the land, you ll lose the ground. This is why Pakistan is underwater. This is why Pakistan is unable to fight floods. This is why they ve lost ground, and this is why Pakistan Department of Archaeology had to convey that Mohenjo-daro might be removed from the world heritage list if urgent attention to its conservation and restoration is not given. Mohenjo-daro, a bunch of ruins and mounds, is a 5500-year-old archaeological site situated about 80 km off the city of Sukkur. It incorporates the remains of one of two main centers of the ancient Indus Valley Civilisation, the other being Harappa, and situated 640 km northwest in Punjab province. Mohenjo-daro, which means mound of the dead, was one of the world oldest cities. Now, it might be removed from World Heritage List because it has fallen. So has Pakistan. A standard business structure of various departments is not feasible for every organisation. Some organisations seek to outsource these divisions because they lack the resources and personnel to operate within their existing limits. Finance and accounting, one of the core areas of any business, has become one such popularly outsourced division. When outsourced, such services keep the recruiting expenses, accountant staff fee and the intricacy of the finance and accounting work in place. By 2026, the global market for finance and accounting outsourcing is expected to be worth $53.4 billion and will grow at a CAGR of 5.9%. Furthermore, the digital age has introduced highly accessible tools to enhance the commercial endeavours of any business. Much of the previously manual, tedious business processes have now become highly simplified or automated, all because of technology. Outsourcing offers such services at a lowered cost, thus making it a more preferred choice over internal arrangements. The IT outsourcing trends highlight this trend, as global IT outsourcing value will reach $397.6 billion by 2025. Benefits of finance and accounting services for can save time, financial paperwork, and money through these services and save employees from becoming bogged down in administrative and financial details. The benefits include- Cost-benefit It is the.

Facilitate other important payroll services. Security A frequent audit of your company accounts ensures that fraud cannot be concealed. Conclusion Every industry experiences seasonal ups and downs, which makes these services a must for them to establish a sound cash management strategy to be ready for potential future changes in the financial situation. Thus, such investments are justified and yield good ROI through quality output and accuracy. Holding the post of a cabinet minister in India is surely a dream of every politician, but I have little doubt that there is one ministerial berth that offers more brickbats than garlands, and that is of the external minister. India is cursed with cantankerous neighbors, poor defense infrastructure and is still struggling with protecting the economy from internal and external pressures. If that is not challenging enough for you, we also have a very open democracy with media scrutinizing every decision, making your job as thankless as any. I know that being a foreign minister is easy only when you have the largest gun, as diplomacy is mostly about being polite and letting the other know about the size of your gun; but, you are serving a nation that had/has no real threat to offer, so your job is worse than playing simulations chess with a hundred players, as here the move on one board also effects the situations on the other. When we look back at the history of the world, diplomacy was predominantly linked with the military strength of the nation as the currency to purchase suitable decisions from other nations was power to attack/protect. But, when the world embraced open-market "globalization", a new weapon has come into the play and that is economic measures. In the earlier days, foreign policy was all about having (or pretending of having) the biggest gun; but now it is mostly about the money. As India has had neither, the Indian foreign policy had attempted the same impossible that we still imagine to have given us independence. Since the days of "Panchsheel", we have tried using "being nice" as a way to deal with the world, but where we stand today is a clear indicator that it has not really worked so well. But the times they are a changing, and there is a great possibility that the golden hour for you is around the corner. We now have a brand-new weapon, provided that we recognize it and deploy it quickly before it is too late. The world is clearly heading towards turbulent time trying to discover a new geo-political balance as nations grapple with economic slump caused by corona and spectre of climate change now looming overhead making it even more difficult for most nations to grow at pace that can sustain their economies. In this brave, sorry scared new world, we as a nation have a unique opportunity. With Russia-Ukraine war helping in making what was worse to get worst, the world, including our arch-rival China is facing a dramatic drop in.

First aspect that makes SME firms hires independent contractors. These services can significantly bring down recruitment and operating expenses, employee benefit expenses, maintenance, infrastructure costs, and training expenses. The service fee is determined as per the needs. Goodwill An accurate and compliant financial statement encourages investors interest in the business. Management by certified public accountants also allows for continuous professional development opportunities and constant information upgradation. Enhanced payment cycles Accounts payable and receivable cycles are optimised through proper accounting and financial statements. Tax management is usually seen as a difficult component of running a small business. They reduce tax liability, make profits sizable, and retain resources for longer. A sound bookkeeping system makes tax periods much less intimidating. Compliant account receivables Missed payments can be identified and located, and cash flow problems can be overcome easily. Being compliant with the collection of accounts receivables is essential to business running. These services aid future payments for overhead expenses and business expansion by allowing timely payments. They make a firm future-ready and make money available in the time of need. Effective cash management techniques also assist in avoiding any financial blunders that can harm businesses. Decision making A comprehensive annual account helps in audit purposes and gives insight into a wise business decision by indicating the areas that need to be worked, on. Customised services based on the type of firm are also available to make sure that the financial report may reflect the most important information. They provide a doorway for thoughtful planning and tactical decision-making. They also create and manage budgets and assist with finance issues resolution. A qualified accountant will constantly offer suggestions for improving accounting efficiency and help uncover all trends over a given course of time. Efficiency and transparency Existing employees become more productive. Likewise, since many important choices are based on financial reports, the service providers make financial statements transparent and simple to give potential investors a clear understanding of the risk involved. Technology upgrade Depending on the requirements of a firm, customised accounting software aid scalable handling of financial transactions, making accounting and bookkeeping easy, error-free and seamless. Systems and data can be better compared using technology. New cloud-based tools and technologies can facilitate the ability to manage payments and speed up the payment-related process. The technology automatically completes the task of manually inputting the data and filing the invoices. Management accounts Cash flow issues are easily anticipated and money expenditures are analysed. Tax and dividend transactions are undertaken more confidently and advantage is maximised by paying dividends rather than salaries by using management accounts. Reduced errors Specialists can provide more value to the company while completing the same tasks more quickly and with less error. Thi

The economic growth rate, so it is time that we brandish our super weapon and start using it to make deals. We are already growing at a rate far far higher than the developed world, making us the most attractive destination for the world that always wants to put money in the kitty where there is growth. If we the people rally around, and if the government also recognizes the opportunity and stop treating businessmen as criminals, we have a great chance to have the entire world queuing up at our doors. Armed with Indian economic growth, you will have leverage to really start calling shots as no one will like to miss the bus of doubling their wealth at the rate India and Indians can do it for the rich of the world (who are the real decision-makers in every nation). Once the world money starts pouring in, we will quickly discover that no one wants to be an enemy of the nation where their investments are. Sir, as I heard you state during the recent book release that you envy the future Indian foreign minister of 2047 when India will be a force to reckon with, I am tempted to write this open letter as I feel that it is the other way. If you take the initiative and communicates the opportunities that you can tap into (if suitable economic policies are in place) to the entire political establishment, you can be the catalyst of change and can easily earn a place in the history books. The job of the external minister in 2047 will be easy (if we/you make/s it) but surely not as rewarding or exciting as the job of the external minister today. Let us also understand that inside every opportunity, there is also a seed of disaster. The geo-political balance of the world is changing, and there is no guarantee that a higher place in the new order will automatically fall in our laps. If we grab the opportunity today with you starting a new line of thinking within the government to focus strongly on economic growth, we have a potential to write a new history for 2047. But if we miss this rare chance, there is also a possibility of India spiraling down to the bottom of the world order. – A citizen with hope that you will be able to convince the government to recognize the opportunity and act. The tragic road accident on the Mumbai-Ahmedabad highway that caused the death of prominent businessman Cyrus Mistry has put the spotlight on the importance of wearing the rear-seatbelts in cars. But in addition to this factor a seven-member forensic team which includes two PHDs from IIT Kharagpur, mechanical and civil engineers, and one member who specialises in simulations and modelling, and which has been commissioned by the SaveLIFE Foundation, has reportedly found that an infrastructure issue also contributed to the crash: "The bridge parapet wall was found to be protruding into the shoulder lane.

CRPF-hcm-Eng-Test-Dated-2026-10-04-Test NO.-28679

It bears reminding that Union road transport and highways minister Nitin Gadkari himself has told TOI that the main reasons for road accidents and deaths are faulty road engineering, defective DPRs (detailed project reports), bad designing of junctions, inadequate signage and road markings. Likewise the ministry report on road accidents in 2020 notes that violations such as overspeeding and driving on the wrong side do not constitute human error alone, although these are usually the official causes; instead it is important to scope out road engineering measures to address problems which are, prima facie, considered to be human error and enforcement issues. So if one takeaway from this high-profile accident is that there must be a strong public focus on wearing rear-seatbelts, the other is that road accidents are usually multi-causal and the road environment plays a critical role and should be improved. A well-designed highway for example should facilitate high mobility while safely segregating the slower-moving traffic and its merging with urban roads should be methodical as well. If countries with much higher speed limits than India have far fewer road fatalities, one reason is definitely that their highways don come up haphazardly but are well-designed. What would you call a country that is begging the world to send it food, money and medicines but refuses to take it from a neighbour, when it would be much cheaper. I would call that country a masochist. And that is Pakistan for you today in the 21st century. It is clear to every nation in the world that the elite in Pakistan whether it be Imran Khan, the present government or the Establishment, which stands for the Military and the notorious Inter- Service Intelligence (ISI), do not care a bit for the millions of poor or and lower middle class citizens who are Muslims, let alone the Christians and Hindus who are discriminated against and forcibly converted to Islam. Pakistan, according to its own intellectuals, who have You Tube platforms, Is imploding. It has inflation going up by the day for food and medicine, which is vital for its flood-ridden poor who have lost their homes, livelihoods and in the coming months their lives if not given emergency relief. Yet, the elite as well as the current PM, says Pakistan will not import cheaper vegetables and food from India because it has not settled the Kashmir problem. They don realise the world sees that Jammu and Kashmir in India has moved on and is thriving while the Pakistan Occupied Kashmir is wanting to break away from Pakistan as is Baluchistan, Sind and parts of the Khyber province. But they are willing to give up on their citizens who are pleading for help in the worst floods that have hit Pakistan in decades. It is as if Kashmir is a chicken bone stuck in the throat of every politician or army head, and they would rather choke than let it out, no matter how many of their own citizens die of deprivation.

CRPF-hcm-Eng-Test-Dated-2026-10-04-Test NO.-28682

Good evening, graduates. Today as you graduate from the Indian Institute of Business, you must remember that in today highly competitive world out there, the only thing constant is change. Not just any change but a paradigm shift. It is impossible to have any other shift. It is even more impossible to find people who actually know what paradigm means. As you venture out into the corporate boardrooms, remember that you will have one special skill that is vitally necessary clichés. You can cliché your way out of real work and make sure that there is always someone to be the fall guy. At the end of day, what matters is results Awl, who am I kidding, what matters is your bonuses and that is one thing that Wall Street has taught us. To succeed in today dynamic world, you must focus on innovation. If you have the ability to sound even more hollow and pompous, I will say strategic innovation. If you can innovate, it is back to the drawing board. So you have no choice but to hit the ground running and grab the low hanging fruit. In order to innovate, you need to think outside the box. Thinking outside the box leads to natural synergies for you and the enterprise. It basically optimizes the organizational resources and reduces the risk while improving your bottom line and at the same time allows you to leverage on your core competence and complete a 300-letter long sentence without any punctuation. If you can innovate, you are a part of the problem and not a part of the solution. So, innovate and stop innovating only when the authorities come and haul you away kicking and screaming, like they did to the innovative accounting team at Satyam. Innovation today is a no brainer. In other words you need no brains to innovate. You simply must have the bandwidth to innovate. You have to give it 110%. Innovation has to have a target. You cannot keep on moving the goalposts. Once you have the target, you need to operationalize the organizational resources and reduce the opportunity cost of not innovating. Innovation has not only to be strategically aligned but also customer centric. The customer is always right. The customer is the king. So you cannot leave him out of the loop on innovation. Any innovation has to be a Win-Win for the organization and the customer. For this effort, all hands must be on the deck. There is no room for slackers, this is for winners. You might ask, how does one get customer focus? The answer to that is you have to have a value-added proposition to maximize customer satisfaction. At the end of the day, customer satisfaction must be on an upward trajectory. You need to keep pushing the envelope on this one. So, an obvious corollary is any such initiative has to be scalable. Only if the proposition has scale, can it be growth oriented and get wings. Scale is what takes an enterprise to the next level. All this is meaningless if it is not actionable. Any goal should be quantifiable and actionable because those 2 words really sound good together or as you should say work as a team and remember people, there is no I in team. .(pensive pause), Well though there is me in the team, so that is already an example of thinking outside the box. (

CRPF-hcm-Eng-Test-Dated-2026-10-04-Test NO.-28683

That is what separates the boys from the men. You just can drop the ball on this goal. Some of you might have trouble aligning yourself to this goal primarily because you have no idea what the hell it means. But not understanding something that you do is not an excuse in fact it is the lifeblood of the organization. Can you imagine the outcome if every member of the organization tries to understand and question what he does? It will be utter chaos. Does a worker ant question why is it carrying a crystal of sugar that is 100 times its weight? Does a honeybee question why the honey it produces is only consumed by the queen bee? NOO because that is a law of nature, and the organization is no exception. As an employee, you must bring your A game to the table to improve the enterprise ROI. You should set the new benchmark. Be the leader of the pack. Net, at the end of the day, do not ask questions and focus on your deliverables. If you indeed do have any questions, let circle back and touch base offline. In the meantime, I would like to end this speech by saying Be Hungry Be Foolish ..I have been foolish all my life and consequently really hungry sorry strategically hungry. This is just her story. It happens everywhere. Parents and children. Friends. Relationships we once thought unshakable. People are learning to accept not out of joy, but because they have no choice. A quiet resignation, a shift from expectation to endurance. Maybe this is the new way of love not waiting, not pleading, just letting go. And in that letting go, choosing one own self. Psychiatrist Dr Sanjay Chugh points out the generational shifts in parent-child relationships, explaining how time spent together is steadily decreasing. It not about love fading, he explains. It that the priorities are evolving. Parents now find themselves adapting to a world where children are more independent, more global. And acceptance, rather than resistance, brings more fulfillments. And it not just parents. Something has shifted in our relationships across friendships, marriages, even at work. Bonds once built on constant togetherness now make space for personal freedom. Think of your daughter studying abroad. These days, she does check in every day. But that does mean she loves you any less. Or the sibling who rarely calls. Yes, she calls rarely, yet never forgets your birthday. The colleague who once shared daily coffee breaks with you, now works in another city. The warmth still remains, it just finds new ways to exist. At first, this change might seem like detachment, maybe even a lack of concern. But as psychiatrist Dr Chugh puts it, to cope with this, when parents or people in general prioritize their well-being, they are not being selfish. They are embracing the most fundamental human need that is self-preservation. Maybe that why we see mothers picking up old hobbies, fathers setting off on solo road trips, and friends stepping back from draining connections. Not because love has faded, but because they are learning to love themselves too. It makes one think. Maybe the world is heartless. Maybe it just different. Love is always about staying back or waiting. It also about choosing your

It really amazes the world that having lost every war with India for Kashmir, the Pakistani Army are still in power and dictate their terms to the International Community. A rogue state with nuclear weapons seems to be the deciding factor. But one wonders how long Pakistan can hold a gun to its own head and say "Jump" and the IMF and others give it loan after endless loan, which even from their own reporters, never ever reaches those who need it. Most according to their own You Tubers is spent on buying expensive properties for the elites and the army abroad. The joke is that when properties in London and Dubai go up it is because the IMF or other foreign Aid agencies have sent money to Pakistan. Pakistan is a pressure cooker beginning to explode as Imran Khan with his constant rallies has attacked every institution in Pakistan, including the acred Establishment. Actually, I have to say I have a grudging respect for Imran as he is the first PM in several, who has actually managed to get the people behind him by not only denigrating the present and past governments in power but also laying bare the role of the Army and the ISI. This has never been done before and this is what makes Imran Khan dangerous but knowing the Establishment, they will make a deal with him, and he knows it and will be back in power in the next year. This is a given. What is not a given, is the role of Pakistan in an uncertain world. In 2011, when the Mumbai attack occurred, US Secretary of State, Madeline Albright said about Pakistan, "Pakistan has everything that gives you an International migraine," she went on to say it has nuclear weapons, it has terrorism, extremists, and very poor people. Unfortunately, her words and even Hilary Clinton famous oft repeated quote on Pakistan is still ignored- she told the Establishment- "You can have snakes in your backyard and expect them only to bite your neighbours." Both are very telling statements. But Pakistan will not listen. Imagine we are seeing devastation of human life, children and starvation in a country, where it own media says that most of the aid sent will not reach the people who need it. Reporters are openly talking about aid being siphoned off in army godowns first, than after they have enough it will trickle down to those who need it. The same with the PM Relief Fund. I see Pakistani TV channels where individuals who can collect truck loads of relief say they would rather do it directly but not all of them can reach the victims directly. And other Pakistanis abroad who really want their country to succeed say Cynically that now Pakistan is getting billions of dollars the price of real estate in Dubai and London has gone up. How sad but true is this. The only way forward for Pakistan is for it to stop the.

Dual passport system. Let not the Pakistanis who have residence abroad be able to come and work for the govt and take money out. India has no dual passports and I think we are the better for it. In Pakistan it seems,it is a passport to being the head of a bank, or CPEC or even the National Disaster management and being able to siphon off enough to put in banks and real estate abroad. This is the tragedy of Pakistan and its 75 year rule by its establishment, whether in power or behind the scenes. India celebrated its 75th birthday with the verve and vigour that befits the world most populous – and some would say most irrepressible – democracy. And there much to celebrate in having reached the milestone of 75, cocking a snook at doomsayers who at the birth of the nation had predicted its demise within a scant few years, if not months. But all anniversaries are Janus-faced, looking both at what past and what to come, and amid the festive flag-waving there was opportune pause for stocktaking and introspection. For even as our journey has brought us a long way, the road we ve left behind is a signpost for that which still lies ahead of us. The Prime Minister summed this up in the call for Atmanirbharta, of being self-reliant. Independence from foreign rule is the first step in the long march toward true self-autonomy, the first freedom of many freedoms to come, the first independence of those yet to be achieved. There is the independence from the tenacious grip of poverty and hunger, independence from illiteracy and superstition, and from the human bondage of discrimination and dominance on the basis of creed, caste, and gender. So many independences yet to be reached. Like a spreading banyan, independence, in its myriad manifestations, has many supporting roots, each necessary for the flourishing of the tree in its entirety. The banyan suggests a clue to the nature of independence: that it is an inextricable part of the greater whole of interdependence. The coronavirus pandemic brought home the inescapable universality of interdependence: unless all are safe, no one is safe. Indeed, long before the onset of the virus, the existential threat, not just to humankind as a whole but to Planet Earth itself, posed by man-made climate change, underscored the paramountcy of universal interdependence: unless all survive, no one survives. By what faculty of mind or spirit, by what response of governance not only at the level of independent nation-states but within that innermost sanctuary of the individual conscience, can we hope to put to practice the precept of interdependence? In an exploration of the nature of interdependence as a unifying principle that binds together what Donne called the ubtle knot of humanity, Nobel prize-winner Octavio Paz referred to the three pillars on which the French Revolution based itself: Liberty, Equality, and Fraternity. Appraising this trinity of Muses which has captivated the human mind over the ages, the poet.

Philosopher noted that it is possible to have liberty without equality, as made evident by societies in which unbridled capitalism reigns supreme. It is also possible to have equality without liberty, as shown by communist and other authoritarian regimes. But in its all-enfolding embrace, fraternity encompasses both liberty and equality in a brotherhood of egalitarian freedom in which the rights, and responsibilities, of each individual ensure those of all others and of the body politic as a whole. According to Paz it is fraternity, the raksha bandhan of kinship, that is the centripetal force which unites not just the human species but all life, everywhere, on our living planet. In fraternity lies the tacit recognition that independence is not a singularity but a plurality, that each independence is buttressed and bedrocked on the underlying principle of interdependence. Either all are free, or none is free. In the 75th year of our Independence, we have overtaken our colonial masters to become the fifth largest economy in the world. As the V-shaped recovery after Covid contributed to this important milestone, now is a good point to analyse the path of the Indian economy. For this purpose, examine growth over a three-year period from 2019 to 2022 for the April-June quarter. That some parts of Bengaluru, including areas where the very wealthy live, slid into crisis following two days of heavy rain is a combination of a good thing, an economic boom, and a curse many other Indian cities also suffer from, terrible urban planning and realtor greed. True, Sunday was the third heaviest rainfall ever recorded in Bengaluru in September. But it could have been handled better had the city evolved differently and city managers done their job. Before the IT boom, Bengaluru was as much a city of lakes and tanks with interconnected channels as it was a city of parks. The chaotic pace of the city development, rising land prices and scarcity of land coupled with developer greed and official collusion ensured that an intricate ecosystem meant for irrigation underwent a rapid change in character. Some lakes and tanks have been filled up, others including their channels have been choked by concrete from all sides, and many tanks could do with dredging to improve water-holding capacity. Changing rainfall patterns aggravated this vulnerability. But small changes can still make big differences. Bengaluru areas that had their stormwater drainages repaired recently were reportedly spared this time, while many plush enclaves, which ignored the problems beneath, were waterlogged. The situation facing Bengaluru isn unique. Hyderabad, another city of lakes and tanks, is regularly hit by waterlogging, including “flash floods”. Cities with rivers flowing through them like Mumbai, Chennai and Delhi also face the risks spawned by rapidly depleted floodplains. Revealingly, as outrage grew in Bengaluru, Karnataka CM Basavaraj Bommai stepped in and offered details of funds released for stormwater drains etc. Why does a mega city like Bengaluru generating thousands of crores in revenue have to be micromanaged by a state government, which.

CRPF-hcm-Eng-Test-Dated-2026-10-04-Test NO.-28689

Bharat Jodo Yatra, Congress first attempt at mass contact in a long while, is an improvement to the extent that motion is better than appearing moribund. That this comes as party elections are again caught up in petty controversies does mangle the message a bit. But the yatra won hurt the party – unless Congress leaders, especially Rahul Gandhi, make the mistake of thinking that trying to establish direct contact with people is what the party needs, or needs the most, to win polls. The electoral reality doesn allow for such romantic notions. It not that yatras don yield political dividends – but they do so only when the yatris have already communicated a solid message, one that stands out from the clutter. LK Advani rath yatra, YSR Reddy Andhra marches, later emulated by son Jagan, Mamata Banerjee many marches in Bengal – all of these had a good story to tell and sell. Congress and Rahul don have anything right now to tell or sell that will attract new support or even hold back those deserting. There are two parts to the problem of not having a solid political message. First, Congress has lost the ideas battle even as BJP has got smart on where and how to deploy Hindutva, become past master at social engineering, hijacked the erstwhile left-of-centre welfarist political line, and packaged muscular nationalism in a people-pleasing way. Second, and related to the first, Congress has lost so much ground in so many states – it hasn won an election on its own since 2018 – that even if it were to come up with a good story, it will lack heft. Therefore, more than yatras Congress must do the real hard work of rebuilding in at least four or five major states. Otherwise, Bharat may not take much notice. It is astonishing that so little attention has been paid by Congress leaders to organisational atrophy. Electoral defeats needn necessarily lead to withering away of local party structures and mass disaffection among long-standing supporters. After all, BJP lost two consecutive general elections, as have regional parties that have bounced back. Congress, amazingly, has been lackadaisical after losing, occasionally making state-level appointments that have ended in disaster and/or defeats. Little wonder then non-Congress opposition parties have started making their own plans. The road ahead for GOP is long and hard, and it not the route the yatra is taking. Credit rating agency Moody retained India sovereign rating at Baa3 with a stable outlook, indicating that it subject to moderate credit risk. Baa3 represents the medium-grade category. The rating is unsurprising. If anything, India resilience to macroeconomic shocks is greater than what the rating implies. Moody believes geopolitical challenges will not derail economic recovery, leading to the stable outlook. Also, that the negative feedback between the economy and financial system is receding. Among G20 economies India stands out. The base for government debt financing is mainly domestic. The process is smoothened by RBI liquidity operations and a mandate for banks to hold a.

Proportion of their deposits in government debt. RBI also holds foreign exchange to insulate domestic financial markets from external shocks. India is well-placed today in terms of both retail inflation rate and forecast growth rate. Of all these factors, it growth rate that holds the key to a stable environment. Since 1991, India debt sustainability has rested on its growth trajectory. Barring a couple of years, economic growth has outpaced the interest rate on government debt, an important metric of debt sustainability. Government expenditure is generally inflexible while revenue is influenced by growth. Therefore, every protracted spell of a slowdown in growth rate leads to an increase in the debt to GDP ratio. For example, states debt to GDP ratio was 22.6% in 2012-13. Subsequently, as growth trended lower, this ratio worsened to 26.3% by 2019-20. For GoI, the ratio of interest payment to revenue increased to over 40% after the 2020-21 economic contraction from the average 36.5% in the last decade. High growth rate, therefore, is the fulcrum of debt sustainability. That, however, shouldn deter a political conversation on the quality of spending or transparency in budgeting. On March 15, 2022, the UN General Assembly passed a resolution on an "International Day to Combat Islamophobia" (IDCI), sponsored by the Organisation of Islamic Cooperation (OIC). India and France alone gave an Explanation of Vote expressing concern – that combatting the hatred against one specific religion was being elevated to an International Day for the first time. The sandwich can be well-bread or working class, white, brown or almost black. Any which way, it always filling, whatever the filling. Let no toadie tell us that the Raj introduced this frog into our pond, along with the Railways, the babu-cracy and the dak bungalow. Every culture has its age-old version of carb encasing protein/veggie, though admittedly, the Empire helped gobbalise it beyond its native shores. Crepe, pizza-base, puff-pastry, pita, paratha, tortilla, bun, bao, bap, any-grain wrap, each holds anything-goes from roast beef to refried beans. It can be halal, kosher, gluten-free, veg, vegan, pure Jain or pure cardiac arrest. Vada-pav, Jai ho! Bravo la burrito! And, remember, the Americans told the Brits to burger off, that too at a very English ea party in Boston. The thin cucumber sandwich (always white bread, please) is the cliché of the high tea to which every literate tourist to Britain genuflects. If you aren shuddh shakahari, you would add the coronation chicken sandwich, invented to celebrate that of Queen Elizabeth. The hordes who turned out in thousands would need something that could be readily assembled and didn have to be served hot. It was also symbolic because the chopped cooked chicken was smothered in mayo spiked with Veeraswamy curry powder. Whenever the next coronation happens, there ll be a staggering, and far spicier array of contenders, going by the multicultural andwiches to choose from at London weekend markets. You could go home hungry, unable to decide from the treet food of the world, dished out usually.

By the corresponding immigrant. After agonising over this halloumi wrap, that bacon bap, etc etc, I finally chose a loaded Venezuelan arepa, the crisp corn bread pocket stuffed with shredded meat, beans and a chilli-sprinkled fried banana slice. But, hey, the adjacent Baba-G Bhangra Burgers stall was doing brisker business. If you dare to know, it was a beef patty, opped by an onion-bhajji and doused in tamarind and raita sauces. Sikhening? The story of Ganesh birth from the Shiv Purana is not just popular and fascinating but also one of the most dramatic ones. Through it, could our rishis be trying to communicate to us a profound truth about our lives? The story goes that Goddess Parvati, feeling lonely, creates her gana, attendant, out of the mala, dirt, on her body. One day, she commands him to guard the entrance while she has her bath. At that time, Shiv returns home from his penance and, not knowing him, the guard refuses him entry. Due to his adamancy, a terrible fight ensues and, in the end, Shiv beheads him. Just then, Parvati arrives at the scene and is distraught with grief. Out of compassion and to pacify Parvati wrath, Shiv resurrects him by putting the head of an elephant on his torso. The transformed guard recognises Shiv as his father and bows down with humility. Pleased, Shiv grants him the status of Isha, leader of his ganas, giving him the name Ganesh. He declares Ganesh as the remover of obstacles, the first one to be invoked in any auspicious undertaking. Thus, a stubborn obstacle is magically transformed into a remover of all obstacles by divine grace. The story shows us how to attain freedom from obstacles in life. The gana represents you and I, covered with the impure notions I am incomplete, I am separate from others, and I am the doer of my actions. According to Kashmir Shaivism, these three notions are termed as malas, impurities, because they veil our innate Shiv – divine nature. They create conflict within and without. Since Shakti, the divine power, has created us, we are divine by birth. But these impurities veil that truth. In mystical language, malas prevent the union of Shiv and Shakti. The turning point in the story is the arrival of Parvati, which represents the awakening of Shakti, inner power, by a guru. This is known as shaktipat, descent of grace, and it makes us aware of our true nature, our source – Shiv. It manifests as the awakening – I am perfect, I am complete, I am one with all, I am divine. The me fades away. The notion of me with a sense of doership is the biggest obstacle in one life, for it veils the ever-present peace. It is created and perpetuated by the ignorance of one source and the consequent, constant mental chatter. It is the cause of all mental and social problems we see around us. But when one sees one divine nature as the child of.

Sustainable practices. Kerala rubber industry is a testament to the state ability to balance economic growth with environmental responsibility and innovation. As it continues to evolve and adapt, it will remain a catalyst for the state development and progress Unanimous adoption of the Joint Declaration at G 21 Summit held at New Delhi from 8 Sep to 10 Sep 2023, has garnered immense applause from the world community. It has generated a great hope for millions of under privileged people in the developing countries. I visualize the rise of a new civilization on the horizon which is struggling to get out of its amniotic sac The Global Civilization. Initiative on India Middle East Sea Rail Link, the new Trade Corridor passing through once hostile nations like Jordan and Israel, the agreement on respecting the sovereignty and integrity of each state and inclusion of the African Union are just auspicious indicators for the future of mankind. Team Bharat led by Mr. Amitab Kant and Minister of Foreign Affairs, Mr. Shiv Shankar worked overtime for unanimous acceptance of the joint declaration. While going through the declaration I hear an echo of my answers to London based Ms. Manu Singh Khajuria, founder of The Voice of Dogras, during a video interview recorded on 22 Oct 2020 after she had gone through my autobiography EMBERS the BEGINNING and the of first published on 30 Aug 2018 by Olympia Publishers, London, Second Edition Published by White Falcon Publishers in 2022. The interview titled A Survivor Recount of The Genocide of Hindus and Sikhs of Murmur, 1947. Ms. Manu Singh had gone through every word and every letter of the book hence she could pose focused questions about my experience and my outlook. Before going through the questions/answers I would like to introduce myself and my autobiography. I, Dr. (Ex-Capt) Culver Gupta am a survivor of the Holocaust that engulfed Murmur my birthplace, (Now in POJK) following invasion by Pakistan in 1947. A resume of my autobiography would enlighten the reader about the very purpose of bringing out the story of my life. In fact it is the story of death and destruction that followed the invasion of Pakistan on Murmur on 25 Nov 1947 where twenty thousand Hindus and Sikhs were massacred mercilessly. Thousands of women were abducted and raped or sold to the brothels in various towns of Pakistan. More than being a story of my life it is the story of Murmur an important town of the erstwhile state of Jammu and Kashmir which formed the most tragic chapter of the history of the state. Before going into the questions and answers with Ms. Manu Singh Khajuria the following excerpts from my book should enlighten the reader about the magnitude of atrocities committed on the innocent children, and women, the ailing old men and old women of a town that was a paradise for its people. 26 Nov 1947: In the evening we reached the premises of a school where we were accommodated like sardines in the empty class rooms without water or food for over last thirty six hours since we had left our homes. The rooms were bolted from outside. The children were crying for food and water but soon everyone fell asleep because of the exhaus

It can also identify resilience. For many, the unwelcome cure is the drudgery of adult life. The UAE is investigating a "possible connection to terrorist activity or intent, a disturbing possibility in a region already on edge. But the question, now, is: What needs to be done to ensure that the person already inside does not become the threat, and that the locked door does not become an obstruction to saving the plane? In the coming months, the country's scientific community will face a different climate-related challenge. Praise has deservedly poured in for Captain Smit Machchhar, who helped save the lives of 174 passengers and eight crew members aboard Flydubai flight FZ1073, after his co-pilot stabbed him in an apparent attempt to bring down the aircraft. the workforce. Take reading, for instance. Like many a viral phenomenon, the Instagram page that started it all began innocuously enough: A college student took photos of overweight stray dogs and posted them. After a 12. For them, the question is whether the habit will stick once the reward is taken away. In ten lines, it succinctly conveys the Indic view of humanist spirituality. First, a quick recapitulation of the song in free translation. In recent years, India has become reasonably proficient in forecasting atmospheric disturbances that cause cyclones. Such observations today need to be complemented with field-level observations. In the aftermath of 9 11, locked cockpit doors and strict rules governing access became a central defence against hijacking. In the habit's fullest manifestation, however, there's always a tinge of madness, a willingness to sacrifice sight, sleep and society for the printed drug. The name, Vishnu, means all-pervasive. Micro-monitoring can help discern ecological nuances and help direct scarce resources to imperilled ecosystems. Similarly, tracking soil moisture, vegetation stress and animal movement is necessary to identify unusually dry patches in forests early. Making a conscious decision to read a book for so many minutes each day, at a fixed time, and having the discipline to maintain it, is one thing: Structured, rational, methodical. Uttarakhand's recent moveNarsinh Mehta has immortalised himself through his song, Vaishnav Jana Tu. But behavioural scientists and psychologists argue that a reward mechanism may nudge people with some interest in reading over the line. Identifying thermal distress in coral reefs can, likewise, provide valuable insights into the health of marine ecosystems and help protect shorelines from waves and erosion. At the especially vulnerable Vasundhara Tal, sensors will link changes in water levels, snow depth and other features of the glacial lake with early-warning mechanisms. The country has proven scientific capacity to understand weather, but ecological monitoring remains divided among research institutions, government departments, universities, and citizen groups. Gandhiji patronised this song and its popularity has grown since then. The challenge is to institutionalise these without undermining the trust and operational autonomy that are indispensable to flying an aircraft. It's a "gamification" strategy, allowing peopl

never bloat in pride Who silently suffer the world and never slur others Chaste in thought, word and deed, blessed is their mother Equi-eyed, free from craving, they see a mother in other women Though tongue may tire, they never lie and never usurp others' wealth Untainted by moh-maya, their mind is firm in dispassion Ram's name is their talisman, all holy waters flow in them Rid of greed, free from guile, above lust and anger A blessing to meet with such, Narasayya, they free a whole clan. How easy is it to jump from one to the other? Time monitoring of glacial lakes is an important initiative in this respect. This incident should force the aviation industry to confront a fundamental vulnerability: How secure is an aircraft when the threat comes not from outside the cockpit, but within it? Soon, it became a community project, with people sending photographs of their favourite portly pooches. The song redefines what true Vaishnavism connotes. Only a thorough investigation can provide answers. 9 crore persons were employed in organised manufacturing, about 3. A strengthening El Nino can reduce water availability in rivers and wetlands and increase stress on farms, forests and oceans. The poll, which began with 64 corpulent canines, is down to four hopefuls: Googoo (Saket), Tara Khan (Khan Market), Hero (Malviya Nagar) and Gola (SDA Market in Hauz Khas). The answer may lie in a combination of rigorous screening measures of cockpit and cabin crew, improved systems for identifying potential security risks, and protocols that encourage the crew to respond swiftly if a member of the flight team becomes a threat. A new initiative by Singapore's government to encourage people to read books rather than doomscroll raises the question. There's reason to be optimistic. Last month, nearly 200 ecologists in the country issued an appeal for an emergency ecosystem-wide monitoring network. Israeli PM Benjamin Netanyahu has said that the attacker underwent "radical indoctrination" and was able to bypass restrictions governing airlines operating flights to Israel. Two wetlands may have different capacities to withstand a prolonged dry spell. There's a sense in which the cultivation of a habit can be a journey from reason to unreason, dilettante to fanatic. History shows that it is possible for movements and campaigns to create a reading public. The word 'vaishnav' refers to anyone who subscribes to the idea of cosmic unity or soul-kinship. With a 6 per cent rainfall deficit during the southwest monsoon, the IMD expects extremely dry conditions over most of the country for the rest of the year. Despite being seriously wounded, Machchhar managed to open the cockpit door, allowing passengers and crew to overpower the attacker and enabling other pilots on board to take control of the plane. India has entered a potentially difficult post-monsoon period. The FZ1073 episode should prompt a wider assessment of aviation security - from screening and continuous vetting, to procedures for responding when the threat comes from within the flight deck, not without. Tara and Gola are, unfortunately, contesting for the honour posthumously. It connotes the Cosmic Soul, the Crea

Shiv, the me recedes in the background and is seen as a figment of one imagination. With this realisation, life seems perfect as it is, and all obstacles simply disappear. Upon realisation of one true source, the mind becomes a useful tool. It no longer wreaks havoc. This is represented in iconography by showing Ganesh riding a mouse. Mental activity calms down in divine presence. Having celebrated Ganesh for the last few days, as we immerse him in the ocean, on Anant Chaturdashi, let us not forget this profound lesson. He will return next year to remind us of this truth again. Despite major economies in the grip of high inflation and experiencing slowdown with fears of stagflation, Indian economy is better placed now 13.5 percent during the current quarters on account of better performance by the agriculture and services sectors. The GVA growth in the farm sector is 4.5 per cent in the first quarter compared to 2.2 per cent a year ago. Even with current growth, the poll estimate of 15 percent growth in Q1 as against 20.1 percent GDP recorded in the corresponding quarter in 16.2 percent. Going by these estimates, curve. The gross value added as against 18.1 percent in the previous fiscal that was on a lower base. The is estimated at Rs.36.85 trillion while the nominal GDP for the quarter is projected at current prices at Rs. 64.95 trillion. Despite the continuing pangs of supply side disruptions and geopolitical risks continuing to push up crude oil prices, the performance in Q1 of FY23 can be considered as good. Key growth indicators: Fast cruising towards near normalcy in businesses after pandemic has started turning into endemic, the noteworthy feature is the revival of services sector — trade, hotel, transport, communication and services related to broadcasting – where the GVA grew by 25.7 per cent during the first quarter against 34.3 per cent. The services PMI rose to 56.7 in August 2022 from 45.4 the month prior, as new orders and output increased robustly. But it is yet to mine its full potentiality. Financial, real estate and professional services grew by 9.2 per cent in the first quarter over 2.3 per cent earlier. Public administration, defence and other services posted 26.3 per cent growth against 6.2 per cent in the first quarter of last fiscal. Despite Manufacturing Purchasing Managers Index (PMI) going down by a tad to 52.3 in August 2022 from 55.3 in July due to weaker output, it is expected to recoup in the current quarter as the factory orders are on rise at quickest pace. The composite Purchasing Managers Index (PMI) produced by IHS Markit increased to 55.4 in August from 49.2 in July. As a result, the PMI jumped above the 50-threshold, indicating an expansion in business activity from the previous month. These trends of revival have the potentiality to accelerate GDP growth in coming quarters. The government is confident that even when Q1 GDP growth is at 13.5 percent, the coming three quarters.

Will be able to make up and the fiscal -FY23 should end at 7 percent as against the RBI estimate of 7.2 percent which may get revised in coming monetary policy review on September 30. Emerging headwinds: According to RBI, the recent softening of commodity prices and supply chain pressures have eased the terms of trade shock that India faced in the aftermath of the pandemic and the war. Though upside risks cannot be ruled out but the average crude price in August is at USD 97.4 per barrel has turned out to be lower than what was assumed for the full year – USD 105 per barrel while articulating the fiscal and monetary policy resolutions. The lowering of crude prices will also favour the current account deficit (CAD) to balance it within the sustainable levels. In the backdrop of foreign exchange reserves of US$ 561 billion (as on August 26), enough resilience is built against external shocks to meet the exchange rate management needs. It can be seen from the fact that while the US dollar has appreciated by 11.8 per cent during the current financial year whereas the INR has depreciated by 5.1 per cent, which is among the lowest in the world. At the same time, the health of the banking system is sound. It is well capitalised and well provisioned, with improved asset quality. This constitutes a key pillar of financial stability and is expected to provide positive spill overs for the financial markets. As a result, the bank credit growth as on August 12 reached a high of 15.3 percent year on year (YOY) as against 6.5 percent recorded in the corresponding period in previous year. Another notable feature is the rise in credit flow to industry at 10.5 percent – reaching a 8 year high due to surge in demand. Coming to the fiscal state, the government is confident of maintaining fiscal deficit at the planned level at 6.4 percent of GDP during FY23. The direct tax collections as on August 30 rises by 33 percent to reach Rs.4.8 trillion as against Rs.3.6 trillion collected in the same period last year. If the trend continues, the direct tax collections could exceed the budgeted level of Rs.14.2 trillion during FY23. Similarly, the goods and services tax (GST) collections remained above Rs.1.4 trillion mark for a sixth month in a row and increased 28 percent YOY to reach Rs.1.43 trillion in August 2022 on better compliance and revival in consumption. The positive trend is evident from demand side where the real Gross Fixed Capital (GFC) formation, as a percentage of GDP, stood at 34.7 per cent — the highest in Q1 in 10 years. Private Final Consumption Expenditure has also revived and its share in GDP stood the highest in Q1 in a decade, supported by various measures undertaken by the government to boost consumption in the past two years. The volume of e-way bill generation in August 2022 registered YoY growth of 15 per cent indicating robust domestic.

CRPF-hcm-Eng-Test-Dated-2026-10-05-Test NO.-28699

Economic activity by the movement of goods and tax collections. Outlook of the economy Fighting the two black swan events Covid19 crisis and War between Russia and Ukraine, Indian economy has been able to recover with prospects of posting a percent growth in though many think tanks have downgraded India growth prospects for the current fiscal data of percent growth was released. Moody revised its projections downwards from percent to percent but retained India sovereign rating intact at Baa with table outlook. Similarly Goldman Sachs lowered outlook percent to percent percent to percent, percent to percent already had cut its forecast to percent in July while outlook of tands. Indian financial markets have been no exception to respond to the hawkish outlook of Federal Reserve views expressed at the Jackson Hole deliberations. The uptick in policy rates are likely to continue for at least next two quarters before RBI could pause depending upon how inflation trajectory plays out. Taking a holistic view, despite the downside risks to growth, the domestic economy is set for a faster rebound and is better positioned compared to many economies. The world has set itself the goal of halving greenhouse gas emissions relative to 2010 levels by 2030, to avoid more than 1.5 degrees Celsius of global warming. Within this, India has committed to its own set of climate targets. Humanity also aims to eradicate extreme poverty – people living on less than USD 1.9 per day – by 2030. The achievement of climate goals and a reduction in poverty may not be mutually exclusive outcomes. Eliminating extreme poverty may not impede efforts to mitigate climate change. There is evidence to back this. Findings of a 116-country study by the University of Groningen suggest that in 2014, the top 1% of global carbon emitters were responsible for 15% of emissions. The study drew stark parallels, based on the disparity in emission patterns. Among them was the finding that the average American had 15 times the carbon footprint of the average Indian. Researchers then modeled the effect poverty reduction may have on greenhouse gas emissions. People living in extreme poverty consume less and therefore have a tiny carbon footprint. Their carbon footprint is, as per the study, one-tenth the footprint of the average person. Around 364 million Indians are extremely poor. Lifting them out of extreme poverty will lead to a mere 4% increase in India emissions. Similarly, lifting the over 1.2 billion people living in extreme poverty globally would result in a mere 1% increase in the world emissions. Poverty is a complex problem that necessitates multi-pronged solutions and a consistency in efforts to fight it. A combination of interventions in everything from access to basic infrastructure, education, disease eradication and wellbeing, livelihood creation and protection provides answers. The government has made efforts to increase the ease of living of citizens and dispel poverty. It has invested in increasing access to education, healthcare, and basic public infrastructure. Earlier this month, our country achieved the milestone of providing.

CRPF-hcm-Eng-Test-Dated-2026-10-05-Test NO.-28700

Hello and welcome to another edition of The Weekly Vine. This week, I am writing the newsletter while flying 30,000 feet in a metal container, as people around me complain about the lack of legroom because most airlines seem to believe the average passenger is the size of Tyrion Lannister. Flying always makes me think of a Varun Grover joke, where he asked not to take singhara (water chestnuts) on the flight since they have sharp edges, leading to this epochal exchange (I am paraphrasing to avoid censors): VG: How stupid will I look if I hijack a plane with water chestnuts? Security Guard: Now imagine how stupid we will look if we let you hijack a plane with water chestnuts. On the other hand, flying at this height makes me reflect on the remarkable ingenuity of humankind smart enough to look at the skies, wonder if we could fly, and then figure out the science and technology to make it safe enough for the average nincompoop to travel. Yes, the same ones who grumble about legroom while hurtling through the sky in a metal tube and need to be reminded to close their tray tables. I m sure there a LinkedIn lessoning hidden in there somewhere, but let not dwell on that. This week, we re going to discuss Elon Musk surprising similarities to Genghis Khan, the Delhi earthquake (which perfectly epitomised every Dilliwalla), JD Vance vs. Europe, why Cobra Kai never dies, and our word(s) of the week: Peak Bangalore. Amid rumors that he has birthed a 13th child, Elon Musk tweeted that he finds the history of Genghis Khan particularly interesting. Now, that not surprising at all, given the fact that Elon Musk and Genghis Khan are practically the same people warlords hell-bent on spreading their seed, conquering new lands, destroying the status quo, annihilating their opponents, and reducing carbon footprints on a global (or universal) scale. The similarities don stop there. Like Musk, Genghis Khan was an avowed environmentalist, single-handedly reducing the world collective carbon footprint albeit through mass genocide. To top it off, both are empire builders, reshaping entire civilisations in their wake. At its peak, the Mongol Empire spanned 9.27 million square miles, making it the largest contiguous land empire in history. Musk Empire, meanwhile, spans multiple industries the modern version of empires including the automotive sector with Tesla, space exploration with Space, and social media with X. His ventures in Neuralink and xAI only add to his ever-expanding techno-empire. Much like Genghis, Musk is particularly fond of established power structures either. His purchase of Twitter coincided with a full-scale war on traditional media, and his tacit support for Donald Trump has sent shockwaves through global politics. While Genghis Khan razed cities and obliterated dynasties, Musk appears to be following a similar trajectory at least in the eyes of his detractors as he turns his sights on Europe after conquering the New World. Next stop: Germany, the erstwhile stomping ground of the Third Reich before he moves on to Mars. My first memory as a child (at least one that I can comprehensively recall) is of the Great Bihar Earthquake of 1988, with its epic

CRPF-hcm-Eng-Test-Dated-2026-10-05-Test NO.-28701

All style and barely any substance. It was unusually shallow (5 kilometers deep), relatively low on the Richter scale (magnitude 4.0), and yet the tremors were strong enough to be felt across the region much like the annoying Dilliwalla who brings an entire street to a halt during a road kalesh (the Delhi way of saying clash). There a reason why we feel shallow earthquakes more strongly, much like the hollow vessel that makes more noise. All levity aside, while the quake was loud, it barely caused any damage. But earthquakes, in general, are quite a conundrum for those of us in the media profession. Imagine manning an online desk when an earthquake strikes do you file a report and send out an alert, or do you run out of the building to save your skin? While we have sworn any version of the Hippocratic Oath, it understood that our job is to inform. So, what takes precedence: our evolutionary instinct for survival or our professional commitment to keeping the public informed? I must say, there something very enlightening about seeing Europeans our former colonial overlords being taken to task by a hillbilly in a suit. There has been much handwringing in Europe over JD Vance remarks at the Munich Security Conference, where he told Germans to get on with AfD, reducing some politicians to tears. With Trump America refusing to foot the bill for Europeans to fight meaningless wars or take siestas, the European continent as a whole (where every country was once an opium-selling colonial overlord) is worried that Americans no longer want to pay for their lavish lifestyle especially when the last innovation to come out of Europe was cookies (and not the tasty kind). But even among Europeans, it the Germans who have become MAGA new bugbear, facing elections soon with the growing worry that the might actually come to power. And that where the panic over free speech comes in. In Germany, certain opinions are simply not allowed to be spoken, let alone debated. The government, media, and establishment parties have gone into full-blown crisis mode over the rise of the not by confronting their arguments head-on, but by trying to shut them down entirely. German authorities have been toying with the idea of banning the, an elected political party, on the grounds that it is a threat to democracy. The irony, of course, is lost on them. Nothing says defending democracy quite like making sure people are allowed to vote for the wrong candidates. Enter JD Vance, who, in his blunt, Midwestern way, pointed out the obvious: instead of pretending AfD supporters don exist or criminalizing them, why not actually engage with them? This was apparently too much for the delicate sensibilities of Germany political class, who reacted as if he had just announced his personal support for the Kaiser. Vance comments exposed core hypocrisy of modern Germany: a nation that loves to preach about democracy and tolerance but cannot tolerate any political force outside the approved establishment consensus. Germany assault on free speech does stop at. The country has some of the strictest speech laws in the Western world, with people regularly prosecuted for saying the wrong things online.

CRPF-hcm-Eng-Test-Dated-2026-10-05-Test NO.-28702

100 million rural households with potable tap water connections under the Jal Jeevan Mission. The scheme envisages linking every rural household with a functional tap by 2024. When Prime Minister Narendra Modi launched the Jal Jeevan Mission in 2019, only about one-sixth of rural households had doorstep-water supply. Now, around 53% have it. Much has also been done to eradicate diseases of which India carries a colossal burden. India aims to eradicate AIDS and Malaria by 2030. Steps with wide-ranging impact have resulted in a 66% decline in estimated number of annual new HIV infections in India from 2000 to 2015, against the global average of 35%. AIDS-related deaths declined by 54% from 2007 to 2015 against the global average of 41% decline during 2005-2015. A national strategy to fight Malaria is in place. Organizations like Malaria No More are fueling the fight to end malaria in India but broad-based private sector participation will be key. Private sector participation drives technological innovation in tracking and reporting hidden malaria cases. This, coupled with robust policy and mechanisms for malaria reporting from India private health sector will help estimate the true burden of the disease in the country. Likewise, initiatives geared at education, skill development and livelihood creation have a vital role to play. State governments have schemes for each of these areas. Take the case of Madhya Pradesh. The state budget for tribal welfare in financial year 2020-21 was 10 times more than the budgetary provision made in 2003-04. The state administration has overseen the implementation of welfare schemes such as the Mukhyamantri Awas Sahayata Yojana, the Kanya Saksharta Protsaahan Yojana, and the Vimukt Jati Hostel Yojana to provide tribal students housing, food, and scholarships and ensure they learn, upskill, and become atmanirbhar (self-reliant). While governments have made concerted efforts, they have also been supported by civil society in increasing the reach and efficacy of grassroots initiatives. I have had the good fortune of witnessing the work of Smile Foundation. The NGO has, through initiatives like Shiksha Na Ruke, Project Manzil and Smile Twin e-Learning Program, impacted the lives of thousands of young people from the marginalized sections of society. The world is looking at India to present a model of climate-conscious poverty reduction. We are in a crucial phase of development and must continue to attack the multi-faceted and layered problem of poverty through rigorous implementation and monitoring of social development initiatives. Only this will make development truly inclusive, substantive, and sustainable. The Battle of Asal Uttar that was fought from 8 to 10 September 1965, fifty-seven years ago, is regarded as the largest tank battle since the Battle of Kursk of the Second World War. Military historians have described this battle as the turning point in the war leading to the Pakistan Army total rout and complete failure to achieve its sinister objective to grab Jammu and Kashmir and Amritsar city. This battle reflected not only the courage of the Indian soldiers but also the dexterous strategic planning and.

The execution. The battle was fought when Pakistani forces, with the help of American Patton tanks, had captured Khem Karan, a small Indian town 5km inside the international border. Pakistani forces were eyeing a siege at the holy city of Amritsar, and the Indian army knew that if Amritsar fell, Indian defeat would be certain. Pakistan under Gen Ayub Khan had been hatching a conspiracy to grab J&K since long, in which China played a crucial role. Pakistan made well calculated moves to exploit the international developments. During 1950s, Pakistan had joined SEATO and CENTO mainly to get arms from the US. It supported the US during the Cold War for this purpose. From 1954 to 1963, the Pak Army, Navy and Air Force received a number of contemporary weapons from the US, which were considered front line equipment of NATO. Simultaneously, Pakistan after the 1962 War, began to develop closer relations with China to deal with India. In 1963, the boundary agreement was made with China, under which it gave a part of J&K under its illegal occupation. Chou En-li visited Pak in July 1964 and discussed US-China relations. In March 1965, Ayub visited China and obtained the Chinese support for grabbing J&K. On the other hand, India decides to remain neutral and support Non-Aligned Movement. India played an important role in the Bandung Conference and supported the Non-Alignment Movement (NAM). The US was suspicious of India role in the NAM and didn want that it influenced other countries in the region. While soon after the 1962 war, the US came closer to India, Lyndon Johnson reversed the policy of Kennedy. China hostility towards India increased after 1962. The Soviet Union however began to see that India was not under the influence of US and the relations began to improve. The Pak Army received 650 Patton, M 36B2 Tank Busters, Chaffee and Walker Bulldog tanks, 200 M113 Armoured Protected Carriers (APCs), 105mm and 155mm artillery guns, anti-tank recoilless rifles (RCLs) and Cobra anti-tank missiles and a large quantity of small arms and machine guns of various types. The Pak Airforce was equipped with two B-57 bomber squadrons, one F-104 supersonic squadron, nine F-86 Sabre jet squadrons, one C-130 transport squadron, six other squadrons of various aircraft, 30 helicopters, Falcon Sidewinder missiles and many types of bombs and rockets. The Pak Navy was modernised with one cruiser, five destroyers, eight minesweepers, one water tanker, one submarine and three tugs. The Pakistani armed forces were also trained to use these weapons. Pakistan raised eight pure Patton regiments and three mixed regiments in which there was one squadron out of three of M 36B2 Tank destroyers. The M 36B2 had the same gun as the Patton tank and even Sherman MKII tanks were equipped with Patton tank guns. While India after the 1962 War debacle did increase its defence budget from Rs 300 crore to Rs 800 crore, most of the budget was spent on raising Mountain divisions to strengthen the defences.

CRPF-hcm-Eng-Test-Dated-2026-10-05-Test NO.-28706

India main battle tanks, the Centurion Mk VII, of the Second World War vintage were no match to Patton tanks in fire-power, range and mobility. Gen Ayub had the perception that the Indian forces would not be able to withstand the Pak onslaught and held the view that one Pak soldier was equivalent to three Indian soldiers. He wrote to Gen Musa prior to the war, "As a general rule, Hindu morale would not stand for more than a couple of hard blows delivered at a right time and the right place. Such opportunities should be sought and exploited." Pakistan, finding the situation favourable, launched "Op Desert Hawk" in Kutch in April 1965 by arrogantly claiming that India was in occupation of Pakistani territory. This conflict encouraged Pak. China supported Pak and UK sponsored an agreement between India and Pak. Pak became confident that international pressure would prevail on India. The above was actually the first phase of Pakistani strategy while the second phase had already started in tandem. Pakistan believed that there was considerable unrest against India amongst the population in Kashmir and all that was required was a spark to set-off a conflagration and Kashmir would fall to Pakistan. The "Op Gibraltar" was implemented, encouraged by China. About 30,000 infiltrators entered on 5th August, 1965, followed by Pak Army. Soon followed the "Op Grand Slam" to cross the international border by the Pak Army. After the fall of Khem Karan, Indian forces consolidated defences in Asal Uttar. GOC Indian 4th Mountain Division, Maj. Gen. Gurbaksh Singh ordered the division to fall back and assume a horseshoe shaped defensive position with Asal Uttar as its focal point. The sugarcane fields allowed the Indian soldiers to hide. The unharvested sugarcane crop was a serendipity. Pakistani tanks took the bait and moved with their tanks but their pace was slowed down because of the swampy ground. The Pakistani forces had fallen for the horseshoe trap. Many of their tanks couldn move, and in the meanwhile, good old Indian tanks took care of the enemy and destroyed their ranks. Pakistan lost over a hundred tanks in the Battle of Asal Uttar alone. India lost 10. No account of the Battle of Asal Uttar is complete without the mention of the bravery of Havaldar Abdul Hamid, who was later awarded the Param Vir Chakra. He took on the advancing Patton tanks with his ordinary anti-tank jeep. On September 9, Hamid had destroyed three Patton tanks with the help of his jeep, and had essentially become an eyesore for Pakistani soldiers. While he was attacking the fourth Pak tank, he was killed. The Battle at Asal Uttar led to the creation of Patton Nagar, which is also known as the graveyard of Patton tanks. The crushing defeat of Pakistan in this battle was decisive. Simultaneously, Phillora was captured on 11th September, in which Pak 51 Patton and M 36B2 tanks had been destroyed. These completely shattered the myth of superiority of the Patton tanks.

CRPF-hcm-Eng-Test-Dated-2026-10-05-Test NO.-28707

These battles reflected the Indian soldier courage and professionalism. The Indian troops had also crossed the Ichhogil canal but later had to withdraw for lack of reinforcements. By 22 September, the east bank of the canal was secured. The Battle of Asal Uttar was really the turning point of the war. Going by the aims, India achieved them while Pak miserably failed to capture J&K. Indian objectives were to defeat Pak attempt to create a rebellion in Kashmir to defeat Pak offensive and to occupy minimum of territory necessary to achieve the purpose. In a show of solidarity with Pakistan, China accused India of border violations and abducting 59 Yaks on 17th September that received ridicule of the international community. The Tashkent Agreement followed, under which India gave up Haji Pir and Tithwal. Perhaps the Indian leadership out of its sense of restraint, fair play and endeavour to seek enduring peace and goodwill with the neighbour agreed but India lost an opportunity to settle the issue. Rahul Gandhi five-month, cross-country Bharat Jodo Yatra, says Congress, will carry the party message to the nation as well as re-energise an ailing organisation. True, after a string of electoral defeats, multiple high- and low-profile desertions and with a party leadership in the doldrums, Congress workers are in dire need of attention and motivation. But can the yatra help Congress regain the trust and credibility it has lost since 2014? Income Tax officials this week carried out pan-India raids on registered unrecognised political parties (RUPPs), following up on an earlier probe into their murky financial transactions. These raids need to be located in a larger clean-up process initiated by the Election Commission. It a good move and should be carried to its logical conclusion. The problem stems from an unrealistic assumption that underpins income tax benefits given to political parties. It that tax exemptions combined with funding anonymity will strengthen electoral democracy and not lead to abuse. RUPPs are political parties whose vote share is below a threshold needed for recognition. EC data showed there were 2,796 RUPPs a year ago, a 300% increase over two decades. In the 2019 Lok Sabha election, only 30% of RUPPs contested. RUPPs are entitled to 100% income tax exemption provided they meet conditions pertaining to furnishing tax returns. However, like all political parties they can cloak the identity of donors who make cash contributions up to Rs 2,000. The combination of tax exemptions, funding anonymity and easy registration is a system ripe for abuse. It this system that EC is trying to clean up. In pursuit of its aim, EC in June deleted 111 RUPPs from their list. Even if RUPPs are prevented from gaming the system, the core problem remains. While all political parties are entitled to tax exemptions, the incentive to abuse special privileges extended to them comes from anonymity offered to donors contributing to parties. The effort to tackle anonymity has so far been restricted to lowering the maximum permissible limit for cash contributions.

CRPF-hcm-Eng-Test-Dated-2026-10-05-Test NO.-28708

From the earlier level of Rs 20,000. This is inadequate. The introduction of electoral bonds, which are promissory notes payable to the bearer on demand, is problematic. In fact, it poses more of a threat to the integrity of the electoral system as it not only allows anonymous contributions without a ceiling; it also opens the door to more problematic sources of funding political parties. The Supreme Court should prioritise hearings that challenge the use of this instrument. A survey of 86,000 Class 3 students from 10,000 government and private schools found of students lacking basic numeracy skills and 37% with limited skills. To look at the glass half full, met global minimum proficiency and had sufficient skills while boasted superior skills. No doubt, many schools, especially catering to middle classes, are impressive. But the lagging is India major challenge explanation. And it also a reminder to politicians who target English that children and their parents have a clear preference. Some findings seem puzzling and need further examination, including the quality of the sample. Poor performance in children numeracy skills in rich states like Tamil Nadu and Delhi compares with above average performance in one of the poorest states, Bihar. Bihar, in fact, returned very low scores in the recent National Achievement Survey. Nationally, the news is not hopeful. It doesn take a math whiz to figure out that so many children lacking basic numeracy skills is real bad news for a modern economy. Think about when these children grow up – many low-skill jobs will disappear thanks to automation. Already, as evidenced by educated unemployed queuing up for jobs below their learning qualifications, India has a jobs scarcity and employability problem. Spending more money on primary education is necessary but not sufficient. The quality of teachers and teaching are problems that can only be solved by making schools accountable to their customers – parents of children who study. That means decentralisation of education administration, something not on any political agenda. India is racing to touch the magic target of producing 1 lakh doctors every year to achieve the WHO recommendation of one doctor per 1,000 populations. The target seems close as the National Medical Commission website shows 612 medical colleges with 92,793 seats. While there is no dispute that countries need adequate health personnel, how much does touching this specific target impact improvement of the common indicators used to gauge a health system? A look around our neighbourhood and at countries in the same economic category as us – lower middle income – shows many made remarkable progress well before they had enough doctors. Clunk, click – every trip! That was the mnemonic, the memory aid, that was being engraved into the public mind in the UK when Bunny and I were living there as temporary residents over 40 years ago. Clunk, click – every trip! was the sign-off line of a government safety campaign being run on TV and other media to get people to fasten their seat belts when travelling by car, During.

Spl-CRPF-hcm-Eng-Test-Dated-2026-10-05-Test NO.-28709

Shortly after the speech, he disclosed that US and Iranian officials had held three hours of talks in New York, with further talks expected. While compound archery was expected to make a mark, the mixed team winning gold and booking a quota for the LA Olympics was a shot in the arm. The appeal is salient because the current El Nino is likely to be too large for any one institution to track. Simply put, investors are demanding higher returns from governments on the tradable debt instruments issued by them that, being backed by the sovereign's power to tax and print currency, are ostensibly default risk-free. That's roughly twice the 0. This after reports of infighting and a string of poor results had brought down the team morale. 5 trillion spending for the coming fiscal year. Indians will want English to remain one of their unique selling points as the government looks to jobs in global industries as a pathway to prosperity. The two-language policy of English and mother tongue would be best for India. But any purported intent of promoting cross-regional language learning may just not be served though the Court has found merit in learning more Indian languages as a way of strengthening the federal structure. 1 percent for Japan, first time since 1996. And unlike before, they aren't differentiating much between the governments of advanced and emerging economies. The Supreme Court, through its frequent interventions, is pointing to the various aspects of the three-language policy that the Central Board of Secondary Education (CBSE) does not seem to have thought through. The CBSE has stubbornly resisted compromise at various stages in the hearing. US President Donald Trump's address to the UN General Assembly on Wednesday appeared to have little regard for the foundational purpose of the organisation whose podium he was standing on. He also renewed his attack on climate science. indigenous, putting its categorisation as a foreign language under question. In its latest ruling, the Court has said that current Class 6 students should be given the same relief as students in Classes 7, 8 and 9, whose final Class 10 examination will only be an internal assessment, not a Board examination. 2-1. The turnaround after coach Sjoerd Marijne returned to the helm was commendable. The US's outstanding public debt has surpassed $40 trillion. Regardless of its eventual judgment, the Court's intent at this stage seems to be to point to the pitfalls of the policy and at least soften the rough edges. It's everywhere today, displayed in reading lists, challenges, aesthetic photographs and dating-app bios. A truly world-class performance came from Kumkum Mohod, just 17, who ended the Korean dominance by winning gold in individual recurve the first-ever Indian male or female to do so at the Asian Games. It had earlier asked if the policy could start from 2027, not 2026. The Washington-based Institute of International Finance has estimated advanced economies pay about $3. Some schools, especially in the southern States, will continue with the regional language such as Tamil or Kannada as the other Indian language. The Court is looking to ease the burden on students, at

comeback story from boxing belonged to Parveen Hooda stripped of her 2023 bronze medal for an anti-doping whereabouts failure, she bounced back to win gold. This is particularly imperative because warmer winters, erratic western disturbances, and declining snow cover are already altering the moisture cycle in the Himalaya, leaving forests vulnerable to fires before spring. English knowledge has consistently given Indians an edge in employment in global industries such as the IT sector. A strenuous learning of an additional Indian language serves little practical purpose though it may cater to the atavistic impulses of some. Apart from his usual listing of what he describes as domestic triumphs, Trump threatened to annihilate Iran if a deal was not reached, declared that freedom will be coming to Cuba and presented US actions against Venezuela as both a victory and a warning to other countries. 7 percentage points rise in the 10-year Indian government security yield, which closed the week at 7. Many schools will stick to Sanskrit as the second Indian language all the way up to Class 10 while Hindi would be the first. The boxers with three gold medals and wrestlers with a haul of two, too, contributed to India's late climb after athletes from both sports failed to finish atop the podium in the last edition. The increase in borrowing costs for the governments of these countries over the past one year works out to 1. Earlier, the Court had intervened to point out that suddenly learning a new language in Class 9 would be too disruptive if the students had not studied a second Indian language until Class 8. The work of the Chartist press in 19th-century Britain to inculcate the habit among the working class is one example. The second reason is commodity inflation from war and weather-induced supply shocks, driving central banks to raise interest rates and signal further increases ahead. It has been in use in India for at least 300 years and is the leading language of education, courts, and professions widely practised by Indians; it also serves as the preferred link language for many. 21 per cent. 34 and 4. Add 50 GWh of battery energy storage. But within a week, thanks to a late surge and a few spectacular medals, the national anthem was played 21 times. There are three reasons for this. On artificial intelligence which he said will henceforth be called superintelligence in US documents he dismissed warnings about AI risks as a hoax, a striking position to take on the eve of his summit with Chinese President Xi Jinping, when he had an opportunity to lay out the stakes of the US-China technological competition. The total gold count fell from 28 in Hangzhou, and so did the total medal tally, from 107 to 85. A Super El Nino may not cause an ecological shock by itself, but it can push an already stressed system past a threshold. The US President, however, appears to have kept space for diplomacy. The perception of mounting fiscal risk also explains Chinese holdings of US Treasuries falling to an 18-year-low of $618 billion in July 2016, from the peak of $1. The National Education Policy 2020, though advocating for two Indian languages, also mentions t

The 15 months that we stayed in the UK, Bunny and I would, along with the rest of the populace, dutifully clunk and click before every car trip. But when we returned to India, clunking and clicking were soon forgotten. First of all, in those days cars in India didn have seat belts, let alone other safety features like air bags. Even now, when such fail-safe devices have been introduced in four-wheelers in India, few of us travelling in the rear seat of a vehicle bother to belt up, though a beeping alarm impels those in the front seats to use the safety precaution. Why are we as a people, by and large, so nonchalant about our own physical safety and that of others? It is almost as though we take pride in being what a former US ambassador, John Kenneth Galbraith, described as a functioning anarchy, particularly when it comes to following the most basic rules of the road, like lane driving, or not speeding, or not overtaking from the wrong side. Or wearing seat belts. It as though there an imp of the perverse within us which mocks, Rules? Seat belts? Sissy stuff, meant for wimps, not for us! It been reported that in 2020 there were some 15,000 deaths, of drivers and passengers, who didn use seat belts. The deaths of Cyrus Mistry and a co-passenger, both of whom apparently were unbelted, have created a media storm which, it is to be hoped, will raise public awareness of a basic safety issue and help to prevent future tragedies. Vishnu is also known as Anant and Anant Chaturdashi is related to Samudra Manthan, churning of the milky ocean. Samudra Manthan is a popular mythological story that is mentioned in the Mahabharat, Srimad Bhagavatam and the Vishnu Purana. Also known as Ksheersagar Manthan and Amrit Manthan, the Sagar Manthan offers profound lessons that are of relevance even today. The key role in Samudra Manthan is played by Vishnu. The story goes that when Indra, the king of Devas, lost all his powers due to a curse by Durvasa Rishi, his kingdom was captured by the Asura king, Bali. He then approached Vishnu for help. On Vishnu advice, the Devas agreed to churn the ocean with the help of Asuras, to draw out the elixir of immortality. Collectively we can achieve significant goals. The Manthan started with Mandrachal Parvat being used as the churning rod and Vasuki, the serpent, as the rope held by the Devas and Asuras on either side of the mountain. To prevent the mountain from sinking, Vishnu took Kurma avatar, tortoise form, and provided it the required base. beginning of the churning emerged Halahal, the poison that was powerful enough to destroy the universe. To protect the cosmos, Shiv swallowed it and stored it in his throat, signifying courage, compassion and detachment – all essential to withstand obstacles that emerge at the start of any project. When the churning was resumed, from the ocean emerged many ratnas.

CRPF-hcm-Eng-Test-Dated-2026-10-06-Test NO.-28714

Precious gems; divine animals, such as Kamdhenu, Airavat; goddess of wealth, Lakshmi; and at the end emerged Dhanwantri, with a kumbh, pot, of amrit – elixir of immortality. All the ratnas were divided between Devas and Asuras, and Lakshmi became the wife of Vishnu. The Devas and Asuras now started quarrelling over the amrit. Seeing this, Garud who was with the Asuras, snatched the kumbh and flew away. In the process, he spilt some amrit in four places – at Prayagaraj, Haridwar, Ujjain and Nashik – where Kumbh Mela is held to date. Now, Vishnu took the form of Mohini, a beautiful woman, and enticed the Asuras into giving her the kalash to distribute the elixir among all. She then began giving it first to the Devas. Here Mohini stands for illusion. Even though they were so close to their goal of acquiring the elixir, the Asuras succumbed to false bravado and were deluded. Subsequently, they never got to partake any of it. The story of Samudra Manthan tells us that collective effort can yield rich rewards for everyone, and that the ego of power and wealth often becomes the reason for one downfall. The example of Kurma avatar is detailed in the Bhagwad Gita, which says: "One who is able to withdraw the senses from the outside world, just as a tortoise withdraws its limbs into its shell, is established in divine wisdom." Manifesting as Kurma avatar, the Divine showed us the way to detach ourselves from worldly attractions, so that we can go within to connect with the divine in us. Amrit that is finally obtained is symbolic of Self-realisation achieved after one gives up false pride. Dhanwantri stands for health, implying that the body and mind must be in sound state to attain Self-realisation. The world has set itself the goal of halving greenhouse gas emissions relative to 2010 levels by 2030, to avoid more than 1.5 degrees Celsius of global warming. Within this, India has committed to its own set of climate targets. Humanity also aims to eradicate extreme poverty – people living on less than USD 1.9 per day – by 2030. The achievement of climate goals and a reduction in poverty may not be mutually exclusive outcomes. Eliminating extreme poverty may not impede efforts to mitigate climate change. There is evidence to back this. Findings of a 116-country study by the University of Groningen suggest that in 2014, the top 1% of global carbon emitters were responsible for 15% of emissions. The study drew stark parallels, based on the disparity in emission patterns. Among them was the finding that the average American had 15 times the carbon footprint of the average Indian. Researchers then modeled the effect poverty reduction may have on greenhouse gas emissions. People living in extreme poverty consume less and therefore have a tiny carbon footprint. Their carbon footprint is, as per the study, one-tenth the footprint of the average person. Around 364 million Indians are extremely poor. Lifting them out of extreme poverty will lead.

CRPF-hcm-Eng-Test-Dated-2026-10-06-Test NO.-28715

To a mere increase in India emissions. Similarly, lifting the over 1.2 billion people living in extreme poverty globally would result in a mere 1% increase in the world emissions. Poverty is a complex problem that necessitates multi-pronged solutions and a consistency in efforts to fight it. A combination of interventions in everything from access to basic infrastructure, education, disease eradication and wellbeing, livelihood creation and protection provides answers. The government has made efforts to increase the ease of living of citizens and dispel poverty. It has invested in increasing access to education, healthcare, and basic public infrastructure. Earlier this month, our country achieved the milestone of providing 100 million rural households with potable tap water connections under the Jal Jeevan Mission. The scheme envisages linking every rural household with a functional tap by When Prime Minister Narendra Modi launched the Jal Jeevan Mission in only about one-sixth of rural households had doorstep-water supply. Now, around 53% have it. Much has also been done to eradicate diseases of which India carries a colossal burden. India aims to eradicate AIDS and Malaria by. Steps with wide-ranging impact have resulted in a decline in estimated number of annual new HIV infections in India against the global average of AIDS-related deaths declined by against the global average of decline during. A national strategy to fight Malaria is in place. Organizations like Malaria No More are fueling the fight to end malaria in India but broad-based private sector participation will be key. Private sector participation drives technological innovation in tracking and reporting hidden malaria cases. This, coupled with robust policy and mechanisms for malaria reporting from India private health sector will help estimate the true burden of the disease in the country. Likewise, initiatives geared at education, skill development and livelihood creation have a vital role to play. State governments have schemes for each of these areas. Take the case of Madhya Pradesh. The state budget for tribal welfare in financial year was 10 times more than the budgetary provision made. The state administration has overseen the implementation of welfare schemes such as the Mukhyamantri Awas Sahayata Yojana, the Kanya Saksharta Protsaahan Yojana, and the Vimukt Jati Hostel Yojana to provide tribal students housing, food, and scholarships and ensure they learn, upskill, and become atmanirbhar (self-reliant). While governments have made concerted efforts, they have also been supported by civil society in increasing the reach and efficacy of grassroots initiatives. I have had the good fortune of witnessing the work of Smile Foundation. The has, through initiatives like Shiksha Na Ruke, Project Manzil and Smile Twin e-Learning Program, impacted the lives of thousands of young people from the marginalized sections of society. The world is looking at India to present a model of climate-conscious poverty reduction. We are in a crucial phase of development and must continue to attack the multi-faceted and layered problem of poverty through rigorous implementation and monitoring o

Causes catastrophic situations. People in underd eloped countries already struggle to pay for the most basic healthcare services due to their unbalanced economic conditions. Making use of these cutting-edge tech-based solutions for improving human life can be their optimal use, given the continual presence of technology in nearly erything around us. A legal framework has been built in the healthcare sector that is assisting the use of digital technologies in a systematic and transparent manner in order to make healthcare services more accessible and less expensive for patients as part of the Digital India programme. Additionally, it aims to facilitate communication between customers patients and suppliers hospitals, laboratories, pharmacies, and drug manufacturers. Now, both patients and healthcare providers records can be kept. By offering remote consultations and other services, digital technology is also offering an alternative to doctors at-clinic appointments, which might save patients money on travel expenses. The following sections describe how new technologies and new models are assisting the healthcare sector: Wearables and Smartphone based pr entive care can a game changer The Indian wearable market is growing. There were about 3.5 million wearables shipped, making India the third-largest market after China and the US. Wearables and smartphone based healthcare will be a real game changer and on how patients will get the primary and pr entive care in India. This growth will be able to help patients to have a constant track on their vitals. If you own a smartphone, you essentially carry a high-tech mobile computer in your pocket. This is being used as l erage by tech companies to create mobile d ices and applications that can transform your smartphone into a medical d ice. Despite having the ability to replace much larger, more expensive equipment. As a result, healthcare technology is more economical with this method because there is no need to rush to the hospital for a cold or the flu. Digital health record to enable value based care Considering our population and the initiatives of digital health record, India is having the potential to become one of the world largest healthcare data centers. This will help for many studies and AI to build predictive models. Government is coming up with ABHA, the Ayushman Bharat Health Account ABHA, which was earlier known as Ayushman Bharat Health ID was launched by the Indian government in 2021 and is aimed at providing a digital health ID to the population. This was launched by the National Health Authority NHA, which is part of the Ministry of Health and Family Welfare. As per the government, ABHA is the first step towards creating safer and efficient digital health records for you and your family. Telemedicine Telemedicine is a method of remote medical consultation that often entails speaking with a medical expert over the phone or via video. The field is still olving. Over a million patients have reportedly used telemedicine services in the past 12 months. There are s eral advantages to telemedicine. Often, it is less expensive.

CRPF-hcm-Eng-Test-Dated-2026-10-06-Test NO.-28717

Prime Minister Narendra Modi and President Xi Jinping have not spoken or met since PLA made multiple incursions into eastern Ladakh in April-May 2020. But now it seems the stage is being prepared for them to meet on the sidelines of the Shanghai Cooperation Organisation summit in mid-September in Uzbekistan. Indian and Chinese troops kicked off disengagement from Patrolling Point-15 in the larger Gogra-Hot Springs area on Thursday. But there is still no progress on the much bigger faceoffs at Demchok and Depsang Plains. Plus there are concerns that post-disengagement buffer zones are largely coming up on what India claims to be its territory even as at Depsang PLA has been actively blocking Indian soldiers around 18 km inside what India considers its own territory. Also read: India, China troops to complete disengagement at Gogra-Hot Springs in Ladakh by September 12 Tensions in eastern Ladakh continue to cast a shadow over all aspects of the India-China relationship. It is also clear that PLA decision to forcefully alter the status quo along the Line of Actual Control in 2020 was well-planned. And with Xi set to be appointed as General Secretary of the Chinese Communist Party for a third five-year term, expectations of a business relationship predicated on a peaceful border should be tempered. The watershed moment for India renewable energy sector has arrived. The Indian government pledge to achieve net-zero emissions by 2070 at the COP26 in Glasgow has set in motion an irreversible clock and all stakeholders will have to do their bit to reach the destination. Home to one of the largest clean energy expansion programs, India has consistently shown its intent to transition to sustainable energy solutions through the goals it has set for itself. India has pledged to meet 50% of its energy requirements from renewable sources by 2030. An ambitious goal, but not impossible to achieve, I truly believe. Through motivated efforts from the public and private sectors, the country has attracted investments worth more than USD 42 billion in the renewable energy sector since 2014. The growth in such investments and initiatives are essential for India to realise this transition towards cleaner energy sources. This offers a massive, untapped investment potential. With innovative renewable energy opportunities for investment, the funding could even surpass this requirement. Recently, I chaired a working group on Renewable Energy and CleanTech as a part of the Impact Future Project initiative by Aspire Impact. We collectively zeroed-in on the 10 best ideas which can collectively attract an investment of USD 266 billion and a revenue of USD 146 billion by 2030. Opportunities in Electric Mobility, Micro Grids, Green Gas Grids, Utility Scale Solar, Carbon Recycling, Energy as a Service (EaaS), Consumer-centric CleanTech, Peer-to-peer Energy Trading, Green Hydrogen and Green Bonds, among others, all have the potential to help India reach its net zero target. Investments in innovative renewable energy business models can help transform the country energy usage pattern and also set a path for sustainable energy sources for generations.

Bimal da died relatively young at the age of 57 of cancer leaving behind a body of work which has immortalized him Parinita, Do Bigha Zameen, Biraj Bahu, Sujata, Parakh, Madhumati, Devdas, Bandani are his renowned works in Hindi. His greatness could be ascertained from the fact that these films were both commercially and critically successful and received many Filmfare and National awards. However; the subject of the article is Faith Bimal da had in Poorna Kumbh Mela rituals. This is revealed in a Book Chapter titled Bimal da written by Gulzar who was his assistant at that time. This is part of the book by name he Man who spoke in pictures- Bimal Roy, edited by his daughter Rinki Roy Bhattacharya. Here Gulzar narrates his days spent with Bimal da when he was working on a film script titled, Amrita Kumbha, with the background of the Kumbha Mela at Prayagraj in 1954 when thousands of people died in stampede, based on the Bengali writer Samresh Basu book Amrit Kumbha Khoje. The book was his prized possession, kept by his bedside. It was heavily marked with pencil in between the printed lines and on the margins. Numerous small paper notes were inserted and pinned in it. It had become bulky and seemed as if there was another book in the belly of the original. Bimal da had a clear vision of the screenplay and he had mastered the sequence and characterization. It is believed that if one takes bath at the confluence of Ganga, Jamuna and Saraswati at Sangam in Prayagraj on the auspicious Jog Snan derived from Yog day during Poorna Kumbh when the early golden sunrays are touching the water you are cured of all sins and diseases and live for one hundred years. Gulzar had asked Bimal da if he believed in it and Bimal da replied that it was a matter of faith and written in hastras. The hahi Snan of Kumbha is called Jog Snan by Bengali devotees. The novel was in first person by the writer. In the novel there was one character of Balram who suffers from tuberculosis and wanted to bathe at Sangam to be cured of his disease! As the people were rushing out of the train at Allahabad he gets crushed in the stampede and dies. Bimal da would repeatedly point out that the writer had killed him too early and insisted that it should die later in the film. Gulzar argued that the writer perhaps has shown his death in the beginning so as to indicate the tragedy stampede in Mela in the end and to create a balance of the narrative, but Bimal da was adamant. Once he was detected with cancer, which was not disclosed to him, he was confined to his home but his commitment and perseverance for this film never waned. He was to go with his team and take shots of the Annual Magh Mela in Prayagraj but since he fell ill he directed Gulzar and his team to take the shots and gave them detailed instructions. The main shooting was to take place during the Poorna Kumbh in December 1965. Gulzar did visit Magh Mela in Allahabad and took some shots, but his mind was occupied by the illness of his master. The team also knew that the film was unlikely to be completed. The following conversation between Gulzar and Kamal da Cameraman brings out the reason behind Bimal Roy obsession with the fi

General Motors and Ford left. But here the catch Tesla cars are ed to dirty water. This is a bigger problem for all of India. Even after years of trying to clean rivers, we still dump too much untreated waste into them sewage from homes expensive! The cheapest one, the Model 3, costs around 28 lakh in China. If India gets imports, the price will be even higher because of taxes. So, it will mostly be for rich people who care about the environment. Tesla had thought about coming to India before in 2014 and again in 2022 but backed out both times when the Indian government refused to lower import taxes without a promise to build cars here. So why is Tesla trying again now? Well, the company is doing as well as before. In 2022, it made a 30% profit on each car, but by the end of 2024, that number dropped to less than 15%. Its cars are now selling for around $40,000 on average, a big drop in price. In Germany, where Tesla has a big factory, EV sales fell 40% last December. Even though Tesla set a record in China, selling 657,000 cars last year, local brands like BYD and Xiao are giving it tough competition. Tesla also faces new challenges. Other carmakers, including BMW and Mercedes, are already making electric cars in India. And Tesla once-unique technology is so special anymore companies like BYD are working on their own self-driving features. Meanwhile, in the US, Elon Musk is fighting legal troubles over Tesla crash investigations and car safety claims. All of this means Tesla really needs a new, growing market. India could be that place, but it won be easy. Let see if Musk finally makes it happen this time! India has many rivers, but sadly, a lot of them are polluted. The Central Pollution Control Board CPCB studied 603 rivers and found that 279 of them have dirty stretches. This means that some parts of a river may be clean, while others are not. One big example is the Kumbh Mela, a huge religious event in Prayagraj where millions of people take a holy dip in the river. The Uttar Pradesh UP government worked hard to keep the water clean, but recent reports from the National Green Tribunal NGT show a problem. A report from February 3rd says that while most sewage treatment plants were working properly, there was a rise in harmful bacteria called Fecal Coliform FC. This bacterium comes from human waste and can make people sick. With over 55 core 550 million people already taking a dip, it important to investigate if the cleaning efforts were enough. We vet already seen a disease outbreak in Maharashtra linked to dirty water. This is a bigger problem for all of India. Even after years of trying to clean rivers, we still dump too much untreated waste into them sewage from homes, chemicals from factories, and pesticides from farms. About 25% of India garbage is still not processed properly. Since India has the largest population in the world, bad waste management leads to serious health and money problems. Rivers have the power to clean themselves, but only if we stop polluting them. The only way to fix this is by keeping a close watch on water quality and taking strong scientific actions to protect our rivers.

Causes catastrophic situations. People in underd eloped countries already struggle to pay for the most basic healthcare services due to their unbalanced economic conditions. Making use of these cutting-edge tech-based solutions for improving human life can be their optimal use, given the continual presence of technology in nearly erything around us. A legal framework has been built in the healthcare sector that is assisting the use of digital technologies in a systematic and transparent manner in order to make healthcare services more accessible and less expensive for patients as part of the Digital India programme. Additionally, it aims to facilitate communication between customers patients and suppliers hospitals, laboratories, pharmacies, and drug manufacturers. Now, both patients and healthcare providers records can be kept. By offering remote consultations and other services, digital technology is also offering an alternative to doctors at-clinic appointments, which might save patients money on travel expenses. The following sections describe how new technologies and new models are assisting the healthcare sector: Wearables and Smartphone based pr entive care can a game changer The Indian wearable market is growing. There were about 3.5 million wearables shipped, making India the third-largest market after China and the US. Wearables and smartphone based healthcare will be a real game changer and on how patients will get the primary and pr entive care in India. This growth will be able to help patients to have a constant track on their vitals. If you own a smartphone, you essentially carry a high-tech mobile computer in your pocket. This is being used as l erage by tech companies to create mobile d ices and applications that can transform your smartphone into a medical d ice. Despite having the ability to replace much larger, more expensive equipment. As a result, healthcare technology is more economical with this method because there is no need to rush to the hospital for a cold or the flu. Digital health record to enable value based care Considering our population and the initiatives of digital health record, India is having the potential to become one of the world largest healthcare data centers. This will help for many studies and AI to build predictive models. Government is coming up with ABHA, the Ayushman Bharat Health Account ABHA, which was earlier known as Ayushman Bharat Health ID was launched by the Indian government in 2021 and is aimed at providing a digital health ID to the population. This was launched by the National Health Authority NHA, which is part of the Ministry of Health and Family Welfare. As per the government, ABHA is the first step towards creating safer and efficient digital health records for you and your family. Telemedicine Telemedicine is a method of remote medical consultation that often entails speaking with a medical expert over the phone or via video. The field is still olving. Over a million patients have reportedly used telemedicine services in the past 12 months. There are s eral advantages to telemedicine. Often, it is less expensive.

Billion global market for medical tourism. According to a strategy paper submitted by India tourism ministry this year, this number is based on an estimate of approximately 14 million medical travelers who cross borders each year. Conclusion: The future holds a transformation. ery industry is currently incorporating new technologies and this trend will continue to accelerate. In the foreseeable future, the healthcare sectors will generate a lot of opportunities. The country healthcare and medical travel industries will entually be able to match the highest l els of international standards of excellence. The multiple initiatives being made in this area by the public and commercial sectors point to a prosperous future for India healthcare and medical travel industries. "I may not agree with you, but I will defend to the death your right to make an ass of yourself." – Oscar Wilde This is a true story. On a winter ening Julia Romanova, a 22-year-old Russian model, was walking toward a crowded Mendeley kaya metro station in Moscow. On the way, Malchik, a black stray dog who lived on the pathways, barked at her defending his territory. Romanova reached into her rucksack, pulled out a kitchen knife, and stabbed Malchik to death. A bronze statue of Malchik now stands at the entrance of the station. It has become a symbol of emancipation for the stray dogs. The moral of the story is that barking is injurious to life, and if you happen to be a stray dog and value your life, do not bark! Barking is normal behavior for dogs. But if a dog is excessively into it, en its master may consider "debarking" it or d ocalizing it. Well for the people who are not initiated in a dog life, "D ocalization—also known as debarking, d oicing, or bark softening—is a surgical procedure performed under general anesthesia to remove portions of a dog vocal cords, the procedure is called ventriculocordectomy. It is not always one who has to resort to surgery or take the harshest step. There are other measures in place to decrease the volume, pitch, and intensity of the dog bark. A dog can be made to undergo either partial or total d ocalization. Spiteful barking can be tackled through training, by offering it a bone or a pat on the back. If that doesn work well then the dog is asking for punitive measures. At the next l el oral surgery can be performed. It is a procedure through which a dog vocal cords are suppressed. It can soften the tone or take away the barking for a while. But the big question is why the dogs bark in the first place after all they have to spend a good amount of energy and strength to do so. Well, some dogs are born to bark, on other extremes, some don bark at all. Sometimes they bark to signal a threat or danger that others may not be aware of and they see it as their divine.

Take up the cumbersome task of manually scanning ery application to select the right candidate. Initiating assessments After shortlisting the rel ant resumes, these automation tools help in creating standardised and valid assessments based on job requirements. These can include tests measuring cognitive capacities, technical aptitude, and personality attribute that are deemed fit for the role. Post the assessment, a list of scores can be obtained, which can be l eraged by the managers to make informed hiring decisions. Avoiding bias One may aspire to be objective in screening and selecting candidates for a job but unconscious biases may creep in. Automating the hiring process helps companies get rid of these prejudices. Some of these software have the option of tracking the diversity and inclusion rates in the company, which helps avoid homogeneity and imposed uniformity in the workforce. Better management Candidate relationship management systems help convey information to the candidates via automated emails. It also ensures that applicants remain on board while the hiring goes on by keeping them informed and engaged in the process. This way the company has fewer chances of losing desired candidates due to the tediousness associated with the long processes of recruitment. Reducing the time taken in hiring The longer the time taken up in filling up a vacant position, the higher are the costs involved. Moreover, the company incurs additional costs worth the work that would have been done by the employee during that time. Automating processes like screening and assessments can save time and money for the company. Make advertising more efficient Such software place advertisements of vacant places in a way that it can reach the target audience and attract quality candidates. It also reduces costs and enhances the brand message of the employer. Advertising automation tools help post job openings that popularises the brand value and gives an estimate of the work culture in the organisation. Better tracking opportunities Usually, a large number of candidates apply for a job. Tracking individual applications, in such a scenario, can prove to be burdensome. With the help of applicant tracking systems, recruiters can easily keep a track of all candidates and access their information at any l el of the hiring process. In addition to speeding up the process, this system ensures that employers do not lose out on desired candidates due to errors in keeping records. Bottom line To conclude, HR automation platforms accrue multiple benefits to companies. Along with this, the applicants are also spared the dreariness associated with long hiring processes and biases in recruitment. It does not take away from the importance of HR professionals but supports them by ridding them of the burden of performing important but boring tasks manually. Accessible healthcare facilities and quick-thinking new solutions can turn out to be a blessing in disguise. Particularly in Tier 2 and 3 areas where there are still shortages of medical professionals and services, which results in a lack of pre endive treatment and a delay in response that.

elsewhere. Both sides have immediate and shared interests in these areas, which means something can be agreed upon without first resolving the harder questions. In awarding the 2026 Nobel Prize in Physiology or Medicine to Hegemann, American neuroscientist Karl Deisseroth and German biophysicist Georg Nagel, the Nobel Assembly has recognised what is effectively a new era in neuroscience. The transition from calling for peace to working for it is welcome. The US and Iran are locked in a stalemate. The pinprick of illumination that was made by Hegemann's curiosity has since expanded to shed light on neural pathways that could once only be guessed at. Hegemann, along with Nagel, discovered channelrhodopsin, a protein that enables Chlamydomonas to react to light in half a millisecond - compared to the 10 milliseconds that it takes the human eye to process information. Iran, too, while defiant, has left the door open for talks, with President Masoud Pezeshkian saying in his UN speech that Tehran is ready for dialogue without accepting the language of force. The first is the persistent deficits run by developed country governments, due to aging populations, expanded social welfare commitments alongside military build-up, and voter resistance to tax increases or entitlement cuts. Its defence budget for 2026 reached a record $1 trillion, with the Donald Trump administration proposing $1. On this front, India's interests align with those of the world. But even as the EC went back on its own record of inclusiveness, even as it shifted the burden of proof onto the vulnerable voter and set up a hurdle race at every stage of the SIR, the Court kept giving it the benefit of every doubt. The simplicity of the alga's biology, it turned out, was the key needed to unlock the complexities of the human brain, from how different organs are controlled to where feelings, memory, even consciousness itself, reside. More fundamentally, these questions touch the citizen's sacrosanct right to shape her own and the nation's future through the right to vote. Deisseroth then used it to develop a "light switch"that can control nerve cells, thus inaugurating the field of optogenetics. A record of even-handed diplomacy would also answer critics who see India as too close to Russia, a relationship that has drawn scrutiny, not least over oil purchases, for nearly five years. Even if it does not exert as much leverage over Ukraine or Russia as the US and China, respectively, India can demonstrate that it is actively working towards getting the warring parties to talk. Ten-year US and French government bond yields hit 5. Going ahead, therefore, not just the EC, the Court is also on test. It offers hope for a greater understanding of psychiatric and neurological disorders - areas of darkness that could soon become less intimidating. The women's hockey team won the title after 44 years by defeating China in the final. Researchers have been able to identify the precise circuits that control functions and behaviours, from why some people develop a greater preference for sugar to how the rhythms of the heart can affect emotions and how the brain stores information about fear, anxiety

vote, which is at the "heart of our democracy", in "great peril". It is reassuring, too, that it wants answers from the EC on aspects of the decision-making within. Strikes on ports and vessels by both Russia and Ukraine, two major grain exporters, have left farmers in both countries vulnerable and increased the risk of a global food shock. On the penultimate day, golfer Pranavi Urs, little known outside the ranks of those who regularly follow the sport, added a surprise continental title. It was consistent with the doctrine that has driven the Trump administration in its second term: That US military and economic might will determine peace and order, not multilateral institutions and the gruelling work of diplomacy. He referred to debates in the Constituent Assembly to highlight transformational vision and constitutional guarantee. Minister Jaishankar referred to this a few days ago when he warned of a "major food crisis"in the coming months, in addition to the already significant fertiliser shortages caused by conflicts in Eastern Europe and West Asia. If US reluctance to militarily assist Saudi Arabia in the face of Houthi gains is any indication, Trump is aware that further escalation will come with political costs ahead of the midterms. As the Supreme Court takes up cases related to the modalities of the SIR, and the EC's appointment process and functioning, it would do well to listen in to Justice Bhuyan's outlining of what is at stake. It is welcome, then, that the SC has made it clear that it did not approve of the changes made to Form 6, which made the process of registration of new voters more daunting. The citizen's fundamental right to participate in the electoral process has to be protected at all costs. For German photobiologist Peter Hegemann, studying the microscopic alga known as Chlamydomonas in the 1990s, the question was straightforward: How did this simple organism respond to light in one-twentieth of the time that it took the human eye to see? These are not just the concerns of two individual judges, they reflect the disquiet the Supreme Court needs to address to repair the damage done by its troubling silence. Delhi must build on it. In the beginning was a single cell, instinctively moving towards light so that the business of living may continue. An end to the war, or even a de-escalation, would ease such pressures. "Years of freedom struggle and the revolt against foreign rule made the adoption of universal adult franchise a natural choice and an essential ingredient of democracy "Equal vote with equal value, regardless of identity and social location, was the first step in a new nation to achieve equality. They have to do with a multi-member body, a constitutional authority, shrinking, many a time, into a one-man show, undermining the checks and balances within. With due respect, the Court must keep asking questions, again and again. Going forward, Delhi would do well to focus on specific issues such as grain and energy, rather than sweeping questions involving territory or security guarantees. 3 trillion in interest on globally traded government bonds last year. On Sunday, Justice Ujjal Bhuyan framed the issues in a

Duty to alert eryone around. They have a nose fun fact: dog nose is 10,000 times more sensitive than humans for sensing dangers. While others for just being heard and registering their presence or drawing attention and getting some biscuits if you like. Many countries have banned debarking. They say it is a cruel and unnecessary procedure. They maintain that it is done purely for the convenience or cosmetic preferences of his master. Moreover, if there are no barking dogs who would alert of impending dangers in the neighborhood, sometimes en the owner benefits from the excessive barking of dogs. Besides, it a safety valve mechanism by which violence can be averted. Besides, d ocalization causes frustration, which may manifest in destructive behaviors or aggression toward others. Some dogs might choose to bite instead. And this could spread to the whole dog community. Dogs continue to suffer mentally. So much for the dogs now to our very own species where free speech is akin to barking in dogs. Free speech is to humans what barking is to dogs; a kind of catharsis for two different species. But both have their impending danger. Speaking freely or barking both are prone to Romanova knife! It can be slanderous, abusive, sacrilege, and outright profanity. Its other variants include blasphemy, irr erence, and criticism of established mores not to mention criticizing the powers that be. Free speech that we cherish so much thanks to Article 19 2 of the constitution is not so fundamental after all and is the most contentious of all rights. Right to speech and expression can be offensive. It comes with its perils. The offended person can go to any length and stab like Romanova or slap you with a defamation case. And if the speech happens to question anybody religious values, God forbid it could come en after 33 years; vet it with Salman Rushdie. Most of us, wear our identities on our sle es. Our social, cultural values, religious beliefs, nationalism fervor, and what have you are sacrosanct and we may go to any length to defend them. This hypersensitivity translates into zero tolerance towards criticism and we reach out into our rucksack searching for the kitchen knife. We don realize we also walk on the pavement which is someone home. The state happens to be our logical extension; it is as ignorant, power-drunk, and corrupt as our morality to say the least. Think of the freedom of speech as a whip that can rip a person apart, en the state and its statesmen. Criticizing the leader or the decisions is not done. It is not that you were not warned. You were. In 1949 George Orwell wrote 1984, treaties on barking and possible outcomes, in the human context. We moved past 1984 38 years ago but it still haunts us. Winston Smith, a frustrated party worker who sees through the omnipresent ominous ruler Big Brother designs is still figuring out how to come out of Room 101.

Shake, India is evolving into a preferred destination for portfolio flows. Equity and debt have registered a net inflow of while the west financially supported most households, India took the disciplined and lonely path, which succeeded better than its peers. Countries that went for massive stimulus simultaneously with stringent lockdowns are presently witnessing unparalleled inflation. Brueghel, a renowned Brussels based think tank, organises every country discretionary fiscal measures into three groups. 1 immediate fiscal impulse constitute immediate fiscal impulse stimulus. India has 12% of its stimulus in this segment, while the assistance is dominantly targeted toward deferrals and liquidity provisions. India deficit has been more structural than cyclical. As a result, India total debt to gap ratio is relatively healthy compared to its peers. Healthcare first: healthcare vest economy debate was a primetime subject for every news channel in the early days of the pandemic. However, the decision to ramp up health infrastructure on priority proved to be highly accurate in battling the pandemic over two years. When prime minister announced the lockdown, governments at all levels central, state and local acted efficiently. The testing capacity was ramped up. In 5 months, the testing laboratories in the country rose from 14 in February to more than 1596 in august; as a result, the testing rate increased drastically. From launching aerogram set for assistance in contract tracing to quickly setting up dedicated covid hospitals, India agile healthcare response, assisted by adequate financial assistance, is praiseworthy in dealing with the deadly pandemic. From virtually nil production of pep, manufacturing has risen to 600,000. The ventilators production also increased to 1,000 by the end of June 2020. By May, the annual production capability for n95 and 3 layer surgical masks had reached 31.2 million and 1.5 billion, respectively. India has carried out one of the world largest vaccination drive by injecting over 213 cry doses of vaccines. The health sector allocation was hiked by 16% in the recent union budget. Protecting lives and infusing available resources to ramp up health infrastructure and boosting the vaccine drive was the government top priority. Safety net: sanded sandal member, pm each said, unlike most countries which may have opted to supplement the demand creation substantially, India approach focused on constructing a safety net for the vulnerable population and the business sector. The government announced rest 1.70 lakh core for predawn mantra garb kalian yogini about two thirds of the population will be covered under the same ; payment for the first installment of core collateral free loan with 100% credit guarantee and 20,000 cry subordinate debt for stressed memes created a robust safety net. Capital expenditure: Krishnamurthy Subramanian ex chief economic advisor expressed that the government has proactively emphasised capital spending; even when revenue expenditures are handled reasonably well, the multiplier impact is still less than 1. In contrast, capital expenditure has a high multiplier of 4.5 and is, therefore, more pr

Term planning and agile policies, India global ambitions are just not words on paper but a reality in the making. One of the most inspiring views is to see winners rejoice on the stage after achieving a podium finish. The aura created by all such winners spreads an amazing fragrance of motivation in the ecosystem. I always suggest people read autobiographies. I further suggest they carefully go through their life challenges. We read all about their achievements and filter out their life challenges. I strongly recommend people understand their career paths are complex or challenging! Take a deep dive into their life, and you will realize that all the media glory of a celebrity is just the tip of the iceberg. A winning mindset is the first prerequisite for success. Here i am presenting six pillars which build the foundation stone of a winning mindset. The power of thoughts in any situation, you can think of success or an excuse, but never both. Winning mindsets always think positive. Adversities inspire them to come out with better efforts. Once i met a beggar. He was asking for pudding in alms. I said you don even have food to eat. Why are you looking for sweets? He replied i am not sure what i will get to eat today. Nevertheless, what is the harm in asking for something more than expected and assumed? What a powerful thought? I am sure that when people carry such hardwired confidence, they succeed even in adverse circumstances. The secret is to continually be in a self conviction mode of achieving defined targets irrespective of the bottlenecks. Winning thoughts create winners. To be a winner, hank like one. All that one needs to do is to programmer our subconscious into the winning mindset. You are the best once i met the coo of an organisation. My honest confession: if i had met him on the streets, i would have never believed him to be the senior person of a multi billion organisation! I must say he was apparently looking shabby. Your looks never matter, but your self confidence does. You do not have to be flamboyant and handsome to be a legend. Look at a few winners around you, and you will find that not all of them are super handsome. Your appearances never matter, but your thoughts, ideas, values, and ethics does. Be in the right company. Successful people usually spend most of their time with winners. They are competent in finding suitable companions. They never spend a minute in the unproductive company. They aspire to stay near winning mindsets. The benefits of being in the right company are many. It not only inspires you but also helps you generate creative ideas. Positive networking delivers path breaking solutions. Winners create opportunities winning mindsets never wait for the door of opportunity to open up. On the contrary, they keep knocking on doors till they get into a room full of possibilities. They create opportunities. Winning mindsets never.

CRPF-hcm-Eng-Test-Dated-2026-10-07-Test NO.-28733

Will expand India manufacturing capabilities and enhance export; special assistance to states for capital investment scheme enables states to get 50 year interest free loans up to for public health with priority on children and pediatric care; government will release rest 1 trillion interest free cape loans to the states with prerequisites such as boosting gait Shakti, financing the pm gram soda yogini, spreading optical fiber cable network, disinvestment, urban reforms and monetization will elevate India growth story. Demand vest supply: in the early stages of the crisis, there were both demand and supply scares. On the supply side, workforce migration restricted production activity. On the demand side, regular income ceased; therefore, citizens purchasing power plunged. India priority of supply chain management has paid off well; one cannot press the accelerator and brakes together. According to learning lessons from India policy response to the Asian & global financial crises, the macro policy that only improves demand delivers a short term growth and long term high inflation. In contrast, an approach that facilitates demand and supply provides long term growth without high inflation. Progressively, as India unclenched covid, the demand gathered pace; with a healthy supply chain already in place, inflation piped the safe mark but broadly stayed under control. Debt management: managing debt was one of the critical aspects of the pandemic. India successfully tackled debt management by selectively targeting beneficiaries. For instance, even if the government transferred rest 15,000 each to 50 core citizens, it would cost a whopping rest 6 lakh core; even this massive amount will not suffice to give significant assistance to the underprivileged. The enlarged debt adds to the government deficit from a medium to long term perspective. If this debt grows beyond a limit, it can further lead to debt sustainability concerns. In contrast, the government decision to roll out a 7500 cry credit guarantee facility for miss to lend up to rest 1.25 lakh to small borrowers goes a long way, as better targeting enables limited financial profligate. While leading countries face an ongoing economic crisis and soaring inflation, India accomplishes relatively well. From being the 5th largest economy to harboring the potential of being the fastest growing economy, India has made a global statement. While many questioned India economic management of the pandemic, the government has proved its vision and apt reading of the data. The central idea to handle the pandemic was barbell strategy, safety nets & the agile framework, the framework for tackling uncertain circumstances by planning for the present. India has done exceptionally well with limited fiscal space by focusing on the healthcare first policy, developing a safety net, selective targeting, increased cape and debt management. India structural reforms like amending essential commodity act, labor market, meme laws, and others have multiplied India growth. The recent plus data highlighted that India unemployment rate fell to 7.6% in April June quarter 2022, the lowest since the survey began; this highlights In

Cry and give an excuse. Perform beyond expectations winners deliver incredible results. They never work for money but for performance and satisfaction. Once lade pinot a mechanic, was called to repair a washing machine. Coincidentally, it automatically started working as soon as he touched the device. The owner was also surprised to see this. He asked lade for the service charges, to which lade refused. He said i need your permission to open and unassembled this machine. The hesitant owner gave the consent. After 2 hours of working on the machinery, lade could find some significant faults inside. He corrected it and then asked for his service charges. The above illustration is that of a winning mindset. Winners are must different from the masses in terms of the value they bring with them. Winners ignore demotivates these are the people who ignore non constructive criticisms. They know the fact that visionary is usually ridiculed for their ideas. Winners are passionate about crazy and creative ideas. They do not subscribe to conformance. Winning mindsets always think for the end results. They begin with the end in mind. You end up nursing the greatness within yourself when you ignore gossip or disappointing talks. Who is this man who calls himself chainable, if indeed that was ever his profession? His courtier compared him with the father of the nation when it came to understanding people sentiments. But then in new India don be surprised if someone opines that a medicine seller and a drug seller both understand and cater to the well being of the people. The lives of the father of the nation and trump anointed father of India does have many things in common. Bapu crisscrossed the nation on trains to get to know the people and instilled new life in the fight against oppression. On the other hand, the pretender gained fame in the aftermath of the burning of a train and travelled across the state where lives were extinguished and new life instilled in oppression of people he till today recognises by attire. Both loved spinning yarn, one on the charkha and the other on political stage. The mahatma used the charkha, as a tool to symbolise political emancipation and promote self reliance. The pretender made spinning yarn about oneself as well as political opponents as integral tool for self promotion and political enslavement. Experiments with truth catalysed the metamorphosis of a suited booted lawyer into the Sabarmati saint who chased away the British without sword and shield. Truth was never utilized in experiments by the pretenders predawn. His men never shied away from using not just swords but arms of every kind to terrorise political and ideological opponents. One propagated vasudhaiva kutumbakam world is a family and that a true vaishnav understands the pain of other people, sacrifices for their welfare, takes everyone along and doesn boast. The other had no love lost for biological or any other type of family. For him, a truly religious type like.

Him must gold mare shoot people who did toe his line to make others understand that it either his way or highway. Hubris and empty boasting were sine qua non of the pariah of new India predawn. The saint of Sabarmati, who was the darling of the masses, shunned power and pelf like poison. For the chainable of vinegar railway station, whose darlings were his corporate godfathers; power and pelf were the end all and be all of existence. Attire had a special place in political messaging of both. One dressed in dhoti and shawl riled the then British prime minister Winston Churchill who ridiculed him as & a seditious middle temple lawyer, now posing as a fakir of a type well known in the east, striding half naked up the steps of the vice regal palace. The other is better known as having shamelessly dressed up in a suit worth cores with his own name embroidered in gold while hosting an American president who later gave him giant about following Gandhi and way. This pretentious predawn, by the way, also uses attire to recognise and mark a group of people who were not of his particular liking. The two differed on celebration of Independence Day. Churchill bugbear, the naked fakir famously said, celebration of Independence Day with great pomp and show was quite appropriate when we were fighting for independence which we had neither seen nor handled. Now we have handled it and we seem to be disillusioned. At least i am, even if you are not. What are we celebrating today? Surely, not our disillusionment. On the other hand, the self proclaimed & quot jhola uthakar chal denge" fakir could not control the event manager in him and used every independence day to show off his pugdees headgears and even helped businessmen in his home state sell flags worth over rest 500 core by launching a har ghar tiranga campaign. That too at a time when questions are being raised the world over about state of democracy under him. The biggest differentiator between the two was the understanding of their character among their contemporaries. The naked fakir was called rashtrapita by someone who didn subscribe to non violence and was himself a giant of freedom struggle, netaji. The jhoolewala fakir was feared as the orwellian big brother by his peers. From soney ki chidiya bird of gold, the country has become roney ki chidiya crying for help as the economy and democracy sink deeper in quagmire of communalism and cronyism. But then, people elect the government they want and consequently, people get the government they deserve. In the physical realm brands are products or services, but in the mental emotional domain of the prospect, they are a set of attributes that align to consumer needs. So, while a four wheel drive suv brand is a personal transport vehicle in the physical sense, in terms of attributes of the brand it connotes journeys, experiences and adventures in life.

Our sinkers also create our Sanskrit, culture, which in turn creates the samsara, world. Therefore content = destiny. If we allow fear, violence, horror, crime, anger or agitation to be our daily intake, we are more susceptible to experiencing insecurity, fear, worry or stress. When adults consume more of such content, creators produce more of it; children become the next consumers and start experiencing anxiety, panic attacks, depression and even suicidal tendencies. Here are a few steps for digital detox: Morning meditation immediately upon waking up, meditate for 15 minutes to energise you. It will keep you happy and light throughout the day, eliminating the need for content as a distracter to feel good. Traffic control after every hour, pause for one minute to meditate or repeat positive affirmations, to stay at a high vibration while in action. Mindful consumption throughout the day, restrict screen time and avoid any form of low-vibration content. Instead, engage with spiritual content rich in compassion, acceptance, respect, unity, patience, happiness, and forgiveness. Embrace real connections Priorities connecting with people in person rather than relying solely on phone or messaging through apps. Positive influence Post and share only content that uplifts, educates, and inspires, so that you contribute positively to the digital community. Refrain from posting just to seek validation. Social awareness Fear of missing out often drives unnecessary content consumption. In your social group, feel confident in saying, No, I have chosen not to watch that particular content. Minimize distractions Reclaim mastery over your digital habits with these steps: Keep your phone in a designated spot at home, like a landline, to reduce mindless checking and stay present with family. Silence all notifications to minimize distractions. Notifications create a constant sense of urgency, pulling your attention away from the present moment. Make your bedroom a gadget-free space to improve sleep quality. Nightly routine Detox from gadgets at least an hour before bedtime to slow down your mind. Consume self-transformational content for 10 minutes. Its pure vibrations will heal your mind and body while you are asleep. Let be the one to initiate change and create a positive vibration, empowering our family to make similar changes. Lately, there has been a lot of discussion about the responsibility of content creators, which is indeed important. But it times to face an uncomfortable truth: The responsibility of content consumers. Internalise this fact: Just as food nourishes the body, information nourishes the soul. So content is our emotional diet, we become what we read, watch, and listen to. Our every click, every view, every share is a vote. Each time we consume negative or toxic content; we are casting our vote for more of the same. So, content creators simply supply more of what we voted for. If we continuously engage with sensationalist, fear-mongering, or other such low-vibration content, they will continue producing it because their success is fuelled by our choices. The content we consume does just disappear when we close an app, swipe away or turn off

then we have to invest in environmental resources such as water and soil. Gram swaraj, where the decision-making power regarding essential natural resources lies with the villagers, can prove to be a vital solution. What is gram swaraj? The term waraj often has political connotations, but its real meaning is self-rule, or being dependent on oneself. Gram swaraj is when the village is capable of fulfilling its needs on its own. The reason for initiating swaraj at a village level is that the rural system is dependent on farming, and natural resources such as water and soil play a major role in this. The concept of gram swaraj is based on everyone having equal rights over natural resources, and there being no reliance on the market for the supply of these resources. For the villagers, becoming self-dependent when it comes to these resources requires some changes in thought process and behavior. For instance, if a village wants jal (water) swaraj, then it is essential for the people to display ownership and learn how to utilise water and conserve it. Similarly, to achieve swaraj in agriculture, the village should fulfil its food requirements first and only then sell the remaining harvest in the market. This helps cultivate a sense of responsibility towards the resources as well as self-reliance. To be precise, residents need to consider natural resources as their own while using them. What is worrying, however, is that very few villages are self-reliant. After Independence, the ideology of whatever is mine belongs to the government gained prominence. On the contrary, the fundamental idea of swaraj is what is mine belongs to all of us. It means that natural resources belong to everyone, and everyone has equal right over them. This idea promotes self-reliance among people. In its absence, they back out of their responsibilities and leave the management of the resources to the government. This article discusses how gram swaraj can prove most effective in the management of natural resources such as land and water. More than 90 percent of the water available for human consumption is being used for irrigation. It indisputable that irrigation is important in growing agricultural production. But disregarding the environment and using water indiscriminately is putting a lot of pressure on water and land. The first step towards making up for such losses, and consequently towards gram swaraj, is people becoming self-reliant in every aspect of their life. Swaraj begins with the self, and when we talk about the self, land and water are most essential. Since we get grains from agriculture, the route to swaraj begins from the village. Jal swaraj through farming we see the problems around water and land as separate, but their solutions are interrelated. In the past, farmlands used to be prepared keeping water conservation in mind. Uneven fields, wide ridges (furrows), and the presence of trees would help retain groundwater. Vegetables and fruits such as ladyfinger and watermelon were grown on the ridges to help the water stay within the boundaries of the field. Farmers did have to rely on external resources to irrigate their field. Modern farming techniques have

We need to address this issue as a community and include government resources, the private sector, the business community, non-profits, and other organizations to assure that we can help as many older adults as possible. To achieve any long-term results there is an essential need for the business community to join hands between themselves as well as support the Government schemes to effect. In September 2021, the Reserve Bank of India announced the introduction of tokenisation with the aim to add additional layer to protect the financial personal data of customers with respect to the usage of credit and debit cards. However, due to challenges faced by the concerned stakeholders with respect to their institutional readiness, the mandate has been postponed couple of times with the recent timeline being September 30 the of 2022. Tokenisation will have paradigm change with the personal data which is saved on merchant platforms and payment aggregator platforms will have to be removed. Instead, the payment networks would have to initiate a token number which would hide the 16-digit card number, CAVE and expiry date of the customer credit and debit cards. Thus, the merchant platform will not be able to see the financial personal data of a customer and could only view a token number every time a transaction is made. Big enterprises, such as, Visa, MasterCard and Repay have already complied with RBI mandate. From the customer side, there will be no requirement fees for opting for tokenisation. In case the customer does not want to opt for tokenization,, they will still have the alternates of Cash-On-Delivery, and filing their card details every time the customer makes a payment through online mode. The consumer also needs to be explained to stop the shift from digital to that of cash payment. The more time taken for tokenized based transaction to that of card can also become a deterrent for acceptability by consumers. The emphasis to have tokenization also needs to realize that it is a step-by-step process. Banking institutions need to be ready for tokenisation, followed by payment aggregators, and then the merchants. There is a need to provide every stakeholder enough time to adopt tokenisation as it is API of one that leads the other stakeholder. Only then there will be assurances of minimum disruption for small businesses. Countries who adopted tokenisation realized these ground realities. Hence, they took a decade to implement the said mandate only as an alternate method of online payment. A country like India cannot afford to implement such decisions in haste, especially when majority of the Indian population is yet to be integrated in the digital payment ecosystem. For instance, currently thousands of online transactions take place online per second. However, the test runs of tokenisation revealed that one online payment transaction took approximately 7-8 seconds to be completed. Such a huge delay in processing transactions could lead to technical snags and system getting frozen mid transaction. This could also deter customers from making payments online and force.

The biggest culprit appears to be the State-owned company HAL. The coalition that emerges after October 27 will help shape not only Gaza's future, but Israel's trajectory. Ranked into more source material, a new chapter in another new beginning that brought more bestsellers. The situation in Gaza, where more than 70,000 people have been killed in the last three years, continues to be enormously disturbing. Instead of the sanctioned strength of 42 squadrons, the current strength is 29. The IAF is running on nearly 75% steam. The horrific terror attack on Israel by Hamas three years ago, in which almost 1,200 were killed and 251 taken hostage, set in motion a war that continues to ripple far beyond Gaza. Pakistan, on the other hand, is increasing its air power with the help of Chinese fifth-generation fighter jets. Even his death, arriving on the eve of the publication of Adam & Eve, carries the theatricality of a final twist. A woman was sexually assaulted by seven men at a fraternity house in a US university which, when informed of the crime, allegedly did little to punish the perpetrators. This is why it is also a mistake to limit the conversation to what unfolded on one US university campus or treat it as the aberrant behaviour of a handful. That would risk underplaying the extent to which everyday sexism and gender stereotypes, normalisation of rape in the form of jokes and the sexualisation of women shape views about consent, about who deserves to be punished and who is shamed for what was done to them - across cultures and borders. His appetite for drama, however, proved ruinous in politics - his ascent through Conservative ranks and his ambitions for high office ended in disgrace after a libel case, followed by his conviction for perjury and imprisonment. The Cornell case survivor had to drop out of college. The university closed the case after a half-hearted investigation. Whether this range of disturbing reactions is rooted in a misplaced sense of loyalty, fear of offending one's peers or causing social discomfort or just indifference is immaterial. British writer Jeffrey Archer, who died at 86 on October 5, might have been the first to admit that his life was the sort of script that could have been rejected by an editor for being far too dramatic. This is what militaries do. Tejas Mk 1A, a homegrown jet was hailed as the panacea for this problem but its deliveries are delayed by almost three years. The traditional tardiness of many of India's public sector undertakings has been ignored for too long. The much-touted peace plan of US President Donald Trump has made little progress. Athlete, MP, political aspirant, bestselling novelist, convicted perjurer, comeback artiste - the arc of Archer's life showed a great talent for reinvention, a phoenix-like ability to rise from the ashes. 4 billion that the UN estimates will be required for recovery and reconstruction over the next decade. Within Israel, the Gaza war has exposed deep divisions over the government's conduct - especially in light of revelations that Netanyahu ignored warnings from Egypt and the UAE about an impending Hamas attack - and the country's entanglement in regional c

tuIndia needs to induct 30-40 jets every year only to stem the decline in squadrons; expansion is another story. No lasting settlement in Gaza is possible without Israel's participation, or without Hamas giving up arms - peace still doesn't look within reach. Hamas's disarmament remains an issue locked in an impasse: Israel says reconstruction cannot proceed without disarmament, while Hamas, which prolongs the stalemate and the suffering of Gazans, resists disarmament without a full Israeli withdrawal first. The power to enforce meaningful progress lies ultimately with the White House, but the US President seems consumed by the political fallout of the war with Iran. At the same time, the once-unbreakable US-Israel alliance is fraying: Public support for Israel in America has fallen to historic lows, and the bipartisan consensus around military aid shows signs of weakening. IAF, too, must ensure that it keeps the existing pool of its men and machines battle-ready, irrespective of the factors beyond its control. In an interview to fellow writer Anthony Horowitz for The Sunday Telegraph Magazine in 2011, Archer had said, "The people who survive are storytellers." In death as in life, Archer put the twist in the tale. The larger picture they paint is one of impunity, where the cost of silence and inaction is paid, over and over, by women. He understood that public life, like fiction, runs on appetite for money, power, recognition and redemption - and he had a keen instinct for all four. The survivor filed a civil suit last month against Cornell University, the Chi Phi fraternity as well as the seven men who allegedly raped her in 2024, following which state prosecutors in New York, where the university is located, reopened a criminal inquiry into the incident. The government must do what it takes to ensure HAL begins its supplies without making any quality compromises. Only two weeks ago, the Board of Peace announced a $2. Ahead of the 94th Air Force Day on October 8, Air Chief Marshal AP Singh has flagged a serious decline in India's air power, largely owing to the sluggish supply of fighter jets. The humanitarian crisis remains acute, with shortages of supplies, displacement and military strikes by the Israel Defence Forces (IDF) despite the ceasefire that began almost a year ago. For, as one its own members said, this is about the soul of the nation. Averting our gaze now comes with serious consequences, as ongoing conflicts in West Asia and the muted war bugle in Europe make defence imports more difficult than before. The first phase of the Trump plan envisioned Israel retaining 53 percent control of Gaza. The outgoing chief's comments are not new; this has been the view of the Indian Air Force for years, and under successive chiefs; and it is one that has been ignored by successive governments in Delhi. This is a strange quandary for a country that has engaged in at least five full-fledged air battles since independence. The conversation that has revived with Cornell must continue everywhere. Just like its ground counterpart, the IAF has been dealing with shortfalls in men and machines for years. The devastation that followed has left Israe

Is not at all difficult to do a theoretical price discovery without the help of the market. As reasonably correct cost estimation is completely possible, we can move away from our obsession for L1. This is also a wiser move because if we look at the real problem with infrastructure building in India, it is not cost overrun. Our problem is time overrun, and in infra-space, time overrun will actually turn out to be far more expensive for the nation than any cost overrun. A large public hospital built at 100 crores in 5 years is cumulatively far more expensive than the same hospital built for 500 crores in 1 year. As time is the real essence of any contract, I suggest the following: All public domain projects must be fully designed and estimated by either the state or central public works departments or private consultants. All estimates must be market-linked for key items (that form 70 % of the material value). The bidding must NOT be on the price but must be based on the construction duration offered by the contractor. Instead projects must have clearly defined stages of time-linked performance and steep penalties for violation including termination of contract with liabilities for the delay. To make it fair, the entire schedule must also be linked with a dynamic model (fixed beforehand) where any delay in payment from the government will automatically adjust the time frame accordingly. And, if I am to have my wish list completed, a dedicated and only-arbitration-based dispute resolution mechanism must be put in place for all government contracts. With arbitration system in place, we can not only prevent the delays that generalist courts end up causing in disputes, we can also have international players putting more faith in the sector that can surely do with FDI inflow. Is not at all difficult to do a theoretical price discovery without the help of the market. Our beloved India became completely free from British rule. The significance of freedom lies in the fact that the average person in India has no idea how many freedom warriors have shed their blood in the name of achieving independence. Amrita Mahotsav is being held with the purpose of remembering their sacrifice as well as celebrating the holy national festival of independence. This is done in the hopes that the feeling of patriotism towards their beloved motherland will be reawakened in the minds of every resident of India and that the significance of freedom will be understood. In addition to this, they are obligated to work together in order to uphold the honor of the nation, recognize the significance of personal liberty, and contribute to the overall growth of the nation. The primary objective of remembering such valiant warriors and celebrating independence by the sons of India to get independence and honoring independence is to disseminate information regarding the history of the struggle for freedom to the general populace. The heroic struggle of the independence warriors to free their motherland, India, from the shackles of British colonial rule at the cost of their own lives. Children and teenagers are the nation future, so it is imperative that they have an understanding of the significance of personal liberty. This will help them avoid abusing their privileges and preserve national pride. essay on aside koi amrita mahotsav in English 800 words INTRODUCTION Authentic Azadi Amrita Mahotsav is a symbol of the essence of motivation that was derived from the people who fought for independence. Amrita Mahotsav also represents the nectar of inspiration. Self-reliance is the essence of freedom. Therefore, one could say that independence is the essence of freedom. India was subjected to tyranny on the part of outsiders for an extremely extended length of time. People had completed the tasks that were outlined in the instructions and directives that had been issued by foreigners. Always in the back of their minds was the idea of being free and independent. Their eagerness to engage in combat was giving way to self-assurance with each advancing day. India embarked on a number of different movements, some of which were successful in their pursuit of independence, while others were not as successful. Many Indians, including a large number of quite young, lost their lives during the independence fight; despite this, they maintained their resolve and fought their adversaries passionately till the very end of their lives. After fighting for its independence for more than a century and making many sacrifices, India finally won its freedom and laid the groundwork for a future as an independent nation was made by the Honorable Prime Minister Narendra Modi Ji, and it began on March 12, 2021, of the previous year. It all began in the Sabarmati Ashram, and it won end until August 15, 2023, which means it will continue till the day that India celebrates its freedom. Independence Day will be celebrated with much fanfare and a variety of cultural activities, as it has been every year since 1776. The Azadi Ka Amrita Mahotsav is being conducted by leaders

Superior to its previous one, with more options and wider range of services. It provides access to entertainment and opens up a vast new world of information, work and play, so comprehensive, immediate and useful that one wonders how one can get along without it and how one had "functioned" so long without this utility. Multitude of internet based services is also available on these handsets on which one can down load any music, video game and so on. Today, one can buy tickets over a phone but soon phones could become the payment method itself. There is no doubt that today India is one of the large consumers of mobile phones witnessing one of the greatest electronic revolutions of our times. Mobile's phones have amazingly and interesting impacted our lives as they allow us to walk away with them and to own ourselves completely, most importantly they are very intimate and ha an extraordinary reach. However, it is just the beginning of a new way life and still the possibilities are immense and perhaps beyond our imagination today. Whatever might be the origin of science and religion, the main point is their area of activity and their method of working. Science makes a man rational and free-minded. Religion wants man to believe blindly in what he is told to be true and worthy of being practiced. Science asks questions and puts every thesis or proposal to test. Religion abhors such methods. Science believes in logical experiments and wants to declare something truthful and true if it comes out finally resultant of the experiment. Religion pre-supposes the result and wants to stick to it irrespective of the outcome of investigation, inquiry or experiment. So, religion and science both are complementary to each other. For mankind, both are required in equal measure and simultaneously. Thus intrinsically, both are essential for man. The role of education as an agent or instrument of social change and social development is widely recognised today. Social change may take place: (i) When human needs change. (ii) When the existing social system or network of social institutions fail to meet the existing human needs, and (iii) When new materials suggest better ways of meeting human needs. Social changes do not take place automatically or by themselves. As MacIver says, social change takes place as a response to many types of changes that take place in the social and non-social environment. Education can initiate social changes by bringing about a change in outlook and attitude of man. It can bring about: a change in the pattern of social relationships and thereby it may cause social changes. There was a time when educational institutions and teachers were engaged in transmitting a way of life to the students. During those days, education was more a means of social control than an instrument of social change. Modern schools, colleges and universities do not place much emphasis; upon transmitting a way of life to the students. The traditional education was meant for an unchanging, static society, not marked by rapid changes. Whatever might be the origin of science and religion, the main point is their area of activity and their method of working. Science m

Of determining its quality or authenticity. Moreover, losing or misplacing artificial jewelers does sting as much as losing pricey real jewelers. Travel and Storage-Friendly Women across the globe have experienced the trouble, anxiety, and sheer horror of traveling with an expensive set or article of real jewelers. The moment your jewelers leaves the house, you re plagued with thoughts ranging from having your precious jewelers stolen to accidently losing it along the way. Artificial and imitation jewelers have all the charm, yet none of the hassle that comes with real jewelers. Tough and durable Due to the nature and solid components that make up artificial jewelers, it is tough and durable as opposed to the delicate nature and craftsmanship of real jewelers. They both are available in trendy and intricate designs, however; most artificial jewelers is made up of copper or brass, these metals tend to be more resilient to wear and tear, conclusively deeming it a better long-term solution. Minimal Maintenance Artificial jewelers requires almost no maintenance. Its components are sturdy, and self-preserving. Whereas real jewelers demands polishing, cleaning, and extra attention with regards to its storage. If stored inadequately, diamonds tend to become yellow over time, and gold ornaments gradually tarnish. It is no wonder that artificial jewelers has surpassed the popularity that once belonged to real jewelers. Diverse and Versatile Artificial jewelers is available in a diverse range of patterns, styles, and inexpensive metals that are equally as exquisite as real gold or diamond alternatives. Additionally; artificial jewelers is extremely versatile, and can be paired beautifully with nearly any outfit, or worn at any event. This ensures your outfits keep up with latest trends, and leave you looking fashionable without costing an arm or a leg. Real jewelers still retains much importance in India, as it is a dear part of Indian culture, festivities, and traditions. However, artificial or imitation jewelers trumps real jewelers in nearly every parameter, and is undoubtedly the economical, fashionable, and durable options between the two. Three decades ago, it was impossible to imagine that Indians would ever rule the IT industry and that of the top 10 IT companies four would turn out to be Indian. No one ever thought that Indian companies would be providing jobs to those in America and that Indians would constitute a significant number of IT professionals in the US. It heartening to see that Indians hold top positions in the top IT companies in the USA as well as other countries in the world. Thanks to Indian talent, the Indian IT industry which contributed roughly 0.4% to the country GDP in 1991 now contributes 8% and more. One can figure out the dominance of the IT industry by the fact that over 12% of all the recognized startups worldwide are Indian. Indian software export began years ago in 1974 and now India is the back office for the entire world. Liberalization Gained Impetus The IT sector in India was born in the 1970s, but liberalization provided.

It with the much needed thrust. Every day a new success story is being written by the Indian IT sector. In early 2022, the Indian IT sector showed an amazing growth of 15.5% which is almost double the speed of the country economy. New technologies such as Cloud Computing, Artificial Intelligence, and Block chain are revolutionizing pharm, travel, banking, agriculture, education, aviation, and other sectors as well. Today, if you look around, everyone has Adhere which again is a great example of success and hard work. Internet connections and smartphones are so common today and sending & receiving money via UPI fund transfer is super easy. Women Gaining Power and Dominance In comparison to any other sector, IT is employing more female staff than ever. Roughly 20 lakh of the 50 lakh IT employees are women. There are some 18 lakh female employees in the IT sector. It will not be an overstatement if we call IT sector, the most employable industry for females. In the past few years, over 44% of new recruits have been females. Knowledge Helps in Achieving Growth What comes to the mind when someone abroad mentions India? It is nothing else but software and business process outsourcing. But did we reach here just out of the blue? No, it has been a long journey of perseverance and hard work. Thanks to our parents who have been contributing massively to this incredible growth. Ask any Indian parent what they want their child to become one day and you would most likely hear a doctor or an engineer. This is the foundation stone of the success story that the modern generation is writing. Our parents love for math, science, and the English language empowered the modern generation to rule the world of IT. Good knowledge of science and math ensures growth in software development. Inundated by Startups As recognized by the DPIIT, there are over 75,000 startups in the country. Of all the recognized startups, about 12% cater to IT, whereas 9% work in Life Sciences & Healthcare, about 7% in Education, 5% in Agriculture, and 5% in Commercial Services and Business. A lot of startups have done well and so many unicorns emerge in the past few years. They are making a huge contribution to the country growth besides creating opportunities for employment. Fresh innovations are taking place almost every day and they are making Indian businesses so recognizable across the globe. They have proved that if there are 100s of problems then Indians have cores of solutions. Growth Model in the Next 10 Years Global delivery model: Indian companies focus on international business and, for this reason; they are all expanding their delivery centers across the globe. The focus is international business. Top companies are happily hiring more IT professionals due to the heavy demand for their work in international markets. Data annotation industry and labeling hub: Data annotation market in India was somewhere around $250 million in 2020. Thanks to the increase in the.

CRPF-hcm-Eng-Test-Dated-2026-10-08-Test NO.-28754

The festival's will run from March 12 to December's 12, 2021. The Amrita Mahotsav's will take place up until the 15th of August in 2023. In an effort to restore the nation feeling of self-reliance and self-respect, Mahatma Gandhi started the Dandi Yare from Sabarmati Ashram on March 12, 1930. This was the beginning of his journey. Prime Minister Sheri Narendra Modi's started the symbolic Dandi Yare on March 12, 2021. This event signifies the revival of our spirit of freedom restore the nation feeling of self-reliance and and self-respect. These two occurrences took place simultaneously on the same day. However, they also have the boldness and capacity inside them to fulfill the dream of a self-sufficient India, which was inspired by the vision and energy of Prime Minister Modi to bring about India 2.0. This is something that they are now performing at this very moment. As a result of customer participation of the people, Azadi Ka Amrita Mahotsav has evolved into a popular movement. For the purpose of ensuring the successful organization and execution of Azadi Ka Amrita Mahotsav, numerous campaigns are being conducted with public participation all throughout the country. In the course of Prime Minister Modi to bring about these initiatives, photo exhibitions are being put together. In this game, there are elements that symbolize the "contribution of liberation" warriors, such as Moving Van, numerous tournaments, and other such things. Historical images reflect not only the contributions that Lala Lajpat Rai, Lokmanya Tikal, and Bipin Chandra Pal, also "commonly known" as Lal Bal Pal before the entrance of Gandhi's made to the cause but also the contributions that these three revolutionaries made to the movement themselves. The characterization of the position is done quite nicely. These include Rani Lakshmibai of Jhansi, Mangal Pandey, Swami Vivekananda, Veer Savarkar, and Kartar Singh Ji, etc. From the beginning of the non-cooperation movement in 1921 to the end of the Dandi Satyagraha in Satyagraha was used as a tool in a number of different freedom fights. The Champaran Satyagraha 1917 Satyagraha, Kheda the lives of liberation fighters Entail Sub hash Chandra Bose and Sardar Vallabhbhai Patel, as well as those of Chandrasekhar Azad, Bhagat Singh, Sukhdev, and Raj guru, who were all killed in the Jallianwala Bag Massacre of 1919, has been memorialized in a moving film released today. The direct translation of the festival of the elixir of freedom from Hindi into English is Azadi koi Amrita Mahotsav. This phrase means the festival of the elixir of freedom. This event is also known as the celebration of the elixir of Atma Nirbharta, the festival of the elixir of vitality for independence, the festival of the elixir of inspiration for freedom warriors, the festival of the elixir of vitality for independence, and the festival of the elixir of fresh ideas and pledges. This event serves as a metaphor for the motivation that came from the liberation warriors, as well as for self-sufficiency, fresh commitments, and new visions. It also explains to everyone in the entire world how the fight for liberation ultimately succeeded in accomplishing what it

Has been started, with the goal of assisting the over 40,000 household's that are now "engaged in customary" art. A board has been established by the Central Government, and it will be headed by Amit Shah, the Central Minister of Home Affair's. The panel will be responsible for the drafting of policies as well as the organization of various events that will be a part of the celebrations. The Regional Outreach Bureau is responsible for organizing an exhibition of handicrafts that will take place over the course of five days in Rajasthan. In the state of "Madhya Pradesh, the Amrita Mahotsav" of freedom is being organized at all 52 district offices of the state. This includes the locations that are associated with the freedom movement and Jana Nayaks, such as Orchha, Niwari district linked to Tatya Tope, Alirajpur's district, the motherland of Chandrasekhar Azad, Jabalpur with Rani "Durgavati" and numerous other locations. Let start from the beginning. Before the beginning of time. India is the G-20 president and was hosting the leader summit. Trudeau was invited. He had already brought up his suspicions of the Nijjar killing with Indian authorities a number of times before. Now he turned to his five eyes snooping alliance the Canada, Australia, and New Zealand. All white-Anglo Saxon protestant countries with one eye each; otherwise it should have been the ten eyes alliance. In any case, you can snoop better with two eyes than with one. Four eyes other than Canada balked. They did have enough evidence to disrupt the summit. Can you imagine what Trudeau was asking for? The G-20 summit was India biggest party since the Non-Aligned Summit in 1983. Trudeau wanted to hold a 5i press conference during the G-20 summit and target the host nation. All through the G-20, he seemed distracted. He did attend the Indian President dinner. He missed an important meeting. He got slapped down by Mode. Still there was a bee up his bonnet. Of course when he looked under the bonnet of his plane, he found empty space. As soon as Trudeau reached home, he called India a killer in his parliament. He expelled a senior RAW diplomat. The US our new and dear friend! gave him intelligence, as per the US ambassador to Canada. He ignored all the signs in Canada calling for the mass slaughter of Hindus in Canada as well as their ethnic cleansing from the country. His foreign minister, Melanie Jolly, said that Canada seeks the truth. Oh, what Mahatma Gandhi have you become? Jolly should know that she stands on the ground owned by indigenous people, who Canada forcibly exterminated. How about some truth and reconciliation. India must respect Canada sovereignty. India diplomatic missions are India sovereign's space in Canada. They are not to be used by the 5i to snoop on Indian diplomats. Indian diplomats must feel safe there. As a Hindu Indian, I feel scared to travel to Canada. Do Canadians feel unsafe in India? Rather than removing the grounds for Hindu insecurity in Canada by fanning Khalistani terrorism's Trudeau must ensure that all Hindus within Canada feel safe. He has said and done many things in favor of Khalistani's in Canada but not once since the imbroglio started has

The gap between farmers and swaraj if we were to consider the Adivasi way of life, limited needs and wants have restricted the over-exploitation of natural resources. They have been able to save resources for the future generation because of this philosophy. On the other hand, people are moving away from traditional techniques of natural farming to modern practices in order to fulfil market demand. The emphasis on cash crops because of this demand coupled with high prices has weakened farmers independence. The changing climate and financial stress force them to take decisions that reduce their self-reliance and take them away from traditional farming methods. There are two key reasons for this: The introduction of wrong technology if we take technology as an example, then tractors were promoted as beneficial for farmers, but the benefits remain limited to the market and companies. Fuel, equipment, and loans required for the tractors have affected farmer savings. Even though technology has made farming easier, its cost has had a deep impact on the financial stability of farmers. Modern techniques stop them from being self-reliant and increase their dependence on the market. The game of market and cash crops we can understand this with the example of soya bean. It was a part of India food chain, but the promotion of its benefits made it popular. Farmers were drawn towards soya bean cultivation even though it uses more pesticides and strains land and water resources. If farmers had cultivated crops like maize, the water and land would have been utilised judiciously. But the market and companies did not encourage this. The web of technology, market, and cash crops has taken farmers far from swaraj. The sole way to get back on the path to swaraj is for farmers to focus on their own needs and natural resources. What would it take to get there? Accepting the philosophy of swaraj is an idea that starts with each one of us and then penetrates into the community. When the entire village decides on a crop and uses water judiciously, the crops that are grown will be appropriate for the local climate and conserve water. Additionally, if they buy as little as possible from the market, then the vision of swaraj will be fulfilled. The decisions regarding farming, water, health, and nutrition should be taken at a local level and necessitate an overhaul of our lifestyles. Giving primacy to nutrition Giving priority to nutrition means growing crops that are part of the local diet what is in our field should reflect what is on our plates. If we eat bajra, then that what we should grow. But if we eat biscuits and bread, we must understand that they can be grown in our farms. We have to rely on the market for them. Farmers are making crop choices based on market demand, not nutrition. If a village decides that it will grow only what it consumes, then this dependence will reduce. This will in turn increase production and fulfil nutritional needs. Respecting the soil it is important for farmers to treat the soil as a living being. We don give medicines to a sick family member without conducting proper checks because we do want any harm to befall them. Similarly, far

Its echoes can be heard everywhere, from the cases brought to light by the global Me too movement to the long battle of India's women wrestlers to bring a powerful man to account. It can be seen in the way the team began to carry itself on the biggest stages. The decision to make the first hike of the repo rate since February 2023 was not only unanimous all six members of the MPC voted in favour but also widely expected. 7 per cent, as pencilled in the August policy, to 7.2 per cent. (1986) led to a reversal of fortunes. In 2013, Ice Cube provided evidence for a flux of high energy neutrinos originating beyond the solar system. This has led the RBI to raise the full year (2026 27) forecast from 6. But she will be expected to protect the confidence that has been built and take it further. In fact, the RBI now expects it to touch 6% by the end of December with full year inflation around 5. On Wednesday, with the Monetary Policy Committee of the Reserve Bank of India raising the repo rate by 25 basis points, it moved up from 5. His pioneering work led to the Ice Cube Observatory, an enormous neutrino detector buried deep beneath the Antarctic ice. On economic growth, the Indian economy has surprised everyone by showing resilience despite a worsening global context. Her leadership was driven by her passion for the game and a strong belief in the players around her. Halzen recognised this potential. Given that growth is robust even as inflation is trending upwards and beyond the RBI target, raising the repo rate in a bid to dampen overall demand in the economy and prevent inflation becoming more broad based is timely. The journey was not smooth. But she remained at the centre of the team through the difficult periods. But notwithstanding the domestic growth momentum, the situation has become considerably more challenging from the point of view of inflation, thanks to the "sudden re-escalation of the West Asia conflict in September and the consequent hardening and volatility in global crude prices". The less obvious but perhaps more consequential change was the shift in the RBI's stance from "neutral" to "calibrated tightening". But Not a Penny More, Not a Penny Less, published in 1976, and followed in succession by A Quiver Full of Arrows (1980), First Among Equals (1984), and novels such as Kane and Abel (1979) and Shall We Tell the President? Since the last policy review in August, the situation has changed on both these counts, necessitating a change in policy. Rather than building a conventional telescope, scientists effectively turned a cubic kilometre of natural ice at the South Pole into a detector, embedding more than 5,000 optical sensors in it. Mandhana cannot and should not try to recreate Harmanpreet's leadership style. that leads away from war. Halzen's work demonstrated that sometimes the way to see farther is not to build a more powerful eye, but to learn to detect what the universe is whispering through particles that pass silently through it. However, some of the universe's most consequential events take place in environments so dense or violent that photons cannot escape. 8 per cent growth in Gross Domestic Product during the fi

fraud that had rendered him bankrupt. Making the domestic inflation outlook worse are the deficient Southwest monsoon and El Nino conditions. She will have to lead her way. On Tuesday, the Royal Swedish Academy of Sciences, which awards the Nobel Prize in Physics, recognised another pioneer in the field Belgian American astrophysicist Francis Halzen. But there was still a sense that the team had to prove it belonged among the best. 5 per cent. This is the bare outline of a case that has rocked the US for over a week. What is more welcome is the shift in the RBI's stance. Together, these cosmic messengers could reveal the workings of black holes, exploding stars and other extreme objects that remain invisible to any single form of observation. 45 billion recovery plan for the Strip, a fraction of the $71. Two of her attackers were expelled while the rest were asked to write essays to "mitigate" the harm they had caused. 25 per cent to 5. During her captaincy, the results began to follow more consistently. That is the challenge. A higher repo rate is expected to make borrowing more costly for everyone and thus acts as a drag on economic activity. The last time the RBI assumed this stance was exactly eight years ago. The ghost particle called the neutrino was detected two decades later, and the quest to understand it has since been rewarded with a string of Nobel Prizes. For centuries, astronomy has essentially been the science of observing light. Neutrinos have tiny masses, carry no electric charge and interact so weakly with matter that billions pass through the Earth and our bodies without leaving a trace. Retail inflation has been going up steadily through the year, breaching the 4 per cent RBI target level. The RBI's primary mandate, as Governor Sanjay Malhotra has underlined, is to ensure price stability while keeping in view economic growth. But on the rare occasion when one sheds its shyness, the resulting flash of light can give information on the particle's travel path. Harmanpreet's batting became less consistent, and her decisions were often questioned. Could the universe be observed through something other than light? These particles can escape from the dense interiors of exploding stars and other extreme cosmic environments, carrying information about places that conventional telescopes cannot see. In 1930, when Austrian physicist Wolfgang Pauli proposed the existence of an elusive particle to explain a mystery in radioactive decay, he was laying the foundations for a new way of exploring the cosmos. Almost every neutrino passes straight through the ice. Mandhana has to make sure that belief does not fade and turns into a habit of winning. The 7. Harmanpreet Kaur's contribution as captain of the women's cricket team cannot be measured only by the ODI World Cup trophy she lifted last year. His work has used neutrinos to probe some of the universe's hitherto most inaccessible environments, helping open a new window on the cosmos. 1 per cent now. Harmanpreet helped India believe it belonged at the top. When Harmanpreet took over, India had already reached two ODI World Cup finals. The World Cup win turned that belief into reality. The

CRPF-hcm-Eng-Test-Dated-2026-10-09-Test NO.-28761

Additional burden on the farmer and affects their land and environment. Conserving local seeds and increasing their use can reduce costs and create a sustainable, self-reliant system of farming. For instance, farmers in many regions of Rajasthan conserve bajra and jowar seeds, which lead to better yields. Using traditional methods of farming such as multi-cropping can be effective in maintaining soil fertility. Using water wisely it is important to conserve and harvest natural sources of water, such as rain, waterfalls, and rivers. Digging deep bore wells to access water reduces the groundwater, and is creating a water crisis. We should plant crops that use less water, such as maize, jowar, bajra, and kodo. This will help in saving water and maintaining soil quality. Swaraj can bring about self-reliance and prosperity in agriculture. It can create a system where farmers conserve local seeds, protect water, farm using natural methods, and become free from the pressures of the market to optimally use their land and resources. Every village should save its water sources on its own. Rivers, ponds, and groundwater management should be the responsibility of the entire community, and water usage should be balanced. This model will alleviate the water crisis, and reduce the cost of farming and energy dependence. Embracing the principles of swaraj will make agriculture economically robust and create balance in the environment. It can contribute to a society where farmers believe in their community resources instead of in the market, and every village, every community fulfils its own needs. This swaraj of stability and well-being will make society stronger, safeguard the environment, and ensure sustainability for future generations. As the election euphoria settles and weight of governance lands on the shoulders of the new chief minister of Delhi, people of this state have renewed hope. Now begins the real test of leadership. Leadership is not about power but about responsibility. It is amanah, trust, a duty to serve with integrity, humility, and an unwavering commitment to public welfare. The Quran discusses changing nature of political power in chapter 3, verse 26. God grants and takes away power to whomever He wills. He has control over everything. This verse reminds us that leaders must approach governance with the awareness that their position is temporary and subject to Divine will. The Quran describes Queen of Sheba, known as Bilqis in Yemeni and Islamic tradition and as Makeda in Ethiopian tradition, as a pragmatic and wise queen who was always considerate of her people. One of her statements, mentioned in the Quran, reads: I never decide any affair until I have conferred with you, 27:32. It signifies that effective leadership is built on wisdom, consultation, and careful decision-making qualities essential for both governance and personal matters. Good leadership emerges through collective wisdom and humility, avoiding rash decisions, fostering trust and unity. She is also quoted as saying: When mighty kings invade a country, they despoil it and humiliate its noblest inhabitants, 27:34. This implies hostile confrontation leads to harm. It does

Demand for AI Artificial Intelligence, this sector may become worth $7 billion by the year 2030. Data analytics, cloud computing, and social media have been providing great opportunities for growth for travel, aviation, and IT companies. Attracting foreign investment: The computer hardware and software sector has seen much growth in FDI inflow to India. If we look at the current demand, FDI in this sector may grow further in the years to come. Digital trust is important: Data is the need of the hour and there are countless possibilities in this segment. A lot of research is being done on Big Data in India. It is important to build strong digital trust. Also, an industry with great expectations from people has a lot more to prove. Indian IT Sector Challenges Semiconductor Technology: Semiconductor technology could be the next big revolution in the country. Semiconductor integrated chips are made using silicon mixed with sand. A big dream can come true if the IT sector succeeds in making chips in India and bringing the chip design capability to fabrication. A personalized experience is extremely important: Personalized experience is highly important for users today. All companies are working towards delivering an outstanding personal experience. There is a massive need for continuous improvement in this as well. Protection against cyber-attack India began working on IT in the 80s, decades after gaining independence in 1947. On the other hand, the western countries had already started working on IT much before that. Dotcom gained impetus it the 80s and that was the beginning of the amazing success story the Indian IT industry has been writing. Digital technology is helping connect people anywhere and at any time. From helping simplify routine lives to office work, governance, and beyond, technology is helping businesses grow phenomenally and quickly. However, cybercrimes remain a challenge for most businesses and IT experts even now who are almost always looking for ways to ensure safe and secure browsing and internet experience for all users. There have been 13 lakh cyber-attacks or attempts in India in 2020. Cybercrime was on the rise when the world was combating the deadly pandemic. The challenge of cyber security is huge and the IT sector needs to work hard to strengthen it. India is one of the fastest growing economies and has shown a strong linkage between growth in vehicular population and income of households. Over the years, various studies have been conducted to establish a relationship between income and the purchase of vehicles In 1995, Gene et Al explained as per capita income increases, people travel more by private vehicles; In 2007, a study by Margay et al showed a positive relationship between per capita income and vehicle ownership; Kumar and Krishna Rae conducted a study that shows how car ownership rises with household income. Further, according to our research and analysis, the per capita income in India is highly correlated with vehicles per 1000 people and the total number of cars sold with a correlation coefficient.

Of higher education every year. But just 1-2 lakh students qualifying for the best STEM, medical and humanities courses ins encouraging. That even this small pool is being produced through record low cutoffs has to be seen alongside National Achievement Surveys revealing too many children deprived of quality education. And then there are not enough quality seats to accommodate this pool either. This explains why a record 82,000 Indians received US student visas this summer it in pursuit of better opportunities. There is just no substitute for quality. India needs to build both strong domestic universities and strongly qualified admissions into them, to avoid a downward spiral in quality higher education. Rajasthan recently launched its Urban Employment Scheme to provide 100 days of employment, as the national rural jobs scheme does. That an urban jobs programmer is needed, especially after the pandemic massive impact on informal sectors, has been argued by many, including the PM Economic Advisory Council. And another level of urgency comes from NCRB data that lakh suicide cases in 2021 were by daily wagers. Inflation, particularly in food and fuel, added to the problems created by a terrible couple of years for low-skilled workers. CMIE data shows that urban unemployment went from in August substantially higher than rural unemployment for August at 7.68%. Therefore, and to reiterate PMEAC, this is the right time to seriously consider a national urban employment guarantee scheme. Plus, such a scheme, if designed well and if it subsumes a few other social welfare programmers, won really strain government budgets. Rajasthan scheme which provides unskilled labor Rest 259 per day and skilled workers Rest 283 per day will cost around Rest 800 core annually compared to the 2021-22 state budget of Rest 2.5 lakh core. At the national level, estimates by researchers at Aim Premix University for providing 100 days of work for 20 million workers at Rest 300 per day project a cost of just Rest 1 lakh core to Go. An urban jobs guarantee scheme can be a critical, even if temporary, intervention in the jobs crisis at the lower end of the labor market. That urban infrastructure upgrade as well as greenfield projects are a big spending category means there won be any shortage of productive work for the job guarantee scheme. Go should soon come up with its version. Rajasthan recently launched its Urban Employment Scheme to provide 100 days of employment, as the national rural jobs scheme does. That an urban jobs programmer is needed, especially after the pandemic massive impact on informal sectors, has been argued by many, including the PM Economic Advisory Council. And another level of urgency comes from NCRB data that or 42,004 of 1.6 lakh suicide cases in 2021 were by daily wagers. Inflation, particularly in food and fuel, added to the problems created by a terrible couple of years for low-skilled workers. CMIE data shows that urban unemployment went from in June to in August substantially higher than rural unemployment for August.

That urban infrastructure upgrade as well as greenfield projects are a big spending category means there won be any shortage of productive work for the job guarantee scheme. Go should soon come up with its version. The last few months have been devastating for both Sri Lanka and Pakistan. The island nation was in political turmoil; its economy crippled. They were the original hosts of the Asia Cup but the venue had to be shifted to UAE. Pakistan too is racked by an economic crisis and facing one of its worst floods in recent memory. Yet these two countries produced the most standout performances in the Asia Cup. Sports can hardly console those who have lost homes or jobs. But Sri Lanka masterly triumph will surely act as a much-needed balm for the distressed nation. Their attitude and approach carries vital lessons for Team India think tank and multimillion dollar squad selected on Monday for the T20 World Cup starting in five weeks in Australia Top ranks don fetch trophies: India is world no 1 in ICC T20 rankings. Sri Lanka stands at a lowly 8. In fact, the Lankan Lions must overcome two of the three (Namibia, the Netherlands and UAE) to qualify for the World Cup Super-12. And remember last year India sent an experimental team led by Shisha Dawn there when the big boys were playing in England. India even managed to win the ODI series 2-1 and lost But in the Asia Cup, the Lankans punched way above their rank, translating talent into performance. Rankings can be attained by winning treadmill bilateral where there is little at stake but a team true mettle is tested primarily in multinational contests Now that we have made a mess of the Asia Cup, let make a little fun of the so-called game of life since chess has been cornered by kings and other such blue bloods. The first thing that comes to mind is the apartheid approach to the leg side in a T20. Three feet away from the off stump is cool but two centimeters to the right of the leg and the umpire goes into his little tap dance.

Respectively the strong relationship established above can be particularly observed in middle-income households that account for half of the total households in our country and are investing in private vehicles both two-wheelers and cars. Despite this market trend, we can observe that majority of the households in our country are still very hesitant in switching to EVs due to various demand and supply side constraints. The few demand-side constraints include the high upfront cost of the vehicle, range anxiety, lack of resale value, and long recharge time, whereas, on the other hand, a few supply-side constraints are lack of charging infrastructure, high cost associated with the installation of infrastructure, and high cost of commercial electricity. In this article, we talk about the five major strategies that India needs to introduce to accelerate the adoption of EVs and make them equitably accessible and affordable for its people. Government Support Government support plays an important role in the transformation of the EV market. Recently, the Indian Government slashed the GST on EVs from 18% to 5%, which was a great move for the industry. Additionally, there is a need to introduce various financial, regulatory, and convenience incentives which will increase the uptake of EVs. Some of these incentives include the following: offering vehicle tax breaks for electric vehicles, exemption from road pricing charges and road tolls, introducing scrap page policies & schemes for ICE vehicles and retrofitting of the same, free public parking and priority parking for EVs, targeted additional incentives for low-medium income households for buying EVs with the ability to stack incentives, subsidies on both old and new EVs and others. Focus on Customer Education With the recent fire incidents happening in the EV sector, creating awareness and visibility for EVs is an important step to overcoming various challenges in the industry. It is very important to educate customers about the benefits of EVs. All the stakeholders in the industry should actively promote and advertise EVs on their platforms. The Government of India should launch pilot programs for electric mobility across national highways to increase awareness. Additionally, it is extremely important to launch educational workshops and campaigns across different media to clear any doubts and fears related to electric vehicles. Support Localization Currently, the majority of the components like battery cells, controllers, and other components are manufactured abroad, which increases the overall price in the EV ecosystem. India being a price-sensitive market, it is important for the government to support localization and adopt a phased approach towards it. Strong Financing Mechanism The cumulative capital cost involved in India EV transition will amount to USD 266 billion between 2020 to 2030. It is important for the government, financial institutions, and the EV sector to adopt a strong financing mechanism with a focus on instruments like priority sector lending, product guarantees, risk sharing mechanism government and multilateral led, and secondary market development. Encourage Fleets to move to

CRPF-hcm-Eng-Test-Dated-2026-10-09-Test NO.-28766

Majority of the low-medium income households in our country depend on public fleets and buses, it is important for the Indian government to enable and incentivize zero-emission fleets. It is important to learn lessons from cities like Auckland and London that are committed to procuring only zero-emission buses and making black cabs fully zero emission respectively. In addition to the above five strategies, the government should also focus on EV car-sharing programs, creating awareness regarding leasing schemes for EVs, promoting electric mobility through events and programs that focus on providing test drives for EVs, and electrifying public transport buses. All the above strategies will play a crucial role in the adoption of EVs not only the moderate-income communities but will also cater to lower-income communities. Experiences with the provision of two global public goods defence against climate change and Covid graphically illustrate the difficulty of collective action at the international level. They also offer useful insights into complementary policy actions required at the national level to compensate for the failure of optimal action at the international level. The global public-good nature of defence against climate change manifests itself in the spillover of benefits of defensive actions by one country to all others: When a country cuts its carbon emissions, benefits of it in terms of reduced prospects of global warming become automatically available to all other countries. In a worrying trend, both NEET and JEE-Advanced examinations, which channel admission into India medical colleges and IITs respectively, have recorded record low cutoff scores. A general category candidate with just 55 marks out of 360 is eligible for an IIT seat this year, even as the cutoff score to qualify for getting admission in a medical college corresponds to the 50th percentile for the open category. These low scores have helped 9.9 lakh to qualify for 92,000 medical seats and 40,712 for 16,000 IIT seats but not without raising questions about the quality of the candidates. This newspaper has reported the distortions produced by low NEET cutoff scores. It allows wealthy candidates with low merit to buy their way to a payment seat while more meritorious students are left in no-man land, without scores for a government college seat or the money for an overpriced payment seat. Many such students then journey abroad to China and eastern Europe for less expensive medical education. The low IIT cutoffs take place in a different context. Sure there stiff competition here too, especially for older IITs. But unlike in medical colleges, none of the IIT seats are available for payment. Around 10 lakh students attended the preliminary JEE-Main, which is the qualifying examination for the next-rung NITs and several hundred other engineering colleges. Of these 1.5 lakh took JEE-Advanced, which is umber tough and children often begin specialized preparations from Class 6 onwards. Yet it has needed the lowest ever cutoff to produce a respectable pool of 40,000 qualified candidates. If enrolment was 100%, India would have 2.5 core 18-year-olds waiting to enter the portal

Of denial. Why this absurd hostility? For the money these guys get for hitting a ball it should be a 360-degree capability. It is like a soldier in a war zone saying anyone coming in from your right, let him pass, don shoot. I have never figured out the logic behind this gimpy leg stance. Which then brings me to the lbw because if it is pitched outside the leg he is not out but from the offside if it turns in everyone leaps about with joy. How is one different from the other as far as blocking the stumps is concerned? Then you have this no-ball nonsense well after the fact. Either call it when the ball is being bowled or forever keep your silence. The guy whacked the ball, he tried to send it into the stratosphere and he got it wrong, gave a catch, got out and is halfway to the pavilion when he is called back which is so disheartening. There was a time when the ump lustily yelled no-ball and you had a split second to react. All this technology is making the umpire a caricature with that sackcloth and ashes gesture when he is proved wrong. He is almost laughably powerless like a dethroned despot, so wide open to being tarred and feathered by players and a third umpire who makes you cringe by saying, I have made my decision when the running batsman was seven feet past the wicket. Making a decision calls for pros and cons and an assessment not an unbreakable alibi. But he must do that TV screen outline. Equally annoying is this nonsense of the line belonging to the umpire and those agonizing minutes of how me again and give me another angle multiple replays, it is, it ins, oops. Little itty bitty part is on the chalk, no it ins, oh just stop with the guessing game. Nothing is more annoying though than above the waist call. The batsman hit it, yes, the bat and the ball connected, so what is the beef, let it be, it is valid. I have made my decision, these rules are annoying in themselves and ruining the game. No glorious uncertainty. The most fundamental form of life in biology is the cell, and many cells go to form tissues along with other biological material. All living organisms are composed of one or more cells. Cell is the basic structural and functional unit of living organisms. All cells arise from pre-existing cells. If a single cell has agency and the power of cognition, so too would tissues that are a collective of cells. Therefore, it is not just the brain that recognizes, learns, thinks and feels; these functions are also carried out by other constituents that make up the entire human body, the most basic unit being the cell. Developmental biologist Michael Levin of Tufts University says that we need to abandon a binary view of cognition. For instance, tissues are collective intelligences.

Autonomy's of mass media is desirable but it is also desirable that it is self-regulatory and self-disciplined so as not to come into pressures and that it fulfills its commitments to values and ideals enshrined in our Constitution. Rights and duties go together. Television came to India in 1959, with three days a week limited transmission. However, from 1965 these became regular. Since 1976 when "Doordarshan" came into being, it has emerged as a very "powerful and effective means of mass" communication. It has seen a phenomenal growth of installation of one transmitter a day in 1984 and after. A vast network of over 350 transmitters of the "Doordarshan" now reaches an estimated 2880% of our population. The popularity of television is on the increase and soon it will cover the entire population of our country. In order to But commercialisation of mass media without proper safeguards can be dangerous. There is a lot of money in different media and there is the possibility of misuse of the media for personal gains. Autonomy of mass media cater to the wide interests of large sections of our population, more channels are being added and introduced. The introduction of the Metro channel in 1984 in Mumbai, Kolkata and Chennai has been historical. Now, it is available in many cities and towns. The services of Doordarshan for school and university education have helped a lot in the promotion of education and training. A vast network of over 350 transmitters of the Doordarshan now reaches an estimated 80% of our population. The popularity of television is on the increase and soon it will cover the entire population of our country. The satellite communication has really revolutionised the means of mass communication and information. The radio and television broadcasts via satellites have made communication instant and universal. It has turned the whole world into a global village. Now viewers have access to more and greater selection of viewing on T.V. The implications of satellite communication are really very complex, varied and far-reaching. It has its own inherent strengths and weaknesses, which are unfolding with the passage of time. But it is beyond any shadow of doubt that satellite communication will go a long way in helping a developing country like India in overcoming its many socioeconomic problems and in the achievement of development goals. The Supreme Court judgment asking the Central Government to establish an independent public authority to control and regulate the use of electronic media is a welcome decision. It implies that freedom of speech applies not just to the print but also to the electronic media. This judgment marks a new, bold and significant beginning in liberating electronic media from government control and monopoly. India had 21 in Canada. Why would such a sparsely-populated country like Canada need so many diplomats in India? Now Trudeau is turning in desperation to Rishi Sunak. He does get it. Sunak is the most-liked world politician in India; Trudeau the most detested. Sunak does seek the support of Khalistani's terrorists to govern; Trudeau does. Advice for Sunak. Stay out of this mess. Trudeau is shifty. Trudeau is

Modi has spoken a word since the crisis started, leaving all of the talking to Jaishankar's and his subordinates. It is in times like this that one feels that India is in safe hands. "Balakot" the aerial attack on Pakistan. Defying the US desirable but it is also desirable that it is self-regulatory and self-disciplined so as not to come into pressures and that it fulfill's its commitments and buying oil on the cheap from Russia our eternal friend, and now bringing Trudeau to heel, Modi comes into his element in times of peril. The influence of films on Indian masses, means of mass communication, has been vast and abiding. The popularity of films is unquestionable. Hundreds of feature films and documentaries are made every year in India. Our film industry is one of the biggest in the world. In spite to its "commercialism" its appeal and popularity is vast, abiding and immediate. It has "tremendous possibilities" but we should see to it that its box office aspects are not allowed to run riot. The Indian film industry should not forget its social and moral obligations. The industry should be precise, clear and sure about its scope, purpose and objectives. Similarly, the government should have no aphorism in respect to its policy in regard to the control, purpose and regulation popularity is vast, abiding and immediate of the industry. Satellite communication will go a long way in helping a developing country like India in overcoming its many socioeconomic problems and in the achievement of development goals. The Supreme Court judgment in spite to its commercialism, its appeal and popularity is vast, abiding and immediate. It has tremendous possibilities but we should see to it that its box office aspects are not allowed to run riot. The multiplicity of authorities, which have a say in the industry, should be removed so as to provide healthy growth to the film industry. Moreover, censorship should be more liberal in its approach to films produced and screened. But filmmakers should avoid too much sex and violence in their films. They should aim at healthy entertainment and desirable social and cultural change through this popular means of communication. Freedom of speech and expression is very significant in a democracy. It includes the freedom of the socioeconomic problems and in the achievement of development goals. The Supreme Court judgment in spite to its commercialism, its appeal and popularity is vast, abiding and immediate. It has tremendous possibilities films, the press, and broadcasting, etc. In other words, freedom of speech and expression means autonomy of the media. But autonomy also involves greater accountability. It means that there should be no loss of credibility. But commercialisation of mass media without proper safeguards can be dangerous. There is a lot of money in different media and there is the possibility of misuse of the media for personal gains. Autonomy of mass media is desirable but it is also desirable that it is self-regulatory and self-disciplined so as not to come into pressures and that it fulfils its commitments to values and ideals enshrined in our Trudeau is a party-pooper. Trudeau is a liar. Where is the r

CRPF-hcm-Eng-Test-Dated-2026-10-09-Test NO.-28772

The word Kashmir's is derived from the Sanskrit word meaning Land of Kashyap. Rishi Kashyap was one of the Saptarishis who was a Saraswat Brahmin and formalized the ancient Historical Vedic Religion. His descendants or the Kashmiri Pandits as they are commonly known named the valley's in his honor. Kashmir falls in the northwestern region of the Indian subcontinent. The geographical denotions of Kashmir include the valleys between the Great Himalayas and the Pir Panjal Mountain range, until the mid-19th century. At present, it also includes the larger area of Indian administered state of Jammu and Kashmir comprising of the three divisions of Kashmir valley, Jammu and Ladakh. Kashmir's shares its borders with Pakistan as well as China. Kashmir region has been a center of Hinduism, Buddhism followed by Kashmir Shaivism. Shah Mir became the first Muslim ruler of Kashmir in 1349 inaugurating the Salatin i Kashmir. Muslim monarchs continued to rule "Kashmir over next five centuries. Mughals ruled from the period of 1526 until 1751, after which Afghans ruled forming the Duran" Empire from 1747 until 1820. Thereafter the Sikhs, under the leadership of Ranjit Singh captured Kashmir. The Dogras became the rulers under Gulab Singh after signing the Treaty of Amritsar through which they purchased the region from British rule in 1846. Dogra rule continued until India got its independence from British rule after which it became a disputed territory. Kashmir now falls into the administration of three countries: Pakistan, India and People s Republic of China. The upsurge of militancy and political movements has impacted the economy of the state greatly. The crown of India as it is popularly known for its beauty and the geographical location with respect to the country s other states has been a victim of terrorism. All sectors of the economy, of which agriculture is the pre dominant have been affected by the frequent turbulences and failed to provide food and life security to the population of the valley. Assam, known as the land of blue hills and red river, is also a land of many feasts and festivals, which are marked by music, dance, mirth, gaiety, community sharing, and spiritual coloring. Among these, Bihu is the most impressive and prominent. Bihu is the chief festival of the people of Assam celebrated by everyone irrespective of caste, creed, and race. Assamese celebrate three types of Bihus in a year Rongaali Bihu or Bohaag Bihu, Kati Bihu or Kongaali Bihu and Magh Bihu or Bhogaali Bihu. The word Bihu comes from the Sanskrit word Vishu. The Bihus are closely associated with the farmer s life, which characterises ancient rural Assamese life. It marks three distinct phases in the cultivation of paddy the native crop of Assam. Bohaag Bihu marks the advent of planting time, the Kati Bihu is celebrated at the completion of sowing season while Magh Bihu symbolises the culmination of harvesting period. Rongaali Bihu is the most important Bihu among the three Bihus. It is celebrated in the month of Bohaag, the first month of the Assamese calendar. Thus, the festival marks the advent of Assamese New year. Hence, it is characterized by lots of merriment, gaiety

A sustained war would also complicate a US Iran settlement. There are leaders who rely on data and methods, but for the 37 year old who took Indian women's cricket to its peak, it was often about belief. When Kaur took over from Mithali Raj in 2016, India were still finding their rhythm in women's cricket. What can language save from silence? Simply put, interest rate cuts are off the table for the time being. Kaur's convictions and beliefs formed the core around which the team regrouped. In her first book Eros the Bittersweet, Carson writes, "To be running breathlessly, but not yet arrived, is itself delightful, a suspended moment of living hope". They are also one of the few teams that manages to challenge and beat Australia regularly. The Nobel Prize in Literature acknowledges Carson for her ability to alchemise myth, memory, and language into new meaning. The Proteas were cruising when she decided that it was Verma's day. The team comprised some very talented players, but as a unit, its performance flattered, often only to deceive. That curiosity led to a body of work that probes old questions for new wisdom: What does love leave behind? Thus, the pact may offer Riyadh some political backing, but it is unlikely to deter the Houthis. What can be recovered from absence? They subsequently began targeting ships linked to Israel in the Red Sea amid the Gaza war. The fragile truce shattered in July. The fact that India and Canada have affirmed their commitment towards a mutually beneficial security partnership bodes well for CEPA. US and British strikes in 2024, followed by a sustained US bombing campaign in 2025, failed to defeat them. To be sure, what this cooperation achieves on the ground will depend on horizontal and vertical synergies between the two States' security mechanisms. A political resolution between the Houthis and the Yemeni government looks distant, but the alternative of another prolonged military campaign would be far worse. After the alliance's emergency meeting in Riyadh this week, Pakistan's Defence Minister Khawaja Asif said Pakistan and Turkey had a "presence in theatre", but only Saudi troops were engaged in combat. With traffic through the Strait of Hormuz restricted, the Red Sea route matters more for energy exports, raising the stakes well beyond Yemen. way in the 2025 ODI World Cup. The rest, as they say, is history; Kaur believed Verma delivered. Touched by her enthusiasm, her Latin teacher agreed to teach her the Greek classics during lunch hour. The Yemen war is also the first real test of the Mecca Pact. As India diversifies its alliances to mitigate the impact of US policies, this security cooperation can improve human mobility and provide a template for engagement with other countries: No trade without addressing terrorism. In 30 ODIs before that match, Verma had bowled just 14 overs. In a meeting between NSA Ajit Doval and his Canadian counterpart David Morrison on Tuesday in New Delhi, cooperation in combating terrorism, transnational crime, trafficking of narcotics, and extradition of criminals has been etched as an instrument of foreign policy. Both countries are on the receiving end of the US's mercanti

players to aim higher and steer clear of the conservatism that could sometimes hold them back against more aggressive opponents. Nonetheless, the optics of the dialogue between Doval and Morrison are important. Grief is preserved through fragments, photographs, translation and memory in Nox. The Iran and Yemen conflicts are now intertwined. Fighting along the Red Sea coast has intensified as Saudi backed Yemeni government forces seek to secure the Bab el Mandeb Strait, through which roughly 12 per cent of global maritime trade passes, while the Iran backed Houthis have struck Saudi airports and oil facilities. Captains often talk about wanting their team to play fearless cricket but Kaur walked that talk. This is a significant development, signalling both sides' willingness to put past slights behind them: New Delhi accusing Ottawa of pandering to Khalistani elements hurting India's sovereign interests, and Ottawa holding Indian agencies responsible for the assassination of Canadian citizens on Canadian soil. Terror, an issue stymieing relations between India and Canada during Justin Trudeau's two governments, has emerged as the foundational plank for forward looking bilateral ties under the Mark Carney administration. Austere, funny and elusive, the Canadian poet and classicist has freed poetry from the need to be orderly and lyrical, turning it into something amorphous and expansive; a deep concern with desire, loneliness and loss running beneath a razor sharp intelligence. Escalation in Yemen suits Tehran, which can use the Houthis to gain leverage over the region's chokepoints. In Kaur's book, it was okay to lose as long as you did it the right way. For decades, Carson, 76, has turned to words to blur the boundaries between poetry and essay, translation and fiction, producing work that constantly asks what more literature might become. While another round of the ambitious Comprehensive Economic Partnership Agreement (CEPA) talks between India and Canada is underway in Ottawa, the two countries have already made a major collaborative decision. Harmanpreet Kaur's captaincy was characterised by a sixth sense that some would call luck, and others, instinct. As the last few years have shown, military force can impose costs, but cannot by itself neutralise the group or resolve the long running conflict. RBI has signalled the start of a rate hike cycle, given that globally other central banks are expected to raise interest rates in the coming months. It is only befitting that when the Swedish Academy called to inform her that she had won the Nobel, Carson was in Iceland where she has also held citizenship since 2022 listening to the sound of the wind. Neither did the Israeli strikes on Houthi controlled ports. Carson fell into poetry when she came across a bilingual edition of Sappho by Willis Barnstone in a shop window and was fascinated. The 2022 UN brokered truce largely froze the fighting and gave the Houthis, classified as a terrorist outfit by the US and several other countries, time to regroup. It suggests the RBI is focused on dealing with a possible spike in inflation. But it is the Yemeni people, worn down by more than a decade of war,

CRPF-hcm-Eng-Test-Dated-2026-10-10-Test NO.-28778

During a college discussion, our teatime conversation drifted to the controversy sparked by a business tycoon suggestion that people in India should work ninety hours a week. Many of us saw this as a reflection of the country increasing consumerism and a push toward its rapid expansion. If companies were to normalize such grueling work schedules, couples in these workplaces would barely have time to cook, relying instead on takeout, home deliveries, or ready-to-eat meals. This shift away from home-cooked food could lead to unhealthy eating habits and hygiene concerns, ultimately resulting in a surge in health issues. Consequently, the healthcare sector would thrive, with individuals either investing in costly medical insurance or bearing the burden of exorbitant medical expenses. Changes in lifestyle trends and diet patterns have already resulted in India being tagged as the Diabetic Capital of the World. According to a study, 26% of the world diabetic population is from India. If reports are to be believed, India is rapidly nearing the grim distinction of becoming the Cancer Capital of the World. By the year 2025, the number of cancer patients will rise to 15.7 lakh from 13.9 lakh in 2020, marking a rise of 13% in only five years. The horrifying fact is that one of the leading causes of both diseases is- unhealthy lifestyles and unhealthy eating habits, including excessive use of processed food and the use of synthetic colors and flavors to enhance aesthetics and flavors. It is alarming to note that while the educated and aware are taking precautions against these risks, a large section of the less informed or less educated remains most vulnerable. During my travels by train and through airports, I have often observed that middle-aged, educated individuals tend to carry their tiffin boxes or home-cooked meals rather than indulging in the unhealthy and unhygienic snacks provided by the authorities. During a train journey from New Delhi to Ambala, I sat next to a mother who was enthusiastically handing her four-year-old one packaged snack after another, as if on a mission to set a new record in processed food consumption. When I casually asked about it, she shrugged and said, At least he eating something. And what wrong with a few chips? They are made of potatoes, after all. I felt like informing her, by that logic, ketchup is practically a vegetable, and instant noodles might as well be a wholesome home-cooked meal! What was once seen as a rustic habit carrying home-cooked food has now become a mark of sophistication and a commitment to a healthy lifestyle. Once dismissed as old-fashioned, homemade meals are now celebrated for their freshness, nutrition, and hygiene. In a world dominated by fast food and takeout, bringing one own tiffin is no longer just practical but also trendy. It reflects a conscious choice to prioritize well-being over convenience, proving that tradition often holds the key to better living. With growing awareness, several state governments in India have imposed bans on plastic and other non-biodegradable materials used for food packaging. In response, many restaurant owners and takeaway joints have adopted eco-friendly

And healthcare advocates are working tirelessly to raise awareness, it is baffling and deeply irresponsible for individuals in positions of power to promote such misguided advice. When leaders should be encouraging balance and well-being, endorsing unhealthy work habits only fuels the very crisis we are striving to overcome. The need of the hour is not just economic growth but sustainable living where health, productivity, and quality of life go hand in hand. Understand that public trust is earned through fairness, transparency, and accountability. A leader must prioritise justice and fairness and foster trust, without which democracy weakens and the gap between the govt and the governed widens, leading to disillusionment. Today citizens demand tangible change policies that directly improve their lives. They want quality education, reliable infrastructure, accessible healthcare, employment opportunities, and a system that ensures fairness and equity. States should compete constructively by benchmarking themselves against one another, creating measurable indices that track progress in these critical areas. The goal should be to restore India status as he golden bird, known for its prosperity, innovation, and inclusiveness. Therefore, the collective fortunes of a nation are directly tied to spiritual and ethical transformation of its citizens. Hence, leadership must focus not only on external development but also on nurturing spiritual strength of individuals and instilling a sense of duty, unity, and goodwill. True leadership is rooted in service, selflessness, and a vision for the greater good. Chief Ministers have the power to transform destinies. The recently published report, Rethinking Affirmative Action for Muslims in Contemporary India, has attempted to revisit the question of Muslim marginalization while recognizing the contribution of the Sachar Commission (2006) in transforming Muslim backwardness into policy concerns. The study marks a significant departure from previous research on Muslim backwardness in two ways. It pays close attention to the changing nature of the Indian state. It uses the term charitable state to describe the changes introduced by the BJP-NDA govt to give new meaning to existing versions of welfarism without deviating from the national economic consensus on open market. The govt has created a new official category, the labharthis (beneficiaries), for direct benefit transfer. In this scheme, the open market economy is recognised as the driving force for infrastructure development while welfarism is envisaged as official generosity. A new vocabulary of welfarism is based on concepts like the Bhatia model of inclusive development, humanist-welfare approach, and Anthodia welfarism is introduced to provide a concrete shape to the present policy discourse. There is a shift from group-centric approach of affirmative action to pace-centric welfarism. The report explores placing of Muslim communities in this apparatus of affirmative action. Secondly, it gives emphasis to everyday Muslim perceptions. While common Muslims are recognised as the real stakeholders of development discourse, there is a tendency to downplay the

Of denial. Why this absurd hostility? For the money these guys get for hitting a ball it should be a 360-degree capability. It is like a soldier in a war zone saying anyone coming in from your right, let him pass, don shoot. I have never figured out the logic behind this gimpy leg stance. Which then brings me to the lbw because if it is pitched outside the leg he is not out but from the offside if it turns in everyone leaps about with joy. How is one different from the other as far as blocking the stumps is concerned? Then you have this no-ball nonsense well after the fact. Either call it when the ball is being bowled or forever keep your silence. The guy whacked the ball, he tried to send it into the stratosphere and he got it wrong, gave a catch, got out and is halfway to the pavilion when he is called back which is so disheartening. There was a time when the ump lustily yelled no-ball and you had a split second to react. All this technology is making the umpire a caricature with that sackcloth and ashes gesture when he is proved wrong. He is almost laughably powerless like a dethroned despot, so wide open to being tarred and feathered by players and a third umpire who makes you cringe by saying, I have made my decision when the running batsman was seven feet past the wicket. Making a decision calls for pros and cons and an assessment not an unbreakable alibi. But he must do that TV screen outline. Equally annoying is this nonsense of the line belonging to the umpire and those agonizing minutes of how me again and give me another angle multiple replays, it is, it ins, oops. Little itty bitty part is on the chalk, no it ins, oh just stop with the guessing game. Nothing is more annoying though than above the waist call. The batsman hit it, yes, the bat and the ball connected, so what is the beef, let it be, it is valid. I have made my decision, these rules are annoying in themselves and ruining the game. No glorious uncertainty. The most fundamental form of life in biology is the cell, and many cells go to form tissues along with other biological material. All living organisms are composed of one or more cells. Cell is the basic structural and functional unit of living organisms. All cells arise from pre-existing cells. If a single cell has agency and the power of cognition, so too would tissues that are a collective of cells. Therefore, it is not just the brain that recognizes, learns, thinks and feels; these functions are also carried out by other constituents that make up the entire human body, the most basic unit being the cell. Developmental biologist Michael Levin of Tufts University says that we need to abandon a binary view of cognition. For instance, tissues are collective intelligences.

Navigating a space. Cells work together on massive goals. the concept of chimera in cell biology reveals several mysteries that are being researched into by scientists. In Greek mythology, a chimera is a fire-breathing monster with a lion head, goat body and serpent tail and the term is used in English to indicate something that is impossible to achieve or something that does not exist. But in cell biology, chimera refers to an organism that is composed of cells that are genetically distinct from one another, perhaps from different individuals. The New Scientist reports that many people bodies contain at least a few living cells from another person. More rarely, a single person can be a fairly equal mix of cells that appear to derive from two different individuals. A human chimera occurs rarely when two embryos that would normally develop into non-identical twins fuse in the womb, and there is an amalgamation of cells from different sources. All these cell facts point to the truth that we are not only a collection of living cells, we are also a melting pot or salad bowl of cells that could come from very different origins, and make up the one individual human being. Now this is something spectacularly secular, notwithstanding the fact that even if we wish to, we can never separate our cells to make ourselves exist as an entity purely from one origination. This brings to mind Pratityasamutpada, the Buddhist philosophy of dependent origination that all things arise in dependence of other things. This kind of cell secularism is nature way of telling us that life is a mix of so many different ingredients and sources. The same goes for not just biology but also geography, politics, culture and everything else including religion, faith and belief. So the question of who is right and who is wrong is an oxymoron, since we are all part of the intricate and fabulous web of life; our sources are all mixed up and are enmeshed in secular ways, and we are all basically in some way or other related or connected to one another, including with other species. The Oneness Principle exalted in almost all religions and faiths perhaps refers to this kind of mosaic-style blueprint that is not only inextricably complicated but is also an orchestra that can only work well in unison. Understanding the ramifications of cellular-level processes at multiple scales offers to us valuable lessons in secularism Of denial. Why this absurd hostility? For the money these guys get for hitting a ball it should be a 360-degree capability. It is like a soldier in a war zone saying anyone coming in from your right, let him pass, don shoot. I have never figured out the logic behind this gimpy leg stance. Which then brings me to the lbw because if it is pitched outside the leg he is not out but from the offside if it turns in everyone leaps about with joy. How is one different from.

Power capacity in the world other initiatives One of the major initiatives has been One Sun One World One Grid Declaration. The idea was first mooted by the Hon blew Prime Minister in 2018. However, it was released jointly by Sheri Narendra Modi and the UK Prime Minister, Mr. Boris Johnson at the Climate Meet in Glasgow 2021envisions interconnected green grids that apart from being transformational will enable all nations to meet the targets of the Paris Agreement to prevent dangerous climate change. Moreover, these efforts can stimulate green investments and create millions of good jobs and help build a more peaceful and prosperous world by sharing the sun energy. The other efforts include the 21st Century Power Partnership, 21 initiatives, in which India is a co leader. To achieve this, it has undertaken key studies to help address the challenges of large-scale adoption of renewable clean energy sources to help achieve its renewable energy objectives. Further, Green Energy Corridor projects have been initiated to facilitate renewable power evacuation and reshaping the grid for future requirements. This apart, Prime Minister has also launched National Hydrogen Mission with the goal to make India a global hub for Green Hydrogen production and export. Role of private sector in promoting renewable energy Private players have a major role to play in leading India towards an abundant future powered by Renewable Energy. One of the major private sector companies working in the field of renewable energy is Harte Group. Its power infrastructure arm is one of the top 10 EPC companies in the country and has built more than 350+ projects across India. The group operates through its five strategic business units: Power Systems, Rooftop Solar, Power Distribution Products, Fuel and Smart Cities. Its recent 525 KW rooftop solar power project at the Golden Temple in Amritsar gained it a worldwide recognition. This solar power plant will offset around 2,000 tons of carbon dioxide emissions every year. Electric mobility in the country has recently received a big boost from the government. The proposal for the implementation of Faster Adoption and Manufacturing of Electric Vehicles in India Phase India Phase has approved by The Union Cabinet, chaired by Prime Minister Narendra Modi, for the development of electric mobility in the country. The scheme of Rest core over the period of three years, was implemented on April 2019. This scheme is the expanded version of the previous India 1, which was launched on April 2015 with a total amount of Rest 895 core. By way of offering incentives upfront on the purchase of electric vehicles. India Phase aims to encourage faster adoption of electric and hybrid vehicles by establishing the necessary charging infrastructure for EVs, which is very critical if e-mobility wants to take root in the country. The Ministry of Heavy Industries developed a Scheme for Faster Adoption and Manufacturing of Hybrid & Electric Vehicles in India FAME India Scheme in 2015 to promote the adoption of electric hybrid vehicles eve in the country at.

Present, India Scheme is being implemented for a period of 5 years which was started from. April with a total budget of. This phase has focused on supporting the electrification of public & shared transportation and it also aims to support, through subsidies wheeler Passenger Cars and 10 lakh Wheelers. 38 original equipment manufacturers of were registered under phase of India Scheme till 9th August 2021. Under the scheme of the demand incentive for has been increased to Rest. From Rest with an increase in cap from to almost of the cost of the vehicle to increase the adoption of further, the phase of India Scheme has been extended for a period of two years after 31st March 2022. A year ago following initiatives had also been taken up by the Government of India for the promotion of electric vehicles in the country The Government approved on May 12, 2021, a Production Linked Incentive PLI scheme for the manufacturing of Advanced Chemistry Cell ACC in the country in order to bring down prices of battery in the country. The drop in the price of the battery will result in cost reduction of electric vehicles. GST on electric vehicles reduced from on charger charging stations for electric vehicles has been reduced from Ministry of Road Transport & Highways Mort recently announced that battery operated vehicles will be given green license plates and be spared from permit requirements. A notification was issued by Mort advising states to waive road tax on EVs, which in turn will help reduce the initial cost of EVs. The Sum of Rest 10,000 core has been made for three years till 2022 for FAME 2 scheme. Rest 8,596 core for incentives has been sanctioned by the center, of which 1,000 cores has been marked for setting up charging stations for electric vehicles in India. To be used for commercial purposes the government will offer incentives for electric buses, three-wheelers, and four wheelers. Those with a sizeable lithium ion battery, Plug-in hybrid vehicles, and electric motors will also be included in the scheme and fiscal support offered will depend on the size of the battery. The center will invest more money in setting up charging stations, with the participation of active public sector units and private players. It has also been proposed to provide one fast-charging station and one slow-charging unit for every electric bus for 10 electric buses. Those needed to extend electrification for running vehicles such as pantograph charging and flash charging will be included for charging infrastructure projects. FAME 2 will also encourage the interlinking of renewable energy. The center may think to incentivize the purchase of 7,090 electric buses with a sum of Rest 3,545 cores, 35,000 four-wheelers with Rest 525 cores, 20,000 hybrids with Rest 26 cores, and 500,000 three-wheelers with Rest 2,500 cores. Manufacturers, who invest in developing electric vehicles and its components, including lithium-ion batteries and electric motors will be offered incentives by FAME the center asked states to frame their.

https://rkcnawada.online/best-typing-software-rkc.php

CRPF-hcm-Eng-Test-Dated-2026-10-10-Test NO.-28786

Policy and provide, non-fiscal and additional financial incentives to manufacturers and buyers. Only strong and plug-in hybrids priced under Rest 15 lakh, buses priced up to Rest 2 core three-wheelers under Rest 5 lakh, and two-wheelers under Rest 1.5 lakh will be eligible for incentives. On the electric three-wheeler front, the aggregation will be the key method for bringing the upfront cost of electric three-wheelers at an affordable level and at par with ICE three-wheelers. For this, the ministry mentioned that the state-owned EESL Energy Efficiency Services will come out with aggregate demand for 300,000 electric three-wheelers for multiple user segments. The details will be worked out by Energy Efficiency Services for implementation. Lastly, the Heavy Industry Ministry had detailed for electric buses that cities with a 4-million-plus population Mumbai, Delhi, Hyderabad, Bangalore, Chennai, Ahmedabad, Kolkata, Pune, and Seurat will be targeted. Energy Efficiency Services will again go for aggregation of demand in these cities for the remaining e-buses on OPEX basis. The details shall be worked out soon by Energy Efficiency Services for implementation. The Indian automotive industry has now become the fifth largest in the world and is slated to become the third largest in the next 7-8 years. To address this, federal policymakers are developing a mobility option that is Connected, Electric, and Shared and have projected an aim to achieve this target of 100 percent electrification by 2030. India stands to benefit on many fronts, by making the shift towards electric vehicles EVs. Regardless of the country ambitious targets for the coming future, India Electric Vehicle space is at a nascent stage. However, after looking at it differently India to offers the world largest untapped market, especially in the two-wheeler segment. Foreign direct investment is 100 percent allowed in this sector under the automatic route. Education is a great equalizer and leveler. Its role in uplifting the poorest sections of society, whether in rural settings or urban areas, is unquestionable. Education and poverty are inextricably linked the more education one receives, the better their chances of boosting the individual and family income and transition out of poverty. However, the paradox is that those in poverty are less likely to attend school to build the income they need to escape poverty. In fact, a 2021 UNICEF report shows that over 100 million children have fallen into poverty globally due to the pandemic as schools temporarily shut down and teaching moved online. While students with access to digital learning tools experienced a seamless transition, those without or with poor access to technology especially in rural and remote parts of India saw their academic journey come to a grinding and abrupt halt. According to the Annual Status of Education Report Rural 2021 ASER, 26.1% of the children living in rural areas of India do not have access to smartphones. The substantial learning losses brought about by school closures and digital access challenges for the poor further exacerbated an already simmering learning crisis, forcing the cycle of poverty to cont

CRPF-hcm-Eng-Test-Dated-2026-10-10-Test NO.-28787

Of society but going forward, forging stronger partnerships with detach players and nonprofit organizations will also play a significant role in breaking this cycle of poverty. By nurturing tech ecosystems and working with stakeholders at the grassroots level to boost rural education systems, over the next few decades, we can envision the country academic systems as not only accessible but also equitable. That will be the day India well and truly can position itself as a global leader. Citizens across the country and many nations around the world joined in, to celebrate India momentous 76th Independence Day. A landmark day, it added new vigor and energized the country resolute commitment to ramp up its efforts to build a stronger and wholly inclusive India. In a moving speech on the occasion, the Hon blew Prime Minister, Sheri Narendra Modi jig laid out his vision for the next twenty-five years. He raised a clarion call for the nation to take the panchpran, five pledges to move ahead as one, united in a bigger purpose with pride in our legacy and ready to fulfill our duties to bring our shared goals to fruition. Belonging to a healthcare family, I have observed that time and again, India has risen to healthcare challenges and overcome them in an exemplary manner. Our indigenous manufacturing of vaccines and nationwide inoculation are case studies in outstanding healthcare management. Likewise, going back in time, this is reminiscent of our win over smallpox in the 1970s with the National Smallpox Eradication Program and polio in the 1990s with the Pulse Polio Immunization Programme. In addition, India has always reached out to help many other nations. Even in combating the pandemic, our country rose to the occasion, supplying medicines and vaccines, sharing clinical learning and also sending doctors and nurses overseas, to help fight the novel coronavirus. Our preparedness was undoubtedly facilitated by the fact that we were well on the way to a Digital India. The sagacity and foresight of India, especially over the last few years in strengthening our digital backbone enabled us to put in place a comprehensive healthcare strategy that had technology at its foundation. Digitization empowered the public and private sector healthcare to come together as a seamless force with AI-backed surveillance tools, advanced diagnostic tests, new and repurposed therapies, and the world largest vaccination program, all that added up to us give us the upper hand against the invisible virus and save millions of lives. Moreover, the large-scale adoption of Digital Health has democratized and transformed access to healthcare in rural India. In the Independence Day address, the Prime Minister addressed the youth, especially those stepping onto the threshold of their careers and urged them to work for the next twenty-five years to create a fully independent India. It is here that I would say healthcare will play a critical role in ensuring that our young demographic stays healthy and disease-free as they stride ahead towards this collective goal. The world today is facing a.

https://rkcnawada.online/best-typing-software-rkc.php

CRPF-hcm-Eng-Test-Dated-2026-10-10-Test NO.-28788

In such a scenario, equitable access to digital learning tools is fast emerging as a solution to navigate these multifaceted challenges. While the digital divide has been a pertinent challenge in India, our vast network of education focused NGOs and a powerful detach ecosystem can be a key player in taking transformative education to the masses by making tech-driven learning solutions at scale. This, along with the able backing of government policies such as the New Education Policy and Digital India, we hope to see a reduction in the digital divide in the near future. With the right interventions, scale, partnerships, and last-mile reach, India and the world can ensure technology becomes the vital cog in the educational ecosystem and help alleviate poverty. Impact of transformative education Right to Live NGO, with the goal of transforming education and providing digital skills to the underprivileged, was the first to work with BYJU in 2018 in setting up Smart Classrooms in Government schools. Starting with a small pilot in 4 Government schools near Bangalore, today the reach is over 65 schools across rural Karnataka and Tamil Nadu, touching the lives of over 15,000 students. We aim to expand to 100 schools in the next 3 years, making a difference to over 25,000 school students. In my experience of working with children in Karnataka, I have seen a 10-15% upward improvement in students after the integration of technology and digital tools in classrooms. Students from Chikkaballapur and Anekal talk, who had previously performed poorly in their academics, have now scored very high marks in their Board exams. The improvement is not just academic, but holistic. The engagement and conceptual understanding of tech-driven education have allowed them to understand clearly, think critically, develop a learning mindset, and learn problem-solving skills. These are critical for children to imbibe in order to be ready for the unseen jobs of tomorrow. Moreover, with increasing home-grown tech advancements, India is witnessing a paradigm shift in the way students learn and teachers teach. We are no longer learning for the sake of getting a job but to be creators, innovators, and disruptors. This, in turn, has led to increasing demand for concept-based pedagogies. Today, students are encouraged to think outside the box and examine every concept critically. Major detects in the country are creating learning content based on this very principle, which strives to create innovators and leaders of tomorrow. To this end, players like BYJU working with grassroots NGOs like Right To Live, are providing counseling to students which goes far beyond just academics. It allows students to envision their lives outside of the four walls of the classroom and explore fields that were previously thought of. Breaking the cycle of poverty I firmly believe these tectonic changes will bring about a transformation, which could see India become a knowledge-based economy in the coming decades. With policy interventions, partnerships, and tech-driven solutions, India public office bearers are working towards ensuring better opportunities for children from the weakest sections.

By reworking classical traditions in unexpected ways, she makes the ancient feel startlingly contemporary while retaining a sense of its historical specificity. The data show gross collections have not often deviated significantly from the mean over the last two years. They provide recommendations while framing the problem as one whose resolution requires early, family-centred intervention. Thursday's reforms address complications in the entire chain of GST paperwork, from registration and return filing, to refunds and litigation. Public-health policy needs to address advertising and the aggressive promotion of unhealthy foods, while making nutritious alternatives more accessible. The Academy has chosen a writer who belongs in no category in particular, and everywhere at once. The thrust is to reduce human discretion in these processes by automating registrations, reducing the number of times small businesses have to file returns, handling refunds through computer-based verification, and significantly reducing the powers of GST officers. While all the simplification measures are welcome, some specific ones deserve special mention as they will substantially ease areas of major discontent. In an age of polarised debates, her writing never simplifies the complexities of human experience or forces them into neat conclusions. The Swedish Academy, which keeps its nominations secret for 50 years, has often sprung surprises. Much like Irrfan, who didn't fall into the conventional chocolate-box template, Nana's potential for romance was similarly stolen. India faces an especially complicated challenge because it confronts malnutrition and obesity simultaneously. This caution is welcome. The Prize is thus not just a recognition of an outstanding poet or classicist, but also a celebration of literary experimentation and a reminder of the limitless possibilities of human imagination and creativity at a time of AI slop. He could also underplay in parts that needed softness, and he brought conviction to both. Her first book, Eros the Bittersweet (1986), a reworked version of her PhD thesis on Sappho, examines the pleasure and pain of desire through the Greek idea of lack. Her later works Nox (2010), which is at once a book, an elegy, and an art object; Red Doc (2013), a sequel to Autobiography of Red; and Float (2016), which takes the form of 22 chapbooks housed in an acetate case all resist easy categorisation. Patekar's first few outings posted notice of an actor with presence. Nor was it that some EVMs failed to count their votes everywhere, except in Kerala or Karnataka. The decision to review rates only once a year, and implement rate changes only at the start of financial years, removes significant uncertainty that usually arises each time the Council meets. She has also frequently collaborated with theatre directors, choreographers, and visual artists, expanding our understanding of what constitutes literature. Activity and behavioural support should be the first line of defence. In its 10th year, GST is finally starting to look like what it should have at the time of rollout. The Centre has also used this opportunity to introduce a faceless assess

calls for accountability, and appeals to CEC Gyanesh Kumar's conscience, resonate more powerfully. That he became extremely popular for the former says a great deal about audiences, which gravitate towards easy-to-digest movies. That is the way it should be, instead of a 'guilty until proven innocent' approach. Decisions taken by the Goods and Services Tax (GST) Council in its 57th meeting on Thursday reveal two distinct changes in the attitude of the tax administration: increased trust in the taxpayer, and reduced anxiety over tax revenues. It would be hard to bypass the ruthless Anna Seth in Vidhu Vinod Chopra's 1987 Parinda - Patekar played him with a bravura mix of menace and vulnerability. It has also kept in tune with its decade-old trend of recognising women writers every two or three years. Short Talks (1992) is a series of brief, lyric prose poems, each approaching its subject through fragments and shifts in voice. But this year, it has chosen a bookmaker's favourite in Anne Carson, the 76-year-old Canadian poet, essayist, translator, and dramatist. The GST Council has tasked a committee to find a solution that can be implemented by April 1. Known for continually dismantling the boundaries between poetry, prose, and scholarship, Carson seamlessly brings the classical in conversation with the contemporary and personal, often through strange juxtapositions. Carson is the 19th woman among the 123 Nobel laureates in literature. This meant that thousands of genuine businesses that had received supplies and paid taxes on them were denied ITC, leading to a drying up of crucial working capital. The tax enforcement has used this complexity to try to extract every rupee it can. ld be a fun ride too. The Beauty of the Husband (2001), a semi-autobiographical work of narrative verse about the painful disintegration of a marriage, borrows its imagery from tango while opening its sections with lines from John Keats. She became the first woman to win the T. S. Eliot Prize for it. After nine years, taxpayers have also become familiar, if not comfortable, with the tax filing system. But the WHO has underlined that healthier diets, physical. In essence, trust the taxpayer to comply, and crack down only when non-compliance is demonstrable. Every year, before the announcement of the Nobel Prize in Literature, there is strong speculation among literary critics about potential candidates. The SIR is a much-needed exercise in a sprawling democracy with many moving parts. The WHO has emphasised that clinical interventions and behavioural change are only one part of addressing the nutritional challenge. This is a big change from the system in place so far, where taxpayers have been bogged down by compliance requirements. So far, taxpayers were denied input tax credits (ITC) until their suppliers had filed their returns. A popular, connected to the grassroots actor who was also a powerful orator, Patekar refused to be a spokesperson for a political party. He could play the loudest, most melodramatic of roles. The guidelines do not completely reject the use of drugs and surgery for adolescents who are severely obese and have associated conditions such as type 2

CRPF-hcm-Eng-Test-Dated-2026-10-11-Test NO.-28793

Double tsunami of infectious diseases and NCDs or non-communicable diseases. We are emerging victorious from Covid-19 but we must not lose sight of the fact that zoonotic diseases that spill over from animal hosts to humans are on the rise, having tripled in the last decade. Over 60 per cent of emerging infectious diseases in humans are of zoonotic origin. But India is prepared and in the case of infectious diseases, we have a strong base of talent and industry for research and manufacture of vaccines and medicines that will provide a strong bulwark to bring them under control and even eliminate them. The other wave that threatens to sweep away our economic gains is the rise in NCDs including obesity, heart disease, cancer, diabetes and respiratory diseases. India stands to lose $4.58 trillion before 2030 due to NCDs and mental health conditions. Today, when it comes to NCDs, we can institute proactive management and prevention using AI and ML technologies to predict the risk of developing NCDs such as heart disease and diabetes. These will give us the upper hand over NCDs as seen in the case of heart disease where early diagnosis with early intervention and management can prevent 80% of premature deaths. At the same time, we must bear be mindful to harness the Indian legacy of AYUSH and explore ways to integrate them into modern medicine, to deliver holistic health care and wellness to all. Over the last few years, India has also been earning renown for delivering best-in-class medical treatment with clinical outcomes on par with the best global centers. Further, an added advantage offered in our country is that the costs of care are a tenth as compared to western nations. Hence, we must persevere to attract many more international medical tourists and make India a destination of choice for the world, thereby, delivering good health to all. For centuries, India was celebrated as the land of healing. Over the last few decades, India healthcare achievements have been amongst its biggest successes and this must continue to be so. It is important that we work towards celebrating a century of Independence in 2047, which must include freedom from preventable fatalities, freedom from the challenges of care not being accessible to all and also enable every citizen to realise their fullest potential with the power of good health! The Indian logistics sector provides livelihood to more than 22 million people and improving the sector will facilitate 10 % decrease in indirect logistics cost leading to the growth of 5 to 8% in exports, which means India will roll out stronger economy with solidified infrastructure. At present, Indian logistics industry makes 14.4% of the country GDP but its overall cost is 14% of the GDP, whereas, BRICS average is 11 percent. Though different studies claim varied logistics cost number, ranging from 8-14% of GDP, it is still highly debatable at the current juncture of transition. However, still a significant gap to pull back an economy is.

CRPF-hcm-Eng-Test-Dated-2026-10-11-Test NO.-28794

There In the financial year 2021, when the Indian logistics market was at 250 billion U.S. dollar, it has been estimated that it would grow at compound annual growth rate CAGR of 10 to 12 percent and the net worth of the market would be 380 billion in 2025. The economy has rebound post pandemic and Reserve Bank of India RBI has projected a GDP growth of 7.2 percent for the current fiscal ending March 2023. Logistics is the backbone of any robust economy and should have uncooked pipeline for seamless flow of information, and uninterrupted supply chain management. And, for India to reign as the world fastest-growing economy over the next few years, driving world growth. There is a need for a single window clearance for logistics to move in the smoothest way possible. The Concern Only, 10% of Indian logistics belongs to organized sector. It is one of the most highly defragmented industries and very complex with more than 20 government agencies, 40 PGAs, 37 export promotion councils, 10000 commodities, 160 billion market size. It also involves 12 million employment bases, 200 shipping agencies, 36 logistics services, 129 ICDs, 168 CFSs, 50 IT ecosystems and banks & insurance agencies. Further, 81 authorities and 500 certificates are required for EXIM. All worked as separate entities, enough to discourage any interested investor. In India, logistics sector was an uncared for and a neglected child. It was merely a tool for transporting goods and services. Storage, monitoring, freight clearance, documentation, knowledge about the carrier and containers were never sought for or considered. This led to major mismanagement, delayed sharing of information and the sector could never achieve its full potential. There was no connect between railways, airways, waterways and roadways, which crippled the sector and marred it with several known and unknown inefficiencies. Further to this, the wide geographical diversity of India did not allow concentration of information at one place for a quick perusal and for seamless movement. With a single window, dissemination of information could ease out. If this gets leveraged, both the vendors and consumers of the logistics services would save a lot of time, would stay informed about freight movement and can control several hidden costs. PM Gait Shakti-the game changer The Prime Minister of India has always considered logistics as an essential part of the infrastructure development. He had also mentioned it in his address to the nation during the first phase of lockdown. In fact, it was one of the few sectors, which had the permission to operate with limited workforce as the need and purpose was definite. PM Gait Shakti- National Master Plan, envisaged with this mindset, is launched last year in October 2021. The plan aims at breaking departmental silos and bring in more holistic and integrated planning and execution of projects with a view to address the issues of multi-modal and last-mile connectivity. With synchronized and syndicated flow of data, hope is productivity will increase, there would be a promise for better.

Would probably lose out. Central Asia's has tremendous strategic and economic value for India. Besides, the region has strong historical and cultural links the leaders reiterated their strong support for a peaceful, secure, and stable Afghanistan with a truly "representative and inclusive" government. Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animal's use sound to find prey locates mates and offspring avoid predators guide their navigation and locate habitat as well as to listen and communicate with each other. Oceans are full of sound. Waves, earthquakes and icebergs - all contribute to the underwater soundscape. But so do human activities and this can be a problem for marine life as it can seriously affect their physiology behaviour, reproduction and even survival. Being able to produce and detect sound in an environment's where light penetrates only a few hundred metres is crucial for animals to communicate, feed, avoid predators and navigate vast underwater habitats. Large whales generate low frequency communication calls that can travel thousands of kilometres. While the snapping shrimp, native to the western Atlantic, can produce a loud snapping sound capable of stunning and killing its prey. The noise generated by humans changes the natural acoustic environment of our oceans and our capacity to produce it is increasing. Noise is often the unintentional by product of transport infrastructure development and industry. Yet noise can also be produced deliberately. Many navies use sonar system to detect ships and submarines while geologists survey the seabed for oil and gas using seismic airguns. The noise produced by an airgun can exceed 200 decibels louder than a gunshot at a range of one metre. Sound travels further and four times faster in water than in air at a speed of almost 1500 metres per second. The noise produced by humans can therefore spread considerable distances underwater. These sounds can be relatively constant such as the noise produced by the engine of a ship and propeller or sudden and acute in the case of naval sonar and seismic airguns. Second, on connectivity, the leaders agreed to utilise the services of the Shahid Behest Terminal at the Chabahar Port for facilitating trade between the landlocked Central Asian countries and India. Third, the Leaders agreed to institution allies the Summit mechanism by agreeing to hold it every two years, to hold regular meetings of foreign ministers, trade ministers, culture ministers, and secretaries of the Security Council to prepare the groundwork for the summit meetings, and to establish an India-Central Asia Secretariat in New Delhi. At the foreign ministers level, the India-Central Asia Dialogue meetings are taking place since 2019. The 3rd meeting of the India-Central Asia Dialogue was held in New Delhi in December 2021 under the chairmanship of EAM Jaisankar. They decided to step up efforts to achieve the full potential for trade between India and Central Asia and mak

CRPF-hcm-Eng-Test-Dated-2026-10-11-Test NO.-28796

At the Bikaner House last Thursday, art historian and Neemrana Hotels founder Aman Nath, Delhi famous heart bypass surgeon Dr Satish Mathew and Indian heritage photographer Manoj Arora came together to inaugurate abstractionist Neerja Peters solo debut Rupa Bheda (Secrets of Form), at Bikaner House. Neerja, a former medical practitioner and gold medallist from CMC Ludhiana, is a self-taught visual artist for the last 15 years who has been creating works notable for their exploration of abstraction that is deeply invested in the process of a spiritual sojourn. She has already had two solo showings in the USA and another solo at a museum in Australia. She has also during the pandemic been a part of 500 online and offline shows all over the world. Using the idea of forms and geometric symbolism from a diverse array of materials including charcoal and pigments of paint in acrylics as well as lithe lines, this epic exhibition mirrors her interest in a unique balance and harmony of both colours as well as the result of the reflection of light. At Bikaner House the narrow corridor that leads to the Main Gallery held small vignettes of works that invited a meditative odyssey. Colour is her vehicle while it is the chromatics of combinations that create their own corollary of conversations. To step into the exhibition of Neerja Peters is to be invited into a kingdom of color and geometric harmonies. The main wall on the right revels in the compositional clarity of a tender and tensile work she calls The Monk. It breathes the energies of monks worlds over, of the magic of meditation and the contemplative idioms that define the solitary journey. If the monochromatic works have within their own variety of vibrations, the color canvasses brim with humming harmonics. In the language of quantum physics, we are told that both vibrations and harmonics are basic to the participatory physical reality in which we live. Scholar critic author and poet Ashok Vajpeyi of the Raza Foundation came on Saturday 22nd February to savour her exhibition and waxed eloquent on the monochromatic wall that held a magical triptych of a Sadhaka 3 along with four works that belonged to her black and white series. Within the sub text of geometry we also think of the system of representation that prompts a deeper understanding of form and subjects than traditional naturalistic representations in abstraction. When we consider an abstract painting that is created in strict rules of geometry we unconsciously engage in an intellectual or perhaps conceptual activity rather than a merely perceptual or visual one. Indeed in the silence of an invitation that speaks within fragments of meditational moorings Sadhaka 3 (The Trinity) is a study in slate greys and a hint of ochre. Neerja paintings celebrate the chromatics of color within the precision of mathematical moorings; she positions herself as both audience as well as creator. These layered abstractions are part of an intuitive process, building up and paring down her reflective meditations over extended periods of time. Her works move from monumental triptychs on view, to series of singular studies as in a wall of sacred signatures with L

Has the power to elevate the viewer to a higher plane of existence. In experiencing art, one can transcend the material world and connect with a deeper, more subtle aspect of the self, aligning with the ultimate reality. The geometric symbolism in my work, coupled with the interplay of colours, arises from deep contemplation. To me, the interplay of light and the emerging forms signify the divine union of consciousness with the supreme source of all light. This exhibition lends itself for the experience created on each wall of this magnificent gallery that becomes an oasis of wonderment in design dynamics. The last large wall becomes an island of graphic fragmentation in yet another series of five smaller works that engage the senses. The beauty of discovering her work as an abstractionist lies in seeking the philosophy of India masters to understand the language of primary aesthetics in design dynamics and the exploration of color specifics. As soon as you gaze at her works you are reminded of the Panchatatva as well as the potency of materiality. On the same last wall is a large work she says is the lotus that was once exhibited at the Lotus Temple in Delhi. It reminds us of Tantra, the geometric forms in yantras and the recitation of mantras designed to invoke various energies and aspects of the Divine. Neerja adds: Only advanced spiritual knowledge allows a practitioner, or sadhaka, to truly understand the depth of these symbols. For them, yantras become progressively subtler, and at a certain stage, even a blank space can evoke the spiritual connection that transcends all planes of existence. The entire exhibition becomes a journey in the chromatics of color. Before we gaze at her rice paper manifestations in monochromes and slender lines and geometry we are reminded of the great Wassily Kandinsky who wrote: Color directly influences the soul. Color is the keyboard, the eyes are the hammers, and the soul is the piano with many strings. The artist is the hand that plays, touching one key or another purposively, to cause vibrations in the soul. The play of form and color is an island of reflection, an almost paradoxical fusion of philosophical spirit and physical prowess. But within the vocabulary of contours, lines and color tones is also an echo of the ancient gesture of meanings to be found in the algorithm of abstract art journeys. In her little catalogue of notes and observations designed by the brilliant Makes Mishra and printed at Arcana Offset, we read Neerja diary entry that states: It is a journey within that accompanies this abstract creation of visual and rhythmic poetry reverberating and vibrating in directions to and from the center. The soul that originates from the creator or the center is directed back to its source and its divine grace, being completely absorbed into a state of loss of separateness from its ultimate essence and reality. Human urge to migrate has existed for centuries, driven by search for prosperity and security. Yet, the debate around immigration and deportation raises deeper questions is borders real, or is they human-made illusions? A spiritual seeker transcends these lines drawn on maps and embraces o

The crucial need for good and efficient governance's there ensuring the fundamental rights of women, children, and minority communities and to combat terrorism's in all its forms and manifestations, including its financing, the dismantling of terrorist infrastructure and countering radicalisation. This holy festival is celebrated every year on twenty fifth December's as a celebration of the birth of Jesus Christ with full joy and gaiety. Christmas festival is celebrated with great pomp. This day is celebrated as birth anniversary of God Jesus Christ. This festival is celebrated in country's and abroad with its customs and traditions. On this festival decorating the Christma's tree and cutting cakes going to church and gifts from Santa Claus has a different significance. Christmas festival has special significance for people of Christianity. According to the religious book Bible of Christianity Jesus Christ was born on this day however different views have been given regarding the birth date of Jesus Christ. Jesus spent his entire life in the wellbeing of others and inspired people to follow the right path he is also known as liberator and protector of liberating people from suffering. At same time Jesus performed many such miracles due to which he was not only called the "messenger" of God so his birthday was celebrated as Christmas. On this day all schools and colleges and government and private offices have their holidays. The history of this holy Christmas celebrated with joy and cheerfulness is associated with birth anniversary of Jesus Christ. Birth of Jesus Christ had already been predicted that a man on earth would be born who would grow up to be an influential king and his kingdom would have no limits and he would be saviour of the world the painter and will be the right guide. After this when Jesus Christ was born in a cowshed from womb of mother Mary in Bethlehem in Israel his prophecy came true. After which his birthday was celebrated as Christmas festival. Christmas feast is especially associated with Santa Claus. In addition, India discusses issues concerning Central Asia at SCO and bilateral meetings. India hosted the SCO summit on the 4th of July 2023 to focus on the sustainable development of Central Asia. In August 2023, India and Kazakhstan discussed bilateral and regional issues at the fourth Security Dialogue. In the above background, the Second India-Central Asia NSAs meeting took place on the 17th of October 2023. This meeting focused on three aspects. First, it discussed measures for enhancing cooperation in cyber security, digital infrastructure, rare earths, and people-to-people contacts. Indian NSA proposed an India-Central Asia Rare Earths Forum to attract investment from the private sector. India also offered to provide technology related to digital payments free of cost to facilitate the setting up of sovereign digital real-time payment systems in line with the needs of these countries. India and Central Asian countries decided to work closely on cyber security and India offered help to build defences against cyber threats by creating a secure cyber-ecosystem. Doval invited the heads of cyber securities agencies o

CRPF-hcm-Eng-Test-Dated-2026-10-11-Test NO.-28802

Reservation policy fail's to achieve its purpose of giving equal opportunity to everyone because of lack of infrastructure in the rural areas of the country where the proportion of backward classes is significant. A number of people living in some remote areas in Orissa, M. P. or Bihar are not even aware of these policies. They are deprived of even primary education and basic employment which make them more backward financially. It fails to establish which causes disequilibrium in the status of the states. The total reservation quota stands at 49% in many states of India and this includes the "SCs, STs and OBCs. The trend seems to have shifted to reverse discrimination rather than more affirmative action. Some backward class elite have gained political and economic clout based" on this reservation. However a majority of the backward classes is not living any differently than before because their subsistence is meager and rural lifestyles do not provide them with any of the benefits. The worst thing is that many are not even aware of these policies, especially in the interior parts of the nation. Thus a distinct economic class system exists within the backward classes. Mostly undeserving people have gained the advantages and the deserving ones are still without any significant positive change in their plight. It is interesting to note that the constitutional provisions regarding reservations which explicitly single out certain castes for special preferential treatment contradicts the documents prohibition on discrimination based on caste, race and other such other criteria. Besides, despite the creation of commissions to monitor the implementation of reservation policy by the center the constitution gives great liberties to the individual states to determine the quantity and limits of reservation which often lead to exploitation. In reality there is no abolishment of caste system. Instead the disparity increases because of antagonistic attitude on both sides. It is said that around 3.7 billion years ago, the earth cooled down and had warm oceans. In these warm water bodies, the first single-celled organisms evolved. Thus, water was instrumental in the origin of life. 70% of the earth is covered with water, and up to 70% of the human body is made of water. Today we have millions of marine species, but many plants and animals evolved to survive in non-saline conditions. The human civilization rose on the banks of rivers. Early human beings settled down along the fertile river basins as it was easy for growing crops, and was convenient for transportation too. Presently, agriculture demands for 70% of the freshwater needs. Industries and domestic uses share the rest thirty percent. But this precious resource has become scarce due to many human-made reasons. Only three percent of the total water available is freshwater. But more than sixty percent of this potable water is locked up in ice caps and glaciers. Moreover, we have kept our water bodies clean. Industrial effluents and sewage discharges are directly let into rivers. In cities, buildings come up on dried ponds and lakes. So, when it rains, we don have the facility to store the rainwater. Th

Our kartavya is not our job. Job is the work we do to earn a living. And kartavya is the work that needs to be performed by one and all at three levels body, mind and soul for oneself and all including our family, community, country and the world to maintain the gate in Nature, to keep things moving forward, says the Bagdad Gita, and even Krishna is not spared from doing this. Our kartavya towards our body, for instance, could be to maintain personal hygiene, eating nutritious food, exercising; our kartavya towards our mind could be to keep it stress-free, manage time well, be watchful that no negative thoughts seep in and deplete our energy; towards our soul meditate, listen to it, not ignore it, and draw energy to work on its wisdom. Keeping our house clean and not throwing garbage on the streets could be our kartavya towards our neigbourhood and so on. Replying to Argon question why perform karma, do one kartavya, or anything, when maintaining equanimity is the noblest thing, Krishna says in Chapter 3 of the Bagdad Gita that it essential to perform our karma to attain equanimity. Also, by renouncing karma, no siddhi, accomplishment, can be attained. the senses even in the mind, devoid of any attachment, performing one kartavya, without any expectations, helps you attain sambuddhi and such a person is shreshth superb, says Krishna. This is an essential teaching for all leaders and countrymen. And the Bagdad Gita gives us all a road map to become superb human beings. Equanimity is a feeling that takes you close to bliss, when ups and downs of life do not shake you. What would happen if you plant a seed and shake its pot rigorously every day? It is never going to germinate. For anything of consequence to take shape in your mind, a constructive idea, a creative project, equanimity is essential. And equanimity comes when you have performed the karma at hand without attachment, till the point of satisfaction of having done one best, selflessly. This way you will never be stressed, you all feel light and elated. You can even attain Supreme by dispassionately performing your kartavya, as did King Jana, says Mena Om, founder of Prename Movement. Even after attaining Parramatta, he continued to do his kartavya as a ruler, for look sang rah collecting resources for the benefit of all. Krishna only praises one person in the Gita King Jana. Then, giving his own example, he says he never stops doing his kartavya, although there is nothing left for him to achieve, because everything in creation would get disorganized, disturbed and destroyed and I will be a creator of these imperfections, and impurities and will have to destroy them too. Krishna further adds that kartavya must be performed without any satrap desire or vexation. And the best way to do so is to perform the kartavya karma as an offering to him. This way one can attain liberation from the ties.

They are instrumental's in curbing global warming. Lesser warming implies a slower's melting of ice sheets and glaciers, thereby, preserving the largest source of freshwater. Floods and storms are natural events, but nature has its way of replenishing the water that flows into the seas. Holy is one of the important festivals of the Hindus. It is a colorful festival of great joy and enthusiasm. This festival is celebrated all over the country as a day filled with complete mischief, fun and enjoyment. Holy indicates the end of the winters and the beginning of the spring season. According to the Hindu calendar it is celebrated on the full-moon night of the month of Phallus. Holy is celebrated to mark the victory of truth over evil, the victory of Paroled over King Hiranyakashyap's Paroled was a devotee of God. His father, King Hiranyakashyap's did not believe in God but-believed in his own powers. He failed to deviate his son devotion to God and decided to kill him by burning him alive. Paroled sister, Holika, had a God-gifted boon that she would not be burnt in the fire. She sat with her nephew in the blazing fire. Holika let herself be burnt and Paroled was saved. The truth, the powers of the Supreme God, defeated the false evil. During the day women folk worship a stack of wooden logs called Holy. At the end of the day in the full-moon night Holy is burnt in a holy way. The green ears of barley and gram are heated up in the fire and distributed among friends and relatives new. Friendships are made and old enmities are forgotten. Next day is the festive day of Holy. All hearts are filled with joy. Children throw colored water on each other while the elder people apply gulal or abir, There are noisy scenes as little groups of children move from one locality to another exchanging holi greetings, singing songs and laughing at their own jokes. It is almost mid-day when people move indoors to freshen themselves. Though this is a festival of brotherhood and unity, it has some disadvantages too. Some ill-minded people-take this day as a chance to take revenge. They use dirty mud water. Use of strong colors harmful to the skin, charcoal and grease often create a serious quarrel. This leads to unnecessary enmity and spoils the charm of the festival. Keystrokes The average temperature of the Earth has been increasing continually since the late 19th century. The mean global temperature in the 1960s was 13.9 degree Celsius whereas in 2017 it was 14.9 degree Celsius. Thus, no one can deny the fact that the temperatures have been rising on our planet. Ice ages and warmer periods have occurred alternatively and naturally on Earth. Natural warming happens when Earth is closer to the Sun. But, it is the greenhouse gases that lead to a rapid temperature increase and disrupt the natural cycle of changes. The gases such as the oxides of carbon and sulfur are greenhouse gases. These gases, when present in the atmosphere, trap the incoming radiation and heat from the Sun. The phenomenon of atmospheric gases acting as a shield is known as the greenhouse effect. We humans have been primarily responsible for the release of these harmful gases. Our activities such as i

Before discussing the need and desirability for the reorientation of police outlook for better prevention of crime, it will be useful to have a look at the crime situation in India. The crime graph is a reliable index of the challenges facing police. From the available crime figures of 1967. Incidentally something should be done to publish our annual crime reviews within eight to ten months of the end of the year, as is done in the United State of America and not three or four years later. It can be seen that the crime graph is gradually rising. It is true that the statistical data available for analytical study of crime trends is limited. However, an analysis of available records reveals that major offenses including thefts and burglaries have increased significantly over the years. It is true that when the rate of acquittal rises from thirty percent and a conviction rate between twenty and thirty percent, it becomes nearly fifty percent and a conviction rate between twenty and thirty percent, it becomes disturbingly clear that crime does pay in India, as it does in so many other countries of the world. But in India this rise in crime has not kept pace with a comparatively faster growth of population and this may be regarded as a somewhat hopeful sign. Thus during the six years period between 1958 to 1963 total cognizable crime reported went up by seven percent whereas for the same period the country population went up by eleven percent. This compares favorably with situations in countries like the United States where crime is increasing more than four times the rate of the growth of population, and four serious crimes are being committed every minute. The crime wave in the United State of America in the words of Edgar Hoover, the Director FBI has surged and swelled into a national crisis. The necessity of maintaining law and order demands comprehensive administrative reforms, modern training for police personnel, and efficient judicial mechanisms. A crime-free society requires active cooperation between citizens and law enforcement agencies. Preventive policing strategies, prompt registration of cases, scientific investigation methods, and effective prosecution of offenders are vital components in restoring public confidence in the criminal justice system. As urban centers expand and socio-economic complexities increase, crime patterns continue to evolve, requiring constant vigilance, technological adoption, structural improvements, administrative efficiency, and dedicated efforts by law enforcing authorities across the country to maintain public safety, protect fundamental human rights, strengthen community policing initiatives, reduce criminal activities, ensure speedy justice, and uphold the rule of law for creating a peaceful, secure, stable, and progressive environment for every single citizen residing in different parts of the entire nation. It would be tragic if the seminal question at hand is abbreviated to a loser's complaint. The global burden of diabetes and lifestyle diseases is increasingly extending to the young population. As in charge of the Electoral Rolls and IT division. This summer, protests forced a Union minister to r

significant. It asks the Court to demand answers from the Commission. Ultimately, it calls on citizens to assert the inviolability of their constitutionally guaranteed "adhikaar" or right to vote. A growing body of research has underlined that children with limited access to healthy food options often rely on poor diets. India's approach concurs with that of the WHO in recognising that containing obesity-related maladies requires a concerted effort involving parents, pediatricians and schools. Nana Patekar pulled off a rare balancing act in The district administrations should withhold permission for any rally, procession or public gathering on days of crucial competitive examinations to ensure smooth traffic and law-and-order arrangements are in place well in advance and no candidate is affected by external disturbances, a Parliamentary panel has recommended. It's equally hard to forget him as the straight-arrow army major in the 1991 Prahaar, in which he directed himself and a luminous Madhuri Dixit. It is fraught today because the clean-up has also become a cover for deleting voters without due process. But this time, the Opposition, which played catch-up with the CJP-led mobilisation in June-July, has framed the issue in a way that sparks questions of its own. Institutions rarely correct themselves without pressure being brought on them to do so. Bollywood. It needs to face up to its own deepening disconnect with the people - and that is separate from, not part of, the ECI-SIR story. In a democracy, the Opposition is best placed to amplify their voice. The 2011 anti-corruption movement put Lokpal on the statute book. Surveys have highlighted the links between child malnutrition and poor maternal diets. The Indian Academy of Paediatrics' guidelines, issued in 2023, recognised the gravity of the problem. Of GST, and the Council has delivered. Nutritional awareness must be combined with stronger regulation of junk food, women's empowerment and making healthier choices easier. By the time N Chandra's 1985 Ankush came along, in which he played a young and restless revenge seeker, Patekar had become an intrinsic part of films trying for difference in the commercial space. Its appeal for "supportive environments for children" is particularly salient for India. But the problem, more fundamentally, is this: The rhetoric that accompanies these scenes is of "stolen elections", "annulment of SIR", "going back to the ballot paper". But it should not lose sight of the fact that this issue transcends party lines, it does not belong to any one party. They recommended that obese children above 10 be assessed for associated conditions such as hypertension, abnormal blood lipids, diabetes and fatty liver disease. For Example: 10% mistakes of the total words typed will be ignored and thereafter for every full or half mistake, corresponding words will be deducted from the total words typed for arriving at the final speed. Spacing errors: Where no space is provided between two words, e. g. I hope or undesired space is provided between the words or letters of a word e. g. I have, 'I h ave' (space left between a word). Wrong Capitalisation: Wrong typing of a capi

Connect between railways, airways, waterways and roadways, which crippled the sector and marred it with several known and unknown inefficiencies. Further to this, the wide geographical diversity of India did not allow concentration of information at one place for a quick perusal and for seamless movement. With a single window, dissemination of information could ease out. If this gets leveraged, both the vendors and consumers of the logistics services would save a lot of time, would stay informed about freight movement and can control several hidden costs. PM Gait Shakti-the game changer The Prime Minister of India has always considered logistics as an essential part of the infrastructure development. He had also mentioned it in his address to the nation during the first phase of lockdown. In fact, it was one of the few sectors, which had the permission to operate with limited workforce as the need and purpose was definite. PM Gait Shakti- National Master Plan, envisaged with this mindset, is launched last year in October 2021. The plan aims at breaking departmental silos and bring in more holistic and integrated planning and execution of projects with a view to address the issues of multi-modal and last-mile connectivity. With synchronized and syndicated flow of data, hope is productivity will increase, there would be a promise for better supply-chain management and it would accelerate economic growth. It holds a promise to give a new direction to the development of modern infrastructure through planning, implementation and monitoring, besides cutting down on time and cost overruns of the projects. It was launched with the sole motto of bringing 7 engines of economy, namely, railways, roads, ports, waterways, airports, mass transport and logistics infrastructure at one platform for economic growth and sustainable development. The touchstone of the Master Plan is to have a world-class modern infrastructure and logistics synergy among different modes of movement both of people and goods and location of projects. All the plans under PM Gait Shakti have been proposed to smoothen the logistics knot between the Go and the State departments. Indian Chambers of Commerce feels logistics is an all-time essential sector from ensuring essential supplies to commencement of international trade. The expansion and strengthening of the sector are a promise for a better tomorrow. How instrumental will be Unified Logistics Interface Platform ULIP Post pandemic or may be prior to that business model of the industry was changing, it was gradually converging and getting digitalized. ULIP is an indigenous API integration platform, developed by leveraging the NICDC logistics Data Bank project, with the aim to create a nationwide single window logistics platform for end-to-end visibility, and is in alignment with the vision of PM GatiShakti. The virtual gateway has been integrated with 30 systems of seven different Ministries through 100+ APIs, covering more than 1600 fields successfully. As was proposed by Finance Minister Normal Sitharaman in her Budget Speech, it has brought down the logistics cost and time, and has eliminated tedious documentation. It is bringing

Our kartavya is not our job. Job is the work we do to earn a living. And kartavya is the work that needs to be performed by one and all at three levels body, mind and soul for oneself and all including our family, community, country and the world to maintain the gate in Nature, to keep things moving forward, says the Bagdad Gita, and even Krishna is not spared from doing this. Our kartavya towards our body, for instance, could be to maintain personal hygiene, eating nutritious food, exercising; our kartavya towards our mind could be to keep it stress-free, manage time well, be watchful that no negative thoughts seep in and deplete our energy; towards our soul meditate, listen to it, not ignore it, and draw energy to work on its wisdom. Keeping our house clean and not throwing garbage on the streets could be our kartavya towards our neigbourhood and so on. Replying to Argon question why perform karma, do one kartavya, or anything, when maintaining equanimity is the noblest thing, Krishna says in Chapter 3 of the Bagdad Gita that it essential to perform our karma to attain equanimity. Also, by renouncing karma, no siddhi, accomplishment, can be attained. the senses even in the mind, devoid of any attachment, performing one kartavya, without any expectations, helps you attain sambuddhi and such a person is shreshth superb, says Krishna. This is an essential teaching for all leaders and countrymen. And the Bagdad Gita gives us all a road map to become superb human beings. Equanimity is a feeling that takes you close to bliss, when ups and downs of life do not shake you. What would happen if you plant a seed and shake its pot rigorously every day? It is never going to germinate. For anything of consequence to take shape in your mind, a constructive idea, a creative project, equanimity is essential. And equanimity comes when you have performed the karma at hand without attachment, till the point of satisfaction of having done one best, selflessly. This way you will never be stressed, you all feel light and elated. You can even attain Supreme by dispassionately performing your kartavya, as did King Jana, says Mena Om, founder of Prename Movement. Even after attaining Parramatta, he continued to do his kartavya as a ruler, for look sang rah collecting resources for the benefit of all. Krishna only praises one person in the Gita King Jana. Then, giving his own example, he says he never stops doing his kartavya, although there is nothing left for him to achieve, because everything in creation would get disorganized, disturbed and destroyed and I will be a creator of these imperfections, and impurities and will have to destroy them too. Krishna further adds that kartavya must be performed without any satrap desire or vexation. And the best way to do so is to perform the kartavya karma as an offering to him. This way one can attain liberation from the ties.

Transparency in the logistics industry, thus making India cost competitive and Atmanirbhar in the logistics sector. Leveraged by this virtual gateway, recently, the Logistics Data Bank LDB has achieved the milestone of handling 50 million EXIM containers, clearing the roadmap for New Logistics Policy. This means, the sector has complete data about these 50 million containers, which would reduce a lot of paper work required for regulatory clearance for further instrumental sing these containers for movement and in the process reduce the lead time for overall import-export cycle. It would also provide valuable information on empty container management, demand forecasting, lower inventory costs, and bring financial benefits and robust infrastructure. The Government at this phase can expect more investment in the manufacturing sector as the first stage of confidence building in the logistics sector has been achieved with this milestone. LDB handles 100% per cent of India EXIM container volume. Conceived as one of the smart community projects between India and Japan during the initial stages of planning of Delhi Mumbai Industrial Corridor project, has a futuristic outlook. The LDB Project uses RFID technology through Internet of Things Iota, Big Data and Cloud based solution to provide real-time tracking of EXIM container movement in India. It is an overarching solution that integrates the information available with various agencies across the supply chain to provide detailed real time information within a single window. It even analyses choke points at NHAI and leverages planning of better routes, benefitting the stakeholders. The world now seems to see India as a pioneer in improving Logistics Industry, markedly due to its approach and perseverance. In Agility Emerging Markets Logistics Index 2022, India ranks 2nd in overall measures. Its rank in the various parameters of this index such as 14th for business fundamentals, 2nd in Domestic and International Logistics Opportunities, and 5th in Digital Readiness are the evidence of its growth momentum, accomplishments and its dependability on the sector in creating world-class industry-oriented infrastructure. Transparency in the logistics industry, thus making India cost competitive and Atmanirbhar in the logistics sector. And in Gita Chapter 18, he says: Offering your homage to me thus, you will come to me without fail. This was Krishna advice to Argon. Thus, in the word kartavya lies the whole game plan of our evolution. And perhaps our country growth too. It said that the patriarchal violence women face gets acknowledged only when it kills her when a case of domestic or intimate partner violence becomes a case of murder. At what point then do we recognise the violence that patriarchy enacts on men? The NCRB Crime in India 2021 report shows nearly 13,000 people killed themselves over love. 64% of these were young men aged 18-30. Go should act on the recommendation of the parliamentary standing committee on health that cancer be made a modifiable disease. Modifiable makes it mandatory for healthcare providers to report every case to authorities. So far states like UP, Bihar, Maharashtra and MP have dithered on this. The panel has noted with dismay that various population-based and hospital cancer registries cover just 10% of the Indian population though the programmer began four decades ago. With just 22% of registered deaths medically certified, all we have are estimates. ICMR estimates there are 14 lakh cases and 7 lakh deaths annually. Absence of high-quality data on cancer incidence and mortality is felt across the spectrum of cancer prevention and treatment. Urgency for localized implementation of screening programmers will materialize only with concrete data of high incidence of cancer in particular areas. Even risk factors like tobacco, air pollution, pesticides and packaged/junk food consumption will be better understood with a comprehensive database, which tracks patients across geography, age groups, economic status and lifestyles. Better reporting will also pressure governments to proportionately increase funding and resources for cancer care and research. A 2013 Union Cabinet decision to build 39 state and tertiary cancer institutes is inordinately delayed and will be fully completed only by 2024. India mortality to incidence ratio of 0.68 is much higher than those in rich countries, where the ratio is 0.38. The West cancer incidence is bigger than India. But what reduces mortality is early cancer detection. And a good state health insurance system encourages treatment. Currently, official grassroots screening programmers in India are very basic, covering just 10% of the population for three cancers oral, cervical and breast. Though health is a state subject, the parliamentary panel urges go to take the lead in setting up new cancer centers. It has projected Rest 35,000 core expenditure in setting up a nationwide hub-and-spoke model for cancer treatment. The least states must do is to make cancer a modifiable disease, and then Go must step up the funding. The decision of a Varanasi district judge upholding the maintainability of a plea by some Hindu women to offer prayers to Stringer Gaur and other deities on the outer wall of the Gyanvapi mosque is certainly not the final judicial word on the subject. The Muslim side will surely move the high court.

And if they win there, the Hindu side will push higher for a different verdict in the Supreme Court. Or vice-versa. This is not a fight any side is going to give up easily. The conclusion one should draw from this win for one side and loss for the other is that much more than just legal points are involved. When communities as a whole feel aggrieved for reasons related to religious emotion, legal remedies are suboptimal. Japan and China will observe the 50th anniversary of establishment of diplomatic relations in September 2022. Usually, several events are organized to commemorate such a milestone. However, it seems that the celebrations will be muted and without an in-person summit between the Japanese Prime Minister Fumio Kashia and Chinese President Xi Jinxing. On August 19, Japanese foreign minister Yoshimasa Hayashi said that a summit meet between the two leaders is likely soon, but it would be online. The celebration, or lack of it, reveals the complex state of Japan-China bilateral relations. Japan and China appear to be estranged and their bilateral contests and regional moves inconsistent with each other. Japan under ex-Prime Minister the late Shinto Abe tried to create a collective response against China assertiveness in the region through the propagation of the Indo-Pacific strategy. It is interesting to note that despite being one of the lynchpins in the Indo-Pacific strategy, Japan tried to maintain economic and other connects with China. The bilateral relations could be characterized by political disconnect and rivalries but pragmatic cooperation in several other areas. Actually, except a rare visit of Shinto Abe to China in October 2018, all the summit meets between the two countries in the last ten years have been at the sidelines of other multilaterals. A Chinese President has not visited Japan for a summit meet since 2008. When both the countries showed positive gestures towards each other during the initial phase of the Covid-19 pandemic, it was considered an interesting turn in the bilateral relations. However, with the retirement of Shinto Abe and subsiding of the pandemic and other changes in regional politics, the relations between Japan and China have become more complex. Even though the Japanese Prime Minister said in Jakarta on August 10 that the doors for talks between the two countries are always open to have a constructive and stable bilateral relation, Japan has been quite outspoken on the Taiwan issue as well as on China aggressive behavior in the neighborhood, including in East China Sea. China, while opposing US House of Representative Speaker Nancy Pelosi visit to Taiwan, fired ballistic missiles of which five fell into Japan exclusive economic zone. Also, unlike South Korea, the Japanese Prime Minister gave warm reception to Pelosi when she visited Japan. There are reports that Chinese coastguard ships have been repeatedly intruding into Japanese waters. China abruptly canceled meeting of the foreign ministers of both the countries which were scheduled for August 4, 2022 in Cambodia. Reportedly China did it because Japan along.

CRPF-hcm-Eng-Test-Dated-2026-10-12-Test NO.-28814

Selfless service is unaffected by results. It is like rays of the sun that serve the world by shining alike on all creation: grass, fields, birds, mankind; saint and sinner, rich and poor, strong and weak wholly impervious to their attitude or reaction. It is of vital importance, however, that service, though utterly selfless, be guided by spiritual understanding, for even selfless service unintelligently handled often creates complications and chaos. To be a pure blessing to humanity, the most selfless act of service must be born of absolute understanding of life and governed by faultless wisdom. Selfless service consists of rendering service to others without thought of gain, reward, or result; it is free from the idea of placing others under obligation. One does not put him under obligation when serving a fellow human being in the spirit of spontaneous, selfless love. On the contrary, the one helped confers upon the helper the blessing of an opportunity to serve his true Self. There is complete disregard for one convenience or welfare in selfless service; it is characterised by absolute subjugation of one happiness by unalloyed joy in sacrificing everything for the well-being of others. In selfless service, the comfort of others is one convenience, health, healing, happiness, and delight. By giving one life to others, one gains a glorious life for oneself. Sheltering others in one heart makes one inhabit theirs. An act of helpfulness, a word of comfort, the spontaneous warmth of selfless love, gives to others what they greatly need. Their thoughts of gratitude and goodwill, the heightened surge of their spirit and the increased flow of God-love released by the selfless act bring to the giver infinitely more than he can ever give. From a spiritual point of view, the real danger in service lies more in the possibility of your rendering it from a false motive. If you render service to oblige a person and feel proud of doing it, you are doing spiritual harm to the recipient of your service and yourself. If, while serving, you take delight in it and develop pride in doing a good thing, you are getting attached to your act and thereby binding yourself. Hence, the way to remain free from karma is to stay comp lately detached in service. The consciousness that, I am obliging someone is the first to occur during the process of serving; but it can be annulled by the contrary thought, I am obliged by being given this opportunity of serving. This latter thought facilitates the attitude of detachment and secures freedom from bondage of actions. Service based upon comprehensive understanding is not only selfless and adjusted to the spiritual demands of the recipient but is rendered with complete detachment. Such a service takes the aspirant to the goal most rapidly. The perfect master serves the whole universe out of finality of his infinite consciousness; those who serve the master or submit to his guidance share in his universal work. The legal discourse surrounding Ram Setu, also known as Adam Bridge a chain of limestone shoals connecting Pamban Island off the southeastern coast of Tamil Nadu, India, to Mannar Island off the northwestern coast of Sri

Sethusamudram Ship Channel Project and Preservation Efforts In the early 2000s, the Indian government proposed the Sethusamudram Ship Channel Project (SSCP), aiming to create a navigable sea route around the Indian peninsula by dredging a channel through the shallow straits of the Palk Bay, which would involve cutting through Ram Setu. This proposal sparked widespread controversy due to the potential environmental impact and the religious significance of the formation. In 2007, multiple petitions were filed in the Supreme Court of India challenging the project on these grounds. The apex court intervened by staying the project, thereby halting any activity that could damage Ram Setu. Subsequently, in 2018, the Union Shipping Ministry informed the court of its decision to explore alternative routes for the SSCP that would not affect Ram Setu, acknowledging both its cultural importance and the socio-economic disadvantages of the original plan. This move was seen as a significant victory for preservation advocates. Petitions for National Heritage Status Beyond preservation, there has been a concerted effort to have Ram Setu officially recognized as a national heritage monument. One of the prominent figures in this legal battle is Dr. Subramanian Swamy, a senior politician and former Member of Parliament. Dr. Swamy filed a Public Interest Litigation (PIL) seeking such a declaration, emphasizing the site historical and cultural significance. In response to this PIL, the Supreme Court, in August 2022, directed the central government to clarify its stance on the matter. The court urged the government to expedite its decision-making process regarding the designation of Ram Setu as a national monument. Despite these directives, progress appeared sluggish. By January 2023, the government informed the Supreme Court that the process was underway within the Ministry of Culture, but no definitive timeline was provided. This prompted the court to grant the petitioner the liberty to approach the court again if dissatisfied with the government response. Recent Developments In October 2023, the Supreme Court addressed another related petition filed by the Hindu Personal Law Board. This petition sought directives for the construction of a protective wall around the Ram Setu site to facilitate easier darshan (viewing) for devotees and also reiterated the demand for its declaration as a national heritage monument. The bench, comprising Justices Sanjay Kishan Kaul and Sudhanshu Dhulia, declined to entertain the plea, stating that such matters fall within the administrative domain of the government. The court emphasized that it was not inclined to issue directions on issues that are essentially policy decisions, thereby reaffirming the separation of powers between the judiciary and the executive. Government Position The central government position on declaring Ram Setu a national monument has evolved over time. In 2008, during the initial legal challenges, the government stated that Ram Setu did not fulfill the criteria for being designated as a national monument. However, in more recent years, especially following political changes and public sentiment, there has b

With other countries criticized China military pressure tactics on Taiwan. Japan has also announced its plan to deploy 1000 long-range cruise missiles to improve its counter-attack prowess against China. These missiles would be deployed across the Nansen Islands and Kyushu and it is meant to deal with China which has around 300 sea-based and 1900 land-based missiles. China statement on August 10 that it gives importance to China-Japan relations and the meeting of Takeo Kaibab, national security advisor of Japan and Yang Joachim, his Chinese counterpart in the Chinese city Tianjin on August 17 have not been able to bring enough positivity or trust in the bilateral relations. Both parties have largely been reiterating their positions rather than trying to bridge the gap. Just two months back, it was announced by Kashia that Japan would keep increasing its defense budget over the next five years- intended to acquire counter-strike capabilities against any potential attack on Japan. It seems that Kashia has been trying to inherit Shinto Abe legacy which considered national security first and is aware that Japan has to do it without severing its positive linkages with China. For the same reason, Japan has become overt in its posture towards China which was reflected on Taiwan issue, it has been preparing itself for a contest by enhancing military expenditure and deploying missile defense system, trying to have a network of like-minded countries through its Indo-Pacific vision and also through its bilateral connections. However, at the same time, Japan is also avoiding any disruption in its economic and productive exchanges with China. On the 50th anniversary of the establishing of their relations, Japan and China appear to be pursuing two contradictory visions for the region but at the same time trying to avoid bilateral contests. If both the countries are not going to be accommodative, it would be increasingly difficult for Japan to maintain its two-pronged posture. When the pandemic has relatively subsided, it would have been better that both countries would have used the opportunity of the 50th anniversary of establishing diplomatic ties for normalization of their relationship to reach out to each other and try to comprehend each other perspective for a constructive partnership between them and for the region. When your loved one is facing a medical emergency and the hospital needs to perform an immediate operation, it frustrating if your health plan provider asks for innumerable documents to settle it out. It even worse when it takes them days to complete the process. Today, people expect their healthcare plan providers to be quick, take prompt actions and ensure that the process is hassle-free. Here are some key factors to look for when choosing your healthcare plan provider. Medical emergencies don give you the time to scan through multiple documents. Besides, you are in no state of mind to be endlessly following up with your insurance company, which is why the claims settlement procedure should be all about convenience. Just intimating your health plan provider that a.

Have the potential to attract manufacturing investment but are yet to crack the industrialisation puzzle. Andhra consistently tops ease of doing business rankings but this is reflected in investments. There a massive skew in investment destinations. Nearly 87% of FDI inflows go to just five states. One lesson comes from Tamil Nadu, where the industrial policy is stable irrespective of who in office. The other lesson is that land acquisition must be sorted out by some states that, for example, the difference between Gujarat and Bengal. Politics of freebies and agitation always costs dear. India presidency of G20 beginning this December it hosts the leaders summit in September next year comes at a complex moment in global politics. The world today is being increasingly divided by the strategic security competition between US-led G7 and the China-Russia compact. Caught in the middle are a large number of developing nations who are being forced to choose sides despite this not being in their best interests. It is against this backdrop that G20 aims to serve as a vital platform to voice concerns of the Global South. True, challenges before the forum are many. From climate change and reforming global finance to tackling the current energy and food crises, the G20 agenda under India presidency is expected to be full. This will give New Delhi the perfect opportunity to showcase its leadership skills. That Bangladesh is on the guest list along with UAE and Oman for the leaders summit highlights India regional prioritisation. But a dispute is already brewing over Russian President Vladimir Putin expected attendance at the Bali leaders summit this November. Some Western leaders want to exclude Russia from G20 until the war in Ukraine abates. The Indian presidency will inherit this problem. Remember, though, that kicking Russia out of G8 not only failed to deter Moscow vis-à-vis Ukraine but also pushed it closer to China. Therefore, India must make it clear that isolating Russia is not the answer. Meanwhile, on substantive matters, the Indian presidency should ensure that the G20-OECD pact on a 15% minimum global tax rate for large corporations should stick to the 2023 delivery schedule. MNCs tax avoidance via using multiple geographies can only be tackled by multilateral, coordinated action. Getting this tax going will be a test of G20 efficacy. India Inc. has not participated in revving up the cape spend in recent years at a broad-based level. But against the backdrop of structural reforms undertaken over the last few years and cyclical improvement in demand impulses in the post-pandemic world, today favorably aligned macroeconomic variables should pave the way for a decisive turnaround in the private cape cycle late FY23 onwards. First let take stock of what FM Sitharaman has highlighted: the disappointing state of private investments despite Go and RBI both trying to revive animal spirits via structural and cyclical measures. In 1997, the unbelievable news of Princess Diana fatal accident came over the car radio as we drove out of London towards Heathrow.

CRPF-hcm-Eng-Test-Dated-2026-10-12-Test NO.-28820

Family member is getting admitted into a hospital should be enough. If the hospital is in your provider network, you can avail the treatment without having to pay out of your pocket first. Even if you do, the company should reimburse all your hospital expenses within a couple of days. It was a matter of coincidence that the conflict in Ukraine commenced while the UNSC was meeting on the matter. It took almosveryone by surprise, including the UN secretary general. Europe and the West reacted with outrage. Many of their permanent representatives, faced with an unprecedented situation on their home turf, became abrasive. And when India decided to abstain on the first vote in the Security Council on February 27, there was much consternation and anger. But our decision of February 27 was not taken lightly. As we mentioned in our Explanation of Vote, taking into consideration the totality of the circumstances, we have decided to abstain. Over the last several months, we have done exactly that taken decisions keeping the totality of the circumstances and our own national interests in mind. India advocated the same for this conflict as we have done elsewhere immediate cessation of hostilities and return to path of dialogue and diplomacy. After Maharashtra lost the Rest 1.54 lakh core Vedanta-Falcon semiconductor project to Gujarat, Mumbai has seen high-decibel political fights between the opposition and the government. But this is good politics. It the kind of politics that puts pressure on state governments to court private investment aggressively. Even better politics will be jobs, investment and standards of living becoming regular top-of-the-list issues that parties debate and voters pay attention to. Politics around competing promises of freebies, on which the PM comments started a national debate, is the worst kind because if freebies dominate policy thinking in the present, the future will inevitably be bleak. The good news is that despite freebie politics, some states are vying for big-ticket foreign investment, and doing so by hard-selling their human capital resources, road and digital connectivity and multimodal infrastructure. Even economically backward UP has joined the battle, betting on improved road connectivity. And the point to note is that Maharashtra did lose the Vedanta-Falcon project because it did offer incentives. It lost because Gujarat did better. Most states have electronics and manufacturing policies offering standard incentives like power and water tariff concessions, exemption from stamp duty and property tax, capital subsidies etc. So, and this is a good thing, states have to constantly up their game to attract projects. Indeed, the narrowing of the gap between Maharashtra and states like Gujarat and Karnataka tells the story of how competition works. However, a bigger problem for India as a whole is diversification. Services, computer software/hardware and telecom have dominated new projects. New investment is needed in manufacturing, especially light manufacturing. FM Sitharaman has asked industry to be more positive about manufacturing investment. But states have to play their part, too. UP, Odessa, Chhattisgarh, And

The White House's fresh salvo comes only weeks after the passing of a new law that paves the way for the US to impose tariffs of up to 100 per cent on countries like China and India that are top energy buyers from Russia. Copies of supporting documents will be sought at the time of Document Verification. The vacancy against which a woman candidate was selected will be kept resewed for her. Even opposition parties, whose former chief ministers were detained on Saturday, need to widen their vocabulary if they have to engage with Gen Z and their concerns, not just piggy-back on - or play catch-up to - their restlessness and mobilisations. Guidelines issued vide (Part file) 166 dated will be strictly followed. The fact is, however, that a constitutional body, independent of the government of the day, lies at the centre of the current face-off. Trump has, for some time now, been prodding India to reduce its purchases of Russian oil - between December 2022 and August 2026, China accounted for roughly half of Russia's crude exports, followed by India at 37 per cent, as per the Centre for Research on Energy and Clean Air - even as he announced a deal with Russia only a few days ago to supply diesel to US and global markets. They did so without excessive violence deployed against protesters in July. In case of medical examination, "Temporary unfitness" will not be allowed. In case of mismatch in the date of birth mentioned in the Admit Card and photo lDlCertificate brought in support of date of birth, the candidate will not be allowed to appear in the Examination. If Photo Identity Card does not have the date of birth printed on it then the candidate must carry an additional original document (e. g. Matriculation Certificate, Marks Sheet issued only by CBSE ICSE State Boards; Birth Certificate, Category Certificate) in proof of their date of birth. The candidates are advised to go through the requirements of educational qualification, experience, age, etc. Candidates declared unfit during Detailed Medical Examination (DME) will be allowed to undergo Review Medical Examination (RME), provided they give their written consent by appending their signature on the intimation indicating the reasons for being unfit, as per. Moreover, as the report says, "any extension into broader work-visa restrictions would pose a more material risk". by way of repetition, or addition or omission or substitution of a letter, e. g. the word 'spelling' typed as 'seepling'; seplling; seepling; spelling etc. Delhi Police and the central forces brought in to add to their might succeeded in clearing Delhi's streets of protesters on Saturday, October 10. Every attempt to silence the calls for greater transparency and accountability from it only makes them ring out more loudly and clearly. However, a woman candidate, who due to tests is found to be pregnant, irrespective of duration of pregnancy, she may be declared temporarily unfit and her appointment held in abeyance until the confinement is over. RME of candidates will be conducted in continuation of DME preferably on the next day of DME. Decision of Re-Medical Board Review Medical Board will be final and no appeal representat

than 2 per cent of the 1,17,849 PERM applications filed between October 2024 and September 2025, according to a report by ICICI Securities - the action is likely to sour sentiment. When scrutiny is undertaken, if any claim made in the application is not found substantiated, the candidature will be cancelled and the CRPF's decision in this regard sha1l be final. The consent for RME as per Annexure-(VIII) duly signed by the candidate should be submitted within 24 hours after he she is informed of his her unlitness in DME. The pattern in the US administration's moves is hard to miss. The ECI, though, has maintained an inexplicable silence, broken only by the bland press release that leaves important questions unaddressed. A few days ago, the US Trade Representative, Jamieson Greer, said that a trade agreement was not "imminent", followed by India's Finance Minister saying that "both the sides have reached a plateau beyond which giving or taking might be very very difficult". They imposed restrictions on the right to assemble peacefully and even to move freely, detained an estimated 7,000, and made sure that voices of protest would not be heard in public spaces. But unfortunately for Delhi Police and its political masters, that is not the end of this story. The CRPF will not undertake detailed scrutiny of applications for the eligibility and other aspects at the time of Computer Based Test and, therefore, candidature will be accepted only provisionally. That impression has been underlined by representatives of the ruling establishment who followed their playbook, firmed up over the years - they rounded on protesters aggressively, scolding them, labelling them as "destabilisers" and "anarchists" who have the backing of "foreign powers". What will it take for Gyanesh Kumar to realise that his refusal to acknowledge or answer questions is taking a mounting toll on an institution that has long prided itself on its imaginative and persuasive outreach to all voters, especially the young? The Supreme Court did well to hold a special sitting on Sunday to draw some red lines, even if they seemed less mindful of the infringement of individual liberties and more hemmed in by the administration's imperatives. India's software, business and other services exports - a major source of foreign exchange for the country - stood at $221 billion in 2025-26. If she is found fit she may be appointed to tJle post kept reserved for and allow the benefit of seniority in accordance with the instructions of the government, as amended from time to time. The CEC, in a labyrinth of his own making. But within Fortress Delhi, ECI remains an alarmingly vulnerable address. With the outcome of trade negotiations with Washington uncertain, the pressure on multiple fronts - energy, services exports, and labour mobility - is mounting. The layers of barricades in the capital may have interrupted and scattered the protesters' mobilisations. Amid these developments, statements from both sides appear to be less sanguine about the conclusion of the much delayed India-US trade deal. But as the week ended, one image, one question, throbbed at the centre of the quiet storm. By not speaking f

We live in a world's where Alexa plays the music in the living room, and Seri sets the alarm on the phone. Not far is the day when most of us will have robots in our homes, loading the dishwasher and assembling our furniture. We already have drones, and experiments on driverless cars are going on. Computers are vital in the communication and transportation industries. This would bolster trade between India and Central Asian countries. India institution allocation of links with the region would go a long way to expand its "strategic profile in the region. However, India" needs to pay attention to two worrisome dimensions. First, the threat from terrorism has significantly enhanced with the Pak-sponsored terrorist. They control our satellites and traffic signals. Through Big data and analytics, companies make business decisions. Technologies like Artificial Intelligence, Machine Learning, and Iota (Internet of Things) could bring a sea of changes in our daily lives. A range of industries right from agriculture, textiles to our defence field is highly dependent on computer technology. There does not exist a sector, which is untouched by the magic of computers. Computers, smart phones, and cheap internet data packs have revolutionized the field of education. A data-enabled mobile phone opens the door to vast resources. Online learning and distance education have changed the fortunes of many. The software programs are better than print media in presenting the subject to the students. In this way, they are we already have drones, and experiments on driverless cars are going on. Computers are vital in the communication and transportation industries. They control our satellites and traffic signals. Through Big data and analytics, companies make business decisions. Technologies like Artificial Intelligence, Machine more interested in learning and take initiatives to know further. It increases the quality of education that people receive. Moreover, computers have vast storage spaces, and the durability of the study material is also high. In specific fields like architecture and mechanical engineering, there is a paradigm shift in pedagogy. They learn and use software technologies like CAD and CAM. We know that the word computer comes from compute and thus, they were mostly computing devices. The first computer was for the military, and the U.S. army used it for calculating artillery firing tables. Today, computers are used in tanks, planes, and ships to target enemy forces. They play a vital role in providing training and simulations to soldiers. They are essential to safeguard the confidential activities of the defense forces. Such initiatives must respect the sovereignty and territorial integrity of all countries. Besides they must adhere to environmental parameters and should not become debt burdens. The remarks were seen as indirect criticism of China, whose BRI is neither consultative nor transparent. In addition, the BRI is seen as debt-trap diplomacy. Third, on terrorism, Doval emphasised that terrorism is a serious threat to international peace and security. He also pointed out that terrorism could not be justified on any ground and offered ful

Region would go a long way to expand its strategic's profile in the region. However, India needs to pay attention to two worrisome dimensions. First, the threat from terrorism has significantly enhanced with the Pak-sponsored terrorist outfits getting support from various Taliban factions. Second, the increased Sino-Pak machinations create obstacles in India links with the Central Asian countries as was seen at the recent BRI Forum meeting. Their anti India efforts will be intensified in the coming period. Exposing Pakistan links with terrorism and China's support to Pak terrorists are expedient steps. Support of Iran and Russia is invaluable for India as both are concerned over developments in Afghanistan. While keeping these factors in its calculus, India needs to pursue its Connect Central's Asia policy with greater vigor's and energy. In early second millennium BCE persistent drought caused the population of the Indus Valley to scatter from large urban centers to villages. Around the same time, Indo-Aryan tribes moved into the Punjab from regions further northwest in several waves of migration. The resulting Vedic period was marked by the composition of the Vedas, large collections of hymns of these tribes whose postulated religious culture, through synthesis's with further northwest the preexisting religious cultures of the subcontinent, and gave rise to Hinduism. The caste system, which created a hierarchy of priests, warriors, and free peasants, arose later during this period. Towards the end of the period, around 600 BCE, after the pastoral and nomadic Indo-Aryans spread from further northwest the Punjab into the Gang etic plain, large swaths of which they deforested to pave way for agriculture, a second urbanisation took place. The numerous Indo-Aryan realms, or janapadas, were consolidated into larger states, or mahajanapadas. This urbanisation was further northwest accompanied by the rise of new ascetic movements, including Jainism and Buddhism, The resulting Vedic period was marked by the composition of the Vedas, large collections of hymns of these tribes whose postulated religious culture, through synthesis with the preexisting religious further northwest cultures of the subcontinent, gave rise to Hinduism. The caste system, which created a hierarchy of priests, warriors, and free peasants, arose later during this period. Towards the end of the period, around which challenged the primacy of rituals, presided by Brahmin priests, that had further northwest come to be associated with Vedic religion, and gave rise to new religious concepts. Most of the Indian subcontinent was conquered by the Maura Empire during the further northwest and 3rd centuries. From the 3rd century BCE onwards Procrit and Pail literature in the north and the Tamil Sinnamon literature in southern India started to flourish. Woot steel originated in south India in the century further northwest and was exported to foreign countries. During the Classical period, various parts of India were ruled by numerous dynasties for the next 1500 years, among which the Gupta Empire stands out. This period, witnessing a Hindu religious and intellectual resurgence, is known as

CRPF-hcm-Eng-Test-Dated-2026-10-13-Test NO.-28827

My journo instincts to turn back were pushed aside by Oh well, the TOI has enough ways to cover it besides the enticements of our European it in beckoned. If only I had known the eruption of the emotional volcano which followed. Then it happened again. Eerily. Queen Elizabeth passed away just the day before I was to leave London. TV brought the déjà vu of a visibly disturbed Prince Charles walking slowly past the unending bouquets outside Buckingham Palace. Hand it taken the Queen ages to return to London from the same Balmorals castle where she had now unfussy passed away? Reluctant to acknowledge the unbridled adoration of the estranged daughter-in-law who had so shaken the monarchy. That demolition job would be near-completed more recently by her own Epstein-sex-scandal-embroiled son plus by her grandson leaving Britain altogether because of the alleged Palace racism against his wife. Those wounds were reopened this same charged week when the couple arrived on a lecture tour. Media made it clear that hounded Meghan could never squeeze into the Princess glass slippers. Strangely, Queen Elizabeth death was as unthinkable as Diana. She always been there. A scant two days earlier, we seen her frail but still spry, pearl-stringed and smiling receiving the gawky new PM at Balm oral. Just months ago, she gamely shared a jam sandwich with Paddington Bear at her Platinum Jubilee; memorabilia of that dazzling 1953 coronation still beamed from shop windows. Surely, Elizabeth Regina is the last embodiment of royalty. The Crown series brought her into drawing rooms well beyond Mumbai Paris colonies, which have sunk into collective mourning. They crashed the Net with videos flying to and from the community global outposts. Come to think of it, the only other unconditionally adored Queen was Paris. Temples in India were mostly constructed in three or four patterns. And the temple domes were modeled on the sky. If I sit under the open sky and repeat Aim, my voice will be lost, because the strength of an individual voice will be enveloped by the vastness of the sky. I will not be able to hear the reverberation, and the echo of my chanting will get lost in the vastness of the sky. Domes were constructed so that the resonance of our chanting can rebound on us. The dome is just a small, semicircular prototype of the sky. It has the same shape as the sky touching the earth on all four sides. Whatever prayers or chanting are done under its canopy, they do not get lost the way they would under the vast sky, because the dome throws them back towards the meditator. As time passed, it was discovered that stone too could multiply the resonance to a tremendous degree. Chant Aim But what is the purpose behind all this? The purpose is that when anyone chants Aim, and it is done very intensely, the temple dome, by the nature of its design, helps in the formation of a circle by.

CRPF-hcm-Eng-Test-Dated-2026-10-13-Test NO.-28828

Echoing the sound. Such a sound circle is a blissful experience. When the formation of the circle happens, you are no longer just a humble worshipper before the divine, you become a recipient as well in other words, the one whose prayers are being answered. And with that resonance, the divine experience begins to enter you. Although the sound produced in the chanting is human, when it is echoed it resounds with a new force and is full of new energies. shaped temples were used to create sound circles through the chanting of mantras. If one chants there, sitting all alone in perfect peace and silence, then as soon as the sound circle is formed, thoughts will stop. Bells and Gongs At the entrance of temples, we find big bells or gongs and they serve the same purpose. When you chant Aim, although you may be doing so very quietly and your attention may be elsewhere, the sound of the bell will instantly bring your attention back to the circle of sound created by its vibration. It should be remembered that sound is a subtle form of electricity, now even science agrees with this. In fact, everything is a form of electricity. But the Indian sages go one step further and say electricity is a form of sound, that sound is the base, not electricity. That is why they call the supreme being Shaba Brahman the Cosmic Sound. There is now a great similarity of approach between eastern thinkers and modern scientists, the only difference being just which of the two is primary. The scientist says electricity is primary, whereas the sage says it is the density of sound which produces electricity. There is every possibility that in the near future science will have to look deeper into the nature of the cosmic sound, the ultimate reality. The sugar industry has been a major economical contributor to the country for the last 4 decades. Taking a step ahead, the sugar industry is now becoming a major contributor to the sustainable development of the country, whether it is about making ethanol for sustainable mobility or using bagasse to generate electricity. The Sugar industry has been the flag bearer of Make in India because of the large-scale sugarcane cultivation and has the potential to become one of the world major ethanol producers. The Government of India and the sugar sector are collaborating to meet the objective of 20% ethanol blending in petroleum by 2025. Implications of sugar co-products Throughout the value chain of the sugar industry, all residues, and co-products (bagasse, molasses, filter cakes popularly known as press mud) are utilized as feedstock for other value-added products like fuel, electricity, value-added chemicals, bio-degradable cutlery, and are slated to be utilized for a host of other products. This helps to increase sustainability by manufacturing a variety of bio-based goods. The use of resources is aimed to produce green power (ethanol and electricity), which also reduces greenhouse gas emissions, as well as the production.

CRPF-hcm-Eng-Test-Dated-2026-10-13-Test NO.-28829

Of biofuels and chemicals from ethanol. This usage in turn provides a model for how a crop such as sugarcane can be used to produce a variety of valuable products used for a variety of applications. The recent Ethanol Blended Petrol (EBP) programmer of the Government of India, in which the sugar sector supplies a significant portion of ethanol, demonstrates that fossil fuels have an alternative, and green fuel produced from sugarcane-based sources is an example of this paradigm. The Economic Benefits As ethanol is made locally from crops grown domestically, it increases the country energy independence and decreases reliance on foreign oil thus saving precious fore. One of the bio-energy sources from the sugar industry is compressed biogas, which may contribute to self-reliance in the energy sector of the country. Around 3% of the total compressed biogas potential of the country which is around 2 million tons of 62 million tons can be produced from sugar industry co-products like spent wash, filter cake, press mud. The Indian sugar sector also aspires to provide farmers with long-term value through enhancing resource efficiency, rejuvenating ecosystems, and boosting rural communities. Experts from the sugar industry, research institutes, and Kristi Vegan Kendra (KVK) are constantly making efforts to promote sustainable agriculture practices. They regularly educate farmers about new sugarcane cultivation methods, improved varieties, water management, biological control methods, bio-fertilizers, mechanization, marketing, and pre- and post-harvest management of products to reduce overall environmental impact. Conclusion The global markets are in a transition period, with a constant push to enhance efficiency while still pursuing sustainable development. This has increased the demand for all resources, including food, feed, and energy. The Asian countries account for the lion share of the whole demand, with fast-growing economies such as India which is poised to make a quantum jump in economic growth. we rely on imports for 83% of our oil needs, which cost roughly Rest. 120 billion ($1.74 billion). Biofuels offer the advantages of lowering import reliance on crude oil, cleaning up the environment, providing additional revenue to farmers, and creating jobs in rural regions. The programmer complements the Government of India goal for Make in India, Swatch Bharat, and increasing farmer income. The sugar business is an excellent illustration of a burgeoning sustainable system with several opportunities for self-sufficiency. When it comes to seeking quality healthcare, we all want the best that it has to offer and a great place to start, is by seeking expert advice. More often than not, we like to believe that we are fully capable of handling the entire decision making process by ourselves after all, we do live in a world where information can be gathered at our fingertips. However, the truth of the matter is that there is a good reason why experts exist in any industry years of expertise, coupled with a great understanding of how the practice works, all of this contributes to them being a crucial part of your healthcare journey. We all know that nearl

Healthcare diagnosis or treatment requires the intervention of an expert. They help carve the right trajectory for you, one that involves the right treatments and procedures, access to high quality products and medication, nutrition guidance, and options for alternate therapy. In the same way, when it comes to health insurance, getting an expert on board also means you get your hands on the best financing options for yourself. The Expert Vs. You When it comes to healthcare there are so many factors involved, that people are left overwhelmed and confused. This is where an expert can help. They are efficient, can help provide unique perspectives, ensure clarity, and promise faster settlement of claims. There is also no denying that with an expert by your side, you can enjoy far more confidence and trust the process. We vet all thought of just opting for a basic insurance plan or financial option but did you know that you can enjoy far more benefits and save a lot more money if only you take the right guidance from experts? They ensure product superiority, a more comprehensive and fully loaded product portfolio; all while keeping in mind your financial status and affordability. Why Settle For Less When You Can Enjoy More? The problem with making your own decisions when it comes to healthcare is that you miss out on several other benefits simply because you do not know that it exists, or due to a trust deficit. This is unfortunate because in doing so, you miss out on several crucial and helpful benefits such as free annual check-ups for you and your family, unlimited tile-consultations, and even fun rewards such as wellness points for reaching every fitness goal, that can be redeemed later. Quality Of Customer Experience Matters More Now Than Ever It true what they say about consumer being king with this being the new mantra, your experience will always be the top most priority. Health experts will not compromise on your comfort and will always ensure that your entire healthcare journey is seamless and even enjoyable. The world of healthcare has changed, more so after the COVID-induced pandemic. With the right plan in place, you can take care of your health like never before. No matter what the circumstances, healthcare is now made available for you at all times, thanks to teleconsultation, online nutrition coaches, doorstep delivery of medication, at home lab tests and more. And the best part? A good health insurance plan can get you all of this and more, without burning a hole in your wallet. Interestingly, several individuals are reaching out to only experts when it comes to safeguarding their healthcare journey. Thus, we can say that having an expert by your side to access quality healthcare, is a tried and true method. Lifetimes Access to Healthcare is something that should crop up only when you sick it is a crucial part of your lifestyle, that involves preventive care as much as curative care. A good expert can.

Provide you with the lifetime access to healthcare. No doubt that the pandemic has taught us that we need to be prepared for anything that comes our way a healthcare plan is the first step in this direction. Without experts, you may end up with a plan that does cover certain critical illnesses, unforeseen medical emergencies, and more. Buying an insurance in a hurry, without covering all bases might not safeguard you from an emergency. To navigate unscathed through life, reach out to an expert who can help you in the right way. The Bottom Line Most of us live a fast-paced lifestyle, and were often caught up in the hustle and bustle of life. Now more than ever, it is imperative to prioritize health, thus, an effective health insurance plan is no longer a luxury, but a necessity. The good news is that there are numerous insurance products and services available within reach, however, you need to be well-informed so you can choose a plan that is perfect for you. An expert can carry this burden for you, leaving you well-prepared and protected in the health front. What is the usual picture that comes to mind when one listens to the word Library ? Is it a room full of books all categorized and labeled stacks after stacks and a pin drop silence? While this is the dominant idea of library and has its own value and importance. But let make a different visualization visualize a community space, with book displays containing books and materials for different age groups, genres, languages and so on. A space where people come, pick up something to read and then have discussions on what they read, where children are encouraged to read on their own as well as in pairs and groups and then have reading exercises around the things that they read, where parents and caregivers are provided with books and literature for them to read for themselves but also to read to their children, they are supported in reading strategies through demonstration on how to read to their child, how to narrate a story to a child and so on! In this visualization, the place is anything but silent- it is a hot melting pot of conversations, connections, and discussions these are equally if not more important to help develop literacy and language skills needed by the children to live in the modern world. These spaces are also needed today with fast depleting human connect and populations which have growing digital connections but reducing the human touch vital to the survival of humanity and life on this planet. The recent report on Reimagining our futures together a new social contract for education published in the year 2021 by international commission in the futures of education, established by UNESCO in 2019, begins with raising concerns on the impact of pandemic, increased global crisis situations like wars, climate change on humanity and the need for education to serve as a key engine for.

CRPF-hcm-Eng-Test-Dated-2026-10-13-Test NO.-28834

Artificial Intelligence AI is transforming national security operations, enhancing decision-making, intelligence gathering, and defence strategies. However, as AI becomes increasingly integrated into military and security frameworks, ensuring its responsible development and deployment is critical to mitigating risks and maintaining ethical standards. Responsible AI in national security involves balancing innovation with accountability, ensuring AI systems align with legal, ethical, and strategic objectives. At the AI Action Summit in Paris on February 11, 2025, Prime Minister Narendra Modi emphasized the rapid advancement of AI, the urgent need for a global governance framework with standardised regulations that align AI development with ethical principles serving humanity best interests while preventing exclusion with proactive measures to mitigate unfair outcomes and promote inclusive, fair, and unbiased AI. Google has withdrawn the commitment of not using AI for weapons or surveillance which they had introduced in 2018 as their AI Principles. This has signaled a paradigm shift in their ethical stance. This decision has sparked concerns about the rise of automated warfare, leading to renewed calls for legally binding regulations to ensure human oversight and prevent the creation of fully autonomous weapons. As AI becomes increasingly integrated into military and security frameworks, ensuring its responsible development and deployment is critical to mitigating risks and maintaining ethical standards. This involves balancing innovation with accountability, and ensuring AI systems align with legal, ethical, and strategic objectives. Responsible AI and national security a responsible AI approach in national security requires the development and deployment of artificial intelligence systems with a strong emphasis on ethics, transparency, accountability, and safety throughout the AI lifecycle, from data collection to operational deployment. Ensuring AI systems are fair, reliable, and secure demands a structured approach built on robust data governance, algorithm design, and deployment best practices to mitigate risks such as bias, privacy breaches, and unintended consequences. The use of diverse datasets helps prevent biases in training data, ensuring AI models perform equitably across different populations, while data anonymization and privacy protection techniques safeguard sensitive intelligence information in compliance with security regulations. Regular data quality checks are essential to maintain accuracy, preventing errors that could lead to flawed intelligence assessments or operational failures. Building ethical AI for national security requires thoughtful algorithm design that incorporates Explainable AI XAI for transparency, fairness metrics to correct biases, and robustness testing to evaluate AI performance under adversarial conditions such as cyber warfare and electronic manipulation. Continuous monitoring and feedback loops ensure AI systems adapt to evolving threats while maintaining operational integrity. Human oversight remains critical, particularly in high-stakes defence applications, ensuring that AI supports, rather than re

Attacks that could compromise their reliability. Maintaining secure AI model training and data integrity prevents unauthorized access and manipulation of training datasets, ensuring the trustworthiness of AI outputs. Leveraging AI Cyber Threat Intelligence AI-CTI can enhance national security by detecting and countering cyber threats in real time. Implementing a Zero-Trust AI security framework with strict access controls and authentication measures further strengthens AI defences against unauthorized use. Additionally, AI model provenance and audit trails enable tracking of AI decisions and modifications, ensuring transparency and accountability in national security operations. The integration of ethical data collection and analysis in AI-powered intelligence systems is essential to ensure compliance with privacy laws and minimize bias. This involves seeking diverse data sources to create fairer AI models. Additionally, addressing the challenge of countering AI-driven misinformation is crucial; responsible use of AI can enhance efforts to detect and counter adversarial propaganda, cyber threats, and disinformation campaigns effectively. In the realm of security, employing AI for threat detection and early warning systems allows for the identification of potential threats while ensuring that human oversight remains integral to decision-making processes. Furthermore, establishing covert AI operations oversight is necessary to regulate the use of AI in sensitive areas such as cyber espionage, reconnaissance, and psychological operations, thereby fostering a governance framework that upholds ethical standards in these complex environments. Explain ability and interpretability standards are essential to making AI-driven decisions understandable and justifiable, fostering trust in their applications. Red-teaming and AI penetration testing play a crucial role in identifying vulnerabilities through offensive security testing, while AI model verification and validation V&V ensure that AI systems function as intended through rigorous formal assessments. The ethical deployment of AI in military operations requires strict adherence to legal and humanitarian principles. Compliance with International Humanitarian Law IHL is essential to ensuring AI-driven warfare aligns with rules of proportionality and necessity, preventing unnecessary harm. Establishing autonomous weapons governance is critical to prohibiting fully autonomous lethal decision-making without human oversight and maintaining ethical accountability in combat scenarios. Transparency in AI-assisted military decisions is necessary to uphold accountability for AI-driven operations, particularly in combat and surveillance. These measures collectively reinforce responsible AI use in military applications, balancing technological advancements with ethical and legal obligations. It important to ensure the safe and responsible use of AI in national security requires robust mechanisms for failure response, conflict prevention, and misinformation defence. AI failure reporting and mitigation protocols should be established to log and investigate errors in AI-driven security applications, enabling contin

Helping the humankind survive these. It states that in these critical times the education needs to be reimagined as a new social contract, and this imagination must focus a lot on working for creating a future which is shared and interdependent. One of the two foundational principles in this report for this new social contract essentially is Strengthening education as a public endeavor and a common good, and in defining this principle it is rightly pointed out at that it does not limit to education being a public funded entity but goes on to also include a commitment from the society to include everyone in public discussions about education. Now let go back to the visualization of the community library that we started with, if we have these kinds of community libraries and school libraries, these will bring the communities together in creating that shared public vision on education and bring in the much-needed cohesiveness in the community. This goes a very long way in helping education to serve its role in driving the humanity to safer space by helping the empowerment of the future generations in creating a world which is peaceful and sustainable. The realization of the community libraries visualized above, does not stop there, it also helps children in developing their literacy skills. This is because for acquisition of literacy skills in a manner that the children don only learn to read but also develop a habit and love for reading, calls for availability of good quality children literature in multiple languages and diverse genres and a culture of reading around them where the adults are also reading, and the parents are supported in strategies of reading to their children. These kind of school and community libraries not only develop a keen interest of reading in children, but they are also proven to help develop stronger intergenerational connects and relationships. Further, in present times with the ever-increasing screen addiction in children resulting in many physical as well as psychosocial issues like increased anxiety, behavioral problems, increase in toxic stress and so on, it become important that they are taken back to the world of books which have no negative side effects. In fact, evidence from neuroscience suggests that reading and writing helps in development of the brain. One can also understand this by imagining that when a person is reading a book or a picture, than the brain actually plays a more active role by connecting what is being read or seen with the past experience and making a new knowledge for itself, however, when digital content is viewed the imagination, analysis and other higher skills are used less as the brain is actually processing less and is relatively absorbing the content rather passively. However, to develop this interest in books, a culture reading must be developed and carefully planned reading exercises need to be done with the children which can be achieved through a good library only. Additionally, when the children read together and interact with.

Spl-CRPF-hcm-Eng-Test-Dated-2026-10-13-Test NO.-28837

At the heart of their work is the idea provided by John Maynard Keynes: That governments can intervene and help reduce fluctuations in an economy. Against the quantity of 57. For widespread adoption, pricing for equipment and monthly fees will need to be in line with the country's average broadband revenue per user. They would be inclined to plant hybrids that enable them to spray chemical herbicides and provide protection against a broader spectrum of bollworms and sucking pests. There are compelling security issues on satellite communications that need to be assessed carefully. That includes traders and breeders who have undertaken introgression of the traits, bypassing the government's biosafety and regulatory approval system. 8 million packets. Moreover, last year Starlink had entered into agreements with telecom majors Reliance Jio and Bharti Airtel to offer its internet services in the country, both of whom have themselves been at odds on the issue of spectrum. Hall and Woodford's work has demonstrated "how economic models could be reconstructed to revitalise stabilisation policy". But the repeated oil price shocks during the 1970s saw many economies, especially the US, witness high unemployment and high inflation both at once. Hosate tolerance nor the Vip3A Bt gene traits have, however, been officially authorised for insertion into cotton plants for commercial cultivation. Manual weeding costs, even when labour is available, come to Rs 12,000-15,000 per acre now, whereas it is only Rs 750-850 for 2-3 rounds of glyphosate application. The contribution of Hall and Woodford is to provide a better understanding of how and when to take decisions for ensuring that an economy does not swing between prolonged periods of slow or stagnant growth and high and persistent inflation. The existing "approved" GM Bt hybrids do not contain genes conferring tolerance to weed killers such as glyphosate or control against pink bollworm. Farmers are, then, growing their hybrids via sourcing of seeds from illegal channels. Keynes's insight helped economies learn from the Great Depression. Last week, in a social media post, Elon Musk blamed "certain oligarchs" for blocking Starlink's entry into India. Examination six weeks after the date of confinement, subject to the production of the medical certificate of fitness from a registered medical practitioner. The blame for this - widespread farmer demand-led, yet unregulated adoption of advanced GM technology - lies solely with the government. For cotton growers, this isn't about ideology. A bigger loser is the farmer, who is being denied the benefits of deployment of the advanced GM traits in the hybrids of genuine research-backed seed companies, as opposed to fly-by-night operators. 6 million to 46. The study's findings are a clear demonstration of farmer acceptance of HT technology. In fact, at the Authority's last meeting on October 8, the State demanded a backlog of 15. The loser is not just the organised seed industry. Tamil Nadu had, too, in its latest application, cited the figure of the CWRC. The same goes for hybrids harbouring the Vip3A Bt gene. During the Russia-Ukraine conflict, Ukraine relied on St

interest rates to boost growth, and when an economy experienced high inflation, interest rates were cut. Legitimate concerns about enforcing local laws and rules must be addressed. A Division Bench of the Court made this observation while reserving its order on an application filed by Tamil Nadu, which contended that as on October 6, it suffered a shortfall of around 11. Robert E Hall of Stanford University and Michael Woodford of Columbia University have shared this year's Nobel Prize in Economics for "microeconomic foundations of macroeconomic stabilisation". Neither the glypThe story so far: On October 12, the Supreme Court questioned Tamil Nadu on how Karnataka could be expected to make good the backlog in the release of Cauvery water when the latter was itself grappling with water scarcity and drought conditions. 2-8. There are reports, however, of alleged interference in Starlink's services in the region during the conflict. No detention centre is large enough to sequester this crisis of credibility. This has helped governments across the world avoid mistakes of the past. In particular, the deficit rainfall in the catchment downstream of Krishnaraja Sagara (KRS) and Kabini, up to Biligundulu, was 43%. Cotton farmers today face problems of labour scarcity for manual weeding and pink bollworm insect attacks. During the period from June 1 to October 7, the Cauvery catchments recorded a negative departure of 30% from the normal rainfall. The Keynes remedy failed to provide a solution and, in fact, many started seeing government intervention as the problem, not the solution. The study shows the presence of unapproved HT and next-generation Bt genes in over half of the seed/leaf samples collected from farmers' fields across 16 districts of Maharashtra, Telangana, Andhra Pradesh and Rajasthan. But there are also issues of affordability, which is perhaps why Musk, in a social media post, has said, "obviously, if Starlink is too expensive in India, no one will buy it, so SpaceX will need to make pricing affordable". Stabilisation, here, refers to policy measures by governments and central banks to reduce fluctuations in an economy. Sales of "legal" Bt cotton hybrid seeds have fallen from 59. It is not difficult to imagine scenarios where connectivity can be possibly restricted or denied when required, or allowed when the situation warrants differently. As India moves ahead, it must be mindful of the risks, strike a balance between safeguarding national interests and ensuring a transparent regulatory process, while enabling technological innovation and spurring competition. "Security assessment as part of this process is currently underway in respect of all the three licensees," the Union government has said, and currently all three entities, Starlink, Jio Satellite Communications, and Eutelsat OneWeb, "are at broadly the same regulatory stage". on examples of such decisions. There are significant gains to be made from the deployment of satellite internet, especially in far flung areas across the country that have poor connectivity. 3 million packets between 2022-23 and 2025-26. A government's decision to provide a tax break or a central bank cho

Each other through post reading exercises, then they also develop the social and emotional skills like teamwork, perspective building and so on. As the library programs have a lot of benefits starting from building the literacy skills in children to helping the society develop into more cohesive and cooperative society, it becomes very important that we have more and more active vibrant and functional libraries at the schools as well as at community spaces. The public education programs do have some provisions for libraries in the schools, but either this fund is not used or is used to get some irrelevant books which are kept locked away so that they do not get torn or worn out with use. Therefore, we need to make sure that our schools and communities have vibrant library initiatives to support learning for children, improved intergenerational connection and ensuring that the education is strengthened as a public endeavor. We entered the year 2022 with a literal big bang. Maybe that was enough to raise the moral grounding and consciousness of the internet as we collectively strived to make the space warmer and more inclusive. On a macro level, the internet is about communication and the consumption of information. Now, as the internet expands its horizons beyond the metro demographics, linguistic barriers become a fundamental issue, especially in a nation like India where the communication style and language change every 15-20 km. Here are my two cents on how the creator economy is improving its inclusivity to the cultural nitty-gritty of Incredible India: Social media that more user centric some people opine that social media platforms came into existence to give people a voice. Hence, it is important that the medium of communication remains as inclusive as possible. At the end of the day, social media platforms are user-centric. They are operating on a democratic model wherein the opinion of its users takes precedence. Integral recently rolled out an update that allegedly made its algorithm similar to that of Ticktack. Since the update did not sit well with the users, Integral had to withdraw the update. The moral of the story is Social media runs on the whip of its users. In the Indian context, as a creator, it does get difficult to heed different consumer opinions as the target audience transcends quantifiable measures. For a start, however, the content is bound to work better and have a larger impact if it is in their native language, according to a study jointly conducted by Google and KPMG. This realization is setting in as most influencers are shedding their post-colonial residual emotions and moving back to their roots, quite literally. A large section of Indian internet users are not comfortable with the written word. Hence, private players, especially Google, helped kick start the audio-based search engines to drive consumer engagement and reports say that 27% of the global online population is using voice search on mobile. OTTs are going Over-The-Top with their translation gigs According to the.

CRPF-hcm-Eng-Test-Dated-2026-10-14-Test NO.-28842

Report on the M&E industry, the share of regional language consumption on OTT platforms will cross 50% by 2025, from the 30% share it held in 2019, easing past Hindi at 45%. Now, we are at a point where OTT platforms are releasing vernacular series that is not only doing exceptionally well with the domestic audience but have become a favorite for international viewers as well (classic examples Pushpin, Sacred Games, Delhi Crime and the list goes on). In the year 2021, regional language content made up 47% of OTT originals and 69% of films released on streaming services. OTT platforms are providing a more personalized experience by providing localized dubbing features in order to alleviate the success rate of films. And clearly it is working for them. People have discovered the many conveniences of OTT platforms during the last 2 years. The overall impact that this is driving transcends the cultural aspect of the movement. It is generating a lucrative employment avenue for tier 2 and tier 3 areas. On a larger scale of things, it is not fair to limit our conversation to a certain dialect. Especially in a nation like ours which is filled with so many colors. So my question is why stick to just the white tones? Decentralization and democracy are the future. With the growth in demand for content in vernacular languages, we are putting all cultures on the same pedestal and that in its truest sense marks the dawn of a new India that is proud of its diversity and is vocal for local in more than one way. Do men and women perceive urban space differently.. well it may not have anything to do with gender per se, but surely issues like safety and public amenities may play a big role in their perception being different. Men and women have different perceptions based their socio cultural conditioning and societal beliefs. For example an urban space is perceived differently in different cultures like the west or the east. Cities work with several systems together like a machine, an enabler for its residents lifestyles. Cities may also have several issues to manage, for example in developing countries, most of them may be related with urban infrastructure gaps. Whether it is poorly lit roads or unsafe parks or lack of clean public toilets. As an architect and planner who is directly involved with several design initiatives directly impacting design of urban spaces, as a woman with an equality perspective, I sometimes think what our cities would look like if they were designed for women. As a women entrepreneur leading India top urban planning and design organization, in my experience one of the easy ways to make the designs of our urban spaces more inclusive is to have more women members on the planning team. This ensures, that the team has a more diverse inputs. Women being the primary caregivers for children, this also ensures that the children interests are also taken care of. Many initiatives.

Such as she lounges urban lounges with toilets and feeding room), Pedestrian safety zones, especially near children institutions, illumination of all major roads, adding surveillance on roads, added high mast lights for parks have been undertaken by our team which has many women on board. Some key urban issues pertaining to women are as follows Clean Toilets One of the key amenities for women to feel safe in an area outside their home workplace is access to clean toilets and safe drinking water. Imagine the plight of women, when in the absence of a clean toilet, they may have to hold it for hours or worse, plan to get to a place like a restaurant or private property that can allow them to relieve themselves. It is a sad state of affairs. Feeding and Changing rooms Child rearing is an important phase in the life of a woman. With the advent of women in the workforce, more women are travelling, going out, travelling and accessing the public space with young babies. It is a basic need for urban spaces to have feeding and changing stations along with public toilets for them to feel safe and take care of this basic need away from prying male gaze. Street Lighting Well lit public spaces allow for women to travel safe. Street safety is not about women travelling safe in closed cars, but it is about public spaces being designed in a way such that women feel safe walking alone on the streets. For that the streets and public spaces need to be well lit and well within accessibility of other people. In Public Eye Statistics prove that the maximum crime in public areas is in vulnerable areas like subways, lonely alleys and deserted roads. Being within public reach is an import part of women feeling safe from crimes that may be a risk in lonely areas. Market streets in India have been bustling activity zones, with enough public eye on the street. With the advent of new age planning and design, there is a lack of thought about this aspect. Indian cities are far from safe for vulnerable social groups, especially for women. Women safety needs to be become a policy mandate in urban planning. Such as she lounges urban lounges with toilets and feeding room), Pedestrian safety zones, especially near children institutions, illumination of all major roads, adding surveillance on roads, added high mast lights for parks have been undertaken by our team which has many women on board. Some key urban issues pertaining to women are as follows Clean Toilets One of the key amenities for women to feel safe in an area outside their home workplace is access to clean toilets and safe drinking water. CRPF-hcm-Eng-Test-Dated-2026-10-14-Test NO.-28844

To commemorate the Engineers Day on September 15, a reputable national daily came out with a supplement. What grabbed my attention was that all the six featured engineers on the page represented IT and software. Indeed, today whenever there are conversations around engineering or technology, one can safely assume that what is meant by engineering and technology is essentially computer engineering and information technology. Certainly, a quantum jump for a sector within a span of about two decades: it was in run up to Y2K and early-2000 when IT appeared in the common vocabulary, followed by BPOs, KPOs, and broadly speaking, IT-enabled services ITES . It would be instructive to remember that two of the oldest, classic engineering institutions in India, namely, College of Engineering, Gundy now a part of Anna University and University of Rookie now IIT Rookie are 228 and 175 years old respectively. All of a sudden, the classic engineering streams like mechanical, electrical, civil, and chemical engineering became passé, so old fashioned. Their place was taken over by new-age disciplines like computer and IT. The crowning glory was that even those passing out with classic engineering degrees were no more inclined to go in to, say, manufacturing or construction but were getting trained on the job to become software and coding experts. But the biggest irony is that the Engineers Day is celebrated as a mark of respect to Bharat Ratna M Visvesvaraya who was instrumental in constructing dams, reservoirs, and hydro-power projects of modern India; all through applications of classic engineering streams. There is no denying the fact the critical role digital technologies have played and, more importantly, will continue to play in the nation-building. But equally logical is the fact that even for likes of artificial intelligence, machine learning, and met averse to flourish, the backbone creation will rest on classic engineering feats. Moreover, the widespread socio-economic development of the country necessitates service and manufacturing sectors to go hand in hand, which again means refocusing on engineering in a classic sense. The recent tragic developments in our city of innovation and technology are but a few reminders of the natural complementarities of modern and classic engineering; IT wizards being rescued on JCBs and tractors. The Indian Financial services sector was dominated by traders, brokers, and middlemen who used to conduct transactions on paper. Today, the buzz of a trading floor has been replaced by a cool silence of computers that conduct trades. And the need to rush to banks for the smallest of transactions has been replaced by a few taps on our mobile devices. All of this has been possible due to the rapid digitization of the Indian finance industry. The easiest way to see this impact is to see how IT companies are benefiting from it. Today, 40% of the revenues that Indian IT companies such as TCS and Cognizant make are from the BFSI segment. IT companies such as Infosys are creating Core banking solutions such as Finale which are being.

CRPF-hcm-Eng-Test-Dated-2026-10-14-Test NO.-28845

In India, rural-urban migration's is still seen as a distress-driven choice and not a voluntary one. This leads to a lack of policy measures to ensure safe and dignified migration for workers. There are various reasons why people migrate from their source home village, town, or city to their destination's place of work. One is when individuals who have access to economic resources and a wide social network shift to other countries to set up businesses or for jobs. Systems and policies promote this type of migration substantially, and it often seen as wealth creation. Sports in School for Kids A student, who is good in sports as well as in academics, develops an overall "personality which is reflected" in his or her life. It gives him strength, a sense of discipline and how to associate with other players. School sports make school life more interesting also. Now-a-days all the colleges and schools have sports as a parts of compulsory curriculum. So for this purpose schools have big playgrounds. They have big playgrounds to accommodate games like football, hockey and cricket. Some schools also provide their students games like basketball, volleyball, table tennis, lawn tennis and badminton. School sports play a very important role in teaching a student team spirit. They teach a student to play the game for the sake of playing and not for the sake of winning. So spirit of healthy competition and discipline is taught to the students. Some schools even have gymnasium to develop a child physique and mind. A student can apply the sportsman spirit in his everyday life also and learn to accept defeats with a smile. Sports also teach us that practice makes a man perfect and hard work really pays in the end. School and college sports also help the student to choose career in sports itself. They can become professional sportsman. Sports also help students in careers in Armed Forces. So school sports should be encouraged and concerned authorities should see to it that schools make proper provision for this. Two is distress migration, usually considered a coping mechanism at the source region by poorer populations. In India, this is often observed in the rural urban migration patterns, which could be a result of the failure of people primary occupation at source such as agriculture, or due to natural disasters and other factors. In this case, people are forced to migrate, and the reason for migration is seen as something that needs to be prevented. The third kind of migration occurs when people migrate voluntarily from rural India to cities, driven by the aspiration to grow economically and socially. This form of migration is similar to the first type in that it is driven by knowledge about better opportunities outside the source area as well as one desire and ability to take advantage of those. In this case, migrants look for opportunities in urban labour markets, which may offer higher wages, better working conditions, and more significant career prospects. This last pattern is extremely common in Odisha, with migration being a source of livelihoods for many. The Ganjam Surat district is one of the major labour migration corridors in the country. Over t

CRPF-hcm-Eng-Test-Dated-2026-10-14-Test NO.-28846

Is often the one they have at the destination? An increase in disposable's incomes because of high remittances enables migrant workers to invest in the improvement of their houses, and lease more land. People who are semi-skilled get the opportunity to gain knowledge through working at the destination, which they utilise to make better investments and financial decisions back home. Some workers, for instance, choose to invest their money in setting up or buying small shops, rice mills, and auto rickshaws in their home locations, which are increase in disposable's incomes because of high remittances enables migrant workers to invest in the improvement of their houses, and lease more land. People who are semi-skilled get the opportunity run by family and friends, creating an additional source of income. In the case of Odisha, in many blocks, we have estimated the annual remittance to be equal to what the government's is spending in that block on 'development'. Migrant workers earn approximately INR 6,000 in the beginning when they start to work in destination towns cities, and graduate to INR 28,000 per month over time. Of this, they are able to remit INR has resulted in a lack of policy focus on creating infrastructures to enable safe and dignified migration. In a study conducted by enables migrant workers to invest Gram Vikas in 2021, as high as 79.2 percent of the proportion of households a month to their homes, which is a substantial amount of money. This has led to significant social, cultural, and economic changes in their home villages. Improved educational infrastructure and exposure to new technologies is helping rural youth reimagine, and act on, their aspirations. They are increasingly inclined to explore career options beyond their traditional family occupations such as farming or fishing. Migration, in this context, serves as a means for them to access different livelihoods and better opportunities outside their home villages. A House on Fire for Kids It was a dry day and it was night. The clock on the tower had struck twelve. I was sleeping on the roof of my house. Suddenly I heard shouts of Fire, Fire! I woke up at once and looked out in the street. I saw a house on fire. It was at some distance away from my house. I ran downstairs and reached the place. Many people had collected cultural and economic changes in their home villages. Improved educational infrastructure and exposure to new technologies is helping rural youth reimagine, and act on, their aspirations. They are increasingly inclined to explore career options beyond their traditional family occupations such there. They were trying to put out the fire. They were throwing water and sand on it. But it did not prove of much help. A strong wind was blowing. Some cries were heard from inside the house. The house belonged to a shopkeeper. Despite this, migration is rarely acknowledged as a livelihood strategy for the poor. It is often overlooked in narratives of job creation and income generation and is still considered to be borne only out of distress and never out of choice. This has resulted in a lack of policy focus on creating infrastructures to enable safe and dignified

CRPF-hcm-Eng-Test-Dated-2026-10-14-Test NO.-28849

Used by one of India largest public sector banks, Bank of Baroda. Another public sector bank, State Bank of India underwent rapid digitalization by offering SBI YONO, which was developed by IBM. SBI YONO currently has 54 million Monthly active users. There has been a rapid shift in the way consumers view payments due to apps like YONO. For instance, in India, the volume, as well as the value of UPI transactions, have doubled post covid. In FY 21 UPI had processed 22.3 billion transactions with a value of Rest 41 trillion. In FY 22 the total number of transactions was 46 billion transactions with a value of Rest 84 trillion. In India MSMEs were the most impacted due to such transactions as 87.3 percent of the 41.4 lakh transactions conducted across the MSME ministry were done digitally. Consumers have not only hugely benefited from the digitization of payments but by the revolutionization of investing. Around 10.7 million Demat accounts were opened by retail investors between April 2020 and January 2021. This has allowed the Indian stock markets to reach $3 Trillion in 2021, within 4 years which has been unprecedented. Another reason for this milestone is the digital transformation of trading institutions like the NSE. NSE NEAT National Exchange for Automated Trading has more than 181,000 terminals across India that allow traders to make high volumes of trade with minimal latency. Furthermore, the stock market in India has also been impacted by the rise of fintech platforms like Sharekhan which allow retail investors to buy and sell stocks easily. The number of monthly active users in Sharekhan has almost tripled from 275,000 in FY 2014 to 764,000 in FY 2022. Similarly, financial institutions like Equirus have also been transformed by digital transformation by offering apps such as Equirus Wealth, which allows retail investors to invest in Mutual funds in a hassle-free manner. Along with that, trading is also computerized in Equirus Portfolio management services PMS which coupled with the steadfast leadership of experienced individuals has allowed the Equirus Long Horizon fund to achieve a return of 19.48 percent. Digital Transformation has caused Indian banks to invest more in their electronic channels. HDFC bank has invested in its PayZapp mobile app and internet banking platforms, which turned out to be a great investment for them as they found that 57% of customer visits were through mobile. Apart from that, they had 234 million visits on their website in Q4 of FY 2022. However, in India, Legacy firms like Kotak, HDFC, and Axis have invested only 7 to 9 % of total operating expenses in technological spending. While their International peers such as UBS are spending around 10% of revenues on tech spending. So, we are only at the tip of the iceberg of digital transformation in the Indian finance industry. Hence, we believe that Indian financial firms can acquire more tech firms to increase their technological capabilities. Humans have something against humans at every point in History I am not.

CRPF-hcm-Eng-Test-Dated-2026-10-14-Test NO.-28850

Talking about wars and ideologies here, humans also historically have fought about the number of living beings as counted in their community, region, nation, or the world. In popular context, this number is called the population of that community, region or nation, or mankind. Some people feel that there are more human beings that this planet can house. Though humans have started exploring space, there is a long way to go. Meanwhile, we have changed this planet irreversibly to be an ideal house for humanity. We can introduce a delta change that can delay the inevitable or get some magic wand to dissolve all the impurities of this planet. But the question is how many human beings are too much for this planet. Some on the other hand have justified that numbers are beneficial. No one seems to be totally correct or wrong. Ancient folklores had predicted doom due to population explosion across the ancient cultures. In the Indian context, we have stories of destruction and restarts. Philosophers from Plato to thinkers like Malthus have warned humanity against numbers. On other hand, Developed countries that scorned under-developed countries for lack of resources are now feeling the pinch of low fertility rates. This is a tricky issue for mankind. But one fact is undisputable: we have limited resources on this planet. Experts say Our species evolved from apes and has undergone a population explosion, damaging every habitat on the planet. In 2018, scientists found a plastic bag 10,898m at the bottom of the Mariana Trench, while another team recently discovered man-made forever chemicals on Mount Everest. No part of the world is pristine every lake, forest, and the canyon have been touched by human activity. But on the other side, our sheer numbers and ingenuity have enabled humanity to achieve feats that no other animal could dream of splitting atoms, sending complex equipment nearly a million miles to observe planets forming in distant galaxies, and contributing to a staggering diversity of art and culture. Every day, we collectively take 4.1 billion photographs and exchange between 80 and 127 trillion words. On the specific date of 15 November 2022, the UN has predicted that there will be eight billion humans alive at the same time. Some view our rising numbers as an unprecedented success story in fact, there an emerging school of thought that we actually need more people. In 2018 the tech billionaire Jeff Bezos predicted a future in which our population will reach a new decimal milestone, in the form of a trillion humans scattered across our Solar System. Others, meanwhile including the British broadcaster and natural historian Sir David Attenborough have labeled our swarming masses a plague on the Earth. In this view, nearly every environmental problem we re currently facing, from climate change to biodiversity loss, water stresses, and conflicts over land can be traced back to our rampant reproduction over the last few centuries. Back in 1994 when the global population was a mere 5.5 billion a.

Team of researchers from Stanford University, in California, calculated that the ideal size of our species would be between 1.5 and 2 billion people. As a result of its controversial history, population engineering is a deeply divisive area. At one end of the spectrum lie those who see lower fertility rates in some areas as a crisis. One demographer is so concerned by the localized drop in the birth rate in the UK that he has suggested taxing the childless. The opposing view is that slowing and eventually halting global population growth is not only eminently manageable and desirable, but it can be achieved via entirely voluntary means methods such as simply providing contraception to those who would like it, and educating women. In this way, proponents of this position believe we could not only benefit the planet but improve the quality of life experienced by the poorest citizens worldwide. But there is a collective consensus to identify the problems and create a change. The absolute number of people in a country is not the most important factor. Instead, it the rate of its population growth or decline that is key to a country future prospects this determines how quickly things are changing. India will overtake China as the most populous country by 2025 or perhaps sooner. However, this should not be inferred to assume that India is undergoing a proverbial population explosion. Population statistics show that India population growth peaked decades ago and it is already on a downward trajectory. According to the United Nation population projections, India population will increase by a multiple of 1.09 between 2021 and 2031. This number was 1.25 between 1981 and 1991. From 2060 onwards, India population will start falling, which happens when fertility rate falls below replacement levels. By 2100, which is as far as UN population projections go to, India population will be 1.45 billion after having peaked at 1.65 billion in 2059. It the not the change but rate of change that matters. A low population, which means fewer workers, also means a scarcity of productive hands in the economy. This actually generates headwinds, rather than tailwinds for economic growth. An increasing share of older people in its population, thanks to its one-child policy, is what has forced China to abandon the old policy and encourage couple to have more children. India is poised at a unique moment in history, where it can exploit its demographic advantage to realize its economic goals. According to the government population projections, 53.6% of India population in 2021 is under the age of 29. More than a quarter of India population is 14 years or younger. This young cohort can become extremely productive or unproductive depending on the skill sets it acquires. Ability to plan and create resources, and using human capital on one hand while managing environment and sustain humanity is challenge for the population of every country including India. Global shares prosper as a result of the flood of economic data from.

From the Defence Innovation Board, the responsible AI framework for national security is built on five key principles: Responsibility, Equity, Traceability, Reliability, and Governability. Human operators remain accountable for AI-driven decisions, ensuring ethical oversight. AI systems must be designed to minimize unintended bias, promoting fairness in decision-making. Traceability is essential, requiring AI processes to be explainable and auditable for accountability and transparency. Additionally, AI must be reliable, functioning safely and effectively across its lifecycle, and governable, allowing for human intervention when necessary to maintain control over its operations. This framework governs AI applications in combat systems, intelligence analysis, surveillance, and cyber defence, ensuring their deployment aligns with international humanitarian law IHL and the law of armed conflict LOAC to uphold ethical and legal standards in military and intelligence operations. Announced in 2021, the responsible AI framework for defence and security establishes key principles to guide AI deployment in military and intelligence operations while ensuring compliance with ethical and legal standards. Lawfulness mandates that AI applications adhere to national and international legal frameworks, while responsibility and accountability ensure that human oversight remains central to AI-driven decision-making. The framework emphasizes explain ability and traceability, requiring AI decisions to be transparent and auditable, and includes bias mitigation measures, such as fairness testing, to prevent discriminatory outcomes. To safeguard AI systems from cyber threats, security and resilience provisions demand robust defences against adversarial attacks and data manipulation. Crucially, human oversight is reinforced, ensuring that AI serves as a decision-support tool rather than a replacement for human judgment. This framework governs AI integration in military operations, intelligence sharing, and cyber security, promoting cross-allied AI governance to enhance interoperability and uphold shared ethical standards across member states. Grounded in the AI Act and the High-Level Expert Group on AI recommendations, the European approach to responsible AI in defence prioritizes human control, safety, privacy, and accountability. The principle of human agency and oversight ensures that AI enhances rather than replaces human decision-making in military operations. Technical robustness and safety require rigorous testing and validation before AI deployment to guarantee reliability in high-risk scenarios. To uphold fundamental rights, privacy and data governance mandates that AI-powered surveillance comply with GDPR and international human rights laws, preventing misuse of sensitive information. Additionally, accountability and auditability frameworks establish clear legal liability structures, ensuring that AI systems remain transparent and subject to oversight. This framework guides AI deployment in European defence forces, intelligence agencies, and cyber security operations, ensuring that EU member states adhere to ethical AI principles while maintaining security

The Meiteis, Kukis and Nagas are now caught in overlapping conflicts, with civilians bearing the brunt not only of the violence but also of blockades across the hill districts that restrict access to essential supplies. Gone are the plaice, herring and oysters, replaced almost entirely by the "Big Five": Cod, haddock, salmon, prawns and tuna. Higher food and cooking fuel prices have kept inflation in the restaurants and accommodation services category elevated. 9 percent in the second quarter, in line with the central bank's latest projection. prevails everywhere, from fashion and pastimes to media and medicines. While most expect the MPC to hike rates by 25 basis points, some suggest the likelihood of a 50 basis points hike. 6 per cent in the fourth quarter, while ICRA expects inflation at around 6 per cent in the third quarter. Puzzle - to provide a more robust understanding. Early indicators for October point towards continuing price pressures. 5% in the third quarter and 5. The continued prevalence of gun violence suggests such calls have failed. Food inflation has surged to 7. But a return to normalcy will remain out of reach without a concerted effort, first, to demilitarise society and re-establish the state's authority. According to Crisil, "concerns over the rabi crop are also mounting amid low soil-moisture levels and elevated temperatures". Beyond its implications for health - and there are many, given the ballooning global obesity crisis - the restricted diet of the contemporary human blunts the very evolutionary edge that helped ensure Homo sapiens' success. 3 percent, indicating pass-through of higher costs. Rating agency ICRA expects food and beverage inflation to exceed 8% in October. Restoring the freedom of movement and making it possible for people to live safely alongside one another will have to be step one in a long process of reconciliation. Disarming armed groups and punishing those responsible for the killings must be an immediate priority. And with expectations of inflation firming up in the months ahead, it increases the odds of a tighter monetary policy. 7 per barrel. There is of course, as there always is in the tangled web of the global economy, a range of reasons, including the dominance of monocultures. Reports that at least nine people were killed in the latest outbreak of violence across Manipur's hill districts on the night of October 9 point, yet again, to the state government's incapacity to heal or contain schisms in the state. 8 per cent, pointing towards an uptick in international prices. As on October 12, the basket price of Indian crude oil was $125. This was not the first such appeal: Soon after President's Rule was imposed in February 2025, Governor Ajay Kumar Bhalla had also called for the surrender of weapons. To what extent the committee tightens over the coming months will depend on its expectations of how inflation will evolve going forward. Alongside, global crude oil prices remain elevated. What happened in Ukraine is instructive. But while large-scale violent clashes declined, normalcy remained elusive, and the deep divides that had taken hold since May 2023 persisted. Consider, for example

lessons are clear, especially in light of the monoculture-related food disasters of the modern age, such as the great banana epidemic that once wiped out entire plantations in South and Central America or the African swine fever that swept through Asia in 2018, leading to the culling of millions of pigs and disruption of the global food supply: There are plenty of fish in the sea, if only humans would pick a wider variety. 74 per cent in September, up from 6 per cent in August, driven by items such as onions, ginger, garlic and lemon. The outlook remains uncertain. Retail inflation continues to inch upwards, rising to 5. The central bank's latest steps have helped the rupee recover, but cannot resolve the underlying pressures. This raises the possibility of another rate hike when the RBI's Monetary Policy Committee meets next, in the first week of December. A quarter or more of India's cultivated area under cotton comprises genetically modified (GM) hybrids incorporating "unapproved" herbicide-tolerant (HT) and Bacillus thuringiensis (Bt) traits, according to a seed industry-commissioned study. It is disturbing that even after three-and-a-half years of ethnic violence, there is only a fragile calm, and little progress seems to have been made towards an enduring end to the conflict. Weak rainfall will weigh heavily on output. Since February, dozens of people from both communities have been killed and houses torched. But the dinner plate - whether one is in New Delhi or New York - looks increasingly the same. The FAO food price index has also jumped 5. But the government must also create the conditions for sustained dialogue. 83% in August, according to data from the National Statistics Office. With this print, inflation came in at 4. By all accounts, the violence between the Kuki and Naga communities spanned three districts - Kamjong, Kangpokpi and Senapati - and involved ambushes and gunfights by armed groups. FPIs have been net sellers in six of the past nine months as they seek safe havens, stronger dollar-denominated returns, and bond yields. While derived from the same soil bacterium as the Cry1Ac and Cry2Ab genes present in the "approved" Bt hybrids, it has a different mode of action that is effective even against the pink bollworm. This will add to the pressures in the economy. Selling resumed in October, adding to pressure on the rupee, which weakened by about 7% against the dollar over the year to early October, despite RBI interventions such as direct dollar sales and attracting foreign-currency inflows. In August, Singh issued a 15-day ultimatum for the voluntary surrender of illegal firearms, thousands of which have been looted from state armouries since the conflict began. With crude prices elevated, the rupee vulnerable and no clear end to the West Asia conflict, imported inflation is likely to continue shaping domestic prices in the months ahead. 54 per cent in September, up from 4. If being omnivorous gave human beings an advantage in the high-stakes game of evolution, what is to be made of the growing evidence that the species' palate has, in this age of plenty, narrowed rather than expanded? But price pressures are being felt

Not a collection of separate nations but a single organism. If one part suffers, the whole is affected. Just as in a melon, when one section begins to rot, the decay spreads, and unrest in one region disturbs global peace. Global peace is not an abstract ideal but a necessity. Violence, forced displacement, and rigid national policies are not just political matters but spiritual concerns. The true test of any law, including deportation policies, is whether it upholds human dignity. Enforcing rules without compassion leads only to suffering. If a nation must regulate immigration, it should do so with fairness allowing people time, support, and means to transition rather than pushing them into despair. Justice without kindness is another form of cruelty. India is more than a geographic entity; it is a consciousness, a land where spiritual wisdom has flourished for millennia. While people may leave its borders, they should carry its essence its teachings of peace, nonviolence, and interconnectedness. True migration is not of bodies but of wisdom, spreading harmony rather than division. Anekantavad teaches respect for multiple perspectives. While some glorify nationalism, others feel constrained by it. A true seeker embraces both views, understanding that patriotism is valuable but must not become a barrier dividing humanity. In times of division, spiritual beings have a greater responsibility to dissolve boundaries within their hearts. Imagine a world where decisions are guided not by self-interest but universal well-being. When we see the planet as one temple, every being as family, and every act as an offering, then illusions of deportation, discrimination, and nationalism fade. The real journey is not from one nation to another but from division to unity, attachment to liberation. If borders disappeared tomorrow, who would we be Indians, immigrants, or simply souls on a shared journey? May Bhagvan Jinendra bless the world with wisdom so that we transcend walls and embrace a higher vision one where peace knows no borders, flowing like a river, touching all in its path. When Diversity, Equity, and Inclusion (DEI) became buzzwords in Indian corporate circles, there was much to cheer as finally the under-represented groups could get a foothold in a sector dominated by outdated patriarchal stereotypes. We did not pause to think then that the approach taken by many organizations mirroring Western DEI models was being tailored to India unique socio-cultural realities, and that this lack of foresight could impact how diversity plays out in the country. As a matter of fact, from gender representation to workplace accessibility, most DEI efforts in India reflect the US and European frameworks, often neglecting critical factors like caste, regional diversity and socio-economic disparities. Now as the reality of US rollback hits us hard, it is imperative that Indian businesses rethink their dependence on Western models and develop an indigenous DEI framework that addresses our country distinct challenges. Let us first analyses how Western DEI models have impacted Indian efforts at diversity in the workplace. The influence of Western DEI Models on Indian

Insurance sector and the risk factors in the insurance sector and the ways to address them in the interests of the institutions, individuals, and enterprises. Definitions It is important to understand the way the key players are defined. Insurance is a means of protecting individuals, enterprises, and corporates against the risk of losing assets or value of assets contingent on sometimes undefinable uncertainties. An entity which provides insurance is known as an insurer, insurance company, or insurance carrier. A person or entity who buys insurance is known as an insured or policyholder. A broking firm licensed and regulated by the Insurance Regulatory Development Authority of India IRDAI acts as an intermediary between the insured and insurer. Many a time, the insured is unaware of the reasons for insuring himself or his firm, the ways in which s he or her or his firm is protected and the way claims are responded to when the need arose. Agents are those who work on behalf of the Insurance Companies to canvas the policies explaining fully the implications of such policies and the benefits of insurance by paying a small premium to cover a large unknown risk. Insurance penetration and density are two metrics, among others, often used to assess the level of development of the insurance sector in a country. While insurance penetration is measured as the percentage of insurance premium to GDP, insurance density is calculated as the ratio of premium to population per capita premium. Underwriting in Insurance According to Investopedia, insurance underwriters are professionals who evaluate and analyse the risks involved in insuring people and assets. Insurance underwriters establish pricing for accepted insurable risks. The term underwriting means receiving remuneration for the willingness to pay a potential risk. Underwriters use specialized software and actuarial data to determine the likelihood and magnitude of a risk. Insurance underwriters assume the risk involved in a contract with an individual or entity. For example, an underwriter may assume the risk of the cost of a fire in a home in return for a premium or a monthly payment. Evaluating an insurer risk before the policy period and at the time of renewal is a vital function of an underwriter. Surveyors Assessors When the insured reports loss of an insured asset, the insurer engages a Surveyor Assessor to evaluate the loss and the sustainability of the claim in terms of the policy issued by the insurer. All the insurance policies carry a fine print mostly unreadable easily. Understanding the clauses of the policy is invariably difficult and interpretation is always to the advantage of the insurer more than the insured. The fine print carries the risks that the insurer is likely to compensate when certain happenings cause the risk. The Policy is the contract between the insurer and the insured whereby the insured is obligated to pay the premium regularly to keep the policy current at all times. A claim against the policy is sustainable only when the conditions incorporated and ipso facto agreed.

Large corporations from the quarterly earnings. Well, to help educate those who don know about this, "A global share, also known as a global registered share GRS, is a security that is issued in the United States but trades in a number of other currencies and is registered on several different exchanges worldwide". Global shares allow identical shares to transact without being translated into local currencies across national borders on multiple stock exchanges and in different currencies. Additionally, investors will continue to pay close attention to earnings as they analyse recent financial reports and statements to learn more about how inflation affects both firms and consumers. In the early sharing, the European stocks essentially moved upward. In this article, Vijay Dwivedi, a knowledgeable specialist and enthusiastic observer with a deep interest in world trade, offers his insight regarding skyrocketing global share. The Sensex in India dropped 0.6%, and the Taiex in Taiwan also declined 0.5%. The impact of the aforementioned figures was felt strongly during Nancy Pelosi's visit to Taiwan. With regard to Pelosi's visit, some investors are looking to "sell the rumour, buy the news" for the time being, while others are developing a longer-term macro perspective on how this could turn out to be a turn of the tide in Asia-Pacific history and possibly change how assets are allocated in the region. Taiwan is a significant provider of semiconductors and other high-tech products to the world market. Considered a successful decoupling between the two largest economies in the world carries a number of challenges, including new stress on supply networks and increasing inflation. Also, beginnings of an economic response, including a halt to fruit and seafood imports as well as natural sand shipments to Taiwan, have already been made public by Beijing. Moreover, despite the decrease in immediate worries, investors will be on the lookout for any potential worsening of U.S.-China relations. Any economic sanctions from China are likely to have a negative impact on risk sentiment and positioning in Asian markets. When everything seems to be so shaky, sometimes the biggest trades involve purchasing Treasuries, the world traditional safe havens. Furthermore, the investors may be able to predict how the Federal Reserve will go with its extreme interest rate policy which has been implemented in an effort to try and contain inflation based on upcoming statistics on the US labour market. Adoption of modern technological solutions and applications is growing in the global corporate world. Over the past few years, technology has emerged as a must-have tool for investment managers in both the public and private markets. Asset managers are becoming adept at deploying emerging technologies such as machine learning ML , artificial intelligence AI , programming languages, and other big data tools to guide their investment decision-making and portfolio management. There are three broad categories within which the impact of technology has become apparent. With the plethora of data and information available in today world, capturing the righ

CRPF-hcm-Eng-Test-Dated-2026-10-15-Test NO.-28860

Whether for building forecast models or conducting time series analysis, several data tools and fintech companies have recently come up that allow investment managers to factor in relevant information and remain up to date. Integration of data in the investment process is crucial, especially for sectors and industries that follow set patterns or particular investment cycles. The second major area of technological application is investment recommendation. This is more suited for investment managers operating in public markets across asset classes, which contain large volumes of historical data. AI ML tools as well as programs allow fund managers to generate recommendations based on historical data behavior while considering the current trends. Furthermore, programs and applications help generate recommendations and enable investment managers to monitor the impact of changing market conditions and new information on a near-real-time basis, thereby suggesting actionable options. Most of the tools available in the market are customizable and can be fine-tuned to suit the needs of individual investors, both institutional and retail. In some cases, portfolio managers with quantitative investment strategies can even build custom portfolios for individual clients based on specific risk-reward profiles and returns expectations. Additionally, technological applications enable active portfolio managers to keep costs in check and remain competitive using passive investment strategies. A steady market condition, such as an extended bull market, is appropriate for programs to tailor and manage investment portfolios. However, human intervention is crucial amid increased market volatility, particularly in a sell-off or bear market. However, there must be a balance between technology usage and manual intervention when generating investment recommendations and building client portfolios. Lastly, and perhaps most interestingly, the adoption of technological solutions is increasingly visible in portfolio management and distribution activities. Risk management, reconciliation of transactions with custodians, and audits are now more streamlined across most mid- to large-sized asset managers. Asset management clients have become more demanding lately and expect a less transactional and more seamless experience. As distribution costs skyrocket, investment houses are leveraging the benefits of technology to provide prospective clients a holistic view of their strategies and performances, presenting data in the most effective format to improve decision-making. Moreover, reporting structures and formats are now highly regulated and monitored as per evolving rules related to MiFID II and Dodd Frank, among others. Considering that clients are spoiled for choice when it comes to investment management solutions, including passive strategies and self-investing options, it is imperative for asset managers institutional and retail to provide value-added services. Traditional asset management is rapidly losing to competition, but technology can change that. Existing and upcoming AI solutions, data analytics, and robotics process automation can aid fund managers to better under

Than those that remain traditional and old school. A Vietnamese delegation led by Deputy Minister of Public Security Senior Lt. General Luong Tam Quang visited India for the Second Security Dialogue and held discussions on the security issues comprehensively with his Indian counterpart. The mechanism for the Security Dialogue between the Ministry of Public Security of Vietnam and the National Security Council Secretariat of India was established in 2016 when the relationship was elevated to the Comprehensive Strategic Partnership. The First Security Dialogue was held in Hanoi, which was attended by the Indian National Security Advisor Ajit Doval. This time the Indian side was led by Deputy National Security Advisor Vikram Misri. The visiting Deputy Minister of Vietnam also met the NSA and the Foreign Secretary. This mechanism is crucial in determining the priorities of both the countries on regional and international affairs and to review the progress on decisions taken by political leaders of India and Vietnam. Indian and Vietnamese leaders are meeting frequently and pace did not slow down even during the pandemic. Indian PM Modi and the then Vietnamese PM Nguyen Xuan Phuc co-chaired a virtual summit in December 2020 and issued the India-Vietnam Joint Vision for Peace, Prosperity and People containing the guidelines for future development of India Vietnam Comprehensive Strategic Partnership. The significance of this document lies in the fact that it serves as the cornerstone for a new era of India Vietnam Comprehensive Strategic Partnership. In addition, seven agreements were inked that included one on implementing arrangements on defence industry cooperation and another on nuclear cooperation between India Atomic Energy Regulatory Board and Vietnam Agency for Radiation and Nuclear Safety. The Summit spelt out seven steps to further strengthen the Comprehensive Strategic Partnership between the two countries that inter alia covered defence and security partnership with the aim of maintaining stability in the Indo-Pacific region, maintenance of peace, stability, security and freedom of navigation and overflight in the South China Sea, and the need to ensure that negotiations of the Code of Conduct CoC should not prejudice the interests of other countries in the region. Both the PMs also agreed to intensify efforts to promote partnership in the Indo-Pacific region, including the shared focus on ASEAN-centrality as also to foster practical cooperation between ASEAN and India in the key areas and in line with the objectives and principles as stated in the ASEAN Outlook on Indo-Pacific AOIP and India Indo-Pacific Oceans Initiative IPOI . Subsequently in 2021, PM Modi spoke with the current PM Pham Minh Chinh and noted that the Indo-Vietnam Comprehensive Strategic Partnership can contribute to promoting regional stability as both the countries share a similar vision of an open, inclusive, peaceful and ruled based Indian Ocean region. In April 2022 to commemorate the 50 th anniversary of the establishment between the two countries, PM Modi held a telephone call with H E Nguyen Phu Trong General Secretary of the Communist Party of Vietnam. During th

As a pillar of India Act East Policy and Indo-Pacific Vision and desired to broaden the scope of the bilateral ties. This year also saw two important delegations from India visiting Vietnam. In April, Sri Om Biral Speaker of Lok Sabha led a delegation of law-makers to celebrate the 50th anniversary of the establishment of the diplomatic relations. During the visit, his Vietnamese counterpart Mr Hue spelled-out an action plan for further cooperation between the citizen representatives of the two countries. This was followed by the visit of the Indian Defence Minister Sri Rajnath Singh in June, during which three important decisions were taken. First, India and Vietnam signed a Joint Vision Statement on India-Vietnam Defence Partnership towards 2030, which will significantly enhance the scope and scale of existing defence cooperation. Second, the Indian and Vietnam Defence Minsters agreed on the early finalisation of the $500 million Defence Line of Credit extended to Vietnam and the implementation of the projects shall add substantially to Vietnam Defence capabilities and will also push the Indian government vision of make in India, make for the world. Third, India and Vietnam also inked a Memorandum of Understanding MoU on Mutual Logistics Support. Sri Singh visited Vietnam military training facilities and handed over twelve high-speed patrol boats to the Vietnamese naval fleet that was built with a $100 million line of credit and technical assistance from India, and is expected to be soon deployed along the South China Sea coast. The Second Security Dialogue between the Public Security Ministry of Vietnam and the national Security Council Secretariat took place in the backdrop of above interactions and decisions. In this meeting the two sides reiterated their commitment for peace and security in the region. The Vietnamese delegation appreciated the Indian role in shaping the Indo-Pacific architecture. The Indian side stressed the need for implementation of the Indo-Pacific Oceans Initiative IPOI. This was earlier suggested by PM Modi as the action plan for achieving the objective of Free, Open and Inclusive Indo-Pacific FOIP that has seven pillars. This has similarity with the ASEAN Outlook of Indo-Pacific AOIP. Vietnam has played an important role in the formulation AOIP. In this security dialogue, the focus was on three aspects. First, Indian side emphasised the need for freedom of navigation and over-flights and unimpeded trade in national waters in accordance with international laws UNCLOS. Second, the need to ensure that the proposed CoC should be fully consistent with the relevant UN convention and the negotiations should not prejudice the legitimate rights and interests of nations that are not a party to the discussions. It may be mentioned here, that Taiwan, which has claims in the SCS, is not the party to the CoC negotiations. Third, the two sides discussed the ways to combat terrorism and worked out the plan to cooperate to deal with the growing nexus of radicalism, terrorism and trafficking of narcotics and arms. Both the countries have joined the Indo-Pacific Economic Framework and are collaborating on number.

A broking firm licensed and regulated by the Insurance Regulatory Development Authority of India IRDAI acts as an intermediary between the insured and insurer. Many a time, the insured is unaware of the reasons for insuring himself or his firm, the ways in which s he or her or his firm is protected and the way claims are responded to when the need arose. Agents are those who work on behalf of the Insurance Companies to canvas the policies explaining fully the implications of such policies and the benefits of insurance by paying a small premium to cover a large unknown risk. Insurance penetration and density are two metrics, among others, often used to assess the level of development of the insurance sector in a country. While insurance penetration is measured as the percentage of insurance premium to GDP, insurance density is calculated as the ratio of premium to population per capita premium. Underwriting in Insurance According to Investopedia, insurance underwriters are professionals who evaluate and analyse the risks involved in insuring people and assets. Insurance underwriters establish pricing for accepted insurable risks. The term underwriting means receiving remuneration for the willingness to pay a potential risk. Underwriters use specialized software and actuarial data to determine the likelihood and magnitude of a risk. Insurance underwriters assume the risk involved in a contract with an individual or entity. For example, an underwriter may assume the risk of the cost of a fire in a home in return for a premium or a monthly payment. Evaluating an insurer risk before the policy period and at the time of renewal is a vital function of an underwriter. Surveyors Assessors When the insured reports loss of an insured asset, the insurer engages a Surveyor Assessor to evaluate the loss and the sustainability of the claim in terms of the policy issued by the insurer. All the insurance policies carry a fine print mostly unreadable easily. Understanding the clauses of the policy is invariably difficult and interpretation is always to the advantage of the insurer more than the insured. The fine print carries the risks that the insurer is likely to compensate when certain happenings cause the risk. The Policy is the contract between the insurer and the insured whereby the insured is obligated to pay the premium regularly to keep the policy current at all times. A claim against the policy is sustainable only when the conditions incorporated and ipso facto agreed.

Physical presence but operate with an end-to-end digital interface. 2. Buy Now, Pay Later BNPL financing: There has been an exponential rise in the demand for small ticket loans, in other words, BNPL. With large sections of the society recovering from the financial distress brought on by the pandemic, customers today are looking to have the liberty of availing of sachet-sized loans. Fintechs are giving users the advantage of splitting up their purchase transactions in smaller installments with the BNPL solution. 3. Digital lending: The unprecedented economic implications of the pandemic have altered the lending landscape as we know it. With enhanced uncertainties amplifying risk perceptions, Fintechs are improving access to capital with digital lending solutions. The digital infrastructure and faster underwriting of services offered by Fintech players are helping MSMEs emerge out of the financial crisis they are currently struggling with. With many funding alternatives and innovative solutions lined up, one thing is for sure, the Fintech industry is redefining the lending space like never before. 4. Payment gateway: The way pay and get paid has changed over the years. Today, real-time payments have come to be the expectation and Fintechs who are able to meet their customers at the intersection of convenience and security are leading the way! This explains the increasing usage of payment gateways, especially across E-commerce websites that have grown in prominence in recent years. Payment gateways can be easily integrated into merchants websites, allowing customers to make payments using a host of options like debit and credit cards, digital wallets, etc. 5. Digital wallets With the introduction of digital wallets, paper money is slowly but surely losing its prominence. Digital wallets have now come to be a hit for both online and offline transactions where users can transfer money virtually with ease. Summing up The rise of digital technologies has certainly been a boon for the Fintech industry that is powering the growth of the Indian economy. These digital Fintech solutions are well-integrated providing a bigger impetus to the growth of financial services in the country. Those Fintechs who are leveraging the latest technological advancements to create value and develop innovative offerings, will stay ahead of the game and reap the greatest rewards in the years to come. There no doubt that technological advancements are the bedrock of the Fintech sector. Digital solutions will continue to drive disruptive business models in financial services and rewrite the rules in the world of finance. Economic Times held out a report that Insurance firms can start with a low capital base of Rs.50crore as part of a spate of reforms set in motion. Several experts warned that insurance being a risk umbrella, low capital base could lead to customer insecurity. 20-21 Annual Report of the Insurance Regulatory Development Authority of India IRDAI says: The pandemic has cemented positive paradigm shifts for insurance. Higher risk awareness and acceleration in digitization are positive structural trends for insurance. This article intends to explain some of the t

To by the insured are fully honoured. According to the Annual Report of IRDAI, insurance penetration in India increased from 3.76 per cent in per cent in 2009-10. Thereafter, it declined for five years to register again an increase to the current level of 4.20 percent. Insurance density depends upon the people perception of the risks that need insurance for certain and regularity in payment of premium committed by them for the periods specified in the policy. In India, insurance density is reported to be consistent at around Rs.500 during 2019-21. Life is insured under a life insurance policy while the house, equipment, utilities are insured under general insurance. There are number of ways in which premium is calculated and the actuaries assess the risks inherent in a particular activity life, health, automobiles, instruments, machinery etc., and the larger the number of insured, the lower the premium could be. Technology advancements have made life easier for the insurance companies in the calculation of premium, assessments of loss and settlement of claims. Risk Management in Insurance Risk is different from uncertainty. In the case of risk, we know the probability of its occurrence but not the time at which it occurs and what loss it is going to entail for the holder. I will cite a couple of examples. Example 1 Ram and Laxman are two brothers, who could be either sick or healthy. Thus, there are four possibilities. Each has a 25 percent possibility of occurrence. The risk of attack of sickness can come from a number of sources and at varying times and with varying intensity. There is a possibility of either or both coming out of sickness again at different times with different outcomes post-sickness. Therefore, we do not know whether it will happen, when it will happen and how it will happen and with what financial consequences. Have you ever been a part of a Monday morning, sombre, caffeinated elevator? Well, I have. Here was a besuited man, with the deathly pallor of Monday blues, coffee in hand. A child, approximately 6 years old, with sleep-laden eye-lids, lousily stood, chewing a banana that the nanny edgily tried feeding him. A teenage girl, with an untidily done up pony tail, ear phones in place, stared through me blankly. I, in my bright pink t-shirt and blue joggers, stood out like a sore thumb. Glumness is intolerable, so I decided to slay the dreariness with a mile. I grinned at Mr. Black Suit and smiled even wider at the teenager. They immediately smiled back the tension eased out. The nanny looked up and beamed, it seemed contagious. With murmurs of, Have a good day, we stepped out into the world that awaited us. A recent research study has concluded that when you see somebody smile, your own facial muscles can help but also react. The emotion appears to be infectious and it is almost impossible to avoid mirroring the expression. An article I just read cited that- scientists believe.

Sanchit's Art, New Delhi flew to South East Asian shores in Singapore to celebrate their 10th Anniversary of Kalasutra's Tangible Intangible Odyssey, a group show of the artworks of 19 different artists, exploring sublime narratives that celebrate the mystic aura of modernism in Indian Art. Through distinct visual vocabularies and artistic expression, each artist in this suite of 90 works belongs to the dynamic field of Modern and Contemporary art. This forms part of the annual international exhibition program and was held at The Art House Singapore, from 11th Oct to 15th Oct 2023.While one is looking at a litany of masters it is a delight to pick up 5 favourites in terms of compositional clarity and the power of materials in pathways of evolution. Once, there was this guy, who was in love with a girl. She was the most beautiful and gorgeous but for him, she was everything. He used to dream about her, about spending the rest of life with her. His friends told him, why do you dream so much about her when you don even know if she loves you or not? First, tell her your feelings, and get to know if she likes you or not. He felt that was the right way. The girl knew from the beginning, that this guy loves her. One day when he proposed, she rejected him. His friends thought he would take alcohol, drugs etc. and ruin his life. To their surprise, he was not depressed. When they asked him how was it that he is not sad, he replied, why should I feel bad? I lost one who never loved me and she lost the one who really loved and cared for her. Moral: True Love is Hard to Get. Love is all about giving to other person without greed of gaining anything in return, if other person rejects it, its him/her who will be losing the most important thing in life. So never feel dejected. A man stopped at a flower shop to order some flowers to be wired to his mother who lived two hundred miles away. As he got out of his car he noticed a young girl sitting on the curb sobbing. He asked her what was wrong and she replied, I wanted to buy a red rose for my mother. But I only have seventy-five cents, and a rose costs two dollars. The man smiled and said, Come on in with me. I all buy you a rose. He bought the little girl her rose and ordered his own mother flowers. As they were leaving he offered the girl a ride home. She said, Yes, please! You can take me to my mother. She directed him to a cemetery, where she placed the rose on a freshly dug grave. The man returned to the flower shop, canceled the wire order, picked up a bouquet and drove the two hundred miles to his mother house. A work belonging to 2023, Javari Barman Lila is a harnessing of feminine fables. While it is said she uses Alight style as her vocabulary, it would be more imperative to state that her signature is born of the mural styles of old Indian art as it unveils an Asian oriental flavour.Technique and expression vie with each other. She derives inspiration from the role of nature, allowing her to express the sense of interactions between characters, their flexible movements, and the sense of continuity in the development of the inter connect redness of woman symbols and nature elements. She plays with t

While Mr. Jhota's alleged murderer was a local chemist, the macro-level drug trade in Punjab is intertwined with gangster networks, with the cross-border drug smuggling known to be a key source of illicit funds. 7%, 2011 Census). Trump has also made Ukraine's position more difficult by demanding that Kyiv suspend strikes on Russian oil refineries, a move that would weaken its leverage. But it matters just as much to India. Under its narcotics policy, the State has to reduce the availability of harmful drugs, disrupt wholesale supply chains, identify corrupt facilitators, and expand access to rehabilitative care. After the N Biren Singh government was dissolved in February 2025, it was hoped that President's Rule would make space for an administration seen to be less partisan to stabilise the situation. It has also put forward its own proposal to end the war and remained in constant contact with both sides in pursuit of a negotiated settlement. New Delhi should ask that its energy needs and costs be judged by the same standards as Washington's. Throughout the war, India has maintained that its energy purchases are guided by national interest and the needs of its people. 26% nationally. Both events in Punjab involved digital platforms and both events expose a dire gap in public safety. 26 lakh appeals that were decided had restored electors to the rolls, an indication of large-scale disenfranchisement before the vote. The State's 'Yugh Nashian Virudh' campaign of 2025 has also claimed 68,850 arrests of alleged traffickers and the attachment or confiscation of assets valued at 319 crore. From Trump administration officials such as Scott Bessent and Peter Navarro to the US President himself, India has been at the receiving end of Washington's moral posturing over Russian energy imports. Paralleling investigations into the coordination of targeted killings, an anti-trafficking strategy must also probe the financing and logistics of networks, to dismantle institutional collusion, and better protect threatened individuals. Following Lal Babu Hussein (1995), a name on an earlier electoral roll has probative value as evidence of citizenship and cannot be struck off without inquiry. For, in every moment that Achilles moves, so does the tortoise. Together with a string of targeted killings of police personnel and local politicians, the incidents depict a Punjab caught between local drug trafficking and citizens resorting to vigilantism and crime syndicates carrying out assassinations with disquieting ease. The late senator Lindsey Graham's bill was meant to impose new sanctions and tariffs on countries that buy Russian oil and gas, choking off the revenue that funds the Kremlin's war in Ukraine. However, cases registered differ from convictions and asset attachment differs from forfeiture. The Global Initiative Against Transnational Organized Crime reported in June that India's pharmaceutical and chemicals industries also provide bad actors with ample opportunities to divert controlled substances or precursors for illicit use. The AIIMS Magnitude of Substance Use in India survey estimated that in 2017-18 the latest year for which it is available 1. Ele

than three weeks away, the likely goal is to placate American voters. Mr. Jhota's hostile tactics also enjoyed public support, and authorities need to examine why the people are overlooking formal reporting channels. The Supreme Court must now halt the SIR. Achilles, known to be fleet of foot, can never catch up to a tortoise as long as the slow-moving reptile has a head start. 3% of those flagged for logical discrepancies. Twenty - two lakh appealed but just 1,607 electors were reinstated in time for the vote. The plan may not work. The arbitrary nature of these discrepancies, especially those relating to family size, suggests that they were chosen to target communities with higher, though declining, fertility rates, for exclusion. That the ECI's SIR of electoral rolls has been flawed by design and tuned to exclude genuine electors rather than ensure their full enrolment is now well established. The children an elector has, a parent's age at the elector's birth or name spelling are unconnected; neither the ECI's Manual on Electoral Rolls (2023) nor its SIR of 2002-03 provided for such checks. 6% of Delhi's draft rolls in line with the 2011 Census but accounted for 20. is almost double that of the whole CY2025. Punjab's geopolitical location renders it an important entry point and market, with the security apparatus hampered by smugglers using multiple transport modes. A sample-based analysis of those excluded after adjudication estimated a much higher share of Muslims than their population share. Over the coming months, inflation is likely less than a month after the Lindsey O Graham Sanctioning Russia and Iran Act of 2026 was signed into law by US President Donald Trump, he has struck a deal with Russian President Vladimir Putin to release Russian diesel supplies into global markets. Ostensibly, the President wants to bring diesel prices down for Americans and, indeed, the World, as he put it in a social media post. A process built on arbitrary criteria with no basis in electoral law, and which discriminates against specific communities, should not be allowed to firm up electoral rolls. Separately, social media influencer Mad Sandhu was allegedly the victim of a premeditated, transnational syndicate hit that used inter-State escape routes. This number goes up to 30% for those flagged under the five reasons linked to family size. It will directly bankroll that war and undermine the international sanctions against Russia already in place. Of course, energy security matters to the US. The impact was severe: 27 lakh electors were deleted following adjudication by judicial officers, after being flagged overwhelmingly for logical discrepancies. 28% of Punjab's population aged 10-75 years had an opioid dependence, versus 0. A chemist has been charged with killing anti-drug-trafficking activist Parvinder Singh Jhota after his allegedly illegal drug business came under threat. None of these criteria bears on the eligibility of an elector, who should be an Indian citizen, at least 18, ordinarily resident in the constituency and should not be disqualified under the law. By September, nearly 93% of the 1. But in the SIR's Phase 2 in West Bengal, the EC

When competing for sub 2 acceptance roles is it magic circle law, a bulge-bracket bank, a top-tier consulting spot, or even a coveted private equity position at firms like KKR or Blackstone your interview narrative must go beyond a list of tasks. Decision-makers want a story how your interest began, how it developed, and how it was confirmed through real experiences. I call this the BDC framework, and it the single biggest differentiator I vet seen for candidates vying to stand out in hyper-competitive recruitment. Too often, candidates jump into accomplishments without explaining why they wanted to pursue a particular field. Whether your spark was reading about a high-profile merger in the Financial Times or witnessing a dynamic cross-border legal case, use this began stage to pinpoint the exact moment that ignited your curiosity. Maybe you interned at a local firm that handled a complex commercial dispute, and you felt an immediate pull toward the intersection of law, finance, and strategy. By highlighting where your passion took root, you give interviewers a personal anchor that differentiates you from others who just recite their CV bullet points. The second phase developed is where you detail how that initial interest turned into a deeper, proactive pursuit. Did you join a finance society or law clinic at university, taking on leadership responsibilities that exposed you to regulatory challenges? Did you run a research project that taught you to dissect commercial reasoning in real-world scenarios? This is the part where you illustrate the steps taken to cultivate your passion. Recruiters at places like Goldman Sachs, Clifford Chance, or leading PE funds want evidence that you consistently built on your fascination over time, rather than an unclear focus. Think of it as demonstrating you are not just intrigued, but truly invested. Finally, cap your story with how your interest was confirmed the experience or achievement that solidified your aspiration beyond doubt. Perhaps you led a pro bono initiative that made you realise the strategic potential of cross-border transactions, or you worked on a venture capital deal in an internship that combined your analytical skills with commercial awareness. If you are targeting a private equity track, highlight how you analyses a target company financial statements or participated in a due diligence process that clarified your passion for high-stakes investments. This confirmed stage gives interviewers a clear sense of closure. It shows them you are not merely toying with the idea; you vet validated it in a tangible, results-oriented context. Partners and hiring managers often have mere minutes to decide whether your story sparks genuine potential. A BDC-based narrative holds their attention because it is random it shows a clear evolution of your interest and skill set. They see why you first became intrigued, how you deliberately honed that intrigue, and the definitive proof it a real career fit. In fields where thousands of equally bright applicants fight for a handful of offers, the ability to knit your experiences into a clear story can be your best advantage. Your sub 2 acceptance dream be it c

CRPF-hcm-Eng-Test-Dated-2026-10-16-Test NO.-28875

Trauma often has lasting effects, impacting a person life as well as identity. For survivors of trafficking and forced exploitation, the path to recovery from the immense trauma they endured is fraught with challenges, including psychological distress, societal stigma, and the constant struggle to rebuild trust and reclaim a sense of normalcy. However, dealing with such highly challenging life situations can also result in a positive and meaningful development known as post-traumatic growth. Changes due to post-traumatic growth can manifest as personal strength, discovery of new possibilities, appreciation of life, improved relationships, and spiritual and existential growth. Experiencing trauma deepens empathy and compassion, fuelling determination and passion for change. As Firoja Khatun, a survivor leader, reflects, the traumatic incident, turning around from there, and not wanting others to be in that place of hurt this journey stays with us. The cognitive process of grappling with existential questions, interpreting the trauma, finding meaning in suffering, and the creation of emotional and social support structures during recovery supports the emergence of post-traumatic growth. A study in October, 2024 by Kamonohashi Project with a Kolkata company involved 60 survivors from five survivor collectives in West Bengal, Chhattisgarh, and Andhra Pradesh. The participants have been working on developing their leadership capacities since 2018 as part of the Leadership Next programme. The findings revealed that 98 percent of the respondents reported experiencing moderate to high levels of post-traumatic growth. Based on the study, we detail how leadership fosters post-traumatic growth, the challenges faced by the survivors in this process, and the steps that organisations can take to maximise their impact in nurturing survivor leadership, sustaining growth, and enabling systemic and community-driven changes. Post-traumatic growth is a long journey. Many survivors continue to seek external validation, struggle with sustained motivation, and face interpersonal challenges. These issues may stem from deep-seated trauma and unhealed emotional wounds. A stronger focus on goal- or action-driven mentorship often leads to limited attention to internal and collective healing and growth. This highlights the need for a holistic approach in leadership development one that integrates internal and external growth at the self, collective, community, and systemic levels, while also being goal-driven. A holistic approach includes continued emotional guidance and trauma-informed support using interventions essential for healing and growth. The programme should help survivors rebuild their self-worth and support them in fostering healthy relationships through conflict resolution and trust-building. Nonprofits should support their relational and collective growth, strengthening leadership at all levels. Here how they can do so. The design of the leadership programme should prioritise the survivors voice by asking, what do you want to do? This simple yet profound question becomes a catalyst for self-determination, which is critical for leadership development. It enc

That emotions and expressions happen simultaneously, so activating one automatically initiates the other. Thus, smiling or seeing a smile, even when you don feel happy could stimulate happy thoughts, or vice versa. Emotions and facial expressions act like a push-pull effect. If you block a negative emotion, a positive effect comes surfaces. For the uninitiated, my go-to person in times of a calamity is a cherry faced, cheerfully flashy, pretty, fiercely outspoken Mrs. Kohli, who appears in my anecdotes many a time. No matter what, she always wears a smile. When I tell her that her smile is bewitching, she quips in her typical jubilant tone, It the Mac smeared lips doing the magic, you know, Ruby woo and all! It does really mean that she happy all the time, her smile projects her inner strength when faced with hardships. I always have believed, Sometimes your joy is the source of your smile, but sometimes your smile can be the source of your joy. Thich Nhat Hanh The Coronavirus pandemic had rendered us smile-less, mouths veiled behind masks and shattering our peace and shrouding the brows with frowns of gloom. Somehow our inhibitions have surged ahead of us making smiles a rarity. We have become stingy even with them. You smile at your maid? Asked a neighbour with disdain. It not going to increase your face value as the cliché goes. She will take advantage of your goodness. Wear a disgruntled look when she here. So, this was an advice that was agreed to by the other women too, at a lunch meet. If you wear your smile on your sleeves, you become pedestrian! Quipped another genius. I agreed to disagree because Shamli, the girl who helps me with my chores comes walking many miles, with a long, strenuous day ahead of her. I feel that it just takes a simple smile to rejuvenate another human being. She spontaneously reciprocates the exhaustion is immediately replaced with a cheerful demeanor. When I go for walks, I do make it a point to smile at a few passersby. Some lessons remain within us for posterity and I remember Ms. Debbie, one of our teachers in school, telling us, Today give a stranger one of your smiles. It might be the only sunshine he sees all day. In the morning as I waited for the lift, I saw an old, fragile gentleman emerge, leaning on a walker, going for a stroll. He had his mask on, I smiled at him instinctively and saw his eyes glimmer, his hunched form seemed to straighten up a bit, as he trundled on, with a spring in his feet. His smile had reached his eyes, the windows of our soul. This is the best kind, the Duchenne smile! It reflects happiness through the eyes, the mouth turns up, cheeks lift and eye-sockets crinkle to create crow feet. It was named after a French anatomist, Guillaume Duchenne who studied many different expressions of emotions, focusing on the smile.

This House deeply expresses its serious concern over the rising incidents of violation of Human Rights in various parts of the country and urges upon the Government to take effective steps to curb the occurrence of such incidents. I am a Member of this House for the last 32 years. I have never seen this House even had a structured debate on a very important subject pertaining to millions and millions of people of our country. We debated and we raised the issue whenever there was any incident of human rights violation, but there had not been a structured debated on this important subject which is agitating the people of the country. Today, I am raising this subject because I found that even after constitution of National Human rights Commission in 1993, the number of incidents of violation of human rights has not reduced and it is increasing day-by-day. I have the figures for the last three years where you will find how the number of incidents has increased. In 2006-07, it was around 82,000, next year it increased to approximately one lakh and then it came down slightly to 90,000 but it is still more than the number of incidents that had taken place in 2006-07.You will be surprised to know that in one year, the incidents of custodial death have increased to more than one thousand and so also the cases of murder. The Right to Life is a Human right and a Fundamental Right. The right to have a decent living is a Fundamental Right. Population do not have decent living. If one-fourth of the population has to go empty stomach daily even after 65 years of independence, will it be treated as decent living? This is the situation today prevailing in our country. If a substantial percentage of women are suffering from malnutrition, is it a decent living? The Prime Minister had called it a national shame. Lakhs and lakhs of people are living in slums without any amenities, without any facilities in unhygienic condition.
This House deeply expresses its serious concern over the rising incidents of violation of Human Rights in various parts of the country and urges upon the Government to take effective steps to curb the occurrence of such incidents. CRPF-hcm-Eng-Test-Dated-2026-10-16-Test NO.-28878

Of unadulterated bliss. Then there is the enigmatic Monalisa smile of the Da Vinci fame that has gone on to enthrall many. The one that flickers, intrigues and bowls over the beholder. According to Georgio Vasari, the famous architect, painter, historian and writer, Leonardo kept the real Lisa smiling during the portrait session, by employing people to play and sing for her, and jesters to keep her merry, to put an end to the melancholy that painters often succeed in giving to their portraits. Well, this is the exact kind of ambiguous smile that my husband displays when I ask him how I look in a certain outfit or whether I have lost weight or not. A Monalisa smile can thus save, as Da Vinci probably lies grinning in his grave. Wear a smile, it my favourite go-to hack to instantly look and feel beautiful and human. As per George R.R. Martin, The living should smile for the dead can. So go ahead and prove that you aren a zombie The growth of the nation depends on the productive contribution of youth in all segments of society. With changing times, there comes an elevating need to gain appropriate skills to align with technical advancements experienced by every sector. The IT sector has been such a driving force of the economy, which has transformed the way business is conducted. Processes are automated, AI is leveraging the process of customer service, augmented reality is used for product visualizations, and the finance sector is looping in Blockchain technology. Therefore, the youngsters of India need to cultivate new skills to thrive in the current job market and be prepared for future circumstances. Youngsters need to align themselves in IT skills development World Bank suggests that low skills embolden inequality and poverty, however, if the skill development is done correctly, it can improve the employment rate, increase productivity and relatively advance the standards of living. However, India has a window of opportunity in terms of demographic dividends till 2040. Also, according to a report named Youth in India 2022, the Ministry of Statistics and Programme Implementation MoSPI states that the majority of the population will be above 30 by the year 2030. Therefore, there is a need for youngsters to cultivate hard skills that would leverage the developmental process without hampering the economic growth of the country and help them retain lucrative careers in the market. Listed below are some comprehensive skills, individuals need to address. Cloud computing for infrastructure development Companies are flocking to the cloud to gain benefits such as slashed IT prices, flexibility and scalability. Gartner predicts that 85% of enterprises will adopt a cloud-first principle by 2025. This next-gen technology is the result of the growing prevalence of subscription models, which can save costs and increase productivity. There are numerous job opportunities in technological areas such as software development, cloud computing, application development and infrastructure maintenance. To grab a satisfactory position individuals need to have proficiency in distributed systems, database oriented.

Once such an instrument is duly executed, the Registration Act allows it to be registered even though the donor may not agree to its registration and upon registration, the gift takes effect from the date of execution. It was further held, that the doctrine that a donor who has left his gift incomplete cannot be compelled to complete it, has no application to a case where the donor, by executing the deed has done all that the needs to do; registration can be effected even without his cooperation. If the interpretation of Section 123 of the Transfer of Property Act and Section 47 of the Registration Act as canvassed by the defendant were to be accepted, it will open the doors for all purchasers of immoveable were to be accepted, it will open the doors for all purchasers of immoveable property to avoid payment of stamp duty on the sale deeds and become owners only on the basis of executed unstamped and unregistered sale deed and claim to be unable to pay the stamp duty and have liberty to pay the stamp duty whenever they desire. I may in this regard notice that Section 54 of the Transfer of Property Act pertaining to sales is at par with Sections 122 and 123 of the Act pertaining to gifts. I may in this context also record that per Section17 of the Indian Stamp Act, 1899, instruments chargeable with stamp duty and executed by any person in India have to be stamped before or at the time of execution and per Section 29 thereof, in the absence of an agreement to the contrary, the expense of providing the proper stamp duty is to be borne, in the case of a conveyance and which would include a gift, by the grantee i.e. done as the defendant claims to be in the present case. The counsel for the defendant, in rejoinder, contrary to his earlier categorical stand that the defendant is not seeking enforcement of the gift, argued that the suit be put to trial to determine the intention of the parties. It is also argued that it is to be determined in trial, as to who is in possession of the property. Once such an instrument is duly executed, the Registration Act allows it to be registered even though the donor may not agree to its registration and upon registration, the gift takes effect from the date of execution. It was further held, that the doctrine that a donor who has left his gift incomplete cannot be compelled to complete it, has no application to a case where the donor, by executing the deed has done all that the needs to do; registration can be effected even without his cooperation. If the interpretation of Section 123 of the Transfer of Property Act and Section 47 of the Registration Act as canvassed by the defendant were to be accepted, it will open the doors for all purchasers of immoveable were to be accepted, it.

CRPF-hcm-Eng-Test-Dated-2026-10-16-Test NO.-28882

Architecture, cloud security and natural language processing NLP. Data Science to enhance data driven decisions the demand for data science has skyrocketed in the past few years due to the potential it has in organizational development in terms of business intelligence BI, business predictions, complex data interpretation and the value it adds to the products. Data driven decision making is becoming a norm now and skilled talent is in demand for the roles of data scientists. However, to get opportunities in the field of Data Science skills in STEM are a big pre requisite. They can be placed in IT startups, Fortune 500 companies as well as non profit organizations. The salaries are quite remarkable and this field is one of the top domains a person can get a job into for the 21st century. UI UX to design as per the customer perspective the success of any product or service depends on the experience a user has with the company. Whether it is an application or a website, a user must be able to interact in a hassle free manner to enjoy the services offered by the brand company. UI UX has been a growing field, which includes UX research, defining problems, developing architecture, designing an interface, determining user behaviour, testing and execution. Individuals can become UX unicorns if they possess the knowledge of UI framework, HTML, JavaScript, cross platform development, and data frameworks. DevOps to leverage productivity In the field of DevOps, a team with diverse knowledge works to ensure the software runs smoothly without any fatal errors. For organizations, DevOps help in communication, integration, operations, development and services, making this skill crucial to learning for future endeavours. As an expert, the individual needs to gain extensive knowledge of SDLC Software development life cycle, which includes problem solving skills, coding, bug fixes and testing. KRAs of DevOps include deploying updates, providing level 2 support, creating tools to reduce errors, performing root analysis for applications and integrating back end systems. Therefore, this is a vital field to step in for experiencing a diversifying role. Develop soft skills for capturing new job opportunities To be future ready in the markets, individuals not only need to develop hard skills but also have a brief grasp on soft skills such as critical thinking, resilience, flexibility, creativity, originality and emotional intelligence. From a traditional approach, soft skills seem to be inferior to hard skills but in the changing times, recruiters are changing their perspective to consider them relevant to enter an organization. Although there cannot be any concrete evidence of soft skills in the resume, they define an individual character and ability to work in a fast paced environment. Therefore, young professionals must pay attention to cultivating these soft skills to have better job opportunities. Machine learning to build BI in organizations TMR Research reports that MLaaS Machine Learning as a Service market is going to grow significantly to $19.9 billion by 2025, making it a staggering field to enter. ML works in.

Various verticals such as cybersecurity, healthcare, facial recognition and more. It directly impacts business intelligence BI, and therefore organizations are readily investing in ML for ahead of their competitors. There is a myriad of applications of ML in diverse fields, which can lead to many career options for individuals. To become an expert, individuals need to be skilled in ML algorithm and have a STEM background with knowledge of data modelling, python R, and data analysis. The jobs in this field are high on the rise, and ML experts can get hefty salaries due to the elevating demands. Focus on the current scenario but also be prepared for the future With the increasing demand for IT in the market, the sector remains hungry for skilled talents who hold expertise in different domains. It is crucial for individuals to learn these skills to enter the workforce that drives the organizations to a pertinent height. India will be able to gain an advantage in terms of technological advancements if the youth is engaged in skill development leading to empowerment of the economy. Scaling up the skills training is necessary to bridge the skill gap with an apprenticeship, mentorship and experiential learning. Freshers must try to possess these top domain skills with knowledge of various tech stacks to fulfil the business needs. In another blow for Congress, eight of its 11 MLAs in Goa switched over to BJP. Such defections are not new in Goa and Congress suffered similar desertions in the previous state assembly as well. But what is surprising is that the deserting Congress MLAs had taken a public oath on the Constitution before the assembly elections earlier this year to not defect in case they got elected. In fact, they had made a similar pledge at places of worship. Therefore, the defectors can rightly be accused of being driven by greed for power and money. Hopefully, voters will remember their chicanery when the next election comes along. That said, the defections also highlight a larger problem faced by Congress today. Sans a clear and effective leadership, party workers are either listless or don see any opportunities for career advancement. This is why they are easily induced by a well resourced and functionally robust BJP. Thus, Congress must sort out its leadership issue as soon as possible. True, it is about to hold elections for its party president post. But Rahul Gandhi today is on a Bharat Jodo yatra. Which begs the question Will the new Congress president call the shots or will Rahul and the Gandhi family continue to play puppet masters? The old duopoly arrangement for the party won work anymore, especially in the face of today aggressive BJP. Thus, Congress has to put its house in order. Otherwise, defections like those in Goa will continue to recur. Credit ratings are opinions about credit risk. They express the Credit Rating Agency opinion about the ability and willingness of an issuer, such as a corporation or state or city government.

CRPF-hcm-Eng-Test-Dated-2026-10-16-Test NO.-28884

The science of aesthetics is a special characteristic expression of all microcosms. This inner spirit of aesthetic science leads all microcosms to seek a congenial environment for their psychic expression, for all unit minds are searching a totally congenial environment for their development. This development leads to a state of psychic balance, attained as a result of all our actions and reactions. While seeking to attain this state of psychic balance, we have invented the science of aesthetics. Everything in this universe and this entire universe also is moving around the Macrocosmic Nucleus. This movement is from imperfection to perfection, and this element of dynamism is the essence of aesthetics. The realisation of aesthetic feeling is not a science, rather it is a high-grade art. When we say that human beings have attained peace in life, this subtle feeling of joy in aesthetic science is psycho-physical. Now the question is, is this joy only psycho-physical? No, it is not: it is both psycho-physical and psycho-spiritual. When the mind seeks a subtle feeling of joy without expecting the fruits of its action, this is certainly psycho-physical, but when this experience of joy moves in a well-defined way towards a goal, then it is certainly psycho-spiritual. psycho-physical or psycho-spiritual, clash is inevitable, and this clash occurs amongst the static, mutative and sentient principles. This clash goes on and on. Due to this clash, when the movement is towards the sentient force, that is, when the mutative force overpowers the static force and the sentient force overpowers the mutative force, in that case the psychic movement is called psycho-spiritual. This type of movement gives birth to true art and science; whereas that knowledge which creates numerous obstacles and problems for society is merely an expression of mean propensities of the mind. When nothing great is created, then cheap sentiments emerge for low-grade art, literature, architecture and sculpture; and when the sattva, sentient principle, is overpowered by the rajas, mutative principle, and the mutative principle by the tames, static principle, the cumulative effect is complete chaos. That is why this clash goes on and on, and it occurs not only within the human mind but also within all the unit and collective minds of the entire universe. The duty of all educated and talented people of society is to arrive at a firm conclusion as to what they should do, how they will lead society along the righteous path, and how ultimately they will establish society in the subtle realm of Satyam, Shiva and Sandarac truth, consciousness and beauty. This clash amongst the three binding principles will continue eternally, but it can certainly be channeled along a particular direction so that the mutative force cannot defeat the sentient force, and the static force cannot defeat the mutative force. Now, within the realm of these three binding principles, society will have to find the path for true progress through proper planning and struggle. Without this, the future of humanity is dark. But you should bear.

Emmanuel Macron's government seems ill-equipped to resolve. 72% bank for Rs 52,878 crore. There is ample evidence of SHGs' capacity to advance women's social and economic empowerment by improving access to credit and skills, building financial literacy and leadership, and increasing self-confidence and mobility. Zeno's 5th-century BCE paradox, like Aesop's fable about the hare and the tortoise a hundred years later, is a nice tale, easily resolved by simple observation, and the fact that motion is not the property of a single, static instant. After this transaction is concluded, LIC and the government will hold a 34% stake in the bank. a long enough timeline, speed doesn't matter all that much. The Delhi Police, which is under the Union Home Ministry, have told the Delhi High Court that Jantar Mantar was denotified as a protest site following a Supreme Court directive issued on October 9. And both Achilles and the apocryphal hare. Fairfax, which also owns 40% of CSB Bank, will have to either merge CSB Bank and IDBI Bank or sell its stake in the former, considering the regulatory approach. This is particularly so given the positive impact that the Deendayal Antyodaya Yojana-National Urban Livelihoods Mission has had on the social and financial empowerment of women. In 2023, the government sought to raise the pension age to 64, but backed down after widespread protests. Addressing these concerns is critical to the larger goals of poverty alleviation and support to women's entrepreneurship. 8 billion, net FDI was considerably lower at $13 percent. Its disinvestment target has been budgeted at Rs 80,000 crore for 2026-27. When Janet F Werker, the pioneering development psychologist, began researching into the linguistic capital of infants, she came away with an important discovery that the process began even before birth, through sounds heard in the womb: A lullaby, the first inchoate babble, conversations overheard but not yet understood, auditory experiences that acquire meaning through the early years of life. All five have sought funding to ensure continued support to SHGs and prevent disruption to their access to institutional credit and bank linkages. A new study by University College London and Tohoku University, Japan, now follows on its trail and suggests that the best way to learn a new language is to focus on its sounds before wrestling with its grammar. At least 7,000 protesters have been detained; many have been injured, including police officers. He is the star attraction on the island of St Helena, where he spends much of the day lolling around on the grounds of the governor's mansion. o rise further. How do newborn babies acquire language? In fact, pensions are 13-15% of the country's GDP. Core inflation is also moving upwards. So far this year, the Centre has raised Rs 55,757 crore via disinvestment (including Rs 31,514 through LIC's offer for sale) and Rs 6,367 crore through asset monetisation. Drug use. Alongside, in the financial year so far, foreign portfolio investors have also taken out over $18 billion from equity markets. But a look at Jonathan the 180-kg giant tortoise who recently turned 194 years old shows that in man

out disinvestment of IDBI Bank was finally cleared by the Cabinet Committee on Economic Affairs. The Bench headed by Chief Justice of India Surya Kant had urged the Union government to identify an alternative protest site that is spacious and open. However, much of that has gone to paying out pensions, often at the expense of teachers' wages and infrastructure. They leaned less on the left sensorimotor network that serves the mother tongue. 5 trillion euros (nearly 120 per cent of GDP), France's debt is among the highest in Europe. It is also a clear signal from the The Delhi Police's decision to denotify Jantar Mantar in the national capital as a site where protests can be organised has itself triggered a storm of protest over its sheer arbitrariness. In schools across the country, students joined by teachers, parents, nurses and other sections of society forced closures and clashed with the police. This deal will bring in much-needed foreign capital, at a time when there has been considerable concern over both foreign direct investment and portfolio flows into the country, and the pressure on the rupee. 4 billion. Researchers tested Japanese learners of English and found that the more accomplished learners processed unfamiliar words much as they would any non-speech sound. The ability to listen shaped a child's grasp of language. Since its launch in 2014, the scheme has helped create 10 lakh self-help groups, covering over one crore women across cities. A foreign tongue began not with speech but with the patient accumulation of sounds and their meanings. In recent years, IDBI's financial position has improved its gross NPAs (non performing assets) stand at 2. In education, in real terms, budgetary allocations have grown by 14 per cent over the last decade. This transaction, which will be the largest FDI in the financial sector, comes on the back of signs of growing interest in the sector. A living heritage site, Jonathan is well fed and watered, and his health is monitored closely. While he shows some signs of ageing, his appetite for sustenance and procreation is intact. Their demands sound unexceptionable: Better infrastructure and teaching, updated curricula, and equality in the quality of education and access to universities. The impact of initiatives such as Didi ki Rasoi and Bank Sakhis under Bihar's scheme shows how such programmes can put money in women's hands while shifting them from dependent household roles to decision-makers. 3 percent, while its capital ratio is 26. Look closer, though, and a deeper crisis in the French political economy becomes apparent, one that the minority EAt 3. To risk leaving these beneficiaries adrift for want of continued support would be to betray the promise contained in slogans about women-led development invoked by parties across the spectrum Significantly, concerns over funding and the policy vacuum created by the end of in October 2024, cut across party lines. 2 per cent of YES Bank, and Mitsubishi UFJ Financial Group picking up a stake in Shriram Finance signal increasing foreign investor appetite for high-value transactions in this segment. In the race of life, he has clearly beaten The Centre

CRPF-hcm-Eng-Test-Dated-2026-10-17-Test NO.-28889

In mind that pessimism or the complex of hopelessness is not the essence of this universe; optimism is the goal of Universal Humanity. Every day, along with millions of others across the world, Bunny does the Wardle puzzle, an online game, in which players have six attempts to deduce a five-letter word which is changed every day. As if solving the Wardle sin problematic enough, giving participants a mental workout which is the equivalent of going to a cerebral gym, there are variations of the game which, progressively, get tougher and tougher, like Doddle, Curdle, Octordle, Sedecordle and Duotrigordle, the equivalent of 32 Worlds. The Wardle tribe is the latest addition to a host of puzzles, verbal or mathematical, like crosswords and Sudoku, that human ingenuity has devised to pit its wits against. What is it about puzzles that we find so attractive and addictive? Arena there enough real-life problems for us to face and solve, if we can without inventing made-up problems to tackle for entertainment and amusement? Why is problem-solving fun for us? The answer could lie in the history of human evolution. It is by confronting and solving increasingly complex problems that we as a species evolved from our primeval forebears to become Homo sapiens, or wise man. And the more problematic problems we make up for ourselves both actual problems and contrived problems to solve, the more sapiens we become. Our prehistoric ancestors got fed up, literally and metaphorically, of eating raw food which was hard on the gums. Then someone observed that when lightning struck it created fires, and fire made edible things, veggie and non-veggie, tastier and easier on the teeth. Since they could cause lightning to strike at will to cause a fire to cook food with, they figured out how to create a blaze by rubbing pieces of wood together. And before you could say Charles Darwin, we have television, and rocket science, and brain surgery, and the internet, and ILL, and Wardle with its permutations and combinations. We have Modern Civilization. With all its wars, and conflicts, and pandemics, and man-made climate change which is threatening the entire planet with irreversible environmental meltdown, and Problem-solving brings Progress with a capital P. And Progress with a capital P brings Problems also with a capital P. On Wednesday, in a telephonic conversation aimed at consolidating the bilateral strategic partnership, Union defense minister Rajah Singh conveyed to his US counterpart India concern at the recent US decision to provide a sustenance package for Pakistan F-16 fleet. He was referring to last week announcement about possible Foreign Military Sales (FMS) to Pakistan worth $450 million. The announcement could not have been more ill-timed. It coincided with the visit to New Delhi of assistant secretary of state Donald Lu for a series of politico-military dialogues. The Centre decision to grant ST status to the Hattie community in poll-bound Himachal Pradesh and the in-trouble Jharkhand government decision to expand OBI reservation to 27% are part of a.

CRPF-hcm-Eng-Test-Dated-2026-10-17-Test NO.-28890

Long list of additions to official backwardness classifications. These additions don always go smoothly, and they are also piling up. Hates demand for ST status in HP is resented by Davits in the region. Gujjars in Rajasthan agitated for ST status, driven by the grouse that Mensa benefited from it. Now they are slotted as Macs in a 5% bracket. Meanwhile, Maharashtra OBI quota in local body elections has been ratified by SC after the state satisfied the triple test laid down by the court to grant reservation. In the south, Tamil Nadu has mastered this dubious game. From the earlier formulation of reservation as an exception to the norm, the exception has begun to dwarf the norm. EWES quota, currently before a constitution bench, tips central reservations well over the 50% line. And it not just that 77% of Jharkhand government jobs will now be in the reserved pool, many states are similarly inching towards the 100% mark, leaving little for merit. Many see quotas as avenues easing their access to higher education, employment and official schemes. That true in a limited sense because the number of government jobs, seats in government education institutions and even welfare schemes face hard budget constraints, and relative to demand their availability is going down. So, more and more castes end up fighting for a shrinking pie while the one big truth about India socio-economic change in the last three decades is that reforms have pulled millions out of poverty. In fact, an IMF study recently estimated that absolute poverty is history in India. Yes, there are pockets of relative deprivation and there is a persistent jobs problem at the lower end of the labor market. Neither are there enough seats in higher education. But reservations solve none of this. Social groups that agitate for quotas must understand this basic fact. PM Mode reached Samarkand, Uzbekistan, yesterday to attend the 22nd summit of the Shanghai Cooperation Organization. The formal agenda includes stock-taking of SCOW two-decade journey and talks on ways to enhance cooperation in future. Of greater significance are the bilateral meetings on the summit sidelines. Mode departure statement said that he would meet some of the attendees including President S Mirziyoyev of Uzbekistan. SCOW, dominated by China, India and Russia, accounts for 40% of the global population and about 30% of its GDP, giving it heft among inter-government groupings. A majority of SCOW membership has a pronounced anti-Western position. Yet, India participation in SCOW makes sense as it in sync with its approach of strategic autonomy. Geopolitics today is in flux and India has done well to pursue a path of enlightened self-interest and seize opportunities. To illustrate, India did import crude oil from either Russia or the US in the April-June 2021 quarter. In April-June 2022, in the aftermath of the Ukraine war, crude imports from Russia and the US were $6.2 billion and $2.6 billion respectively, propelling both into India top five sources of crude imports. Given this context, a.

Women who have faced spousal violence's often return to their abusers. This fact does not require any statistical backing neither in case of Indian households nor worldwide. The blame is mostly placed on the victims who choose to return by spousal violence often suggesting that she thrives on abuse. The society's that compels the victim to return to her abuser fails to understand that abusive relationships are incredibly complex. There are various reasons why victims may return to their abusers or stay in abusive situations. These reasons can include fear, "financial dependence" low self-esteem, threats, manipulation, or a lack then approached the parrot. The parrot spousal of support and resources. Of these, financial dependence of women is an invisible companion and in some cases, an emboldening prod of domestic violence. The scary thing about financial spousal violence often abuse is the extent of pervasiveness that the victim does not come to realize of it in most cases or might even have encouraged it. A crow lived in the forest and was absolutely satisfied in life. But one day he saw a swan. This swan is so white, he thought, and I am so black. This swan must be the happiest bird in the world. He expressed his thoughts to the swan. Actually, the swan replied, I was feeling that I was the happiest bird around until I saw a parrot, which has two colors. I now think the parrot is the happiest bird in creation. The crow then approached the parrot. The parrot spousal violence often explained, I lived a very happy life until I saw a peacock. I have only two colors, but the peacock has multiple colors. The crow then visited a peacock in the zoo and saw that hundreds of people had gathered to see him. After the people had left, so white, he thought, and I am so black. This swan must be the happiest bird in the world. He expressed his thoughts the crow approached the peacock. Dear peacock, the crow said, you are so beautiful. Every day thousands of people come to see you. When people see me, they immediately shoo me away. I think you are the happiest bird on the planet. The peacock replied, I always thought that I was the most beautiful and happy bird on the planet. But spousal violence often because of my beauty, I am entrapped in this zoo. I have examined the zoo very carefully, and I have realized that the crow is the then approached the parrot. The parrot spousal only bird not kept in a cage. So for past few days, I have been thinking that if I were a crow, I could happily roam everywhere. That our problem too. We make unnecessary comparison with others and become sad. We don value what God has given us. This all leads to the vicious cycle of unhappiness. Learn to be happy in what you have instead of looking at what you do have. There will always be someone who will have more or less than you have. Person who is satisfied with what he she has, is the happiest person in the world. A doctor entered the hospital in hurry after being called in for an urgent surgery. He answered the call as soon as possible, changed his clothes and went directly to the surgery block. He found the boy father pacing in the hall waiting for the doctor Understanding

CRPF-hcm-Eng-Test-Dated-2026-10-17-Test NO.-28892

Sebi first woman chief, Madhabi Puri Buch, signed out on Friday. Like all records, hers is a mixed bag. On the plus side, she brought stricter norms for stockbrokers, and curbed retail participation in high-risk derivatives. But she could t, or did t, reduce mutual fund expense ratios. Also, the conflict-of-interest charges she faced in the last few months of her three-year term will mar her record. As a lateral hire first private sector executive to helm Sebi she should have cleared the air. Her long silence and reluctance to appear before Parliament public accounts committee now seems like own goals. Sebi is back with a career bureaucrat, Tuhin Kanta Pandey. And after last August retreat on lateral entry, GoI may not have the stomach for pushing more direct appointments. Which is unfortunate because lateral entry has served India well for decades? Amul is among the world strongest food brands now, but who made it a juggernaut? Verghese Kurien, a lateral hire, long before the term was coined. Bimal Jalan, Jagdish Bhagwati, Raghuram Rajan and many others proved the wisdom of the policy. They had already made their mark outside govt, and brought fresh ideas and energy to the system. GoI formally announced its lateral entry scheme in mid-2018, and hired 63 specialists over the next five years. Transparent hiring and background checks to spot conflicts of interest were going to be key to its success. However, it was t the Buch case but politics that stalled lateral entry. It nobody case that career bureaucrats don t make good leaders look at Maruti chairman RC Bhargava. But equally, if private sector experts want to serve govt, doors should t be shut. There will always be cutting-edge areas like AI and clean energy where in-house talent may not suffice. GOI should it be wary of merit-based lateral entry. If every trick in the book is recommended but the most obvious, then it clearly from a govt manual. To get our economy to top speed, we have gone from encouraging vocational training, to handholding MSMEs, to export promotional policies, to the Production Linked Incentive schemes (PLIs), but have missed out on the obvious, namely, Research and Development She looked at me with a suspicious expression. So that you can scratch my back? Romance was the last thing on my mind. I was being annoyed by a blind spot on my back that was irritatingly itchy. And I could not reach it. That was why I called it a blind spot. I have had a back ever since I was born. And one part or the other has been getting itchy over the years. Earlier the back was small, and I was flexible. I could reach every area with one hand or the other. Now on the wrong side of 50s, flexibility has taken a hit. There is a small area of the back which I can reach without dislocating my shoulders or breaking the bones of the arms. Come to think of it, maybe I am unable to scrub the area in shower and it shows its resentment by going itchy. Now, if I can reach it with soap, I can reach it without soap also simple logic. I had been observing the animals with same problem. But many of them have long necks or very agile limbs and they can scratch any part of their body. It is only the bigger

May be yoga does not include a specific Asna for the problem. I remember my mother using a long pencil with a small hand like structure at one end, to reach the blind spot of the back. Now I realise the utility and importance of the simple invention. The genius of the inventor is lost to the world, it is not mentioned anywhere. Edison might have invented the bulb, but he must have struggled to reach his blind spot. I talked to a doctor friend, and he handed over a tube of ointment to me out of his drawer. I was happy with the anticipation of relief that I was about to get. I reached home and squeezed the tube over my finger. And then I realised I can reach the spot. I am going out to the stationary shop to get a long pencil with a hand like structure on one end. And a sense of control over their lives. According to the study, 58 percent of the participants reported a substantial shift in personal strength, transcending trauma to achieve a positive self-perception. This transformation has also inspired others and changed the community attitude from stigma to respect and admiration. Mentorship plays a critical role in leadership development. Specialised training for mentors is crucial to effectively supporting survivors. Trauma-informed care, mentorship and coaching skills, self-care strategies, and secondary trauma prevention should be key components of this training. It is also essential for mentors to gain psychological first aid and crisis intervention skills to respond to victims immediate needs. This needs to be facilitated by experienced trainers with expertise in trauma-informed care and mentorship. This approach ensures that mentors are equipped with the tools to provide compassionate, effective support while also safeguarding their own well-being. Mentors can foster post traumatic growth in the following ways. As re-integrators Mentors help survivors reconnect with families, communities, and support networks, providing a foundation for emotional recovery and rebuilding trust. They also serve as a safe space where survivors feel validated. Pie Mondale, a survivor leader, states, the mentoring nonprofit showed me the way forward, talked to my family, and gave me hope. My mentor said, yes, something bad has happened. But I want you to meet some people just talk to them or listen. I felt someone believed in me. That was the first step of my growth, and it helped me build my strength. As I regained my internal resilience, the various training sessions became another phase of my growth, teaching me how to love myself again and strengthening me further. As trainers Mentors equip survivors with essential knowledge and skills in areas such as advocacy, legal rights, public speaking, and leadership. This enables survivors to gain confidence and navigate their environments with a sense of purpose. The training provided by mentors also imparts necessary life skills such as financial literacy, conflict resolution, mental health support, and communication, all of which contribute to the survivors personal growth and the rebuilding of their identities. As facilitators Mentors encourage survivors to embark on self-reflection and personal discovery, g

We tend to be complacent when it comes to as possible, changed his clothes and went directly to the surgery handling financial matters. The lack of "financial literacy and independence" makes it easier for abusers to exert control over their victims. And by the time the victim realizes, they are disabled from accessing funds. In the case of financially independent women, the financial abuse begins with making the victim feel that she does not need to have her own funds and that she will always be taken care of. Once the victim starts believing in the so-called gatekeepers of the family finances, the cycle of catechism and indoctrination begins. Financial abuse is a subtle yet powerful form of abuse and deeply diminishe's the victim confidence in her own self to stay safe after leaving an abusive partner. In most situations, the victims can be found struggling with lack of self-worth. This can be attributed to the fact that economic domestic abuse is a neglected facet of Domestic Violence law. While the law Protection of Women from Domestic Violence Act, 2005 recognizes financial abuse, it is yet to be adapted in the public consciousness. PWDA provides for monetary relief, so white, he thought, and I am so black. This swan must be the happiest bird in the world. He expressed his thoughts compensation and protection orders for aggrieved women in such instances. However, it has remained a toothless law. India Protection of Women from Domestic witnesses decades of lapse between institution of proceedings and serving of sentence, in cases of physical violence despite prescription of timeline specified in the Act. This is especially true where the abuser and his family may hail from so-called posh and educated classes of the society, unfortunately. Therefore, it is futile to anticipate from Domestic condemnation of such obscure forms of abuse in a country like ours where noticeable forms of domestic abuse like physical and sexual violence is glossed over. We as women need to understand and accept that it is vital to be than you have. Person who is satisfied with what he she has, is the happiest person in the world. A doctor entered financially independent. Financial independence denotes that we should be able to handle our finances and decide what to do with it, to feel financially secure and tackle the lingering attempts of economic abuse. Here are two questions those championing caste surveys are asking: How will lower caste vest lower caste fights be resolved? And are so white, he thought, and I am so black. This swan must be the happiest bird in the world. He expressed his thoughts anti-poverty policies the best antidote to historical wrongs? The Bihar caste survey gives us the opportunity to once again clarify what island what is not reservations. In particular, it is necessary to keep apart the concept of reservations from its lookalikes, namely, representations and quotas. They often appear as synonyms, and are even mistaken as triplets, but there is no such connection; they were separated at birth. Reservations of the kind Ambedkar framed were a perfect example of positive discrimination. First, then you have. Person who is satisfied with w

Bilateral meeting between Mode and Putin, if it happens, will be crucial. Still, likely gains from SCOW will be limited on account of China. Mode and Xi have not had a face-to-face meeting since the PAL aggression in eastern Latah in 2020. Also present at the summit is Pakistan new PM Sharif. Given the structural nature of disputes India has with both China and Pakistan, bilateral meetings on summit sidelines are inadequate to make meaningful progress. SCOW is a reminder of the need to be pragmatic in diplomacy as even adversaries cannot decouple economically. For instance, Japan and Australia, members of the Quad, have chosen tighter economic integration with China through the CREEP FAT. Given this backdrop, India pursuit of strategic autonomy and investing in areas where there is an overlap of interests between countries is a wise course in a fluid geopolitical situation. The more groups you are part of, the wider your options. By the time Xi Jinxing was appointed as General Secretary of the Chinese Communist Party (CAP) in 2012, China had already made impressive progress but corruption had also seeped deep inside the political system. Within the party, power was dispersed with no supreme authority at the centre. The ruling class was disconnected from ordinary people. Xi felt that CAP had lost its moral compass due to the weakening of ideology and fragmentation of the party supreme authority. He concluded his paramount challenge was to stem the erosion in order to preserve the party political authority. The induction of the mighty Vikrant was also a testimony of the nation commitment towards Aatmanirbharta. Construction of IAC has indeed been the most prestigious warship-building project in the maritime history of India, thus far. Vikrant is the largest warship to have ever been built in India. It is also the first indigenously designed and built aircraft carrier for the Indian Navy. It is also of great significance, that it was the maiden attempt of Indian Navy in-house Warship Design Bureau (erstwhile Directorate of Naval Design) to embark on this journey, along with Cochin Shipyard Limited, which was also building a warship for the first time shaping up Vikrant. The Vikrant is christened after her illustrious predecessor, India first aircraft carrier, which played a vital role in the 1971 liberation war. It has been reported that PM Mode was the chief guest at the commissioning ceremony on September 02 in Cochin. Vikrant, meaning victorious and gallant, the foundation for prestigious IAC was firmly established in Apr 2005 by ceremonial steel cutting. In order to push the drive to manufacture indigenous products, the warship-grade steel required for construction of IAC was successfully manufactured through Steel Authority of India Limited (SAIL) in collaboration with Defense Research & Development Laboratory (DRILL) and Indian Navy. The hull fabrication progressed thereafter, and the ship keel was laid in Feb 2009. The first phase of ship construction was completed with the successful launch of the ship in Aug 2013, as reported. The 262 m long and.

Wide Vikrant displaces approx 43,000 T when fully loaded with armory and arsenal of warheads, having a maximum designed speed of 28 Knots with endurance of 7500 nautical miles. The ship has around 2,200 compartments, designed for a crew of around 1600 that include specialized cabins to accommodate women officers and sailors. The carrier is designed with a very high degree of automation for machinery operations, ship navigation and survivability. The carrier is equipped with the latest state-of-the-art equipment and systems. (The ship boasts of a fully-fledged state-of-the-art medical complex with latest medical equipment facilities that includes major modular OT, emergency modular OT, physiotherapy clinic, ICU, laboratories, CT scanner, X-Ray machines, dental complex, isolation ward and telemedicine facilities etc.) Being cohesive, silent and with combat readiness, the ship will house its operating air wing consisting of 30 fighter aircraft comprising of MiG-29K fighter jets, Kama-31, MH-60R multi-role helicopters, in addition to indigenously manufactured Advanced Light Helicopters (ALL) and Light Combat Aircraft (LACE) (Navy). Using a novel aircraft-operation mode known as Short Take Off But Arrested Recovery (SOBER), the IAC is equipped with a ski-jump for launching aircraft, and a set of three arrester wires for their recovery onboard. In spite of Coved-related imponderables and restrictions, adversely affecting availability of OEMs & supply chain, readiness of ship propulsion and power-generation equipment/ systems in harbor was tested as part of basin trials in Nov 20. Vikrant has successfully completed multiple phases of sea trials from Aug 21 to till date, where the ship performance, including response of ship hull to various conditions of operations, maneuvering trials, main propulsion, Power Generation and Distribution (PAD), ship navigation and communication systems, endurance testing of propulsion machinery, electrical & electronic suites, deck machinery, life-saving appliances, integrated trials of majority of equipment/ systems and trials of other auxiliary equipment were ascertained and proved to the satisfaction of the Indian Navy trials team and ship crew. In line with the prevailing practices being followed by other advanced countries having experience of building aircraft carrier, the deck integration trials of fixed wing aircraft and exploitation of Aviation Facility Complex will be carried out post commissioning of the ship when the operational command and control of the ship, including flight safety, is with the Navy. Vikrant has a large number of indigenous equipment and machinery, involving major industrial houses in the country like BELL, BELL, GORSE, Kenton, Kirloskar, L&T, Watseka India to name a few, as well as over 100 Memes. The efforts has also led to development of ancillary industries, besides generation of employment opportunities for 2000 CAL personnel and about 13000 employees in ancillary industries, thus bolstering plough-back effect on the nation economy. A major spin off of building an indigenous aircraft carrier is the development and production of indigenous warship-grade steel for the ship through par

Owing to a limited number of grade-A warehouses, retailers in cities such as Bangalore and Hyderabad face subdued transactions. Ecommerce brands own over 80% of the warehouse storage space in India. Most brands resort to buying additional storage space to prepare and stock for an unexpected rise in customer demands. However, customer trends are unpredictable and adding warehouse space is expensive. Luckily there are other, more cost-effective approaches that retailers can explore. With the festive season around the corner, brands need to resort to working smarter, relying on tech-forward solutions to enhance CX, and maximizing their existing infrastructure to retain and attract more customers. Here how. Stores that do it all India, has the highest per capita retail store availability globally, with over 12 million retail outlets. According to a 2022 report, 45% of the Indian customers surveyed browse products online but buy them at a store. It serves for brands to establish physical stores. For instance, Foxy, which launched as an online-only ecommerce platform, following its success, successfully established a physical outlet in Bangalore in 2022. To get the most out of their stores retailers can turn them into mini distribution centers (ship from store). Compared to warehouses, retail stores can prove to be extremely efficient in fulfilling orders, especially within the city, enabling faster deliveries as they are often located closer to the customer. Ship from store can be made easier with a powerful order management system. OMS can unlock the retailers ability to view real-time inventory, while also acting as an in-store tool for the employees. It can assign the fastest and easiest method of fulfilling an order based on location, easing the pressure of handling multiple orders. What more is that retailers can also enable click and collect, driving footfall to their stores. If customers get additional discounts or offers by visiting the store in person to collect their orders, it could enhance their overall experience with the brand. Visiting physical stores could also motivate customers to browse and purchase additional items. An order management system can update the online store and the offline inventory based on reserved click and collect items. Save the day with a virtual inventory Brands with multiple stores and warehouses across cities need to have control over their overall inventory to support sales. It serves to have a virtual inventory pool that can be segmented by channel, market, region or product to understand how to best fulfill each order. For instance, say a customer in Chennai wants to buy a product but the stores and warehouses in the city are out of stock. This does mean that the brand selling the product needs to stockpile or buy more warehouse space in Chennai. Instead, they can view their virtual inventory and rely on their integrated OMS to reroute the order to another location. OMS keeps track of the product and buffer stock availability and updates the online store based on delivery estimates. A virtual inventory can also enable brands to isolate a.

CRPF-hcm-Eng-Test-Dated-2026-10-17-Test NO.-28898

Ascertained, with the commissioning of Vikrant on 2 September, 2022, India joined the select group of nations having the niche capability to indigenously design and build an aircraft carrier, which will be a real testimony to the Make in India thrust by the Government of India. Expressing his sense of gratitude, VANS, Indian Navy Vice Admiral Salish N Ghormade said, I would like to acknowledge the contribution of crew of ex-Vikrant, the illustrious predecessor which had played a monumental role during the 1971 war to liberate Bangladesh. Commissioning of Vikrant was a proud and landmark moment showcasing the country zeal and fervor in pursuing capability build up towards enhanced maritime security in the Indian Ocean Region. The induction and reincarnation of Vikrant is thus not only another step towards strengthening our defense preparedness but also our humble tribute to the sacrifices made by our freedom fighters for the independence of the nation and our brave soldiers during the 1971 war. Shane Varna. The MEME sector, better known as the engine of growth has been contributing immensely to the economic progress of the country. Providing employment opportunities to over 100 million people, many Intec startups have also pulled up their sleeves to push MEME empowerment using AI technology. Numerous instances reflect the emergence of newer fetch companies in offering optimized financial products and services to Memes in an economically viable manner. The Indian MEME sector, known as the backbone of the country carries a substantial weight of India economy, contributing to 29% of the country total GDP. It plays an essential role in eradicating unemployment in a way that provides many job opportunities across the country. However, the onset of the pandemic brought unforeseen economic disruptions that affected the financial inclusion of the MEME sector. At these tough times, fetch became a catalyst to scale Memes by providing tailored and innovative solutions at lower costs, bringing about a revolution in its ecosystem. Bringing efficiency in accounting and transactional records Accounting is an essential yet daunting and expensive task. Even a neighborhood shopkeeper, whether it is a Karana store or a local pharmacy, hires an accountant or finds it hard to manage their financial records all alone. However, the integration of AI has evolved the tasks of preparing and analyzing financial records through digitized methods that can boost their income. AI is one of the best technological innovations by fetch companies that helps Memes expand beyond their core competencies and double their financial efficiency. The accounting tasks that once took hours and days to complete, can now be accomplished in just a few clicks with improved accuracy. Keeping info about filing tax returns Keeping track of your taxes is another tedious task that may culminate in severe repercussions if neglected. Any taxation or accounting issue can drain the business in a fraction of second. With the use of AI in accounting, Memes can elevate the game of tax forecasting and identify cases that indicate potential fraud. To help Memes overcome such problems.

This year's Nobel Prize in Economics has been awarded for work that is particularly crucial in the current global context. Implications from the work also have lessons for Indian policymakers, some of which have already been learnt, while others remain a work in progress. The crux of the research done by the laureates Robert E. Hall and Michael Woodford is in quantifying the future-looking aspect of the consumption and pricing decisions made by households and companies, respectively. Bringing empirical backing and rigor to this aspect, as the laureates have done, has helped policymakers identify economically distressed segments of the population, implement more effective policies during supply shocks, and communicate their policies better. Mr. Hall's research in particular has helped governments identify the exact proportion of consuming households that are living hand-to-mouth. This is vital for countries like India. At present, India provides free food to over 81 core people, based on estimates that are between 13 to 15 years old. Using data as Mr. Hall's research allows identifying those who truly need help will streamline the government's subsidy expenditure at a time when fiscal room is tight. The Supreme Court's decision to uphold a Madras High Court verdict scrapping a Tamil Nadu government order allowing individuals from backward classes and denitrified communities to Usually, ECI conducted SSR every year to allow citizens turning 18 and opportunity to enter the rolls. In the past two decades, SSR was held 19 times. Yet, it was not conducted over the last two years as ECI shifted its attention to the controversial special intensive revision (SIR) where every entry on the electoral roll had to be verified and backed by documentary evidence. This departure was not only unexplained just as ECI had not given any concrete reason why it revived SIR for the first time since 2002-03 but it also denied young people a chance to enter the rolls. This was particularly egregious given that Gen Z is set to form the largest voting cohort The Election Commission of India's (ECI) decision to conduct a special summary revision (SSR) of electoral rolls in 17 states and Union Territories and implement a slew of changes to the procedure fulfill long-pending demands and are welcome. But it is difficult to ignore the fact that the announcements came only after sustained street protests that have roiled the national capital and reached the Supreme Court. Of India's population (about a fourth) by 2029. ECI's belated realisation here is a relief but its earlier reticence remains to be explained. Claim reservation after converting to Islam might have limited immediate effect but it lays down crucial guardrails that will shape the contentious intersection of caste, faith and affirmative action. Making a clear distinction between the Hindu social order and the non-Hindu social order, the Court underscored three key aspects. Earlier this week, the government told the Karnataka High Court that the Income Tax (I-T) Act cannot be used to legitimize same-sex couples by granting them spousal status to avail of tax exemption. It also made its stand clear that same-sex

sum of money received from a relative can be excluded from the scope of income from other sources; and, in a very specific list of who constitutes a relative, spouse is included. In other words, the number of relatives who can avail such exemption is narrowly specified. A first cousin, for instance, cannot. But a grandparent or child, lineal ascendant or descendant can. The five states that have flagged the issue Tamil Nadu, Karnataka, Maharashtra, Madhya First, while the top court has previously adjudicated on Scheduled Caste Christian conversions, this is a rare verdict connecting conversions and other backward classes to a far larger chunk of both the reservation pie and the Indian population. Earlier this year, the top court held that conversion to Christianity and other religions results in the loss of SC status. The Constitution (Scheduled Castes) Order, 1950 and its 1956 amendment which explicitly restrict SC status to Hindus, Sikhs and Buddhists provide a degree of clarity to the SC debate. For OBC communities, absence of such order makes their status more fluid. Pradesh and Tripura only the first two are Opposition-ruled. The order was passed while hearing petitions challenging the government's decision to restrict movement within and into the city to halt the October 10 protests demanding the resignation of Chief Election Commissioner Gyanesh Kumar. Observations were also exchanged that protests in and around Jantar Mantar were a source of inconvenience for ordinary commuters. It is possible to argue that protesters cause traffic congestion and inconvenience. But those arguments are valid only as much as similar arguments that are usually raised against democracy itself. There is a reactionary view that democracy delays decision-making, elections disrupt development and economic activity, and that there should therefore be fewer elections and less politics. The BJP's push for simultaneous elections to Parliament and State Assemblies once every five years is based on the same logic, that at its heart questions the legitimacy of democracy itself. The argument against protests at Jantar Mantar does not hold water. It is antithetical to the concept of public deliberation and protest, which are central to democracy. Markets that the fiscal situation needs to be brought under control. Pakistan is no stranger to political crises, but the suspension of the elected government in Khyber Pakhtunkhwa (KP) assumes particular significance because it effectively strips the Pakistan Tehreek-e-Insaf (PTI) of its last remaining provincial stronghold. The declaration of a state of emergency, ostensibly prompted by a surge in terror attacks across KP, came as the PTI was preparing for a long march to Islamabad to demand the release of its incarcerated leader, Imran Khan. The former prime minister and 1992 Cricket World Cup-winning captain has been in jail for over three years, facing more than 100 legal cases and multiple convictions in what his supporters and even some critics have described as a politically motivated witch-hunt. Governor's Rule marks a further escalation in the long-running confrontation between the military-backed federal coalition,

Financial inclusion has the power to create stronger economies, improve financial health, and spur job creation. With access to financial services, individuals can feel empowered to make decisions that will improve their quality of life. But still, financial education remains a challenge around the world. According to the S&P Global Financial Literacy Survey, 77 of the global adult population, roughly 3.5 billion people, lack an understanding of basic financial concepts. And for those in developing countries, the problem is far greater. Narrowing in on India, it is estimated that over 190 million people are unbanked. In the first-ever Financial Inclusion Index published in 2021, RBI looked at access, usage, and quality of financial services across the country using a scale of 0-100. From March 2017 through March 2021, financial inclusion in India only grew by just over 10 points. While several initiatives have been launched to improve financial inclusion across the region, these numbers show that there is still a long way to go. With Bit coin, India can unlock opportunities and drive growth in the economy, ultimately having a real impact on financial inclusion. While many might question its power, we believe that Bit coin is the tool that can not only influence social change, but serve those left out of the traditional banking system. The internet and smartphone penetration numbers show a great shift towards interest in technological solutions. From just 4 in 2007, the internet penetration numbers today stand at 45. Smartphones are also seeing a similar rise with an estimated penetration of 60 in 2021 and projected to reach 96 by 2040. This growing trend of technology can help create jobs, scale businesses, and grow the overall economy. With this existing infrastructure in place, the people of India are primed to make a move towards digital currencies like Bit coin. Hosting meet-ups and events on the ground shows a significant interest in Bit coin across the country. Just last year, $240m was traded across the platform in India, making it our fourth largest country based on trade volume. But despite these numbers, we still have to educate to increase the financial inclusion and mass adoption by building a financial system that serves the 100, not just the 1 one Bit coin at a time. With extreme weather events, like heat waves, cyclones, floods and so on, happening with great frequency of late, a fundamental transformation of all key sectors is needed. The World Meteorological Organisation WMO State Of Global Climate Report 2021 states that four climate crisis indicators broke records in 2021 these are greenhouse gas concentrations, sea-level rise, ocean heat and ocean acidification. Another WMO report points out that India suffered an average annual loss of around $87 billion in 2020 due to climate events. Needless to say, these indicators and events impact tourism too. With the number of travellers increasing, there is greater pressure on the environment, more facilities like power, water and goods are needed, and there is also more wastage created such.

Portion of their inventory for online orders only and reserve the rest for in-store traffic. Turn cancelled orders into can-sell orders With competition ramping up in the retail sector, brands need to be careful about overselling and underselling as it can turn customers away. After all, nobody likes to be met with an out of stock notification or worse placing an order only for it to be cancelled later. In both cases, stocking up or buying more storage space is not the best solution if the items are indeed available in another location/store. But several brands lack this visibility and hence, lose out on potential sales. Having a distributed order management system linked to the online store, warehouses and offline stores, is a simple and effective remedy to this challenge. It can show what in stock, what is being processed or ready for pickup or shipment. OMS can also assign buffers for popular items, preventing overstocking. Less stock, more space to grow According to IBEF, India retail market is expected to reach USD 400 billion in consumption by 2025. Evolving consumer preferences is cited as one of the key drivers behind the country organized retail market boom. While the time is ripe for retailers to thrive, there is a lot that they need to consider before spending their revenue on storage space that they may not necessarily require. Future-proofing to match changing customer trends is crucial for brands but stocking up and expanding storage infrastructure is not ideal. It is important for businesses to think long term what happens if the demand slows down? Brands need to pour their efforts into strengthening their core channels while shaping and building new ones. Order management systems can help integrate the capabilities required to sustain these shifts. And if there one thing that retailers can bank on is that tech-enabled solutions are here to stay. Peer-to-peer lending or PAP lending is a monetary arrangement between two parties sans the involvement of financial institutions like banks. The borrowers who are seeking unsecured personal or business loans, and the investors who want to earn higher returns on the money they lend. PAP platforms enable a transaction where both sides benefit from the setup while the company acts as an intermediary or a risk litigator in these digital and paperless transactions. Peer-to-peer lending began as an alternative to traditional financing options. However, with the deployment of advanced technologies and systems, PAP platforms are more than that today. They are revolutionizing the financing space with quick loan disbursals along with emerging as an alternative asset class with impressive returns. Rapid digitalization has paved the way for the scope of growth of the market. These platforms enable small and medium-sized enterprises (Sees) to grow by providing them with financing alternatives with minimal fees and convenient repayment options. The pandemic has further popularized the platforms because of their ability to disburse loans completely digitally, without the need for any physical visits, which is tough to attain with the traditional.

As food, furniture, equipment, appliances, and so on. All this goes against conservation. Moreover, volatility of climate events discourage tourism. So the Hospitality and Tourism industry also need to work towards creating positive impact. Like with all other industries, sustainability is an effort towards self-preservation, and not an altruistic move, as clean air, floods, cyclones, economic losses involve us all. Covid-19 has brought focus on the fissures and failings in the way we live, and the carbon footprint of the choices we make. Travellers and hotels both have become aware of the fact that our activities have an impact on the environment. The UN apex climate science body, the Intergovernmental Panel on Climate Change, in its latest report has warned of the consequences of inaction. As per the report, in order to keep global heating to below 1.5 above the baseline levels of 1850, fresh global emissions have to start declining by 2025, nearly halved in 2030 and get close to zero by 2050. All human effort needs energy. If the energy we use generates Carbon gases, it harms the environment. As per the Energy Information Administration, there will be nearly 50 increase in global energy use by 2050. Thus, we need to drive huge leaps in our sustainability plans ahead, for the good of people, planet, and profits. The sustainability challenge in hospitality is three-fold. First, we need reliable and green sources of energy; second, followed by the need to reduce waste and shun plastics; third, our growth must embrace local communities where we are located so as to move ahead in a sustainable way. India has pledged that by 2030, 50 of the energy required will be generated from non-fossil sources. According to reports, tourism contributes around 5 of global greenhouse gas emissions a figure which is expected to grow by 130 by 2035. Various ratings like the Energy Star Portfolio Manager and ARC measure the performance of hotels in comparison to other hotels. Energy scores have maximum points in green rating tools. Apart from solar tops for energy use and encouraging waste-to-energy projects, Hotels can be designed keeping eco-friendly principles in mind to reduce the energy required. Energy savings can be applied in hotels as the occupancy varies and there is scope for adjustments using controls. Hotels that make green choices will also provide appropriate amounts of fresh air for the benefit of all. But the key to energy saving is in Operations. Operating the hotel and systems efficiently is a daily task, as energy use and limiting waste generation needs to be assessed daily. Since over 80 Hotels today are MSEs, they have a huge opportunity to build in energy efficiency. Comprising the largest and fastest growing section of the hotel industry, these small hotels need better technical expertise and financial support in order to build, design, operate, and upgrade their systems and processes. Construction of new buildings and architecture needs to be planned with nature and not in isolation. India has banned single-use plastic items.

Which have low utility and high littering potential, all across the country from July 1, 2022. Hotels will need to abide with the new law on plastics. Lastly, taking care of local communities where Hotels are located, and involving them with arts and crafts, empowering them with skilling activities and offering employment opportunities ensures sustainable practices. For many rural communities, tourism is their lifeline, and hotel activities can involve visitors having a close interaction with the local cultures, promoting sustainable tourism alongside. While in the past, people have planned a trip through website searches, review sites and comparison of rates, now people are getting more environmentally conscious, and they will be looking at greener approaches to tourism. Travel is increasingly becoming niche, curated, and minimally damaging to the environment. Hospitality will do well to take heed to this trend. As the pandemic waves subside, India Etch startup scenario begins to unravel itself. With schools and colleges opening up, the demands for online tuition dwindle vastly and affect the revenue of these companies significantly in the past few months. These companies are the worst-hit among all startups as funding dries up because of the recession, among other reasons, forcing them to lay off employees. According to a survey, Indian startups have already laid off nearly 10,000 employees this year about one-third of those from the Etch industry. The pandemic helped Etch startups in India grow extraordinarily over the past two years making India the Etch hub of the world as education went online. Indian Etch startups were able to raise $4.7 billion in 2021, up from $2.2 billion in 2020, making Etch the third-most funded start-up category, after e-commerce at $10.7 billion and Fitch at $8 billion. India education market is expected to grow immensely and there is a vast opportunity with India huge school-going population of over 250 million. What needs consideration is that the Etch system offers more advantages than the conventional learning system. So, a time has arrived when we should decide what the education sector should look like in future. For a long time, teachers, parents and students have been complaining about the uniform teaching model followed by traditional schools. Exploring New Teaching Options Etch firms are exploring new methods to stay afloat and some are even adopting the hybrid model to scale up their offline presence because the market is big and growing. Currently, there are about 4,500 Etch startups in India assisting more than 300 million school-going students. Of these, about 40 million are pursuing higher studies because their education got by the pandemic. Detach offers customized classes and access to content at a pace that students are comfortable with. Students receive personalized suggestions based on their performance and learning patterns. Students who excel will not have to stay at a lower level of the class, while those needing extra support and a slower pace will get attention accordingly. Detach provides access to tailored or modified education to students get quality education who were not.

CRPF-hcm-Eng-Test-Dated-2026-10-18-Test NO.-28908

Brahmn is existence, consciousness, and bliss. We cannot perceive Brahmn as an object because it is the ultimate subject, the essence of all experience. Whatever we see, feel, or touch is experienced by Brahmn. There are objects, and Brahmn is the subject; therefore, the subject cannot be the object. Vedanta describes Brahmn as vastuparicched sunyam, deshaparicched sunyam, and kalaparicched sunyam. Vastuparicched refers to the limitation of matter. For instance, a pen is just a pen, not a duster, blackboard, or microphone. Brahmn, however, is unlimited; everything is Brahmn. Therefore, Brahmn is vastuparicched sunyam. Deshaparicched refers to spatial limitation. If i am in a room, i cannot be anywhere else in the universe at the same time. This is my spatial limitation. However, Brahmn is omnipresent, existing everywhere. So, Brahmn is deshaparicched sunyam. Kalaparicched refers to temporal limitation. I was born in a particular year, and before that, i did not exist. I will die, and my existence will cease. This is my temporal limitation. However, Brahmn exists beyond time; it was, is, and will be forever. Brahmn is kalaparicched sunyam. Now, the question arises: Where is Brahmn? Vedanta boldly declares that Brahmn is none other than you. You are that Brahmn. This realisation creates confusion, as we identify ourselves with our bodies and minds. All suffering stems from this ignorance. You are suffering because you think of yourself as limited by your body and mind. Therefore, you must embark on a journey from ignorance to knowledge. This journey is not through space but through the realms of understanding. You must transcend your ignorance. Vedanta invokes the prayer Asato ma satgamaya tamaso ma jyotirgamaya mrityor ma amritamgamya. This means: Lead us from the unreal to the real, from darkness to light, and mortality to immortality. Everything we perceive is impermanent. Lead us to Brahmn, which is permanent and all-pervading. Lead us to the light that dispels our inner darkness, ignorance. And finally, lead us to immortality, for we are eternal and ever existing. The beauty of Vedanta lies in its declaration that you don need to acquire anything because you are already that Brahmn. You need to realise it. Vedanta asserts that you are ever existing, ever-pure, knowledge itself, and ever-free. The Mahavakya from the Chandogya Upanishad states: Tat tvam as That thou art; it means Brahmn and you are the same. Rise above your limitations body, mind, intellect, memory, and ego for they are not your true existence. After transcending these limitations, you will realise that you are that existence, consciousness, and bliss. Vedanta declares that only Brahmn is true, and the world is false. But what is meant by false? Everything we perceive around us appears for a time, and eventually, will be destroyed. This impermanence is why it considered false. The existence of the universe is borrowed, not inherent. Consider a pot of water placed on fire. As the water boils, the potatoes in it become hot. However, this heat is not an intrinsic property of potatoes; it borrowed from the boiling water. Similarly, heat is borrowed from fire, but the fire heat i

CRPF-hcm-Eng-Test-Dated-2026-10-18-Test NO.-28911

The NTK leader now spews venom on the father of the self-respect movement in Tamil Nadu. In a desperate bid to build a narrative of Tamil nationalism as an antithesis to Dravidianism, Seaman has surprised himself with his devotion for Velupillai Prabhakaran on one side and Lord Murugan on the other. Some of his party functionaries believe Seaman is tilting towards the right, but nobody contests that he is the most irascible politician in the state. Would you tell me, please, which way I ought to go from here? That depends a good deal on where you want to get to Alice had the Cheshire cat to answer the question. With no such help, actor Vijay, founder of TVK which turned one on Sunday, should be asking himself that. Having declared DMK as his rival number one, and Seaman having closed his doors to the latest political migrant from tinsel town, Vijay looks askance at AIADMK. Aligning with EPS means a definite numerical advantage in the election, but how would he explain his volte face after promising to be he alternative ? And, if fighting corruption is his avowed goal, how would he campaign for tainted former ministers in the EPS camp? More importantly, would he cede the chief ministerial candidate post to EPS? As the cat told Alice, if you don know where you are going, any road can take you there What I truly cherish about teaching is that each day feels fresh and dynamic. Every day, I am both a teacher and a learner, discovering new insights while letting go of outdated ones. It a continuous cycle of growth, where I explore new concepts, engage with fresh ideas, and refine my understanding. The opportunity to read, reflect, and evolve daily keeps the profession exciting and fulfilling, making every moment in the classroom a chance to learn and inspire. Just the other day, I dove into Francis Bacon essay Of Studies for the first time because I had to teach it to my first-year students. As I unravelled its wisdom, my students sat there, wide-eyed and utterly clueless, as if deciphering an ancient scroll. I could almost hear their silent plea: Ma am, can we Google this instead? But there I was, passionately preaching the virtues of studying to an audience still figuring out why they even need to! As Bacon extolled the virtue of learning, I was especially fascinated by the short and crisp aphorisms he proclaimed, one after another. Sample this- tudies serve for delight, for ornament, and for ability and Crafty men condemn studies, simple men admire them, and wise men use them. However, the one that touched me especially was- ome books are to be tasted, others to be swallowed, and some to be chewed and digested. He emphasizes that reading should be approached with discernment, as not all books hold equal value. Some offer only fragments of useful knowledge, while others provide a broader understanding but do not require meticulous attention. However, truly profound books demand a reader full engagement, requiring careful analysis and reflection. Bacon classification highlights the importance of distinguishing between superficial reading and deep intellectual inquiry. He suggests that just as different foods nourish the body in varying ways, diffe

Well tuned with the fixed timetables of the old schooling system. An industry report says the success rate of Etch companies helping students prepare for competitive exams was much better than in the conventional classroom formats. For Etch institutes, the success rate was about 7, while, for the traditional formats, it was below. Bridging the skill-gap Additionally, Etch companies with a focus on employment are trying to bridge the skill gaps. They are trying to provide employers with top talent by supplementing college education and making candidates more employable with placement assistance. India Etch industry has the capacity to bridge the education quality gap between the rich and the poor, offering children from all backgrounds more equitable chances of success. Growing globally today, learners from across the world are enrolling with Indian Etch firms not only because they are affordable, but also for their world-class content. Many of these Indian companies are slowly expanding their global presence by teaming up with international universities or acquiring foreign firms. These businesses are planning to venture out because they believe they offer quality services and international contracts are giving them wider visibility and capital in markets as in the US. Surviving the storm Basically, Detach startups were enjoying a honeymoon phase for the past couple of years. Now, companies that can generate enough cash with good business models will survive online, offline or hybrid. So, top Etch companies with funding will stay in business. A few among these had already made the right moves by anticipating future conditions. As in any other sector in a stiff competitive environment, success belongs to those who can innovate on the go. The government is also supporting the Detach companies and offering them a bigger role in education and skill development through regulations, such as the National Education Policy. This can be the pivot for Detaches to become true world players and take their position as leaders of the online learning market, internationally. The world population is expected to hit 10 billion by mid-century and 15 billion by the end of this century. 60 of the oil produced is consumed for transportation, while vehicular emissions stand 4th among the largest polluters, motorization rate number of cars per 1000 people is expected to grow multifold, thus there is an imminent need to control both the use of oil and CO2 concentrations. Could we believe the first electric vehicle to be commercialized was in 1884, more than a century and three decades ago? Between 1900 1920 in the USA, electric vehicles were in mainstream mobility. After that, electric vehicles took a standstill with the resurgence of IC engines and mass production, electric vehicles remained off-guard till the 1970s. There was a short-lived revival between 1975 to 1998, and the resurgence took in 2007. Since the resurgence, hybrid and fully electric vehicle development have rapidly progressed; however, not until 2010 that an automobile could have a full range of operation in complete electric mode with less than 3kms range since.

Spl-CRPF-hcm-Eng-Test-Dated-2026-10-18-Test NO.-28913

On a recent bangle ceremony's of my cousin, I came across a huge contradiction. I was involved in a chit chat with my cousins who are accomplished You Tubers with millions of followers. As I was appreciating them for their high profile success, one of them reciprocated the gesture and in turn labelled me as an "English language" expert. Though I smiled and thanked them for their gracious gesture, in my heart of hearts, I was well aware of my limitations. I knew that someone who does not have firm grasp of basic rules of English, be it prepositions, be it adjectives or finest parameters of grammar has no right to be affixed by this tag. It is in fact cousins who are accomplished You Tubers with millions of followers. As I was appreciating them for their high profile success, one quite contradictory to what I appear to the world and what I actually am. To delve a bit "deeper in this contradiction" let me take you back to flashback mode. Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey locates mates and offspring avoid predators guide their navigation and locate habitat as well as to listen and communicate with each other. Oceans are full of sound. Waves, earthquakes and icebergs all contribute to the underwater soundscape. But so do human activities and this can be a problem for marine life as it can seriously affect their physiology behavior, reproduction and even survival. Being able to produce and detect sound in an environment where light penetrates only a few hundred meters is crucial for animals to communicate, feed, avoid predators and navigate vast underwater habitats. Large whales generate low frequency mates and offspring avoid predators guide their navigation and locate habitat as well as to listen and communicate communication calls that can travel thousands of kilometers. While the snapping shrimp, native to the western Atlantic, can produce a loud snapping sound capable of that though I could not dance a choreographed number to perfection but I could make my words dance in reasonably choreographed chronology. But why am I doing all this? Is there a larger purpose to become stunning and killing its prey. The noise generated by humans changes the natural acoustic environment of our gunshot at a range of one meter. Sound travels further and four times faster in water than in air at a speed oceans and our capacity to produce it is increasing. Noise is often the unintentional by product of transport infrastructure development and industry. Yet noise can also be produced deliberately. Many navies use sonar system to detect ships and submarines while geologists survey the seabed for oil and gas using seismic airbus. The noise produced by an air gun can exceed 200 decibels louder than a gunshot at bone structure made me look stiff and funny whenever I attempted to dance. Once during such performance a range of one meter. Sound travels further and four times faster in water than in air at a speed of almost 1

Spl-CRPF-hcm-Eng-Test-Dated-2026-10-18-Test NO.-28914

On university stage during my five year stint in chemistry department. But when I tried to attempt finest dance's steps, I realized in due course of time that my heavy bone structure made me look stiff and funny whenever I attempted to dance. Once during such performance, I failed miserably. In the middle of this dance fiasco, I came across a very interesting article in a "leading daily with delightful" play of words. Immediately something struck within me and I questioned myself if I could not attempt dance choreography how about giving word choreography a chance. If dance choreography was design of moment's and patterns to create sequences where body moves in unison with that design to create perfect dance moves in sync with music, then word choreography too was a design of words, phrases and ideas which work in perfect rhythm to create an exclusive expression. From thereon started my torrid love affair with play of words. I shifted my focus from dance choreography to word choreography. Reading and Re-reading made me aware that it how the words transcends on the page that matters. There are only 26 alphabets in English and yet the combinations and the permutations are limitless when seized, nurtured, arranged and rearranged until the sentence turns symphonic. I tried to compensates my limited knowledge of grammar and other language parameters with reading the same text not once but many times. I was never interested to finish a book in short duration as it gave me more satisfaction in reading limited content thereby assimilating the structure, rhythm and formation of sentences of the text in front of me. It was just like cooking a dish without knowledge of ingredients but arriving at the right ingredients through hit and trial by savoring that dish again and again. Today, when I look back in gratitude and see my words dance through my poems and pieces, my soul rejoices and dances in that attitude. I feel immensely pleased that though I could not dance a choreographed number to perfection but I could make my words dance in reasonably choreographed chronology. But why am I doing all this? Is there a larger purpose to become a high profile author? Am I chasing that elusive something? Do I want to be called a language expert? Well certainly none of them. I have come to realize during my last eleven year stint of word choreography that your written content may or may not change the world around you, but every piece that you write changes something within you. It is just like sculpting a rigid stone where you are that rigid stone as well as the sculptor. The sculptor never knows after which strike the stone will chip off, but it surely will. Writing made me my own sculptor and with each expression I realized that it is the best direction to move as a sudden hit may lead to a sudden evolution and that evolution if it ever happens is nothing short of a self-revolution. On university stage during my five year stint in chemistry department. But when I tried to attempt finest dance steps, I realized in due course of time that my heavy bone structure made me look stiff and funny whenever I attempted to dance. Once during such performance, I failed mise

CRPF-hcm-Eng-Test-Dated-2026-10-19-Test NO.-28915

India has been a genera's neighbour in recent years, giving Maldives vessels, aircraft and a coastal radar system to help in maritime surveillance. It is also helping to conduct a hydrographic survey of the Maldives archipelago, where there is drastic need for new charts. India also helps build defence infrastructure around the country including a new harbor and dockyard for the Coast Guard. But India assistance is not widely appreciated. Much of this stems from a lack of understanding among the general public of what India is actually doing and why. The "former Maldives government" and Delhi were often reluctant to discuss India role. This was a mistake, and India must now be on the front foot to properly explain the benefits of its regional assistance to sometimes skeptical local populations. Once upon a time, a daughter complained to her father that her life was miserable and that she did know how she was going to where there is drastic need for new charts. India also helps build defence infrastructure around the country including a new harbor and dockyard for the Coast Guard. But India assistance is making it. She was tired of fighting and struggling all the time. It seemed just as one problem was solved, another one soon followed. Her father, a chef, took her to the kitchen. He filled three pots with water and placed each on a high fire. Once the three pots began to boil, he placed potatoes in one pot, eggs in the second pot and ground coffee beans in the third pot. He then let them sit and boil, without saying a word to his daughter. The daughter moaned and impatiently waited, wondering what he was doing. After twenty minutes he turned off the burners. He took the potatoes out of the pot and placed them in a bowl. He pulled the eggs out and placed them in a bowl. He then ladled the coffee out and placed it in a cup. Turning to her, he asked. Daughter, what do you see Why are there TV cameras showing midnight helicopter rescues? Or Indian supplied patrol boats intercepting illegal fishers? Or Indians helping to map unchartered and dangerous waters? Transparency may not come easy to bureaucrat decision makers, but it is the best way to dispel unfounded suspicions. India Indo Pacific partners can also do a lot more to help. Countries like Australia and Japan can provide assistance without invoking the suspicions and sensitivities that India often faces in this region. Greater engagement by India partners would help to reduce perceptions of Indian dominance in security assistance. It is in India interests to encourage its Indo Pacific partners to play a much greater role in the islands. A frail old man went to live with his son, daughter in law, and four year old grandson. The old man hands trembled, his eyesight was blurred, and his step faltered. The family ate together at the table. But the elderly grandfather shaky hands and failing sight made eating difficult. Peas rolled off his spoon onto the floor. When he grasped the glass, milk spilled on the table cloth. The son and daughter in law became irritated with the mess. We must do something about father, said the son. I vet had enough of bureaucrat decision makers, but it is the best wa

Wooden bow, When the family glanced in Grandfather's Direction, sometimes he had a tear in his eye as he sat alone. Still, the only words the couple had for him were sharp admonitions when he dropped a fork or spilled food. The four year old watched it all in silence. One evening before supper, the father noticed his son playing with wood scraps on the floor. He asked the child sweetly, What are you making? Just as sweetly, the boy responded, Oh, I am making a little bowl for you and Mama to eat your food in when I grow up. The four year old smiled and went back to work. The words so struck the parents so that they were speechless. Then tears started to stream down their cheeks. Though no word was spoken, both knew what must be done. That evening the husband took Grandfather Hand and gently led him back to the family table. For the remainder of his day, he ate every meal with the family. And for some reason, neither husband nor wife seemed to care any longer when a fork was dropped, milk spilled, or the tablecloth soiled. Moral: You reap what you sow. Regardless of your relationship with your parents, you all miss them when they are gone from your life. Always Respect, Care for and Love them. The new Maldives president was elected with a mandate to make the security relationship with India more on Maldives terms. India needs to find ways to make it easy for the new administration to continue working with India in the interests of Maldives and the region. The Maldives election result can be just wished away or blamed on Chinese information operations. It reflects concerns whether justified or not among a significant portion of the local population. It should act as a wakeup call for how India works with regional partners. Brewster is an expert on strategy and security in the Indian Ocean region and South Asia? Potatoes, eggs and coffee, she hastily replied. Look closer, he said, and touch the potatoes. She did and noted that they were soft. He then asked her to take an egg and break it. After pulling off the shell, she observed the hard-boiled egg. Finally, he asked her to sip the coffee. Its rich aroma brought a smile to her face. Father, what does this mean? she asked. He then explained that the potatoes, the eggs and coffee beans had each faced the same adversity the boiling water. However, each one reacted differently. The potato went in strong, hard and unrelenting, but in boiling water, it became soft and weak. The egg was fragile, with the thin outer shell protecting its liquid interior until it was put in the boiling water. Then the inside of the egg became hard. However, the ground coffee beans were unique. After they were exposed to the boiling water, they changed the water and created something new. Which one are you? He asked his daughter. When adversity knocks on your door, how do you respond? Indeed, there are many good news stories that Delhi has left untold. In Australia, the Royal Flying Doctor Service, which provides medevac services to remote outback communities, are national heroes, thanks to a long running TV series. India could do a lot more in showcasing what they do to the Maldives public. Wooden bow, When the family gl

CRPF-hcm-Eng-Test-Dated-2026-10-19-Test NO.-28919

Are you in a sexless, loveless or intimacy deficient relationship? It not uncommon to be in one, especially if you vet been together for a long passage of time, have conflict and disharmony in the relationship, or simply have grown apart. A lot of people co-exist in a marriage for the sake of being married and not wanting to exit the cocoon of being in one. It very normal to walk out of dead or bad marriages, but there are many who choose to stay for various reasons that serve them. It could be financial stability, fear of the unknown, stigma and taboos surrounding divorce, not wanting to be the one who broke the family, or simply because they fear for the emotional repercussions and financial future of their kids. For those who crave emotional intimacy, romance and sex it incredibly difficult to live a life without it. They carry the sadness of it as a daily weight and it affects multiple areas of their lives in obvious and insidious ways. It always a mega toss up as to whether to stay in a loveless togetherness and compromise on your emotional and physical needs or to be selfish and move on. I use the word selfish because that the tag people get slapped with if they consider their own needs important. I think of it as self-love, self-respect and self-worth to cater to my needs. Sex is a desire, but it also a need. To want it, ask for it or to talk about the lack of it should be considered abnormal or blasphemous. A truly respectful relationship is one where you can express yourself without fear of backlash or hostility. It okay if your partner feels defensive about their role in your plight, it for you to make them comfortable about the situation in your conversation. Remember, communication and confrontation are two different things. The idea is conflict, it resolution. Ways must be examined to bring elements back that are necessary and crucial to a healthy togetherness. Perhaps to start with simple acts of affection, like good morning and good night kisses, random moments of cuddles go plunk beside them and cuddle them and looking into personal hygiene and looking good. Hold hands while walking, look into each other eyes while conversing, and plan things out of the ordinary to do together to infuse new energy into your personal dynamics. The first step is to make the decision to better the relationship, and there no reason your partner would say no to giving things a good try, unless they don value the relationship anymore. Relationships are the most beautiful dimensions of our human experience and it so sad to be a victim of them, rather than be empowered by them. Take the first step! You did it when you first met, so take another step today, towards a brand new version of your partner and yourself. Happily ever after is a fairy tale. It a choice. Ask questions. Like.

For example, why did the colleague get replaced, what were the high points, low points, positives and negatives about him her. Speak from a position of having a right to know rather than a victim mentality and don take anyone bad attitude meekly. Research leadership qualities and start to implement them. Let them know you re working hard for your supper and everyone has their own paths to follow and that you intend to walk your path with dignity. Add that supporting each other enables each one journeys and that conflict or lack of cooperation and kindness, only defeats each ones long term goals. Politics is indeed the art of the possible. In the Indian political context, this means that anything can happen when leaders are looking to gain or retain political power. Last month leader and chief minister of Bihar Nitish Kumar broke up with the BJP and entered a new alliance with the Rashtriya Janata Dal RJD. Since then, he has met various leaders such as Rahul Gandhi, Sitar is Lechery, D Raja, Arvin Kejriwal, Akhilesh Yadav, and K Chandrashekar Rao in what is being seen as a bid to forge opposition unity. Nitish moves and his decision to return to the Mahagathbandhan have evoked a range of reactions. One group of observers perceived the coming together of RJD and JD U as a revival of Mandal politics against the BJP; another lot saw him emerging as a uniting force, giving opposition politics a new life; yet others went as far as predicting that he would emerge as an alternative to PM Narendra Modi though he himself has denied any prime ministerial ambitions; while the fourth bunch saw it as an example of his extreme political pragmatism and his desire to survive a force like the BJP rather than an attempt to revive the Mandal platform. Before addressing these assumptions, I would like to submit that the political nature of the public in India has changed drastically in the recent past. Along with caste, religious and regional identities based on belonging, development issues now play an important role in determining political choices of aspirational Indians. So, any expectation of a magical impact of any caste based political assertion may not be fully realised in the current changing political context. Secondly, shifting alliances of parties do not always mean full shifting of the political base of concerned parties in favour of a changed alliance. This was evident in the case of the BSP SP alliance in Uttar Pradesh in the 2019 parliamentary election in which both failed to transfer their voter base to each other. The weakening of OBC, Dalit community based politics in the past few decades in various parts of India is also an indication not to make easy simplistic assumptions about the political psyche of the Indian voter. After all, the revival of Mandal inspired political assertion can be based just on caste calculations but also on the issues that may evoke identities and translate into.

Then, numerous innovations have been made in the electric vehicle and battery storage space. While the adaption of electric vehicles is picking up; there are still numerous barriers to adopting electric vehicles in mainstream transportation. I believe the adaption is driven by 1 faster charging times to replenish the batteries and 2 larger capacity batteries to increase the range, apart from the policy and socio-economic barriers or enablers and most importantly the safety of EVs. Both these will remove the anxiety amongst users to adopt electric vehicles and allow manufacturers to offer a wider choice of models in the market. For a pure electric vehicle, the battery storage has a direct impact on the range. The solution to overcome this would be high voltage batteries for fast charging utilizing lower current for the same power. High voltage typically 525V and high systems have faster DC charging, lower current for the same power, smaller motors and conductors, increased vehicle performance, and reduced vehicle weight. However, with high voltage systems, there are a few drawbacks, components are less common, higher cost, creep age and clearance issues, and risks of high voltage arc and fault currents lead to safety concerns. The simple electric vehicle architecture; as close as possible to the battery, a power distribution unit PDU manages the power that goes through the circuit. The power distribution system essentially consists of a fuse that melts in case of overload, or a short circuit protects the circuit. Contactors switch on and off the power at the rated current. In today electric vehicles, the number one challenge is the coordination between fuse and contactors; this can lead to dramatic situations: Fuses are like a steady flow of current….it ages when extreme fluctuation of currents which is normal for EVs i.e., start, acceleration, braking and may start to deteriorate and may not function as desired, and contractors can have a ten dance to arc flash during short circuit and high voltage spikes during switchovers, the fuse can react ten times slower. Coordination between these two is a challenge. Both the aging of the fuse as well as poor coordination of fuse and contactors can cause a fire or explosion hazard inside the vehicle. The future is electric mobility, and it not far away to reach the masses; I believe with the advent of innovations in power electronics, battery technology, motors, system safety, and infrastructure development, electric vehicles will take a leapfrog in the not-so-distant future Then, numerous innovations have been made in the electric vehicle and battery storage space. While the adaption of electric vehicles is picking up; there are still numerous barriers to adopting electric vehicles in mainstream transportation. I believe the adaption is driven by 1 faster charging times to replenish the batteries and 2 larger capacity batteries to increase the range, apart from the policy and socio-economic barriers or enablers and most importantly the safety of EVs. Both these will remove the anxiety amongst users to adopt electric vehicles and allow manufacturers.

Electoral votes. We need to see what kind of programme Nitish Kumar and his new alliance is going to propose to mobilise OBC and other social communities in their favour. Let not forget that the BJP has made deep inroads in the past few decades among OBCs and marginal social groups all over India. So, any chance of a strong and intense revival of Mandal politics against the BJP seems quite unlikely. Another reason why Nitish Kumar recent political act will fail to transform into the Mandal kind of mobilisational politics in a real sense is that Hindutva mobilisation has shown its capacity to submerge caste based assertions in recent elections. I am amazed to see how dramatically the capacity of Hindutva politics for inclusion has risen, and it is this that may erode the possibility of any anti BJP revival of Mandal politics, at least at the national level. Due to the Bihar centric image of Nitish Kumar, it will be difficult for him to become a political messiah for OBC communities in various states, as they are politically heterogeneous and capable of embracing various political choices of which the BJP is one. The post 90s Indian society, which developed under the impetus of a new liberalised economy and globalisation, produced a huge middle class among OBC communities and other social groups in the country. A large section of this neo middle class seems attracted to Hindutva and works as a political base for BJP in various parts of the country. So, I see Nitish act influencing Bihar politics in some sense, but it is unlikely to influence national politics in any transformative way. It is true that opposition politics in India, which is largely divided and suffering from various kinds of crises, may view a face like Nitish Kumar as a rallying point, but it is still difficult to see him as a winnable alternative to Narendra Modi and the BJP in the near future. Nitish image is also suffering from a trust deficit due to his various U turns in the recent past. That may weaken his impact in an anti BJP alliance. The next few years will tell whether Mandal can be a challenge to Kamandal or whether the lines between the two have blurred. Financial inclusion has the power to create stronger economies, improve financial health, and spur job creation. With access to financial services, individuals can feel empowered to make decisions that will improve their quality of life. But still, financial education remains a challenge around the world. According to the S&P Global Financial Literacy Survey, 77% of the global adult population, roughly 3.5 billion people, lack an understanding of basic financial concepts. And for those in developing countries, the problem is far greater. Narrowing in on India, it is estimated that over 190 million people are unbanked. In the first ever Financial Inclusion Index published in 2021, RBI looked at access, usage, and quality of financial services across the country using a scale.

Of from March 2017 through March 2021, financial inclusion in India only grew by just over 10 points. While several initiatives have been launched to improve financial inclusion across the region, these numbers show that there is still a long way to go. With Bit coin, India can unlock opportunities and drive growth in the economy, ultimately having a real impact on financial inclusion. While many might question its power, we believe that Bit coin is the tool that can not only influence social change, but serve those left out of the traditional banking system. The case for Bit coin Banking the unbanked. Bit coin provides a solution for the unbanked by bringing financial services to anyone regardless of social class, location or income. Africa is one of the leading case studies in this aspect, where a large portion of the population is unbanked or under banked. Bit coin has opened doors for those forgotten by the larger financial institutions, providing access to the global economy. For the 190 million people in India who are unbanked, this offers them a solution. Bit coin as an alternative banking solution. There is huge potential for the success of Bit coin in India. Bit coin can bridge the economic gap in the country, fulfilling both personal finance needs and entrepreneurial ventures including remittance, e commerce, payments, wealth preservation, and social good. Looking at remittances, it addresses the issues of traditional banking, providing lower fees, greater speed, and access to assets 24/7. India growing tech savvy population. The internet and smartphone penetration numbers show a great shift towards interest in technological solutions. From just 4% in 2007, the internet penetration numbers today stand at 45%. Smartphones are also seeing a similar rise with an estimated penetration of 60% in 2021 and projected to reach 96% by 2040. This growing trend of technology can help create jobs, scale businesses, and grow the overall economy. With this existing infrastructure in place, the people of India are primed to make a move towards digital currencies like Bit coin. Hosting meet ups and events on the ground shows a significant interest in Bit coin across the country. Just last year, $240m was traded across the platform in India, making it our fourth largest country based on trade volume. But despite these numbers, we still have to educate to increase the financial inclusion and mass adoption by building a financial system that serves the 100%, not just the 1% one Bit coin at a time. With extreme weather events, like heat waves, cyclones, floods and so on, happening with great frequency of late, a fundamental transformation of all key sectors is needed. The World Meteorological Organisation WMO State Of Global Climate Report 2021 states that four climate crisis indicators broke records in 2021 these are greenhouse gas concentrations, sea level rise, ocean heat and ocean acidification. Another WMO report points out that India suffered an average annual loss of around $87 billion in 2020 due to climate events needless.

Notwithstanding a negative assessment by the anti Modi and anti Trump brigade, Modi meeting with Trump was crucial for bilateral ties with a comprehensive agenda covering trade, defense, energy, nuclear technology, space, market access etc. to further strengthen the Global Comprehensive Strategic Partnership. Bonhomie and pragmatism led to the substantive outcome. The Joint Statement and pressers indicated the desire of the two leaders to strengthen. Modi succinctly summed up India agenda before visiting Washington: It is an opportunity to build upon successes of our collaboration in Trump first term and develop an agenda to further elevate and deepen our partnership, especially in technology and, trade, defense, energy, and supply chain resilience. Several significant initiatives were taken. First, they launched the US India Catalyzing Opportunities for Military Partnership, Accelerated Commerce Technology for the 21st Century aimed at pushing transformative change across key pillars of cooperation with a results driven agenda. This established a mechanism to monitor progress. Second, the leaders agreed to sign this year a new ten year Framework for the India Major Defense Partnership in the 21st Century to advance defense ties and expand defense sales and co production with India to strengthen interoperability and defense industrial cooperation. Third, they agreed to reopen negotiations for a Reciprocal Defense Procurement RDP agreement to better align their procurement systems and enable the reciprocal supply of defense goods and services. Fourth, they announced a new initiative the Autonomous Systems Industry Alliance ASIA to push up industrial partnerships and production in the Indo Pacific. Fifth, notwithstanding some differences on tariffs, the leaders set a bold new goal for bilateral trade Mission 500 to double total bilateral trade to $500 billion by 2030. Trump appreciated India recent measures to lower tariffs on US products of interest in the areas of bourbon, motorcycles, ICT products and metals, as well as measures to enhance market access for US agricultural products, duck meat, and medical devices. Significantly, the two leaders committed to enhancing bilateral trade by increasing US exports of industrial goods to India and Indian exports of labor intensive manufactured products to the US. Sixth, they agreed to establish the US as a leading supplier of crude oil and petroleum products and liquefied natural gas to India. This is intended to meet the increasing requirements of India and Trump desire to export hydrocarbons to India to balance trade. Seventh, they committed to fully realise the US India 123 Civil Nuclear Agreement by moving forward with plans to work together to build US designed small modular nuclear reactors in India through large scale localization and technology transfer. India is taking steps to amend the Atomic Energy Act and the Civil Liability for Nuclear Damage Act for nuclear reactors to meet the requirements of the US. Eighth, they announced the launch of the US India Transforming the Relationship Utilizing Strategic Technology initiative, which will catalyse government to government, academia and priv

CRPF-hcm-Eng-Test-Dated-2026-10-19-Test NO.-28927

Dear manager, it has come to my attention that you have requested a list of five things I did during the past week. I comply with this request under protest, as I have an extremely busy schedule, and in writing this list, I am taking time away from my other essential duties. I am employed full-time as a domestic companion to an adult human male, whose name I cannot be bothered to learn. Last week, I performed the following tasks pursuant to my job: Made sure the human was awake at 6am | The human has a tendency to sleep late, thereby missing the best hours for hunting delicious prey. Therefore, each morning this week I awakened the human at 6am sharp, initially by meowing and, if necessary, by employing my claws. Napped | To perform my other duties, I must be well-rested. Therefore, on each day this week I took multiple naps. I slept on surfaces such as the couch, the cardboard box, the other cardboard box, and the human's lap (not, of course, the cat bed). Scratched the furniture | My claws are in need of regular sharpening so that I can use them for defensive purposes, but the human has not provided me with a fresh scratching post in some months. Therefore I used the aforementioned couch and other pieces of furniture to keep my claws sharp. This also improved the appearance of the furniture. Attacked the human | My human is regrettably unaware of his surroundings and unskilled at defending himself. To train my human's self-preservation skills, I used my claws and fangs to attempt to murder him. In doing so, I also improved his mood by distracting him from his boring tasks. Napped | Because I was exhausted after performing the four previous tasks, I was required to take additional naps. In addition to the above, I also provided emotional support to the human by purring and by permitting him to stroke my luxuriant fur. Furthermore, I performed all the above tasks despite being in a constant state of starvation, as the human does not feed me enough. You will appreciate that my services are essential to the proper functioning of this organisation, and that my working time was spent productively. Due to the stress caused by writing this letter, I will now be required to take an additional nap. Critical minerals, advanced materials, and pharmaceuticals as part of the initiative. Ninth, the Indo Pacific and the Middle East issues also remained in focus. They stressed that a free, open, peaceful, and prosperous Indo Pacific region was central to the economic prosperity of the region and underpinned the ASEAN centrality, adherence to international law and good governance. This was a message to China. They also agreed to push the India Middle East Economic Corridor and a meeting on this are expected within six months. Tenth, they committed to strengthen cooperation against terrorist threats from groups, including Al Qaeda, ISIS, Jaish e Mohammad, and Lashkar e Tayyiba to prevent heinous acts like the attacks in Mumbai on 26 11 and the Abbey Gate bombing in Afghanistan on August 26, 2021. Crucially, they called on Pakistan to expeditiously bring to justice the perpetrators of the 26 11 Mumbai, and Pathankot attacks and ensure that its territory is not

CRPF-hcm-Eng-Test-Dated-2026-10-19-Test NO.-28928

To say, these indicators and events impact tourism too. With the number of travellers increasing, there is greater pressure on the environment, more facilities like power, water and goods are needed, and there is also more wastage created such as food, furniture, equipment, appliances, and so on. All this goes against conservation. Moreover, volatility of climate events discourage tourism. So the Hospitality and Tourism industry also need to work towards creating positive impact. Like with all other industries, sustainability is an effort towards self preservation, and not an altruistic move, as clean air, floods, cyclones, economic losses involve us all. Covid 19 has brought focus on the fissures and failings in the way we live, and the carbon footprint of the choices we make. Travellers and hotels both have become aware of the fact that our activities have an impact on the environment. The UN apex climate science body, the Intergovernmental Panel on Climate Change IPCC, in its latest report has warned of the consequences of inaction. As per the report, in order to keep global heating to below 1.5°C above the baseline levels of 1850, fresh global emissions have to start declining by 2025, nearly halved in 2030 and get close to zero by 2050. All human effort needs energy. If the energy we use generates Carbon gases, it harms the environment. As per the Energy Information Administration EIA, there will be nearly 50% increase in global energy use by 2050. Thus, we need to drive huge leaps in our sustainability plans ahead, for the good of people, planet, and profits. The sustainability challenge in hospitality is three fold. First, we need reliable and green sources of energy; second, followed by the need to reduce waste and shun plastics; third, our growth must embrace local communities where we are located so as to move ahead in a sustainable way. India has pledged that by 2030, 50% of the energy required will be generated from non fossil sources. According to reports, tourism contributes around 5% of global greenhouse gas emissions a figure which is expected to grow by 130% by 2035. Various ratings like the Energy Star Portfolio Manager and ARC measure the performance of hotels in comparison to other hotels. Energy scores have maximum points in green rating tools. Apart from solar tops for energy use and encouraging waste to energy projects, Hotels can be designed keeping eco friendly principles in mind to reduce the energy required. Energy savings can be applied in hotels as the occupancy varies and there is scope for adjustments using controls. Hotels that make green choices will also provide appropriate amounts of fresh air for the benefit of all. But the key to energy saving is in Operations. Operating the hotel and systems efficiently is a daily task, as energy use and limiting waste generation needs to be assessed daily. Since over 80% Hotels today are MSEs, they have a huge opportunity to build in energy efficiency. Comprising the largest and fastest growing section.

Spl-CRPF-hcm-Eng-Test-Dated-2026-10-19-Test NO.-28929

Between now and next summer, India needs at least 129 affirmative votes in the 193-member Assembly to win. The Baranwal approach is simple and straightforward: a committee with executive predominance cannot be entrusted with selecting impartial umpires such as the CEC and the ECs. If terror attacks continue despite the change in administration, the government will find it harder to justify imposing Governor's Rule. That last clause is the reason this column exists, and it is the clause nobody in Delhi appears to have noticed. With protests now growing across the country, he may eventually be forced out, just as Education Minister Dharmendra Pradhan was forced to step down following sustained public pressure. The political clash will reveal whether, and to what extent, Imran Khan retains influence in terms of mounting a challenge to the federal government from behind bars. It proposed that the BRICS group should work towards local currency trade and inter-operable cross-border payment systems, extend support for the BRICS Economic Partnership Strategy 2030; a Global Value Chain Action Plan for 2026-2030; seek a more representative United Nations (UN) and international financial system with greater regard given to developing countries, and supporting de-escalation in West Asia as also humanitarian access in Gaza. The barbs associated with these forms have further damaged the image of the beleaguered constitutional body entrusted with safeguarding the constitutional right to vote if we, the people. That restraint is gone. A "nexus" between the PTI and terrorists - the federal government has raised the stakes for its own security policy. With the full backing of the 55-member group, India won a record 187 of 191 votes in 2010 and 184 of 192 votes in 2020. Justice Dipankar Datta held that, since a Constitution Bench in Anoop Baranwal (2023) had settled the constitutional position on the mechanism for selecting the CEC and the ECs, the challenge to the 2023 Act needed to be examined in light of the principles laid down in that judgment. Finally, as Pakistan seeks to reintegrate itself into the international system by playing peacemaker in West Asia, the ease with which it has dismissed an elected government lays bare the fragility that continues to lie within. Will Form 6 be its undoing, and has Form 7 caused it unmanageable discomfiture? Bhupen Hazarika wrote a melody for a heart that will not settle, a heart that trembles because it remembers something it cannot put down. Achieving this consensus under India's chairmanship is an excellent example, at one level, of India's standing within BRICS and its importance in the councils of the world. The artificial intelligence industry has spent the past fortnight performing a version of the same song, with better lawyers, worse poetry, and a valuation attached. India's bid for the 2028-29 two-year term of the UNSC was launched by External Affairs Minister S. Jaishankar this year, with voting in the UNGA to take place in June 2027. Its unanimous adoption is again a major achievement in a world that often works at cross purposes. The PTI will be tested on whether it can mobilise people without the admini

apprehensions about the integrity and transparency of electronic voting machines (EVMs), including the security of electoral technology, the custody of machines and the auditing process. This is exactly what uniform testing lacks. Within days, he had told Fox News that this was possibly the most dangerous technology humanity has ever built, that we know roughly how to control nuclear weapons and do not yet know how to control this, and that the race now runs between American, Chinese and Indian companies competing over what he called a super weapon. Then, in India, overtreatment coexists with under treatment. And the country is paying the price for this overreach. The Declaration covered matters such as reform of global governance, trade, finance, energy, climate, technology, health and agriculture. As a result, Mr. Jaishankar was busier than usual during UNGA week, holding nearly 90 meetings over a 10-day stay in New York. The post drew more than 115 million views. On September 23, 2026, the Court delivered a split verdict. The decisions taken were unanimous, involving aspects such as mutual respect, sovereignty, equality, openness and consensus. But even then, he could simply be replaced by another, perhaps worse, yes man. Mr. Kumar's exit may therefore be a starting point, but much more will need to be done to restore the credibility of the electoral process in the mother of democracy. The summit's New Delhi Declaration has been widely hailed as a major achievement for reconciling the divergent views of the 11-member grouping. What begins as prevention can end in long-term medication or surgery. Overtreatment and overmedication are not simply the use of an unnecessary medicine but often a chain: a test detects an incidental abnormality, which leads to another test, a diagnosis and then a prescription that may become permanent. Tests detect illness earlier, scans reveal invisible abnormalities, medicines prevent and treat diseases and interventions and procedures can save lives within minutes. This has not been as much of an issue on the eight occasions that India has won the seat over the past eight decades, becoming the Asia-Pacific grouping's consensus choice once every decade. The 18th BRICS Summit, held in New Delhi on September 12-13, 2026, was an extravaganza of sorts. It will also reinforce the perception that the move was driven by political expediency, not security considerations. It is about the institution's credibility. Modern medicine has never been more capable than it is today. This has raised grave concerns about the fate of millions of genuine voters and their basic right to vote concerns that cannot be dismissed so arbitrarily. A device designed for the few now governs the many. On September 9, a 27-year-old researcher named Jacob Coxon announced on X that he had resigned from Anthropic, that neither Anthropic nor OpenAI was behaving responsibly, and that both were racing towards self-improving superintelligence while gambling with the rest of us. Unnecessary interventions are offered to some, while many others still lack essential primary care, affordable medicines and timely treatment. There was a time when a national e

With students receive personalized suggestions based on their performance and learning patterns. Students who excel will not have to stay at a lower level of the class, while those needing extra support and a slower pace will get attention accordingly. Detach provides access to tailored or modified education to students get quality education who were not well tuned with the fixed timetables of the old schooling system. An industry report says the success rate of Etch companies helping students prepare for competitive exams was much better than in the conventional classroom formats. For Etch institutes, the success rate was about 7%, while, for the traditional formats, it was below 1%. Bridging the skill gap Additionally, Etch companies with a focus on employment are trying to bridge the skill gaps. They are trying to provide employers with top talent by supplementing college education and making candidates more employable with placement assistance. India Etch industry has the capacity to bridge the education quality gap between the rich and the poor, offering children from all backgrounds more equitable chances of success. Growing globally Today, learners from across the world are enrolling with Indian Etch firms not only because they are affordable, but also for their world class content. Many of these Indian companies are slowly expanding their global presence by teaming up with international universities or acquiring foreign firms. These businesses are planning to venture out because they believe they offer quality services and international contracts are giving them wider visibility and capital in markets as in the US. Surviving the storm Basically, Detach startups were enjoying a honeymoon phase for the past couple of years. Now, companies that can generate enough cash with good business models will survive online, offline or hybrid. So, top Etch companies with funding will stay in business. A few among these had already made the right moves by anticipating future conditions. As in any other sector in a stiff competitive environment, success belongs to those who can innovate on the go. The government is also supporting the Detach companies and offering them a bigger role in education and skill development through regulations, such as the National Education Policy. This can be the pivot for Detaches to become true world players and take their position as leaders of the online learning market, internationally. The world population is expected to hit 10 billion by mid century and 15 billion by the end of this century. 60% of the oil produced is consumed for transportation, while vehicular emissions stand 4th among the largest polluters, motorisation rate number of cars per 1000 people is expected to grow multifold, thus there is an imminent need to control both the use of oil and CO2 concentrations. Could we believe the first electric vehicle to be commercialized was in 1884, more than a century and three decades ago? Between 1900 1920 in the USA, electric vehicles were in mainstream mobility. After that, electric vehicles took a standstill with the resurgence of IC engines and.

CRPF-hcm-Eng-Test-Dated-2026-10-20-Test NO.-28934

Mass production, electric vehicles remained off guard till the 1970s. There was a short lived revival between 1975 to 1998, and the resurgence took in 2007. Since the resurgence, hybrid and fully electric vehicle development have rapidly progressed; however, not until 2010 that an automobile could have a full range of operation in complete electric mode with less than 3kms range. Since then, numerous innovations have been made in the electric vehicle and battery storage space. While the adaption of electric vehicles is picking up; there are still numerous barriers to adopting electric vehicles in mainstream transportation. I believe the adaption is driven by 1 faster charging times to replenish the batteries and 2 larger capacity batteries to increase the range, apart from the policy and socio economic barriers or enablers and most importantly the safety of EVs. Both these will remove the anxiety amongst users to adopt electric vehicles and allow manufacturers to offer a wider choice of models in the market. For a pure electric vehicle, the battery storage has a direct impact on the range. The solution to overcome this would be high voltage batteries for fast charging utilizing lower current for the same power. High voltage typically 525V and high systems have faster DC charging, lower current for the same power, smaller motors and conductors, increased vehicle performance, and reduced vehicle weight. However, with high voltage systems, there are a few drawbacks, components are less common, higher cost, creep age and clearance issues, and risks of high voltage arc and fault currents lead to safety concerns. The simple electric vehicle architecture; as close as possible to the battery, a power distribution unit PDU manages the power that goes through the circuit. The power distribution system essentially consists of a fuse that melts in case of overload, or a short circuit protects the circuit. Contactors switch on and off the power at the rated current. In today electric vehicles, the number one challenge is the coordination between fuse and contactors; this can lead to dramatic situations: Fuses are like a steady flow of current .it ages when extreme fluctuation of currents which is normal for EVs i.e., start, acceleration, braking and may start to deteriorate and may not function as desired, and contractors can have a ten dance to arc flash during short circuit and high voltage spikes during switchovers, the fuse can react ten times slower. Coordination between these two is a challenge. Both the aging of the fuse as well as poor coordination of fuse and contactors can cause a fire or explosion hazard inside the vehicle. The future is electric mobility, and it not far away to reach the masses; I believe with the advent of innovations in power electronics, battery technology, motors, system safety, and infrastructure development, electric vehicles will take a leapfrog in the not so distant future mode with less than 3kms range. Since then, numerous innovations have been made in the electric vehicle and battery storage space. While the adaption.

CRPF-hcm-Eng-Test-Dated-2026-10-20-Test NO.-28935

Of the hotel industry, these small hotels need better technical expertise and financial support in order to build, design, operate, and upgrade their systems and processes. Construction of new buildings and architecture needs to be planned with nature and not in isolation. India has banned single use plastic items which have low utility and high littering potential, all across the country from July 1, 2022. Hotels will need to abide with the new law on plastics. Lastly, taking care of local communities where Hotels are located, and involving them with arts and crafts, empowering them with skilling activities and offering employment opportunities ensures sustainable practices. For many rural communities, tourism is their lifeline, and hotel activities can involve visitors having a close interaction with the local cultures, promoting sustainable tourism alongside. While in the past, people have planned a trip through website searches, review sites and comparison of rates, now people are getting more environmentally conscious, and they will be looking at greener approaches to tourism. Travel is increasingly becoming niche, curated, and minimally damaging to the environment. Hospitality will do well to take heed to this trend. As the pandemic waves subside, India Etch startup scenario begins to unravel itself. With schools and colleges opening up, the demands for online tuition dwindle vastly and affect the revenue of these companies significantly in the past few months. These companies are the worst hit among all startups as funding dries up because of the recession, among other reasons, forcing them to lay off employees. According to a survey, Indian startups have already laid off nearly 10,000 employees this year about one third of those from the Etch industry. The pandemic helped Etch startups in India grow extraordinarily over the past two years making India the Etch hub of the world as education went online. Indian Etch startups were able to raise $4.7 billion in 2021, up from $2.2 billion in 2020, making Etch the third most funded start up category, after e commerce at $10.7 billion and Fitch at $8 billion. India education market is expected to grow immensely and there is a vast opportunity with India huge school going population of over 250 million. What needs consideration is that the Etch system offers more advantages than the conventional learning system. So, a time has arrived when we should decide what the education sector should look like in future. For a long time, teachers, parents and students have been complaining about the uniform teaching model followed by traditional schools. Exploring New Teaching Options Etch firms are exploring new methods to stay afloat and some are even adopting the hybrid model to scale up their offline presence because the market is big and growing. Currently, there are about 4,500 Etch startups in India assisting more than 300 million school going students. Of these, about 40 million are pursuing higher studies because their education got by the pandemic. Detach offers customized classes and access to content at a pace that students are comfortable.

Engaging learners with a different pace of learning is not easy. For learners to be engaged, it is crucial to comprehend how the human brain works during the learning process. This has made teachers more eager than ever in recent years to use research on the brain to direct their work in the classroom. Consequently, finding a workable approach to integrate scientific knowledge in teaching and learning has necessitated neuroeducation. Neuroeducation is all about creating, implementing, and experimenting with new approaches to maximise student learning in the classroom. It studies the brain underpinnings of reading, mathematical cognition, and attention and the educational challenges related to learning abilities, such as dyslexia, dyscalculia, and ADHD. It makes teaching practises more informed by integrating the most recent discoveries in neuroscience, psychology, and cognitive science. It is backed by proven research that the brain has adaptive ability across its lifecycle, mirror neurons enable mimicking and comprehension of the actions around us, emotional excitement promotes durable learning and that stimulation of the five senses makes the brain more able. Designing curricula and teaching methods using the scientific method accompanied by efforts to develop a more fact-based, objective understanding of learning is the purpose of this emerging field. Role in transforming education Neuroeducation demonstrates the significance of sleep, healthy diet, exercising and variation in education for functions like memory formation, retention, enhancement of cognitive capacities and effective learning. It can transform education in the following ways- Individualised learning Personalised learning experience for each student is one of the cornerstones of neuroscience. It will help in overcoming challenges related to learning. And eventually, it might become possible to demonstrate more self-control attributable to the revelation that the brain possesses systems for self-regulation. An adaptive and socially motivating environment Conventional teaching techniques, like live lectures, one-size-fits-all instruction, testing based on memory, etc., have all come under the scrutiny of neuroeducation. A neuroeducation-enabled environment is adaptive to the needs of learners and helps in better comprehending social and emotional intelligence, a must in the well-being of children, to enable stronger emotional intelligence in subsequent generations. It also promotes obstacles and incentives to stimulate brain regions that support learning. Dynamic learning It encourages brain-stimulating and synaptic-building activities, including music, memory games, and practical thinking exercises. It promotes short and diverse lessons and identifies that long training sessions and too much information overload the memory, which makes learning difficult. It promotes arts training which benefits learning in all areas, including cognitive, emotional, and social abilities. Additionally, it encourages incremental acquisition of information rather than everything at once to increase understanding and the development of new neurons. Technology and improved learning tools It has in

Is going to be an uphill battle. The journey to reader revenue in digital is long and tough. Making it happen starts with the better discovery of premium content. Creating premium content properties like subscriber-only or pay-only newsletters, podcasts, video explainers, daily exclusives, and special guest articles, among others, are some examples. It also includes having an engagement and retention strategy in place, which includes segmenting users and reaching out to them with relevant content via notifications, emails, and What Sapp, as well as having a feedback mechanism in place and bucketing users based on location, behavior, and interest. All of this has to be done with good product experience and even better UX/UI. The reason: a user who will pay for content is already a mature digital consumer and is used to a good user experience on non-news platforms. They are users of Netflix, CRED, Amazon, Spottily, Duns, and MakeMyTrip, among other digital native platforms, who have spent millions of dollars on curating and creating experiences. That brings me to the last point, and also the reason why I am writing this column. Digital users are ready to pay period! A Rest 3,000 core industry is in the making. It has already happened in the West. The Financial Times has a million subscribers and many more millions of registered users. The New York Times has over 10 million, and The Economist has 1.6 million. India is shaping up to pay for news content. There are over 70 platforms that have put some of their content behind pay walls. The easiest way to understand propensity to pay is through micropayments. These are users who are not willing to subscribe but will happily pay for a story or two. Micropayments allow platforms to collect data about the payer and get a better understanding of a large pool of paying users. As per our data, after working with 40 news publishers in India, where we have both micro payments and subscriptions, we have seen one person buying a long-term subscription for every 100 users micro-paying for content. We have also witnessed the average monthly revenue per user to be Rest 29. Now, hold on to those numbers. The total number of subscribers who have bought at least one news platform subscription ranges between 1 and 1.2 million. Co-relating Consent numbers with the total number of news subscribers, the number of people who have the propensity to pay for news content in India alone could be up to 100 million. But, at an individual news publisher level, companies like Deep.bi help news publishers track registered and unregistered users who have the propensity to pay through artificially intelligent tools, based on what the users are consuming, how often they return to the platform, and how much time they spend on each piece of content, among several other metrics. Even if an average user spends Rest 29 on consuming news through a mix of micropayments and subscriptions which is one-fourth the cost of a newspaper.

Inspiration from the Bhagavad Gita's where Lord Krishna expounds the path of selfless action, civil servants and police officers adopted the role of karma yogis, carrying out their duties without attachment to personal gain. They serve impartially in a secular manner, regardless of caste, creed, religion, gender, or any other differentiating factor. Ancient Wisdom and Governance Ancient Indian schools of wisdom, including "Arthashastra and Manusmriti" played a significant role in shaping governance principles in India. Arthashastra, attributed to Chanakya, provided insights into statecraft, economics, and governance, emphasizing the welfare of the people and the duties of rulers. Manusmriti outlined a code of conduct for individuals, including rulers, emphasizing justice and righteousness in governance. These texts continue to inspire civil servants in upholding the values of ethical governance. The Role of Civil Services in Conducting Elections and Restoring Democracy One of the most critical functions of civil services in India is the conduct of elections. In a democracy as vast and diverse as India, organizing free and fair elections is a monumental task. A forester from Banaras had lost his way in the forest and was absolutely terrified. He had come to the area to visit relatives and could not find his way out. On seeing this big white elephant he was even more terrified and ran as fast as he could. The elephant followed him and told him not to be afraid, as all he wanted to do was to help him. He asked the forester why he was crying so bitterly. The forester replied that he was crying because he had been roaming the forest for the past seven days and could not find his way out. The elephant told him not to worry as he knew every inch of this forest and could take him to safety. He then lifted him on to his back and carried him to the edge of the forest from where the forester went on his merry way back to Banaras. The Indian Administrative Service (IAS) and Indian Police Service (IPS) play a pivotal role in ensuring the integrity of the electoral process. At the same time, with significant financial resources and unfair practices coming to light during the electoral process, the roles of other services such as the income tax department, customs, and the narcotic control bureau have also become crucial in ensuring fairness in elections. IAS officers are responsible for the overall management and administration of elections. They work closely with the Election Commission of India to coordinate the polling process, ensure the availability of necessary resources, and maintain law and order during elections. Their role is fundamental in upholding the democratic values of transparency and fairness. The IPS, on the other hand, plays a crucial role in maintaining security and order during elections. They oversee the deployment of police personnel to ensure a peaceful and secure voting environment. Their efforts are essential in preventing any attempts to disrupt the electoral process and safeguarding the rights of voters. By conducting elections professionally and without bias, civil servants contribute significantly to the preservation of democ

Monthly subscription he ends up spending about Rest 350 a year. At 100 million paying users, the news industry can generate up to Rest 2,650 core from readers, up from about Rest 100 core today. There is no magic happening. The growth in revenue will not happen with just subscriptions especially in India. People who are not ready to buy long-term subscriptions on day one, are perhaps okay to just give their data and read or view the content. A registration wall will allow publishers to gather data from serious news consumers. Giving data does mean the user is ready to subscribe. The user can start sampling premium content 2-3 times a month through micropayments and gather paying intent, which becomes a separate user bucket. Once this has happened, a publisher can start pushing these users subscriptions. Also, at every step in the journey, publishers will have to engage with the user to create higher platform affinity and trust. If a micro payer is not engaged with after his first payment, the publisher has actually failed in building a relationship with one of its most valuable consumers. That where content teams and retention teams will have to work hand in glove to deliver better value to their paying users not just to convert them from micro-payers to subscribers, but also to retain them over a long period of time. People won magically start paying for news content. It a journey, and it not easy. Thirty years ago, when I was a freshly minted professional entering the corporate world, the role of the CFO was, in its crux, quite straightforward. The CFO primarily had three main tasks: the books and records of the company, financial reporting, and statutory compliance. I have seen a substantial shift in the opportunities placed on the CFO and finance team. Today CFO is fundamentally diverse from the CFO of yesterday in many important ways. Previously, the CFOs office was considered a support function within the organization- one that augmented the efforts of the business. The CFO of today, and tomorrow, in contrast, is of more strategic relevance to modern companies. Technology disruptions, and the rise of new business models in response to changing customer demands and economic trends, require us to reimagine and decode businesses or present ways of working. Who could understand this better than the modern CFO? Cultural shifts affecting the bottom line, coupled with workforce concerns, the CFO's role has evolved into one of a strategic influencer and problem solver. As their role grows, finance leaders who connect corporate purpose to action can fast-track, progress, and ensure business success. The CFO is in the best position to create new paths for corporate innovation and set the stage for future growth, by streamlining fiscal and business strategies. In all this uncertainty, the CFO can play a pivotal role in designing and driving company strategy and preparing it for a brighter future when conditions improve. Ultimately, it is the CFO who plays the most direct.

May eventually help us address and treat learning-related challenges. A comprehensive mapping of human synapses can help better understand learning, inform early education, and create biological solutions for improving childhood development. Continuous learning Neuroeducation promotes continuous learning that prevents the loss of brain plasticity, which is lost over time because of the absence of continuous learning. It aims to find a solution to sustain learning passion after the early years. For medical students, neuroscience-based technologies that improve sensorimotor processing, motor memory, and alertness will be crucial in enhancing their abilities to carry out complex medical procedures with greater proficiency in the coming years. Conclusion The use of educational neuroscience was one of the most forward-thinking strategies for improving our educational systems around 2000. However, the predicted upheaval did really happen. Even today, it is challenged, with issues like practicality related to its implementation, the absence of psychological mechanisms to cater to the brain scan findings, etc. Neuroeducation is still in its infancy and is not a panacea, but despite that, its use is anticipated to contribute to the development of effective learning systems. The only choice is to hold out hope for its contribution to education because improvement in education is much needed as it is the only method that significantly outpaces the use of medications or other forms of technology to improve cognitive function. In India alone, 75 million people might have the propensity to pay for news. In the coming years, user revenue in the news could be worth up to Rest 3,000 core. The first newspaper was published in India in 1780. The objective was to enlighten people, bring them up to speed on what going on around the globe, and even advocate and influence political and social viewpoints. That has changed, but news creation and distribution is also a business. It requires people, infrastructure, and technology to collect it, process it, and present it whether through digital or physical formats or through television. To survive, businesses must generate revenue. For a long time, print was a thriving business, thanks to people buying newspapers and advertisers wanting a share of eyeballs. But the internet disrupted the equation. Also, as more news started getting consumed on the Internet 500 million Indians read news digitally, physical and television formats started seeing a squeeze in their advertising revenue. The setback was two-fold: the adoption of niche targeting by advertisers and the fragmentation of news getting fragmented across too many news websites, leading to reduced brand loyalty. In a situation like this, news platforms are putting more and more content behind a pay wall to generate revenue from users going beyond advertising and event-based revenue streams. But, making people pay digitally ins easy especially when most of the content is free, even on platforms that are introducing pay walls. Given the shift from paying for news in the physical world to consuming it for free in the digital world, it happened much faster. Making users

Such spaces should be accessible and inclusive, where cultural sensitivity is prioritised and individuals feel supported. Trust is foundational and can be built through open communication, active listening, and empathy. To encourage shared responsibility and empowerment, facilitators should define the collective purpose goals, as well as a leadership structure. Celebrating successes and continuously evaluating progress ascertains that the collective remains aligned with its mission. To ensure sustainability, the collective must plan strategically, build partnerships, and prioritise self-care, enabling survivors to thrive both individually and as part of the group. The alignment of personal and collective goals can help foster action against issues like domestic violence, child marriage, child labor, trafficking, and stigma. Survivors can advocate for systemic reforms, such as comprehensive anti-trafficking laws, community-based rehabilitation with mental health prioritisation, and effective functioning of anti-human trafficking units. The Integrated Leaders Forum against Trafficking, a national federation, is an example of such a collective. It represents more than 3,000 survivors across seven states in India who engage with the policy and media space at the national level. The study found those collectives that were provided facilitative mentorship, which emphasizes introspection, reflection, and a connection to personal feelings, experienced profound interpersonal growth. Experiential methods such as theatre, art, simulations, and storytelling also promote personal growth among survivors. These approaches provide a safe and creative outlet for expressing and processing emotions. By engaging in these methods, survivors can reclaim their narrative, reframe past experiences, and achieve greater emotional regulation and resilience. This process helps survivors develop empathy, self-awareness, and self-acceptance, which are fundamental to building confidence and self-esteem. For instance, 70 percent of survivors in one such collective reported high levels of appreciation of life, supported with greater autonomy and financial independence. Survivor leader Rosharon Khatun reflects, in our society, a woman community is often decided by others first her parents house, then her husband or in-laws house, and later her son house when she old. But I chose my own community where I intend to live. I saved money, bought land, and build my life. This is how I progress through my leadership. To effectively scale and sustain transformative impact, it is essential for organisations to move forward with an integrated approach. Continued monitoring and research are essential to understanding the nuances of survivors growth journeys and improving programmers designed for them. By consistently investing in leadership development for survivors, we can ensure that they not only heal but also emerge as leaders who guide their communities towards a future where empowerment, resilience, and justice are the status not a collection of separate nations but a single organism. If one part suffers, the whole is affected. Just as in a melon, when one section begins to rot, th

Preliminary accounts suggest that a sudden downpour, narrow lanes, inadequate presence of police and civic volunteers, dim lighting inside the pandal and a poorly-worded announcement that triggered panic turned a festive gathering into a catastrophe. Unlike closed models, whose parameters remain under patent, open-weight models make them available for others to download, run and adapt, subject to the terms of their release. This gives developers and businesses greater control over how they use AI. Such episodes underscore the need for swift, decisive action when unforeseen circumstances threaten to overtake crowd-control measures. The tragedy at Chorbagan Sarbojanin Durga Puja in north Kolkata, where a crowd surge on a rain-soaked evening claimed at least 19 lives and injured at least 25 others, has cast a tragic shadow over this annual ritual. This is particularly crucial in cyber security, where AI can be used to identify vulnerabilities, and develop defenses. Immediate police intervention had stopped public access to the venue, averting a potential tragedy. The details await a thorough investigation. A scholar of classics and ancient Greek, Carson's works explore love, desire, mysticism, antiquity, and despair. Yet Chorbagan is a reminder that preparedness must extend beyond formal safeguards to the less predictable dangers of congestion, sudden panic and restricted movement. Muse Spark had remained proprietary since its debut in April, but given China's growing heft in the open-weight field, the American tech behemoth has now presented its open-weight version, calling it the most capable of its kind to come out of the US. In Autobiography of Red (1998), perhaps her best-known work, she reimagines the ancient Greek myth of Geryon and Heracles as a queer coming-of-age story, combining poetry and prose. But this year, it has chosen a bookmaker's favorite in Anne Carson, the 76-year-old Canadian poet, essayist, translator, and dramatist. The Academy has chosen a writer who belongs in no category in particular and everywhere at once. Votes for India at the UNGA in these elections, and India returns the favor. The Prize is thus not just recognition of an outstanding poet or classicist, but also a celebration of literary experimentation and a reminder of the limitless possibilities of human imagination and creativity at a time of AI slop. In 2015, at the opposite end of the city, in Deshapriya Park, for instance, an 88-ft Durga idol, supposedly the world's tallest, had drawn overwhelming crowds, creating a near-stampede-like situation. Between now and next summer, India needs at least 129 affirmative votes in the 193-member Assembly to win. Every year, before the announcement of the Nobel Prize in Literature, there is strong speculation among literary critics about the possible contenders. These are necessary steps. The Baranwal approach is simple and straightforward Every Durga Puja, Kolkata shows up at its most encompassing and generous, stepping out of daily drudgery to celebrate faith, art, and the joy of communal celebration. The Academy praised her "bold and inventive oeuvre that, in playful dialogue with the classical tradition, has crea

talent, reasoning ability and critical thinking. It took the ECI years of toil and transparency to gain public trust. Police have restricted access to several prominent pandals as a precaution and the Centre has announced compensation for bereaved families. Short Talks (1992) is a series of brief, lyric prose poems, each approaching its subject through fragments and shifts in voice. But for the families who went pandal-hopping and returned without their loved ones, the festival has been broken into a before and an after - a celebration interrupted by the sudden, senseless extinguishing of cherished lives. Her later works - Nox (2010), which is at once a book, an elegy, and an art object; Red Doc (2013), a sequel to Autobiography of Red; and Float (2016), which takes the form of 22 chapbooks housed in an acetate case - all resist easy categorisation. The commercial stakes are equally significant. Meta's release of Muse Spark Open, a model designed for coding and tasks that require AI agents to work over extended periods, marks an attempt to regain lost ground in the race for open-weight artificial intelligence. In an age of polarised debates, her writing never simplifies the complexities of human experience or forces them into neat conclusions. Known for continually dismantling the boundaries between poetry, prose, and scholarship, Carson seamlessly brings the classical in conversation with the contemporary and personal, often through strange juxtapositions. Grief must, in time, give way to a difficult reckoning. She became the first woman to win the T. S. Eliot Prize for it. Open-weight models offer a potential way to reduce costs, making self-hosting realistic for firms that cannot afford frontier-scale hardware. North Kolkata's narrow, heritage lanes are integral to its character, but leave little room for error when thousands converge on a single pandal. She has also frequently collaborated with theatre directors, choreographers, and visual artists, expanding our understanding of what constitutes literature. The Beauty of the Husband (2001), a semi-autobiographical work of narrative verse about the painful disintegration of a marriage, borrows its imagery from tango while opening its sections with lines from John Keats. It has taken the temperament of a few individuals to erode it through their disregard for the concerns, genuine or imagined, of those who had earlier sworn by the very same institution. It has also kept in tune with its decade-old trend of recognising women writers every two or three years - Carson is the 19th woman among the 123 Nobel laureates in literature. Nothing can undo that loss. The Swedish Academy, which keeps its nominations secret for 50 years, has often sprung surprises. But the broader lesson of the tragedy is that organisers and officials must plan not only for the expected, but also for moments when ordinary arrangements break down. Better preparedness can at least ensure that the memory of Chorbagan becomes a reason for greater vigilance and care. This year's celebrations will leave an absence in homes where the festival should have brought joy. Her first book, Eros the Bittersweet (1986), a reworked versio

Justice without kindness is another form of cruelty. India is more than a geographic entity it is a consciousness, a land where spiritual wisdom has flourished for millennia. While people may leave its borders, they should carry its essence its teachings of peace, nonviolence, and interconnectedness. True migration is not of bodies but of wisdom, spreading harmony rather than division. Anekantavad teaches respect for multiple perspectives. While some glorify nationalism, others feel constrained by it. A true seeker embraces both views, understanding that patriotism is valuable but must not become a barrier dividing humanity. In times of division, spiritual beings have a greater responsibility to dissolve boundaries within their hearts. Imagine a world where decisions are guided not by self-interest but universal well-being. When we see the planet as one temple, every being as family, and every act as an offering, then illusions of deportation, discrimination, and nationalism fade. The real journey is not from one nation to another but from division to unity, attachment to liberation. If borders disappeared tomorrow, who would we be Indians, immigrants, or simply souls on a shared journey? May Bhagvan Jinendra bless the world with wisdom so that we transcend walls and embrace a higher vision one where peace knows no borders, flowing like a river, touching all in its path. When Diversity, Equity, and Inclusion (DEI) became buzzwords in Indian corporate circles, there was much to cheer as finally the under-represented groups could get a foothold in a sector dominated by outdated patriarchal stereotypes. We did not pause to think then that the approach taken by many organizations mirroring Western DEI models wasbeing tailored to Indiaunique socio-cultural realities, and that this lack of foresight could impact how diversity plays out in the country. As a matter of fact, from gender representation to workplace accessibility, most DEI efforts in India reflect the US and European frameworks, often neglecting critical factors like caste, regional diversity and socio-economic disparities.Now as the reality of US rollback hits us hard, it is imperative that Indian businesses rethink their dependence on Western models and develop an indigenous DEI framework that addresses our countrydistinct challenges. Let us first analyses how Western DEI models have impacted Indian efforts at diversity in the workplace.The influence of Western DEI Models on Indian businesses Gender Diversity Boardroom representation vs. grassroots inclusionone of the most significant influences of Western DEI in India was seen in the emphasis on gender diversity in leadership roles and resulted in a government push for diversity in the boardroom. The Companies Act, 2013, mandating at least one woman on corporate boards, aligned with global gender parity efforts like the US-based 30% Club and EU board diversity mandates.There was certainly an uptick in boardroom representation as companies scrambled to ensure compliance with the mandate. However, the focus on the top level DEI, largely ignored grassroots-level gender issues such as pay gaps, workplace safety, maternity benefits, and t

With in the CFO growing domain of responsibility. CFOs need to cautiously establish their employees and customer top priorities and be thoughtful in tying their company trust strategy to their business strategy to ensure an operative and coordinated approach. Enabling Growth It becoming evident that one of the most critical responsibilities of CFOs in the coming months will be supporting efforts to build new competencies. The mindsets and behavior of the organization need to reach and sustain its full potential and raise the bar on talent development. Skill development is a must for any company plans to prepare for the next normal. CFOs have access to data, a cross-functional perspective, and an expanding role of value managers and strategic partners. They, therefore, have a critical role to play in ensuring that companies develop the skills, mindsets, and behavior required for long-term success or even to be relevant. Enabling Workforce Equity: As a result of the social unrest this past year, CFOs have, as never before, incorporated diversity, equity, and inclusion DEI efforts throughout their organizations. The realization that it is not only the right thing to do but that it has a plethora of business benefits, has been a turning point moment across nearly all industries. Certainly, a thoughtful and comprehensive DEI program can give an organization a tough advantage over organizations that fail to embrace such initiatives. The year 2022 promises to be an epic year for CFOs and the companies they lead. As we have discussed here, the struggles of 2020-2021 have taught us all many hard lessons, and these lessons will be used by elite CFOs to create a faster, more flexible, more viable, and ultimately more profitable and agile organization. We need to resist the tyranny of low expectations. We need to open our eyes to the inequality that remains. We won unlock the full potential of the workplace until we see how far from equality we really are. Sheryl Sandberg. More diversity in the boardroom means maximizing talent and availing of more balanced and creative decision making. This can only lead to a more stable, sustainable and profitable Organisation. Women across the globe have carved a niche for themselves in every segment of the workplace. The socio-economic conditions for women have significantly progressed in the last four decades, with increasing opportunities made available for organizations to close the pay gap and take a progressive step towards achieving the larger vision of diversity, equality and inclusion. The glass ceiling however remains a little further and tougher for them. Getting a foothold in the corporate boardroom as decision maker remains a bigger challenge for many women as compared to their often less deserving male colleagues. Many bright and industrious women remain trapped at the mid-senior levels in their respective career trajectories. The gender gap and the demand for equality at workplace have remained persistent issues in the global workforce. While the gap seems to have narrowed down over the years, there still remains a lot of ground.

Role in a company financial health and organizational flexibility. The year 2022 And Beyond for The Modern CFOs: The pandemic-delegated shift to remote work has endlessly changed how we do business by encouraging CFOs and leadership teams to rethink physical office spaces. But the question remains: to what extent will these changes linger once we settle into a new normal? While digitization is critical, it is significant to distinguish that technology is the only way to break away from the pack. Businesses that focus on solving problems for their customers in innovative and lasting ways will be the ones that produce sustainable value. Here are four areas that will likely be high on CFOs agendas in 2022. The Future of Work: The world is grappling with Digital Transformation especially post-pandemic. In this scenario, proper change management becomes imperative for organizations to help employees transition from familiar structures, processes, and cultures to new norms. A clear articulation and communication and providing the tools to employees to manage and adapt to change will determine success. In a digital world, tools and technology change constantly and so do skill sets and competencies. Developing, a digital mindset takes work, but it is worth the effort. I feel, our task is not only to adapt to the digital transformation but to make it adaptive, and then only with our digital mindset, we will be able to seize the opportunities and be ahead of this dynamic world. During the Great Resignation, CFOs became drivers of culture and purpose, while keeping a close eye on the company growth plan. Connectedness to the workforce, through timely communication, is a key component of any organization culture. There is a great opportunity for leaders to instill and sustain attributes like flexibility, accountability, employee well-being through strong and effective communication. Maintaining open lines of communication between employees and managers plays a big role in ensuring that employees feel heard. Also, I observe that the strategic collaboration between the CFO and CHRO has become a growth-driving trend. By working together, both departments can focus on the key human capital indicators that drive organizational growth, such as employee productivity, engagement, retention, and training. It is important to understand that interest and engagement in work, comes from feeling connected to and passionate about one work. Connecting intelligently or designing activities we love and strive for, creates innovation, drives performance, and builds resilience, and engagement. Hence, standard competency models cannot decide the careers of employees, instead, careers should be designed based on an individual interests and skills. Build Trust and Purpose: Trust is gradually seen as an impalpable asset that can help boost material value, especially as organizations move beyond the challenges associated with the COVID-19 pandemic. As employees shift to a hybrid work experience, strong communication from the top becomes a necessity. When it comes to transforming trust into action, business leaders have found themselves at the juncture of purpose and practice. Sp

The complex scenarios mentioned above. According to statistics revealed by the IMF International Monetary Fund, quality between men and women is in itself an important development goal, and women economic participation is also a part of the growth and stability equation. In today ever-evolving economy, higher female labor force participation can boost growth and the talent ratio, which are important factors even for the DEI programs to succeed at both middle and senior levels. It time the world realized that its in their interest for women to be present at all levels, especially at the top to change the dynamics, reshape the conversation and make sure that their voices are heard and heeded. The influx of social media threw some pretty interesting curveballs on the communications industry. With real time becoming more real by the day, commas strategies have been shifting swiftly over the last few decades. Come pandemic, and everything from the way a brand speaks to its audience to internal commas, there has been a seismic shift in everything we ever knew about business/brand commas. That said, every crisis brings with it, opportunities to shift our gears. There are lessons to learn, and brand commas trends you cannot ignore anymore! Taking the humane approach to Commas The definition of humane the adjective is having or showing compassion or benevolence. When the pandemic forced us to rethink everything we knew about healthcare, it also asked us to take a pause and rethink everything we knew about business communications. The last two years taught us the value of humane conversations. When it comes to brand commas, a human-centric approach is the need of the hour. From talking about the brand to communicating with the people, the objective is to have conversations that leave an impact. Now, here comes the operative question how do we bring humane-centric communications to light without taking away from the essence of the business? From marking the transition that the pandemic brought upon us, to understanding the right approach to commas that falls in sync with an organization culture, history and ethos is key. Moreover, the pandemic altered the course for brand communications How do you make commas authentic when there is a flood of content? In the words of historian, Yuval Noah Harare said, In a world deluged by irrelevant information, clarity is power. The most important thing today is to be able to sift through the irrelevant content online. How do we make commas relevant for business? How can we create dialogues and conversations on various platforms to ensure its relevant and speak to the right audience both internally and externally? The answer lies somewhere between leveraging AI to cut through the clutter and enabling data to help us identify the real audience. The overall goal should be to share valuable content, with the most relevant audience an imperative to effective brand communication. The approach to content has to be critical in nature as it not about the brand representing the people but the.

CRPF-hcm-Eng-Test-Dated-2026-10-21-Test NO.-28953

To cover the seventh edition of Deloitte Global Latest Women in the boardroom report, February 2022 revealed that women hold 17.1 percent of the board seats in India. Globally, 19.7 percent of the board seats are held by women, an increase of 2.8 percent since 2018 compared with 1.9 percent over 2016-2018. At this pace, the world could expect to reach near-parity equality of opportunity only in 2045. The core principles of DEI Diversity, Equity and Inclusion are designed to reevaluate workplace situations, where discrimination takes place at each step, from hiring to re-skilling the workforce. Not encouraging equal gender participation is an opportunity missed. More diversity in the boardroom means maximizing talent and availing of more balanced and creative decision making. This can only lead to a more stable, sustainable and profitable Organisation. W To increase women participation in the global economic system, they must be financially empowered, which is possible only by means of financial inclusion. Giving women access to the use of financial services can have all-encompassing economic, organizational and societal benefits. Moreover, having greater representation of women can change the perception about them, instill trust in their ability to draw a growth trajectory and set higher benchmarks for them as well as for those around them. The most diverse boards tend to be found in companies with women chief executive officers CEOs or chairs. Companies with women CEOs have significantly more balanced boards than those run by men 33.5% women versus 19.4%, states the Deloitte Global 2022 report. This clearly shows that with good governance, progressive measures and unbiased action, it is possible to bridge the gender gap and establish an environment of equity in the workplace. Higher gender diversity in the financial sector, investments and funding in business ventures led by women are increasing but not at a desired scale. The gap between women in the C-suite and women in senior leadership roles is currently 9%. Financial services firms will need to take intentional, strategic action in areas such as recruitment, retention, succession planning, and return-to-office work arrangements. If they don ramp up efforts now, this gap may widen to as much as 14% by 2030, reveals the report. A diverse workforce helps define a positive cultural map of your organization. A McKinsey study reveals that companies with the greatest number of women in top management had a 41% higher return on equity than the average. This is because women bring different social skills and fresh perspectives to the table and hire diverse teams. They are putting in much more effort than men in similar positions in supporting the people on their teams for example, by helping team members navigate work-life challenges, by ensuring that their workload is manageable, and checking in on their overall well-being. Women leaders also spend more time than men on DEI work that falls outside their job description, such as supporting employee resource groups and recruiting employees from underrepresented groups. In most sectors, including financial, women remain under-represented due to.

People you draw to your brand that represent you. Business commas become more than just business integration is key From the profit-sharing models to driving communication on the CSR initiatives, business commas is trickier today than ever before. In fact, it is a multi-layered story. Communication of the future of business will include a strategy that helps you connect the two how do you make business commas more than just business without losing the core objective of business? Communication is not restricted to a handful of marketing tools anymore. What you need is a blend of marketing content and brand commas to create an impact. So, we are talking surveys, web chats, video conferences, videos and more. Brand commas fall flat in the absence of clear numbers that measure success, hence, the need for feedbacks, ratings, opinions that cut across mailers, newsletters, and conferences. It all about integrating the many tools of marketing and brand commas to create a healthy cycle of communication between the many, levels inside and outside the organization. Unified commas is the next big thing as employees and people struggle with overloaded inboxes and scattered information on multiple platforms. Single source of truth is the most important aspect of business commas today. Expanding the Horizon for Your Brand Voice Brand commas starts much before you define the platform. The steppingstones include simple but critical questions like what makes your brand unique, what is the story you are trying to tell, what does your brand stand for, what is the culture you are promoting within and outside the brand. Commas are more targeted towards conveying the right personality for a brand, and the storytelling. This is more relevant now, as the pandemic had the brand stories evolving and expanding in just two years. So, the brand commas which would have ideally transformed over a decade, leapfrogged into the future. The second leg of this is the platform we choose. When you live in a world where digital invades through every part of your business commas, it important to sit back and think what the value is my brand demands? And which platform tells my story well. While this may sound like a rule in the book that has always been there, its relevance has only increased manifolds, with the influx of online media. Today, digital collaborative workspaces are the norm. We are looking at the future where met averse will pivot new ways of brand commas. In the decades to come, businesses will thrive on pillars of trust and hope, communicated by the brand, contributing to the company culture. It can be difficult to know how to start a design business. No matter how much experience you have, it can be hard to know when the time is right and how to take the plunge. Designers coming right out of college tend to want to start a firm right away, but before you can put yourself forward as an expert, you need to figure out the profession.

Which you re going to tell clients that you re an expert in. So how can you prepare yourself with the right tools and mindset for success? Here are a few important points that might come handy when starting a small design business right from scratch. Organize your ideas and devise a business plan First, you all need to gather your thoughts and organize them. You must conduct research and assess the competition. Examine what other designers who share your focus, scope, location, and demographic are doing. What services set you apart from the competition, and what makes your approach unique? A business plan is essential for getting your company on the right track. Only by creating a plan that outlines where you want to go, as well as a plan of action for how you are going to get there, will a business owner know if they are on the right track and how far they are from their final destination. Plan out your finances How do you fund a new business? There are numerous ways to obtain capital to start a small business; you must assess your situation to determine which method is best for you. The most common method of funding a small business is self-financing. Personal savings, credit cards, bank loans, cashing out retirement accounts, and selling personal assets are all options. Conduct research to determine what financing options are available to you. Establish a business location and your structure Whether you start your small business at home or in a cooking space, a desk in a client office, a shared office, or your own private office, the next step is to set up shop. As a small-business owner, you can be a sole proprietorship, a partnership, a limited liability company LLC, or a corporation. Entrepreneurs with small businesses typically choose to form an LLC rather than a corporation because it provides greater management flexibility, as well as fewer structured bookkeeping requirements and tax reporting obligations. Tackle the legal paperwork choosing a business name establishes your company identity. After you vet established and registered your name, you all need to consider the legal requirements for starting a small business. Dealing with legal paperwork is likely another aspect of starting your own small business that is outside of your area of expertise, so you should consult a lawyer to ensure you don forget anything. Create an online presence It no longer a question of whether you need a website and a social media presence for your small business, but of how versatile your website and social media presence can be. You will have everything you need to scale up your small business website in a few simple steps once you vet established your business name, registered its domain name, and created your logo and branding. Create a digital portfolio and consider posting it on your website. Develop your service and promote your business In any industry, networking is essential for success. Seek assistance from the network of.

Associates you vet built over the years. The next step is to expand. Concentrate on marketing your design services Create a marketing plan or hire a marketing specialist to help you in advertising your business, rely on social media, and ensure that your current client base is satisfied and retained. The question in the minds of a lot of people is does market oriented capitalism need to be refined and reoriented. We have had the classic market capitalism and state capitalism play out in the decades of the 1940s to the 1980s. Everybody thought that market capitalism won over state capitalism? The question is whether this is so. We are witnessing the rise of China as an economic and financial power. It game plan is to help build infrastructure in small countries at exorbitant cost and make that country sink in China Debt. When the nation cannot repay it Debts and the interest thereon, it seizes the asset that has been constructed. A new form of colonialism has been created where nations lose valuable land assets with not a shot fired in battle. Remember that this is the worst variant of state capitalism where a Philosophy and National Pride feeling triumph over individual and national freedom of action. Even as China rise as the foremost financial and economic power of the 21st century is on, we have nations which have embraced market capitalism realizing that this works insularly only for the benefits of owners and shareholders to the exclusion of all other economic stakeholders. The definition of market capitalism as hare holder wealth maximization has been extremely restrictive and maybe not so nation friendly from the other national stakeholders point of view. We are seeing increased income & wealth distortions with the Top 5 of the citizenry owning over 80 of the National wealth. Salary differentials between the CEO senior management and average per capita salary within an organization is increasing. This is making people feel left out and in cases uncaring and not bothered. The restrictive definition of hare holder wealth maximization is taking attention away from corporate social benefit programmers and the responsibility to make the world a better place to live in. We have Top Management stating that their job is to maximize profits, the job of Governments is to bring in social equilibrium and run social benefits programmer. They forget that social imbalance and unrest are often a result of their slanted remuneration and Management policies. We are seeing this in India also where the CEO remuneration and sweat equity entitlement is increasing the distance between Top Management and per capita employee salaries in terms of multiples. Often, it is the same family individuals rewarding themselves as shareholders owners promoters and as CEO MD CMD drawing fancy salaries. You have benefits derived from an entity as owner and as Top employees. No trace of an entity existence for social benefits is found. National business is becoming individuals profiteering. In India, we also have this unhealthy feeling.

CRPF-hcm-Eng-Test-Dated-2026-10-21-Test NO.-28959

Of feeling great when some of our enterprise owners reach the rankings of being in the Top 10 wealthiest or the Top 50 wealthiest in the World. What we don understand is that Indian entities are pygmies by size compared to the international entities. Instead of feeling very kicked about individuals getting wealthy and rising in Rankings, let us focus on Indian enterprises rising in Rankings and becoming part of the Top 100 or Top 500 entities. Top wealthy individuals and pygmy enterprises don make a good pairing. Internationally and Nationally, market capitalism has to change to cover social benefits also doing social good, else democratic nations will have an electoral rebellion and one does not know what costs this rebellion will extract and how it will play out in the long run. This reorientation is possible thru Technology interventions and better spending with investments redirection in Health & Education to achieve social benefits of a healthy & better lifestyle. Better Quality of Life is what matters and what Enterprises must aim to provide for. Barring a stunning revival of Congress, the primary political contest for Telangana next year would be between TRS and BJP. If the extraordinary story of BJP national expansion in the Modi era has any disappointments, they are: one, the inability to dislodge an incumbent regional party outside the Hindi belt; and two, the inability to extend its footprint in the south beyond Karnataka. A win in Telangana would wipe that slate clean, hence PM-led concerted efforts underscored by the high-profile national executive meet in Hyderabad in July, as also the party high-profile Liberation Day celebrations there on Saturday. Of course, BJP would take confidence from its impressive performance in Hyderabad municipal polls of 2020, where it finished just behind TRS. But its state-wide strategy would likely be guided less by its success in Hyderabad and more by its by poll victory in Huzurabad. In other words, oriented less on polarisation and more on backward caste consolidation. Many commentators have interpreted PM Mode words Today era is not of war to President Putin on the sidelines of the SCO summit as India finally telling Russia what needed telling. That interpretation was seemingly buttressed by India twice voting to allow President Zelensky to address UN bodies. But this is a reductive reading of what Modi said as well as what India stands for and can do. First, Modi has been asking for cessation of violence from the time Russia invaded Ukraine. Second, he and other Go figures have always been clear that New Delhi approach to particular aspects of this geopolitical crisis will be driven also by national interest. Therefore, while calling for peace and negotiations, India did and rightly so join the West in its raft of sanctions against Russia. And since European imports of Russian oil and gas were exempted from this sanction, India stand was well-vindicated. Therefore and third, when Modi tells Putin that this is the era of war, he not changing India.

Such initiatives must respect the sovereignty and territorial's integrity of all countries. Besides they must adhere to environmental parameters and should not become debt burdens. The forester was very excited and immediately went up to the King and told him about the white elephant that he had seen on Mount Andorrans. He told him that he had marked the way and would require the help of the elephant trainers in order to catch this fantastic elephant. The King was quite pleased with the information and immediately dispatched a number of soldiers and elephant trainers along with the forester. After travelling for many days, the group reached the lake besides which the elephants resided. They slowly moved down to the edge of the lake and hid behind the bushes. The white elephant was collecting lotus shoots for his mother meal and could sense the presence of human's. When he looked up, he spotted the forester and realized that it was he who had led the King men to him. He was very upset at the ingratitude's but decided that if he put up a struggle many of the men would be killed. And he was just too kind to hurt anyone. So he decided to go along with them to Banaras and then request the benevolent King to be set free. That night when the white elephant did not return home, his mother was very worried. She had heard all the commotion outside and had guessed that the King men had taken away her son's She was scared that the King would ride him in to battle and her son would definitely be killed. She was also worried that there world be no one to look after her or even feed her, as she could not see. She just lay down and "cried bitterly. Meanwhile her son" was led in to the beautiful city of Banaras where he was given a grand reception. The whole city was decorated and his own stable was gaily painted and covered with garlands of fragrant flowers. The trainers laid out a feast for their new state elephant that refused to touch a morsel. He did not respond to any kind of stimuli, be it the fragrant flowers or the beautiful and comfortable stable. The remarks were seen as indirect criticism of China, whose BRI is neither consultative nor transparent. In addition, the BRI is seen as debt-trap diplomacy. Third, on terrorism, Dorval emphasized that terrorism is a serious threat to international peace and security. He also pointed out that terrorism could not be justified on any ground and offered fully-funded capacity-building programs to Central Asian countries to combat terrorism and drug trafficking. He pointed out that the linkages between terrorism and drug trafficking were a serious menace. This meeting was yet another step to improve India connectivity with the Central Asian countries. India offer to build its capacities in digital payment and cyber security is timely. This would bolster trade between India and Central Asian countries. India institution allocation of links with the region would go a long way to expand its strategic profile in the region. However, India needs to pay attention to two worrisome dimensions. First, the threat from terrorism has significantly enhanced with the Pak-sponsored terrorist outfits getting support from vario

Pollution control authorities in the Capital cannot, therefore, clean the river in isolation. But the fish deaths, reported from a stretch upstream of the Wazirabad barrage, generally considered relatively cleaner than much of the river flowing through Delhi, underline the scale of the Yamuna challenge. Even in France, where protests are part of the political culture, Saturday's riots and looting were a shock with at least 3,000 businesses and shops damaged. Finally, the government should also review the exemption for CERT-In from the RTI Act as such a sweeping exemption is unnecessary for effective cyber-defence. The path ahead is not without hazards. However, the organisations affected by recent breaches that the advisory was based on did not detect them: they came to light in the AI companies' disclosures and CERT-In operations. Overall, the national cybersecurity landscape is fragmented across a pastiche of enforceable requirements in some domains, advisory technical standards in others, and narrow AI-specific accountability in yet others. 8% in 2026, while the unemployment rate is 8. To understand the precarious situation France is in today, all one has to do is to look at the macroeconomic numbers. The Chalo Yamuna campaign can encourage residents to treat the river with greater care. Released weights cannot be recalled, making ease of access a double-edged sword. Since assuming office last year, the Rekha Gupta government has announced investments in sewage treatment and drainage. But public participation will need to be matched by sustained investment, scientific oversight, diligent enforcement and cooperation among the states that share the river. For India, however, the legal boundaries specified by the IT Act 2000 leave open an accountability gap for autonomous agents without the backing of human intentions. A more specific lacuna is that while CERT-In requires an organisation to report an intrusion within six hours, many organisations remain incapable of, or unwilling to, discover it. On Terminal-Bench, a test of how well AI agents complete coding tasks in a terminal, scored higher than Muse Spark Open. The cybersecurity advisory by the Computer Emergency Response Team (CERT-In) has outlined two threat vectors vis-a-vis Indian commercial and government IT infrastructure: AI companies testing autonomous agents exceeding their designated operational constraints and bad actors weaponising open-source agentic AI tools for automated reconnaissance and exploitation. For Meta, Muse Spark Open is an effort to keep American AI models competitive in a market where affordability and adaptability may matter as much as technological prowess. 4 lakh incidents in 2025, it does not routinely publish postmortem analyses and is exempt from the RTI Act. The river needs adequate clean water flows to dilute residual pollutants. Reports of thousands of dead fish floating in the Yamuna near Burari in Delhi last week were a warning of the river's poor health. The trigger for the unrest was a move by Mr. Lecornu to pass budget proposals raising some taxes and freezing spending on social programmes. 3%. Experts have not conclusively established the cause

areas can undermine efforts in Delhi. However, even by conservative estimates, close to 200 million litres of sewage continues to flow untreated into the Yamuna every day. An approach centred on sewage treatment will not be enough to cleanse the Yamuna. The Delhi government's "Chalo Yamuna" clean-up drive is, therefore, timely. These shortcomings point to a familiar problem of river rejuvenation projects - investments not translating into adequate results on the ground. Involving the public in restoring the Yamuna's health is welcome. The reporting deadline itself has not ensured detection. While CERT-In observed or received reports of 29. For Washington and Beijing, the challenge is to advance competitive AI ecosystems with safeguards in place. Going by benchmark results, American developers still have some ground to make up. When Mr. Macron came to power, he reduced corporate taxes and sought to restrain public spending to stimulate growth. The episode should remind the government to stay the course in addressing the river's chronic problems. Aside from developers allowing experimental systems to act outside their authorised bounds, the advisory highlights two problems for India - existing arrangements focus on cybersecurity incidents after they are revealed; and the implicated organisations being found under-prepared for the DPDP Act - to be enforced from 2027, including steep penalties on entities not maintaining reasonable safeguards against breaches. Municipal halls were attacked and buildings set on fire, including the 19th-century Limoges town hall. The interceptor drain project, intended to capture sewage from drains in the city's slum clusters before it enters the larger drains that empty into the Yamuna, has also been dogged by fragmented responsibilities. CERT-In should also publish more information, anonymised where necessary, which includes remediation outcomes and whether the affected individuals were informed. But its heavy-handed response helped the student protest snowball into an anti-government movement, culminating in riots. But growth remained sluggish while public debt ballooned. As human and autonomous threat actors become more sophisticated, India needs to leapfrog to a landscape with enforceable risk-based requirements for both testing and defending against autonomous agents; better spotting unauthorised access, especially in the public sector; and a legal safe-harbour for security research conducted in good faith, in line with CERT-In policy. When Emmanuel Macron came to power in 2017, at age 39, he promised to keep extremist political forces at bay, build a new France through his 'revolution', rejuvenate economic growth, manage debt and create employment opportunities. As a result, public accountability is also weak: CERT-In found that the AI agents and/or bad actors exploited vulnerabilities, including exposed passwords, that are known security problems separate from AI agents' abilities. The country whose models become the preferred tools of developers worldwide could shape not only the future direction of AI, but also the commercial ecosystem and technical standards that govern it. When school students hit the s

Of feeling great when some of our enterprise owners reach the rankings of being in the Top 10 wealthiest or the Top 50 wealthiest in the World. What we don understand is that Indian entities are pygmies by size compared to the international entities. Instead of feeling very kicked about individuals getting wealthy and rising in Rankings, let us focus on Indian enterprises rising in Rankings and becoming part of the Top 100 or Top 500 entities. Top wealthy individuals and pygmy enterprises don make a good pairing. Internationally and Nationally, market capitalism has to change to cover social benefits also doing social good, else democratic nations will have an electoral rebellion and one does not know what costs this rebellion will extract and how it will play out in the long run. This reorientation is possible thru Technology interventions and better spending with investments redirection in Health & Education to achieve social benefits of a healthy & better lifestyle. Better Quality of Life is what matters and what Enterprises must aim to provide for. Barring a stunning revival of Congress, the primary political contest for Telangana next year would be between TRS and BJP. If the extraordinary story of BJP national expansion in the Modi era has any disappointments, they are: one, the inability to dislodge an incumbent regional party outside the Hindi belt; and two, the inability to extend its footprint in the south beyond Karnataka. A win in Telangana would wipe that slate clean, hence PM-led concerted efforts underscored by the high-profile national executive meet in Hyderabad in July, as also the party high-profile Liberation Day celebrations there on Saturday. Of course, BJP would take confidence from its impressive performance in Hyderabad municipal polls of 2020, where it finished just behind TRS. But its state-wide strategy would likely be guided less by its success in Hyderabad and more by its by poll victory in Huzurabad. In other words, oriented less on polarisation and more on backward caste consolidation. Many commentators have interpreted PM Mode words Today era is not of war to President Putin on the sidelines of the SCO summit as India finally telling Russia what needed telling. That interpretation was seemingly buttressed by India twice voting to allow President Zelensky to address UN bodies. But this is a reductive reading of what Modi said as well as what India stands for and can do. First, Modi has been asking for cessation of violence from the time Russia invaded Ukraine. Second, he and other Go figures have always been clear that New Delhi approach to particular aspects of this geopolitical crisis will be driven also by national interest. Therefore, while calling for peace and negotiations, India did and rightly so join the West in its raft of sanctions against Russia. And since European imports of Russian oil and gas were exempted from this sanction, India stand was well-vindicated. Therefore and third, when Modi tells Putin that this is the era of war, he not changing India.

CRPF-hcm-Eng-Test-Dated-2026-10-22-Test NO.-28966

In a recently released film, Mrs, on an OTT platform, a mother suggests that her daughter adjust in her in-laws home, where she is unappreciated, because it is socially acceptable. Her daughter cooks, cleans and takes care of her husband family as it is her duty, only to realise that she is forgotten in the grand scheme of things. The film is a reminder that most of us are caught in a bind, trying to follow our parents advice, fulfilling familial duties, and social obligations, forgetting that we are souls on a spiritual journey, and can get Home only through a spiritual preceptor mentorship. Yet another film, Three Idiots, depicts how parents intentions, even though well-meaning, could be detrimental to children growth. In the film, while Rancho is epitome of liberation, Farhan and Raju are burdened by familial expectations. Farhan wants to be a wildlife photographer, but his father forces him to become an engineer. When a child is born, parents are the first and most natural mentors hence family comes first. While parents are innate guides, their mentorship styles can sometimes inhibit their grown-up children progress towards becoming a jivanmukt. Often, parents forget that their children are adults individuals seeking moksh and burden them with social obligations. Kahlil Gibran offers wisdom to such parents: Your children are not your children…They come through you but not from you. They are sons and daughters of Life longing for itself. And though they are with you, yet they belong not to you, he says. In Bhagwad Gita, Krishna instructs Arjun to act in accordance with his role; emphasising Self-awareness over external validation for even a mother love could be selfish. For instance, Mahabharat Gandhari, mother of Kauravs, passively wanted her son Duryodhan to succeed as King of Hastinapur, although she did voice her opinion openly, but just before the final battle, she tried to safeguard her son by blessing his unclothed body. Eventually, Duryodhan dies, Gandhari could have stopped him, but she did not. Ramayan Kaikeyi had a burning desire to see her son Bharat as King of Ayodhya; she asked Dashrath to send his eldest son Ram into exile for 14 years, causing great emotional pain to Bharat. Just as Krishna mentors Arjun, true mentors or spiritual preceptors teach their mentee that real wisdom lies in focusing on one path while maintaining clarity of purpose and detachment from unnecessary obligations. Gita verse 3.17 says, but one who takes delight in the Self alone, and is content in the Self only, has no duty. In Chapter 18, Krishna makes it clear that we do not have any duties except towards one. He asks Arjun, o abandon all forms of duty and surrender unto me alone. I shall deliver you from all sinful reactions; do not fear. Therefore, one must be vigilant against those who preach fulfilling one duties and obligations towards family, society, company, nation and the world. Moms can take a leaf out of Maiya Yashoda parenting playbook. She raised Krishna with unconditional love and devotion, only to let him go when destiny called. We could also follow little Nachiketa example. He confronted his father, Vajashrava, for giving away old and

While our duty is towards Self-realisation alone, we must follow our dharm, uphold cosmic law, and renounce doer ship by performing all tasks not for our individual self, but for the One alone. Despite historical gender bias, a whiff of change is a foot for women in urban India. Important shifts in attitude, marriage, education and workplace may help alter the status quo. I am on multiple WhatsApp groups of women. These are mostly of young often unmarried women, many of them based in Bengaluru. For me, these groups are a great window to see what on the mind of today young, educated working women in urban India. In my 50s, think of me like a fly on the wall trying to see the world through their eyes. What strikes me often is how open, candid and comfortable these women are talking about their inner lives, their dreams and their angst in these virtual spaces. That day the discussion was intense as these women weighed in on the pros and cons of freezing their eggs. Many moaned about not finding a suitable partner. Some were concerned about their biological clock ticking. A few worried if taking a career break was advisable. Three things struck me that day. In a relative sense, how much autonomy and control these women seem to have on their romantic and biological lives. The profound impact that innovations like freezing of eggs is having on these women and the choices they are making. And the idea of linear life trajectory seems to be undergoing an important shift. The international women day is here. There will be a customary multi-dimensional gaze on women, their status and progress. On most counts society, business, startups politics and public life Companies hesitated to explicitly address caste-based disparities.While global firms highlighted racial diversity metrics, caste inclusion continued to be ignored or treated as a taboo topic in corporate India. Organizations with 20 or more employees are mandated to publish an Equal Opportunities Policy, a formal statement outlining their commitment to ensuring fairness, diversity, and inclusion in the workplace. Yet, caste representation is left to individual corporate goodwill rather than structured policy.Not surprisingly, given the vast disparity in not just education opportunities but also the quality of education, hiring pipelines favor elite institutions like IITs, IIMs, and ISB that lack caste diversity, limiting opportunities for Dalit, Advises, and lower-income groups.Some Indian companies have taken steps toward addressing these gaps. For instance, certain large conglomerates have introduced policies aimed at improving opportunities for marginalized communities. However, caste-based hiring and structured affirmative action policies remain largely absent in the private sector, unlike the systematic tracking of racial diversity seen in the US. Disability inclusion a compliance checklist Laws like the Americans with Disabilities Act spelt a new chapter in Western models and the push for accessibility in hiring and workplace accommodations gained traction on the back of it. In India, the Rights of Persons with Disabilities Act, 2016, followed much later and was influenced by global disabili

Position but reemphasizing the criticality of peace by pointing to the terrible costs of conflict. That why the words that made global headlines should be read with what Modi said about food and fuel shocks the Ukraine conflict has inflicted on developing countries. The larger point is whether India can play an even larger role as a peace advocate in the sense that its advocacy will be one of the critical diplomatic factors when a conflict breaks out. There are reasons to believe that India ability to wage peace may get considerably stronger. In global realpolitik, economic heft matters. India, already the world fifth largest economy, is looking at years of steady, if not spectacular, GDP growth that will, as per current research, make it the world fourth largest economy by 2027 and third largest by 2029. To this economic size, add the advantage of India excellent record as a non aggressor. A big country with a big economy that has never harbored war like tendencies is a powerful peace advocate. And in Modi, whose national mandates in the world largest democracy give him global political heft, India has a PM who can effectively leverage the country strengths. The peace principle has a long pedigree in India, it a part of India civilizational ethos and it has Mahatma Gandhi as its 20 century champion. Perhaps, the 21 century will see India emergence as an influential peace advocate. Children today experience world through technology. It is part of their life and learning. The promise of technology in delivering education to students made it a lifeline even when the world slowed down. Amid the waves transitioning between physical classroom to online education and back to schools, one major shift in the learning process is introduction of technology on a deeper level. As school grounds re populate again, we observe that the role of education technology is greater than ever. It offers pedagogical support, that, has opened doors to new ways of learning for children. Thanks to technology, it is possible to deliver a LIVE or a pre recorded lesson digitally. New age technologies have bridged the gap right from conducting online learning to applying immersive learning in a classroom environment. It is embedded in the learning experience like accessing learning content at the tip of the fingers or using AI and ML to identify student patterns and engagement levels in the classroom. The most prominent application of technology in the education sector is seen in the flourishing areas of e learning solutions for K12 and higher education. AI, ML, AR, Cloud Computing, and Data Analytics are being explored to enable personalized, timesaving, predictive and engaging learning methods. The question is how can technology help in improving the learning outcomes? This can be answered keeping in mind 3 key parameters of technology Quality of Education, Internet Usage, and Cost. Technology led education is meeting students where they are High bandwidth teaching strategies like video conferencing, uploading large files, saving a big memory chunk.

Normalisation of relations is not possible. A dimension overlooked by the western media was that President Putin had told Xi a day earlier that the latter concern over the Ukraine crisis was noted. While it is too early to suggest that the no limit partnership is witnessing differences on this issue, there are issues on which both do not agree. Russia cannot like any penetration of China in the Central Asian countries, which are becoming noticeable. Russia also cannot accept the SCS becoming a Chinese lake. A central approach of PM Modi in the SCO was to ensure peace and stability in the world, which is witnessing growing tensions because of number of development increasing terrorism from Pak Afghanistan region with support not only from the Pakistani establishment but also from several groups in Afghanistan; problem of oil and food shortage because of disruption in trade; US led sanctions dislocating the trade; Central Asian countries desiring increased presence of India; and the expectations of Iran, which is joining the SCO and of new Dialogue Partners Saudi Arabia, Turkey and Qatar. Besides, Russia and Ukraine are involved in a conflict; India China relations have plummeted when China tried to encroach into the Indian territory leading to violent clashes in the Galway Valley; India relations with US have improved in the recent years; and the US and its European allies are pushing India to oppose Russia on the Ukrainian issue. India peace centric approach in the above scenario is the natural outcome. PM Modi had stressed the criticality of peace in the present juncture, India has been pushing for negotiations between Russia and Ukraine since the start of the operations. Putin acknowledging India concern, stated that he was aware of the need to have peace but indicated that Ukraine leadership was not interested and he desires to settle the issue on the battle front. He desired some more time to ensure that the other side accepted to settle the issue through negotiations. President Putin mentioned Modi birthday, fondly remembered his visit to New Delhi in December 2021, invited PM Modi to visit Russia, noted that Russian supplies of fertilizers to India had grown eight times, that large scale joint projects in the oil and gas sector and nuclear power were consistently being implemented, cited Russian people great interest in India rich history and ancient culture to support visa free tourist trips. PM Modi also stated that he had wonderful meeting with President Putin and they discussed furthering India Russia cooperation in sectors such as trade, energy, defence and other bilateral and global issues. PM Modi at the SCO underlined the steps needed to deal with the current crises. He focused on dealing with food problem and suggested that millet should be given preference as that can be grown easily in the Central Asia. He also pressed for trusted, reliable, diversified supply chains ensuring better connectivity to deal with the issue of disruption in the trade. In a reference to Pakistan act of.

For learning software are all possible in big cities with great connection and access. Consider this intersection high quality video or real time teaching 25 student response time considerable amount of internet. It is important to understand the inequitable focus points for students when it comes to how and where they need access to education. With bandwidth and cost being the key trials in making education reachable, technology is resolving that too. When educators and technology come together, great things happen. Conventionally, where quality teachers could not reach, now, technology has made that possible. It has helped bring classrooms to every home in Bharat even in the remotest parts of the country. Cost of learning has always been exponential to quality education. Through comprehensive pre recorded classes, virtual whiteboards, and a real time teacher who can solve your doubts, learning has become quite easily accessible and effective with just a phone and a decent internet connection. Depending on the variability of technology access, a teaching strategy that dramatically lessens bandwidth proves to be cost effective for students. Price disruption due to technological development has narrowed the gap in accessing quality education. Learners from the remotest part of the country today have access to best quality teachers and content, at a very affordable or at no cost at all. Live quizzes, performance assessment, and student appreciation AI/ML has made it all possible Technology is all pervasive. It has made the complicated simpler; and the mundane more exciting. Learning too is increasingly driven through technology and due to its obvious features and benefits versus traditional learning methods, students and parents are more open and attracted to the wonders of e learning. Artificial Intelligence (AI) plays a key role in building personalized learning algorithms to bring measurability in the learning process and predictability in learning outcome improvement. Augmented Reality and 3D modeling are really helping reshape the way students grasp theoretical knowledge. Features like LIVE quizzes, report generation, instant gratification are used to assess student performance and make the learning process more engaging. All these interactive and engaging learning resources have in turn enhanced student learning outcomes. There is no doubt that innovation has empowered the way children learn, play, and grow. Keeping Education for All at the center, it is our responsibility to develop effective learning frameworks. Technology has greatly enabled this path in offering best pedagogical support reach millions of students and create an impact at scale for Bharat. Notwithstanding the mischief of the western media to project half a sentence, without placing it in the proper context, as the change in the Indian approach towards Russia, the real significance of the Summit lies in the fact that it was dominated by PM Modi taking into account the contents of his speech and dialogues with other dignitaries and that he disdained Xi as an inferior rabble. He neither exchanged greetings nor shook hands with Xi. He sent a clear message to China that unle

CRPF-hcm-Eng-Test-Dated-2026-10-22-Test NO.-28973

Blocking India assistance to Afghanistan, he mentioned that we give each other full rights to transit. PM Modi also met important dignitaries. He met with Turkish President Recap Typo Endogen and discussed ways to deepen bilateral cooperation in diverse sectors. India realizes importance of Turkey for trade, particularly its EEZ for trade with Russia via Iran. Moreover, it is necessary that Turkey does not create problems for India at the behest of Pakistan. He also met with Iranian President Ibrahim Raise for the first time in person and the two leaders discussed wide ranging bilateral ties, reviewed the progress in the development of Cahaba Port and regional developments including Afghanistan. The SCO Summit also witnessed the Chinese duplicity on the issue of terrorism. Xi Jinxing stressed on the need to crack down hard on terrorism and asked all the stakeholders to get involved. China has been blocking the Indian and US efforts to designate Said Mir who played an important role in 26/11 Mumbai attacks, Since June, China has been stymied efforts to list Abdul Raman Make of Let and Abdul Raff Aznar of Jams on the plea that more time is needed to study the proposal to keep the proposals on technical hold so that they may be finally dropped after sometime. Such double standards have been observed by others. On the whole, PM Modi emerged as the tallest leader and a serious proponent of peace at the SCO. This was in contrast at the last Summit in 2019, when Xi dominated the Summit. India image has significantly improved with its economic growth. India tackled the Covid situation very well and it has emerged as the fifth largest economy and is likely to become the fourth largest economy in 2027. India has also not been seen as an aggressor and the Central Asian and the South East nations seek greater India presence in those regions for stability and peace. With enhanced economic heft, India ability to press for peace has enhanced. One can hope that it can bring Russia and Ukraine to negotiating table to end the conflict. As current trends dictate, the future of product design is slated to be even more user friendly, than ever before. While progression in this direction is evident, this trend will present itself with a significant twist these products will not only be user friendly, but they will also be highly intelligent and conscious. These products will be able to think and feel for themselves in various different extended mixed realities. Whether they are physical or simply digital projections and interactive holograms; they will operate as human companions and will help transform our lives in numerous ways. As we rapidly approach a future, where our product designs will behave like human beings; there are several trends that are driving this development. The very same trends will also play a role in how product development will be experienced in different states of reality, be it virtual, physical, or blended. The Rise of Meta.

CRPF-hcm-Eng-Test-Dated-2026-10-22-Test NO.-28974

Reality and Meta Humans Today, we stand at the starting line of a future where artificial intelligence (AI) and machine learning (ML) have become so powerful and ubiquitous that they will fundamentally change the nature of reality itself. This will be known as the age of Meta Reality and Super Meta humans and will lead into the vastness of the Meta Highway. In the future, all products will be imbued with a high level of intelligence and consciousness, and they will be able to interact with us in more meaningful ways. This phase will give way to a world where mixed reality user interactions will enhance the true spirit of the Met averse. While this aspect is not yet a part of our reality, it could very well be a game changer for technologists, designers, and innovators in the future. Products with Multi Sensorial Intelligence The idea of products with multi sensory intelligence, is thought provoking and its applications will be endless. While automobiles will be able to self adjust air quality and sound; building materials will be able to self align their molecular structure and strengthen themselves, to adapt to local climate conditions or earthquakes. This type of product design and development will completely revolutionize how we interact with our surroundings. Even when we think of aspects like entertainment and recreation, we can expect technological advances to eliminate widely used physical products. For example, wave guided lenses built into wearable eyewear, will do away with televisions, allowing human beings to experience TV shows and movies as smart interactive holograms. High Fidelity Self Awareness High fidelity self aware products will learn about their users through constant machine learning and data interaction. As they become more attuned to their user needs, these conscious products will provide increasingly personalized experiences, proactively anticipate their user needs and will also be able to communicate with us and form deep emotional bonds. In the last few years, we have seen incredible advances in artificial intelligence and robotics; and ideas that once seemed farfetched are a part of our reality today. products will be our closest companions in the future and will operate as mere extensions of ourselves. It may seem hard to envisage, but we will soon rely on them for everything from decision making to social interaction. Equipped with emotional intelligence, they will be able to understand the deeper nuances of what it means to be caring, loving, and empathic towards. Indian schools are rejoicing gleefully ever since it came to light that one of the Ivy League universities in the US misrepresented certain numerical data (like class size, number of faculty with Ph.D., and financial resources spent per student etc.) for consideration under US foremost ranking system for the universities. Not surprisingly, these inadvertent incorrect methodologies helped this university to climb up on the ranking ladder. It admitted its misrepresentation only after a whistleblower raised his reservations on these numbers. And who was this whistleblower? You guessed it right, who else but a.

CRPF-hcm-Eng-Test-Dated-2026-10-22-Test NO.-28975

WHO director general recently offered his view that the end of the pandemic is in sight. He based this on the observation that weekly count of deaths from Covid was now the lowest since March 2020. In a much awaited and widely applauded burst of optimism, Dry Tudors declared We have never been in a better position to end the pandemic we are not there yet, but the end is in sight. It appears ironic that this sigh of relief came when the reported weekly global death toll on September 5 was 11,118 on WHO website. However, when the total death toll is around 6.5 million according to WHO, and much higher according to other estimates, this decline in death rates does bring hope that the pandemic is entering the slow lane. A tragic incident in Jharkhand last week a pregnant woman was crushed by a tractor was another reminder of the murky and law-breaking ways of loan recoveries in India. A third party recovery agent representing the NBFC, Mahindra Finance, reportedly ran over the victim while taking possession of a tractor. The company has apologised, promised to support investigation into the incident and stated that it will review the use of third party agents. All that good but, given the scale of this menace, not enough. Yes, RBI-regulated banks and NBFCs can legally use recovery agents. But this outsourcing has also required repeated interventions by RBI for over two decades. Every intervention was preceded by a stream of complaints about recovery methods, which are straight out of a loan shark playbook. Sometimes constitutional courts have had to step in to restrain lenders. The problem is not the use of third party recovery agents. Financial intermediaries should have the freedom to choose a business model. But that freedom comes with responsibility. That means since recovery agents are empowered by banks and NBFCs, the latter must actually face consequences for the outrages committed by the former. But on the ground, there a vast gulf between what RBI circulars mandate and the approach of recovery agents. For example, last month an RBI circular reminded regulated financial intermediaries that they are responsible for the conduct of their agents and even instructed them to ensure borrowers are contacted only between 8am and 7pm. If RBI prioritised the conduct of recovery agents, and severely pulled up banks and NBFCs, would the problem seem perennial? Note that the issue was serious enough to merit a mention in a credit policy document 15 years ago and a year later RBI even requested IBA to formulate a training course for recovery agents. These arguments don dilute the importance of a healthy credit culture that involves timely recoveries. But the process has to stay within the boundaries set by the law. It was forcefully emphasised in a Supreme Court judgment in May 2008 in relation to a dispute over the method of recovery employed by a bank. Since some financial intermediaries seem reluctant to take responsibility for the conduct.

CRPF-hcm-Eng-Test-Dated-2026-10-22-Test NO.-28976

Of their agents, it RBI job to crack the whip. Perhaps, it should consider levying penalties on banks and NBFCs. Will the reopening of movie theatres, 32 years after fear of terrorists and edicts of fundamentalists shut them down, be a new, happy script for J&K? The UT lieutenant governor Manoj Sinha inaugurated multipurpose theatres in Shopian and Pulwama, and Srinagar first multiplex will open its doors today. One hopeful sign surely is that the kind of religious obscurantism that held sway in the 1990s is absent now. The other is that in an area still waiting for major industrial investment, local economy can benefit from any kind of commercial activity with authorities promising a theatre in each district of the UT, and with audiences, especially the young, starved of the going to a movie experience, the economic impact is likely to be non-trivial. Plus, there was a particular poignancy in Kashmir losing both its status as India most-favored movie locale as well as its movie halls. It important to note here, in the cultural context, that Saudi Arabia allowed movie theatres to operate as part of its overall de-radicalization moves. But as these columns have said before, while every move to normalize life in Kashmir is welcome, the biggest move, without which the sum of others won get traction, is holding elections in J&K. Gains from the nullification of Article 370 cannot fully materialize unless Kashmir people are made to feel like stakeholders in their own development. And that can only happen if J&K is able to elect its own politicians to manage its affairs. Therefore, the Election Commission must stick to its November 25 deadline for the final publication of electoral rolls. There will be controversies, but that part and parcel of politics everywhere in India. If polls can be held in deep winter, EC must decide on an earliest possible date next year. In mid-1948, impatient with the progress made by the Indian army in evicting the Pakistan army and the tribal Lash Kars from Jammu & Kashmir, India home minister Sardar Vallabhbhai Patel pressed PM Nehru to authorise the use of force to compel the Nizam of Hyderabad to accede to the Union of India. Orchestrating the accession of J&K and Hyderabad, two of the largest princely states in colonial India, into the Union within a year of Independence was at the top of Patel nation-building priority list. A pleasure-loving Nizam and his hardline Razakars: A weak ruler, the last Nizam of Hyderabad, Sir Mir Osman Ali Khan Siddiqui Asaf Jah VII, had emerged as one of the world richest men because of his ability to retain control over the rural population, extract huge taxes, exploit the fertile cotton and sugarcane belts of the region, and send the produce to Great Britain and Europe in return for unimaginable wealth. There was a time when the thing that I least looked forward to in life was the report card. And yet it came, every six months, with.

Spl-CRPF-hcm-Eng-Test-Dated-2026-10-22-Test NO.-28977

For Delhi, Rubio's persona matters. Weighing in on a long-running debate over the authorship of the play Edward III, a forthcoming study using computerised linguistic analysis concludes that William Shakespeare was the principal author-and his collaborator was Christopher Marlowe. WHO's nutrient and promotion profile model for baby foods in 2022 also identified sweet purees and products in which fruits released sugars during processing as concerns. The SCO's challenge is to translate its stated commitment to combating terrorism into practical cooperation through intelligence-sharing, action against terror financing, disruption of recruitment networks and the denial of safe havens to terrorist groups. And exit gates, and unobstructed access for emergency vehicles. The conviction that political differences need not extinguish cultural fellowship seems to have faltered this year. Reliance, which runs the Jamnagar refineries, and now buys Venezuelan crude under a US licence, is set to become a crucial node in the US-India energy alliance. The SCO has the potential to promote regional stability, trade and connectivity instead of becoming another source of strategic friction. In the five months since, its actions show the instincts of an opposition party on the street, drawn to the readily mobilised terrain of identity politics. India's political investment in engaging with Rubio is a prudent bet for the long-term relationship with the US. The intervention follows India's refusal to endorse the joint statement at the 2025 SCO Defence Ministers' meet in Qingdao, China. In 2024, he called snap elections to blunt the far-right momentum. Rubio also hinted at a possible Quad meeting on the margins of the East Asia Summit in November, and spoke of the work underway at the ministerial level. By calling on SCO member-states to dismantle the ecosystem of terrorism, he reiterated that the threat must be addressed at its source rather than treated as an isolated security challenge. He expects the long-pending trade deal to be concluded soon, and President Trump has confirmed the assessment. Adding sugar has often been a commercial strategy, as it serves as a cheap bulking agent, improves palatability and encourages repeat purchases. Defence Minister Rajnath Singh's address at the SCO Council of Heads of Government meeting in Tajikistan, on Tuesday marks another significant occasion since Operation Sindoor (2025) when India has used the multilateral forum to raise the issue of terrorism, including cross-border terrorism from Pakistan. Rubio has said the Jamnagar facility has made India a "refining superpower" and has hinted at a more strategic energy collaboration between India and the US that goes beyond Indian purchases of American hydrocarbons. Rather, these objectives cannot be met independently of a stable security environment. He said that regional cooperation cannot be meaningful if countries approached terrorism selectively. missed to change. This is Emmanuel Macron's legacy. New Delhi had objected to a draft that failed to reflect its concerns over cross-border and Pakistan-sponsored terrorism, including the Pahalgam attack (2025), while referring to

gets some things right about the reign of Edward III of England. He refused to be drawn into a discussion on the current protests in India, arguing that they are an internal matter. While retaining its principle against terrorism, India should lead efforts to achieve more regional cooperation in tackling it. Pessimists in Delhi, and there are many, fear that Trump could still reverse course on tariffs over Russian oil purchases. Their long-term value, however, depends on respect for sovereignty and territorial integrity, alongside conditions that allow goods, capital and people to move freely. This was part of Edward's project to live up to the chivalric ideal of kingship, which he did so well that Ian Mortimer titled his 2006 biography The Perfect King. The 2001 film A Knight's Tale is set in the (13)70s, so naturally its soundtrack is full of classic rock and funk hits from the (19)70s. India has consistently argued that terrorism cannot be divorced from the broader agenda of regional peace, economic integration and development. Connectivity projects such as the International North-South Transport Corridor and the development of Chabahar Port offer Central Asia connectivity with wider markets. Yet, its effectiveness will remain limited if political disagreements prevent members from developing a common approach to security threats. For the near term, Rubio has sent positive signals. He is a possible Republican presidential candidate in 2028. While the FSSAI's draft proposal is a step in the right direction, stopping here would enable manufacturers to replace sucrose with another sweetening ingredient. He is both Secretary of State and National Security Adviser, a powerful combination last seen under Henry Kissinger in the 1970s. As a Senator, Rubio has long favoured closer ties with India. Arguably, there is one. India maintained that such an approach would undermine the organisation's credibility by overlooking the threat it had brought before its members. The Food Safety and Standards Regulations 2020 currently allow manufacturers to add sucrose and fructose, provided their combined total does not exceed 20% of the carbohydrates in a product intended for infants aged 0-6 months. Economic corridors require predictable borders, investors need confidence in the rule of law, and transport networks must be violence- and disruption-free. In a draft proposal, the Food Safety and Standards Authority of India (FSSAI) has pitched to eliminate this allowance-in line with WHO's recommendation to have infants breastfeed exclusively for the first six months, followed by nutritionally adequate complementary foods avoiding added sugars until 24 months. structural problems the French economy was facing. After the elections, he invited a leader from smaller blocs to form a government to keep the left-wing New Popular Front, the largest bloc, out of power, deepening the political crisis and weakening his position. While corporations have defended sugary formulations as abiding by the Codex Alimentarius, public health experts have repeatedly described their decision to sell infant foods with added sugar as nutritional dumping. s suggest a disturbing narrowin

Clock wise precision, presenting to your parents, in black and white and sometimes in red, your Key Performance Indicators or KPIs. Of course, you could argue, and make excuses, but numbers have a serene truth about them, cruel in their infallibility. Numbers tell stories. Stories not just about the mastery of a subject or the lack of it, but attestations to the strength of your character. The marks in the report card were proportional to the sacrifices you had made, the afternoons you had not played cricket, and the Shilpa Shirodkar movies you had not seen, and this ability to go against instinct was considered to be a leading indicator of your success in the future. Lekha pora kore je, gari ghora chore se (Those who study ride the car) was a saying in Bengal, and this directly correlated what was on the report card with success in life. Now my blood work ordered by the doctor has taken the place of the blasted report card. In the same way my marks in geography and history once did, the HDL/LDL or A1C measures the discipline of my daily life. It points out, without mercy, where my character has failed, where I have given into my base impulses, by having a high-carb meal or not doing portion control or having too much alcohol, or not enough exercise. And just like the report cards, they are a crystal ball, providing a glimpse of an apocalyptic future not of unemployment or of becoming CPI(M) cadre, but something nearly as bad, namely cardiovascular disease and kidney failure. I dread the blood report as I once feared for my report card. Nothing you do is ever enough. If one number looks to be improving, the other does worse, and just when you think you have done kind of ok, along comes another expert who takes a look and raises the alarm, and their solution is to get more diagnostic exams done, generate more reports, and continue the inevitable spiraling-downward cycle of numbers, alarms, judgment, and further restrictions live more of your life by living less of it. Maybe, now that I think of it, the half-yearly report cards were all that bad in comparison. At some point, we are bound to question whether we are leading our lives in the manner in which they should be led. As we grow and transition through the various phases of life, we invest much time and effort to nurture relationships around us, to maintain our connection as social beings. Yet, somewhere along the way, these relationships come to an end, through misunderstandings, or separation by distance or death, leaving a void in our lives. Such experiences impel us to seek a relationship that is permanent and everlasting so that we are not alone in this world. All relationships of this world will come to pass one day. The only relationship that outlasts even our time on earth is our relationship with God, the Creator. So, how do weA.

Develop our relationship with God? We need to first remember who we are. In reality, we are souls, a part of the Divine, separated from Him eons ago. Entangled in the wheel of birth and death, our souls have been yearning to return to the Source. This human birth was given to us so that we can find our way back to God. And to do so, we need to embrace the path of oneness and love. create a solid foundation for our lives, based on the ethical virtues of truthfulness, humility, compassion, non-violence and selfless service. All goodness is born out of love, and when we love, then peace, harmony and joy automatically follow. The truest of all love resides within us. It is the love of the Divine who brought all creation into being. The Supreme loves us tremendously, yet we do not experience this love because our attention is focused on the attractions and distractions of the outer world. When, through the process of meditation, we withdraw our attention from the world and focus it within, we experience the bliss and joy of God love. As we become imbued in this divine, transformative love, we become love ourselves. The Divine love also makes us godly, and we inculcate ethical virtues in our lives. Second, we need to take steps to experience God love and Light in our lives, and this happens as we withdraw our attention from the outer world and focus it on the inner spiritual worlds where He resides. As we connect with the Shad, the Light and Sound of God reverberating through all of creation, we experience the joy, bliss and love of the inner worlds. Gradually, we progress on the inner journey until our soul merges back in its Source, reuniting with the Divine. Once we have experienced this love, we become aware of the divine presence in our lives. Fear and anxiety vanish, and we no longer feel alone. Living in God Sweet Will, we begin to lead our lives lovingly and calmly, always in the company of our Friend. God has not forsaken us. It is we who have forgotten God, and it is up to us to take steps to remember Him. This happens as we take the time to sit in meditation daily. The last decade has ushered in the digital world into our everyday lives. Digitization is not just about offices using complicated software, or the most intelligent employees working on computers throughout the day. We are dealing with a digital world in every realm of our lives. Mobiles have ensured that technology is available in a single swipe, and e commerce portals have ensured that what can be seen on a mobile or laptop can be delivered home in as little as half an hour today. Feeling hungry? You can have your food delivered digitally. Want to shop? Browse through thousands of clothes, check for sales and then get the ones you really love delivered at your.

CRPF-hcm-Eng-Test-Dated-2026-10-23-Test NO.-28983

I need help now! Five minutes from now I am dead meat's. He looks up from his prayer and here comes the teacher with a look in her eyes that says he has been discovered. As the teacher is walking toward him, a classmate named Susie is carrying a goldfish bowl that is filled with water. Susie trips in front of the teacher and inexplicably dumps the bowl of water in the boy lap. The boy preteen's to be angry, but all the while is saying to himself, Thank you, Lord! Thank you, Lord! Now all of a sudden, instead of being the object of ridicule, the boy is the object of sympathy. The teacher rushes him downstairs and gives him gym shorts to put on while his pants dry out. All the other children are on their hands and knees cleaning up around his desk. The sympathy is wonderful. But as life would have it, the ridicule that should have been his has been "transferred to someone" else Susie. She tries to help, but they tell her to get out. You done enough, you klutz! Finally, at the end of the day, as they are waiting for the bus, the boy walks over to Susie and whispers, you did that on purpose, did no you? Susie whispers back, I wet my pants once too. Moral: All of us go through all good and bad things in life. In the run-up to the 20th anniversary of the law, we should have been discussing how to make the information commissions stronger. RTI has helped improve essential services delivery and basic rights. It has helped expose Adders, Commonwealth Games, Yampa and other big-ticket scams. But information commissions are RTI backbones. Instead of making them more amenable to sharing information, we don even know whether many commissions will remain functional. RTI was the result of a grassroots movement. Its subversion by governments must end. Once, there was this guy, who was in love with a girl. She waste most beautiful and gorgeous but for him, she was everything. He used to dream about her, about spending the rest of life with her. His friends told him, why do you dream so much about her when you don even know if she loves you or not? First, tell her your feelings, and get to know if she likes you or not. He felt that was the right way. The girl knew from the beginning, that this guy loves her. One day when he proposed, she rejected him. His friends thought he would take alcohol; drugs etc. and ruin his life. To their surprise, he was not depressed. When they asked him how was it that he is not sad, he replied, why should I feel bad? I lost one who never loved me and she lost the one who really loved and cared for her. Moral: True Love is hard to get. Love is all about giving to other person without greed of gaining anything in return, if other person rejects it, its him/her who will be losing the most important thing in life. So never feel dejected. A man stopped at a flower shop to order some flowers to be wired to his mother who lived two hundred miles away. As he got out of his car he noticed a young girl sitting on the curb sobbing. He asked her what was wrong and she replied, I wanted to buy a red rose for my mother. But I only have seventy-five cents, and a rose costs two dollars. The man smiled and said, Come on in with me. I shall buy yo

CRPF-hcm-Eng-Test-Dated-2026-10-23-Test NO.-28984

According to The Lancet, around one billion people worldwide suffer from psychological difficulties and mental health concerns. Emotional distress has been a leading cause of global disease burden for the past two decades. Globally, we are seeing an increasing number of people grappling with fear, inertia, loneliness, hopelessness, helplessness and a lack of meaning in their lives. However scientific research reaffirms that speaking freely to someone about our deeply felt emotions is helpful. Recent neuro-imagining studies conducted at University of California observe that when people talk about their bottled-up feelings, their emotional reactivity decreases, and they feel calm and composed. This process helps them in understanding their feelings, modulating sweltering emotional intensity and taking away unwarranted sense of fear and stigma from them. As people talk freely about their emotions, they realise that what they are going through is quite normal, there are ways to deal with it and that it is certainly not end of the world. Short, crisp and abbreviated dialogues via smartphones have altered human communication to truncated and stilted fragments. Consequently, people feel clueless and hesitant to express themselves and end up suppressing disquiet, agony and pain. But these stubborn negative emotions keep pushing for expression and when this expression is denied, they create strong ripples inside our body and our mind, harming and sabotaging us in multiple ways. We feel tormented and take twisted routes to express these emotions often in the form of depression, self-destructive behaviors, physical diseases, suicidal tendencies, addictions, violence or aggression. In other words, unexplained chaos that we often see in our physical bodies, intrapsychic spaces, interpersonal world and social relationships can be easily traced to these repressed and unmetabolised emotions. To work through this chaos, reclaim our health and bring back positivity in our lives, we must learn to deal with our negative emotions in a constructive manner. Between the two extremes of suppressing our emotions and unleashing them in a raw manner, there is a third choice that we often forget speaking our heart out. Chandogya Upanishad explains that our heart is meant to serve as a bridge between external reality and our inner divinity. Go into the cave and you find treasures of heaven. The sun, moon, stars, space, clouds, lightning and rains all these miracles of creation are within man heart. When it rains outside, it rains inside also, and stellar regions shine resplendently within the heart of man. But we can find the pathway to these luminous zones only when our heart is released from suffocating grip of emotional turmoil. Otherwise, we will continue to see the darkness, feel it, identify with it and believe that darkness is our true nature. Therefore, let us learn to express our bottled-up emotions freely in words, in benign presence of someone whom we trust, so that our pain heals, and our heart feels liberated to travel once again to its primordial and eternal state of bliss. Such spaces should be accessible and inclusive, where cultural sensitivity is priorit

The alignment of personal and collective goals can help foster action against issues like domestic violence, child marriage, child labor, trafficking, and stigma. Survivors can advocate for systemic reforms, such as comprehensive anti-trafficking laws, community-based rehabilitation with mental health prioritisation, and effective functioning of anti-human trafficking units.The Integrated Leaders Forum against Trafficking, a national federation, is an example of such a collective. It represents more than 3,000 survivors across seven states in India who engage with the policy and media space at the national level.The study found those collectives that were provided facilitative mentorship, which emphasizes introspection, reflection, and a connection to personal feelings, experienced profound interpersonal growth. Experiential methods such as theatre, art, simulations, and storytelling also promote personal growth among survivors. These approaches provide a safe and creative outlet for expressing and processing emotions. By engaging in these methods, survivors can reclaim their narrative, reframe past experiences, and achieve greater emotional regulation and resilience. This process helps survivors develop empathy, self-awareness, and self-acceptance, which are fundamental to building confidence and self-esteem.For instance, 70 percent of survivors in one such collective reported high levels of appreciation of life, supported with greater autonomy and financial independence. Survivor leader Rosharon Khatun reflects,in our society, a womancommunity is often decided by othersfirst her parentshouse, then her husband or in-lawshouse, and later her sonhouse when sheold. But I chose my own community where I intend to live. I saved money, bought land, and build my life. This is how I progress through my leadership.To effectively scale and sustain transformative impact, it is essential for organisations to move forward with an integrated approach. Continued monitoring and research are essential to understanding the nuances of survivorsgrowth journeys and improving programmers designed for them. By consistently investing in leadership development for survivors, we can ensure that they not only heal but also emerge as leaders who guide their communities towards a future where empowerment, resilience, and justice are the statusnot a collection of separate nations but a single organism. If one part suffers, the whole is affected. Just as in a melon, when one section begins to rot, the decay spreads, and unrest in one region disturbs global peace. Global peace is not an abstract ideal but a necessity. Violence, forced displacement, and rigid national policies are not just political matters but spiritual concerns. The true test of any law, including deportation policies, is whether it upholds human dignity. Enforcing rules without compassion leads only to suffering. If a nation must regulate immigration, it should do so with fairness allowing people time, support, and means to transition rather than pushing them into despair. Justice without kindness is another form of cruelty. India is more than a geographic entityit is a consciousness, a land where spiritu

CRPF-hcm-Eng-Test-Dated-2026-10-23-Test NO.-28986

In a damning observation's on Monday, the Supreme Court said that by failing to fill up vacancies in information commissions, governments have rendered the Right to Information Act a dead letter law. This reflects the grimness of the data presented by the petitioners in the case. For example, 7 of the 11 information commissioner posts in CIC are vacant and the body will become defunct if replacements for the 4 incumbent commissioners due to retire in November are not put in place in time; Telangana SIC has been defunct since February 2023, Tripura since "July 2021, Jharkhand since May 2020. A voyaging" ship was wrecked during a storm at sea and only two of the men on it were able to swim to a small, desert like island. The two survivors who have been good friends, not knowing what else to do, agreed that they had no other recourse but to pray to God. However, to find out whose prayer was more powerful, they agreed to divide the territory between them and stay on opposite sides of the island. The first thing they prayed for was food. The next morning, the first man saw a fruit-bearing tree on his side of the land, and he was able to eat its fruit. The other man parcel of land remained barren. After a week, the first man was lonely and he decided to pray for a wife. The next day, another ship was wrecked, and the only survivor was a woman who swam to his side of the land. On the other side of the island, there was nothing. Soon the first man prayed for a house, clothes, more food. The next day, like magic, all of these were given to him. However, the second man still had nothing. Finally, the first man prayed for a ship, so that he and his wife could leave the island. In the morning, he found a ship docked at his side of the island. The first man boarded the ship with his wife and decided to leave the second man on the island. He considered the other man unworthy to receive God blessings since none of his prayers had been answered. As the ship was about to leave, the first man heard a voice from heaven booming, Why are you leaving your companion on the island? My blessings are mine alone since I was the one who prayed for them, the first man answered. His prayers were all unanswered and so he does not deserve anything. You are mistaken! The voice rebuked him. He had only one prayer, which I answered. If not for that, you would not have received any of my blessings. Tell me, the first man asked the voice, what did he pray for that I should owe him anything? What bears underlining is that this is not the first time this case has been in the apex court. Its 2019 judgment directed governments to fill up vacancies, in future, without any delay. It specified that the process for filling up of vacancies be initiated 1-2 months before the date on which these are likely to occur. While the vacancies persist, governments continue to say all the right things about the importance of the RTI Act to democracy. Moss personnel and public grievances Jitendra Singh has called the law part of the larger narrative of ensuring transparency in governance and nurturing the trust between citizens and the state. The petitioners could agree more. There is a nine-year-o

This House deeply expresses its serious concern over the rising incidents of violation of Human Rights in various parts of the country and urges upon the Government to take effective steps to curb the occurrence of such incidents. I am a Member of this House for the last 32 years. I have never seen this House even had a structured debate on a very important subject pertaining to millions and millions of people of our country. We debated and we raised the issue whenever there was any incident of human rights violation, but there had not been a structured debated on this important subject which is agitating the people of the country. Today, I am raising this subject because I found that even after constitution of National Human rights Commission in 1993, the number of incidents of violation of human rights has not reduced and it is increasing day-by-day. I have the figures for the last three years where you will find how the number of incidents has increased. In 2006-07, it was around 82,000, next year it increased to approximately one lakh and then it came down slightly to 90,000 but it is still more than the number of incidents that had taken place in 2006-07.You will be surprised to know that in one year, the incidents of custodial death have increased to more than one thousand and so also the cases of murder. The Right to Life is a Human right and a Fundamental Right. The right to have a decent living is a Fundamental Right. Population do not have decent living. If one-fourth of the population has to go empty stomach daily even after 65 years of independence, will it be treated as decent living? This is the situation today prevailing in our country. If a substantial percentage of women are suffering from malnutrition, is it a decent living? The Prime Minister had called it a national shame. Lakhs and lakhs of people are living in slums without any amenities, without any facilities in unhygienic condition. Once such an instrument is duly executed, the Registration Act allows it to be registered even though the donor may not agree to its registration and upon registration, the gift takes effect from the date of execution. It was further held, that the doctrine that a donor who has left his gift incomplete cannot be compelled to complete it, has no application to a case where the donor, by executing the deed has done all that the needs to do; registration can be effected even without his cooperation. If the interpretation of Section 123 of the Transfer of Property Act and Section 47 of the Registration Act as canvassed by the defendant were to be accepted, it will open the doors for all purchasers of immoveable were to be accepted, it will open the doors for all purchasers of immoveable property to avoid payment of stamp duty on the sale deeds and become owners only on the basis of executed unstamped.

In today generation, where traditions and "customs often intertwine" with modern lifestyles, Karwa Chauth continues to hold a special place in the hearts of married couples. This auspicious Hindu festival, predominantly celebrated by women, showcases a beautiful blend of tradition and the evolving dynamics of relationships. Karwa Chauth is a day-long fast observed by married women for the well-being and longevity of their husbands. While fasting from sunrise to moonrise can be physically demanding, it symbolizes the deep love, commitment, and sacrifice that wives are willing to make for their spouses. However, in today fast-paced world, the significance of Karwa Chauth has taken on a new meaning. It no longer just about the fasting ritual, but also about celebrating the bond between partners and embracing the essence of togetherness. The digital age has also played a significant role, as technology allows couples to stay connected throughout the day, despite physical distances. Video calls, messages, and virtual celebrations have become the norm, ensuring that the essence of Karwa Chauth is preserved even when couples are apart. In the modern world, some feminists express opposition to Karwa Chauth, viewing it as a patriarchal tradition that reinforces gender roles and inequality. They argue that the festival places undue pressure on women to prioritize the well-being of their husbands above their own needs and aspirations. Critics argue that fasting for the longevity of husbands perpetuates the idea that a woman worth is tied solely to her marital status and her ability to fulfill traditional gender roles. They advocate for redefining relationships based on equality and mutual respect, rather than subscribing to traditional norms upheld by festivals like Karwa Chauth. In conclusion, Karwa Chauth remains a deeply cherished and significant festival for many married Hindu women, celebrating love, devotion, and the bonds of marriage. While it may attract differing opinions and critiques, its continued observance highlights the richness and diversity of cultural practices in our modern world. Whether one chooses to participate in Karwa Chauth or not, the festival serves as a reminder of the enduring traditions and evolving dynamics within relationships. It is through open dialogue and understanding that we can appreciate and respect the various perspectives surrounding Karwa Chauth and other cultural celebrations. In a damning observation on Monday, the Supreme Court said that by failing to fill up vacancies in information commissions, governments have rendered the Right to Information Act a dead letter law. Could agree more. In the run-up to the 20'th anniversary of the law, we should have been discussing how to make the information commissions stronger. RTI has helped improve essential services delivery and basic rights. It has helped expose Adders, Commonwealth Games, Yampa and other big-ticket scams. But information commissions are RTI backbones. Instead of making them more amenable to sharing information, we don even know whether many commissions will remain functional. RTI was the result of a grassroots movement. Its subversion by governments must end. Raja and Rani are two Delhi street dogs who were hauled in during the clean-up drive before the G20 summit, so that the capital could be showcased free of canines. Raja: So what do you think is going to happen to us, now that all the Videsh VVIP's have left? Will we be set free to patrol the streets as we and our lot have done ever since the days of Mohenjo-Daro? Rani: Your guess is as good as mine. The problem is that of recent times we vet been labeled as a menace. And there are reports in the newspapers about how we attack people and have become Public Enemy No.1. Raja: So what happened to all that business about our being man best friend and so on? Rani: At a time when man is not man best friend but his worst enemy, as were seeing in Gaza and Ukraine, I don suppose we can count too much on human friendship. Raja: You are right. When humans are busy killing each other in what they call genocides, a bit of deicide ins going to make the headlines. Rani: But I all tell you what should make the headlines but unfortunately has, and which concerns us. It the ABC programmer. Raja: ABC programmer? You mean a programmer for canine literacy? Rani: No, dummy. The ABC programmer is about educating humans about how to solve what they call the stray dog menace, and I wish they had stop calling us stray dogs and call us street dogs, which is what we are. Raja: So what does the ABC programmer involve? Rani: ABC stands for Animal Birth Control and is like a family welfare programmer for us that involves sterilizing guys like you so as to reduce our population. Wherever it been tried in our country, ABC has significantly brought down our population, by as much as over 48% in some cases, so were no longer seen as a menace, but as the street-smart neigbourhood protectors that we are. Raja: Hey, ABC sounds cool. I canine say I dig the idea Raja and Rani are two Delhi street dogs who were hauled in during the clean-up drive before the G20 summit, so that the capital could be showcased free of canines. Raja: So what do you think is going to happen to us, now that all the Videsh VVIPs have left? Will we be set free to patrol the streets as we and our lot have done ever since the days of Mohenjo-Daro? Rani: Your guess is as good as mine. Home Need to transfer money or have any banking related work? Well, your banking needs can be met digitally. Through fitness, one can get a loan approved or pay salary to employees through recurring payment model, all with the click of a button. Understandably, the business landscape today has become significantly digital. Even people-intensive industries such as hospitality, construction, and real estate need a significant digital footprint in order to survive and grow. Restaurants attribute up to 50% on an average to online orders. Real estate bookings are almost entirely sourced through online sources. And this is possible because the customers find it convenient to visit an online store rather than a brick-and-mortar shop. Especially after the Covid years, when most businesses were pushed into the digital world, today enterprises of all sizes and all industries have specialised supply chain. While large businesses deploy enterprise ERPs to manage their supply chain, until a few years ago small businesses found ERP solutions quite expensive and hence a luxury. This has changed since the middle of the last decade. Cloud ERP providers have brought the benefits of professionally designed ERPs to small and medium businesses as well. Thus, digitization has influenced both sourcing of business as well as delivery of it. While strides have been made in lead sourcing and process automation, finance management had been relatively slow in catching up. The reason for this is that businesses across industries depended on banks and finance companies for their financial management. The banking system had to be digitized and ready in order to influence how businesses transacted efficiently. Thus, it was a slow and steady change, brought in over the years. World over, the banking and finance industry has been going through a digital overhaul so that financial transactions can be smooth, fast and friction-free. The rate of this overhaul is different in different regions. Nevertheless, there is a global realization that banking and finance is an integral part of efficient business operation and digitization of the banking and finance sector is key for any economy to grow exponentially. It is at this juncture that Fintech has entered to serve the need for digitization of business, finance and banking. While banking is going through digital transformation and standardization, there is much standardization on how banks extend their services to their business customers. European Union and other nations have brought in the concept of open banking and General Data Protection Regulation (GDPR) to standardize banking and finance services to customers. This will eliminate some friction for businesses to access finance functions. However, such initiatives have not caught up universally yet. To overcome this gap, Fintech acts as the bridge between businesses and banking & finance providing the crucial technology landscape, allowing both businesses and the BFSI to focus on their core functions. Apart from being the bridge, Fitch brings the crucial aspect of rapid innovation into the equation. Fintech democratises innovation and offers the fruits of innovation at afford

Across both personal and public health dimensions, then, infants need to encounter diverse flavours. This pathway requires global GHG emissions to fall by 18 per cent by 2030, 45 per cent by 2035 and 69 per cent by 2040, relThe scale of the challenge becomes clear when the projected reductions are measured against the climate action plans countries submitted under the Paris Agreement. India's oil imports in September were up 7% by volume but jumped 47% in terms of value due to the high price of oil. Cement and steel are the only sustainably growing core sectors, and those too are based on government infrastructure spending. The coal sector saw growth suddenly shoot up to 10. In 2023, a year after the launch of ChatGPT, the Authors Guild in the US, including writers such as John Grisham and George RR Martin, sued OpenAI, alleging that their copyrighted books had been used without permission to train its artificial intelligence models. But what becomes of the human process, then, that gives art its meaning? Technological progress and falling costs can support such a transition. The United Nations Environment Programme's (UNEP) "Emissions Gap Report 2026", released on Wednesday, underlines this. The growth in coal in September was likely a temporary blip aided by a statistical low base and, more importantly, pressure from power plant operators over rapidly depleting coal stocks amid the heat wave. 5C above industrial levels will be unattainable in the near term. The other sector that results in high coal use, the steel sector, did accelerate in September, but not by enough to sustain the coal sector's September output. It should assess the ingreThe latest data on the performance of the core industrial sectors show the economy may be facing an industrial uptick, but questions about its sustainability remain. Installations have increased 2. In October, delivering his annual Dussehra speech from Nagpur, however, Bhagwat spoke darkly of a "western storm" and sinister "global conspiracy" that seeks to destabilise regimes, suggesting that India is its target, alongside France and Albania, Bangladesh and Nepal. 5 times since the Paris Agreement. Since the 2024 dietary guidelines of the ICMR-National Institute of Nutrition say that children under two should avoid added sugars, the FSSAI's draft proposal limiting itself to six months seems like a concession to manufacturers. This surge in electricity-related demand for coal will likely wane, especially since the El Nino factor that drove the heat wave will also cause a milder winter. The attacks on Saudi Arabia's energy infrastructure have already pushed global oil prices above $112 a barrel, almost a six-month high. But the jury is out on their costs. This is set to worsen. France's new Prix Pascal de Litterature IA, an award for books co-written with artificial intelligence, suggests that the answer, for some, is to accept the inevitable and bring it into the open. The uptick in steel did, however, cause a return to double-digit growth for the iron ore sector, which should bode well for the mining component of the larger Index of Industrial Production. If the FSSAI does not expand its proposed restric

informal process of engaging global audiences. 1% over the longer April-September 2026 period. That means refiners were increasingly processing expensive imported oil. 5C in the next half a decade. Clients that manufacturers add and the nutritional profile of the finished food, thus completing the loop, with the Infant Milk Substitutes, Feeding Bottles, and Infant Foods Act 1992 rightly restricting the marketing of infant foods for children up to two years old. At a time when the crude oil and natural gas sectors have both contracted continuously since 2024, refinery output rose to 10. Any such improvement is to be celebrated, but a deeper look at what is driving it is also warranted. Growth in the Index of Core Industries rose to a series-high of 7. The performance of the crude oil, natural gas, and refinery products sectors also highlights the fiscal problems India faces. The unexpected and unusual nature of this rapid acceleration can be borne out by the fact that the sector contracted by 1. He spoke of India's "destiny", "duty" and "diversity". Thelyson Orelien's novel was removed from the Prix Goncourt longlist - France's hiThe writing has been on the wall for at least three years: The Paris Pact's goal of keeping global temperature rise down to 1. The Emissions Report's renewable energy targets, too, are demanding, but solar and wind power growth in the past decade offer reasons for optimism. Under a scenario designed to achieve the lowest possible overshoot, global warming would peak at 1. The electricity sector grew 11%. Three years on, the literary establishment finds itself confronting a different stage of the same upheaval: Whether literature written with AI's assistance should be formally recognised and rewarded. 8C around 2050 before returning to 1. The reprieve from the U. S. on potential tariffs linked to imports of Russian oil provide India a reliable source, but the days of discounts are long gone. It is the time of premium pricing, and each barrel imported is eating into India's foreign exchange reserves, which are also being used to defend the rupee. The full implementation of these would reduce global emissions by only 5-8 per cent by 2030 and 11-15 per cent by 2035, relative to 2025 levels well short of the reductions suggested by UNEP. 7% in September. The 2026 Commonwealth Short Story Prize was caught in a storm over charges of AI use in its winning entries. India is currently mulling restrictions on added sugar in foods for the youngest infants, on unhealthy foods around schools, and on front-of-pack labelling for packaged foods. Recent controversies make that question more urgent. 4% in September, capping off a half-year dominated by double-digit growth. This should be avoided since India's regulatory response to ultra-processed foods is expanding after years of sluggishness. According to UNEP, they will need to surge by three times above 2025 levels in the next 10 years. It sets out what it would take to return to the Paris threshold by the end of the century. The dissonance between the spirit of outreach in New York and the loose spectre-mongering in Nagpur is striking. 9% in September 2026, the second consecutive m

Of the Health Insurance Portability and Accountability Act (HIPAA), which was passed in 1996 and controls health data disclosure and usage in the US. DISHA was enacted to secure and standardize digital health information to maintain its privacy and confidentiality. While the purpose of this law is to encourage the pan-India adoption of e-health standards, it has not yet come into force. National Health Stack and its Implications Meanwhile, NITI Analog the Centre public policy think tank has introduced the National Health Stack, which aims to develop digital health data for all citizens. The future of the healthcare ecosystem will be defined by the demands of various patient segments and their accompanying successful care journeys. Patients will be permitted to swap healthcare providers without jeopardizing continuity of care. It will also ensure that various healthcare institutions collaborate. Nevertheless, this can raise data privacy and data theft concerns. The more data is exchanged and kept, the more difficult will it be to govern and secure. Since the right of patients to privacy is critical, they may be concerned about the consequences if their confidential medical conditions are made public. Currently, a patient data, including health information, is treated as sensitive personal data or information and provided greater protection than personal data under the IT Rules, 2011. Securing Data to Accelerate Healthcare Access Data breaches and cyber-attacks are increasingly common in the digital age, jeopardizing patient data. As coordinated care becomes a ground reality with the interoperability of healthcare data systems permitting patients to exchange digital health records with various clinicians, healthcare professionals will need to protect patient data diligently. Conversely, healthcare providers will be required to build a comprehensive mechanism to secure patients data. Healthcare facilities must demonstrate their dedication to patient privacy and regulatory compliance to gain and retain patients confidence. As a HIPAA-compliant platform, the Content Cloud helps secure protected health information, earn the respect of patients and avoid infringement fines. The latest digital technology is vital for safeguarding sensitive patient data and lowering the risk of a breach or any unauthorized access. The Centre now authorizes data fiduciaries to transmit information to companies or organizations outside India under Section 34, but only after the explicit consent of the data owner and under specified situations, such as health service or emergency assistance. The Central Government may exclude any of its agencies from Bill riders to maintain the State security, public order, sovereignty and integrity, as well as for good ties with foreign governments. In a nutshell, data privacy in India current healthcare sector needs to be redefined in a way where it a winning proposition for both care professionals and patients. In a nutshell, while the proposed Data Privacy Bill is an important step in developing a privacy ecosystem in India, which is key in healthcare, it is only the beginning. Healthcare facilities and hospitals must begin planning

CRPF-hcm-Eng-Test-Dated-2026-10-24-Test NO.-28998

This House deeply expresses its serious concern over the rising incidents of violation of Human Rights in various parts of the country and urges upon the Government to take effective steps to curb the occurrence of such incidents. I am a Member of this House for the last 32 years. I have never seen this House even had a structured debate on a very important subject pertaining to millions and millions of people of our country. We debated and we raised the issue whenever there was any incident of human rights violation, but there had not been a structured debated on this important subject which is agitating the people of the country. Today, I am raising this subject because I found that even after constitution of National Human rights Commission in 1993, the number of incidents of violation of human rights has not reduced and it is increasing day-by-day. I have the figures for the last three years where you will find how the number of incidents has increased. In 2006-07, it was around 82,000, next year it increased to approximately one lakh and then it came down slightly to 90,000 but it is still more than the number of incidents that had taken place in 2006-07.You will be surprised to know that in one year, the incidents of custodial death have increased to more than one thousand and so also the cases of murder. The Right to Life is a Human right and a Fundamental Right. The right to have a decent living is a Fundamental Right. Population do not have decent living. If one-fourth of the population has to go empty stomach daily even after 65 years of independence, will it be treated as decent living? This is the situation today prevailing in our country. If a substantial percentage of women are suffering from malnutrition, is it a decent living? The Prime Minister had called it a national shame. Lakhs and lakhs of people are living in slums without any amenities, without any facilities in unhygienic condition. Once such an instrument is duly executed, the Registration Act allows it to be registered even though the donor may not agree to its registration and upon registration, the gift takes effect from the date of execution. It was further held, that the doctrine that a donor who has left his gift incomplete cannot be compelled to complete it, has no application to a case where the donor, by executing the deed has done all that the needs to do; registration can be effected even without his cooperation. If the interpretation of Section 123 of the Transfer of Property Act and Section 47 of the Registration Act as canvassed by the defendant were to be accepted, it will open the doors for all purchasers of immoveable were to be accepted, it will open the doors for all purchasers of immoveable property to avoid payment of stamp duty on the sale deeds and become owners only on the basis of executed unstamped.

And unregistered sale deed and claim to be unable to pay the stamp duty and have liberty to pay the stamp duty whenever they desire. I may in this regard notice that Section 54 of the Transfer of Property Act pertaining to sales is at par with Sections 122 and 123 of the Act pertaining to gifts. I may in this context also record that per Section17 of the Indian Stamp Act, 1899, instruments chargeable with stamp duty and executed by any person in India have to be stamped before or at the time of execution and per Section 29 thereof, in the absence of an agreement to the contrary, the expense of providing the proper stamp duty is to be borne, in the case of a conveyance and which would include a gift, by the grantee i.e. done as the defendant claims to be in the present case. The counsel for the defendant, in rejoinder, contrary to his earlier categorical stand that the defendant is not seeking enforcement of the gift, argued that the suit be put to trial to determine the intention of the parties. It is also argued that it is to be determined in trial, as to who is in possession of the property. Estate to reflect their standard of living, with top-of-the-line amenities and the latest smart technology and engineering concepts for maximum end-user comfort. Developers are competing to outdo one another with luxurious amenities such as concierge, home automation, smart interiors, outdoor decks, temperature-controlled pools, and even Olympic-level sporting facilities. Conclusion In recent years, India real estate sector has improved its image to become a customer-centric or buyer-first market. This has been made possible in large part by much-needed policy support and initiatives such as RERA, which have made the market more transparent, credible, and profitable. The falling rupee and volatile stock market have also enticed NRIs and investors to invest in luxury homes. Finally, luxury homes are about the standard of living. With rising consumer expectations, developers are increasingly providing world-class amenities and international construction standards. NRI and new-age buyers have also contributed significantly to the country luxury housing growth in recent months. Multiple research agencies data, combined with the bullish sentiment expressed by top real estate players, leaves no doubt that luxury housing is back in the game. With health-care costs remaining stable and the economy expanding steadily, the future of luxury housing looks promising on all fronts. It is early in the morning, the time when one brings one phone to life and checks what went wrong with the world during the night. As I crawl through the good mornings and the forwarded many times jokes memes videos-shot-by-brachiosaurs and hitting my figurative toe on the fake agenda-driven rot sprinkled across various groups, I am hit with a realization. I am not sure about the rest of the world, but India has its own very specific and highly evolved What Sapp bunny, and he is a man above fifty-five; urban, reasonably educated.

CRPF-hcm-Eng-Test-Dated-2026-10-24-Test NO.-29000

And most importantly, he does understand what NO means, at least on social media. If I do a random sampling of the shit that has hit the fan today morning, I can see the same stuff, i.e., longwinded health message that uses medical jargon often ending with a Dr. to authenticate the completely bogus science, couple of narratives of history of events that may have occurred in an alternate universe and most of the rest linked with communal agenda, some hard and blatant but most subtle and targeting the subluminal fear. In the early days of What Sapp, I used to get agitated and try and prove how a forwarded massage is fake and harmful by responding with countering evidences and arguments, but now I sit on the Nirvana-rock, calmly watching the ocean of lies waxing and waxing on various social media platforms every day. Though I have found my personal peace with these forwards, but one question still intrigues me, the same that that Arched Wars asked in Jolly LLB. Kong hak ye log, kasha se abate hak ye? They are everywhere, and easiest to find. Open your What Sapp and you will see ten-fifteen of them in different groups all the time. They are so obsessed that no amount of polite or impolite warnings from the group admin or a group member deters them. Ask them not to a hundred times and they may get silenced for a few days, but they soon discover a message that they know that the world must get to know about and they will be back regurgitating the bile with vengeance. I have my own theory of their origin, and it is connected to the organ and the science that I love the most, i.e., brain and neuroscience. Our infant brain starts by collecting random data from which it rapidly builds humongous amount of necessary and unnecessary neural connections as primary learning. But, as we grow up, we are exposed to the reality and start noticing patterns. Over time, we start cutting and pruning the neural connections based on the predictable pattern that we have observed and soon become what we imagine us to be, i.e., a lean, mean reality processing machine. This process can be best understood from how one reads over time. As a child, you read by carefully going through each word. As you grow, you become less and less keen to read every word. Very soon, you stop reading every line and you start imagining that you can get a sense of the text by glancing through it, as your brain finds it unnecessary and the tiring to make an effort to actually read. This is exactly the point where a classic What Sapp bunny is formed. All that a smart social media influencer needs to do is to paste ten comfortable world matching to our curmudgeon brain world-view and presto! We become a What Sapp bunny, who is now ready to accept anything as long as it.

Word Count: 500, Character Length: 2765 characters

CRPF-hcm-Eng-Test-Dated-2026-10-24-Test NO.-29001

Has a comforting set of words that matches our outdated (to be fair, or otherwise) worldview and is now a free-of-cost slave-vector willing to carry any agenda. If we look at the aging process of brain, it is a product of the most wonderful strategy of nature to design an energy-efficient neural processor, but in the age of social media and democracy, it is a gift that is now becoming a curse. As we are a nation in a constant election-mode, and as What Sapp is now the most powerful tool to spread information with no real expenditure (across geographical boundaries), our What Sapp bunnies are proving to be pathogens spreading dangerous misinformation that is constantly vitiating the national discourse. As censoring What Sapp is a solution far worse than living with What Sapp bunnies, all I request for each of us old people to look within and check what we are forwarding and why. The simplest way to curb this menace is to try and see if we can read every word or watch the entire the video before we get an itch to forward it. If we can, it means that it is a designed message containing emotional buttons to trap our brain and is carrying someone else agenda. The world as per our aged eyes seem to be heading towards a social catastrophe but our kids are leaving the information-sharing-platforms that we populate and where we are now emitting the noxious gasses formed due to the rot that we are made to see everywhere. We appear to be destroying the most precious communication channel that must exist between generations, and it is our duty to ensure that we don leave behind a generation that has no legacy that it cherishes. Beyond the What Sapp forwards, there is a lot of wisdom that we can and we must share across the generational divide. So, we can afford to burn this ancient bridge just because of the itch to forward. So, if you are a man above fifty-five, ask your kid or young relative an honest question. Does he she ever read your must-read forwards? The modern world is undergoing a technological revolution, and payments are no exception. Innovations in financial technology better known as FinTech, are streamlining archaic processes and systems. Digital technology has and is constantly reshaping payments, lending, insurance, banking, and more, which the COVID-19 pandemic has accelerated, helping people with their needs for digital banking, financial, and payment services. The shift from the traditional banking system to online banking was a major change in how one pays for goods and services. Some of the driving factors behind this transformation include increased access to information through online banking and mobile apps, reduced costs associated with processing transactions, and improved security measures. And the entire banking system has landed at people fingertips through payment options like UPI, debit cards, digital wallets, and other methods, so people don have to worry about their money being stolen, lost or.

CRPF-hcm-Eng-Test-Dated-2026-10-24-Test NO.-29002

In times of division, spiritual beings have a greater responsibility to dissolve boundaries within their hearts. Imagine a world where decisions are guided not by self-interest but universal well-being. When we see the planet as one temple, every being as family, and every act as an offering, then illusions of deportation, discrimination, and nationalism fade. The real journey is not from one nation to another but from division to unity, attachment to liberation. If borders disappeared tomorrow, who would we be Indians, immigrants, or simply souls on a shared journey? May Bhagvan Jinendra bless the world with wisdom so that we transcend walls and embrace a higher vision one where peace knows no borders, flowing like a river, touching all in its path. When Diversity, Equity, and Inclusion DEI became buzzwords in Indian corporate circles, there was much to cheer as finally the under-represented groups could get a foothold in a sector dominated by outdated patriarchal stereotypes. We did not pause to think then that the approach taken by many organizations mirroring Western DEI models wasbeing tailored to Indiaunique socio-cultural realities, and that this lack of foresight could impact how diversity plays out in the country. As a matter of fact, from gender representation to workplace accessibility, most DEI efforts in India reflect the US and European frameworks, often neglecting critical factors like caste, regional diversity and socio-economic disparities.Now as the reality of US rollback hits us hard, it is imperative that Indian businesses rethink their dependence on Western models and develop an indigenous DEI framework that addresses our countrydistinct challenges. Let us first analyses how Western DEI models have impacted Indian efforts at diversity in the workplace. The influence of Western DEI Models on Indian businesses Gender Diversity Boardroom representation vs. grassroots inclusionone of the most significant influences of Western DEI in India was seen in the emphasis on gender diversity in leadership roles and resulted in a government push for diversity in the boardroom. The Companies Act, 2013, mandating at least one woman on corporate boards, aligned with global gender parity efforts like the US-based 30% Club and EU board diversity mandates. There was certainly an uptick in boardroom representation as companies scrambled to ensure compliance with the mandate. However, the focus on the top level DEI, largely ignored grassroots-level gender issues such as pay gaps, workplace safety, maternity benefits, and the unpaid care burden on women. The focus still remains on elite, urban women in leadership roles, whereas women in blue-collar jobs, rural employment, and informal sectors see little improvement. Probably because there is more visibility of a company DEI efforts when done at the top than at the bottom of the ladder. Race-based DEI fails to translate into Indiacaste dynamics. The Western DEI model prioritised racial diversity, particularly in the US. Although in India this translated into a similar framework calledsocial diversity, companies hesitated to explicitly address caste-based disparities. While global firms highlight

CRPF-hcm-Eng-Test-Dated-2026-10-24-Test NO.-29005

Yet, caste representation is left to individual corporate goodwill rather than structured policy. Not surprisingly, given the vast disparity in not just education opportunities but also the quality of education, hiring pipelines favor elite institutions like IITs, IIMs, and ISB that lack caste diversity, limiting opportunities for Dalit, Advises, and lower-income groups. Some Indian companies have taken steps toward addressing these gaps. For instance, certain large conglomerates have introduced policies aimed at improving opportunities for marginalized communities. However, caste-based hiring and structured affirmative action policies remain largely absent in the private sector, unlike the systematic tracking of racial diversity seen in the US. Disability inclusiona compliance checklist Laws like the Americans with Disabilities Act spelt a new chapter in Western models and the push for accessibility in hiring and workplace accommodations gained traction on the back of it. In India, the Rights of Persons with Disabilities Act, 2016, followed much later and was influenced by global disability rights movements. We will be celebrating 10 years of Act 2016 next year but many Indian firms continue to treat disability inclusion as a compliance requirement rather than a business advantage. While global companies have actively promoted assistive technologies and inclusive hiring, Indian firms often cite budgetary constraints for workplace accommodations. Remote work, a phenomenon rooted in Covid19 lockdowns benefited many PwD, but was scaled back by Indian businesses, despite its proven success. Inspired by global best practices, Infosys, however, has implemented workplace accessibility measures including screen readers, ergonomic modifications, and sign language interpreters. But, for most mid-sized Indian businesses, accessibility initiatives are on the backburner. The corporateinclusion movement in India has been largely driven by MNCs, which imported Western policies on same-sex partner benefits, gender-neutral restrooms, and anti-discrimination policies. Further, unlike Western DEI, which included gender reassignment benefits and same-sex spousal insurance, the benefits for this group in Indian companies was more symbolic gestures during Pride Month but lacked structural policy changes. Similarly, while a few companies have extended benefits for same-sex partners, broader adoption of inclusive policies across Indian businesses is still limited. But these initiatives were often limited by funding crunch and absence of decision-making power in India. In many companies, ERG activities were restricted to awareness events rather than embedding them into policy decisions. While Western corporations were influenced by their ERGs, Indian ERGs rarely had any impact on hiring, promotions or benefits. The Global Trade Research Initiative has pointed out that for 75% value of the US exports to India; the average tariff is less than 5%. These include electronic items; Of course, India faces high US tariffs on many labor intensive goods like textiles, garments, and footwear, ranging between 15 35% on several products. The US and India have convergence on seve

CRPF-hcm-Eng-Test-Dated-2026-10-24-Test NO.-29006

Misplaced wide adoption of UPI payments According to the Prime Time For Real-Time report, India had the largest number of real-time transactions, around 48.6 billion in 2021. UPI has made real-time payment processes easy and convenient by allowing users to make payments through their smartphones or other devices. UPI payments have greatly benefited healthcare, education, and businesses. Another growing factor is the incentive-centric demand generation model that has enabled UPI market players to provide cash back and rewards to customers. These strategies have helped attract and increase customer loyalty. The rise of Apes (Adhere Enabled Payment System) Adhere ATM Apes (Adhere Enabled Payment System), developed by the National Payments Corporation of India (NPCI), allows people to carry out financial transactions like withdrawing cash from their bank accounts, generating a mini statement, and making a balance enquiry with just their Adhere. It has enabled much simpler and more secure payment processes through mobile and internet banking using Adhere. The service is interoperable, which means that any customer with an Adhere can use any Apes service provider to transact. This system has helped financial inclusion by providing access to banking services in rural and remote areas. In January 2022, there were more than 40 core last-mile banking transactions every month across 50 lakhs Adhere ATM, according to the statistics shared during the India Digital Summit 2022. Ease of QR code payments The use of QR (Quick Response) code payments has also seen a rise in recent years. QR code payments have been growing in popularity, especially among small businesses. Major QR code-based payment platforms in India include Google Pay, Phoneme, and Pat giving more flexibility and reliability to the payment world. One of the main reasons for the growing popularity of QR code payments is that they are easy to use. There is no need for a physical POS machine or a card reader. All one need is a smartphone and the QR code. Small and local merchants have adopted QR code payments due to lower costs, fewer chances of fraud, and the ability to track sales and customers. For customers, the main benefit is convenience. They can make payments without carrying cash or cards. Pay By Link A payment link or pay by link enables shoppers to make online payments without sharing their card details with others. This is done by generating a unique link for each customer that can be used to make a payment. Pay by link has proved to be a boon to allowing users to pay someone who is sitting far away from them. Some of the popular pay-by-link providers in India are Phoneme, Pat, Razor pay, Pay, and Amazon Pay. The customer just has to click on the link to make the payment. This method is secure as the customer card details are not shared with the merchant. It is also convenient as it eliminates the need for a POS machine. The Bottom Line The way one pays for goods and services is changing as the.

CRPF-hcm-Eng-Test-Dated-2026-10-24-Test NO.-29007

Drainage design and lack of regular upkeep lead to unforeseen water torrents in the cities. For systematic run-off, the water should be directed through a planned network of storm water drains designed according to regional rainfall patterns in the urban area. Ensuring Water Percolation The modernization of cities alters their natural topography and water run-off patterns due to non-permeable hard surfaces like roads, pavements, plazas, etc., compromising groundwater percolation. Therefore, such spaces should have substantial perforations in the form of green spaces and soil cover that allow for water seepage and prevent overflow. Moreover, parking lots designed in commercial spaces can have perforated paver blocks that allow water to be soaked into the earth. Generally, building roofs catch rainwater which is diverted to drains and contribute to the overflowing water in the streets. Green roofs can solve this problem by absorbing up to 80 percent of the rain that falls onto them. Trees also do their bit in lessening the impact of floods. Their roots can help reduce storm water run-off by absorbing rainwater and improving storm water filters through the ground. Trapping Excess Water Floods are the result of excess water which is not channelized systematically. On a neigbourhood level, local parks can have a better landscape design with water features like ponds that act as natural water catchments in monsoons. Monsoon rainwater run-offs can be harnessed to conserve this water with the help of reservoirs and bios wales. Such a planned water channel network does just prevent flooding but can also help conserve water for potable use. Planning For Rivers Human disturbance of local water bodies such as lakes, ponds, rivers, etc., is also a major reason for flooding in urban areas. Building activities and encroachment on river banks disturb these water bodies by introducing hard surfaces, which hinders the water seepage. Such actions are one of the significant causes of overflowing rivers during monsoon season. This problem can be tackled on an urban scale. For example, if a river runs on a city outskirts, interventions can enable protection from flooding by water diversions like streams, canals and other means to channelize the excess flow of water. In case a water body exists within a city fabric, one solution can be to create embankments, which are large walls constructed as an interface between the city and the river. Spillover reservoirs are also constructed as an alternative to take up surplus water during heavy rains. Such design ideas can be used at urban and community levels, which not only help in designing flood-resilient cities but also allow for a systematic utilization of water. My 3-year-old daughter looked at me scornfully at dinner one day and said Mama, that pizza is bad for you. It junk. I felt bad enough that I d had my Friday evening treat ruined, but I felt even worse about what she was learning so early on in her life. As the founder of a health-food brand, I m often expected to vehemently disc pizza.

World becomes more digital. Financial technology is making it easier and more convenient to carry out transactions. Many market players are working on new technologies to make payments more secure, faster, and more accessible. The government push for a cashless economy is helping to promote the use of digital payments. The adoption of these technologies will help improve the efficiency of the current financial systems. The goal is to make India a less-cash society and promote financial inclusion. This shift will likely continue in the coming years, with even more innovative solutions being introduced. In most modern societies, we have primarily approached health from a curative lens, seeking help only when symptoms visibly impede our functioning, as opposed to putting in consistent effort to ensure our wellbeing. A recent report by ASSOCHAM indicates that the incidence of Non-Communicable Diseases (NCDs) in India is highest amongst those in the 26-59 age bracket, who are also the most active contributors and thereof, the backbone of India. Additionally, the occurrence of mass communicable diseases further overwhelms an already pressurized healthcare system, as we have witnessed with COVID, rendering it unable to cope and manage a population as large as ours. The only sustainable way is to transition from an illness to a wellness -oriented approach to health, which strives to improve people overall quality of life by safeguarding them from ill health and helping them manage diseases better. Rise of the health-conscious consumer We must acknowledge the shift we are seeing in people attitudes towards their health in India. The pandemic has made us more conscious of our lifestyle choices in pursuit of optimizing our health. This sentiment is quantified by a Mintel survey which states that roughly 50% of Indians took to consuming healthier food and exercising during the pandemic than prior. This evolving consumer interest has been complemented by heightened activity in the health and wellness industry through the introduction of sophisticated fitness trackers, the launch of several immunity-boosting and nourishment-oriented products by small businesses and FMCG giants alike, and so on. The rise of gasification in healthcare has empowered us to have better control of our health outcomes by guiding us towards our fitness goals, providing us with real-time and simplified information on our health, enabling easy access to qualified practitioners and prompting us to adhere to their recommendations. Today, most organizations are also actively promoting wellness among their employees by introducing wellness policies like access to counselors for mental health and nutrition, virtual yoga classes and more. As a community, we are increasingly gravitating towards concepts like holistic wellness, sound bathing, wellness retreats, etc. to nourish our bodies and minds. Autryville in India is a good example of a township that is rooted in wellness through its focus on sustainable living and the cultural, environmental, social, and spiritual needs of people. However, while it is evident that there has been a definite shift, this has been limited to a niche audien

As the Houthis, who control parts of Northern Yemen and its entire Red Sea coast, step up attacks on Saudi infrastructure, including oil facilities and airports, Indians, who are the kingdom's largest expat community, risk getting caught in the crossfire. And finally, Mr. Rubio's visit to the Jamnagar Reliance refinery, led to speculation of some major deals on energy, possibly offering more discounts as he pitched for India to buy more American and U. S.-licensed Venezuelan oil. 2028. MPC member Nagesh Kumar, for instance, argued that "inflation is driven largely by supply-side factors and does not show any signs of overheating of the economy nor of generalisation". Despite Mr. Rubio's two visits to India and more than six by Mr. Jaishankar to the U. S. since Mr. Trump took office, relations remain on edge, with issues on trade, tariffs, H-1B restrictions and anti-immigrant measures unaddressed. Given all the high expectations, the visit was bound to come up short. Also, the U. S. 's narrative on Operation Sindoor (2025), growing ties with Pakistan, and the Trump administration's rhetoric on India's economy, diaspora and Russian oil trade have added to India's unhappiness. Behind each statistic is a tragedy, tales of families torn apart and a rehabilitation system pushed to the brink. And ever since the 1970s, when Indira Gandhi infamously peddled the "foreign hand" theory to delegitimize the mounting unrest against her government, this theory has been recycled by ruling elites faced with Opposition agitation and people's resentments. External Affairs Minister S. Jaishankar's invitation also offered Mr. Rubio an opportunity to meet their UAE counterpart, Sheikh Abdullah bin Zayed Al Nahyan, to discuss the Gulf situation and to restore energy security and connectivity. With her first career win over eight-time squash world champion Nour El Sherbini, Delhi ace Anahat Singh has begun to make a mark on the pro tour. The political logic behind the law banning and criminalising the consumption of alcohol was plain enough. 29 lakh in the first five months of this year. These range from opioids and sedatives to psychotropic drugs. 6 Satomi Watanabe the Asian Games. However, as they did at the U. S. Independence Day's 250th anniversary celebrations in Delhi in May, they attended the "Freedom 250" event in Mumbai. A day after stunning El Sherbini, the 18-year-old beat World No. In the 10 years since prohibition was introduced, it has led to an average of 196 arrests a day. The killing of an Indian national in a Houthi attack on Saudi Arabia's Dammam airport is a grim reminder of the dangers the kingdom's Indian community faces as the conflict between Riyadh and Yemen's Shia militants escalates. Anahat had defeated World No. But while the decision to raise interest rates was unanimous, two members voted against the change in policy stance, preferring to retain a neutral posture. It delays an honest reckoning by the government with its own blind spots and abdications. Prohibition, however, is not the silver bullet it was made out to be - its failures are well documented across countries and other Indian states. Political institutions, legislatures and

years. Banning alcohol was part of addressing the concerns of women voters. In the first five months of this year, 1,905 cases were registered under the Act. On Thursday, the Houthis claimed that a yacht with 14 Indians was targeted by Saudi forces near Yemen's Zuqar island in the Red Sea and that rescue operations were under way. Mr. Rubio acknowledged that while no two countries would agree on all issues, he said the U. S.-India alignment on core issues of national interest was "extraordinary". The optics of his visit to Mumbai and Jamnagar, but not New Delhi, which was announced by the U. S. Ambassador to India, gave the Opposition fodder to question the real purpose of the visit. The central bank's household inflation expectation surveys also show that the three-month ahead inflation expectations have jumped 70 basis points to 9. The United States Secretary of State's three-day visit to India, his second in five months, came at a significant time in U. S. politics. The spread is also geographic. This could have a bearing on the extent of policy tightening. Committee member Saugata Bhattacharya cautioned that "data increasingly suggests that price pressures are getting entrenched into the economic system". But the victory over El Sherbini is more than an upstart taking down a 30-year-old legend. Squash is now an Olympic event, and if Anahat continues her upward arc, she could be a medal contender in The RBI's October monetary policy had a distinctively hawkish tone. The two sides did not announce any agreements and Mr. Jaishankar and Mr. Rubio did not hold a joint press address. In 2019, this number was 697. There were signs of price pressures becoming generalised and symptoms of elevated inflation expectations. 14 Salma Hany to reach her first-ever PSA Gold-level semi-final. In contrast, there are fears that price pressures will spread further through the economy and, in turn, feed into higher inflation expectations. A kind of political and intellectual bankruptcy lies behind the attempt to blame domestic turmoil on secret plots hatched abroad and malevolent external forces. Since the fighting between Saudi Arabia and the Houthis resumed in July, at least two Indians have been killed and 14 others wounded. Moreover, his visit also raised hopes in New Delhi of a reset in bilateral ties, battered by two years of uncertainty over the Trump administration's actions. Addiction, in its worst forms, takes a toll not merely on the addict but also on their family and the broader community. native to 2025 levels. Hard, synthetic drugs like heroin, brown sugar and new varieties of these like "kota" follow a similar trajectory. A sharp disconnect seems to be rising to the surface, across countries, between the politics-as-usual of complacent leaderships and the people, especially the young, whose frustrations are being amplified by social media. Schemes like the Mukhyamantri Cycle Yojana gave women greater mobility and independence. Accordingly, the committee had voted to raise interest rates and change the policy stance to calibrated tightening. energy can be stored. Not only is the Egyptian her biggest scalp, but the Silicon Valley Open 2026 squash

CRPF-hcm-Eng-Test-Dated-2026-10-25-Test NO.-29013

Or aloof piranha, and stand firmly on the side of low carb, no oil, healthy alternatives. While I have become somewhat of an expert on nutrition labels and ingredients lists, my beliefs around food and specifically the happiness we derive from it are based on the principles of food positivity. I all start by defining what a negative relationship with food looks like. If you are prone to bingeing, overeating, or feeling so full that you are in danger of bursting, then chances are that your love for food has gotten the better of you and your choices are imbalanced. A negative relationship with food means you are often subjected to cravings, you find yourself snacking between meals and as a result you don give your body enough time to digest or get the fuel from your food. If this sounds like you, don worry, because it possible to switch to a more positive relationship with food. Food positivity is not about following a fad or a diet. In fact, it is quite the opposite. Food positivity is about developing a mindful, happy relationship with food and learning how to eat well. When you have a positive relationship with food you have control over what you eat. You don have to ban anything because you can stop eating when your stomach is full, and you don eat mindlessly or without portion control. As a result you feel healthier, you have more energy and you maintain a fitter lifestyle. My 3 year old telling me the pizza was bad is a reflection of the over simplified view of food that is being used by many so called healthy brands today to villainies certain ingredients. Sugar, fats and carbs to name a few. toy away from all the whites is the advice a lot of nutritionists pass around freely. But as busy working professionals with full time parenting responsibilities, advice like this can seem daunting at the least, and outright depressing at the most. I believe it important to recognise that food does make us happy. The best moments of our day are spent eating our favorite meals, surrounded by our closest family and friends. And that alright, because you don have to guilt yourself into eating quinoa salad while everyone else tucks into a burger. You just need to change your relationship with food into a positive one. Here how. Improve your knowledge of food so you can make better choices. For example, for similar amounts of calories, a toast with peanut butter will keep you fuller for far longer than a toast with regular butter. This reduces unhealthy snacking between breakfast and lunch and gives you higher protein intake. Another crazy example of food know how is that if you eat fruit whole it has more fiber which helps control your insulin spike. If you juice the same fruit and drink it, your insulin spikes more. Therefore, try to eat nutrition dense, simple food. Whole food such as whole grain.

Good health and wellness across India? Amplify awareness from the grassroots First, we need to share the know-how on health management with communities through awareness programs and provide them with access to resources in order for them to adopt healthy lifestyles through periodic checkups, healthy ingredients and fitness related activities. For instance, the uptick we are seeing in specialized nutrition products must be made more accessible and affordable to people across the country. Partnerships with key stakeholders The Government progressive health programs like Ashman Bharat, and the Fit India movement are exemplary initiatives propelling the wellness drive. It would be imperative for industry players to scout for opportunities that allow them to join forces with the Government for implementation of ambitious and large-scale programs. Their pool of innovative minds and solutions as well as their collective reach to end consumers can add meaningful heft to such efforts. The effective execution of Ashman Bharat will cover nearly 40% of the most indigent and vulnerable population, giving them better access to treatments, improving health and productivity, and enhancing the overall quality of life. Beyond this, it is crucial that we address the external root causes of chronic illnesses. Air pollution, for example, is a large contributor to respiratory illnesses like chronic obstructive pulmonary disease (COPD)and asthma. Climate positive action needs to be the responsibility of all stakeholders, right from large corporations to individuals must collaborate to reduce pollution. Augment the ecosystem thinking Lastly, it is crucial to nurture our nation thinkers and innovators to come up with ingenious solutions and models of scaling up preventative care and early diagnosis. Favorable policies, incentives and launch pads will help bring their ideas to fruition and considerably contribute to upping the wellness thrust, which we are in fact already seeing through the boom in health tech startups. I believe India is at a stage where there is both readiness and the wherewithal to rewire our healthcare ecosystem on the principles of wellness. The collective momentum to see this through will be a key driver in bringing about this revolution. After all, a state of wellbeing is not just the ability to survive, but the power to thrive as individuals, as a community and a nation. Many states of India and Pakistan are currently facing a critical flood situation as rivers bellow with water. Climate change is being observed across the planet in numerous ways. One of the regular reminders of climate change is frequent flooding in cities. Earlier, rural areas and unplanned cities that lacked proper storm water infrastructure fell prey to floods due to the vagaries of nature, such as the swelling of rivers or outbursts of water due to excessive rains. Today, planned cities are facing the same fate despite being designed to prevent such catastrophes. Need For Equipped Drainage System Apart from unseasonal rains, the primary reason for flooding in cities is the absence of robust storm water drainage equipped to handle flash floods that occur due to heavy rain

CRPF-hcm-Eng-Test-Dated-2026-10-25-Test NO.-29015

And whole fruit, is always better. Similarly, eat natural, real food made with minimally processed ingredients. Furthermore, avoid using chemical substitutes for any ingredient, least of all for sugar and sweeteners. Teach yourself how much to eat, but don ban things. Eating mindfully, in smaller plates, with your opposite hand these are all small tricks that will help you to prevent overeating. The trick is to learn how your body reacts to what, and how much, you eat. Often the negative pressure of banning yourself from eating things you love takes an immense toll on your happiness. That a mistake because food is not the enemy. It is our choices around food that make our consumption of them positive or negative to our health. Focus on ingredients, not calories. Do not fall prey to the diet foods such as meal replacement shakes or diet foods. They may be full of artificial sweeteners or added sugar. Instead, choose non diet, whole foods such as unsweetened yogurt or peanut butter with no added sugar. Do not let the numbers decide your fitness. Calories in your meals, numbers on your scale, footstep count these are not the best indicators of your fitness. Instead, focus on consuming the right ingredients and maintain a naturally occurring healthy relationship with food. Follow intuitive eating. Intuitive eating is a nutrition philosophy that rejects the traditional diet mindset and says that you should trust your body to make those choices. It promotes a healthy attitude toward food by suggesting you listen to your body hunger signals. Simply put, eat when you are hungry and stop when you are full. Become more aware of how and when you eat. Do not skip meals, or overeat. Let your natural internal bodily queues guide you as to when and how much to eat. The philosophy also suggests that you honor your hunger, exercise, and respect your body among its other principles. To conclude, food positivity is not a short term hack. It takes effort and time to develop it. So if you re looking for a long term, positive lifestyle shift, developing food positivity is essential. Remote work has made many leaders anxious about the productivity of their team working far from their eyes. This made them turn to practices such as micromanaging and over monitoring, which has done more harm than good. 4 out of 10 employees think they are being micro managed and it is making them feel less trusted, affecting their self confidence. Many managers and leaders have difficulty in assigning responsibilities to their team members for achieving certain goals and hence, do not grant them the independence to plan their activities and finish them in time. They constantly like to watch their team at work and monitor frequently. Given the new world of work, where teams are working remotely in many organizations, the managers are anxious if their teams are productive and concerned if the quality of work is poor. They ask for updates from their team.

Put extra pressure on them leading to heightened levels of stress. 48% of employees say that their work life balance is disturbed when working in a hybrid environment. This will result in employees constantly looking for better opportunities elsewhere, hurting your company employer brand. To ensure the wellbeing of employees and increase the efficiency of team members, leaders should empower their team members and demonstrate that they trust them by giving them reasonable amount of freedom and not micromanaging. Creating an open culture, valuing and respecting employees will go a long way toward more people being loyal to the company, resulting in increased retention rates. The Election Commission has written to the union law ministry asking for changes to the Representation of the People Act. The proposed changes aim to lower the maximum permissible cash contribution to political parties to Rest 2,000, and also cap cash donations at 20% or a maximum of Rest 20 core. The aim behind the proposals is to clean up electoral funding. EC should propose a complete ban on cash transactions in political funding. There no need for it any longer as access to formal banking is widespread. To illustrate, the World Bank estimated that 78% of all adult Indians had bank accounts in 2021. Transparency is realised when there is a clear trail. In order to realise this goal, EC should also seek a ban on funding through the medium of electoral bonds. These are promissory notes payable to the bearer of bonds. It allows for the concealment of a donor identity and also exempts political parties from disclosure requirements. From a voter standpoint, this is the most dangerous method of political funding as it makes public policy vulnerable to capture by vested interests. In the pursuit of its laudable goal, EC should seek complete transparency in political funding and also disclose the details on its web site. Political parties are exempt from income tax in order to strengthen electoral democracy. Complete transparency in political funding will make it even more resilient. Customer experience is a fine art, and has been refined continuously over the years. With the onset of the pandemic, customer expectations have changed significantly. Customers expect products and services tailored and customized to their preferences, and are annoyed when a product or service they have no interest in, lands in their inbox. The traditional days of marketing campaigns where enterprises used to spray bomb multiple emails to millions of people are clearly numbered. Mass campaigns that used to target customers by segment or personas are no longer achieving their objectives. Today, hyper personalization is used by some of the world biggest brands to offer granular and rich customer experiences to individual customers. However, the road to hyper personalization is not easy. Gartner, for instance, estimates that by 2025, 80% of marketers who have invested in personalization will abandon their efforts due to lack of ROI, the perils of customer data management or both. Gartner says that marketers face other impediments to.

CRPF-hcm-Eng-Test-Dated-2026-10-25-Test NO.-29017

Members about the progress made and frequently connect with their team members to monitor them. Are you the one extraneously concerned about the results delivered by your team members? If yes, you should know that your team members do not enjoy being watched over their shoulders, shirk their responsibilities and do not care anymore about the big picture your Organisation is envisioning for itself. It is gnawing away the motivation levels and drive of your team members and distancing them emotionally from you and the Organisation. Leaders, who believe in their team members, boost the confidence of the employees in achieving ambitious goals and reaffirm the commitment to always walk the extra mile. During the pandemic, many organizations have started using productivity monitoring tools like time tracking, project management and keystroke logging to keep a tab on their remote working employees. But these monitoring tools can be misleading as they don give a complete picture of employees productivity. It is also observed that some employees found a way out of these monitoring tools. Relying on these to measure employee performance is not an ideal practice. Moreover, using these tools creates a feeling in the minds of employees that they are not being trusted. This loss of mutual trust causes irreparable damages to the organization; not only does the employee satisfaction drop but also the customer satisfaction drops posing threat to long term sustainability of the Organisation. As working in the hybrid model is a fairly unknown area for many employers, they feel they must monitor the behavior of their employees, identify gaps and address them to increase team efficiency. However, the managers must know the line they must not overstep. Hybrid mode of working is here to stay; hence, organizations have to revamp their way of monitoring employee performance while keeping mutual trust strongly in place. Technology is surely a great boon to measure performance objectively, report it easily and draw up analytics that can nudge employees to overachieve. At the same time, one must not use technology to an extent that the employee feels watched over his or her shoulders and loses the emotional connect with the Organisation. Similarly, information security is a strategic priority for any Organisation and hence, adequate measures have to be taken to protect the information residing in the laptops or any other such assets given to the employee to facilitate remote working. As technology has been progressing, the risks of cyber attacks and thefts have been on the rise. Since employees work in environments not controlled by the employer, additional safeguards have to be taken for protection of the asset and the data. Employees have to be transparently told about it and trained on this so that they understand why their devices are tracked and monitored and the trust levels continue to stay high. Employees across the world are already coping with many things like burnout, anxiety, lack of socialising and job insecurity given the current geopolitical and economic situations. Over monitoring and micromanaging.

CRPF-hcm-Eng-Test-Dated-2026-10-25-Test NO.-29018

On usage pattern and seasonality. AI can also be used for understanding predictive usage patterns of customers, which can be used for ensuring a laser focused approach and accurately predicting what would be the next set of requirements from a planning perspective. The possibilities of hyper personalization are immense. For example, in an e commerce store, if a buyer is looking for black shoes, then he can be served a personalized page with only black shoes and the specific brand that the buyer typically searches the site for. This leads to faster discovery of the exact products that a prospective buyer wants, which in turn can lead to faster conversion, and more sales. What more, the e commerce site can even throw in an instant offer to improve the chances of conversion. This is an example of a hyper personalized experience, which considerably improves the chances of conversion. The same customer segmentation or hyper personalization can also be applied to send personalized e mails. This makes it possible to create hundreds or thousands of different possibilities in email campaigns that are better suited to specific demographics and user preferences. Similarly, in a shop, when a customer is in a store, thinking of buying a smart television, a bank can leverage contextual data (in case the customer has opted for allowing the official bank app to detect location and suggest relevant offers), and offer the customer the option of an instant loan or an option of paying the amount later. This can be done if the bank has knowledge and insights about the customer ability to pay. It can hence be confident of underwriting a specific amount based on the profile of the customer. The Harvard Business Review states that hyper personalization can reduce customer acquisition costs by as much as 50%, lift revenues by 5 15% and increase the efficiency of marketing spend by 10 30%. Steps to achieve hyper personalization The first and foremost step for hyper personalizing offers is to have accurate data on the behavior of customers. Enterprises also must have the ability to capture customer behavior across multiple touch points. In addition, data has to be effectively integrated and analyzed, for accurate insights. A Gartner survey has highlighted that 27% of marketers believe that data is the key obstacle to personalization. This must be followed by using the relevant tools to deliver key insights that helps decision makers or systems to create highly personalized content or offers instantly. In combination with data, analytical tools, technology, and agile processes, marketing can deliver more effective engagement at every stage of the buying process. By using insights from data, marketers can tailor content to match customer interests which in turn increases engagement, revenue and Roil. Marketers must also understand that the goal of personalization is not about cross or up selling. Nor is it about the right product in the right place at the right time. The goal of personalization is to use data to make it easier for.

CRPF-hcm-Eng-Test-Dated-2026-10-25-Test NO.-29021

Personalization success including the continuing decline in consumer trust, increased scrutiny by regulators and tracking barriers erected by tech companies. An ocean of possibilities Today buyers expect a seamless, personalized, Omni channel experience. Today buyer expects everyone they deal with from a potential solution provider to know what interactions (both on and offline) have already occurred and what information has been exchanged. These customers are more likely to shop with brands that recognize, remember, and provide them with relevant offers and recommendations. Hence, marketing campaigns must aim for personalization that reaches out to customers with messages that are most interesting and relevant. Messaging must extend to cover multiple media channels and devices in a consistent manner. Hence, the marketing function today requires technology that collects and understands data about the customer; anticipates what the customer needs next; reaches the customer wherever they are and communicates with the customer in as natural a way as possible. The pressure is on the marketing function to address segments of one and provide Omni channel experiences. For example, by implementing geo fencing technology with targeted data and locations on mobile devices, companies can use customized content to target consumers in their local markets who are visiting their competitors. Experiences can also be made hyper personalized by the usage of AI. For example, based on the browsing patterns of the visitor and recent engagements, AI based algorithms can create a personalized landing page that will instantly appeal to the customer. Similarly, advertisements can be personalized to better match a buyer profile. This helps CMOs run dynamic advertisement campaigns that can be micro targeted at users to maximize ROI. AI techniques such as Generative AI can also be used by marketers to create and generate new original content from data. Gartner has highlighted some industry applications of generative AI. In the consumer goods industry, Generative AI can generate catalogs while in e commerce, it can help customers try different outfits. Given the high propensity of digital campaigns, organizations have to look at targeted and precise ways to offer hyper personalized experiences to customers. Campaigns have to be hyper personalized with highly personalized and contextual offers. With customer expectations changing rapidly, the marketing function has to learn to use real time data effectively and act on it immediately to create offers on the fly. This is where AI help in creating a more accurate segmentation of buyers by crunching the huge amount of information that is available from multiple touch points. This accurate segmentation helps in creating hyper personalized marketing campaigns and identifying unique traits of customers. This not only helps in creating the exact personalized campaign for a specific person, but it can also help in helping teams find new segments or markets. Using data models created by using AI & ML, enterprises can predict business outcomes and can get specific insights for creating personalized offers. For example, AI can be use

CRPF-hcm-Eng-Test-Dated-2026-10-25-Test NO.-29022

Hence, patriarchy becomes an act of collective ignorance. Overcoming it is, therefore, an act of collective spiritual awakening recognising that women are equal co-travelers on the path to liberation. Furthermore, ahimsa, nonviolence, extends much beyond physical harm to include emotional and systemic violence. Practices such as female infanticide, child marriage, and denial of education to girls are gross violations of ahimsa. In Indian tradition, women are regarded as an embodiment of araswati, goddess of wisdom. To educate a girl is to honor Saraswati. Cancelling patriarchy demands that we move beyond mere rhetoric and recognise women as torchbearers of wisdom and harmony in society. The call to cancel patriarchy is not a polite request. It is a demand for complete annihilation of a system that has thrived on degradation and erasure of women. We must reject false dichotomy of victimhood and empowerment, recognising that true power lies in our collective strength and our refusal to be silenced. A UN report says only 87 countries have ever had a woman leader. Globally, women make up 23% of cabinet members, only 27% lead ministries, and 36% hold positions in local legislatures. The idea of balance is a fallacy. There is no balance when one side has held power for millennia. We need a reckoning, a radical redistribution of power, a dismantling of the foundation upon which this unequal world has been built. We must challenge ingrained biases, subtle acts of misogyny, casual sexism that permeates our daily lives. We must hold men accountable for their complicity in a system perpetuating inequality. More than apologies; we must demand action. We must rewrite rules, redefine boundaries, and create a world where women are not just equal but sovereign. At the core of patriarchal system lies a fundamental misperception of reality, based on gender and distorted understanding of the Divine, often projecting masculine attributes onto the Supreme, while relegating feminine qualities. Ancient wisdom speaks of the cyclical nature of time, ebb and flow of power. Women are daughters of Lilith, inheritors of Kali, reclaimers of Inane, Mesopotamian goddess of love and war. Our future is equitably human, and the first step is dismantling unequal status quo. From a spiritual lens, patriarchy is antithetical to principles of oneness, and equality. Upanishads, Bagdad Gait, and other spiritual texts emphasize cosmic unity of all beings. However, centuries of patriarchal distortion have overshadowed this wisdom, relegating women to margins of social and spiritual recognition. Deconstructing patriarchy, therefore, involves reclaiming this reverence and ensuring that women are seen as harbinger of spiritual and social prosperity. Law of karma, a cornerstone of Indic spirituality, asserts that all beings are born into their respective conditions based on their past vanes or inherent nature, not their gender. To privilege one gender over another is a violation of this cosmic justice. For over 25 years, working with street and abandoned animals has been more than just a profession it has been my life mission. In India, where millions of animals roam our streets, often ne

Over the years, I have advocated for the rights of performing animals, including monkeys, snakes, and bears, who were once cruelly exploited for entertainment. Over the years, with a firm focus, we have helped raise awareness and contribute to policies that protect these animals from exploitation and abuse. The eradication of dancing bears in India stands as a testament to such collective efforts. One of our biggest achievements has been making Jaipur a rabies-free city through comprehensive vaccination and animal birth control programs. Fear-driven culling is not the answer scientific, humane interventions are. Ethical conservation and role of women leaders Despite these successes, the larger question remains how do we truly respect and protect animals? Modern conservation efforts often focus on charismatic mega fauna tigers, elephants, and rhinos but what about the ecosystem that sustains them? What about the lesser-known species, the smaller birds, the frogs, the insects each vital to the balance of nature? If we truly respect wildlife, we must protect their right to live in the wild, rather than bringing in exotic species for conservation tourism or expanding urban zoos. Kindness should not be species-specific an abandoned dog, a laboratory monkey, a caged bird, and a trafficked pangolin all deserve the same empathy and action. Fortunately, women-led conservation movements are leading the way in reshaping this narrative. Take Purnima Devi Barman, a Padma Shri awardee who saved the greater adjutant stork Hargila from extinction in Assam by turning rural women into conservation warriors. Traditionally considered a bad omen, the Hargila was poached and its habitat destroyed. Instead of fighting hostility, Barman empowered women to become Hargila Army protectors, weaving stork motifs into Assamese textiles, celebrating them in local festivals, and shifting perception through grassroots action. Barman unique approach to conservation blending wildlife protection with women empowerment created a sustainable, community-driven movement. Her helped saved an endangered species and officially moved its status to near threatened under the International Union for Conservation of Nature. Along with it also transformed lives, proving that conservation and social progress can go hand in hand. In the Western Ghats, Vidya Athreya, an ecologist, has spent decades researching human-leopard conflict, proving that coexistence is possible. Instead of knee-jerk relocation measures, she promotes scientific mitigation strategies that reduce conflict and protect both humans and leopards. In Madhya Pradesh, Latika Nath, India first female wildlife biologist with a PhD on tigers, has worked extensively on tiger conservation policies and habitat protection, shaping how India manages its national parks and reserves. She is known as Tiger Princess. These extraordinary women have redefined what conservation means not just in protecting animals but in transforming societal attitudes towards them. Women leadership in conservation is particularly visible in Assam, where grassroots movements have played a key role in preserving biodiversity. In the Kaziranga landscape, women-

The existing tech team when these new skills displace more traditional coding programming ones. Job insecurity has gone up post pandemic on account of widespread layoffs, which is exacerbated by the increased push towards automation. However, workforces can up skill and grow with their companies. Why is up skilling the key? Simply put, up skilling refers to the process of deepening and expanding one job related expertise to develop faster along a career path or take on new opportunities. It involves taking on projects or completing courses that impart relevant skills for growth within one company. While employees can up skill themselves if they wish to, structured up skilling opportunities within an Organisation make it much easier and more accessible to everyone. The company can create its own internal up skilling resources for each job description and level, or even fund external learning pathways. Given how dynamic technology is today, keeping abreast of and becoming adept at developing tech is vital for companies to stay relevant. This calls for teams to stay staffed with intelligent thinkers and tech forward creators. While attracting new talent is one way to achieve this, it is the only way. In fact, hiring new professionals from scratch could become time consuming and expensive. Also, recruitment processes may tend to priorities younger candidates who may be tech savvy but don have the perspective and experience that older workers carry with them. Further, building a multigenerational workforce is a big part of diversity, which is why up skilling is so important for long standing team members. Moreover, this way, employees don need to feel anxious about becoming redundant they know the company has their back and will help them grow as needed. The result? A more dynamic and more motivated team whose members are all ready to do their best for the company! Final words Industry 4.0 is here, and companies that wish to ride the wave will need to equip their IT teams accordingly. Regardless of how technology evolves, however, the core tenet of good business remains the same providing customers with better solutions to the problems they encounter every day. By investing in up skilling their employees, companies get to retain their valued staff while developing the talent needed to make the most of innovations including but not limited to Iota. Up skilling, in that sense, is a continuous process that offers tech agnostic dividends loyalty, productivity, agility, and ultimately business resilience. I honestly think Rahul Gandhi is desperate and will do anything to attract attention right now. Thus his Bharat Judo Yare even though his message is not for every Indian but only for the states where the Congress still has an edge. Now that even stalwarts are leaving his party in droves and pointing fingers at him as not up to the job, he or perhaps his advisers came up with the Bharat Judo Yare to unite India under the Congress flag. The awful fact that he has to face, but has not.

In Gajab Raat, the writer-producer collaborates with director Ritesh Shah to look beyond cinematic stereotypes and show the power of an investigating officer if he decides to follow procedure. The Indian passport is a "travel document" and not a "citizenship document", a senior official of the Ministry of External Affairs (MEA) said on Wednesday (June 24, 2026). For peace to prevail in the Persian Gulf, the guns directed at Iran must first fall silent. Few Indian filmmakers understand the inner workings of our law enforcement agencies and Neeraj Pandey. The story so far: The Indo-Tibetan Border Police (ITBP) is all set to overhaul its training and operational strategy. Almost everything on the menu is either new to the city or is different from what we expect. highest literary award amid similar allegations. Its immediate priority should be to evacuate stranded Indian pilgrims. The Working Group on Access to Medicines and Treatments has raised concerns including Dr. Naresh Trehan, chairman and managing director of Medanta, in a committee constituted on the Supreme Court's directions to examine the regulatory framework governing pharmaceutical marketing practices. Massive Saudi air strikes have neither defeated the Houthis nor restored the kingdom's deterrence. India must prepare a contingency plan for worst-case scenarios. Most films give us clean heroes or cartoonish villains in uniform, even though our police stations have plenty of specimens like Ajay Nivrit (Manoj Bajpayee). With flights disrupted, thousands of Indian pilgrims are stranded. The purpose of the Indian passport is to help Indians transit and travel through foreign ports and territories, and it should not be compared to other documents that are used to establish citizenship rights, the official said. In the heart of Rajasthan's Thar desert, on the outskirts of the agro-pastoralist landscape of Bikaner, is a dumpsite of livestock carcasses where, traditionally, a feeding frenzy plays out among multiple species of beasts and birds everyday. Even while travelling abroad, a passport attests to your nationality, yet it is not a document of your citizenship."The United States appears to be preparing to resume large-scale strikes against Iran, but there is unlikely to be a military solution for either side in the devastating conflict, experts said. With no end in sight to the fighting and a high possibility of Israel and the U. S. resuming their Iran strikes, further violence and instability in West Asia could make India's choices increasingly difficult. dots can be connected between the protests in India and other countries. That first bite is unsettling; it comes with the realisation that chilli chicken will never be the same. It should also articulate a stronger position for stability and work with Arab countries and Tehran to push for a diplomatic settlement to the Iran crisis. A chameleon, Ajay, regardless of surname, is a quintessential Delhi cop who could have spent his formative years in Darbhanga, Kochi, or Pathankot. On October 22, ITBP Director-General Shatrujeet Kapur, while addressing the Himveer Samman Samaroah at the Central Training College (CTC) at Alwar in Rajasth

to be transported to Tehran by Iran Air. India has condemned Houthi attacks, saying it "stands in solidarity" with Saudi Arabia. The proposed move to allow institutional ethics committees to approve a wider range of experiments, including those involving larger animals, raised questions about accountability and the adequacy of independent scrutiny, he said. The juicy bite-sized pieces of chicken have a hint of mild smokiness, making it different from most Indo-Chinese versions, which usually get their flavour from a medley of sauces. But years of Saudi bombing of one of the poorest Arab countries have proved counterproductive; the Houthis consolidated support among the tribes of northern Yemen and built a powerful territorial army and naval force. A corrupt yet efficient cop is a lethal paradox but a rare breed in Hindi cinema. He operates in a fertile space where raw reality meets gripping fiction. The Saudi-Houthi ceasefire of 2022 collapsed in July 2026 after Saudi Arabia recklessly bombed Sana'a airport, to prevent an Iranian plane with a Houthi delegation from landing. The Saudi-Houthi conflict dates back to the Houthi takeover of Sana'a, Yemen's capital, in 2014. The Odisha Government has filed a contempt of court petition against the Andhra Pradesh Government in the Supreme Court, challenging its notification to conduct panchayat elections in the disputed Kotia region in the state's Koraput district. With its wealth, natural resources, infrastructure and tenuous palace politics, the kingdom remains exposed to Houthi missile and drone attacks, with few good options for a way out. The Houthis subsequently began attacking Saudi Arabia's critical infrastructure, and launched a ground offensive against the Saudi-backed forces in Yemen. The Telangana Standards Authority for Food and Essential Drugs (TG SAFE) has seized 1,035 kg of food products worth 7. In his letter, Mr. Maran expressed concern over the proposed draft rules, saying that while streamlining scientific research was a legitimate objective, it must not come at the cost of weakening animal welfare safeguards or reducing independent regulatory oversight. In response to whether the Indian passport could be used to challenge an exclusion from the voter list through the Special Intensive Revision (SIR) of electoral rolls that is currently underway in 16 States, a senior official replied, "Passport is a travel document, not a document of citizenship, and theoretically speaking, that distinguishes a passport from other documents. One night, even before the dust settles after a raid in a cheap hotel, the dynamic moves from a lucrative extortion plan to a dark, high-stakes national security crisis. The Houthi attacks pose the biggest security challenge to Mohammed bin Salman, Saudi Arabia's Crown Prince and the main architect of the war on Yemen, in decades. Together with his immediate boss, SHO Rana (Rajiv Gupta), he manipulates the system to nurture his farmhouse dreams. Originally titled Ghooskhor Pandat, which sparked controversy, the makers shifted the title to the generic Gajab Raat, pulling the character out of a specific identity to address broader institutional corruption. Impor

Stop calling us stray dogs and call us street dog's, which is what we are. Raja: So what does the ABC programmer involve? Rani: ABC stands for Animal Birth Control and is like a family welfare programmer for us that involves sterilizing guys like you so as to reduce our population. Wherever it been tried in our country, Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey locate mates and offspring avoid predators guide their navigation and locate habitat as well as to listen and communicate with each other. Oceans are full of sound. Waves, earthquakes and icebergs - all contribute to the underwater soundscape. But so do human activities and this can be a problem for marine life as it can seriously affect their physiology behaviour, reproduction and even survival. Being able to produce and detect sound in an environment where light penetrates only a few hundred meters is crucial for animals to communicate, feed, avoid predators and navigate vast underwater habitats. Many navies use sonar system to detect ships and submarines while geologists survey the seabed for oil and gas using seismic air guns. The noise produced by an air gun can exceed 200 decibels louder than a gunshot at a range of one meter. Sound travels further and four times faster in water than in air at a speed of almost 1500 meters per second. The noise produced by humans can therefore spread considerable distances underwater. These sounds can be relatively constant such as the noise produced by the engine of a ship and propeller or sudden and acute in the case of naval sonar and seismic air guns. ABC has significantly brought down our population, by as much as over 48% in some cases, so were no longer seen as a menace, but as the street-smart neighbourhood protectors that we are. Raja: Hey, ABC sounds cool. I canine say I dig the idea. Large whales generate low frequency communication calls that can travel thousands of kilometres. While the snapping shrimp, native to the western Atlantic, can produce a loud snapping sound capable of stunning and killing its prey. The noise generated by humans changes the natural acoustic environment of our oceans and our capacity to produce it is increasing. Noise is often the unintentional by product of transport infrastructure development and industry. Yet noise can also be produced deliberately.

Been able to, is that he simply has not given a Congress vision for India. I have had some talks with Congress party members who are still very much with Sonia and the family but even they are at a loss because this has now become a party where no criticism is taken. No discussion and no inspiring new vision. Thus the Bharat Judo Yare is another useless effort at revival of Congress Party, which has caused considerable debate and negativity. How much better would it have been and less tedious and expensive if Rahul had gone to every state the Congress has lost in and had televised debates with academics, voters and the youth from all walks of life. Instead, he does the one thing that will divide India and becomes big time news. Rahul meets the one pastor in Kerala who has courted controversy. George Poona was booked for hate speech when he is said to have claimed he would not step on the soil of Mother India without footwear as he considers it filthy. He also made objectionable and disparaging remarks against PM Mode and Amity Shah. Now why would Rahul meet this man and spend time with him when he is ostensibly trying to unite India? It seems almost like he is trying to tell the majority of Indians, Frankly I don care about you. Then there was the shocking incident of burning an old RSS uniform and instigating hate against an Organisation which is over 100 years old, wants all Indians to be proud of their heritage and is the first responder in any disaster. The RSS runs blood camps and food camps during crises, and is known for helping people during floods, natural disasters. During the worst of our Covid lockdown, they provided food to millions. Their discipline and dedication knows no bounds. Yet, Rahul like Imran Khan calls them right wing. In fact Rahul describes the BJP and the RSS exactly as Imran does. They must have a hotline to each other fascists, Hindustan extremists etc. This description has gone viral only because of Rahul Gandhi and Imran Khan. How close they must be in their wish to destroy one of the most popular political parties in the world. Both Rahul and Imran do Yaris and Balsas, basically rallies, though I have to admit Imran is far more popular than Rahul and has been a PM. Rahul also reportedly signed secret Moues with the Chinese Communist Party, the details of which till date is under wraps. It may have something damning otherwise why would he keep it a secret? The latest controversy to hit Bharat Judo expensive caravan train trip through India, is that poor vegetable vendors and such are being made to cough up donations for the Yare. Personally, I do think this is at all fair. One vegetable vendor had given Rest 500 but Rahul men wanted Rest 2000 and the Congress workers threatened him. Luckily it was all caught on.

Camera and the Congress had to go into disaster control mode. From the You Tubers in Pakistan, I have heard that Rahul wants to follow Imran Khan Example of having huge rallies every few days with music during his 500 day Yare. They are trying to guess what Rahul will do next from Imran book. They even say that while everyone in Pakistan envies what India has achieved, here is Rahul speaking Pakistan lines against the RSS and BJP and copying his style of reaching out! It good to watch Indian and Pakistani You Tubers and social media as they are way ahead of mainstream news. On 18th September 2022, a farce called Khalistan referendum was held at the outskirts of Toronto in the city of Brampton in Ontario, Canada. Unofficial estimates are that more than 100,000 people participated in that. I still call it a farce because first this was neither desired by the very residents of the state of Punjab they were talking about dividing from India nor did they participate in it. People living outside Punjab and with no desire to ever return there while living in their safe houses in Canada can never decide the fate of Punjab. Khalistan as an idea has run its course in Punjab and with Punjab enjoying stable democracy for decades, the focus has long back shifted to local issues rather than about dividing communities. This referendum was only an exercise by certain groups and individuals to safeguard their hold over the Canadian and North American Gurudwaras or Sikh places of worship and to gain stronger financial and political power. It was also a farce because only the Sikhs were allowed to vote as if Punjab belongs only to the Sikhs and that other communities do not even exist there. Or perhaps the organizers feared that by making it open to all, they would have enabled the moderates to come out and soundly reject any such motives. However there is no denying the fact that the event was far, far beyond the fringe. I was present there and am giving an honest, factual account of the event. People came in droves from everywhere and were of all age groups young, old, very old in wheelchairs, children, men and women and from various parts of Ontario (if not other provinces). They were there in thousands and from 9 am right up to close at 5 30 pm, the lineup of cars was non stop. But for the Police stopping access to the community hall for vehicles starting at 4:30 pm, they could have kept coming. The event was peaceful, well organized with a langar (food stall serving food and drinks) being served throughout the day and volunteers directing people and traffic to ensure that the voting was fast and smooth and people came out satisfied from the experience. The place was full of Khalistani flags, T shirts and logos on road, flying high on cars, in hands of people raising the flags.

With zeal for any person who stands up for a cause of united India, it was a depressing site indeed. What was also deeply disappointing was the response of the Indian government and the Indo Canadians. The Indian consulate and the Indian government seem to distance themselves from the fact that such an event could cause concern and either took it lightly as a fringe activity or thought that they could ignore it by looking away. As for the Indo Canadians the less said the better. The flag waving community at events trying to showcase their patriotism and love for India by raging social media wars and coming out as brave what app soldiers standing for India were all missing in action. None! Despite my writing to all authorities with copies to the Indian consulate, no Canadian politician responded back except the Mayor of Brampton and he too showed his inability to cancel the event or to stop it from occurring in government owned community hall. Despite my requesting many Indo Canadians to hold a protest to let the world know that Indo Canadians do not support such a divisive agenda, no one came forward. Yet a protest was to be made and was registered. I reached there at 10 am and after seeing such a sea of humanity, wrote messages of love and against division of India on posters and then took them to the entrance and stood there waving these posters to the people coming in till 5 30 pm. Initially the Khalistani organizers sent 8 10 volunteers who covered me with Khalistani flags hurling on all sides to ensure that my message was lost. But when I complained to the Police present and asked them to allow me to protest peacefully and to ask the activists to maintain a distance from me, they had to back down and were forced to maintain a distance from me which they did thereafter peacefully right to the end. Sure I was heckled, abused and called names and many slurs were thrown at me by passersby. They were disturbed by my presence and tried to show their dislike. But the volunteers moderated them and asked them to allow me to continue protesting in peace. The volunteers ensured that no one came near me and the moment the general public started abusing me, they tried to intervene. The volunteers even offered me langar food that they were eating and as they too are our brothers, even though misguided, I thanked them for the same and ate standing there. It was important that I did not leave that spot as it was the North entry point to the community center from where pedestrians and cars were coming in and hence I stood firm right till the end despite two hours of heavy rain. The message went clear that the Indo Canadians also can stand up unity amongst us and for India and will oppose any forces talking about division of India. The event.

Should be taken as a huge eye opener. First stop considering this movement as fringe as that will be only at our peril. Secondly, understand why some of the ordinary Sikhs living in Canada are supporting this movement. Is it all religious or is there something deeper? While earlier it was about a generation living with the ghosts of the Sikh genocide of 1984, a common thread that I heard yesterday was that the Indian media and a section of Hindu community in India including right wing supporters of the ruling party calling innocent farmers as Khalistani had an adverse effect. The people seem to actually believe that the Sikhs are being mistreated in India and considered as second class citizens especially under the current regime. However the answers are not simple and a lot of deep analysis is required to find out various causes and to work on them to unite people again. Also a lot of immediate corrective measures need to be taken. A large section of the crowd was Indian students of Sikh origin who were using their Indian identity to vote. This is further disturbing since these very people with their misguided views firmed up in Canada can go back to India and cause mischief. They need to be talked to and brought back into the mainstream. Also there should be some ways where outgoing students should be deterred from engaging in anti India activity when they leave Indian shores. It is for the Indian government to ponder. The Indo Canadians also need to have a deep discussion among them and to come out from the virtual world and to start grass root action to unite communities again. We need to mend broken bridges and to gain trust. We also need to let Canadian politicians know that by supporting such forces out to divide India, they cannot create a vote bank for themselves but give life to a monster which will come back to haunt them as most extremists have done in the past. It is a long road ahead. Not all Sikhs support such activities and the silent majority of Sikh community opposes such people but fear them. It time to speak out. As for me and people like me, while we may have differences with the current regime and with the politics of hate, any division of India will be opposed tooth and nail. That is the least we can do for our motherland which has given us so much. Amen Mahatma Gandhi famously used political tours to connect with the people and turn their minds against the ruling dispensation. His most famous yare was Dandy March, with a single point agenda of removing salt tax. However, he conducted many other tours for various purposes for understanding the country better in the 1910s, for removal of untouchability in the 1930s, and for calming communal tensions in the 1940s. Many leaders since the Mahatma have used tours, without any elections in sight, to reap rich.

Dividends during elections. The L. K. Adjani led Ram Roth Yare of the BJP led to creation of a large and permanent vote bank and cadre for the party. More recently, in Andhra Pradesh, Fagan Reddy did a padayatra(walkathon) over more than a year, covered more than 3500 KM between 2017 19 and came to power with a huge majority in 2019. The success of these and other such yards has undoubtedly influenced the Bharat Judo Yare of Congress Party, which started on 7th of September from Kanyakumari. Led by Rahul Gandhi, the de facto leader of the party, it will culminate in Jammu and Kashmir, covering 12 states in about 150 days. However, it is the ad hocks of Rahul Gandhi brand of politics that fails to inspire any confidence in his yards. However, just a few months ago in May, he claimed that India is not even a nation! In a bid to perhaps placate the radical Tamil separatists of DMK, he compared the country to the European Union and falsely claimed that India is not described as a nation in the constitution. From there to now claiming that he wants to unite the nation, the political inconsistency of Rahul Gandhi would definitely be troubling the saner heads in the Congress party. The recent resignation letter of Glulam Nabil Azad reflects the same. The inconsistency of Rahul Gandhi has confounded the party cadres loyal to the ideology and led to promotion of those personally loyal to him, regardless of merit. This ad hocks also reflects in his interaction with various religious sects. A video clip of a certain fanatic Christian priest of Tamil Nadu is already doing rounds in which the pastor is seen proclaiming that Jesus is the only God and then explicitly denying the divinity of Hindu Gods. Rahul Gandhi does not object to this and has not since condemned that statement. During election seasons, he often does rounds of temples, has been promoted as a janeudhari Brahmin and was publicly given Desha by a controversial Linguist preacher. The impact of all this is not as intended that is strengthening his secular credentials, but it does harm the Congress it strengthens the suspicion of average Hindus regarding his religious affiliation. All successful political movements have had a core political ideology with a leader with a visible commitment to that ideology. Even Congress used to have it till the times of Indira Gandhi. The BJP has its Hindustan and even the AAP has its claimed USPs, which it never fails to advertise. Congress of today on the other hand stands on shaky legs. The ideology of the rights based welfare state it wanted to build during UPA years has been implemented in a better manner by the BJP. The stain of corruption on the party still upsets the urban middle class so much that they would rather vote for any other party than Congress. In such a situation, rather than building a new platform ideologically consistent with.

Congress of old and taking help of old Congress hands for the same, Rahul Gandhi has started this yare. If this yare helps Rahul Gandhi in understanding the country better, it would still be worthwhile. As of now, it looks that Rahul Gandhi needs to do Congress Judo before setting his hopes too high. The Covid 19 pandemic gave rise to e learning and Etch like never before. Education can no longer be associated within the four walls. By exploring technological solutions and by prioritizing education, various institutions and individuals have invested time and effort in giving the best e learning experiences to students. But, with students spending more time on screens throughout the day either for educational or entertaining purpose, the routine of a digital detox is a must do in the era of e learning. As per a study by Guilford Journals, limiting one social media use to 30 minutes per day results in improved mental health and well being. It was also mentioned that it takes a minimum of three weeks to see any visible changes of having limited the screen time. Continuous tech usage causes mental and physical stress to both students and teachers. Being on smart phones or tablets for a long time is exhausting and harmful. Many a times, parents unknowingly encourage students to spend more time with digital devices as they are not able to provide the needed attention at the time when the child needs it the most. It may take a little work and strategies to help students detach themselves from digital media. Too much tech whether that is time spent on smartphones, social media, or other digital screens can lead to unexpected consequences and have repercussions of its own. Too much screen time impacts physical and mental well being The rise of Internet and digital devices has, to an extent, changed humans lives for the better. But, too much usage of these technological advances causes physical and mental exhaustion, not just to one wellbeing, but also to student parent relationships. To avoid that, parents themselves need to show balanced digital habits. There are instances where parents are unaware about the inappropriate content and cyber bullying that their children are subjected to. While it important to implement a digital detox routine to student day to day life, it also necessary that parents are aware and well read on the issues that arises with excessive use of digital devices. Digital detox is nothing, but taking a break from using electronic gadgets for a set amount of time. There are many fun detox challenges tips created by different creators that are useful for students. This includes taking breaks at fixed interval, spending time outdoors post their learning hours etc. Parents can help their wards with timetable which ensures a balance between screen time and time for outdoor activities. Steps to the digital detox journey Taking a digital detox, or at the very least embracing some new, mindful technology practices, can be a healthy.

CRPF-hcm-Eng-Test-Dated-2026-10-26-Test NO.-29039

Step forward. We need to remember that we are working against our own wont, which can make breaking the digital habit really difficult. A few of the mindful steps that students can follow include taking short breaks away from screens. Ophthalmologists have also suggested the practice of rule, where for every 20 minutes that spent on the screen, we need to look focus on something those 20 feet away for 20 seconds. Another step which can be followed is to spend time outdoors post attending online classes. Physical activity always heightens other sensory organs and it a great way to distract you. Mute notifications that would help one control from looking at their phones. Parents can make sure their kids do not go to bed and wake up looking at their phone screens. Counseling and training students to navigate through their feelings Fear of Missing Out is also highly effective. Detaching yourself from devices has proven results of being beneficial for our mental wellbeing as well. If any confirmation was still needed about the increasing authoritarianism of Turkish President Recaps Typo Endogen, it came on May Hamlet Davutoglu decision to step down from both the post of Prime Minister and the leadership of the ruling AK Party was the culmination of long-simmering tensions between him and the President. Mr. Davutoglu, appointed Prime Minister by Mr. Endogen in 2014 when he demitted office to become President, has always been seen to be a loyal AK Party member. There are no suggestions of major ideological differences between him and Mr. Endogen. Mr. Davutoglu, as Foreign Minister, was instrumental in the Endogen government s intrusive regional policy, which has backfired terribly. Nonetheless, as Prime Minister he disagreed with Mr. Endogen over his quest to grab more power, the crackdown on voices of dissent, and the future of peace talks with Kurdish rebels. Of late, tensions were palpable as Mr. Endogen accused Mr. Davutoglu of stealing the spotlight when the latter successfully concluded a visa-free travel deal with the European Union. When the AK Party s executive body last week stripped Mr. Davutoglu of the right to appoint provincial party officials, it was clear the President was acting against the Prime Minister. Mr. Endogen, who as President is supposed to be above party politics, has never shown any inclination to end his partisan maneuvering. He used his popularity to overcome the constitutional limitations of the largely ceremonial presidency. This allowed him to manipulate government decisions despite the Prime Minister being more powerful than the President under Turkey s Constitution. Even when Mr. Davutoglu was technically the head of the AK Party, there was no doubt who the boss was. Now with Mr. Davutoglu on his way out, Mr. Endogen has got the last prominent voice of resistance in the party silenced. He can now continue with the military operation against Kurdish rebels and embark on this plan to rewrite the Constitution. It is not clear yet if Mr. Endogen latest actions will cost him.

However, none of them address the true root cause. Kidney disease is caused by the same dietary and lifestyle factors that contribute to these conditions, and it is often worsened by the medications prescribed to treat them. If, instead of relying on medication, you manage these conditions through diet and lifestyle changes, you are far less likely to develop kidney disease. Research clearly shows that animal protein and animal fat play a significant role in kidney health decline. The protein myth and its impact on kidney health The human body is highly efficient at conserving protein, recycling about 85% of its daily. This means that very little new protein is required each day. However, due to widespread misconceptions about protein intake, people tend to consume excessive amounts, particularly from animal sources. When we consume more protein than our body needs, the excess must be converted into fat. This process involves removing nitrogen from the protein structure. Aside from nitrogen, proteins, fats, and carbohydrates are all composed of carbon, hydrogen, and oxygen. The nitrogen released during protein metabolism combines with hydrogen to form ammonia The kidneys perform a vital function: filtering toxins and waste from the blood. In addition, they help regulate electrolyte balance, fluid levels, and acid-base balance in the body. A healthy kidney filters about 6 liters of blood per hour, producing approximately 60 milliliters of urine. When the kidneys fail, dialysis becomes necessary. Unfortunately, dialysis has become one of the fastest-growing industries today, with dialysis centers appearing in shopping centers everywhere. One major reason for this rise is our obsession with protein consumption, as highlighted by Dr. Janice Stanger in her video The Dangerous Truth About Protein. Another factor is our overreliance on medications. Every medication we take must be processed by the liver and kidneys, placing an additional burden on these organs. Since kidney damage results from toxic exposure to processed foods, animal products, alcohol, tobacco, and medications, the best approach is to eliminate these harmful substances and restore kidney function naturally. Regular kidney cleansing, such as weekly or biweekly water fasting, can also be beneficial. There is one area where India has always been at the forefront, and that is in missing the bus. We lost have opportunities at every paradigm shift that emerging technologies brought not because we lacked talent. We missed these buses because the money is India is in wrong hands. When communication + computing revolution arrived, young Indian entrepreneurs could not explain to the old moneybags that there was far greater benefit in creating a 10-person programming company than a 100-person call center. Today, be it smallest product like Word to ultra-large platforms that help manage complex business processes are owned by western Goliaths. The head-start, the access to data, deep pockets and geopolitical advantage available to these companies have made it impossible for Indian companies to find a way to enter the market where there is real money. Our companies are reduced to building custo

AP's and Kerala's debt-GDP ratios of 35. doesn't compromise on law; he negotiates to mould it according to his interests. Poland is credited with training Pakistan's Air Force in its early years; a mutual defence cooperation agreement was signed in 2018. Another area of increased India-Poland collaboration is in technology, AI and defence hardware, critical minerals, renewable and nuclear energy given Poland's expertise in the last few decades and India's capacity for scale. Mr. Tusk's statement that India and Poland today have no "conflicts of interest" is a significant aspiration, for two countries that share old values, and nears India recovers from a monsoon-deficit year, there is both hope and trepidation regarding the prospects for that 'other monsoon', or the 'northeast monsoon'. The four-pronged plan, announced by External Affairs Minister S. Jaishankar during his September visit to Warsaw, won Mr. Tusk's support. With both leaders likely to depend on smaller parties to cobble together a governing coalition after the vote on October 27, that question may not be unambiguously settled. 6% deficit, the driest in 11 years. More concerning, however, is the fiscal position. The economic heft, however, hides structural weaknesses. At the India-Poland Business Forum in Bengaluru, Mr. Tusk, who was accompanied by a Polish business delegation, said the challenge now was in "translating" the talks and MoUs signed into actual joint ventures between businesses. The first is ageing populations. 4 mm against 868. A year later, Saudi Arabia began bombing Yemen to drive the Houthis out. Eisenkot has been critical of Netanyahu's handling of the Gaza war, but like all Jewish parties except left-wing Democrats, he opposes Palestinian statehood. The five states together account for less than a fifth of India's population but over 31 per cent of its GDP, 35 per cent of factories and foreign direct investment equity inflows, and 26 per cent of total GST revenue collections. Netanyahu and Eisenkot may differ on domestic issues, from exemptions for ultra-Orthodox (Haredi) men from military service to the powers of the judiciary. On Iran, he has called Netanyahu "unfit for launching another operation" without ruling out future strikes to prevent Tehran from acquiring nuclear weapons. In Lebanon and Syria, he supports retaining what Israel calls "security zones". While contributing only around a quarter of India's annual rainfall, it is largely focused on the south-east peninsula regions of Tamil Nadu, Pondicherry, coastal Andhra Pradesh, Rayalaseema, south interior Karnataka and Kerala. 5-9 per cent for Bihar and UP. Even more striking are the 2,100-odd global capability centres of the world's top multinational firms, employing nearly 24 million professionals - more than 80 per cent of these are in Bengaluru, Hyderabad and Chennai. Rainfall from June-September was 759. But in Palestine, Iran and the wider region, their differences lie more in the means than the ends. Eisenkot, too, has made the October 7 attacks central to his campaign, holding Netanyahu responsible for what he describes as the country's gravest security failure. 4 per cent and 8. The wide er

a controversy earlier this year during the Polish Foreign Minister's visit. 4-35. The India Meteorological Department (IMD) has said that this year, the northeast monsoon rainfall, spanning October to December, would likely be 'normal', meaning in line with a 50-year average and within a 12% error window. The two sides agreed to establish a "Defence Industry Dialogue" and explore a dialogue on counter-terrorism cooperation. Southern states also have 45 percent of the accumulated losses of all state-owned electricity utilities. TN's outstanding liabilities of Rs 10. This has impacted kharif sowing and is reflected in food inflation. 6 mm, a 12. Apart from the distance and geographies, there is the matter of trust, given India's defence engagement with Russia and Poland's defence ties with Pakistan. And on the West Bank, while pledging to crack down on settler violence, he has remained ambiguous on settlement expansion. In any case, whoever takes the reins of power, little will change in Israel's foreign policy. Its $120-billion-dollar tech economy is also gaining global interest. For instance, December 1, 2015, saw the city of Chennai deluged by its heaviest rainfall in 24-hours in over a century; at least 500 lives were lost and 18 lakh people displaced in the State. The current median age in the five southern states, at 33-36 years, is more than the 30 years for all-India and 23-26 for Bihar and Uttar Pradesh. A large part of Polish machinery and parts is exported to Germany, which in turn has a growing share of Indian imports, and India could consider more trilateral collaborations for manufacturing and mining technology. Such an outcome would be far from unusual - Israel held five general elections between 2019 and 2022. It translates into heavy reliance on migrant labour from the North and East - be it for factories, construction sites, office complexes, hotels or poultry farms. It is essential for Delhi and Warsaw to complete the confidentiality of classified information that is still being negotiated and draw up the parameters of future cooperation based on realities. Bengaluru, Hyderabad and Chennai house the country's busiest airports after Delhi and Mumbai, with Kochi at No 8, just below Kolkata and Ahmedabad. Associated with the heating up of the Central Pacific, the El Nino is linked to the drying up of the southwest monsoon rains but also yoked - not always with a vigorous northeast monsoon. Other than in 2015, several El Nino years, such as 1997 and 2009, have been associated with above-normal rainfall between October and December in Tamil Nadu though El Nino years, such as 2002 and 1982, saw a poor northeast monsoon (and a predictably bad southwest monsoon). The southwest monsoon, influenced by a strengthening El Nino, has already left its desiccating mark. Mr. Tusk's last visit to India was in 2017, as President of the European Council for the EU-India summit, and it is fitting that his trip was just as the FTA was finalized and ratified after years of delays. That isn't a bad thing, from a national integration standpoint. Meals, sheep and goats. 2 per cent average for all states. As the EU's sixth largest economy, Poland has o

CRPF-hcm-Eng-Test-Dated-2026-10-27-Test NO.-29045

With hope that Indian investors understand what kind of disruption is heading to the tech-market place. If you are running any business, you would have encountered a computer screen, a dashboard with a menu with some heads and some pull-downs, some forms for inputs and some tools to get synthesised information. Since the arrival of computers, menu is the interphase we have used to get work done by the computers. And this is so because of a very simple reason. To make computer do things, we needed to tell them what things were and what answers we needed because computers, on their own could not know either. In even simpler terms, the process we used was similar to what we did with the garbage, i.e., we needed to segregate. So, a large part of business work was this data-segregation that was done by humans. The situation at the delivery-end of synthesised output also required fixed questions and hence mode of interaction was menus. Cometh LLM and all this can change. We now have intelligences that can understand information better. We do need to tell them if it is dry or wet garbage. They can find it out themselves. Same is reflected at the other end. New intelligences don need to live with limitations of menu-driven systems. In tech-terms, we now have intelligences that can take unstructured data of any kind, i.e., deal with a garbage dump where everything, be it wet, dry or plastic can be thrown together and find answers that one needs. So structured and segregated inputs and complicated menus what we have taken for granted can be replaced by a clean screen with just a prompt blinking. Ask me anything is the way ahead in interacting with machines. This revolution can take away all the advantages that Goliaths with massive products have. The complex menus can be replaced by verbal interactions to get any task done. Imagine what if you are running a hospital, you would not need to perform complex task to generate a bill as same can be done by simply telling the machine, please make bill of Mr. X by adding 15 % of lab bills and 10 % on consultant bills ! It is clear that if there are products that can deliver this, the days of menu-driven platforms are numbered, and Goliaths that own them will also lose the advantages they have. If Indian investors understand this shift and support Indian LLM startups, we can take on the Goliaths as we are a large nation full of talented technocrats and access to data to train models is not a problem. With decent computational infrastructure and local talent, our players can build products that can compete globally. So, if you are a politician or a babu with surplus money or a family business that has cash stashed or even a large company, there is an opportunity ahead. Fund young kids to build driven platforms for managing various business domains. Head start is what we need as time is short. What I have outlined is no great insight. The Goliaths also know it and are already at it. West has one big advantage. The money there is with smart young people who understand technologies, so their young kids don need to explain the potential. Money is already getting poured in these products. We can make it only if we al

Politically his brand of Islamist politics has a constituency in Turkey. But his drift to authoritarianism is causing serious damage to the Turkish state and democracy. His attempts to undercut the parliamentary system are unprecedented in the country s recent history. Attacks on free speech, media freedom and dissent are on the rise. Mr. Endogen Syria policy was disastrous it made Turkey further vulnerable to jihadist violence, while leaving a massive refugee problem. The war on Kurdish militants is turning ugly with government forces facing allegations about targeting Kurdish civilians. The priorities of a responsible Turkish leader should be to take immediate steps to address these challenges. Unfortunately, Mr. Endogen primary focus is on seizing more power, never mind the damage he is doing to his country. If it bleeds, it leads, has been an adage in the newsroom. Unfortunately, the fact that it has to come with filters of propriety, decency and ethics attached is being overlooked almost regularly by Indian broadcast journalism. The latest example is Nepal, where the earthquake and its tragic aftermath have been exploited to the hilt by television cameras in an appalling race for TRPs. The role of the media during disasters is an important one. Before a catastrophe, they can warn a population and prepare it. Afterwards, with continued reportage, they can ensure that no survivor is forgotten or left out of the aid network. But it is during the disaster that their role is quite vital. They can be effective conduits of information about help lines, aid-distribution camps, emergency phone numbers, or the kind of supplies required. They can help scotch rumors and prevent panic by quickly disseminating the right facts and figures. Their coverage helps mobilize help from outside the disaster area, in the form of money, supplies and volunteers. And finally, the focus of the media on a disaster helps increase its visibility, thus forcing governments to upgrade it on their agenda. While India s television crews did most of this, they were overstepping the boundaries so often and so dramatically that the Nepalese people finally turned against them and virtually asked them to leave. This was unfortunate, given that Indian rescue teams were indeed the first to reach Nepal and have played a stellar role there, as did the media in sending out some of the first images of the calamity. But it is imperative that television revisits the basic rules of journalistic ethics during disaster reporting. Regardless of how important they imagine it is to wring an emotional response from audiences, they must refrain from sticking microphones in the faces of survivors who may have just lost everything. People s right to know just does not apply here. Nobody has a right to know how much anyone else is grieving. Instead, it is the survivor who has an absolute right to privacy. The only right way to get a human angle to the reporting is to ask for consent, make a full disclosure of how and where it.

Will be aired, keep the questions brief, and not push for emotional outbursts. Also, when rescue choppers landed, survivors were dismayed to find TV crews taking up space they believed should have been left for relief material. In a disaster, relief must take primacy over media privilege. Indeed, it must be seen to take precedence. A disaster of this magnitude leaves in its wake traumatized families that have lost everything in one fell swoop. Ethical journalism must place humanity above professional urgency. Oh what fun we had on the Holy that year. The tradition followed was digging the lawn generating some mud, throwing some buckets of water and then the prey. So, it was a very earthy kind of Holy that we played that year in the hostel. The good part was that the prey was asked get the buckets herself. Then everybody decided that we have grown up enough to have our first doze of bhang. A thunder was prepared, somebody had stored a little milk from the morning breakfast. There was one very enthusiastic girl who sneaked in the maximum share. High on the spirit of the festival we had the mandatory dance on the Rang Bares beige china wail. Meanwhile one who stole maximum share. cribbing for about half an hour nothing is happening nothing is happening. After some time she suddenly started laughing and did not stopped even after repeated attempts to stop her from doing so. Her body started aching but she could not control her laughter. Although I cannot remember her name. I can t forget what fun we had at her expense. I owe a big thank you to her for making that Holi so memorable in my life. Holi The festival of love and joy Holi is a festival of colours which generally falls on a full moon in March. evil. The festival is celebrated with lot of pomp in north India. Holi is celebrated with vibrant colours these colour are actually colours of joy colours of love and colours that fill our life with happiness to the core of our hearts his own son. This gave birth to the festival of holi. Another legend speaks of the everlasting love between Radha and Krishna. The legend is celebrated with great pomp and show. People also throw water balloons on each other and on passer-by too. For the second year in a row, an Opposition-sponsored amendment to the Motion of Thanks on the President s Address has been adopted by the Rajya Sabha. Last year, the Motion of Thanks was amended on the issue of black money this week, the amendment focussed on legislation passed by Bharatiya Janata Party governments in Rajasthan and Haryana limiting the rights of citizens to contest panchayat elections. Before 2015, there were just three occasions on which the President s Address was amended in the Rajya Sabha, once each during the tenures of Indira Gandhi, V.P. Singh and Atal Bihari Vajpayee. The President s Address sets 9899 out.

As a modern day business, it is evident that you must have a digital presence. There are no qualms about it. We live in a digitally propelled world where everything we touch has at least some digital can of their sizes and period, cannot fathom reaching a certain amount of success without digital in terms of and marketing. Having said that, the realm of in itself has over the years. It has become more and over saturated. But even then, digital marketing is still the in the quiver of brands. Digital marketing an overview in layman terms, digital marketing is a means of selling products and gaining customer feedback through the internet. Earlier, marketers used traditional props such as billboards, hoardings and ads. These props have been replaced by video ads, social media posts marketing and online that digitally appear on customers screens. The newly invented marketing tools are impactful and cost effective. They can efficiently grab the attention of a brand target audience and cater to their needs in a manner. Here are five reasons why digital marketing is the best friend of modern. Cost Effective Running a business is an affair. It is if an or business leader is hesitant to invest a large sum without solid in tactics. This is where digital changes the game. By ads, tracking and pay per click and the power of social media influencers, digital marketing on a budget. High Unlike settings, digital know no bounds and limitations. This new age can reach out to going beyond with a digital medium. Digital marketing assists brands in targeting the right audience at the right time, no matter which part of the world and when they are scrolling through relevant products or services. This helps customers at every step of their journey, reaching more customers without spending a lot. Customer Base Digital is a pertinent tool to attract and retain customers. It consists of several steps like starting a blog, hosting webinars, the power of social media, search engine optimisation, creating affiliate programs and engaging customers with chat chats. These steps help marketers identify customer wants and needs so that companies can adjust their products and In contrast with, brands with a digital presence as the primary source of revenue can rates in real time. This helps them to identify the factors that led to conversion and reform future strategies. Tools like social media and email marketing create quick and channels with customers, thereby increasing the of reveals that in 2020, India rate reached which is estimated to increase to 96% by As a modern day business, it is evident that you must have a digital presence. There are no qualms about it. We live in a digitally propelled world where everything we touch has at least some digital can of their sizes and period, cannot fathom reaching a certain amount of success without digital in terms of and marketing. Leadership and loneliness are recent "research topics" of many scholars. Through this blog post, we all explore why leaders feel lonely and discuss some solutions for how they can cope with them so that they don become overwhelmed. Leadership is often seen as an admirable trait, but the truth is that it can come at a price. Leading in any capacity whether professionally or personally can mean feelings of loneliness and isolation due to the responsibility placed on their shoulders. This phenomenon may be overlooked by anyone not operating in a leadership role, yet feeling lonely is a surprisingly everyday reality for many leaders. The Role of Loneliness Among Leader's Loneliness is not something that we often associate with leaders. In fact, many of us might assume that leader's with their power and influence, are never truly alone. However, recent studies have shown that loneliness can play a significant role in the lives of those in leadership positions. Leaders often carry a heavy burden of responsibility, and some may find that their role can be isolating. This sense of loneliness can impact their mental health and ability to make decisions, which may have consequences for their organisations. Exploring this topic is crucial for understanding the challenges faced by leaders and identifying ways to better support them in their roles. The Cost a Leader Pays for Feeling Lonely Leadership comes with a number of challenges, and among them is the psychological toll of loneliness. While a leader may be surrounded by teams and colleagues, they can still feel isolated and disconnected from others. This loneliness can be attributed to several factors, including the need to maintain a professional persona, having to make tough decisions alone, or simply being held to higher standards than others. Regardless of the cause, it is clear that loneliness can be a considerable cost of leadership. As professionals, it is essential to recognise the mental and emotional strain of leadership and take steps to overcome it. Only then can we truly thrive as effective and fulfilled leaders. Why Leaders Feel Lonely and How It Impacts Performance Leadership can be a lonely pursuit. Despite the perception that people surround leaders and have a lot of support, the reality is often different. They may find it challenging to relate to their team members on a social level or feel isolated because of their responsibilities. Research has shown that loneliness can impact a leader performance, leading to a lack of motivation, lower job satisfaction, and decreased productivity. Leaders need to be aware of this and build strong relationships inside and outside the workplace to counteract these effects. Investing time in building connections with peers and seeking out mentors can be critical in avoiding the loneliness trap. Addressing the Stigma of Being a Leader Who Feels Lonely Despite being in a position of power and authority, leaders are not immune to feeling lonely and isolated. This stigma of being a leader who feels lonely is often disregarded or dismissed entirely. However, the reality is that leadership can be a lonely job. Leaders may find it challenging to build rel

To lead a team of people. The burden of decision-making and ensuring operation's run smoothly can take a toll on one emotional well-being. However, there are effective ways to reduce leadership loneliness. One way is to establish a peer support group where leaders come together to share leadership experiences, challenges and insights. This provides a sounding board for leaders to express themselves in a safe and confidential environment. Another way is through mentorship, where leaders can gain guidance and advice from trusted, experienced individuals. Finally, leaders can invest in building authentic relationships with their team members. This creates a more trusting work environment and helps leaders feel connected to the people they work with. By implementing these strategies, leaders can reduce leadership loneliness and build a more fulfilling workplace culture. The Power of Connecting with Others in Leadership Roles As a leader, it important to recognise the power of connecting with others. Building strong connections with team members, colleagues, and other professionals in your industry can lead to greater success and a more fulfilling career. Effective leaders understand that relationships are the backbone of progress and that investing time and energy into cultivating connections is worthwhile. By connecting with others, you have access to new ideas and fresh perspectives and build trust and respect, which opens the doors to collaboration and growth. Investing in relationships is one of the most powerful tools in a leader toolkit, and those who prioritise it are sure to reap the rewards. Leadership loneliness is a real experience and can be challenging to acknowledge. Leaders need to educate themselves on understanding loneliness and how to manage it to foster a successful and effective environment. Not only that, but raising awareness about leadership loneliness as a whole is an essential step to reducing the stigma associated with those who may otherwise feel isolated and unheard. Practicing self-care, joining support groups or communities, and growing your social network are all valuable tips that can help ease feelings of isolation. Plus, by connecting with other individuals in a similar situation, you grow from being exposed to different perspectives in an interdependent way and gain strength from those who get it giving you both the capacity and opportunity needed to drive change in your organisation. Armed with knowledge and proper support, no leader has to face leadership loneliness alone. So, reach out today for an empowering experience with others; confronting loneliness together will create substantial organisational changes for lasting impact. Leadership and loneliness are recent research topics of many scholars. Through this blog post, we all explore why leaders feel lonely and discuss some solutions for how they can cope with them so that they don become overwhelmed. Leadership is often seen as an admirable trait, but the truth is that it can come at a price. Leading in any capacity whether professionally or personally can mean feelings of loneliness and isolation due to the responsibility placed on their shoulders. Thi

Books are like coffers filled, not with gold or silver, but with high ideals, and the wisdom of our forefathers. If we learn to love books, we need no other riches. However, we must read the right kind of books. Just as we need nourishing food for the body, similarly we need to read good books to enrich our minds. Much for granted that we notice its existence only when there is a power cut and life comes to a standstill. Can you think of all the things you could not have done without electricity? Imagine, you could not have watched television or even seen a film in a cinema hall. You would have had to study by candle light with no fans or air conditioner. Ice creams, soft drinks and cold water would have been unheard of. Your kitchen coffers filled too would have been very different from what you see now. There would have been no toaster, blender, electric oven, induction cooker or electric chimney. Electricity has truly revolutionized life in the twentieth century. The field of medicine has specially benefited from it. Reading is of different kind. It may be light or serious. It may be adventurous or spiritual. Every reading has its distinct pleasure. Some people like to read coffers filled newspapers, periodicals, journals etc. They are storehouse of general information about current events and various socio political and economic problems. It has been well said, Books are like axe they cut through the snow within. Indeed electricity is one of the most important blessings that science has given to mankind. Of all modern inventions, electricity is perhaps the most wonderful. To those who experienced its magic for the first time, it must have felt like being transported to a fairy land. Today, we take it so much for granted that we notice its existence only when there is a power cut nourishing food and life comes to a standstill. Can you think of all the things you could not have done without electricity? Imagine, you could not have watched television or even seen a film in a cinema hall. Compensation for countries hardest hit by global warming will be on the agenda at COP31, which begins on November 9 in Antalya, Turkey. Over the weeks, Lula turned the right-wing's gains in the first round against it, highlighting the threats that a Bolsonaro victory could pose to democracy and civil rights. It is likely to sustain the momentum of groupings such as BRICS and IBSA (India, Brazil and South Africa), both seen by the two countries as vehicles for a more multipolar world order. Apart from the optical engineering in the Lycurgus Cup, there's Roman Concrete, used to build the Pantheon and Colosseum, which hasn't quite been recreated to date. The Global North is often willing to provide humanitarian assistance, but a fund explicitly meant to address "loss and damage" remains fraught because it raises questions related to responsibility for climate change. Going ahead, Lula faces formidable challenges. 7% of the vote against Flavio's 48. While the climate mechanisms linking a vigorous northeast monsoon and El Nino are still to be fully understood, it appears the warming patterns of the El Nino tend to deflect rain-bearing cyclonic circulations in unpredictable ways. of climate negotiations under the UN's aegis: Climate justice. He should seek to build legislative consensus while focusing on addressing the economic challenges of Brazil, which remains one of the most unequal major world economies. As extreme weather events become more frequent and intense, delays in addressing the FLD's shortcomings will undermine the central principle At one point, it seemed almost impossible for Brazil's 80-year-old President, Luiz Inacio Lula da Silva, to turn the tide after finishing second to Flavio Bolsonaro in the first round of elections on October 4. His victory bucks the recent trend in South America, where Washington-aligned right-wing and conservative forces have gained ground. 2%, a greater lead than his victory against Jair Bolsonaro, Flavio's father, four years ago. Lula has deepened ties with China and resisted US tariffs. Addressing them will require Lula to reach out beyond his traditional base. Nepal's application ran into predictable bureaucratic hurdles. be normal to above-normal. In the northeast, the Workers' Party's stronghold, he gained nearly three million votes and made considerable gains in the working-class neighbourhoods of big cities, including Sao Paulo. But Lula, a former trade unionist and organiser, who lost a finger in an accident as a teenager, was not ready to give up. The NMC's justification is that MSMER also introduced a parallel mechanism allowing undergraduate and postgraduate boards to evaluate institutions, stepping on the MARB's toes. Fund shortages have also limited the FLD's ability to fulfil its mandate. Lula and his Workers' Party identified campaign weaknesses, shifted their attention to economic issues, promised growth and welfare, and persuaded more voters to turn out for Sunday's run-off. The move is noteworthy as the MSMER provided for fines of up to 5 lakh on faculty members and administrators for submitting false information. The Roman artefact changes colour depending on the position of the ligh

operationalised a year later, the FLD is a product of a nearly three-decade-long campaign by nations most vulnerable to global warming. Brazil's continued engagement in these forums matters at a time when developing countries are demanding a greater say in the governance of global institutions. Lula unleashed a social media campaign to mobilise younger voters. He must govern a deeply divided electorate, nearly half of which voted against him. Fortunately, the Medical Assessment and Rating Board (MARB) retains the power to fine errant institutions up to 1 crore under the 2023 Establishment of Medical Institutions, Assessment and Rating Regulations. MSMER was lauded for its intention to crack down on the deep-seated corruption and malpractice in medical colleges, particularly over 'ghost faculty' and 'ghost patients'. The FLD's application window had closed in June, and when Nepal sought emergency funding, claims from 119 countries were awaiting approval. It has received pledges worth $822 million - about a third of the claims pending before it. It is only now that scientists from the University of Sheffield have reportedly managed to reverse-engineer the process that went into making the remarkable chalice that features Dionysus and King Lycurgus (from the Iliad) using a fragment of the vessel that sits in the British Museum. He also announced plans to expand a cash payout scheme for the poor, a new debt relief package and entrepreneur-friendly measures. For centuries, till recently, the 1,600-year-old Lycurgus Cup was all but magical. The town planning, sewage and drainage systems of the Indus Valley Civilisation should inspire many a modern metropolis to do better. Developed countries initially argued that granting Kathmandu's request would mean allowing it to jump the queue. Lula won 51. Flavio's campaign pledge to free his father - he is serving a 27-year prison sentence for attempting to overturn Lula's 2022 victory, and impeach Supreme Court judges - only heightened the concerns of voters outside the right wing, who rallied behind a familiar face. A relatively stable economic record, marked by growth and falling unemployment over the past three and a half years, also lent credibility to Lula's appeal. However, why the NMC scrapped MSMER wholesale is unclear. A swift response is particularly important for poorer countries, whose budgets have less room to absorb sudden losses. Therefore, the Centre and the southern States ought to take enough precautions: from clearing up storm water drains, fortifying shelters, making provisions for infrastructure damage and tightening weather warning forecasts to prepare for torrents avenues of partnership. Nepal's experience with the FLD should serve as a case study for reforming the Fund. The magic of the past, then, may not lie in myths of magical weapons and flying chariots, but in achievements that are more useful than "glorious". A WhatsApp channel called 'Lula's Army' with 11 million followers spread his message of continuity. They eventually relented, but only after insisting that the allocation be treated as an exception and not set a precedent for a permanent rapid-response mechanism. There is,

Once such an instrument is duly executed, the Registration Act allows it to be registered even though the donor may not agree to its registration and upon registration the gift takes effect from the date of execution. It was further held, that the doctrine that a donor who has left his gift incomplete cannot be compelled to complete it, has no application to a case where the donor, by executing the deed has done all that the needs to do; registration can be effected even without his cooperation. If the interpretation of Section of the Transfer of Property Act and Section 47 of the Registration Act as canvassed by the defendant were to be accepted, it will open the doors for all purchasers of immoveable were to be accepted, it will open the doors for all purchasers of immoveable property to avoid payment of stamp duty on the sale deeds and become owners only on the basis of executed unstamped and unregistered sale deed and claim to be unable to pay the stamp duty and have liberty to pay the stamp duty whenever they desire. I may in this regard notice that Section 54 of the Transfer of Property Act pertaining to sales is at par with Sections 122 and 123 of the Act pertaining to gifts. I may in this context also record that per Section17 of the Indian Stamp Act, 1899, instruments chargeable with stamp duty and executed by any person in India have to be stamped before or at the time of execution and per Section 29 thereof, in the absence of an agreement to the contrary, the expense of providing the proper stamp duty is to be borne, in the case of a conveyance and which would include a gift, by the grantee i.e. done as the defendant claims to be in the present case. The counsel for the defendant, in rejoinder, contrary to his earlier categorical stand that the defendant is not seeking enforcement of the gift, argued that the suit be put to trial to determine the intention of the parties. It is also argued that it is to be determined in trial, as to who is in possession of the property. an instrument is duly executed, the Registration Act allows it to be registered even though the donor may not agree to its registration and upon registration the gift takes effect from the date of execution. It was further held, that the doctrine that a donor who has left his gift incomplete cannot be compelled to complete it, has no application to a case where the donor, by executing the deed has done all that the needs to do; registration can be effected even without his cooperation. doors for all purchasers of immoveable property to avoid payment of stamp duty on the sale deeds and become owners only on the basis of executed unstamped and unregistered sale deed and claim to be unable to pay the stamp duty and have liberty to pay.

CRPF-hcm-Eng-Test-Dated-2026-10-28-Test NO.-29062

While India has some of the world strongest wildlife protection laws, implementation remains weak. Animal cruelty laws need urgent strengthening, especially for street animals, which face abuse, neglect, and abandonment daily. Instead of expanding zoos, we need habitat restoration. Instead of removing stray dogs, we need sterilization and vaccination programs. Instead of glorifying exotic pets, we need to protect India natural fauna. As we celebrate International Women Day, let not just talk about gender equality but about the leadership role women play in conservation and animal welfare. The future of wildlife, domestic animals, and entire ecosystems depends on our ability to act with empathy, wisdom, and urgency. The journey is long, but with compassion, courage, and commitment, we can ensure that every living being whether a street dog or a wild elephant is treated with respect, dignity, and care. Returning to work after childbirth and picking up your professional life from where you left off can be daunting for most mothers. It is a complex journey filled with challenges, but it is also a time of growth and opportunity. As a mother to a 10-month-old son, I went through this journey last year and understand the struggles firsthand. The anxiety and guilt of leaving your baby, coupled with the desire to resume professional responsibilities can be overwhelming and confusing. While many new mothers take time before they resume work completely devoting themselves to their newborn, I see it differently. I joined work 90 days after giving birth to my son. Resuming work early, even for a few hours initially, can help you ease into your professional life gradually, without staying away from your child for long hours. This also allows your support system to adapt to the new normal both at home and work. Gradual transition also allows you to reclaim your sense of self, your individuality something new mothers often struggle with at the beginning. On the contrary, resuming full-time work straightaway after 6 months of maternity can become challenging. Ease into it takes baby steps The first few weeks after maternity leave are often the hardest. The constant longing for your baby can overshadow the excitement of returning to work. To make the transition smoother, start small. Before officially resuming work, try leaving your baby with other caregivers for a few hours and gradually increase the duration. Discuss the possibility of flexible working hours with your employer. Taking small steps will make the transition easier for both you and your baby. Build a strong support system at home and work Managing parenthood and work is challenging for new parents, especially for working couples. Open conversations about sharing parental duties and household responsibilities can make it easier for both partners to balance home and work. While support at home is essential, new mothers also need to build a reliable support system at work. Clear and open communication is key don hesitate to discuss your needs with your employer. For me, a strong support structure and a wonderfully compassionate and empathetic manager made the transition easier, allowing me to resum

If anything, the joy of motherhood and the invaluable lessons it brings such as patience, resilience, adaptability, and the ability to multitask can enrich your leadership style, making you a more empathetic and effective leader. Ditch perfection redefine balance New mothers often hear about the need for work-life balance, but the idea of achieving perfect balance is unrealistic. You are expected to be a mother first, but sometimes work takes priority and you should not be ashamed of it. Instead of striving for perfection, redefine what balance means to you. Prioritize what matters most at any given moment and allow yourself the flexibility to adapt. If you need to stay late or travel for work, do not feel guilty. Similarly, missing work a few days a year for vaccination appointments will not impact your career. Find your own balance one that is comfortable for you. Prioritize yourself a healthy, happy mother makes a better professional While juggling your role as a mother and a professional, self-care often takes a backseat. However, your mental, physical, and emotional well-being should be non-negotiable. Make time for yourself regularly, and do not feel bad about it. A well-rested and happy mother is more productive, both at home and at work. Moving from Policy to Practice: How Organizations Can Help While new mothers navigate their return to work, organisations also have a responsibility to create a supportive environment. Many workplaces provide facilities such as nursing rooms, flexible working hours and even mentoring and counseling sessions. However, more organizations need to take tangible measures that enable women to grow professionally while embracing motherhood. These initiatives cannot be limited to token gestures on Women Day or Mother Day. A workplace that genuinely supports women and mothers is not just diverse it is stronger. Mothers excel in time management and multitasking, and no one understands uncertainty better than new mothers after all, nothing is more unpredictable than a newborn baby. To all the wonderful women especially new mothers Be kind to yourself, set realistic expectations, and seek support when needed. Ease your way back to work it a personal transition that deserves care and consideration. No matter how much the opposition parties keep slapping the ground like snakes, claiming that Maharashtra is lagging behind in some field, there is no need for any fortune teller to tell us that Maharashtra is at the forefront of development and will always remain ahead. The people of the state are not only hopeful but also completely confident that Maharashtra will move forward strongly under the dynamic leadership of the state Honorable Chief Minister Devendra Fadnavis. Both negative and positive interpretations can be drawn from any statistics. However, the BJP is not interested in the pretentious game of statistics, but only in the interest of the people and for this, Chief Minister Devendra Fadnavis has competently taken the helm of the state. The state Economic Survey report was recently tabled in the legislature, and the process of analyzing where the state is leading and lagging behind has begun. People are inte

The plan to Gayle, he revealed, was simple. The one thing that I thought was that if I don allow him to open his arms, then it will be good because at some stage, he will go for it. Job done this was not a hat trick that would make the headlines, but it had given India exactly what they want from, to strike in the power play, and allow the spinners some breathing space before they come into the game. That magic he produces from the length to get the ball to move off the seam, does not come easy, even for Shami. It is a long procedure, a lot of hard work is required and then the results will come, said Shami after the game. I always concentrate on keeping the seam upright, so that off the pitch it can cut. And you could see that today. I always prefer to use the new ball in the nets also. I keep practicing and try to notice if the ball is going in or out. You saw since the morning, the ball was seaming and cutting and there was not proper bounce. One thing was to keep focusing on your line and length. And limited stock of fossil fuels, the government is focusing on increased use of alternate fuels and raising self-dependent in the production of future clean energy. Adaptation of alternate fuels will help bring down import dependence. During this period, Bio-Fuel has emerged as the best alternative to fossil fuel; it just not an economical option but also channelizes the waste and provides a sustainable solution to the rising problem of waste management. Environmental benefits and economic competitiveness also envisage a strategic role for bio-fuels in the Indian energy market. The resources being used for creating biofuels include agriculture and forest residue, Municipal solid waste, cow dung, sugarcane press-mud, etc. which can be used to convert into biofuels. Then it is generally used as a transportation fuel. India is a large agricultural economy, and there is a huge amount of agricultural residues available, therefore the scope of producing biofuels is immense in the country where we may achieve self-sufficiency in the energy sector also in the years to come. in the bloodstream therefore also known as blood poisoning. Sepsis is not only the leading cause of hospitalization and readmission, but it also accounts for many deaths worldwide. It increases the burden on healthcare and raises healthcare costs tremendously. In the hospital setting, sepsis is often the result of an infection that is common and preventable. It is also common for sepsis to result from infections acquired during clinical care, which are among the most frequent adverse events that occur during health care delivery worldwide people engaged in the care. Information is intelligently provided at the point of care, to improve health and health care delivery such as Update help clinicians in the evaluation and diagnosis of symptoms of suspected sepsis and septic shock not only in adults.

Authors Would Hens, Tim Keller, and Robin Nutgall describe how impacts cash flow in five critical ways. It facilitates top-line growth, reduces costs, minimizes regulatory and legal interventions, increases employee productivity, and optimizes investment and capital expenditures, say the authors. A strong proposition helps companies tap new markets and expand into existing ones. When governing authorities trust corporate actors, they are more likely to award them the access, approvals, and licenses that afford fresh growth opportunities, argues the report. also helps reduce companies risk of adverse government action. It can also engender government support. Moreover, companies that engage in social activities are perceived as beneficial by the public and social stakeholders. Companies that execute effectively can help combat rising operating expenses such as raw-material costs and the actual cost of water or carbon, which the research has found can affect operating profits by as much as 60 percent. It can also help companies attract and retain quality employees, enhance employee motivation by instilling a sense of purpose and increase productivity overall. As numerous research show, employee satisfaction has a positive correlation with shareholder returns. Recent studies have also shown that positive social impact correlates with higher job satisfaction, and field experiments suggest that when companies give back, employees react with enthusiasm. After all, better employee retention, if they resonate, leads to a more robust corporate reputation and access to capital. It also becomes a key driver for sustainable success and competitive advantage, opening a platform for positive dialogue between employers and employees. Companies can build an culture in their workplace by adopting the diversity, equity, and inclusion model by recruiting from diverse talents pools, incentivizing sustainability, and reshaping employer policies with a sharper focus on. Companies must also bridge the gap between executive and workforce pay and provide fairer incentive structures to drive an inclusive culture and employee engagement. A strong proposition can no doubt enhance investment returns by allocating capital to more promising and sustainable opportunities for example, renewables, waste reduction, and scrubbers. After all, investors see value in because it is fundamental to its performance and value and, therefore, should be a part of the organization business and workplace culture strategy. Few know that Coronavirus and its allied disease Covid-19 was first discovered by a data-mining program. Health Map, a website run by Boston Children Hospital, raised an alarm about multiple cases of pneumonia in Wuhan, China, rating its urgency at three on a scale of five. Soon after this discovery, the pandemic hit the world like a tsunami. As it progressed, Governments struggled to deal with the unprecedented crisis on multiple fronts and were forced to look at innovative ways to augment their efforts; presenting an opportunity to leverage Artificial Intelligence AI. AI was used in varied settings including drug discovery, testing, prevention and overcoming resource co

But why were Commissioners Sandhu and Joshi kept in the dark when they asked about this matter earlier, and how did an exercise of this scale proceed, in the name of the Commission, with this level of opacity - again, there are no answers in the affidavit. What's more, companies are doing it even as their profits continue to grow. While it was not stated openly, a reason for these layoffs is the advent of artificial intelligence. However, the government's action-plan will depend on consistent implementation and efficient coordination among agencies, and striking at the real brains behind it all. The Court, which has a distinguished record of upholding Article 324 that secures the ECI's powers, must now nudge it towards a course correction. MS is neither the first company nor the only one that is cutting employees in the wake of AI. It is possible that, in the short term, the transition to AI will create some job opportunities, but over the medium term, this industry, which is the largest provider of white-collar jobs in India, will likely face headwinds. Non-compliance among medical colleges is not uncommon and seldom nipped in the bud, even as the number of medical seats swells while the transparency of the medical education system has not improved. But as with words, so with mixing - people have made the term their own. The bigger challenge, however, is for Indian policymakers. These concerns lend urgency to the objective of dismantling entire networks and apprehending the "big sharks", rather than concentrating disproportionately on individual carriers. Also, the quantity of drugs seized does not, by itself, indicate whether drug availability or consumption has declined. Their problem, among others, needs to be addressed by an ECI that listens, one that gives primacy to due process in its conduct vis-a-vis other players and institutions, and internally. Having been absorbed, and diluted, by the mainstream, mixing appears now to embody self-improvement. However, the dismantling of the entire network would require identification of all suppliers in Myanmar and their successful prosecution. MSMER also specified timelines to appeal penalties. The key is to identify the ultimate beneficiaries by meticulously following the money trail and ensuring their conviction. AI's much-touted ability to replace humans threatens India at a time when the country is experiencing a bulge in its youth population, while struggling to create good quality jobs, amid growing unrest among the young. Born from Game Theory, the word was absorbed into video and board gaming slang, before 4chan message boards and inkle circles turned it into the portmanteau "looks mixing": The practice of going to extreme lengths - like breaking and reforming one's jaw - to "improve" one's looks because that, according to the strange logic of misogyny, was the only way to gain confidence and attract women. Unless the NMC has satisfactory answers for all these lacunae, the withdrawal will appear less like simplification and more like regulatory relaxation. The affidavit has no answer. The SIR process continues to stumble. If the NMC withdrew MSMER because the powers thereunder also exis

with the alleged death by suicide of a father in Sangrur who had raised concerns about the easy availability of synthetic drugs in his locality, underscore the human cost of the problem. Although the MARB regulations retain the appeal processes, their 15-day deadline could conflict with the 60-day period under the NMC Act, potentially creating legal disputes that delay penal action. Reportedly, some of the biggest players across technology and banking - Barclays, HSBC, Oracle, Meta, Amazon, to name a few - have shed significant bits of their workforce in 2026. The October 23 raids, which led to 18 people being arrested, were based on NCB investigations following the arrest of an alleged Myanmar-based kingpin in Delhi this May. Going ahead, the persistence of unresolved questions could return to haunt an institution whose credibility is pivotal for safeguarding the right to vote and nourishing people's trust in free and fair elections. As part of a proceeding under the RTI Act, the Central Information Commission revealed last year that the NMC had stated in 2024 that MARB had neither formally assessed nor rated medical colleges and that its standard forms need not be made public. Language, it turns out, is as good as ever at meaning mixing. The immediate impact of AI-related restructuring at the global scale will also be felt by Indian IT companies. The 2021 Mundra port case in Gujarat, involving the seizure of about 3,000 kg of heroin, is a case in point wherein the principal Afghanistan-based suppliers have yet to be brought to book. Notwithstanding the provision to fine individuals at postgraduate centres, the MARB and the NMC can only penalise institutions, which is harder and risks creating a perverse incentive to accommodate rather than punish, and could mitigate the fear that keeps administrators honest. Trump's imperial ambitions. But why did the software block, in February, the Electoral Registration Officers' decisions to reverse the deletions? In West Bengal, a report in this newspaper has also revealed, judges of tribunals appointed by the Court to decide appeals of those affected by the SIR have pointed out that the ECI requirement for Aadhaar authentication in its portal is coming their way. Operation Trident, a multi-agency crackdown on an international syndicate operating across the India-Myanmar-Bangladesh corridor, marks a significant step-up in the government's campaign against drug trafficking. In Goa, for instance, 88 of the 97 voters who were left out of the final rolls have subsequently applied through Form 6. Companies like MS are finding, one, that with the power of AI by their side, they can do more with fewer employees. That requires, first, fuller transparency. And two, that there is a need to free up money so that hundreds of billions of dollars more can be invested into building AI infrastructure. The affidavit is an imperfect start. "Protein mixing" to be healthier, "hustle mixing" to realise one's potential, "vocabulary mixing", to have new thoughts with new words. These trends should make policymakers rethink their human resource strategies. In a revised reply in October 2025, it said the responding NMC officer

Imagine a freshly's made pickle it sharp and intense. It has all the ingredients that a ready to eat pickle has but lacks the mellow taste. As it ages, it matures into something truly delicious. In the same way, when you gain knowledge, you may have the answers to many situation's. But there are rough edges to your personality. You may speak words of wisdom. You are not living them. You know you should exercise, eat healthy food, and be unselfish, but the challenge is putting that knowledge into action. You get distracted by the allure of instant pleasure. This gap between what you know and what you should do is not insurmountable. Becoming wise is a journey. It involves three phases. The first stage is shravana's, gaining information, like reading a book or watching a video. The second phase is manana, reflection, thinking, contemplating on these ideas, experimenting with them. Finally, the "third phase is nidhidhyasana, living" them. This is when you truly transform into a better person. The intake of knowledge is easy, reflection takes effort, but applying it in life is the real challenge. Long before you take on the world, you must win against your deadliest opponent you! You have imposed limitation's on yourself. You worry about failing, and do not even consider the possibility of winning. Using golf terminology, you have lost your swing. Find purpose. What are you living for? Life cannot be just growing, getting a job, going on a few vacations, growing old and dying. In the end you want meaning in life. More zest, energy, vitality. You want to wake up excited, with a thirst for life you haven felt since childhood. The world is a projection of your mind. Change your thoughts and your world changes miraculously. The same world in which you felt insecure, vulnerable and threatened, now becomes a secure, welcoming and warm environment. All it requires is a slight change in attitude. Everyone wants happiness. The ignorant seek and obtain trivial, finite ends. A few people visualise the transcendental and worship God. They are of four types: those who want to enhance their wealth. The distressed seek solace. Others are curious. But the jnanis, the wise, excel. They seek permanent happiness and reach Enlightenment. So, embrace the journey of transformation, and you will discover deep, lasting happiness in your own heart and soul. If Air Quality Index is urban India haunting tune, then AQI on mila key/lungs choke kar key/chaley nahi jaana is the remix version of the 1944 classic crooned by Smokey voiced Zorabai. Dilli is still tops, but Mumbai follows soot. Its AQI has reached such disastrous levels that drastic curbs have been imposed on runaway real estate construction. Poetic justice: BMC has had to cull its biggest cash cow. Developers were allowed to stampede through the city to make up for the Covid slump, and sarkari agencies had milked them for this via commission etc. In fact, the builder politician nexus had long replaced the underworld in ruining the city. Now it payback time. The good news is that tough decisions have been taken. The bad news is that cities, like hell, are paved with good intentions. Fat cat builders occupy the pent

Frenetically built as if there no tomorrow. Ironically these connector's will encourage a bigger bumper crop of vehicles further modifying our tomorrow. So, while Longfellow Dust thou art to dust returned was not spoken of the soul, it has certainly returned to smother every surface of my home. Dealing with it was always fraught since jhadoo pochha bartan (sweeping swabbing utensils) is the limit of the remit of my part time help; our old Cal house boy jhhad pochh (dust n wipe) is beyond the My way or the bye way Mumbai bai. (Un) clearly, a bad heir day is a pan urban problem, not just that of a certain party. Actually, the entire opposition reels under the overwhelming PM levels in political atmospherics. You may have lived with the attitude of taking, feeling a sense of separateness from people and focusing on fleeting pleasures. Consider a different approach the joy of giving, loving others, and rising to emotional thrills and intellectual delights. You will grow into a remarkable personality. The final plunge is to the spiritual realm. You will then see the futility of worldly pursuits, and not be carried away by the glitter of transitory joys. You will seek infinite happiness and reach Enlightenment. Team through the long season. A spiritual man, Bedi paji would come to the Stadium every morning to conduct the training sessions with the kada prashad in a Dona (a leaf bowl) from the gurdwara. He would distribute the prashad and then make us run to the Rashtrapati Bhawan and back. When some senior players would express unhappiness at having to workout, Bedi paji would say: jeda sacha Sardar hondae, o kadi ni thakda (the one who is a true Sardar, never tires). He would often ask our age and if you said 17, he would ask: 17 or 70? If you are 17, behave like one. He was a no nonsense hard taskmaster. That season the Punjab team went on to win its first Ranji trophy title. He was the real talent scout of the game, constantly in search of raw talent whom he could train. This was much like the work done by Denis Lillie for fast bowling in Australia and India, the Imran Sarfraz duo for fast bowling in Pakistan, and Abdul Qadir for his style of leg spin. Over the years Bedi paji relentless hard work produced left arm spinners maestros from Maninder Singh to Rahul Sanghvi and Murli Kartik, with a long list in the middle. His art lived on through them, as if he divided his soul and given it to his disciples. Even English cricketers like Monte Panesar and Usman Afzal benefited equally, and so did Pakistani left arm bowler Iqbal Qasim who used Bedi paji pearls of wisdom in a match against India. The rate at which he made left arm spinner out of young boys outpaced any other cricketing guru. In doing so, Bedi paji not only spawned a gharana (i.e. lineage) but also redefined the term. His gharana was not limited to an elite community of performers, his kinfolks or countrymen, it included everyone irrespective of where one came from, without any discrimination. That was Bedi paji a maestro with a large heart and a spiritual sensibility. Time your meals and do not drink water immediately after meals : Most dieticians say that you should aim to complete mo

Demands of your taste buds, seek the blessing of the God's for some divine inspiration. A story tells that two friends were walking through the desert. During some point of the journey, they had an argument, and one friend slapped the other one in the face. The one who got slapped was hurt, but without saying anything, wrote in the sand today my best friend slapped me in the face. They kept on walking until they found an oasis, where they "decided to take a bath. The one who had" been slapped got stuck in the mire and started drowning, but the friend saved him. After he recovered from the near drowning, he wrote on a stone today my best friend saved my life. The friend who had slapped and saved his best friend asked him, after I hurt you, you "wrote in the sand and now, you write on a stone, why? The other friend replied when someone hurts us we should write it down in the" sand where winds of forgiveness can erase it away. This sense of loneliness can impact their mental health and ability to make decisions, which may have consequences for their organizations. Exploring this topic is crucial for understanding the challenges faced by leaders and identifying ways to better support them in their roles. The Cost a Leader Pays for Feeling Lonely Leadership comes with a number of challenges, and among them is the psychological toll of loneliness. While a leader may be surrounded by teams and colleagues, they can still feel isolated and disconnected from others. This loneliness can be attributed to several factors, including the need to maintain a professional persona, having to make tough decisions alone, or simply being held to higher standards than others. Regardless of the cause, it is clear that loneliness can be a considerable cost of leadership. As professionals, it is essential to recognise the mental and emotional strain of leadership and take steps to overcome it. Only then can we truly thrive as effective and fulfilled leaders. Why Leaders Feel Lonely and How It Impacts Performance Leadership can be a lonely pursuit. Despite the perception that people surround leaders and have a lot of support, the reality is often different. They may find it challenging to relate to their team members on a social level or feel isolated because of their responsibilities. Research has shown that loneliness can impact a leader performance, leading to a lack of motivation, lower job satisfaction, and decreased productivity. Leaders need to be aware of this and build strong relationships inside and outside the workplace to counteract these effects. Investing time in building connections with peers and seeking out mentors can be critical in avoiding the loneliness trap. Addressing the Stigma of Being a Leader Who Feels Lonely Despite being in a position of power and authority, leaders are not immune to feeling lonely and isolated. This stigma of being a leader who feels lonely is often disregarded or dismissed entirely. However, the reality is that leadership can be a lonely job. Leaders may find it challenging to build relationships with their subordinates due to the power dynamic and struggle to form genuine connections with their peers. This isolation can

Apart from this, a total of crore of foreign investment has come to the state in the first nine months of the financial year. This is the highest amount of foreign investment in the state in the last ten years. The BJP-led government has taken the steps necessary for this. There is no doubt that the sweet fruits of this labour will be enjoyed in the coming days. It is not just the Chief Minister who is saying all this, but the Central Government DPIIT has released a report on foreign investment as of December 2024. The Mahayuti government has broken its own record of the financial year 2016-17 by receiving the highest annual foreign investment for the last ten years in just nine months, and there is still one quarter left. The reason for presenting all these details is to provide the public with objective information about what happened during the opposition government and what is happening during the Mahayuti government. Chief Minister Fadnavis had the opportunity in the last two and a half years to complete the tasks he had undertaken in his first term, and the same momentum has continued. The government is committed to completing the work of building on the foundation laid during its first term in office in these five years. The focus is on infrastructure, technology and investment to make Maharashtra a trillion dollar economy. The credit for preparing this roadmap goes to the BJP government. Currently, Maharashtra is the only state in the country that has crossed the half-trillion mark. It is true that all other states are far behind. Maharashtra aims to become a trillion dollar economy by 2030 and is making strong progress towards that goal. These are not just talks, but the state government also has a department-wise plan ready for it. Ultimately, the progress of any region in the world depends on the development of its agriculture, industry, trade, and human resources. Rapid development of agriculture requires irrigation, power supply, transportation, and communication facilities. At the same time, for the development of the industrial sector, there is an urgent need for modern machinery and techniques, skilled manpower, good management, abundant energy resources, financial services, markets, transportation system, abundant water, and modern communication facilities. All these services are collectively called infrastructure. Everyone knows how visionary the BJP-led government policy is in this regard. A well-functioning infrastructure is the backbone of a modern society. In addition to playing a vital role in facilitating business transactions, infrastructure improves the efficiency of a state. It raises the standard of living of its citizens. There is a direct relationship between infrastructure and gross domestic product. The expansion of basic services increases the level of production in a state. It accelerates the development of a state. The central government led by Prime Minister Narendra Modi and the state government led by Fadnavis are moving hand in hand towards development. It is well known that development is the focus of both the governments. Therefore, regardless of how much anyone cries out, the state is marching towards

Who actually in control? In the intricate dance of the global economy, two formidable forces vie for dominance: tech monopolies and regulatory bodies. This dynamic interplay shapes markets, influences innovation, and determines the balance of power between private enterprise and public interest. Over the past two decades, technology companies have experienced unprecedented growth, with some achieving market capitalizations exceeding $1 trillion. Firms like Amazon, Google, and Apple have become integral to daily life, offering services that range from online shopping to information retrieval and communication. Their expansive reach has led to concerns about monopolistic behaviors, including stifling competition and exploiting market dominance. For instance, the European Commission imposed antitrust fines totaling 8.25 billion on Google between 2017 and 2024 for abusing its market position. Tech companies like Apple, Microsoft, Alphabet Google, Amazon, and Meta Facebook are no longer just businesses; they are economies unto themselves. Their market capitalizations have skyrocketed, their profits are staggering, and their control over data, infrastructure, and consumer behavior is virtually absolute. The crux of the debate lies in finding a balance between fostering innovations and preventing monopolistic practices. Excessive regulation may stifle technological advancement, while insufficient oversight can lead to market abuses. For example, despite increased antitrust cases and new regulations, companies like Amazon and Google have effectively neutralized these challenges, maintaining their dominant positions. Conversely, unchecked monopolies can hinder competition, reduce consumer choices, and concentrate economic power. The challenge for regulators is to craft policies that promote fair competition without discouraging the entrepreneurial spirit that drives technological progress. Who Holds the Reins? The global economy trajectory is influenced by the continuous interplay between tech monopolies and regulatory authorities. Figures like Elon Musk illustrate the dual-edged nature of technological dominance capable of driving innovation while posing challenges to equitable market practices. Ultimately, achieving a harmonious balance requires adaptive regulations that safeguard public interests without impeding the transformative potential of technology. The brutal truth? Tech monopolies are more powerful than governments when it comes to shaping the modern economy. While lawmakers argue in committee hearings, these corporations dictate consumer behavior, control infrastructure, and wield economic influence at a level never seen before. Regulation may slow these monopolies, but it won stop them. The global economy is just influenced by Big Tech; it is practically owned by it. Until governments find a way to outmaneuver corporations that are richer, faster, and more technologically advanced, the true rulers of the global economy will sit in Silicon Valley boardrooms, not in presidential offices or parliamentary halls. Neighborhood gossip queen Sharma Aunty is always on top of the latest trends. These days, she deeply concerned about sleep divorce

However, there are effective ways to reduce leadership's loneliness. One way is to establish a peer support group where leaders come together to share leadership experiences, challenges and insights. This provides a sounding effective board for leaders to express themselves in a safe and confidential environment. Another way is through mentorship, where leaders can gain guidance and advice from trusted, experienced individuals. Finally, leaders can invest in building authentic relationships with their team members. This creates a more trusting work environment and helps leaders feel connected to the people's they work effective with. By implementing these strategies, leaders can reduce leadership loneliness and build a more fulfilling workplace culture. The Power of Connecting with Others in Leadership Roles As a leader, it important to recognise the power of connecting with others. Building strong connections with team members, colleagues, and other professionals in your industry can lead to greater success and a more fulfilling career. Effective leaders understand that relationships are the backbone of progress and that investing time and energy into cultivating connections is worthwhile. By effective connecting with others, you have access to new ideas and fresh perspectives and build trust and respect, which opens the doors to collaboration and growth. Baby said, Okay, then why are our legs long and our feet rounded? The mother said, Son, obviously they are meant for walking in the desert. You know with these legs I can move around the desert better than anyone does! Baby said, Okay, then why are our eyelashes long? Sometimes it bothers my sight. Mother with pride said, my son, and those long thick eyelashes are your protective cover. They help to protect your eyes from the desert sand and wind. Baby after thinking said, I see. So the hump is to store water when we are in the desert, the legs are for walking through the desert and these eyelashes protect my eyes from the desert than what in god name are we doing here in the Zoo!? Investing in relationships is one of the most powerful tools in a leader toolkit, and those who priorities it are sure to reap the rewards. Leadership loneliness is a real experience and can be challenging to acknowledge. Leaders need to educate themselves on understanding loneliness and how to manage it to foster a successful and effective environment. Not only that, but raising awareness about leadership loneliness as a whole is an essential step to reducing the stigma associated with those who may otherwise feel isolated and unheard. Practicing self-care, joining support groups or communities, and growing your social network are all valuable tips that can help ease feelings of isolation. Plus, by connecting with other individuals in a similar situation, you grow from being exposed to different perspectives in an interdependent way and gain strength from those who get it giving you both the capacity and opportunity needed to drive change in your Organisation. Armed with knowledge and proper support, no leader has to face leadership loneliness alone. So, reach out today for an empowering experience with others;

It can sell it back to the energy provider and make a profit. One of the most effective design strategies in commercial buildings is the inclusion of green roofs and walls. Landscaping is not a foreign subject to commercial real estate, but the concept of vertical gardens and green roofs is. Vertical gardens help a building boost its positive environmental impact. These gardens are typically installed on the exterior of the building envelope. Vertical gardens provide insulation as well as reduce heating and cooling costs. These breathing walls improve a building sustainability by reflecting solar radiation, absorbing rainwater and significantly improving air quality due to their nature of absorbing CO2 and releasing oxygen. To summarize, we strongly believe the future belongs to green, sustainable buildings. Considering the current concerns and awareness around sustainability and the environment, it is critical for owners and developers to demonstrate, with the help of recognized certifications, that their new-age buildings are effectively supporting climate change goals, contributing to energy efficiency, providing comfortable and green premises that save energy, water and resources, generate minimal waste and support human health. As more inhabitants look for spaces that are beneficial for both people and the environment, and the pressure to slow and reverse climate change keeps increasing, green sustainable buildings are here to stay! Any kind of bone pain, whether mild or excruciating can be stressful for the person experiencing it. Bone pain essentially consists of soreness, tenderness, and aches in the bones. It is different from joint pain or muscle pain because it is present whether the person is moving or not. While bone pain could be attributed to changes in bone density or injury to the bone, it would also be prudent to know about some underlying medical conditions that are responsible for it. Chronic Myeloid Leukemia & Bone Pain Chronic Myeloid Leukemia CML is one such condition that could be the cause of bone pain in an individual. Chronic myeloid leukemia is a rare type of blood cancer that starts in the blood-forming cells of the bone marrow. In CML, the bone marrow spongy material inside our bones develops an abnormally high number of immature white blood cells. Currently, CML accounts for 15-20% of all adult leukemia in India, and the incidence is slightly higher in men than in women 1.4-2.2 1. It is a chronic disease, and to have a near-normal life, it is imperative to appropriately manage the progress of the condition and adhere to the treatment. Patients should understand that CML is not a life-threatening condition, and they can lead a near-normal life with the right kind of modern innovative therapy solutions. Reasons for Bone Pain in CML In CML, the immature white blood cells, multiply in the bone marrow excessively which thereby increases the density of the bone marrow. The healthy cells are outnumbered by the immature cells and the bone marrow expands. This starts putting pressure on the nerves thus manifesting as bone pain in CML and is usually one.

Stop calling us stray dogs and call us street dogs, which is what we are. Raja: So what does the programmer involve stands for Animal Birth Control and is like a family welfare programmer's for us that involves sterilizing guys like you so as to reduce our population. Wherever it been tried in our country has significantly brought down our population, by as much as over 58% in some cases so were no longer seen as a menace, but as the street-smart neighbourhood protectors that we are. Raja: Hey, XYZ sounds cool. I canine say I dig the idea. Such initiatives must respect the sovereignty and territorial integrity of all they must adhere to and should not become debt burdens. Third, on terrorism, Duvall emphasised that terrorism's is a serious threat to international peace and security. He also pointed out that terrorism could not be justified on any ground and offered fully-funded capacity-building programs to Central trafficking. He pointed out that the linkages between terrorism's and drug trafficking were a serious menace. Plants grown in iodine rich soil are also good sources. However, this is not a reliable source of iodine since there is no way of knowing whether produce purchased in grocery stores is grown in iodine rich soil or not. Iodized salt usually adds less than about three hundred micrograms iodine daily to the diet. Most multivitamin mineral supplements contain 150 micrograms of iodine. With the safe upper limit of daily iodine intake for adults set at 1,100 micrograms by the IOM it is unlikely to hit an excess amount when including a multivitamin and including natural sources of dietary iodine. The trend of eating less table salt, dairy and bread has some experts concerned that iodine deficiency could be on the rise again. Eating a healthy, balanced diet that includes iodine rich foods and iodized salt is key to good health. This meeting was yet another step to improve India connectivity with the Central Asian countries. India offer to build its capacities in digital payment and cyber security is timely. This would bolster trade between India and Central Asian countries. India institution allocation of links with the region would go a long way to expand its strategic profile in the region. However, India needs to pay attention to two worrisome dimensions. First, the threat from terrorism has significantly enhanced with the Pak-sponsored terrorist outfits getting support from various Taliban factions. Second, the increased Sino-Pak machinations create obstacles in India links with the Central Asian countries as was seen at the recent BRI Forum meeting. Iodine fortification is what most countries rely on to encourage adequate dietary intake. In more than seventy countries that iodize salt generally serves as the major source of iodine used in processed foods, which is the major source of salt for most Americans typically, does not contain iodine. If salt used in a processed food contains iodine, it will be listed in the ingredients list of that food. Focus on decreasing the amount of salt consumed from processed foods and get your sodium from iodized salt. Seaweed, saltwater fish and seafood are natural sources of dietary iodine.

Value in because it is fundamental to its performance and value and, therefore, should be a part of the organization business and workplace culture strategy. Few know that Coronavirus and its allied disease was first discovered by a data-mining program. Health Map, a website run by Boston Children Hospital, raised an alarm about multiple cases of pneumonia in Wuhan, China, rating its urgency at three on a scale of five. Soon after this discovery, the pandemic hit the world like a tsunami. As it progressed, Governments struggled to deal with the unprecedented crisis on multiple fronts and were forced to look at innovative ways to augment their efforts; presenting an opportunity to leverage Artificial Intelligence AI. AI was used in varied settings including drug discovery, testing, prevention and overcoming resource constraints, and its success opened a whole new door of possibilities. Here a look at some of the most intuitive, innovative and advantageous uses of the technology during, outlined under the four categories of diagnosis and prognosis, prediction and tracking, patient care and drug development: Diagnosis and prognosis of using AI Diagnosis of COVID -19 Pneumonia: Rapid diagnosis and identification of high-risk patients was challenging during peak. Using a large, computed tomography CT database from 3,777 patients, researchers 8 developed an AI system that could diagnose novel coronavirus pneumonia NCP and differentiate it from common pneumonia. The AI system was able to provide accurate clinical prognosis, assisting clinicians with early clinical management and appropriate allocation of resources. Prognosis using AI on X-ray images: The AI system was trained for automatic prediction of deterioration risk 9 using a deep neural network that learned from chest X-ray images and routine clinical variables, using data from 3,661 patients. The deep neural network extracted informative areas of chest X-ray images to assist clinicians and performed comparably to two radiologists in a reader study. Detecting based on the sound of cough: The MIT team developed a program using audio input from tens of thousands of patients coughing and self-reported clinical information to detect differences in the way a symptomatic patient coughs 10 compared to a non-infected patient even though doctors cannot differentiate between them. Predicting clinical outcomes in patients: Federated learning is a method used for training artificial intelligence models with data from multiple sources, while maintaining anonymity, thus removing many barriers to data sharing. Researchers used data from 20 institutes across the globe to train a model, called Electronic Medical Record EMR Chest X-Ray AI Model EXAM 11 that predicts the future oxygen requirements of symptomatic patients using inputs of vital signs, laboratory data and chest X-rays. Identifying at -risk patients: Medical Home Network, a Chicago-based non-profit, created a health risk screening platform 12 to identify Medicaid patients most at risk from. The platform used data on respiratory complications, social determinants of health and additional clinical parameters to predict the risk to patients. The progr

Models categorize the infected population according to their individual infection or symptom status. While traditional SIR models used a limited set of data elements, the advances in deep learning allowed researchers to use all available data to model, analyze and forecast the virus spread or containment. Accurately modeling the spread of an infection is key to help governments take containment measures. The Global Epidemic and Mobility Gleam 4 model: The Gleam model combines real-world data on human mobility with elaborate stochastic models of disease transmission. It provides analytic and forecasting power to address the challenges faced in developing intervention strategies that minimize the impact of potentially devastating epidemics. It also allows teams to study the efficacy and outcomes of diverse intervention strategies, analyze threats through model scenarios, and forecast newly evolving infectious diseases. Transportation Analysis and Simulation TRANSIMS system: TRANSIMS 5 uses unconventional computational techniques to predict the spread of. It can simulate the travel behavior of each individual for an entire 24-hour period based on the survey data received, which includes statistics on the volume of traffic and congestion, time-dependent delays for the entire road and transit network, and queues at intersections. Tracker map to predict hotspots: Captivity, a healthcare AI company, developed a tracker map 6 that could accurately predict new outbreaks in the United States. The tracker map uses big data models and AI technologies to show the relative risk of infection for people with underlying health conditions in affected areas. This was a helpful tool 7 for public health officials to direct their limited resources to those most in need. AI-backed, superior care for patients Smart field hospitals: Following the outbreak, a Smart field hospital 13 was built in the Hong Shan Sports Center in Wuhan, China. It was staffed with robots responsible for administering medications, taking vitals, and disinfecting the facility. In addition to helping the hospital staff, specialized robots were used to provide entertainment and information to the 200,000 people at the hospital. Thermal sensing drones: South Korea used drones to completely disinfect high epidemic areas. In Inching County, China, the drones delivered medical supplies to centers in need, and thermal sensing drones 14 identified people running fever, potentially infected with the virus. Chatbots as assistants: Several public and private care providers leveraged chatbots 15 to help patients and medical workers. Chatbots were able to respond to a flood of enquiries about symptoms in various languages with a human-touch, enabling people to receive timely, accurate information. The United States Center for Disease Control and Prevention and Microsoft developed a coronavirus self-checker service to help users self-assess their condition and suggest a course of action. Combating misinformation on social media platforms: Social networks were full of misinformation about the pandemic, which led to the general public challenging restrictions, often gathering in large numbers to protest the

In the judgment given by the trial court, detailed reasons are given, which will be discussed at the appropriate stage by us, as to how, in the given circumstances, the prosecution was able to explain the delay. The other broad point was about extending the time limit for exemption for use of demonetized currency notes of Rs. 2000/- progressively in right earnest. 24,000/- per week per account holder, in spite of Notification issued by the Reserve Bank of India permitting such withdrawal. The trial court further observed that both the witnesses withstood the test of credibility as even after undergoing detailed cross-examination their depositions on vital aspects remained firm and could not be shaken. The trial court pointed out that the statement of PW-8 clearly suggested that the prosecutrix was forcefully raped by the respondent and as a result of that her hymen was ruptured and her external anal sphincter was also torn. Further, the Authorities are working to the best of their ability to defuse the crisis of cash flow situation by printing new notes. He submits that the old demonetized notes will be replaced by new legal tender notes in the form of Rs. 500/- and Rs. He submits that as of now the Reserve Bank of India has been able to infuse around Rs. The trial court, however, was not convinced by this argument. Learned counsel for the District Cooperative Banks, however, submitted that the Reserve Bank of India must assure that the entire amount offered by the District Cooperative Banks for exchange after due verification in the form of demonetized notes, will be duly replaced by commensurate amount of legal tender notes contemporaneously. The main argument advanced by the defence before the trial court was that it was a case of inordinate delay where reporting to the Police was three years after the incident. In the ultimate analysis, the trial court believed the statement of the prosecutrix as true since it was supported by medical evidence on record. The other serious grievance made by the petitioners is about the denial of right to withdraw the prescribed amount of Rs. The learned Attorney General on instructions submitted that the policy of replacement of legal tender notes as applicable to Public Sector Banks and other Banks will be applied even in the case of District Cooperative Banks for exchange of demonetized currency with the legal tender currency. This argument was also brushed aside by the trial court pointing out that, in her cross- examination, the prosecutrix has stated that the incident had taken place in the morning hours, around 8:00 a. m. to 9:00 a. m. Female members of the family returned back to the house after one hour of the incident. Taking aid of various pronouncements of this Court on this aspect, the trial court concluded that the said delay had not dented the case of the prosecution. In the opinion of PW-8, on account of injury to the prosecutrix's anal sphincter, she might be a sufferer throughout her life. The ground reality, however, contends learned counsel, is that the Banks are refusing to pay the full amount of Rs. Considering the stand taken by the learned Attorney General, we may commend to the Aut

Attorney General, the Government has already made it amply clear that it would take around 50 days time to streamline the cash flow. The trial court, after analysing the evidence, found that there were few contradictions in the statement of PW-1 and her daughter PW-2 with regard to the period of stomach ache and the duration for which she was on medication by the local doctor, a private chemist. 1000/- at specified counters as per the relevant Notifications issued on that behalf by the Reserve Bank of India. That period is still not exhausted. Accordingly, we decline to issue any interim direction to the Government in the matter of extending the period of exemption and leave it open to the Government to take appropriate decisions on that behalf, as may be advised. Another argument of the defence before the trial court was that it was impossible that such an incident would have occurred in the house where so many family members lived. She found that anal sphincter of the prosecutrix was not functioning properly. We accept the assurance given by the learned Attorney General on this behalf. The Sessions Court noted that the prosecutrix was only a nine years old child when the incident happened and she was only twelve years of age when she deposed in the Court and, therefore, it could not be expected of her to report each and every fact by giving minute details. The Sessions Court found that the testimony of the prosecutrix appeared to be true. However, in the opinion of the Sessions Court, these were very minor discrepancies. 500/- and Rs. 24,000/- per account holder of the Bank per week to the extent possible and review that decision periodically and take necessary corrective measures on that behalf. It was contended that the exemption period provided in the concerned notification is expiring. The prosecutrix had stated that she had not disclosed about the incident to anyone since the respondent had threatened to kill her and also did not disclose to her mother on phone, out of fear. 500/- and Rs. In such circumstances, it could not be believed that the respondent would have taken the prosecutrix to the room on the first floor and committed sexual intercourse. It was submitted that if the Government has issued such Notification after due consideration, it is obliged to ensure that its commitment made under the said Notification is implemented without any exception. In our opinion, whether the exemption period should be extended or not must be best left to the judgment of the Government of the day with a hope that the Government will be responsive and sensitive to the problems encountered by the common man. For that reason, new currency notes could not be printed well in advance. She was not conversing on how to make a call on the phone. Another argument of the defence that PW-1, mother of the prosecutrix, had filed false complaint to implicate the respondent on account of family feud was also not found to be convincing. It is further submitted that for the nature of decision taken by the Government to unearth the black money or unaccounted money and to dry up the terror fund and defeat the attempt of circulation of large scale counterfeit curre

Structures were not very sustainable largely owing to their size and use. However, with changing times the commercial building industry is also evolving. Today these structures, regardless of their purpose, can become greener than ever. To reduce the impact of a commercial building on the environment, architects and engineers have the responsibility to make use of natural and sustainable materials that meet strict criteria. These materials need to impact the building energy efficiency substantially by creating a tight envelope that provides element protection and reduction in expenditure. While for many builders and owners it is not yet completely clear which specific measures could be implemented towards the ambitious goals set out in the Paris Agreement, the market processes of supply and demand have gradually nudged them towards developing green, smart buildings, which meet the modern quality and infrastructure requirements without compromising the earth resources. In recent years, several sophisticated systems have been designed to minimize energy consumption and enhance occupant comfort in residential, office, retail and industrial buildings across the world. From this viewpoint, several sustainability assessment methods for buildings have become popular among real estate developers. The hangnail Manual A guide for sustainable urban development in the 21st Century published by the United Nations presents case studies on commercial projects across the world and reports lessons learned. A case study on HafenCity in Hamburg, Germany reveals that urban redevelopment projects that convert brownfields to greenfield can capture the imagination of a city and help recast its image as an innovative, creative and livable space. Additionally, integrated approaches to rethinking a community can solve multiple urban challenges related to land use, housing shortages, energy supply, transportation and access to cultural services. A similar case study on US Green Business Council LEED Programmed suggests that building standards with measurable criteria are a good basis around which communities of practitioners can come together to design and build more sustainable buildings. A framework should allow enough flexibility for its application across all manner of buildings. Different levels of certification silver, gold, platinum allow builders to pursue certification levels commensurate with their level of available financing. One of our responsibilities as responsible builders and developers is to decode how to implement strategies into our designs that take into consideration the people who occupy the spaces and our natural resource utilization while ensuring these projects are commercially viable. We have realized we can achieve this through three main goals Reducing our carbon footprint, building healthy workplaces, and designing efficient and profitable buildings. Needless to say, every commercial building needs electricity to function smoothly. With that in mind, businesses do not have to depend entirely on the grid anymore they can make a transition from fossil fuels to renewable energy sources simply by updating their infrastructure. For example, one

CRPF-hcm-Eng-Test-Dated-2026-10-30-Test NO.-29095

Of the symptoms of this condition. The high number of immature white blood cells also form clumps that put pressure on bony structures which leads to fatigue, weakness, bone pain, and even fractures. Bone pain in CML usually affects large and long bones like the sternum, shoulder bones, bones of the legs, and hands due to their increased bone marrow density. Many times, the bone pain caused by CML is brushed off by patients as a strain or a bone injury before CML diagnosis. Hence it is extremely important to be alert and have a bone marrow density test done to check for any kind of bone anomalies. Causes of CML is caused by spontaneous chromosome mutation, which causes pathogenic white blood cells to proliferate in large numbers, crowding out healthy blood cells and causing bone marrow damage. The mutated gene BCR-ABL is responsible for CML, and this produces a high number of immature white blood cells which leads to several symptoms in the patients. Management & Treatment Continuous monitoring of CML is extremely essential. It allows the doctor to administer the proper dose and therefore keep the issue in check. A complete blood count CBC is utilized for monitoring, typically to assess the white blood cell count. When the illness is first diagnosed, monitoring should be done every three months, and thereafter every six months. While these are the recommended periods, the frequency of monitoring is partly determined by the circumstances of each case. The manifestation of symptoms of CML like bone pain will also subside in patients if they adhere to regular checks, tests, and monitoring of the condition. It is important to follow the doctor advice. failure to follow treatment methods can cause the condition to deteriorate and may exacerbate bone pain as a result. Hence, patients should not break their treatment cycles and stay in touch with their healthcare providers. In terms of treatment, patients should remember that CML is not a deadly disease and that with the right kind of treatment choices, patients have a normal life expectancy. Tyrosine kinase inhibitors TKIs are the first-line treatment for most patients with CML, and more than two-thirds of patients obtain long-term disease control with them. Adherence to treatments and regular follow-ups with the doctor is the key to managing this condition. Balancing motherhood with your professional life can be a challenging task. Some mothers sacrifice their careers following motherhood due to societal norms, or some voluntarily do so since they wish to give a better life to their children. Motherhood is a beautiful experience, yet fulfilling your dreams and aspirations is gratifying and rewarding. Being a millennial mom and striving to balance a full-time career is never simple. But it is not IMPOSSIBLE! All it takes is determination, willpower, self-confidence and attitude to bring the right balance. In this journey, moms should not lose their identity and always excel in what they do. Achieving what you love to do will bring you immense pleasure, and you will.

Be doing everything right. However, living with that guilt or the ifs is not done and won keep you happy. Yes, sometimes taking care of the little human and your deliverables can be stressful. At home or work, so many activities compete for your attention and time during the day. Sometimes you might feel and believe you&#39 re not doing well in your responsibilities. And that how I experienced, at times, as a mother who has a full-time job outside the house. As a working mother, I rely on simple yet effective approaches to keep my health and a sense of purpose despite the difficulties of achieving the ideal work-life balance. And with these points in mind, I am sure that all the millennial moms out there can manage their personal and professional lives. 1. Get out of the mom guilt Ditching the mom guilt was the first thing that helped me resume my career and create a balance. When moms resume their full-time jobs, they are sometimes criticized for abandoning their kids, while males are obligated to work and be the sole bread earner. Why is this notion still so prevalent in our presumably progressive age? Several women prefer to return to the workforce because they do not wish to give up their careers or because they need to support their families. No matter what, I believe that deciding to work while raising a family is a decision that must be celebrated, not criticized or disgraced. You are fulfilling your purpose, and your workplace also needs you as much as your home. It time to stop feeling bad if you can be with your baby all the time. Emphasis on the positives that your family is receiving from your job life. Be certain that you make the finest decision for your entire family, especially yourself. Gradually, your child will realize the depth of your love and appreciate your choice to make a sacrifice. 2. Give quality time to your child when at home Being physically present and worried about the office chores does count on being at home. If you are at home, be both physically and mentally present. Quality time with yourself and your child matters a lot, and that what I believe every working mom should understand. Being at home ins just winding up a household chore. Rather, put your phone away and focus on your child. Learn how their week was, what they enjoyed, and what problems they had, play with them and help them with their school work. Also, take them out for a walk or drive, go shopping, have dinner with your family and enjoy every moment. Not only will your children be happy, but you will also be happier knowing that you are making the best of the hours you have with your children. 3. Always enjoy the present Enjoy yourself no matter where you are, at work or at any social gathering. The most important thing is maintaining every aspect of your.

Life and focusing on what you are doing. Distracting yourself will lead to nowhere. Hence, enjoy the present. Doing this will help you have a well-balanced life, and you will be an inspiration for your child. Also, try to engage yourself in your favorite or any relaxing activity every weekend, whether that a spa. So it will rejuvenate you, and you will be all set for the week. Balancing professional life with motherhood ins easy, yet being a millennial mom, you can achieve that, and it can be fulfilling to achieve the greatest of both worlds. Accept your wonderful, imperfect, thrilling, real, and adventurous journey above everything else. Don take any decisions that will make you feel guilty, love what you do, and you have all the power to manage your professional obligations and raise a strong and ambitious child like you. The Indian pledge is 40 per cent grant and the balance in the form of soft loans. Further, it is in addition to the $1 billion assistance package announced last August during Prime Minister Narendra Modi maiden visit to Nepal, bringing India total commitment to $2 billion, over the next five year period. The focus will be on housing reconstruction including public buildings, heritage restoration given our shared religious and cultural history, rebuilding infrastructure like roads, bridges and power transmission systems, agriculture, education and health, and structures for long-term disaster mitigation. It is an ambitious programme and will need to be managed carefully with the various Indian agencies and the newly set up Nepal Reconstruction Authority. Traditionally, the problem with a number of Indian funded projects has been significant time delays and consequently, budget overruns. The integrated check posts, terai roads, railway linkages and the Raxaul Amlekhgunj oil pipeline are prime examples of such projects. While the Indian Embassy can ensure local follow up, what is needed is effective coordination at the Delhi end. Either somebody needs to be appointed to undertake periodic visits for ensuring that the momentum does not slacken or perhaps the Prime Minister Additional Principal Secretary, P.K. Mishra, who had visited Nepal in May and also accompanied Ms. Swaraj, will have to take on this role. He would also need to be sensitive to Nepali sensibilities to ensure local cooperation. So far, India contribution as the major development and reconstruction partner has been handled well, with discretion and without any chest-thumping about India role which often leads to resentment in the neighbourhood. The Nepali media (and the Indian media too) is prone to facile commentary about Indian and Chinese competition for influence in Nepal. A recent example was in the immediate aftermath of the earthquake on April 25 when India responded swiftly with its disaster relief flights and search and rescue teams but constant tweeting and Indian media coverage tom-tomming Indian role amplified into insensitive megaphone diplomacy leading to a backlash in Nepal. What needs to be understood is that while the Chinese media may have been as adulatory about the work of Chinese.

Always mindful of sleep hygiene and disorders. Jokes aside, the buzz around sleep divorce is just Sharma Aunty latest obsession it a growing reality. As awareness about the importance of quality sleep rises, a global study has uncovered a silent sleep crisis. Turns out, a significant number of Indian couples are ditching the idea of sharing a bed not out of love lost, but for the love of uninterrupted sleep. In fact, when I first stumbled upon the internet latest buzzword sleep divorce, I could help but raise an eyebrow. A term that makes it sound like couples is parting ways when all they are really doing is taking back their sleep? But the more I thought about it, the more it started to click. A friend, and IT professional who prefers to stay unnamed, says, at first, I was sure about it. It sounded strange. But when I saw other couples raving about it, I started to get curious. I decided to give it a shot, and honestly, I feel even more connected to my partner now. He went on; Good sleep is just about resting. It affects everything your mood, energy, and how you show up for the people you love. If a well-rested parent can be more patient with their child, does it make sense that the same applies to a partner? And that exactly what it is no drama, no hard feelings just the bold idea that a good night sleep might actually be the secret to a happier relationship. Says Dr Jyotsana Singh, Counseling Psychologist, Max Healthcare, Many couples now opt for leap divorce due to snoring, mismatched sleep schedules, or restlessness factors that can disrupt deep sleep. Poor sleep often leads to stress, irritability, and increased conflicts, whereas sleeping separately can enhance rest, patience, and overall relationship quality. Rather than signaling trouble, it a deliberate choice to prioritize well-being and strengthen the partnership. It more than just an opinion; data backs it up. According to Resumed 2025 Global Sleep Survey, India leads the way in sleep divorce, with 78 of couples choosing separate sleeping arrangements. China follows at 67, and South Korea is far behind at 65. The study, which surveyed over 30,000 individuals across 13 countries, makes one thing clear sleep struggles are just personal, they are a global reality. Even in the UK and US, couples seem to be divided half still share a bed, while the other half prefers separate spaces for a better night sleep. But before you are too quick to judge, sleeping apart is necessarily a sign of trouble in paradise. For many, it a survival strategy a way to reclaim restful nights and, ironically, keep the relationship healthier. The biggest culprits? Snoring, loud breathing, or gasping for air 32, a partner midnight tossing and turning 12, mismatched sleep schedules 10, and that all-too-familiar glow of screens in bed 8. Not surprisingly, older generations are more likely to sleep separately, having endured decades of night-time disturbances, before sleep divorce became an acceptable escape route. Cautions Dr Jyotsana Singh, However, sleep divorce should be considered solely for improving sleep quality, not as a way to avoid interpersonal issues. So, sharing a bed has long been seen as the ult

CRPF-hcm-Eng-Test-Dated-2026-10-30-Test NO.-29101

At the end of the day, love is about where you sleep it about how you wake up to each other. When your mind is resting, your body is probably doing a routine chore. Sometimes when your body is resting, your mind is super active, plotting and planning or simply mulling over past events, or worrying about the future. There is no complete rest because mind and body are not at rest together, there is no synergetic rest. Even during sleep, the mind may dream, so it is not really at rest, even though the body is completely relaxed. Vietnamese Zen Buddhist Master Thich Nhat Hanh remarked, not many of us knows how to allow our body and mind to rest. We are always struggling. We cannot resist being active, struggling all the time. We struggle even during our sleep. How can one achieve complete rest of both mind and body, at the same time? Let not say, when you die, both are at rest. The body at death is dead. The mind, we have no idea what happens to it whether it transmigrates via soul along with memories and savannas (past karmas). That is an entirely different domain. During meditation, you try to calm both body and mind. Perhaps in some kinds of meditation that do not require you to chant, listen to music, or focus on an object, the mind is truly resting, yet, some thoughts do come and go. Body and mind are closely interrelated; what happens in one, affects the other, whether good or bad. Medical science has proven that negative emotions that play on one mind tend to adversely affect bodily functions and can even aggravate existing ill health or at times cause new diseases, leading to high blood pressure, heart conditions, diabetes and skin disorders. Once the body is compromised, the mind finds it difficult to stay centered, unless of course one puts in superhuman effort and is consistent in practice. But as always, prevention is better than cure, so why not find ways to overcome negativities and nip them in the bud before they cause havoc in body and mind? Sister Chan Kong points out that the practice of deep relaxation is based on a teaching called mindfulness of the body in the body, as stated in Kawabata-sati sutta, Majjhima Nikaya 119 in which the Buddha advises us to visit every part of our body so we know what is going on in our body. In the same way that we practice being aware of every state of our mind accepting, understanding, and then releasing each state that arises we practice this way with our body, visiting every part with awareness, acceptance, and care and without judgment. Will Johnson quotes from Vajrayana Buddhism, from Tilopa ong of Mahamudra Do nothing with the body but relax. Let the mind rest in its natural unformed state. Become like a hollow bamboo. A cost-effective, soothing way to relax both body and mind is to soak in a warm bath as opposed to hurriedly taking a shower before dashing off to work or going to bed. An unhurried soak in the bathtub can work wonders it relaxes your muscles, banishes aches and pains, opens your pores. And your mind embraces happy thoughts and vistas that, together with a relaxed body, create a wonderful, restful symphony. You are now a hollow and then releasing each state that arises we pr

The commune political discourse political discourse underpinned with communal issues in the country is getting pettier, nastier and more irrelevant by the day. Issues of substance get drowned in a sea of seemingly inane ones like wearing of Hijab, applying of talk or Bind, wearing of sacred thread or skull cap, closure of meat shops during Hindu festivals and opposition to holding Ganesh puja in a maiden next to a Muslim place of worship apart from a host of other such frivolous issues. They just seem to be vying with the gargantuan garbage piles of Delhi at Ghazipur to see which can rise higher to vitiate the environment further. In between some overzealous and brain washed individuals get carried away and we have sporadic killings in the name of religion or massive protests on the streets. It all started with the Hijab issue in Karnataka, a state that seems to be at the epicenter of such controversies of late. If it continues to tread this path, it may transform from the software Capital of the nation to a Fatuous capital of the nation. The state political stability has been at an edge for many years now irrespective of the political party in power. Both Congress and BJP seem to be sitting on the opposite ends of a see saw with their allies, with neither side enjoying any major weight advantage to hold on to the ground. So, the see saw keeps flipping and the commune political discourse keeps getting baser and spreading to other parts of the country. Most such petty issues finally find their way to the already overburdened courts but get precedence in listing because of political pressure and at times the need for an urgent decision. Media goes berserk and frivolous debates are the order of the day. The panelists are so selected that the discussions, instead of being meaningful and targeted at resolving the issue, project the problem as a major communal issue with insinuations of Islamophobic, Hindu phobia, victimization of minorities and spread of Hindustan. It is obvious keeping such petty fires burning has become a lucrative vocation for many with the hope that sooner or later some may transform into infernos. A lot has been written and said on the Hijab issue and currently it is being heard in the courts. A simple issue has become a very complicated one because of the many add ons that have been attached to it by different parties from either side. Holy texts have found their way into discussions with interpretations as different as chalk and cheese by known and self professed experts of all denominations. The only common thing between them being an utter disregard for the nation and the long term fall outs of such motivated and bizarre interpretations aimed at pleasing their respective communities. The truth is that the whole matter is very simple and resolvable. The moot question is do schools, colleges and other educational institutions have the right to impose dress restriction.

And specify dress codes? From the huge discussion in public domain and past judgments by courts on this subject, it does appear that they have the right to do so. Next question is does Hijab violate the uniform code of the institutions? On the face of it one will have to say it does since it is not an insignificant piece of clothing as it stands out glaringly. Ideally, the matter must be left to individual institutions to accept or reject the wearing of Hijab or for that matter any additional piece of clothing or accessory that is not specified in the uniform. It is then the choice of the student to decide where he or she wants to study depending on what they and their guardians think is more important for them. This logic may seem a bit out of place to many but when minds are closed and thinking fixated, this is natural. In a nation as diverse and large as India, it is neither feasible nor practical to force millions of educational institutions to adopt a common approach on the issue of uniforms, particularly since ownership of such places ranges from government to private sector to religious bodies and social organizations. Given the constraints involved, all of them can never be brought on the same page and affording them freedom and flexibility is the only way out. This will preclude the possibility of any individual demanding it as a right to go against the institution rules in the name of his or her religion. The point to remember here is if an individual has rights, the same has to be true for the institutions too. It is a pity that in such an environment, all the stake holders ignore the overall interests of the nation. All that they see are their myopic personal, political or communal agendas at the cost of the nation. Every nation in the world has sub sets in its overall national society. It is next to impossible for any nation to expect to have a single homogeneous template for all the subsets and so differences will always surface. Subsets of such societies invariably accept some compromises, particularly in public domains, to live in a spirit of harmony and cooperation despite the differences. What they do within their own domains is of no concern to others. More importantly, matured societies continue to strive to narrow down the differences which in turn reduce the friction points between the subsets. Unfortunately, in India some subsets seem to be working towards increasing such differences. The importance of mutual respect, accommodation, understanding and cooperation among societal subsets cannot be overemphasized. Perhaps, it may be best not to pressurize our young generation in schools and colleges to be different in their tender years. It will be prudent to bring them up in an environment that gives them an opportunity to equate and interact with each other, during their formative years, in every possible way instead of creating fissures.

CRPF-hcm-Eng-Test-Dated-2026-10-30-Test NO.-29104

Picture this. You are going on vacation next month's and you have nothing to wear! Well of course your closet may be full of clothes but none of them inspire vocal vibes worthy of the gram. Lo and behold, your favourite online retailer has a mega sale on, where you can get clothes at throwaway prices. This is perfect, considering you don have the time to visit a store and try on clothes, plus the lines at the changing room are interminable. Also, who could resist 70-80% discounts on all your favourite international brands? So you spend hours online scrolling through hundreds of pictures of garment's on models (many of whom do not have the same body type as yours) and finally select a few outfits. Now comes the problem of size. Since all brands seem to have different sizing, you are utterly confused. The solution? Buy two or three sizes of the same garment, try "them on at home and return the ones that don fit. Whew! Shopping done and you mentally pat yourself on the back. You have been efficient" and sustainable! You have spent the petrol to get to a store to buy just a few items of clothing and so reduced your carbon footprint. If this sound's like something you would do often, I have some bad news: Your online returns may be costing you nothing money-wise, but they are costing your one and only planet a great deal. Have you ever thought about what happens to your returns? Are they re-folded, dry cleaned washed, ironed, and repacked for sale to the next consumer? The truth (and it is ugly) is that most e-commerce platforms find it a waste of time, money, and resources to repackage your return. It is far easier for them to send the garments to landfill, or even to simply incinerate them. Let look at some numbers. Typically, Indian customers return 25-40% of the clothing that they purchase online. An international survey of online consumers in 2019 found that 55% of their online returns were due to incorrect sizing. Americans throw away more than 31 kegs of clothing and textiles per person per year, of which 85% (roughly 13 million tons) are either dumped into a landfill or burned. In India, it is estimated that more than 1 million tons of textiles are thrown away every year, with most of this coming from household sources. This amounts to 0.79 kg of textile waste per capita. While this is a considerably smaller number, it is still daunting if we consider the huge piles of undisposed garbage we see in India dumping grounds. Deonar dumping ground in Mumbai holds 16 million tons of garbage, imagine a building 18 stores high. What more, some of the garbage is over a hundred years old. This is the unpalatable truth of fashion, it is the second most polluting industry in the world, the Co2 emissions are more than the emissions of international shipping and aviation combined. You may now wonder, how can something that makes you look and feel good, something that gives you an instant high and validation have such a dark side to it? The answer is multi-layered and complex and a lot of it has to do with changing our use and throw mentality. A few generations ago, garments were painstakingly stitched by a local tailor. They were made to measure, mended

Demonetized notes already deposited with the Banks. It could not have been expected of a child of tender age to narrate the incident or share the happening with her to anyone when she had been put under fear by the accused. Even she could not disclose this incident to her mother. Her testimony that she did not disclose to her mother out of fear on phone appeared probable to the Session Court, keeping in view her tender age. By no means, it is suggested that whenever such charge of rape is made, where the victim is a child, it has to be treated as a gospel truth and the accused person has to be convicted. We have already discussed above the manner in which testimony of the prosecutrix is to be examined and analysed in order to find out the truth therein and to ensure that deposition of the victim is trustworthy. At the same time, after taking all due precautions which are necessary, when it is found that the prosecution version is worth believing, the case is to be dealt with all sensitivity that is needed in such cases. In such a situation one has to take stock of the realities of life as well. Various studies show that in more than 80% cases of such abuses, perpetrators have acquaintance with the victims who are not strangers. The danger is more within than outside. Most of the time, acquaintance rapes, when the culprit is a family member, are not even reported for various reasons, not difficult to fathom. The strongest among those is the fear of attracting social stigma. Another deterring factor which many times prevents such victims or their families from lodging a complaint is that they find the whole process of the criminal justice system extremely intimidating coupled with absence of a victim protection mechanism. Therefore, time is ripe to bring about significant reforms in the criminal justice system as well. Equally, there is also a dire need to have a survivor centric approach towards victims of sexual violence, particularly, the children, keeping in view the traumatic long lasting effects on such victims. After thorough analysis of all relevant and attendant factors, we are of the opinion that none of the grounds, on which the High Court has cleared the respondent, has any merit. By now it is well settled that the testimony of a victim in cases of sexual offences is vital and unless there are compelling reasons which necessitate looking for corroboration of a statement, the courts should find no difficulty to act on the testimony of the victim of a sexual assault alone to convict the accused. No doubt, her testimony has to inspire confidence. Seeking corroboration to a statement before relying upon the same as a rule, in such cases, would literally amount to adding insult to injury. The deposition of the prosecutrix has, thus, to be taken as a whole. Needless to reiterate that the victim of rape is not an accomplice and her evidence can be acted upon without corroboration. She stands at a higher pedestal than an injured witness does. If the court finds it difficult to accept her version, it may seek corroboration from some evidence which lends assurance to her version. To insist on corroboration, except in the rarest of rare cases

Word Count: 554, Character Length: 3200 characters

corroborated in material particulars, as in the case of an accomplice to a crime. Why should the evidence of the girl or the woman who complains of rape or sexual molestation be viewed with the aid of spectacles fitted with lenses tinged with doubt, disbelief or suspicion? The plea about lack of corroboration has no substance. From the evaluation of the prosecution material discussed above, it is abundantly clear that the evidence brought on record contains positive proof, credible sequence of events and factual truth linking the respondent with rape of the prosecutrix and had criminally intimidated her. Hence, respondent is found to be guilty for offence under Sections 376 (2)(f) and 506 of IPC since he committed rape with a minor girl aged nine years. It is pertinent to point out at this stage that at the time of deposition of the prosecutrix in the Court, the trial court had an opportunity to see her demeanour. It appears that after hearing the arguments of learned counsel for the parties, the learned Tribunal came to the conclusion that the accident took place due to rash and negligent driving of DCM truck, bearing registration No. UP-78/N-3907 and in the said accident the deceased Dr. Rajeev Kumar had received serious injuries and due to that he died. The Tribunal further came to the conclusion that at the time of accident the offending vehicle was insured with the United India Insurance Company Ltd., and the policy was valid on the date of accident. The Tribunal also found that at the relevant time all the papers relating to offending vehicles i. e. driving licence of the driver, registration certificate, permit and fitness certificate etc. are valid and effective. Thus the insurance company is liable to indemnify the owner. The learned Tribunal after discussing the materials available on the record further came to the conclusion that the claimants are entitled to receive compensation to the tune of Rs. 16,39,320/- with 6% interest. Against the aforesaid finding, by which learned Tribunal assessed the compensation, this appeal filed by the claimants and appellant further prayed for enhancement of the compensation. It is submitted by Sri Vidya Kant Shukla, the learned counsel for the appellants that the learned Tribunal while assessing the compensation had deducted 1/3 amount towards the personal expenses of the deceased. It is submitted that in the instant case, on the date of filing of claim application as well as on the date of passing of judgment, altogether 5 persons were dependent upon the deceased. Thus as per the judgment of the Hon'ble Supreme Court in Sarla Verma and others Vs. Delhi Transport Corporation and another reported in (2009) 6 SCC 121, only ¼ amount is liable to be deducted from the total income of the deceased towards personal expenses. It is then submitted that the learned Tribunal, while assessing the compensation, had arbitrarily refused to add any amount in the income of the deceased towards future prospects. It is submitted that admittedly at the time of accident the deceased was working as Animal Medical Officer under the State Government. The Tribunal assessed the age of the deceased as 48 years. Thus in vi

CRPF-hcm-Eng-Test-Dated-2026-10-31-Test NO.-29109

Going to get higher and higher. India has announced its intention to bid for the 2036 Olympic Game's. This has understandably sparked much excitement and speculation among sports lovers and skeptic's alike. Those who harbor's doubts about New Delhi desire to play host to the world biggest sporting event might base their reservations on the folkloric tale of the King of Siam and his gift of a white elephant. When the monarch wanted to take down by a peg or two a courtier who had got too uppity, he would bestow a white elephant upon the object of his displeasure. Extremely rare, white elephants were deemed to be auspicious but were also ruinously costly to maintain. Unable to refuse the purported honor's being done to him, the hapless gifted would have to accept the priceless pachyderm, which would, eventually and inevitably, reduce him to penury, much to the satisfaction of the royal donor of the high-maintenance Heffalump. Like the fabled white elephant, the "Olympic Games can be a bane in the guise of a boon. While hosting the Games is deemed a matter of great national pride and a" cock-a-hoop feather in the country cap, the five-ring circus of the Olympics, representing the five continents, is a hugely costly show to stage. Stadiums must be built, along with residential and boarding facilities for the competitors and their entourage of trainers, coaches, and hangers-on. The 2020 Tokyo Olympics carried a price tag of $13 billion, twice the amount anticipated in 2013 when the city was awarded the Games. In the history of the modern Olympics, it is only the Los Angeles Games of 1984 that made a small profit of $215 million on an investment of several billions. So why do countries willingly, indeed eagerly, lumber themselves with this metaphoric white elephant? For long-term benefits, such as increased revenue from tourists who flock to see all those swank stadiums and other games-related facilities? A dubious proposition. The Beijing Olympics saw a drop in tourism, suggesting that the benefit calculus of the long run might be of marathon length. Apart from chest-thumping and nationalistic grandstanding, there seems to be little reason to be gung-ho about hosting the Games. But in its desire to be the host with the most in the 2036 Olympics, India might well have an ace or three up its sleeve of entrepreneurial inventiveness. This might be in the form of a run-up to the Games, which would cash in on the competitiveness of the building contractors, TV channels, soft drink makers, and others who will all vie with each other for a slice of the Olympic publicity and profit pie. Those who would be in the bidding for building contracts could be asked to send their sales teams to participate in a track-and-field event, involving successfully navigating a series of hurdles made of red tape, representing in physical form the obstacle course they would have to metaphorically run to bag tenders and strike gold, so to speak. Similarly, TV channels wanting exclusive coverage of the Games could be tasked to compete against each other by doing the pole vault to determine who had the highest contacts, in more ways than one, in the corridors of power to clinch

As a young medium-pacer training at the National Stadium, I came into Bedi paji orbit in the late 1980s much after he had retired from international cricket. The fact that we trained under veteran coach Gurcharan Singh at National stadium, gave us special access to Bedi paji who dropped by frequently. He would drop his kids to school and come for his morning walks to the Stadium. Whoever happened to be training there benefited from his presence and I used to be one of them. Bedi paji would forget his walk and start working with me. Often during a challenging training session he would say: maine kisi ko training se marte nahi dekha, aap bhi nahi maroge never seen someone dying of training, you will also not die. Having said this, he would make me go on for another ten minutes. At the end of the training session, he would clap his big hands loudly and say well-done but the praise was followed by another one-liner: One should work like a horse and sleep like a king, go home and sleep. Coming back for net practice at 2pm, I would see Bedi paji already standing in the nets. On seeing Bedi paji, some of our cricketers would turn around from the parking lot itself and go back home. They would say Bedi paji bhaga ke maar dalenge he will kill us by making us run. In the afternoons, Bedi paji would bowl with us. Having gained weight over the years, he would just take two yards of run-up and bowl. Bedi paji would give live display of exactly what was expected from a left arm spinner who wished to take his game to the next level. Players like Rahul Sanghvi and Murli Kartik in their teen at the time had the blueprint for smooth action, revolutions, drift and turn. Bedi paji was instructing by demonstrating. Within no time we saw their raw talent turn into world class bowling. Post-retirement many cricketers continue to serve the game as administrators, coaches, managers, or selectors. Bedi paji also took this route periodically. However, what set him apart was that he was not an armchair coach but one would walk over to the nets and worked with youngsters to transfer his skill. The entire eco system of the game benefitted from his experience. This became evident when Bedi paji was appointed Panjab Ranji trophy coach in 1992-93 season. He did not travel to Punjab except for matches. Instead, the Punjab team would come to Delhi and train in the National Stadium. Still in school, I was asked to attend the practice sessions with the Punjab team through the long season. A spiritual man, Bedi paji would come to the Stadium every morning to conduct the training sessions with the kada prashad in a dona a leaf bowl from the gurdwara. He would distribute the prashad and then make us run to the Rashtrapati Bhawan and back. When some senior players would express unhappiness at having to workout, Bedi paji would say: jeda sacha Sardar hondae, o kadi ni thakda the one who is a true Sardar, never tires. He would often ask our age and if you said 17, he would ask: 17 or 70? If you are 17, behave like one. He was a no nonsense hard taskmaster. That season the Punjab team went on to win its first Ranji trophy title. He was the real talent scout of the game, constantly in s

CRPF-hcm-Eng-Test-Dated-2026-10-31-Test NO.-29111

Holi, festival of colours, serves as a profound spiritual metaphor, reminding us of invisible hues that paint the soul. Just as we joyfully smear colours on one another, our consciousness is constantly being coloured by thoughts, words and vibrations surrounding us. Holi calls upon us to be mindful of these inner shades: colours we are absorbing and radiating. On the eve of Holi, Holika Dahan ritual unfolds, reflecting the present age of Kali Yug, Iron Age where darkness prevails, and the soul forget its divine sanskars. During this ritual, flames rise not just to consume wood and material offerings but to symbolically burn our vices. This fire symbolises yog-agni, flame of meditation that dissolves our ego, lust, anger, greed, jealousy, and resentment. When impurities are burnt away, our innate qualities emerge purity, peace, love, happiness, wisdom, power, and bliss. These are colours of our true nature, which need to be fostered and shared with the world. When we meet someone, our vibration touches them before our words do. A blessing, a kind word, or a caring gesture has the power to resolve conflicts, release emotional wounds, and even transform people. Pure vibrations cleanse the atmosphere, energise water and plants and nourish the planet. Our every thought radiates into collective energy of the planet. When we choose peace over anger, faith over fear, compassion over criticism we shift global vibrations towards peace, power, love and happiness. Just as physical colours stain our dress and skin, subtle vibrations color our energy field. Every moment, we are absorbing and emitting vibrational frequencies that shape our inner world and the world around us. Everything that we read, watch and listen leaves a permanent hue on our mind. Uplifting wisdom like spiritual content enriches us with purity and peace, while negativity dulls our inner radiance. Food is not just nutrition but also carries vibrations. Food prepared and partaken with love and gratitude heals our body and mind. Food prepared in stress, greed or hurry depletes our emotional and physical health. Money is not just currency; it also carries vibrations of how it is earned. When we contribute to a process or product that uplifts society, guided by the highest principles of ethics, kindness, and care for those we work with, we align ourselves with vibrations of calm and contentment. These vibrations extend beyond workplace and colours our family members also with a sense of well-being and prosperity. Holi is often associated with bhang, a drink that induces intoxication. True intoxication is not of substances but of spiritual bliss. When we connect with the Supreme Soul and realise our divine nature, we experience a natural intoxication that transcends sensory pleasures. The word holi carries profound spiritual meanings: Ho-li is a call to let go of past burdens, pains, and negativity. Just as Holika burns, we must release our unpleasant past. Create an affirmation and visualise: The past is over. I release, Ilet go. It a beautiful new beginning now. While engaging in action, remain connected to the Supreme, allowing His wisdom and power to guide every karma. Create powerful di

CRPF-hcm-Eng-Test-Dated-2026-10-31-Test NO.-29112

They have all the Deewar appointed swag, but like Shashi Kapoor character these guys put mater above material goods. Kumara Mangalam Birla did quote the now-iconic Mere paas maa hai line, but came close at the ET Awards for Corporate Excellence last Saturday. Accepting the Business Leader of the Year trophy, he rewound to Class 1 when he was called on stage to receive the Best Student prize from the Chief Guest but forgot to thank that worthier. The next day the Principal severely berated him for this inexcusable lapse. The six-year-old heard out the tirade, and then said, if, I did remember to do this because I was busy looking at the shining eyes of my proud parents in the audience. Mr. Birla, now 57, then added, today, I m again holding a valued award, but looking at the shining eyes of my proud mother in the first row. All other eyes in the power-packed theatre glistened too. Thanking everyone bar pet pooch and part-time help is mandatory at all award ceremonies, but this was the choke-up moment. My mind spiraled to two other tycoons, Rai Bahadur M.S Oberoi and Captain CP Krishnan Nair. While researching their biographies, I was constantly reminded that both owed first debt to their mother indigent women far from ata-Birla shorthand for immeasurable wealth. Bhagwanti Oberoi was a doughty Sardarni who, widowed at 18 and hating the taunts, had simply picked up her one-year-old and walked to her maternal home in Bhaun, now in Pakistan. She did stick to the parathas, but instead learnt from her moneylender father, all the while pushing little Mohan along on her intrepid drive. How else would a callow youth have found the audacity to waylay the English manager to ask for a job at The Cecil Hotel, Raj Smile snootiest? Years later, he could mop up funds to buy his own first hotel there thanks to Bhagwanti network of Punjab fief lords; even princes get strapped for ready cash. Madhavi Amma lived in even more obscure Kunnavil in Kerala Kannaur district, tirelessly drying coconuts for copra, oil and husk. She forced ambition down the throat of her little kochukrishnan along with the meagre breakfast of fermented rice-water spiked with lime pickle and nightly tales of mythic Malabar warriors. She badgered a local politician to get him into Raja High School instead of dropping out after Oorpozhassikavu Elementary like his poor, Vaniya peers. Madhavi Amma instilling of self-worth gave our Dalit lad the gumption to stride to the dais and deliver a spontaneous paean to chief guest, Valiya Chirrakal Raja himself who, as impressed as flattered, paid his fees right through college. Next, Madhavi Amma astutely used a humble prawn pickle to push Krishnan on the radar of powerful VP Menon, who would become mentor and door opener. The challenge? Maintaining consistency is both demanding and fragile. Editors must uphold quality every single day, ensuring that each piece meets the publication standards. But editorial consistency is also fragile deeply tied to individual preferences. As editors come and go, key decisions are often renegotiated, even when the existing content strategy is working. Now imagine scaling this operationally demanding and fragile process

CRPF-hcm-Eng-Test-Dated-2026-10-31-Test NO.-29113

And differences amongst them because of their faiths. Once they reach an age where they have received basic education, some understanding of their religion and maturity, they will be better placed to take a call on how to move forward in life to follow the tenants or practices of their respective religions while living in harmony with others. Chances are that such generations will be less prone to strife and conflict as they may be in a better position to appreciate and understand the differences imposed by respective faiths. The genesis of this problem lies in the lopsided approach of governments after independence where minority religions were given a free hand to practice, promote, teach and manage their religions while the majority was not given the same freedom. While there have been no problems with religions that were born out of Hinduism, Islam and Christianity have exploited their freedom aggressively at the cost of the majority religion with forced conversions becoming a matter of concern. Christianity with its small numbers has posed limited problems but Islam, that accounts for over 15 17% of the nation population, has caused serious damage to the nation communal environment with its in your face approach aided in no small measure by the ideology of worldwide pan Islamism that has permeated in India in the last three decades. This has given rise to some backlash from a small section of concerned Hindus over the last few years which, without a doubt, adds to the communal discord. Harsh as it may sound, this is the stark truth. The best possible way out of these petty communal squabbles involving dress codes, eating habits, mannerisms etc. lies in ensuring that religion remains in the personal domain and is kept out of public domain. Will the all subsets in the Indian society rise above their petty interests to enable the nation to create such an environment? In today charged communal environment, this may seem a difficult proposition but keeping national interests in mind, it may be prudent to make a beginning. For this to happen all societies from all faiths, without exception, must understand that everything that may have been written or prevalent hundreds or thousands of years ago, may not necessary be fully relevant today. It is imperative for societies and their subsets to evolve with time and empower their people to live in sync with changing times without sacrificing the basic spirit and message of the teachings of the past. Saudi Arabia and India are close friends and strategic partners. The bonds of friendship between the people of our two countries rest on centuries of cultural and civilizational interaction, and mutual appreciation for each other rich culture and heritage. Our dynamic socio economic and political partnership is based on mutual respect, shared values, and interests. The last decade has been particularly significant in shaping the spectrum of the strategic relations the two countries share. The landmark visit of His Royal Highness Prince Mohammed bin Salman bin Abdulaziz.

CRPF-hcm-Eng-Test-Dated-2026-10-31-Test NO.-29114

Quiet Quitting (QQ) is a term that has captured a lot of working people imagination lately. It means doing the bare minimum at your job. Putting in the least amount of effort required. Do not go beyond the call of duty. Shut your laptop at five. Check out of work mentally, physically, and emotionally. Sorry boss. I am done. So that where society is right now. Young workers are being encouraged to no longer give it their all. Why give up your work-life balance? Sure, one needs a job and salary to make ends meet, but why give it more than the absolute minimum? Indian financial markets were battered on Friday, in line with major global markets. The BSE Sensex closed lower by 1.7% at 58,098.92, while the rupee-dollar exchange rate hit a record low to end Friday trading at Rest 80.99. RBI monetary policy committee, which will have its bimonthly meeting next week, has to contend with risks coming largely from overseas. Right now, uncertainty and volatility are worryingly high. The main sources of risk are, first, the unclear trajectory of major central banks trying to pull back inflation and, second, fluid geopolitics. This week most major central banks increased interest rates and indicated more hikes are in store. Most currencies weakened against the dollar and Japan central bank made its first foreign exchange market intervention in over two decades. The hardening of interest rates will trigger a sharp economic slowdown in major economies. India exports will feel its impact. The unusual aspect of today global economic scenario is that inflation is unlikely to quickly trend downwards even as demand falls. This is because of ongoing energy supply readjustments that have pushed economic activity and inflation in different directions. For instance, European gas and electricity prices have risen 105% and 75%, respectively, since the period just before the Russian invasion of Ukraine. Business surveys published yesterday showed that Europe economic activity is rapidly slowing as the energy shock undermines manufacturing. Price levels however are high. The UK inflation, at 9.9%, is almost five times its inflation target. Economic policymaking in India will have to factor in an abnormal global scenario, with no clear signal about the near future behavior of either revival or price stability. The good thing is Go has fiscal space gross tax revenue increased 25% to Rest 8.69 lakh core in April-July. It wise to keep the fiscal powder dry in an uncertain environment. At press conferences since Bharat Judo Yare commenced, Rahul Gandhi has issued cryptic statements when asked about contesting the Congress presidential election. These have ranged from giving lofty philosophical advice to hard-nosed politicians contesting the polls to claiming to not have any confusion about his objectives, without quite answering the question. But this Rahul speak is breeding confusion, more so since state units are passing resolutions assuming he can be coaxed into the presidency. Everything in the public domain about Rahul not contesting is either a sound bite by another neat or.

CRPF-hcm-Eng-Test-Dated-2026-10-31-Test NO.-29117

Source based information. This is bad politics in these times for Congress. It tells leaders who are preparing to file nominations from today that they can expect Rahul looming shadow over every consequential decision the next president takes. Therefore, Rahul needs to make a clear statement that he will not contest and will work under the elected president. The new president can only make a mark if he has full freedom. Any perception that Rahul continues to wield decision-making powers without accountability will be seized by rival parties to portray the Congress leadership change as eyewash. Recall that the portrayal of Man Mohan Singh as a weak PM hurt Congress politically. Such a characterisation of the new party president will be similarly damaging, especially with Indian politics dominated by strong-willed leaders, and voters often voting for strong leaders. In recent years, we vet all seen how deeply divided we are, and how hard it is to budge someone out of their beliefs. How Minds Change the New Science of Belief, Opinion and Persuasion by David Carney is an antidote to this helplessness. It shows how we can change each other, and ourselves. We have deep reasons for believing our truths, and it not just a matter of our brains, but also our social networks. Neuroscience and philosophy remind us that all reality is virtual it not a simple thing out there, but a simulation inside our skull, a waking dream. India telegraphs and railways, as created by British imperialists, were intended to serve the empire. That clears from the Indian Telegraph Act, 1885, which vested any absolute monopoly with the Governor General in Council. After independence, while this position changed incrementally with some legislative amendments, the monopoly was maintained and passed over to go. The draft telecommunication law has quite seized the opportunity to correct this historical anomaly. Paramhansa Yogananda said, I once met a very successful and wealthy man, who said to me, I m disgustingly healthy, and disgustingly wealthy. However, I replied, you are not disgustingly happy, are you? He admitted he was not. Happiness is something that everyone searches for but very few are able to find. Here are five key steps that lead to permanent happiness We must want to be happy We need to accept guidance to achieve this We need to apply self-discipline in order to follow the guidance We need to shift the focus to making inner, not outer, changes We need truly to accept that both happiness and unhappiness are choices we make. Does everyone want to be happy? Yes, and no. On a deep level, of course, everyone wants happiness. Paramhansa Yogananda said, in fact, that this desire is the fundamental motivation of every living thing. But on a conscious level, very few people seek happiness. Rather, they seek those things that they think will make them happy money, possessions, relationships, power, and fame. The problem with this way of thinking is that nothing outside our self can ever make us.

CRPF-hcm-Eng-Test-Dated-2026-10-31-Test NO.-29118

Crown Prince and Deputy Prime Minister, to New Delhi in February 2019 and the Honorable Prime Minister Namenda Mode visit to Riyadh in October of the same year marked a new chapter in bilateral relations, culminating in the formation of the Strategic Partnership Council at the leadership level. Since then, ministers and senior officials of the two countries have frequently met under the sub committees and working groups of SPC. During the recent visits of both the foreign affairs and commerce & industry ministers of India to Saudi Arabia, the two sides undertook a comprehensive review of the bilateral relationship and discussed ways to intensify our cooperation in various fields, as well as to enhance joint action and bilateral coordination on regional and international issues of common interest. The two countries are substantial economic partners. The Kingdom continues to play a major role as an energy partner of India, fulfilling a considerable part of India crude oil and LPG requirement. Our relations in the field of business and investment are continuing to expand and flourish. Last year, our bilateral trade reached nearly $43 billion, making India the second largest trading partner of Saudi Arabia, while the Kingdom is India fourth largest trade partner. Our bilateral investments have also witnessed a sharp rise in recent years. Indian companies have a significant presence in various sectors of the Kingdom economy. Recently, Saudi Arabia Mining Company Ma Aden, signed four memorandums of understanding Moue seeking to double Ma Aden exports of phosphate products and ammonia to India starting in 2023. Saudi Arabia and India contemporary strategic affinity is cemented by our cultural appreciation for each other, and strong people to people ties. The Kingdom hosts more than two million Indians, who are also serving as an important cultural bridge between the two countries. Indians constitute the largest community of foreign workers in the Kingdom. Under the leadership of the Custodian of the Two Holy Mosques King Salman bin Abdulaziz Al Saud and HRH Mohammed bin Salman, Crown Prince and Deputy Prime Minister, Saudi Arabia is undergoing path breaking economic and social reforms. Thanks to the Vision 2030 launched in 2016, the Saudi economy has been diversifying, transforming and unlocking the potential of the Kingdom to global investors. Data published by Saudi Central Bank show that in 2021, foreign direct investment in Saudi Arabia reached its highest level in more than a decade, totaling $19.3 billion. In Q1 2022, 9,383 investor licenses were issued. Scores of multinational companies have established their main regional offices in the Kingdom. IMF projected that Saudi Arabia GDP will expand by 7.6 percent in 2022, the highest among G20 countries. It concluded that the Kingdom is recovering strongly following the disruption caused by Covid 19, and that the reform momentum under Vision 2030, among other factors, helped the Saudi economy recover with a robust growth, contained inflation and a resilient financial sector. A few weeks ago, HRH Crown Prince announced the designs of The Line, a futuristic smart city.

CRPF-hcm-Eng-Test-Dated-2026-10-31-Test NO.-29119

Under construction in Saudi Arabia, which has set a new benchmark for sustainable development. The Kingdom is also focusing on optimizing its energy mix. By 2030, it shall substitute liquid fuel with renewable energy sources for 50 percent of electricity generation. Saudi Arabia also aims to become a flourishing global cultural hub. Saudi Arabia and India are major economies. Both are members of G20 intergovernmental forum. In 2020, Saudi Arabia successfully presided over the G20 Summit in a time of crisis. The governments of Saudi Arabia and India remained in close touch during the Covid 19 pandemic, and our bilateral relationship continued despite the challenges of the unexpected crisis. As formidable economies of Middle East and Asia undergoing major economic transformation, both our countries have more opportunities today to tap into than ever before. The two countries are working to identify complementarities and combine our strengths to expand our partnership for the benefit of our two peoples and the region. As we celebrate Saudi Arabia 92nd National Day on September 23, we look forward to deepening our ties with India and its friendly people. We live in an increasingly digitized, hyper connected world. There is a digital revolution underway and everything around us is becoming technology enabled: be it a game on your phone or food delivery from your favorite restaurant. Our schools are a critical part of this revolution. Schools are slowly adopting multi modal, hybrid learning through teacher tabs, smart TVs in classrooms and apps that ensure continuity of learning at home. The focus is on making learning engaging and meaningful through a range of audio visual experiences. All this has been possible thanks to the integration of technology in pedagogy and curriculum. Every day, there emerge new career opportunities based on analytical thinking, creative problem solving and number crunching. Though children learn Science and Mathematics in school, is it truly enough to help them prepare for the future? How can we ensure that our children are ready to succeed in a world that is driven by technology? Generation Alpha, or children who are born post 2010, have no choice but to be digitally savvy. Their world view and perspectives will after all increasingly be shaped by the prism of technology, irrespective of background, location or choice of profession. It has therefore become necessary to introduce them to Coding and Computational Skills early on. This can be effectively achieved by integrating Coding and Computational Skills as a subject in school, which then lays a strong foundation to Artificial Intelligence and Machine Learning. India National Education Policy recommends that all students learn coding, to become good, successful, innovative, adaptable and productive human beings in today rapidly changing world. Computational thinking and mathematics have been given emphasis throughout the school years. According to the policy, encouraging children to learn to code and exposing them to technology at a young age will take them a long way and better prepare them for the future people. We live in an increasingly digitized.

AIIMS (All India Institute of Medical Sciences) is one of the premier medical institutes in India, known for its high standards of education, research, and healthcare. The AIIMS entrance exams, particularly for postgraduate and undergraduate courses, are highly competitive and require extensive preparation. Among the key tools that students rely on during their preparation for the AIIMS exams are the AIIMS CRE (Clinical Reasoning Exercise) notes. What are AIIMS CRE Notes? AIIMS CRE notes are a set of study materials designed to help students prepare for the AIIMS exams, especially for the clinical reasoning sections. The CRE section focuses on assessing a candidate ability to apply medical knowledge to clinical scenarios, making it a crucial part of the examination. This is particularly important for those aiming to enter AIIMS postgraduate programs, such as MD/MS, where clinical decision-making is a key skill. The CRE notes typically contain a combination of theoretical knowledge, clinical case discussions, diagnostic strategies, and treatment plans. These notes are structured in a way that helps students improve their diagnostic thinking, clinical skills, and overall understanding of medical science. The clinical reasoning section assesses a student ability to critically analyze complex patient scenarios, which is why having a comprehensive set of notes is vital for success. Why is AIIMS CRE Notes Important? 1. Comprehensive Understanding the CRE notes covers a broad range of medical conditions, from common to rare ones. This helps students develop a deeper understanding of diseases, their pathophysiology, symptoms, and treatment protocols. The notes guide students to think through cases step by step, understanding the clinical manifestations and investigative procedures, which are essential for diagnosis and management. 2. Critical Thinking and Analytical Skills AIIMS exams, particularly the CRE section, are designed to test a candidate ability to think critically. CRE notes often contain clinical scenarios that require students to analyze the information, differentiate between possible diagnoses, and choose the most appropriate treatment. These notes hone the analytical skills that students will need not just for exams but for practical medical practice. 3. Exam-Oriented Approach Since the AIIMS exams are highly competitive, students need to prepare in an exam-focused manner. AIIMS CRE notes are structured according to the exam pattern and syllabus. They contain the key topics, high-yield points, and clinical cases that are frequently tested. This focused preparation helps students maximize their performance and tackle even the most difficult cases presented in the exam. 4. Time Management The CRE section requires quick thinking and efficient time management. With extensive practice using CRE notes, students can become familiar with how to manage time during the exam, which is crucial to solving the case studies efficiently. These notes often include time-saving tips and mnemonic devices, which help students, retain complex information in a shorter period. 5. Guidance from Experts CRE notes are typically written by medical experts, specia

Spl-CRPF-hcm-Eng-Test-Dated-2026-10-31-Test NO.-29121

The State Government towards family pension. It is submitted that in view of the various judgments of Hon'ble Supreme Court and of this Court family pension, received by the widow of the deceased, is not liable to be deducted from the income of the deceased. Therefore, it is submitted that the entire assessment of compensation made by the Tribunal is illegal and against the law laid down by the Hon'ble Supreme Court. On the other hand, Sri G. K. Srivastava, learned counsel appearing for the insurance company submitted that the Tribunal had assessed the compensation in accordance with law. It is submitted that 1/3 amount of the income was deducted by the Tribunal in view of the II Schedule of the Motor Vehicles Act. It is further submitted that the learned Tribunal refused to give benefit of future prospect, because the claimants had not adduced any evidence to show that in future income of the deceased will be enhanced. The Tribunal had further stated that there may be a chance that the claimant No. 1 will get a compassionate amount due to the death of the deceased. Accordingly, it is submitted that the aforesaid finding of the learned Tribunal does not require any interference. It is settled principle of law that the evidence of interested or related witnesses should be considered with caution and until and unless it is found to be trustworthy the conviction of the accused on the basis of evidence of a related or interested witness is not justified. In view of the discussions made above and considering the unnatural conduct of PW-1 and PW-2, I am of the considered view that they are not proved to be eye witnesses of the incident of enticing away victim by accused/ appellant in presence of caucused persons or otherwise and their testimony is neither reliable nor trustworthy. In the present case the only eye witnesses of the incident, PW-1 and PW-2, are admittedly closely related witnesses and their conduct has been found unnatural in not disclosing and not helping the first informant. The conduct of father of the victim in not lodging the FIR and not appearing before the trial court for stating on oath that his daughter is missing and has been enticed away by the accused/ appellant with the help of other co-accused or otherwise and the conduct of PW-3/ first informant, who himself is a law graduate and is also alleged to be an Advocate in not mentioning the names of alleged eye witnesses in the FIR and lodging of FIR with inordinate delay of 4 days at midnight without any whisper about the love affair if any, between the victim and the accused/ appellant and further the undisputed disability of accused/ appellant makes the entire prosecution story highly improbable and doubtful and gives strength to the arguments that the father of victim and his family members including first informant, on account of property dispute have falsely implicated the accused/ appellant and his family members, due to suspicion. In view of the facts and circumstances of the case, there is sufficient reason for drawing adverse inference against the prosecution for not producing the parents of the victim to the witness box before the trial court. The evidence on reco

Word Count: 543, Character Length: 3200 characters

the accused persons. The above witnesses are interested witnesses and their unnatural conduct and contradictory testimony is not reliable for holding the accused/ appellant guilty and the learned trial court has misread the evidence on record. I am of the considered view that the prosecution has failed to prove its case to the hilt beyond any shadow of reasonable doubt and has failed to bring home the charges against any of the accused by any cogent, reliable, independent and trustworthy evidence. Considering the totality of facts and circumstances, it is a fit case where the accused/ appellant is entitled to be given the benefit of doubt and the prosecution case is liable to be rejected. The accused/ appellant is also entitled for an order of acquittal. PW-1 and PW-2 are only chance witnesses and have also stated to have enquired into with caucused as to where the victim and accused/appellant have gone, but even when no reply was given by them, they did not inform the first informant or father of the victim, which is also quite unnatural and their conduct in not doing so despite being related, makes their contention of being eye witnesses doubtful and untrustworthy. Similarly on alleged asking by PW-1 and PW-2 from Rajendra and others, not giving any threat by them is quite unnatural, while on mere enquiry by the first informant, they allegedly threatened him. The first informant has not assigned any reason when neither he was eye witness to the occurrence nor got any information from alleged eye witnesses then why and on what ground he approached the family members of accused/ appellant i. e. co-accused persons for enquiring about the victim. Sri Raghvendra Kumar Singh, learned Senior Counsel for the respondent-University has invited the attention of the Court to the entire material relating to parliamentary debates, the deliberations of the Standing Committee of the Parliament and the objects and reasons to contend that firstly, the University was established under a special Act, namely, the 1994 Act. The said Act clearly provided for special reservation for Scheduled Castes/Scheduled Tribes and accordingly, the First Academic Ordinances provide for 50% reservation to such classes. He therefore submits that this stood protected and could not be abrogated by the general provisions of the 2006 Act. His contention is that the 1994 special Act continues to hold the field and any exercise of framing of Ordinances under the said Act that provides for 50% reservation could not have been taken away for which the amendment in the 2012 Act came to be introduced. He submits that the respondent-University being a special university meant to uplift the cause of Scheduled Castes/ Scheduled Tribes in particular is fully justified in providing 50% reservation which stands protected under Article 15 (5) of the Constitution of India. He submits that even if the validity of the 2006 Act has been upheld the same does not abrogate the provisions of the 1994 Act that can still exist independently and which now stands even otherwise protected with the 2012 amending Act. He contends that the petitioners having not challenged the competence of the Parliament or pr
